The dates shown in this calendar are subject to change at any time by official action of Cornell University.
In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.
The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.
The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.
The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.
This catalog was produced by Media and Technology Services at Cornell University.

Courses with names and descriptions enclosed in brackets—[ ]—are not offered fall 2002 and spring 2003.
INTRODUCTION

Courses of study (www.cornell.edu/Academic/Courses/), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Additionally, a student handbook, distributed to all incoming students, describes life at Cornell. The Policy Notebook (www.univc.cornell.edu/policy/library.html), also distributed to each new student, summarizes pertinent university policies, including the campus Code of Conduct and the Code of Academic Integrity. Students should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements.

All these publications are also available for viewing on CUINFO the university's electronic information system, and in print at the various university libraries, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office. 410 Thurston Avenue, Ithaca, NY 14850-2488, 607-255-5241.
Medical College and Graduate School of Medical Sciences. Office of Admissions, 1300 York Avenue, New York, NY 10021, 212-746-1067.

CUINFO ON THE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell's electronic information source, and in the Course and Room Roster and the Course and Time Roster, published each semester by the Office of the University Registrar. You may access CUINFO through the web. The URL is: www.cornell.edu.

Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND COURSE PREFIXES

The course levels have been assigned as follows:

- 100-level course—introductory course, no prerequisites, open to all qualified students
- 200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites
- 300-level course—upper-division course, open to juniors and seniors, may have prerequisites
- 400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent
- 500-level course—professional level (e.g., management, law, veterinary medicine)
- 600-level course—graduate-level course, open to upper-division students
- 700-level course—graduate-level course
- 800-level course—master's level, thesis, research
- 900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses
- Agriculture and Life Sciences
- Architecture, Art, and Planning
- Arts and Sciences
- Engineering
- Hotel Administration
- Human Ecology
- Industrial and Labor Relations
- Nutritional Sciences
- Officer Education

Group 2: Graduate professional divisions
- Law
- Management
- Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

Advanced Placement

Credit for Advanced Placement

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate education.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

a. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, NJ. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 7–9.

b. Acceptable performance on a Cornell department exam (offered only in some subjects, usually during orientation).

c. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.

d. International credentials from "A" level IB Examinations.

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate exam as described in paragraph a or b above.

The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject, recommends AP credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell rests with each individual college. For policies governing use of advanced placement in a specific college, students should consult the relevant section of Courses of Study or their college or school office. Students need not accept advanced placement. They may

Accreditation

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell’s accreditation can be found at www.ipr.cornell.edu/Accreditation/Status. Requests to review additional documentation supporting Cornell’s accreditation should be addressed to Michael Matier, Director, Institutional Research and Planning, Cornell University, 440 Day Hall, Ithaca, NY 14853-2801, mmw5@cornell.edu.
repeat the course they have placed out of, thereby relinquishing the advanced placement credit.

Advanced placement examinations. Entering freshmen should have their scores from CEEB Advanced Placement Examinations sent to their college or school registrar’s office (see list below).

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations appears in the orientation booklet mailed in late summer to entering students. The departments that award advanced placement and credit on the basis of departmental examinations are shown on pages 7-11.

Transfer of credit. Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list at the end of this section).

Written inquiries. Students can address questions to departments, schools, or college offices by adding Ithaca, New York 14853 to the addresses given in the following sections.

College of Agriculture and Life Sciences
140 Roberts Hall
College of Architecture, Art, and Planning
B1 West Sibley Hall
College of Arts and Sciences
172 Goldwin Smith Hall
College of Engineering
158 Olin Hall
School of Hotel Administration

College of Human Ecology
N145 Van Rensselaer Hall
School of Industrial and Labor Relations
101 Ives Hall

ADVANCED PLACEMENT AND CREDIT FOR INTERNATIONAL CREDENTIALS

Following are the policies currently in effect for G.C.E. "A" Level Examinations and International Baccalaureate Higher Level Examinations. Students may submit results of the French Baccalauréat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during orientation week.

General Certificate of Education (GCE) Advanced ("A") Level Examination passes are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate in order to receive credit.

Following is a list of subjects and the marks for which credit will be awarded:

DETERMINATION OF CREDIT AND PLACEMENT

The tables on pages 7–9 provide information on how credit and placement are determined for most subjects. Supplementary information for subjects requiring additional explanation is provided below.

Biological Sciences

Any student who earns a score of 5 on the CEEB Advanced Placement Examination in biology may elect to receive eight credits and be exempted from all introductory biology courses.

Students not majoring in biological sciences who score a 4 may earn six advanced placement credits. This will satisfy the distribution requirement in biological sciences in the College of Human Ecology, a portion of the group B distribution requirement in the College of Agriculture and Life Sciences, and a portion of distribution in science and quantitative reasoning in Arts and Sciences.

Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4.

The student receiving a score of 4 must fulfill the introductory biology requirement by taking BIO G 101–102, 101/103, 102/104, or 103–104 or 105 or 106 (Biological Sciences, Lectures and Laboratory). These students should consult information available in the BIO G 101–104 course office (1140 Comstock Hall) and in the Office of Undergraduate Biology (216 Stimson Hall) to determine which semester to complete the introductory biology requirement. For students in doubt, BIO G 101/103 or BIO G 105 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

†Cornell Advanced Standing Examination. Contact Calleman Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zabal, 183 Goldwin Smith Hall, for German.
Chemistry and Chemical Biology
The Department of Chemistry and Chemical Biology offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207–208, an eight-credit sequence that covers qualitative analysis, and Chemistry 215–216, a nine-credit sequence that includes qualitative and quantitative analysis.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in the Chemistry and Chemical Biology Instructional Office, 138 Baker Laboratory.

The specific course(s) in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to the department. A score of 5 on the CEEB examination entitles a student to four credits. A student who is permitted to take Chemistry 215–216 and should consult the Chemistry 215 instructor or department staff.

Mathematics and Statistics
The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this catalogue.

The non-engineering freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB’s two Advanced Placement Examinations (Calculus AB or Calculus BC) during their senior year.

Students who have been awarded Advanced Placement credit for calculus or statistics may not also receive academic credit for similar courses taken at Cornell. In particular, students who have been awarded AP credit for 1 semester of calculus (4 academic credits) may not also receive academic credit for any first-semester calculus course (MATH 106, 111, 121, 190, 191). Students who have been awarded AP credit for 2 semesters of calculus (8 academic credits) may not also receive academic credit for any first-semester calculus course (MATH 106, 111, 121, 190, 191) nor for any second-semester calculus course (MATH 112, 122, 192). Arts & Sciences students receive a maximum of 8 credits for AP Math AB and BC combined. Finally, students who have been awarded AP credit for statistics (3 academic credits) may not also receive academic credit for any of the introductory statistics courses BTRY 100, ILRST 210, or MATH 171.

The following rules apply to students in all colleges and programs except the College of Engineering and the Biological and Environmental Engineering (BEE) program in the College of Agriculture and Life Sciences. Rules applicable to these engineering programs are provided near the end of this section.

Students with a score of 3 or 5 on the BC examination may take any of the following third-semester courses (MATH 221, 223, or 213). Students with these scores who wish to take courses in the engineering calculus sequence and who have had no multivariable calculus may give up their AP credit for the second semester and take the second-semester engineering calculus course, Math 192. On the other hand, scores of 4 or 5 on the BC examination who can also demonstrate sufficient mastery of introductory multivariable calculus (which is covered in MATH 192 but not on the BC examination) may obtain permission from the Department of Mathematics to take either of the second-year engineering calculus courses, MATH 293 or 294.

Borderline passing score of 3 on the AB examination or an AB subscore of 3 on the BC examination, who wish to continue with calculus, are strongly advised to take MATH 112 rather than the more demanding courses 122 or 192. Advanced placement credit will be awarded appropriately; however, no credit will be granted for a score of 1 or 2 on the AB examination, nor for a score of 1 or 2 on the BC examination unless the AP subscore on that examination is at least 3.

A placement examination in mathematics for non-engineering students is offered at Cornell only during Orientation Week and should be taken by
1) students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination; or
2) students who believe that the placement examination is not adequate for their needs.

The exam covers the material of the AP calculus program. Students are strongly urged to take this departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any advanced placement grade on this test does not become a part of the student's record. No advance registration for the departmental examination is necessary.

The College of Engineering and the Biological and Environmental Engineering (BEE) program in the College of Agriculture and Life Sciences will give credit for MATH 191 (4 credits), and permission to take MATH 192, for a score of 3, 4, or 5 on the BC examination, or the score of 5 on the AB examination, or for a satisfactory score on the Engineering Mathematics Placement Examination.

Credit for MATH 191 and 192 (8 credits), and permission to take MATH 293 or 294, will be given to students in the Engineering College or BEE program who achieve a substantially higher score on the Engineering Mathematics Placement Examination.

Students will receive academic credit for two semesters of calculus, and permission to take any third-semester calculus course, for scores of A or B on the General Certificate of Education (GCE) Advanced ("A") Level Examination, or scores of 5 or 6 on the International Baccalaureate (IB) Higher Level Examination, in mathematics. They will receive credit for one semester of calculus, and permission to take any second-semester calculus course, for scores of C on the GCE "A" Level Examination. These rules for international credentials in mathematics apply to all students, including those in engineering programs.

Modern Foreign Languages
Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See “Placement Tests and Advanced Placement credit” under “Foreign Language Requirements” in the Arts and Sciences section of this catalog. Students who have had a year of formal study or substantial informal study since they last took a placement test may be awarded advanced placement credit again during Orientation Week if they plan to continue course work.
Advanced standing credit may be entered on a student's record as follows:

1) Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, earn three credits, and are eligible to take Cornell's Advanced Standing Examination (CASE). Outstanding performance on this examination can result in three additional credits.

2) Students who achieve a minimum score of 65 on the Cornell language placement test given during Orientation Week are eligible to take Cornell's Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

3) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student's Cornell record.

4) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of six credits if they can demonstrate proficiency equivalent to coursework on the 200 level or above at Cornell. Additional credit will be awarded only to those who complete advanced college courses in their native language.

Information about times and places of placement tests is available in the orientation booklet and from Academic and Career Counseling Services on the web at dml.cornell.edu/html/place/testschedule.html. For more information, see the College of Arts and Sciences section on language course placement, or contact Callie Hale, 303 Morrill Hall for French, Italian, and Spanish; Miriam Zubal, 183 Goldwin Smith Hall, for German; Doreen Silva, 226 Morrill Hall, for Russian; Kim Robinson, 388 Rockefeller Hall, for Asian languages, Nava Scharf, 350 Rockefeller Hall for Hebrew; Munther Younes, 421 Rockefeller Hall, for Arabic.

Music
Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during Orientation Week. If special arrangements are made, the examination may be administered at other times during the academic year. Inquiries may be directed to the Department of Music (telephone: 607-255-4997).

Physics
Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (which may be taken during Orientation Week or at other times as arranged). For information about the departmental examination, students should contact the director of undergraduate studies, 101 Clark Hall, or the department chair, 109 Clark Hall.

Physics B: Students earning a score of 4 or 5 may receive eight credits for noncalculus-based Physics 101 and 102. Those earning a score of 3 in physics B and a score of 4 or 5 in calculus BC may choose to accept four credits in calculus-based PHYS 112 or 207 instead of eight credits in PHYS 101 and 102.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the student to plan and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, University Health Services, or the Bursar.

Individuals must become registered students by the end of the third week of the semester or they will be subject to a financial penalty. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

COURSE ENROLLMENT
Pre-course enrollment for each semester at Cornell takes place one week through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

</tr>
</tbody>
</table>

*Consult the college office for special considerations and requirements.
†Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.
AUDITING COURSES
Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

LEAVES AND WITHDRAWALS
A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specific time, after which the student is expected to return to resume course work. Students should inform their college of intent to return. A student may withdraw from the university at the student's discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave. Medical leaves are granted and processed through University Health Services.

Internal Transfer Division
Students may not always be satisfied with the original Cornell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255–4966).

Excess-Hours Tuition

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

*Residency status is determined at the time of admission by the college. Change in residency status is determined by the University Bursar.

Fees and Expenses
Undergraduate applicants to Cornell pay a nonrefundable $65 application fee when submitting an application for admission. The graduate application fee is $65. Application to the Johnson Graduate School of Management costs $150.

Tuition Refund Policy
Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.

First-time matriculants will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second and third weeks, 20 percent; fourth week, 50 percent; fifth and sixth weeks, 40 percent; seventh week, 50 percent; eighth and ninth weeks, 60 percent; tenth week to the end of the semester, 100 percent.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

Class Attendance, Meeting Times, and Examinations

Class Attendance and Absences

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

50 MIN 03:35 PM 04:25 PM

No evening classes

No classes or laboratory exercises are to be held between the hours of 4:25 p.m. and 7:30 p.m. Monday through Thursday, after 4:25 p.m. on Friday, after 12:20 p.m. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theatrical, employment, etc.).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty.

All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.
FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the Course and Time Roster and the Course and Room Roster, both of which are published through the Office of the University Registrar each semester and on the web at www.comell.edu/Academic/class.html.

General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar’s office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

a) Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final criticism, oral presentation, or conference) be conducted or due during the period set aside for final examinations.

b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.

c) Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be held for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelins" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m. An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D−; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first two weeks of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality-Point Equivalent</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>4.3</td>
</tr>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A−</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B−</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C−</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>D−</td>
<td>0.7</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
</tr>
</tbody>
</table>

This is how a term average is computed:

\[
\text{Average} = \frac{\sum \text{Points}}{\sum \text{Credits}}
\]

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Points</th>
<th>Credits</th>
<th>Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemistry 103</td>
<td>B+</td>
<td>3.3</td>
<td>3</td>
<td>9.9</td>
</tr>
<tr>
<td>English 151</td>
<td>C−</td>
<td>1.7</td>
<td>3</td>
<td>5.1</td>
</tr>
<tr>
<td>DEA 145</td>
<td>B</td>
<td>3.0</td>
<td>4</td>
<td>12.0</td>
</tr>
<tr>
<td>CEH 100</td>
<td>B</td>
<td>3.0</td>
<td>3</td>
<td>9.0</td>
</tr>
<tr>
<td>DEI 111</td>
<td>C</td>
<td>2.0</td>
<td>3</td>
<td>6.0</td>
</tr>
</tbody>
</table>

Total 16 42.0

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

A. the S-U system have symbol equivalents which are uniform within the university. "S" means C− or above; "U" means D+, D−, or failure.

B. S-U options be chosen by the student during the first three weeks of the term.

C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U.

Any change in grading options must be announced by the instructor within the first two weeks of the term.

D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades.

The rules for the S-U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences. (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

Architecture, Art, and Planning. (a) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (b) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may be elected during Pre-Course Enrollment or with the written permission of the instructor and adviser on an add/drop form in the first 3 weeks of classes. (c) Decision is irrevocable after first three weeks of term.

Graduate School. (a) Seminars and Thesis Research courses are usually graded S-U, and should be registered accordingly or a grade
error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

Hotel. (a) Maximum of four free-elective credit hours per term. (b) Exceptions are by petition only.

Human Ecology. (a) Not part of student's major. (b) May be used in the 19 hours required outside the major in Human Ecology courses. (c) Not part of hours required in humanities, social sciences, and social sciences. (d) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (e) Freshmen enrolled in ENGL 137 and 138, which are only offered for S-U credit, are permitted to apply these courses to the freshman seminar requirement. (f) Total of 12 credits in S-U courses (not counting PD) may be counted towards degree requirements during a student's college career.

Industrial and Labor Relations. (a) This option may be elected, if available in I&LR electives, or in out-of-college electives but not including directed study. (b) A student may be exempted from this requirement if approved by the Educational Policies Committee. (c) Student must also be in good academic standing. (d) A "U" is considered the equivalent of an "F" in determining a student's academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

Internal Transfer. (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (a) There is one foundation course in the veterinary curriculum that is offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor.

INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:
1) the student has a substantial equity at a passing level in the course with respect to work completed, and
2) the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor; not the mere presence of incomplete make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, B7 Day Hall.

University Requirements for Graduation

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

PHYSICAL EDUCATION

Classes

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell. Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied. Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

Student Records Policy

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of their rights concerning their education records. Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The law gives students the right to:

a) inspect and review their education records;

b) challenge contents of education records;

c) a hearing if the challenge is unsatisfactory;

d) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;

e) prevent disclosure of personally identifiable information;

f) secure a copy of the institutional policy which includes the location of all education records' and

g) file complaints with the Department of Education concerning institutional failure to comply with the act.
16

GENERAL INFORMATION - 2002-2003

Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), degrees earned, and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the office of the university registrar in writing within 10 days of the date of official university registration. Students may rescind their no release request at any time in writing to the office of the university registrar.

"Cornell University Policy on Access to and Release of Student Education Records" is available on the web at URL: www.univco.cornell.edu/policy/asi.html.

POLICY ON POSTING OF STUDENT INFORMATION

In compliance with the university's policy on student educational records, and the U.S. Department of Education's Family Educational Rights and Privacy Act of 1974 (FERPA), restricted student information may not be posted.

Accordingly, the following student information is considered restricted and therefore may not be posted:

- Student social security number
- Student identification number
- Courses elected
- Grades earned
- Grade point average
- Class rank
- Date of birth
- Place of birth
- Home telephone listing
- Academic and disciplinary actions
- Student or administrative committees
- The most recent student educational records from previous educational agency or institution
- Financial arrangements between the student and the university
- Any other education record containing personally identifiable information

For further information, please refer to the revised Policy on Access to and Release of Student Education Records on the web at www.univco.cornell.edu/policy/asi.html.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the Code of Academic Integrity and Acknowledging the Work of Others is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy is published in the Policy Notebook, available free of charge from the office of the dean of students.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board for all university projects that use humans as research subjects, assuring compliance to federal regulations protecting human subjects in research at universities. A human subject is defined by federal regulations as "a living individual about whom an investigator obtains data through intervention or interaction with the individual, or identifiable private information." Projects affected by regulation include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents or records in which there are individual identifiers. All proposals involving human subjects in any category, including those initiated by students, must be submitted to the University Committee on Human Subjects for review before the research projects begin. The guidelines for the use of human subjects in research are available at http://www.osp.cornell.edu/Compliance/UCHS/homepageUCHS.htm. Inquiries and communications about the guidelines should be directed to the committee's executive secretary, 115 Day Hall (255-2945).

USE OF ANIMALS FOR COURSES

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered.

Guidelines for Faculty and Students with Respect to the Use of Animals in Instruction

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.

2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in the Announcement "Courses of Study" should alert students to this fact.

3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.

4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.

5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor in the course.

6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.

7. When students object on ethical or other valid grounds, to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives, for learning the same material.

8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the Chair of the Institutional Animal Care and Use Committee (IACUC) at 253-3735 or by e-mail at iacuc@cornell.edu.

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832)

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2003

Morrison, Toni, novelist
Rabinovich, Itamar, historian of the Middle East, diplomat
Frank H. T. Rhodes Class of '56 University Professorship

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of '56 University Professorship in honor of Cornell's ninth president (1977-1995). The purpose of the Rhodes Class of '56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of '56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of '56 Professors visit the campus for a minimum of two weeks to engage in a variety of activities including public lectures, participations in ongoing courses, and collaborative research.

Selected Applied Mathematics Courses

Basic Graduate Courses in Mathematics and Applied Mathematics

MATH 413-414 Honors Introduction to Analysis
MATH 433-434 Honors Introduction to Algebra
MATH 436 Applications of Abstract Algebra
MATH 611-612 Real and Complex Analysis
MATH 615-616 Mathematical Methods in Physics
MATH 621 Measure Theory and Lebesgue Integration
MATH 622 Applied Functional Analysis
MATH 651-652, 654 Algebra
MATH 651 Introductory Algebraic Topology
MATH 661 Geometric Topology
T&AM 612-613 Methods of Applied Mathematics

Analysis (and Differential Equations)

MATH 427 Introduction to Ordinary Differential Equations
MATH 428 Introduction to Partial Differential Equations
MATH 617 Dynamical Systems
MATH 618 Smooth Ergodic Theory
MATH 619-620 Partial Differential Equations
MATH 652-653 Differentiable Manifolds
MATH 662 Riemannian Geometry
MATH 711-712 Seminar in Analysis
MATH 713 Functional Analysis
MATH 715 Fourier Analysis
MATH 722 Topics in Complex Analysis
MATH 728 Seminar in Partial Differential Equations

Logic and Theory of Computing

COM S 671 Introduction to Automated Reasoning

M&A 736 Theory of Computational Aerodynamics
M&A 737 Computational Fluid Mechanics and Heat Transfer
The Cornell Center for the Environment (CfE) coordinates interdisciplinary research, teaching, and outreach programs on environmental issues. CfE's overarching goal is to continuously advance an intellectual community for the environment at Cornell University, with the objective of promoting a sustainable future. To meet this goal, CfE:

- initiates environmental courses and curricula at both the graduate and undergraduate levels;
- facilitates interdisciplinary environmental research;
- coordinates outreach programs that assist federal, state, and local government, international agencies, private organizations, businesses, and individuals;
- organizes environmental events, lectures, festivals, and seminars; and
- serves as a clearinghouse for environmental information.

CfE is home for several environmental agencies.

**Rice Hall (255-7535)**

**Cornell Center for the Environment**

Rice Hall (255-7535)

The Cornell Center for the Environment (CfE) coordinates interdisciplinary research, teaching, and outreach programs on environmental issues. CfE's overarching goal is to continuously advance an intellectual community for the environment at Cornell University, with the objective of promoting a sustainable future. To meet this goal, CfE:

- initiates environmental courses and curricula at both the graduate and undergraduate levels;
- facilitates interdisciplinary environmental research;
- coordinates outreach programs that assist federal, state, and local government, international agencies, private organizations, businesses, and individuals;
- organizes environmental events, lectures, festivals, and seminars; and
- serves as a clearinghouse for environmental information.

The CfE web page (www.cfe.cornell.edu) is the principal source of environmental information for Cornell students, faculty, and staff. Check it frequently for the latest updates on funding, seminars, courses, lectures, events, research opportunities, and new educational programs.

**EDUCATION**

Undergraduates and graduates can study the environment through programs in Cornell departments, centers, and institutes. Cornell has a strong tradition in environmental studies, with over 200 faculty across campus from the natural, biological, and social sciences working on various environmental issues.

**Undergraduate Education**

For undergraduate students, a listing of environmental course offerings is posted on the CFE web page (www.cfe.cornell.edu) along with a listing of majors for students interested in the environment.

**Graduate Study**

Graduate level environmental concentrations are found in many of Cornell's "Major Fields of Study," from Applied Economics and Management to Zoology. Similarly, there are opportunities for further study through graduate minors. The Center for the Environment administers several graduate programs, including the Masters Program in Environmental Management, the Environmental Toxicology Graduate Field, and the Conservation and Sustainable Development minor.

**Master's Program in Environmental Management (MPS-EM).** Resolving complex environmental problems requires more than technological solutions and technical expertise. Environmental professionals also need broad-based administrative, analytical, and managerial skills to make cost effective decisions, perform impact analyses, effectively engage stakeholders, and work in a fluctuating legal, political, and regulatory arena. The MPS-EM Program is organized with these demands in mind. For more information, contact CFE's education coordinator (607-255-7535 or cucfe@cornell.edu).

**Environmental Toxicology.** CFE is the administrative home of the Environmental Toxicology Graduate Field. The field offers a multidisciplinary science program leading to an M.S. or Ph.D. degree. The three major areas of concentration in the program are cellular and molecular toxicology, food and nutritional toxicology, and ecotoxicology and environmental chemistry. The graduate program prepares students for professional opportunities in academia, industry, private research institutes, and governmental agencies.

**Beyond the Classroom**

Students interested in the environment will find many organizations, resources, and activities beyond the classroom setting, both on campus and in the regional area. CfE sponsors guest lectures and co-hosts conferences with groups from across the campus. In addition, CfE organizes the annual Cornell Environmental Film Festival, the Jilt and Ken Iscol Distinguished Environmental Lectures, and the Environmental Career Fair.

**Research and Outreach**

CfE is home for several environmental institutes offering students opportunities for study, project work, research, and outreach. These programs are focused on a variety of issues from watershed management to sustainable economic development, to environmental risks. CfE programs include:

- Water Resources Institute (WRI)
- Institute for Comparative and Environmental Toxicology (ICET)
- Waste Management Institute (WMI)
- Institute for Resource Information Systems (Cornell IRIS)
- Program on Breast Cancer and Environmental Risk Factors in New York State (BCERP)
- Environmental Inquiry (EI)
- Environmental Risk Analysis Program (ERAP)

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255–6370)

The Mario Einaudi Center for International Studies, established in 1961 to encourage and support comparative and interdisciplinary research on international subjects, is one of the largest and most diverse centers of its kind in the United States. Currently, it includes four U.S. Department of Education Title VI National Resource Centers and 16 other area, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center’s programs with well over 300 graduate students involved directly in its international programs. Undergraduate students may choose concentrations in International Relations, Latin American Studies, Modern European Studies, East Asian Studies, South Asian Studies, or Southeast Asian Studies. (See also Africana Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

Cornell’s international programs are poised to anticipate and respond to changing global circumstances and perspectives. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot activities that bring faculty and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty and students. Together with the Peace Studies Program, the center hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty in discussion of key world events. Besides the educational and research opportunities the Einaudi Center makes available on the Ithaca campus, it also provides foreign study options for undergraduate students through the Cornell Abroad Program. The Center promotes graduate students’ overseas field research through an annual competition for travel grants and assistance with other fellowship programs. The Fulbright fellowship program, administered by the center, is available to graduating seniors as well as graduate students. The center also is the administrative home of the International Students and Scholars Office, the principal campus resource serving Cornell’s large international community.

Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system with 2,500,000 volumes related to international and comparative studies.

CENTER FOR THE STUDY OF INEQUALITY

Office: 363 Uris Hall
Telephone: 607-254–8674
Fax: 607-254–8672
Email: inequality@cornell.edu
URL: www.inequality.cornell.edu
Executive Administrator: Jessica Henning
(jh322@cornell.edu)

The Center for the Study of Inequality (CSI) fosters basic and applied research on social, economic, and cultural inequalities and the processes by which such inequalities change and persist. The study of inequality lies at the heart of current debates about welfare reform, affirmative action, the “gated community,” globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because of the way that such inequalities change and evolve with respect to race, ethnicity, and gender. The mission of CSI is to support research and teaching relevant to issues of inequality, to disseminate research findings coming out of this research, and to otherwise facilitate the study of inequality in the United States and throughout the world.

Symposia and Lecture Series

The CSI regularly sponsors symposia, workshops, and lecture series that draw attention to the most pressing problems and controversies in the field. The current schedule of symposia and lecture series is listed on the Center website (www.inequality.cornell.edu).

Research Support

For faculty affiliates of CSI, small seed grants for equality-relevant research are available, especially for research that has the potential to attract external funding. The center also runs a small grant program that supports graduate and undergraduate research on poverty or inequality. The application deadline for all grants is May 1, 2003 (for further details, see www.inequality.cornell.edu/support/index.shtml).

Internships

The CSI serves as a clearinghouse for student internships that are relevant to the study of inequality. For a full listing of possible
Dissemination
The working paper series on the Center website assists in disseminating research findings, opinion pieces, and related scholarship from some of the top scholars of inequality in the world. This series can be found at www.inequality.cornell.edu/publications/index.shtml.

Awards
The CSI presents a Distinguished Book Award and Distinguished Paper Award for publications that significantly expand our understanding of inequality. The recipients are invited each year to Cornell University to present their research (see www.inequality.cornell.edu/publications/awards.shtml).

Undergraduate Concentration
The Inequality Concentration allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. The Concentration is organized into tracks examining such topics as globalization and inequality, social policy, the ethics of inequality, poverty and economic development, social movements, education and inequality, race and ethnicity in comparative perspective, the family and inequality, and literature, postmodernism, and inequality. The Concentration is open to students enrolled in any of the seven Cornell undergraduate colleges. If the requirements of the Concentration are met, a special notation to that effect will be recorded on the transcript (see www.inequality.cornell.edu/academics/undergraduate.shtml for further information).

For more information about CSI, please contact Jessica Henning, Executive Administrator of CSI (254-8674 or inequality@cornell.edu).

CORNELL ABROAD
474 Uris Hall 607/255-6224, fax 607/255-8700, e-mail: CUAbroad@cornell.edu
web homepage: www.einaudi.cornell.edu/cuabroad

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly at the desired location. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA
Botswana, Cameroon, Kenya, Madagascar, Tanzania, Uganda: School for International Training;

Kenya: Wildlife Management (School for Field Studies);

South Africa: Universities of Cape Town and Natal

ASIA
China: Chinese University of Hong Kong; *Cornell FALCON for the spring or fall semester at the Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing and Fudan Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Beijing;

India: School for International Training; St. Stephen's College, Delhi (through Brown or Rutgers Universities);

Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);

Japan: *Kyoto Center for Japanese Studies; various university programs; IES Tokyo;

Korea: Yonsei University;

Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;

Thailand: Khon Kaen University (CIEE);

Vietnam: University of Hanoi (CIEE);

AUSTRALIA AND NEW ZEALAND
Australia:
Australian National University, Canberra, University of Sydney, University of Melbourne, University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training, Sydney Internship (Boston University);

New Zealand:
Otago and Lincoln Universities in New Zealand;

EUROPE
Denmark: *Denmark's International Study Program (DIS);

France: *EDUCO (Cornell, Duke, and Emory in Paris) at Universite de Paris VII, Paris I, Institut d'Etudes Politiques de Paris ("Sciences Po"); Critical Studies Program at the National University of Paris (CIEE); Paris Internship (Boston University); IES Dijon Business Program

Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg.

Undergraduate Programs
An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive coursework in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Concentration" in the College of Arts and Sciences section. Contact Linda LeVan (255-6431 or cogst@cornell.edu).

Graduate Programs
Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as Philosophy, Computer Science, Linguistics, Psychology, Neurobiology and Behavior, Philosophy, Computer Science, Design and Environmental Science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies focuses on the nature and cognition and the nature of intelligent systems. It approaches thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Human Development, Linguistics, Mathematics, Mechanical and Computer Engineering, Neurobiology and Behavior, Philosophy, Psychology, Science & Technology Studies, and Sociology, as well as the Johnson Graduate School of Management.

Courses
Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences.

Locations Abroad
Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in more than 40 countries. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.
Greece: College Year in Athens; France: University of Paris; Hungary: Budapest University of Technology and Economics; Germany: Free University of Berlin; Sweden: University of Umeå; Netherlands: University of Amsterdam; Leiden University; Russia: St. Petersburg University (CIEE); Slovenia: University of Ljubljana; Spain: Comillas Business School; Portugal: University of Porto; Argentina and Chile: various university-affiliated study abroad programs; Belize, Brazil, Chile, Ecuador: School for International Training; Cuba: the University of Havana through COPA; School for International Training; Ecuador and Jamaica: Partnership for Service Learning; Honduras: Escuela Agrícola Panamericana (Zamorano); Mexico: Instituto Tecnológico de Estudios Superiores de Monterrey (ITESM); Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California; MIDDLE EAST AND NORTH AFRICA: Egypt: American University in Cairo; Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University; Jordan: University of Jordan (CIEE); Lebanon: American University of Beirut; Morocco: School for International Training.

Other Locations: Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Czech Republic, Dominican Republic, Finland, the Philippines, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere.

Who Studies Abroad: Students from all seven undergraduate colleges and from all major fields study abroad; they are expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long: Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic year programs are highly recommended.

Application Process: Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, talk with staff, and attend information meetings. The Cornell Abroad web site is an excellent resource for program offerings and links to universities and programs worldwide, as well as for comprehensive information on all aspects of study abroad. Students meet with the study abroad advisers in their colleges to discuss how they will meet college degree requirements. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty adviser and the college study abroad adviser. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering and Applied Science, and Engineering and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The application deadline for study abroad in the fall 2003 semester and the 2003–2004 academic year is February 15, 2003, for all programs except Oxford and Cambridge, for which the deadline to study at those universities is November 1, 2002. Many universities and programs adimit on a rolling basis and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades: Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution or program overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review coursework taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcripts will include the names of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements: Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent, of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Indonesia, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language coursework require at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisers about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.
Housing Arrangements
Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs
Students studying abroad on Cornell programs pay a uniform Cornell Abroad Tuition per semester, which covers tuition, housing, orientation, some field trips, and excursions. Some or all meals may be included also.

Financial Aid
Students applying for study abroad are eligible for merit-based scholarships. Cornell Abroad will provide financial aid to students based on prorated formulas. The Cornell Abroad website contains detailed information about the financial aid available for study abroad.

Sources of Information and Advice Concerning Study Abroad
Cornell Abroad offers a wide range of resources to help students plan for study abroad.

College Study Abroad Advisers

Cornell in Washington Program
http://ciw.cornell.edu
311 Caldwell Hall (255-4090)

Cornell in Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries, offers an opportunity to explore American history, literature, and the full range of the American humanistic tradition. The Cornell in Washington Program offers two study options: (1) studies in public policy; and (2) studies in the American experience. Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students are on the upper floors.

The Cornell in Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

Tuition
Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing
Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each one-bedroom apartment.

Applications
Application forms are available from the Cornell in Washington office at 311 Caldwell Hall. Students may also apply on line at http://ciw.cornell.edu. Applications should be submitted the semester prior to participation.
The Cornell in Washington website is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell in Washington office at 311 Caldwell Hall (607) 255-4000, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

The Cornell Institute for Public Affairs (CIPA) offers a university-wide two-year program of graduate professional studies leading to a Master of Public Administration (MPA) degree. We seek to educate creative leaders for government, for nonprofit organizations, and for the private sector's interface with both. We are preparing people to make sensible things happen in complex environments at the local, state, national, and international levels.

The world needs capable creative leaders who can deal effectively with the emerging issues of public affairs. The opportunities to work constructively are expanding rapidly for those who are well prepared, and CIPA graduates are finding that their talents are in demand. They are joining the worldwide community of professionals who reach across public and private spheres to bring about positive change in the public arena. They are working to make the world a better place.

CIPA graduates are employed in a broad range of activities. Some are publicly elected officials; others hold professional appointments. Our alumni are represented in governments at all levels, in foundations, in consulting firms, in the United Nations, in nongovernmental organizations, in universities, and in many areas of the private sector. Several of our Fellows (students) have won the distinguished Presidential Management Internship award, and many of our graduates have gone on to further study in law school or PhD programs.

Faculty

We are particularly proud of the depth and flexibility of our program. It is not confined within a single school or college, but spans the entire university. Over ninety faculty members of the Field of Public Affairs, from a diverse cross section of schools, departments and programs, welcome CIPA Fellows into their courses and serve on thesis committees. About thirty members of this group, known as Program Faculty, teach many of the Area Requirement courses. Within this group, five members serve as Core Faculty providing instruction in the Core Courses. These include David B. Lewis, CIPA director, City and Regional Planning; Nancy Chau, Applied Economics and Management; Arch Dotson, Government; Ted Lowi, the John L. Senior Professor of American Institutions in the Department of Government; Peter Stein, Physics and Nuclear Studies.

Advising

Each Fellow has an academic advisor, and together they develop the student's academic plan, focusing on the student's individual interests. With the resources available at Cornell, a CIPA Fellow can elect to concentrate in virtually any area of public affairs. Fellows frequently take courses in the Law School, the Graduate School of Management, the Division of Nutritional Sciences, the College of Arts and Sciences, the School of Industrial and Labor Relations, the College of Agriculture and Life Sciences, the College of Engineering, the College of Architecture, Art, and Planning, the Hotel School, and the College of Human Ecology. They may also choose to participate in cross-disciplinary initiatives such as the Latin American Studies Program, the Cornell International Institute for Food, Agriculture, and Development, and the Institute for African Development.

Complementary Degrees

The Master of Public Administration may be obtained by obtaining a degree in conjunction with other degrees, such as a JD from the Cornell Law School, an MBA from the Johnson School of Management, an MMH from the Hotel School, or an MRp from the City and Regional Planning.

Undergraduate to Master's Program

An accelerated program for Cornell undergraduates allows students to apply to CIPA in their junior year, begin preparatory coursework in their senior year, and complete the MPA in just one year beyond their undergraduate studies.

Core Courses

These foundation courses provide a platform for further study and specialization. Through their core studies, students delve into government and public policy, quantitative methods, program management, international trade policy, and attend weekly colloquia where invited speakers discuss current issues of public policy.

Area Requirements

These courses enable students to develop broad, long-term public policy skills for professional work. Students acquire competence in administration, politics and public policy, economics, math/statistics, public finance, regulation, ethics, and public law.

Individual Concentration

Each CIPA Fellow selects a program concentration in a subject area of personal interest. Cornell has particular strengths in the following broad areas.

- Health, Nutrition, and Social Services
- Global Economic Dynamics
- Regional Economic and Fiscal Policy
- Government, Politics, and National Security
- Education and Employment
- Discrimination and Social Justice
- Technology and Infrastructure
- Environment

Thesis

Each Fellow writes a thesis integrating conceptual tools, theories, and analytical techniques by applying them to a problem in his or her concentration. The culmination of study in the MPA program, the thesis is intended to be both critical and creative, reflecting the student's ability to identify and analyze important public policy questions and generate practical solutions.

Residence Requirement

Students are required to spend four semesters in study to complete the MPA in CIPA. Those who enroll in the Cornell Undergraduate to Master's Program can earn the equivalent of two semesters in residence during their senior year.

Internships

CIPA has study/internship programs at the local, state, national and international levels. The following opportunities are available to CIPA Fellows:

Local

CIPA Fellows have been placed in internships throughout the City of Ithaca and Tompkins County. CIPA Fellows have worked in the Mayor's Office, Ithaca Youth Bureau, Tompkins County Office for the Aging, County Workforce Development Board, Board of Representatives, Department of Planning, and Department of Health.

State

The New York State Assembly Graduate Internship program provides research and policy development experiences for qualified graduate students. It affords CIPA Fellows a unique professional learning experience and the opportunity to develop their understanding of the legislative process at the state level.

National

Cornell In Washington blends practical work experience, Cornell courses, and exposure to one of the world's great capital cities. It provides the opportunity to investigate and explore public policy from the prospective of institutions in the public, private, and non-profit sectors.

International

Many of our CIPA Fellows are placed in summer or semester internships with the United Nations either in New York City or overseas in areas such as Africa. Through the Cornell in Rome Program students have the opportunity to be placed in a United Nations internship while taking Cornell courses in Rome, Italy.

Student Organization

Fellows organize and manage a variety of professional development activities that provide opportunities to share their work experience and to meet distinguished faculty and practitioners in the field of public policy from around the world. Students schedule and coordinate the weekly Colloquium Program, they produce a debate-format television show (Point of View) that airs twice a week during the school year, and they publish a journal of student policy research (The Current). Student officers in the Cornell Public Affairs Society (CPAS) and Women in Public Policy (WPP) guide these endeavors. They are elected each November and serve for one calendar year.
Each spring, over the spring break period, CIPA students travel to Washington, D.C., where they attend a session of Congress and meet with government representatives and officials in organizations such as the World Bank and US Agency for International Development.

CIPA Fellows have a range of on-campus policy-related conferences to choose from each semester, sponsored by various public policy-affiliated programs. CIPA Fellows also attend national conferences such as APPAM (Association for Public Policy Analysis and Management).

Admission
Admission to CIPA is highly selective. A committee of faculty members evaluates individual applications for the following requirements:
- relevant undergraduate program of study
- strong grade-point average
- strong scores on the Graduate Record Examination (GRE)
- cogent Statement of Purpose
- good letters of recommendation

CIPA has a policy of rolling admission. For an application, or more information, contact Cornell Office for Public Affairs, 472 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: cipa@cornell.edu; web site: www.cipa.cornell.edu).

Financial Aid
Financial aid is limited. CIPA is pleased to consider students of unusual merit and documented need for assistance, but the Institute is unable to provide full fellowships for any student. CIPA Fellows often win support from Fulbright, Truman or World Bank fellowships. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers. Decisions concerning CIPA funding are made in March, so those wishing to be considered should complete the application by February 15.

CORNELL PLANTATIONS
One Plantations Road (255–3020)
Internet home page: www.plantations.cornell.edu

e-mail: plantations@cornell.edu

A place of exceptional diversity and learning opportunities, Cornell Plantations comprises the university’s botanical garden, arboretum, and natural areas. Its 3,000+ acres include the woodlands and gorges on and around campus, as well as specialized gardens and a 150-acre arboretum that features a field flower meadow and trees and shrubs hardy in central New York State. Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell’s academic programs and research in disciplines such as ecology and systematics, floriculture, ornamental horticulture, and bioengineering. While many of Cornell Plantations’ resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of wild vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these areas for classes and research can be made by calling Cornell Plantations.

Cornell Plantations also offers relaxation, rejuvenation, and inspiration. The vast open spaces provide room to breathe; while the intimate gardens provide respite from the busy campus. Visitors always discover surprises and learn something new in the gardens, which contain flowers, vegetables, international crops, rock garden plants, peonies, poisonous plants, ground covers, rhododendrons, wildflowers, and a winter garden.

Students are encouraged to volunteer as photographers, tour guides, computer assistants, gardeners and writers for our magazine and newsletter. A number of student internships are also offered each summer. Maps, information, publications, and class brochures (for noncredit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Noncredit courses in horticulture, landscape design, botanical arts, and natural history are offered throughout the year. A one-credit seminar series (HORT 480) is offered each fall; a three-credit Public Management garden course (HORT 485) is offered every other spring semester, and a Master of Professional Studies program offers fully funded fellowships in Public Garden Management.

PROGRAM ON ETHICS & PUBLIC LIFE
240 Goldwin Smith Hall (255–8515)

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics & Public Life (EPL) is Cornell’s initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL does not intend to create either an undergraduate major or a graduate field in Ethics & Public Life. On the contrary, the program seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under “Special Programs and Interdisciplinary Studies”).

EPL Core Courses

PHIL 194/GOVT 294 Global Thinking
PHIL 242/GOVT 260 Social and Political Philosophy
PHIL 246/B&SOC 206/S&TS 206 Ethics and the World Environment
PHIL 247 Ethics and Public Life
PHIL 342 Law, Society, and Morality
GOVT 469/PHIL 369 Limiting War: The Morality of Modern State Violence
GOVT 412 Voting and Political Participation

PROGRAM IN REAL ESTATE
114 West Sibley Hall (255–7110)

The two-year Master of Professional Studies in Real Estate (MPS RE) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial
or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate exists at Cornell University to serve as the integrating organizational unit for financial management and administration of academic and industry related real estate activities on and off campus. The Field of Real Estate is a committee of faculty members from several different colleges that is directly involved in the design and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also bring an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, real estate development process, real estate finance and investments, managerial finance, residential development, real estate law, construction planning and operations, and real estate marketing and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration, and there is a leadership and management training requirement. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate marketing and market analysis or international real estate concentrations). Students complete a real-world, semester long project workshop during their final semester.

Admissions

Applicants to the Program in Real Estate must have completed a Bachelors degree with a good academic record. Applicants must submit a resume plus two letters of recommendation either from faculty familiar with the applicant's academic work, or if appropriate, professional recommendations based on work experience. Competitive scores for either the GMAT (preferred) or GRE are required. International students, for whom English is a second language, will need to achieve a minimum TOEFL score of 250 (computer based) or 600 (paper based). There is no work experience required for admission; however, it is strongly preferred that applicants have at least some work experience, 3-5 years has been typical. For more information, contact C. Bradley Olson, Director of the Program in Real Estate, or Leila Aman, Graduate Field Assistant, at 607-255-7110, or e-mail real_estate@cornell.edu.

SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate work leading to the M.S. and/or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, geology/geophysics, biogeochemistry, hydrology, oceanography).
- Employment in environmentally-oriented careers in both the private and public sector at the B.S. or B.A. level.
- Advanced degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences and the College of Arts and Sciences. In the College of Engineering, the SES curriculum may be completed by choosing the SES option in the Department of Earth and Atmospheric Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES Curriculum

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

(1) Basic Math and Sciences
   a. MATH 111 and 112, or MATH 191 and 192, or MATH 190 and 192
   b. PHYS 207 and 208, or PHYS 112 and 213, if PHYS 214 will also be taken
      (see below)
   c. CHEM 207 and 208
   d. BIO 101/103 and 102/104 (or 105-106) or BIO 109 and 110

(2) Science of Earth Systems Core Courses
   - EAS 302 Evolution of the Earth System
   - EAS 331/ASTRO 331 Climate Dynamics
   - EAS 321/NRES 321 Introduction to Biogeochemistry

(3) Concentration Courses

Four intermediate to advanced-level courses (300-level and up) that build on the core courses and have prerequisites among the “Basic Math and Sciences” courses listed in (1). These classes build depth and provide the student with a specific expertise in some facet of earth system science. Possible areas of concentration include Climate Dynamics, Biogeochemistry, Ecological Systems, Environmental Geology, Ocean Sciences, Environmental Biophysics, Hydrological Systems, and Soil Science.

For more information contact Professor Kerri H. Cook, Department of Earth and Atmospheric Science, khc6@cornell.edu and visit the web site: www.geo.cornell.edu/SES/

DEPARTMENT OF STATISTICAL SCIENCE

301 Malott Hall (255-8066)

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Students interested in graduate study in statistics and probability can apply to the Graduate Field of Statistics or to one of the other graduate fields that have related course work. Students in the Field of Statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study, students should contact the Director of Graduate Studies, 301 Malott Hall.

The department also offers an undergraduate program through the Biometrics Unit in the College of Agriculture and Life Sciences and an Engineering Statistics minor in the College of Engineering. Undergraduate majors and
certificate programs are currently under development for other colleges. For information, contact the Undergraduate Coordinator, (301) Malott Hall, 255-4066. Statistics courses offered by the departments listed below will fill distribution requirements in many of the colleges.

A free consulting service is offered through the Biometrics Unit in the College of Agriculture and Life Sciences. Statistical consulting is available through the Office of Statistical Consulting, B21 Savage Hall, 255-1926.

The department is organized into four units: Biometrics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural statistics, biostatistics, economics and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

Course designations

The following course identifiers are used to designate the courses offered by the separate units: Biological Statistics and Computational Biology (CALS), STBYTRY: Engineering Statistics Unit (ENGR), STBYTRY: Mathematical Statistics Unit (ARTS), STMATH; Social Statistics Unit (ILR), STSOC. To enroll in one of the courses, see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

Department of Statistical Science

ST 501-502 Applied Statistical Analysis

This is the two-semester core course for students in the Master of Professional Studies (M.P.S.) degree program in applied statistics in the Department of Statistical Science. Enrollment is limited to students enrolled in the M.P.S. program. The course consists of a series of modules on various topics in applied statistics. Some modules will include guest lectures from practitioners. Parallel with the course, students complete a year-long, in-depth data analysis project.

ST 501: Applied Statistical Analysis. Letter only. Topics include, but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

ST 502: Applied Statistical Analysis. Letter only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

[ST 578: Statistical Methods for Reliability Survival Data] Prerequisites: OR 270 or equivalent, plus some senior elective level course in applied statistics such as regression, data mining or time series. This course will provide an introduction to probabilistic and statistical methodology for the analysis of life-length data. Because of the presence of such features as censoring, skewed distributions and time-varying covariates, special statistical techniques are required. Topics will include: life distributions, life tables, truncation and censoring. Kaplan-Meier estimate, accelerated life tests, Weibull and lognormal regression models, Cox proportional hazards model, regression diagnostics, system reliability, repairable systems reliability, repeated events. Use of statistical computing packages, such as SAS and S-plus, will be stressed to perform data analyses, although no previous experience will be assumed.

600: Statistics Seminar Fall and spring. 1 credit S-U only. Prerequisite or corequisite: BTRY 409 or permission of instructor.

Biometrics Unit

STBYTRY 100 Statistics and the World We Live In (enroll in BTRY 100)
STBYTRY 301 Statistical Methods I (enroll in BTRY 301)
STBYTRY 302 Statistical Methods II (enroll in BTRY 302)
STBYTRY 400 Biometry Seminar (enroll in BTRY 400)
STBYTRY 408 Theory of Probability (enroll in BTRY 408)

Program in Comparative and Environmental Toxicology

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

Graduate Studies

The graduate field of Environmental Toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breath and depth in many facets of environmental toxicology, and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and a minor concentration of risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

Courses

Courses in environmental toxicology are cosponsored by the university's academic departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new...
Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and management (only the second accredited undergraduate general business program in the Ivy League; College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, policy analysis and management (College of Human Ecology), industrial and labor relations, and sociology.

Applied economics and management. This is the undergraduate general business degree program at Cornell that is accredited by the AACSB—The Association to Advance Collegiate Schools of Business, the accrediting body for university business programs. Here students gain a general business degree, with courses spanning the fields of marketing, finance, management, accounting, business law, and human resources. Students also participate in specialized programs focusing on entrepreneurship, small business, food industry, management, and agribusiness.

Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the functioning of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities—more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many engineers enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

Hotel administration. The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of hotel administration and general management, human resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

Policy analysis and management. Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.

Industrial and labor relations focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employee.

Sociology. The program provides disciplined understanding of society and social issues. The insights and analytical skills you will acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools. (Also see the description of the Sociology and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

Related Areas

Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

Combined Degree Programs

Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-regrant program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.
1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.

2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophical reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students’ interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences. It may be possible for exceptionally well-qualified other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a one-year program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as The Nature, Functions, and Limits of Law, which are open to all undergraduates.

**PREMEDICAL STUDY**

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a first-year writing seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends on the student’s other interests.

**PREVETERINARY STUDY**

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below.

Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, *Admissions Information*, obtained by writing to the Office of DVM Admissions, College of Veterinary Medicine, Cornell University, S2-009 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor’s and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barneg Hall, Ithaca, New York 14853–1601.
ADMINISTRATION
Susan A. Henry, dean
William E. Fry, senior associate dean
John M. Finamore, associate dean for financial affairs
Mary Lou Doyle, assistant dean for human resources
Michael P. Riley, assistant dean for public affairs
H. Dean Sutphin, associate dean and director of academic programs
Donald R. Viands, associate director of academic programs
Jeffrey J. Doyle, director of undergraduate biology
Daniel J. Decker, associate dean and director of the Cornell University Agricultural Experiment Station
associate dean and director of cooperative extension
Edward D. Harwood, associate director of cooperative extension
Helene R. Dillard, associate director of cooperative extension
W. Ronnie Coffman, director of international programs
Norman T. Uphoff, director of Cornell International Institute for Food, Agriculture and Development
James E. Haldeman, associate director of international agriculture
Terry W. Tucker, associate director of international agriculture

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley
Registrar: Barbara Smith, Mary Milks, Patricia Auctis
Admissions: Robert Springall, Ann LaFave, Bermadette Soto, Bryan Nance
Career development: Amy Benedict-Augustine, Laurie Gillespie, Pamela Hampton
Minority programs: Catherine Thompson

Department Chairs
Applied economics and management: A. M. Novakovic, Warren Hall
Animal science: A. W. Bell, Morrison Hall
Atmospheric science unit (part of earth and atmospheric sciences): S. J. Riba, Bradfield Hall
Biological and environmental engineering: M. F. Walter, Riley-Robb Hall
Biological statistics and computational biology: M. T. Wells, Ives Hall
Communication: R. E. Ostman, Kennedy Hall

Crop and soil sciences: S. D. DeGloria, Emerson Hall
Ecology and evolutionary biology: N. G. Hairston, Corson Hall
Education: R. S. Caffarella, Kennedy Hall
Entomology: D. A. Rutz, Comstock Hall
Food science: J. H. Hotchkiss, Stocking Hall
Horticultural science: M. P. Pratts, Plant Science Building
Landscape architecture: K. L. Gleason, Kennedy Hall
Microbiology: S. H. Zinder, Wing Hall
Molecular biology and genetics: T. D. Fox, Biotechnology Building
Natural resources: B. A. Knuth, Fernow Hall
Neurobiology and behavior: R. M. Harris-Warrick, S. G. Mudd Hall
Plant breeding: W. R. Coffman, Emerson Hall
Plant pathology: R. Loria, Plant Science Building
Rural sociology: P. D. McMichael, Warren Hall
Statistical sciences: B. W. Turnbull, Mallott Hall

College Focus
The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills.
The college focuses on a broad-based education for its students, and on a problem-solving and basic research program. The program is geared to the discovery and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:
- Agriculture (production and marketing)
- Biological Sciences
- Community, Human, and Rural Resources
- Environment
- Food and Nutrition
- International

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.
Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Minority Programs, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture [M.P.S. (Agr.)]: H. D. Sutphin, Roberts Hall
Agricultural and Biological Engineering: D. J. Areshansley, Riley-Robb Hall
Agricultural Economics: D. R. Lee, Warren Hall
Animal Breeding: E. J. Pollak, Morrison Hall
Animal Science: R. L. Quaas, Morrison Hall
Atmospheric Sciences: D. S. Wilks, Bradfield Hall
Biochemistry, Molecular, and Cell Biology: W. J. Brown, Biotechnology Building
Biometry: M. Wells, Warren Hall
Communication: J. E. Shanahan, Kennedy Hall
Development Sociology: C. C. Geisler, Warren Hall
Ecology and Evolutionary Biology: D. W. Winkler, Corson Hall
Education (also M.A.T.): D. J. Trumbull, Kennedy Hall
Entomology: E. Shields, Comstock Hall
Environmental Toxicology: A. Yen, Rice Hall
Food Science and Technology: S. S. H. Rizvi, Stokking Hall
Genetics and Development: K. J. Kemphues, Biotechnology Building
Horticulture: N. L. Bassuk, Plant Science Building
International Agriculture and Rural Development [M.P.S. (Agr.)]: W. R. Blake, Morrison Hall
International Development: N. T. Uphoff, Warren Hall
Landscape Architecture [M.L.A.]: D. W. Krall, Kennedy Hall
M.P.S. Agriculture with Peace Corps Option (offered by most agriculture fields with M.P.S. programs): J. Haldeman, Warren Hall or see director of graduate studies for chosen field
Microbiology: S. C. Winans, Wing Hall
Natural Resources: M. E. Krasny, Fernow Hall
Neurobiology and Behavior: C. D. Hopkins, Seeley-Mudd Hall
Nutritional Sciences: M. N. Kazarinoft, Martha Van Rensselaer Hall
Physiology: S. S. Suarez, Vet Research Tower
Plant Biology: J. B. Nasrallah, Plant Science Building
Plant Breeding: E. D. Earle, Bradford Hall
Plant Pathology: J. W. Lorbeer, Plant Science Building
Plant Protection (M.P.S. (Agr.)): W. H. Reissig, Geneva Campus
Soil and Crop Sciences: Harold van Es, Bradford Hall
Statistics: M. Wells, Malott Hall
Zoology: J. W. Hermanson, Vet Research Tower

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 20 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major, but afterwards may pursue and major by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors offer minors.

Summary of Basic College Requirements for Graduation

1. Credit Hours
   a. Minimum: 120
   Exception: Credit for tutorial courses (Math 109, EDUC 005, and 00 level) increase
      the number of credits required for graduation by the number of credits in the course. The
      credits do count toward the minimum 12 credits for full-time status.
   b. Minimum at Cornell: 60; Maximum transferred in (C- or higher): 60
   c. Minimum from College of Agriculture and Life Sciences: 55 (includes credit used in
      the distribution and appropriate transfer credit)
   d. Maximum from endowed colleges (Arts and Sciences; Architecture, Art, and
      Planning; Engineering; and Hotel School) without additional charge: 55 (includes
      credit used in the distribution AND failed courses)
   e. Minimum with letter grade: 100; Maximum
      with S-U grade based on 120 credits: 20 (prorated for transfer students)
      with maximum of one course per semester
   f. Maximum independent study, research, teaching experience, internships based on
      120 credits: 15 (pro-rated for transfer students)
   g. Credit for physical education does not count toward the 120 credits or the
      minimum 12 credits for full-time status (see #6).

2. Residence
   a. Students are entitled to enroll eight full-time semesters (prorated for transfer
      students). A full-time semester requires a minimum of 12 credits per semester, not
      counting physical education, Tutorial courses (see #1A) are counted.
   b. A minimum of seven semesters is required. Transfer students are credited
      full-time status in residence for each of 15 credits from another institution.
   c. Internal transfer students must be enrolled in CALS for at least two
      semesters, not including residency in Internal Transfer Division.
   d. The final semester before graduation must be in residence at Cornell as a full-
      time student in good academic standing.
      Exception: Students with eight or fewer credits remaining for graduation and with
      circumstances that prevent full-time study may petition for approval to complete remaining
      credits at another institution or part-time in CALS.

3. Grade-point Average (GPA)

Cumulative GPA: 2.00 or above must be maintained. Includes only grades earned at
Cornell after matriculating into the college. For students matriculated prior to 8/01:
Cumulative GPA: 1.70 or above must be maintained. Includes only grades earned at
Cornell after matriculating into the college.

4. Distribution

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.
Progress toward the Degree

a. The progress of each student toward meeting the degree requirements is recorded each fall term in the college registrar's office on a Summary of Record form.

b. Students who have been in residence for eight semesters and who have met the graduation requirements will be gradu­ated. Students are entitled to attend for the full eight semesters even if they have com­pleted the graduation requirements in fewer semesters. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.

c. Application to graduate. Students who are planning to graduate in the spring or fall semester must complete an Application to Graduate by the end of the fourth week of class in their respective semester. The adviser must first sign the application verifying that the student will complete all major requirements by the end of the semester. Students with two majors or a minor must obtain signatures for each major and/or minor. The college registrar then signs the application after verifying that the college requirements will be fulfilled after successful completion of the student's final semester.

Credit Earned While in High School

Transfer credit will not be accepted for the Syracuse Project Advance Program and similar programs. If a student is enrolled in a college/university course during his/her high school years, transfer credit will be given only if certain criteria are met:

1. Course must be a standard course taught by a post-secondary institution.
2. High school must be a satellite location, one of several options available to all students taking the course.
3. Course syllabus, text, examinations, and evaluation process must be the same for all students at all sites.
4. Students must be enrolled for college credit and pay college tuition.
5. Instructor must be a faculty member (includes adjunct) at the offering college.

If one of these is not met, no transfer credit will be given. Written verification may be necessary.

CLEP Credit

The College of Agriculture and Life Sciences awards CLEP (College-Level Examination Program) credit if a student achieves an acceptable score on the CLEP exam. Please contact the Registrar's Office in 140 Roberts Hall for specific information about CLEP credit.

Admission

The College Admissions office selects applicants who are academically well prepared and appear most likely to benefit from the college's various curricula. While most students come from New York State, about 33 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are self identified as members of minority ethnic groups.

Transfer Students

Approximately 18 to 20 percent of ALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

A Cornell student in good standing may apply for an intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure involves filing a transfer request, meeting with a faculty member in the proposed area of study, and submitting a letter of explanation for the transfer.

Consideration is given to students who have demonstrated an interest in their proposed field of study, by taking appropriate prerequisite courses and courses within the area of study. Academic achievement is also considered. Students are not allowed to transfer during their freshman year. In certain cases, a student may be referred to the Internal Transfer Division (ITD) to study for one semester before entering the college. A second semester in ITD is considered only in unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students

A limited number of non-degree candidates who want to take courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience, and a list of the courses in which they are interested. For more information and guidelines, students should contact the Admissions Office, 177 Roberts Hall.

Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell-in-Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

Off-Campus Courses

Students in CALS must be registered for at least 12 credits of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS.

Two exceptions to enrollment elsewhere while being a full-time student at Cornell would be the joint enrollment agreements between Cornell and Ithaca College and Wells College. Other exceptions must be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The committee may approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Cornell is not permitted.

Leave of Absence

A student wishing a break from studies in a future semester, or those who find it necessary to leave the university before the end of a semester, should submit a written petition for a leave of absence. Such action is necessary to clear the record for the semester and if not taken may adversely affect subsequent readmission to the university.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring reapplication to the university. Voluntary leaves are issued two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave, activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Petitions Committee).

A database is maintained by the Counseling and Advising Office to assist participation in pre-course enrollment the semester before a student's return.

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

Withdrawal

A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

Graduation and Diplomas

Graduating seniors must complete the Application to Graduate (see the details in Part C of “Progress toward the Degree”). Diplomas are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field in May, graduates return to the Ag Quad to obtain their diplomas. For January and August graduates, diplomas are mailed.

ADVISNG AND COUNSELING SERVICES

Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while in college. They believe that personal contact is the best way to provide information and advice on both academic and personal matters; they consider advising to be an important and integral part of the
undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student's academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are international, transfer, or international exchange students, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college pols and counseling is framed as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment.

The Office of Minority Programs serves to recruit, admit, monitor, and influence policy on behalf of all minority students in the College of Agriculture and Life Sciences. This population is defined as encompassing all African American, Latin American, Asian American, and Native American students. In the past academic year, this population represented 20 percent of the college's undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP) and the Prehealth Collegiate Science and Technology Entry Program (CSTEP). EOP and CSTEP are state-supported programs intended to assist New York State students who meet economic and academic criteria set by the college, State Programs Office, and Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, the Office of Minority Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, the Learning Strategies Center, and the State Programs Office. Other university connections include the Undergraduate Admissions Office and the Office of Financial Aid regarding the concerns of the minority student population. The director and 7 to 10 peer advisers primarily carry out the duties of the Office of Minority Programs. Together, the staff acts as a major advocacy and advising group, as well as an informational and referral center. The director provides support for the Academic Human Diversity and Resources Committee. Its constituency includes students, faculty, and the general public.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employ- ment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of more than 300 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as resume writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 90 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The Office of Counseling and Advising is the network with a full-time faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine and the staff in 177 Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations in the college provide supplemental aid for students who are eligible for financial aid. Information about college grants is available from the Office of Academic Programs in Roberts Hall for students who have received a financial aid package established through the university office in Day Hall. Grants are processed through the university's Office of Financial Aid.

**Academic Integrity Policy**

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must not misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of this code is the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code:

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.
2. Students are guilty of violating the code if they
   - knowingly represent the work of others as their own
   - use or obtain unauthorized assistance in any academic work
   - give fraudulent assistance to another student

- fabricate data in support of laboratory or field work
- forge a signature to certify completion or approval
- submit the same work for two different courses without advanced permission
- knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids
- in any other manner violate the principle of absolute integrity

3. Faculty members assume responsibility to make clear to students and teaching assistants specific requirements that apply to scholarly work in a discipline.

4. Faculty members fulfill their responsibility to
   - maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
   - make clear the conditions under which examinations are to be given
   - make clear the consequences of violating any aspects of the code
   - provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
   - state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline
   - censure those students who misrepresent the source of such materials
   - approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
   - monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are
available from the Counseling and Advising Office, 140 Roberts Hall.

ACADEMIC POLICIES AND PROCEDURES

Records
The office of the college registrar maintains a complete academic record for each matriculated student. The director of enrollment management and student records, registrar, and associate registrar are available to consult with students regarding the assignment of credit toward meeting distribution and elective requirements as listed on the Summary of Record form.

Registration Procedures
All students must register with the university and check-in with this college at the beginning of each fall semester. Check-in materials are available in 140 Roberts Hall.

Course Enrollment Procedures
Students will receive course enrollment information from the university registrar. After planning a schedule of courses in consultation with their faculty adviser, students pre-enroll by computer, through CourseEnroll in “Just the Facts” located in the Bear Access menu. Pre-enrollment is not valid until the student enters the adviser key code, received from their faculty adviser, into the computer. The adviser key code changes each semester to ensure ongoing contact between student and faculty adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar’s Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar's Office to ensure that proper registration will occur.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, the second time will be for no credit.

Students must not enroll again for a course in which they received an incompleted or NGR. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form to the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence is a failure. In the case of a graduating senior, incomplete returns to failure at the time of graduation.

Claims: To enroll in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the R grade.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credits, grading options, or sections must be made by the student on the official university course drop and add form at the Registrar's Office, 140 Roberts Hall. Approval and signature of the faculty adviser and course instructor are required to change course enrollment.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the term, and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions (also see Petitions Procedures (Academic Dismissal) below). Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A notation of “W (for withdraw)” is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than twelve credits.

Petitions Procedures
The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements
- receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
- acts upon readmission requests from persons whose previous enrollment was terminated by the committee
- notifies the petitioner in writing of the action taken by the committee

A petition for exemption from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

A petition is usually prepared with the assistance of a student’s faculty adviser, whose signature is required. The adviser’s recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action. Petitions for withdrawing from a course are discussed above.

Academic Deficiency Policies
At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, suspending or expelling students.

Specifically, the committee considers as possible cause for action, failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:
- semester GPA of at least 2.0
- cumulative GPA of at least 2.0
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C (2.0) or higher are prima facie evidence of satisfactory progress and good academic standing.

*For those students matriculating 8/01 or later. Requirements are 1.70 for those who matriculated prior to 8/01.

Grade Reports
Grade reports for the fall semester are available on "Just the Facts" in January; grade reports for the spring semester are mailed by the Office of the University Registrar to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May.

ACADEMIC HONORS
The college encourages high academic achievement and recognizes outstanding students in several ways.

Dean’s List. Each semester, students are recognized for academic excellence by inclusion in the Dean’s List. Eligibility for the Dean’s List in the College of Agriculture and Life Sciences is determined by the following criteria:

1) a minimum course load for the semester of 12 letter-graded credits,
2) achievement of a semester GPA of at least 3.50; and
3) achievement of an ’S’ grade, or a ‘C’ or better grade in each course (including physical education), with no Incompletes.

Dean’s List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

Bachelor of Science with Honors. Students receiving a cumulative GPA of 4.0 or greater (based on the last four residential semesters of Cornell credits, with a minimum of 48 letter graded credits) will graduate “summa cum laude.”

Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.0 (based on the last four residential semesters of Cornell credits, with a minimum of 48 letter graded credits) will graduate "magna cum laude."
RESEARCH HONORS PROGRAM

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion of this program requires a thesis written in the style of a professional journal article in that area of research. Original honors research occasionally is published in a professional journal. Students are required to send an electronic version of their thesis title, abstract, student's name, and the research advisor's name to Ann Gartner, amg28@cornell.edu, by the end of the spring semester. Students are encouraged to give an oral or poster presentation at the Cornell Undergraduate Research Honors Program area: Animal Sciences Research Honors Committee by the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the research honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.6 will be graduated "cum laude." Additional funding opportunities are described on the Undergraduate Research Opportunities web site. Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the research honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results. Students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

• Meet with the Animal Sciences Research Honors Committee by the end of the spring semester to discuss the project and to complete the following:

1. Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year.

2. Preregister during the spring semester for AS 495, Animal Sciences Honors Seminar, which is offered in the fall semester.

3. Register for AS 495, Undergraduate Research Seminar.

4. Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results (see exceptions under particular program areas).

5. Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.

6. Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis and a review of the thesis by the student's sponsor and the research committee.

Students receiving a cumulative GPA of greater than or equal to 3.5 and less than 3.75 (based on the last four residential semesters of Cornell credits, with a minimum of 48 letter graded credits) will graduate "cum laude."
Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

Biological Sciences

Students interested in the research honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Sinton Hall.

Biology & Society

Faculty committee: D. Pimentel, chair

The research honors program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in Biology & Society. Students who enroll in this program are expected, with faculty guidance, to do independent study at a research dealing with issues in biology and society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society Office, 275 Clark Hall. To qualify for the Biology & Society research honors program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his/her adviser. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the Biology & Society program. Students must enroll for two semesters and may take three to five credits per semester up to a maximum of eight credits in B&SOC 498 and 499, Honors Project I and II. More information on the honors program is available in the Biology and Society Office, 275 Clark Hall (255-6047)

Important Deadlines

(NOTE: If the following dates fall on a weekend, the deadline is the proceeding Friday).

- Last week of second semester of the junior year: Application for honors program submitted to 275 Clark Hall.
- April 15: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 29: Thesis defense accomplished.
- May 13: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

Entomology

Faculty committee: B. L. Peckarsky, chair

A research honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets for students selecting entomology as their area for research honors study.

Research Honors students have the option of earning academic credit by enrolling in Independent Study (ENTOM 497) during any semester while working toward a Research Honors Thesis. Credits and grade option for satisfying requirements of ENTOM 497 should be discussed with the thesis adviser (see below). Note: Enrolling in independent study is not a requirement for graduating with distinction in research honors in Entomology.

The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year. This schedule makes it possible to carefully plan a research project, and implement some research during the junior year and/or summer before the senior year.
- Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student's academic adviser. The academic adviser will assist in determining which faculty entomologist has expertise most compatible with the interest of the student.
- Prepare a brief, tentative plan of the project for the discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Submit a completed application and proposal (approved by the honors project supervisor and the chair of the Entomology Research Honors Committee) no later than the end of the sixth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available and should be submitted to the CALS Registrar 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only once a year (in late fall).
- Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by mid-term of the semester in which the student will complete his or her graduation requirements.
- Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a Jugatae seminar) in the last semester of the senior year.
- Submit two copies of the final honors thesis (as approved by the thesis supervisor) to the chair of the Entomology Research Honors Committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the Entomology honors project supervisor and one other referee selected by the chair of the honors committee. Referees will return the thesis to the student one week before the last day of classes. If referees indicate that changes must be made, the revised thesis should be submitted to the Entomology Research Honors Committee chair no later than the last day of classes. Referees should include a recommendation to the Entomology Research Honors chair regarding acceptability of the honors theses. Approved honors theses will be bound and housed in the Entomology Library in Comstock Hall.

Natural Resources

Faculty director: J. B. Yavitt

The research honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of applied ecology or resource policy and management. The subject matter and nature of the research experience may be quite varied. The guidance and supervision of a faculty member with substantial interest and expertise in the subject area is essential to the success of the project.

In addition to meeting requirements of the college, the student is expected to do the following:

- Register for the research honors program in the junior year or earlier.
- Work with a faculty adviser to identify and formulate a research problem.
- If the faculty adviser is not in the Department of Natural Resources, select a co-adviser from the department to insure the research is consistent with the field.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the format of a conventional master's thesis or scientific paper ready for publication in a scientific or policy journal. A copy is due the first week of April. This version will be reviewed by two ad hoc reviewers, and the student will be able to incorporate their comments and suggestions into the final version, which will be due the last day of classes. About half of the theses have been published.
- Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student's senior year.
• Students should be aware that this requires a considerable time commitment, and they are responsible for meeting deadlines and being prepared for presentations and other meetings.

**Nutritional Sciences**

Faculty committee: J. T. Brenna, C. Bisogni

The research honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread across both semesters of the junior and senior years.

Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for research honors, students need to consult with their academic advisers to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean’s list. Although honors research credits for spring semester junior year and both semesters senior year are designated LET, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student’s mentor. An outline of activities for both years is given below. Letters of invitation are sent to upcoming juniors during the summer.

**Junior Year**

**Fall Semester** Course No: NS 398 (1 credit, S-U). Students are oriented to the program, and provided material that summarizes the range of research activities in DNS. Students begin making arrangements with faculty members. When these arrangements have been completed, students begin a literature search that focuses on their research problems.

**Spring Semester** Each student finalizes arrangements with a faculty mentor and submits a proposal abstract by February 15. Each student may also register under the number NS 499 for a convenient number of credits, to be determined in consultation with the chosen adviser.

**Senior Year**

**Fall Semester** Students will register under the number NS 499 (2–4 credits, LET, by arrangement with their mentors). They may begin their research earlier than fall, (e.g. during the summer, or even earlier) but should be prepared to begin research **early in the fall semester at the latest**. The objective for the semester will be to conclude most of the hands-on research/data acquisition. A one-page progress report is submitted by September 20.

**Spring Semester** Students will again register under course number NS 499 for 2–4 credits, LET, by arrangement with their research mentors. Much of the allotted time will be spent on analyzing data and on writing the honors thesis.

Several important deadlines should be noted.

2. End Week 7: Full thesis is submitted to reader.
3. Mid-Week 10: Reader returns thesis to student with comments.
5. Week 13-14: Students present projects at symposium.

**Physical Sciences**

Faculty committee: J.-Y. Parfange, chair; S. Colucci, S. J. Mulvaney, R. L. Strawderman

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Sciences, or Biometrics.

In addition to meeting the requirements of the college, the student is expected to:

• Identify a thesis adviser and thesis topic before the end of junior year.
• Work with the thesis adviser, prepare a budget and application form (due by the sixth week of senior year).
• Enroll in the program for a minimum of two semesters.
• Enroll in the appropriate departmental undergraduate research course for a total of at least six credits.
• Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
• Submit a draft of the thesis to the thesis adviser with sufficient lead-time for a revision to be prepared.
• Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by three weeks before the end of classes in the semester in which graduation is expected.

There is no required format but the thesis is usually written in the form of a research journal article or a master’s thesis.

Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

**Plant Sciences**

Faculty committee: R. L. Obendorf, chair; I. A. Merwin, E. B. Nelson, F. S. Rossi

Students perform independent scientific research under the guidance of faculty members in the departments of agromonic, and soil sciences; plant biology, plant genetics and breeding, and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Research Honors Committee a project proposal (two to three pages) which includes a title; a brief background to the problem (justification and literature review); a clear statement of objectives; and hypotheses to be tested; methodology and experimental plan, necessary equipment, and budget. A project proposal must be accompanied by a letter from the student’s faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student’s undergraduate tenure is feasible.

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

**Social Sciences**

Faculty committee: R. E. Ostman, S. Feldman, J. M. Conrad, S. Peters

Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the college criteria described earlier, after evaluation of the student’s written application, and on approval of a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement. The proposal should be 5 to 10 typed, double-spaced pages and include the following:

• **Research Topic:** State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a suitable extensive bibliography to be consulted.

• **Research Questions/Empirical Hypotheses:** Specify the proposed questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.

• **Research Methods:** Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.

• **Expected Significance:** State what new knowledge or information is likely to be
The Department of Landscape Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate levels (MLA I), as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board, LAAB. The graduate program is cosponsored by the Department of Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

The Division of Nutritional Sciences is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The nutrition, food, and agriculture major offers students in the College of Agriculture and Life Sciences the opportunity to focus their studies in human nutrition while obtaining a strong background in courses related to agriculture and the life sciences. Students in the biological sciences major may complete the program of study in human nutrition. Courses offered by the Division of Nutritional Sciences support many undergraduate programs in the College of Agriculture and Life Sciences including animal science, biological sciences, communication, food science, international agriculture, plant sciences, and rural sociology. Nutritional sciences courses count toward the undergraduate degree requirement for 55 credit hours of courses in Agriculture and Life Sciences.

The American Indian Program (AIP) is a multidisciplinary intercollege program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students tackle such challenging topics as the sovereign rights of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present, and feature the perspectives of Native American people. Research areas among faculty active in the program include American Indian education, social and economic development, agriculture, environmental issues, history, sociology, language, literature and the arts, and cultural preservation. Extension and outreach efforts within the program seek to develop solutions to problems identified by American Indian communities to facilitate the application of institutional resources, research, and expertise to community needs.

The American Indian Program's Akwe:kon Press publishes Native Americas, a multidisciplinary journal that covers issues across the West, and sponsors conferences, guest lectures, and forums on important local, national, and international issues. Akwe:kon, the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration is earned upon completion of five courses: American Indian Studies 100 (Indian America to 1890) and American Indian Studies 175 (Contemporary American Indian Issues), plus three other courses selected from the American Indian Studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies must obtain application materials from the AIP office in 450 Caldwell. AIP also offers a graduate minor.

Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell's strengths across a broad range of earth and environmental sciences have been brought together to provide students with the tools needed to meet that will be the primary challenge of the twenty-first century.

The major is available to students in the College of Agriculture and Life Sciences as well as students in the Colleges of Arts and Sciences and, as an option, Engineering. The SES major has its home in the Department of Earth and Atmospheric Sciences, which spans all three colleges, but relies on the collaboration of several departments across the university.

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or inter-disciplinary courses that build on the basic sequences. Graduates of Cornell's SES program are well prepared for graduate studies in the earth and environmental sciences. The SES major also provides an excellent background for students wishing to pursue careers, with or without advanced study, in environmental law and policy, and environmental protection. SES is also a good major for students wishing to teach earth and environmental science at the high school level, perhaps in conjunction with Elementary Teacher Education in Agriculture, Mathematics, and Science (TEAMS) program.

See the Science of Earth Systems listing in the section on "Major Fields of Study" for complete information about the SES curriculum. For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Sciences, khc6@cornell.edu, and visit the web site: www.geo.cornell.edu/ses/
The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and cooperative extension activities coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 213 Rice Hall, or at www.cfe.cornell.edu/icet. See also the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.
The Cornell Institute for Resource Information Systems (Cornell IRIS) is an interdisciplinary, inter-college unit affiliated with the Center for the Environment. The mission of Cornell IRIS is to advance the development and use of spectral and spatial information processing and technology to benefit the environment. The Institute is comprised of three program areas in environmental resource inventory, remote sensing, and geographic information systems. A description of these programs, as well as full information, is available from the Institute director through the Cornell IRIS office in 302 Roe Hall.

OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity. Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Three formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistant Program also occurs during the spring semester and has placements with New York State senators and selected staff. The Albany Semester Program is available during the spring, summer, and fall semesters and provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor. Each program has an academic component as well. Check the individual folders in the internship files at the ALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the ALS Career Development Office, 177 Roberts Hall, in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least 12 credits must be carried to meet the residency requirement. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.

Information and applications are available in the Albany Programs office, 177 Roberts Hall.

Cornell in Washington

The Cornell in Washington Program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell in Washington Program offers two study options: (1) studies in public policy, and (2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects under the supervision of Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, the Cornell in Washington Program. Students in the College of Agriculture and Life Sciences may register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 22, inquire at 311 Caldwell Hall, 255-4090, or visit the Cornell in Washington web site at ciw.cornell.edu.

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. The humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, and the following six weeks are spent on one of SEA's two sailing vessels, the SSV Robert Seamans or the SSV Corwith Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall (607-255-3717) or visit SEA's web site: www.sea.edu. Students should file an intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on the 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduates and other interested individuals an opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717 or visit their web site: www.sml.cornell.edu.

Internships

Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to 3 credits per internship and no more than 6 credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The specific terms of the internship contract should be recorded, using the guidelines to serve as minimum requirements.

• Students need to keep their faculty internship advisor updated on the progress of the internship while away from campus.

Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work, and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workloads, and the relationship of the internship to the goals of the department. The intern's terms of the contract should be recorded, using the Independent Study, Research, Teaching, and Internship form, available in the Registrar's Office in 140 Roberts Hall.

International Exchange Programs in The College of Agriculture and Life Sciences

Any student whose grade point average is 2.75 or above and has completed one year of continuous study in CALS may apply to a CALS international student exchange program. These undergraduate exchange opportunities are for CALS students only. For more information on programs and application process, see the CALS Study Abroad Adviser in 140 Roberts Hall or visit our web site www.cals/oap/advising/international/index.cfm.

Students who are interested in international study but not in one of the CALS programs must apply through Office of International Programs in 474 Uris Hall. Please refer to the Cornell Abroad section of Courses of Study.
MAJOR FIELDS OF STUDY

The college curriculum consists of 20 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet the minimum distribution requirements of the college.

Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science Department has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching farm, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits), students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation.

Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summer months. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a highly select group of students.

Applied Economics and Management

The Department of Applied Economics and Management (AEM) offers undergraduate programs of study in three broad areas: Business, Agribusiness, and Applied Economics.

AEM is home to Cornell's undergraduate general business degree. Here students can immerse themselves in finance, marketing, management, and business strategy courses, as well as take specialized courses in entrepreneurship, food industry management, and agribusiness. This highly selective program is accredited by AACSB International, the accrediting body for general business degree programs.

AEM also includes undergraduate specializations that focus on the economics of agriculture and the environment. All AEM courses stress the application of analytical skills, critical thinking, and economic theory to real-world business and public-policy issues.

The six areas of specialization offered in AEM are:

- **Business**, one of the largest undergraduate majors at Cornell University, offers students a broad array of courses in the fields of finance, marketing, management, accounting, and entrepreneurship.
- **Food industry management** is a specialized business program for students interested in management positions in the retailing, manufacturing, and distribution sectors of the food industry.
- **Agribusiness management** students study general business and take courses tailored to agricultural businesses.
- **Farm business management and finance** is for students interested in working for firms with ties to farming and agriculture, such as cooperatives, banks, horticultural businesses, and family farms.
- **Agricultural and applied economics** is a broad-based specialization that focuses on such important national and international issues as the economics of policy, markets, production, international trade, and international development.
- **Environmental and resource economics** students study the economics of water and air quality, waste management, rural-urban land use, the sustainability of natural resources, energy use, and global climate change.

AEM graduates are actively recruited by elite businesses for positions in finance, marketing, investment banking, and management consulting, as well as by federal and international agencies. Many graduates go on for advanced professional and academic degrees, often after several years in a challenging career position in business or government.

Atmospheric Science

Atmospheric Science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). There are three options for the B.S. in Atmospheric Science through the College of Agriculture and Life Sciences:

**Option A**

1. Mathematics, Computer Science, and Statistics:
   - Math 190/191, 192, 293; or Math 111, 112, 213
   - Computer Sci. 100 or EAS 150
   - AEM (ARME) 210 or equivalent
   - Math 294 (or MATH 221 and 222, without MATH 213) or EAS 455
2. Basic Physical Sciences:
   - Physics 207, 208, or Physics 112, 213, 214
   - Chem 103, 207, or 211
3. Atmospheric Science:
   - EAS 131, 250, 341, 342, 352, 447, 451
   - At least two atmospheric science electives

**Option B**

1. Mathematics, Computer Science, and Statistics:
   - Math 190/191, 192, 293, 294; or Math 111, 112, 221, 222
   - Computer Sci. 100 or EAS 150
   - AEM (ARME) 210 or equivalent
   - Math 521, Math 420, or T&AM 510
2. Basic Physical Sciences:
   - Physics 112, 213, 214
   - Chem 207 or 211
3. Atmospheric Science:
   - EAS 341, 342, 352, 451

**Option C**

1. Mathematics, Computer Science, and Statistics:
   - Math 190/191, 192, 293; or MATH 111, 112, 213
   - COM S 100 or EAS 150
   - AEM (ARME) 210 or equivalent
2. Basic Physical Sciences:
   - Physics 207, 208
   - CHEM 103, 207, or 211
3. Atmospheric Science:
   - EAS 341, 342, 352, 451
4. Earth Sciences:
   - one semester of introductory astronomy
   - one semester of introductory geology
   - six additional semesters of earth science (astronomy, atmospheric science, geology)
Option A is intended to meet the needs of students whose primary interests are in forecasting and operational meteorology. Upon graduation, a student who has completed Option A will have satisfied both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist. They will also be well qualified for positions in private-sector forecasting, environmental consulting firms, and broadcast meteorology. In addition, Option A provides good preparation for graduate work in atmospheric science and closely related fields.

Option B is designed to focus on preparation for graduate study in atmospheric as well as other sciences, and includes somewhat stronger coursework in mathematics and physics than does Option A. The minimum coursework in Option B does not satisfy the National Weather Service requirements or American Meteorological Society guidelines for employment in operational meteorology, but may be suitable for students with academic or research career goals. It can also be an attractive option for students transferring into the program as juniors.

Option C is intended for students who wish to become secondary earth science teachers. It provides good preparation for graduate study in earth science education, and includes the minimum earth science teaching certification in New York. It does not satisfy the National Weather Service or American Meteorological Society guidelines for employment as an operational meteorologist. A student may minor in Atmospheric Science by completing any four of the following EAS courses: 131, 250, 268, 331, 334, 341, 342, 352, 435, 447, 451, 456, 457, 470, 651, 652 or 666.

Biological Sciences

Biological Science is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology世家 student services which are available to students from either college. The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences should consult the Shoals Marine Laboratory Office, G14 Simmon Hall, 255–3717, for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on Biological Sciences.

Biological and Environmental Engineering

The Department of Biological and Environmental Engineering (BEE, formerly Agricultural and Biological Engineering) addresses three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population, protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering program in the Department of Biological and Environmental Engineering has a unique focus on biological systems, including the environment, that is realized through a curriculum of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a Bachelor of Science degree, which is awarded jointly by the College of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET). Students in the jointly administered BEE (ABEN) major enroll in the College of Engineering and pay endowed tuition their last two semesters.

Two concentrations in Biological and Environmental Engineering are offered: biological engineering and environmental engineering. Students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in the department in areas that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students strengthen their programs by selecting additional courses in the College of Engineering. They may complete minors or a second engineering major. Students planning for medical school also take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills, and all students complete a capstone design project. Students in the engineering program may pursue minors and options in specialized areas as noted in the engineering section of this publication. Specific course requirements and other information for the Biological and Environmental Engineering joint program are in the College of Engineering section of this publication. Further information is available at the undergraduate program office, BEE (ABEN) Student Services, 207 Riley-Robb.

The department also offers two technology programs: Biological Engineering Technology and Environmental Engineering Technology. The technology programs emphasize applied and technical aspects of biological, environmental, physical and life sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies.

Many undergraduate students participate in honors programs, undergraduate teaching and research, independent study, design teams, and study abroad. Students in the Engineering program are also eligible to do Engineering Co-Op. Students completing the BEE (ABEN) major should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is educating the next generation of engineers to meet these challenges.

Specific course requirements for the Accredited Engineering Programs are found in the College of Engineering section of this book.

Specific course distribution requirements for the academic programs in Biological Engineering Technology and Environmental Engineering Technology include:

A. Basic Subjects Credits
1. Calculus 8
2. Chemistry 7
3. Physics 8
4. Introductory biological sciences 6
5. Computer programming 4
6. Probability and Statistics 3
7. Written and oral expression 9

B. Advanced and Applied Subjects
1. Five courses in the biological, environmental, or life sciences 15
2. Five engineering or technology courses at the 300 level or above, at least 9 credits in biological and environmental engineering 15

C. Electives
Additional courses to complete College of Agriculture and Life Sciences requirements

D. Total (minimum) 120

For further details on the Biological and Environmental Engineering Technology Programs, see the department's Undergraduate
The Biology & Society program area is designed for students who wish to combine department's web site at www.sts.comell.edu their core. At the same time these issues are climate change, have biological processes at faculty member, students are expected to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see the section on Biology and Society Office, 275 Clark Hall, where students can get information, specific course requirements, and application forms. Faculty and student advisers are available to discuss the Biology & Society requirements with you.

Requirements for the program are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 275 Clark Hall or on the web at www.sts.comell.edu. Also refer to the section on Biology & Society under the College of Arts and Sciences in this publication.

### Biology and Society Requirements:

- **College calculus** (one course)
- **Ethics** (one course)
- **Two social sciences/humanities foundation courses**
- **Three biology foundation courses**
- **One biology depth course**
- **Statistics** (one course)
- **Core course**
- Five theme courses (a coherent group of five courses relevant to the student's special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of faculty is available in 275 Clark Hall. Further information may be obtained by calling (607) 255-6047 or sending an e-mail message to msb8@comell.edu.

### 1. First-Year Writing Seminars

Check the current FWS pamphlet for information.

### II. Foundation Courses

**A. Ethics** (select one)

- **B&SOC 205 Ethical Issues in Health and Medicine** (also S&TS 205)
  - Fall. 4 credits. Limited to 150 students. M. Rossiter.
  - Fall or summer. 3 credits. W. Provine.
  - For description, see S&TS 355.

- **S&TS 442 Social Issues of Gender and Science** (also WOMNS 444)
  - Spring. 4 credits. M. Rossiter.
  - For description, see S&TS 444.

### 2. Philosophy of Science

**S&TS 301 What is Science? An Introduction to the Social Studies of Science and Technology**

- Spring. 3 credits. S. Hilgartner.
  - For description, see S&TS 301.

- **S&TS 286 Science and Human Nature** (also PHIL 286)
  - Spring. 4 credits. May be used to meet the philosophy of science requirement if not used to meet the core course requirement. R. Boyd.
  - For description, see PHIL 286.

- **S&TS 381 Philosophy of Science: Knowledge and Objectivity** (also PHIL 381)
  - Fall. 4 credits. Limited to 30 students. R. Boyd.
  - For description, see PHIL 381.

### 3. Sociology of Science

**B&SOC 301 Biology and Society: The Social Construction of Life** (also S&TS 301)

- Fall. 4 credits. Limited to 75 students. May be used to meet the sociology of science requirement if not used to meet the core course requirement. E. Toon.
  - For description and prerequisites, see B&SOC 301.

- **B&SOC 442 Sociology of Science** (also S&TS 442, CRP 442 and SOC 442)
  - Spring. 4 credits. M. Mazit.
  - For description, see S&TS 442.
HD 452 Culture and Human Development
For description, see HD 452.

NS 245 Social Science Perspectives on Food and Nutrition
For description, see HS 245.

[R SOC 208 Technology and Society
C. Geisler.
For description, see R SOC 208.]

R SOC 220 Sociology of Health and Ethnic Minorities (also LSP 220)
For description, see R SOC 220.

S&TS 201 What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210)
Spring. 3 credits. S. Hilgartner.
For description, see S&TS 201.

S&TS 311 The Sociology of Medicine
Spring. 4 credits. E. Toon.
For description, see S&TS 311.

S&TS 411 Knowledge, Technology, and Property
Spring. 4 credits. S. Hilgartner.
For description, see S&TS 411.

4. Politics of Science

B&SOC 406 Biotechnology and the Law (also S&TS 406)
Spring. 4 credits. L. Palmer.
For description, see B&SOC 406.

B&SOC 407 Law, Science, and Public Values (also GOVT 407 and S&TS 407)
Spring. 4 credits. M. Lynch.
For description, see B&SOC 407.

[B&SOC 427 Politics of Environmental Protection in America (also GOVT 427 and S&TS 427)
For description, see B&SOC 427.]

CRP 380 Environmental Politics
Fall. 4 credits. R. Booth.
For description, see CRP 380.

PAM 230 Introduction to Policy Analysis
For description, see PAM 230.

S&TS 334 Environment and Society (also R SOC 324 and SOC 324)
Spring. 3 credits. Staff.
For description, see R SOC 324.

S&TS 391 Science in the American Polity: 1960–Now (also GOVT 309 and AM ST 389)
Fall. 4 credits. M. Dennis.
For description, see S&TS 391.

5. Science Communication

COMM 260 Scientific Writing for Public Information
Fall or spring. 3 credits. Limited to 25 non-freshman or graduate students per section. S. Corneau.
For description and prerequisites, see COMM 260.

COMM 421 Communication and the Environment
Spring. 3 credits. May be used in the foundation only if not taken as a senior seminar. J. Shanahan.
For description, see COMM 421.

S&TS 285 Communication in the Life Sciences (also COMM 285)
Spring. 3 credits. B. Lewenstein.
For description, see COMM 285.

S&TS 352 Science Writing for the Mass Media (also COMM 352)
Spring. 3 credits. Not open to freshmen. Limited to 25 students. B. Lewenstein.
For description and prerequisites, see COMM 352.

[S&TS 466 Communication of Science and Technology (also COMM 466)
Fall. 3 credits. May be used in the foundation only if not taken as a senior seminar. Limited to 15 students. Not offered 2002–2003. B. Lewenstein.
For description and prerequisites, see COMM 466.]

C. Biology Foundation
(breadth requirement): Three courses, one from three of the following subject areas:

1. Biochemistry, Molecular and Cell Biology

BIOBM 330 Principles of Biochemistry, Individual Instruction
Fall or spring. 4 credits. J. Blankenship, P. Hinke, staff.
For description and prerequisites, see BIOBM 330.

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. May not be taken for credit after BIOBM 330 or 333. G. Feigenson.
For description and prerequisites, see BIOBM 331.

BIOBM 333 Principles of Biochemistry, Lectures
Summer. 4 credits. H. T. Nivison.
For description and prerequisites, see BIOBM 333.

NS 262 Nutrients and Cells
Spring. 3 credits. N. Noy.
For description and prerequisites, see NS 262.

NS 320 Introduction to Human Biochemistry
Fall. 4 credits. W. Arion and P. Stover.
For description and prerequisites, see NS 320.

2. Ecology

BIOEE 261 Ecological and the Environment
Fall or summer. 4 credits. Not open to freshmen. A. Flecker, J. Sparks, and A. Vawter.
For description and prerequisites, see BIOEE 261.

3. Genetics and Development

BIOGD 281 Genetics
Fall, spring, or summer. 5 credits. Not open to freshmen fall semester. Limited to 200 students. P. Bruns, et al.
For description and prerequisites, see BIOGD 281.

BIOGD 282 Human Genetics
Spring. 3 credits (2 cr. if taken after BIOGD 281). Limited to 25 per discussion group. M. Hamblin.
For description and prerequisites, see BIOGD 282.

4. Evolutionary Biology

BIOEE 276 Evolutionary Biology
Fall or spring. 3 or 4 credits. Limited to 300 students. Staff.
For description, see BIOEE 276.

5. Microbiology

BIOM 290 General Microbiology
Lectures
Fall, spring, or summer. 2 or 3 credits (2 credits if taken after BIOM 192). S. Merkel, W. Ghurom, S. Winans, J. Helmann and B. Batzing.
For description and prerequisites, see BIOM 290.

6. Neurobiology and Behavior

BION 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits. Not open to freshmen. H. Reeve.
For description and prerequisites, see BION 221.

BION 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits. Not open to freshmen. Each discussion limited to 20 students. Staff.
For description and prerequisites, see BION 222.

7. Botany

BIOL 241 Introductory Botany
Fall. 3 credits. K. J. Niklas.
For description, see BIOL 241.

8. Physiology and Anatomy

BIOAP 311 Introductory Animal Physiology, Lectures (also VETMED 346)
Fall. 3 credits. E. Loew and staff.
For description and prerequisites, see BIOAP 311.

NS 341 Human Anatomy and Physiology
Spring. 4 credits. Permission only. Must preregister for lab in 309 MVR during CourseEnroll. V. Utermohl.
For description and prerequisites, see NS 341.

D. Biology Foundation (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite.

E. Statistics (select one)

AEM 210 Introductory Statistics
Fall. 4 credits. C. van Es.
For description and prerequisites, see AEM (ARME) 210.

BTRY 261 Statistical Methods I
Summer. 4 credits. Note: BTRY 261 is limited to undergraduates. R. Lloyd.
For description and prerequisites, see BTRY 261.

CRP 223 Introduction to Statistical Reasoning for Urban and Regional Analysis
Fall. 3 credits. J. Lobo.
For description, see CRP 223.

ECON 319 Introduction to Statistics and Probability
Fall. 4 credits. T. Vogelsang.
For description and prerequisites, see ECON 319.

ILRST 210 Statistical Reasoning I
Fall, spring. 3 credits. J. Angelotti.
For description, see ILRST 210.

MATH 171 Statistical Theory and Application in the Real World
Fall, spring. 4 credits. Staff.
For description and prerequisites, see MATH 171.
PAM 210  Introduction to Statistics  
Fall, spring. 4 credits. K. Joyner.  
For description, see PAM 210.

PSYCH 350  Statistics and Research Design  
Fall. 4 credits. T. Gilovich.  
For description, see PSYCH 350.

SOC 301  Evaluating Statistical Evidence  
(also R SOC 302)  
Fall. 3 credits. M. Clarkberg.  
For description, see SOC 301.

III. Core Courses  

B&SOC 301  Biology and Society: The Social Construction of Life (also S&TS 301)  
Fall. 4 credits. Limited to 75 students. E. Toon.  
For description and prerequisites, see B&SOC 301.

S&TS 286  Science and Human Nature (also PHIL 286)  
Spring. 4 credits. R. Boyd.  
For description, see PHIL 286.

IV. Theme

A. Natural Sciences Issues/Biology Elective (two courses). Select from the following list of B&SOC approved Natural Science Issues courses or choose course(s) with introductory biology as a prerequisite:

B&SOC 214  Biological Basis of Sex Differences (also BIOAP 214 and WOMNS 214)  
Spring. 3 credits. J. Fortune.  
For description, see BIOAP 214.

B&SOC 347  Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and NS 347)  
Spring. 3 credits. Offered alternate years. J. Haas and S. Robertson.  
For description and prerequisites, see HD 347.

BIOEE 275  Human Biology and Evolution (also ANTHR 275 and NS 275)  
Fall. 3 credits. J. Haas and K. Kennedy.  
For description, see BIOEE 275.

BIOEE 474  Laboratory and Field Methods in Human Biology (also ANTHR 474)  
Spring. 5 credits. K. Kennedy.  
For description, see BIOEE 474.

BIOEE 673  Human Evolution: Concepts, History, and Theory (also ANTHR 673)  
Fall. 3 credits. Offered alternate years. K. Kennedy.  
For description, see BIOEE 673.

BIOPL 247  Ethnobiology  
Fall. 3 credits. D. Bates.  
For description, see BIOPL 247.

[HD 266  Emotional Functions of the Brain  
For description and prerequisites, see HD 266]  

HD 344  Infant Behavior and Development  
Fall. 3 credits. Not open to freshmen. S. Robertson.  
For description and prerequisites, see HD 344.

HD 436  Language Development (also LING 436, PSYCH 436, and COGST 436)  
Spring. 4 credits. B. Lust.  
For description, see HD 436.

NS 222  Maternal and Child Nutrition  
Fall. 3 credits. Limited to 20. C. Garza and P. Brannon.  
For description and prerequisites, see NS 222.

NS 331  Physiological and Biochemical Bases of Human Nutrition  
Spring. 4 credits. May be used to fulfill the Biology Depth requirement. M. Stipanuk.  
For description and prerequisites, see NS 331.

NS 361  Biology of Normal and Abnormal Behavior (also PSYCH 361)  
Fall. 3 credits. Limited to juniors and seniors only. B. Strupp.  
For description and prerequisites, see NS 361.

NS 452  Molecular Epidemiology and Dietary Markers of Chronic Disease  
Spring. 3 credits. P. Cassano.  
For description and prerequisites, see NS 452.

[NS 475  Molecular Nutrition and Development  
For description and prerequisites, see NS 475.]

NTRES 201  Environmental Conservation  
Spring. 3 credits. T. Falvey.  
For description, see NTRES 201.

PSYCH 326  Evolution of Human Behavior  
Fall. 4 credits. R. Johnston.  
For description and prerequisites, see PSYCH 326.

Examples of biology electives

AN SCI 300  Animal Reproduction and Development  
Spring. 3 credits. For description, see AN SCI 300.

HD 366  Psychobiology of Temperament and Personality  
Fall. 3 credits. R. DePue.  
For description and prerequisites, see HD 366.

HD 220  The Human Brain and Mind  
For description, see HD 220.

B. Humanities/Social Sciences Elective  
(two courses)

Courses listed earlier as social science/ humanities foundation courses (2.B) are particularly appropriate as social science/ humanities electives. A single course, however, cannot be used to meet both requirements. Additional courses that are recommended as social science or humanities electives are:

Examples of humanities/social sciences electives

AEM 464  Economics of Agricultural Development  
Spring. 3 credits. R. Christy.  
For description, see AEM 464.

[ANTHR 211 Nature and Culture  
For description, see ANTHR 211.]  

B&SOC 403  Environmental Governance (also S&TS 403 and NTRES 403)  
Fall. 3 credits. S. Wolf.  
For description, see NTRES 403.

[HD 457  Health and Social Behavior (also SOC 457)  
Fall. 3 credits. Not offered 2002-2003. E. Wethington.  
For description, see HD 457.]

NS 450  Public Health Nutrition  
Spring. 3 credits. D. Pelletier.  
For description, see NS 450.

NTRES 400  International Environmental Issues  
Spring. 4 credits. R. McNeil.  
For description, see NTRES 400.

NTRES 407  Religion, Ethics, and the Environment  
Fall. 4 credits. R. Baer.  
For description, see NTRES 407.

PAM 303  Ecology and Epidemiology of Health  
Spring. 3 credits. E. Rodriguez.  
For description, see PAM 303.

PAM 380  Human Sexuality  
Spring. 3 credits. A. Parrot.  
For description, see PAM 380.

PAM 435  U.S. Health Care Systems  
Fall. 3 credits. R. Battistella.  
For description, see PAM 435.

PAM 437  Economics of Health Policy  
For description, see PAM 437.

PHIL 241  Ethics  
Spring. 4 credits. N. Sturgeon.  
For description, see PHIL 241.

[PHIL 368  Global Climate and Global Justice (also GOVT 468)  
Fall. 4 credits. Not offered 2002-2003. Staff.  
For description, see PHIL 368.]

R SOC 205  International Development (also SOC 206)  
Spring. 3 credits. P. McMichael.  
For description, see R SOC 205.

[R SOC 261  Sociology of Sustainable Development  
Fall. 3 credits. Not offered 2002-2003. Staff.  
For description, see R SOC 261.]

[R SOC 490  Society and Survival  
Fall. 3 credits. Not offered 2002-2003. Staff.  
For description, see R SOC 490.]

[S&TS 453  Reflections on Scientific Personae: Visibility and Invisibility of the Body  
For description, see S&TS 453.]

S&TS 481  Philosophy of Science (also PHIL 481)  
Spring. 4 credits. R. Boyd.  
For description, see PHIL 481.

SOC 340  Health, Behavior, and Policy  
Spring. 4 credits. S. Caldwell.  
For description, see SOC 340.

C. Senior Seminars: Representative seminars listed below. Complete list available in 275 Clark Hall.

B&SOC 406  Biotechnology and the Law (also S&TS 406)  
Spring. 4 credits. L. Palmer.  
For description, see S&TS 406.
B&SOC 461 Environmental Policy (also BIOEE 661 and ALS 661)  
Fall and spring. 3 credits each term. Limited to 12 students. Students must register for 6 credits each term since an "R" grade is given at the end of the fall term. D. Pimentel. For description, see BIOEE 661.

COMM 421 Communication and the Environment  
Spring. 3 credits. J. Shanahan. For description, see COMM 421.

HD 336 Connecting Social, Cognitive and Emotional Development  
Fall. 3 credits. M. Cassasola. For description, see HD 336.

HD 366 Psychobiology of Temperament and Personality  
Fall. 3 credits. R. A. DePue. For description and prerequisites, see HD 366.

[HD 418 Psychology of Aging  
Fall. 3 credits. Not offered 2002-2003. S. Cornelius. For description, see HD 418.]

HD 419 Midlife Development  
Spring. 3 credits. S. Cornelius. For description, see HD 419.

HD 464 Adolescent Sexuality (also WOMNS 467)  
Spring. 3 credits. R. Savin-Williams. For description, see HD 464.

HD 660 Social Development  
Spring. 3 credits. Permission of the instructor required for undergraduates. K. Greene. For description, see HD 660.

NTRES 411 Seminar in Environmental Ethics  
Fall. 3 credits. R. Baer. For description, see NTRES 411.

PAM 552 Health Care Services: Consumer and Ethical Perspectives  
Fall. 3-4 credits. If using this course as a senior seminar, Biology & Society majors must take it for 4 credits. Enrollment limited; preference given to PAM students. A. Parrot. For description and prerequisites, see PAM 552.

PAM 556 Managed Care  
Spring. 3 credits. For undergraduate seniors only by permission of instructor. J. Kuder. For description and prerequisites, see PAM 556.

PAM 559 Epidemiology, Clinical Medicine, and Management Interface Issues  
Spring. 3 credits. E. Rodriguez. For description, see PAM 559.

[R SOC 410 Population and Environment  
Spring. 3 credits. Not offered 2002-2003. Staff. For description, see R SOC 410.]

R SOC 438 Social Demography (also SOC 437)  
Fall. 3 credits. D. Gurak. For description, see R SOC 438.

[R SOC 495 Population, Environment, and Development in Sub-Saharan Africa  
Fall. 3 credits. Not offered 2002-2003. P. Eloudou-Enyegue. For description, see R SOC 495.]

S&TS 411 Knowledge, Technology, and Property  
Spring. 4 credits. S. Hilgartner. For description and prerequisites, see S&TS 411.

S&TS 438 Minds, Machines, and Intelligence (also COGST 438)  
Spring. 4 credits. H. Mietal. For description, see S&TS 438.

[S&TS 466 Public Communication of Science and Technology (also COMM 466)  
Fall. 4 credits. Limited to 15 students. Not offered 2002-2003. B. Lewenstein. For description and prerequisites, see COMM 466.]

[S&TS 490 Integrity of Scientific Practice  

S&TS 491 Disease and Culture  
Fall. 4 credits. E. Toon. For description, see S&TS 491.

S&TS 645 Genetics: Politics and Society in Comparative Perspective (also GOVT 634)  
Fall. 4 credits. S. Hilgartner. For description, see S&TS 645.

V. Other Courses  
B&SOC 375 Independent Study  
Fall or spring. 1-4 credits. For description and prerequisites, see B&SOC 375.

B&SOC 498 Honors Project I  
Fall. 3-5 credits. Staff. For description and requirements, see B&SOC 498.

B&SOC 499 Honors Project II  
Spring. 3-5 credits. Staff. For description and requirements, see B&SOC 499.

Biometry and Statistics  
The major of Biometry and Statistics in the Department of Biological Statistics and Computational Biology deals with the application of mathematical and statistical techniques to the life sciences. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and drawing conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major. The work of an applied statistician or biometrician can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large consulting firms to small consulting firms; salaries are usually excellent.

While satisfying course requirements for the major, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, business, computer science, economics, and the social sciences that involve numerical data and their interpretation.

Students majoring in this area are required to take a computer science course (e.g., Computer Science 100), mathematics courses (at least three semesters of calculus), Biometry and Statistics 100, 101, 102, 408-409, 421, 601-602, as well as a number of electives. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. Students should contact Professor Steven J. Schwager for information.

Communication  
The single most important thing to learn in college is how to assess and manage constantly changing information. The amount of information the public receives and is expected to understand is growing exponen­entially. Communication is taking a more central role in science, technology, business, and public policy. Increasingly, government, industry, and special interest groups rely on communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information understandable and accessible to the general public, to interest groups, and to decision-makers in organizations. Effective information management requires a thorough understanding of the communication process.

Students who graduate from this department have excellent speaking, writing, and listening skills. Communication majors are taught:

• Communication processes, such as how communication influences attitudes, opinions, and behaviors.

• How communication systems work in our society.

• How to apply their understanding of communication to solving problems in science, government, industry, health, and education.

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice. Required freshman courses are:

Fall semester:  
COMM 120 Contemporary Mass Communication  
COMM 121 Investigating Communication  
Spring semester:  
COMM 116 Communication in Social Relationships  
COMM 117 Writing about Communication  

This set of courses provides students with a basic understanding of communication and the communication process. These courses also provide a unique opportunity to link practical application (such as writing and critical analysis) with up-to-date research and knowledge about communication.
During the sophomore year, students take:

**Fall semester:**
- COMM 201 Oral Communication
- COMM 282 Communication Industry
- Research

**Spring semester:**
- COMM 230 Visual Communication

After completing the courses in the core curriculum, students take an additional 18 credits in communication. Students can choose to concentrate in one of three focus areas:

- Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science, and agricultural issues, and public perceptions of risk.)

- Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and evaluating the success of these plans.)

- Communication and Information Technologies. (Principles of how we use communication technologies and how we are influenced by these technologies.)

Detailed information on the distribution of courses is available through the department.

In designing the communication major, the faculty of the department has kept in mind the need for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may complete a minor program of study in communication or a minor program of study in information science or both. The minor in communication consists of four required courses (COMM 110, 120, 201, 230), one advanced presentation course (chosen from COMM 203, 260, 265, 301, 350, 352) and two elective courses totaling 6 credit hours at the 300-400 level, excluding COMM 496 and 498.

The minor program of study in information science is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the information systems component area (primarily computer science), two courses from the human components course area, and one course from any component area. A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

**Crop and Soil Sciences**

The Department of Crop and Soil Sciences provides instruction in three specializations: agronomy, crop science, and soil science. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development Office of the college are glad to help students search for relevant summer jobs and internships. Professional certification can also be obtained in these specializations.

**Agronomy** combines the study of crop production and plant management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming. Graduate school is also possible after a well-planned program of study. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of their curriculum to meet specific interests and goals. Some students pursue a major in agronomy with a concentration in international agriculture. Agronomy is also offered as a specialization within the plant sciences major field of study.

**Crop science** is the application of basic biological and ecological science to the improvement and management of the world's main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in organic chemistry and biochemistry, calculus, physics, and statistics. Crop science is also offered as a specialization within the plant sciences major field of study.

**Soil science** is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 18 credits in soil science, including four credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as six credits of crop science to satisfy the major. Soil science is also offered as a specialization within the Science of Earth Systems major field of study that is now being planned.

**Education**

The Department of Education is currently redesigning its programs. Building on strong academic disciplines and grounding in sociopolitical, psychological, empirical and theoretical bases of educational practice, the department has two foci to meet societal demands for teachers of mathematics, science and agriculture in both formal and non-formal educational settings: Teacher Education, and Adult and Extension Education. These two programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through research, practice and scholarship. Our undergraduate program leads to provisional certification in agricultural education. The latest information on program development can be found on our web site, http://ed.cornell.edu/education.

**Adult and Extension Education.**

The purpose of the Adult and Extension Graduate Program of Professional Development is to promote social learning and civic engagement through participatory adult and extension education practice. Program coursework, research, and fieldwork integrate critical educational, philosophical, ethical, and sociological theories of democratic engagement of adult learners to support both domestic and international educational programs for sustainability in human and community development. As public universities focus a greater share of their research, teaching, and extension resources on critical environmental, economic, and social problems domestically and globally, the program provides opportunities for participants to examine who benefits from such efforts and in what ways. The program prepares educational scholars and professionals for leadership and activist roles in non-formal and community-based settings, including but not limited to adult education, agricultural education, adult literacy education, continuing education and staff development, domestic extension and community development, and international agricultural education and development. Using a reflective practice approach to professional development, graduate preparation includes the study of ethical, political, empirical, and theoretical bases of educational endeavors; analyses of current and historical practices in adult, extension, and international education; and the praxis of education in a global environment.

Programs of graduate study and professional development include:

- **Master of Professional Studies (M.P.S.)—Agriculture and Life Sciences) in Adult and Extension Education**

The purpose of this program is to provide opportunity for professional development and graduate study for adult, extension, and international educators working in a variety of non-formal and community-based settings.

- **Master of Science (M.S.) and Doctor of Philosophy in Education (Ph.D.) in Adult and Extension Education**

The M.S. and Ph.D. programs of advanced graduate study are designed to provide intellectual and professional preparation of scholars and practitioners for faculty roles in higher education, leadership roles in non-formal and community-based educational agencies domestically and internationally, and activist roles in a variety of adult and extension education endeavors.

**Teacher Education.** The Teacher Education Program prepares teachers, teacher educators, and scholars in the areas of Agriculture, Mathematics, and Science. Students develop knowledge and expert practice skills to assume leadership positions in formal educational settings, including public and charter schools, private schools, and other formal instructional centers. Through courses and field experiences, students gain knowledge of ethical practice, the teaching and learning process, and the sociocultural context of education, and integrate this with their specific content area of science, mathematics, and/or agriculture. Building on the land-grant mission of Cornell, this program focuses on the improvement of education through exemplary instruction, meaningful inquiry, and collaboration with public schools. Graduates become practitioners who have the intellectual resources and willingness to engage in critical educational practice to prepare engaged and informed citizens who participate in promoting positive social change.
Programs of professional development and graduate research options include the Cornell Teacher Education (CTE) Program. The CTE Program prepares educational professionals who are recognized for the quality and significance of their teaching in the areas of Agriculture, Mathematics, and Science. The Program provides opportunities to engage in coursework and field experiences that focus on the character and formation of cognitive abilities as well as subject matter expertise, critical and reflective thinking, the social context of schooling, the synthesis and communication of knowledge, professional development, and inquiry.

Graduates of this program work in formal educational settings such as public and private schools, and in other areas where preparation in teaching and learning is highly desirable. There is also an Agricultural Education Undergraduate Certification Option (B.S.). Students enrolled in the undergraduate Education major or in one of the technical agriculture areas of the College of Agriculture and Life Sciences complete coursework in professional education in addition to their technical agriculture requirements. One semester of off-campus student teaching is required. Individuals who complete the Undergraduate Certification Option are eligible to apply for New York State provisional certification to teach agriculture in the public schools. Completion of a Master’s degree within five years of graduation and two years of successful teaching are required for permanent certification.

Master of Arts in Teaching Certification Option (M.A.T.—Agriculture, Mathematics, and Science). Students enrolled in the M.A.T Certification Option complete a graduate curriculum of professional education, additional coursework in their content area(s), and one off-campus semester of student teaching. Graduates are eligible to apply for New York State provisional certification (grades 7-12) to teach one or more of the content areas emphasized in the program. Two years of successful teaching experience are subsequently required for permanent certification in New York State. Note that Undergraduates in science, mathematics, or agriculture majors should apply to the M.A.T program during their sophomore year. Students complete their undergraduate subject majors while taking selected courses in Education during their junior and senior years. Contact the Cornell Teacher Education coordinator, 255-9573, for further information.

Master of Professional Studies—Non-Certification Option in Agricultural Education (M.P.S. Agriculture and Life Sciences). Students enrolled in the M.P.S Non-Certification Option in Agricultural Education complete a program of professional education, additional coursework in their technical content area(s), and an in-depth project. Graduates of this option work in formal educational settings that do not require state licensure (e.g., community colleges, private schools, industry), but do require a background in the planning, delivery, and assessment of instruction.

Graduate Studies in Curriculum and Instruction (M.S., and Doctor of Philosophy—Ph.D.). Graduate Studies in Curriculum and Instruction prepare scholars, researchers, and leaders in education who will work in colleges and universities, government agencies, foundations, and other institutions whose work is focused on formal education and its improvement. Graduates engage in disciplined inquiry addressing problems and issues of importance to the processes of teaching and learning and to the socio-political context in which schooling takes place. Each M.S. and Ph.D. student designs a program tailored to fit his/her personal and professional interests within the context of our Graduate Studies Program and its focus on teacher education. Applicants for the Ph.D. program should have teaching experience or comparable experiences in the public schools.

Effective College Teaching Series. The Center for Learning and Teaching, under the auspices of the Department of Education, offers a series of non-credit and non-credit for, the improvement of teaching at Cornell. Designed for Cornell faculty and graduate students who are either currently teaching or intending to teach. Contact the Center for Learning and Teaching, 5-6310, or www.clt.cornell.edu, for details.

Current offerings include:

EDUC 548 Effective College Teaching Spring and one-week summer session. For faculty, and graduate students who intend to pursue an academic career. 1-3 credits.

EDUC 578 ITATP Cross-Cultural Classroom Dynamics, Language and Teaching Practicum Fall and spring. For international graduate students who have, or will have, teaching assistantships. 2 credits.

ITATP follow-up course Fall and spring. A non-credit course offered for international teaching assistants who have completed EDUC 578, but who need or desire continued work in classroom instructional and communication skills.

Graduate Teaching Development Workshops Offered early in each fall and spring semester, this day-long series offers an array of workshops in teaching effectiveness, from teacher/student interactions to developing a teaching portfolio. Non-credit, open to all Cornell faculty and graduate teaching assistants.

EDUC 620 Internship in Education Fall and spring. For CALS graduate teaching assistants or CALS teaching personnel who wish to extend their workshop experience through reflective practice and consultation with an instructional support specialist. Prerequisite: the CALS Graduate Student Professional Development Workshop. 1 credit.

Educational Leadership The Institute for Community College Development (ICCD), a partnership with the State University of New York (SUNY), Cornell University, and community colleges is located in the School of Industrial Relations, Extension Division and draws on faculty in the Department of Education with expertise in personal and social competencies related to leadership. The Institute currently offers professional development for leaders in community colleges, a research program, and a course in leadership. Contact ICCD, (607) 255-9259, or on the web at iccd.cornell.edu for more information.

Current Offerings include:

Professional Development

The Administrative Leadership Program is designed for senior and mid-level administrators in academic, student affairs, professional, and foundation officers who are interested in current issues affecting community colleges and the way they operate their campuses. The three-day program is held during the summer at Cornell. The program includes opportunities for self-reflection and group problem-solving activities.

The Great Teachers Seminar and Successful Teaching Conference are designed for faculty interested in improving, learning about, and reflecting on their own theory and practice and on general principles of effective teaching and learning. The events are held in upstate New York in the spring and fall, respectively. Faculty from the Department of Education are frequent presenters.

The Presidents Leadership Conference is designed for current and future community college presidents who need information and ideas about leading a diverse, learning-centered campus that is connected to the local and global communities.

Research

The Institute research agenda is centered on leadership theory and practice, and on social and economic policies affecting education.

Education

EDUC 694 is a three credit course offered in the fall term. Analysis of Leadership Theories: Developing a Leadership Philosophy. Designed for faculty and administrators in higher education, particularly in the community colleges.

Entomology

The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes a common core of requirements allowing flexibility in electives selected by students in consultation with their advisers.

Specific requirements

Basic Sciences

One year of college mathematics, including a course in calculus, may substitute statistics and biometry. One semester of physics. Chemistry 205-208 or 207-208 (General Chemistry)
Chemistry 257 (Organic and Biological Chemistry)
General Biology
Introduction to Biology
Biological Sciences 281 (Genetics) or Plant Breeding 225 (Plant Genetics)
Biological Sciences 278 (Evolutionary Biology)
A choice of one: Biological Sciences 261 (Ecology and the Environment) or Biological Sciences 350 or 351 (Principles of Biochemistry)
Entomology
Entomology 212 (Insect Biology)
A choice of two:
Entomology 322 (Insect Morphology)
Entomology 331 (Insect Systematics)
Entomology 483 (Insect Physiology)
Students must also enroll in at least two additional entomology courses offered at the 300-400 level on more specialized topics.

Environmental Science
Environmental Science is a new major for the College of Agriculture and Life Sciences that is pending approval. The proposed major provides an integrative and broad-based program in the physical, biological, and social sciences. The major consists of foundation courses and environmental core courses in earth, biotic, human, and economic systems. Students focus their upper-level study in a concentration or "environmental track," which provides expertise in a particular area. For more information about this new major, contact the Center for the Environment (uccfe@cornell.edu, or (607) 255-7535).

Food Science
The mission of the Food Science Program is to prepare students for careers in food science and technology. Graduates are prepared for entry level positions in industry, government, and research organizations or for advanced study in food science and related disciplines. Food scientists qualify for satisfying careers which focus on ensuring the sustainable availability of a safe, nutritious, affordable, and high quality food supply for people throughout New York State, the nation, and the world.

Students choose one of five specialization options: (1) Basic Food Science; (2) Food Engineering; (3) Food Processing; (4) Food Operations and Management; and (5) Food Biotechnology. The first three options meet minimum curriculum standards set by the Institute of Food Technologists, the premier professional society for food scientists. Students choose an option based on individual interests and career goals.

The first two years of the program are focused on establishing a solid background in the physical and biological sciences, math, and communication. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, food science, and nutrition. The second two years emphasize the application of basic science and technology to the processing, storage, distribution, marketing, and final preparation of foods. Required courses include Food Engineering Principles, Physical Principles of Food Processing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, Food Microbiology, and Statistics. Students choose electives to satisfy college distribution requirements and individual interests.

Students are strongly encouraged to participate in research supervised by a faculty member and/or to work as an intern in a food company during summer breaks. Most faculty in the department have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment.

A state-of-the-art food processing and development laboratory, an operational dairy plant, and extensive laboratory facilities are available for training, research, and employment.

Landscape Architecture
Landscape Architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences; a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad
The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third year graduates in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence
(1) Please note that each semester the studio classes require a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.)

First Year
Fall Term
LA 141, Grounding in Landscape Architecture
Biological sciences elective
Physical sciences elective
Social sciences or humanities elective
Written or oral expression elective

Spring Term
LA 142, Grounding in Landscape Architecture
Biological sciences elective
Social sciences or humanities elective
Written or oral expression elective
Physical sciences elective

Second Year
Fall Term
LA 491, Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment
LA 201, Medium of the Landscape
Biological Sciences elective
Social Sciences or Humanities elective
Free electives

Spring Term
LA 202, Medium of the Landscape
LA 315, Site Engineering
LA 492, Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment
Written or oral expression elective
Physical sciences elective

### Master of Landscape Architecture (M.L.A.) License Qualifying Degree

Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units of satisfactory completion of the core curriculum courses, and a thesis or a capstone studio. (Please note that each semester the studio classes require a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.)

### Master of Landscape Architecture Advanced Degree Program

The two-year Master of Landscape Architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants must hold a Bachelor's Degree in Landscape Architecture or Architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects the curriculum requires three advanced studios, two courses in sites and site design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

### Undergraduate Concentration for Nonmajors

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of four courses, two required and two electives. Students may petition to substitute one course in the electives list. Direct inquiries to professors H. Gottfried or S. Baugher. Required.

### Visual Studies (choose one):

- Art 121 Introduction to Painting (3 cr)
- Art 141 Introduction to Sculpture (3 cr)
- Art 151 Introduction to Drawing (3 cr)
- Art 158 Conceptual Drawing (3 cr)
- Art 159 Life and Still-Life (3 cr)
- Art 161 Photography (1 cr)
- DEA 101 Design I: Fundamentals (3 cr)
- LA 141 Grounding in Landscape Architecture (3 cr)

### The Landscape

- LA 282 The American Landscape (3 cr)

### Electives (choose two):

- Arch 390 American Architecture and Building I (3 cr)
- Arch 391 American Architecture and Building II (3 cr)
- LA 250 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years
- LA 261 Urban Archaeology (3 cr)
- LA 262 Laboratory in Landscape Archaeology
- LA 263 American Indians, Planners, and Public Policy (3 cr)
- LANAR 525 History of American Landscape Architecture (3 cr)
- LA 569 Archeology in Preservation Planning and Design (3 cr) offered alternative years

### Natural Resources

As the number of humans living on the Earth surpasses six billion at the start of the twenty-first century, knowing how to conserve and manage well our Earth's remaining biological resources and natural environments takes on increasing importance and urgency. The undergraduate curriculum in natural resources provides students with the concepts and tools needed to understand the Earth's environment.
provide the student with an intensive experience in synthesis, integration, and communication. The program's emphasis is on developing an ability to think critically about these interactions. As juniors and seniors, students who choose Environmental Studies design a cohesive sequence of five courses in the social sciences, natural sciences, and humanities related to environment. Together with their departmental advisor, they decide on an environmental theme that the student wishes to pursue in depth. That theme should identify a specific set of interrelationships between humans and the environment that the student wishes to understand. For example, students could choose to explore themes such as applied and economic incentives for conservation or studying human views of the environment as expressed in literature or history. Many upper-division sequences of courses are acceptable if the student can formulate and defend a reasonable rationale for the choice of courses.

The concentration in Resource Policy and Management provides a foundation for students who wish to pursue careers or advanced study in the field of natural resources, ecological systems, or the environment. The concentration in Applied Ecology is designed as a foundation for those who wish to pursue careers or advanced study in science-based conservation or management of wild plant and animal species, ecological conservation biology, control of invasive and overabundant species, watershed and landscape management, quantitative resource management, resource inventory and information management, global ecology, or applied ecology, and biogeochemistry of forests and wetlands. This concentration also may interest students seeking a biologically based approach to environmental science or global studies. Students who select this concentration typically focus their course work in the areas of species biology and applied ecosystem ecology, including quantitative analysis of fish and wildlife populations, and restoration design and practices. They complement their course work within the department with courses in other departments, such as Ecology and Evolutionary Biology, Microbiology, Geology, Crop and Soil Sciences, Environmental and Earth Sciences, and Plant Sciences.

The Future for Natural Resource Majors
Most students entering the department have a strong interest in the natural world and contributing in some way to greater harmony between humans and the environment. An undergraduate degree in natural resources prepares students to make these contributions as informed citizens with a strong liberal arts education and a firm grasp of the scientific, ethical, and societal dimensions of environmental conservation and management. It also prepares them for entry-level positions with state and federal government agencies, private sector organizations, non-profits, and other public interest groups. Students who graduate with a degree in natural resources will be prepared to pursue advanced studies in professional or graduate school, or work for a variety of public and private sector employers.

The concentration in Environment-related Studies is intended for those who wish to obtain the broadest possible, yet rigorous, grounding in the wide range of subjects needed to understand human interactions with the environment. The program's emphasis is on developing an ability to think critically about these interactions. As juniors and seniors, students who choose Environment-related Studies design a cohesive sequence of five courses in the social sciences, natural sciences, and humanities related to environment. Together with their departmental advisor, they decide on an environmental theme that the student wishes to pursue in depth. That theme should identify a specific set of interrelationships between humans and the environment that the student wishes to understand. For example, students could choose to explore themes such as applied and economic incentives for conservation or studying human views of the environment as expressed in literature or history. Many upper-division sequences of courses are acceptable if the student can formulate and defend a reasonable rationale for the choice of courses.

For details about the core curriculum in the Department of Natural Resources, consult our Web site at www.dnr.comell.edu. A complete listing also is available in the department's Undergraduate Program Office in 12 Fernow Hall.

Research and Work Opportunities for Undergraduates
The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These opportunities include several field-based courses and access for research to the department's Arctic Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, and the Cornell Biological Field Station on Onedia Lake near Syracuse, as well as numerous natural areas near campus. Students also may choose to do independent research or work during the summer at the Hubbard Brook Forest in New Hampshire, New York's Adirondack Park, or in many types of forest, aquatic, and wetland ecosystems in New York and beyond where departmental faculty members have on-going research projects.

Part-time jobs in the research and extension programs of several faculty members offer students many opportunities for career-related work experience. In addition, a strong search for student research opportunities is available for qualified students. In addition, the department coordinates an internship program for students and encourages students to seek relevant work experience to complement their academic studies.

Nutrition, Food, and Agriculture
Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing importance of the interrelationships of human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and select elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences 285-111 Nutrition, Health and Society, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physiochemical Aspects of Foods, NS 351 Physiological and Biochemical Bases for Nutrition, and NS 352 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and
All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research and natural resources, communication, agricultural policy, the life sciences, and human development and education. Honors credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the direction of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to a career in the field. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields. The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the Division faculty members work in Savage–Kinzelberg Hall and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in MVR is used by students for study and small group discussion. The center contains class materials, computers, audio-visual aids, and supplementary books and periodicals for independent study and special projects.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607–255–2628.

**Plant Sciences**

Plant Science is a multidisciplinary program governed by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding, and Plant Pathology. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, and many have their sights set on careers in applied agricultural fields. In addition to the college distribution requirements, they must take at least one course in each of several areas including botany, plant physiology, ecology, taxonomy/systematics, genetics, statistics, plant–pest interactions, crop production, and soil science for a total of 40 credits. Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work usually choose a specialization within one of the six cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study without declaring a specialization. Those students have fewer required courses but are still expected to develop a strong background in plant science.

More than one hundred courses that deal directly with some area of plant science are offered by the cooperating departments, and other courses in plant science are offered elsewhere in the university. There are also ample opportunities for undergraduate teaching and research experience, and qualified students, especially those expecting to go on to graduate school, are encouraged to avail themselves of such opportunities. Students who are planning to enter the work force immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in a plant production or maintenance related industry such as a lawn and tree care company, commercial greenhouses, nursery, botanical garden or arboretum, cross pollination research with Cooperative Extension. Plant Science faculty also encourage students to avail themselves of opportunities to work and/or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the campus provide students with ample opportunities for hands-on practice, technical training, independent research projects, and internships in plant science. Facilities available to students include research orchards and vineyards, golf courses and turf research facility, the Cornell Plantations, Arboretum and natural areas, and vegetable and field crop farms. Demonstration/research facilities in Aurora (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Essex County), Middletown (Orange County), Odyssey (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Science program. There are also ample opportunities for undergraduate and graduate field study.

**Crop Science and Agronomy** are specializations that focus on the science and management of the major food and feed crops of the world such as wheat, corn, rice, soybean, and alfalfa. In addition to several courses in Crop Science, students should also take courses in the sister disciplines of weed science, seed science, and soil science. At present, the specialization is described in detail under the major field of study called Crop and Soil Sciences, but it will become a part of the Plant Science major field of study in the next future.

**Horticulture.** Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants in farms and gardens, parks and greenhouses, athletic and recreational facilities, indoor plants, greenhouse and nursery plant production, and crops used for wines, herbs and spices, medicinal purposes, coffee and tea. The knowledge and skills essential to progress and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health. There are about 40 faculty members in horticulture—specializing in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally and internationally.

Students choosing a concentration in Horticulture must complete the minimum 40 credits of core courses for the Plant Science major, plus the following courses:

- **HORT 101: Horticultural Science and Systems** (4 credits)
- **HORT 400: Plant Propagation** (3 credits)

Two HORT courses in plant production or management at the 400 level (6 credits).

One additional course of integrated pest management (plant pathology, entomology or weed science) beyond the 3-credit Plant Science core requirement (3 credits). Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisers.

**Plant Biology** stresses a basic, rather than applied, understanding of how plants function, grow and develop, as well as a study of their genome, evolution and relationships to man. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In cooperation with an adviser each student plans a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology. Students specializing in Plant Science within the Plant Science major should take a minimum of four courses beyond the core of Plant Science courses. Options include plant molecular biology, plant cell biology, biochemistry, ethology, and further courses in the function, growth, genetics, systematics, ecology and evolution of plants. Individual research under professional guidance is encouraged. Different options within Plant Biology afford a flexible curriculum.

**Plant Genetics and Breeding** relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas in order to create crops that meet the needs of modern society. In addition to the core plant science courses, students should take PLBR 201, 403, 404, and BIOPL 343. Other courses may be included after consultation with the adviser. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

**Plant Pathology** is the study of plant disease—its causes and how they are identified, the molecular basis for pathogenicity and resistance, and disease management. For most students, a concentration in plant pathology as an undergraduate is preparation for graduate study in plant pathology or another field of plant science. However, study in plant pathology also prepares students for careers as technical representatives with agribusiness firms, Cooperative Extension educators, integrated pest management practitioners, state or federal plant pest regulatory agents, and laboratory technicians. Suggested courses beyond the plant science core include organic chemistry and biochemistry, calculus, introductory plant pathology, plant disease diagnosis, mycology, entomology, and plant breeding.
Plant Protection is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a departmental program for students desiring practical preparation for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

Rural Sociology

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. The Rural Sociology major provides an opportunity for in-depth study of the interaction among development processes, economic, ecological, political, demographic, and social factors influencing the impact of change in agricultural systems on development, community and regional development, environmental sociology, rural industrialization, and labor markets; technology and social change; the implications of the genocidal revolution for agriculture and communities; the linkages between population dynamics, the environment and development; the political economy of globalization; the planning and development; and ethnic competition and stratification. Most courses provide background in both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international, or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

 Majors in Rural Sociology are required to successfully complete core courses: introductory sociology (R SOC 101), international development (R SOC 205), population dynamics (R SOC 203), methods (R SOC 213 or R SOC 214), theory (R SOC 301), social stratification (R SOC 370) and a course in statistics. Four additional Rural Sociology courses are also required of all majors, at least two of which must be at the 300 level or higher. The elective courses allow students to focus their major on particular themes such as the sociology of development, the social processes linking the environment, population, and development; and more general areas such as ethnic and class stratification, social movements, social policy, and gender and development. In each of these focus areas students can choose to concentrate on domestic or international situations. Students are encouraged to complement courses in the department in the history and economics of development, area studies, and the policy sciences.

Recognizing that students are concerned with future career opportunities, the Rural Sociology major emphasizes acquisition of skills as well as general knowledge in preparation for jobs or post-graduate study. Accordingly, students are expected to become involved in the application of theory, methodology, and principles and concepts in the analysis of practical problems. Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. The department and graduate field are recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, methodology, and principles and concepts in the analysis of practical problems. Rural Sociology Faculty are committed to both quality instruction and cutting edge research programs.

The department maintains strong ties with technical fields in CALS as well as with programs dealing with a range of issues of importance to international and domestic development. These include: the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social Research, the Center for the Environment, the Polson Institute for Global Development, the Community and Rural Development Institute, the Gender and Global Change Program, the Bronfenbrenner Life Course Institute, and the Center for International Studies. Nearly half of the department faculty are associated with one or more area studies programs including the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, and the Institute for African Development. Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their Rural Sociology course work by electing courses in these other departments.

Science of Earth Systems (SES)

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the destruction of the ozone: and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell’s strengths across a broad range of earth and environmental sciences have prepared students with the tools to engage in what will be the primary challenge of the twenty-first century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, and biogeochemistry. These classes emphasize the interconnectedness of the Earth system, and are team-taught by professors from different traditional disciplines. The selection of upper-level “concentration” courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Possible areas of concentration include climate dynamics, biogeochemistry, ecological systems, environmental geology, ocean sciences, environmental biophysics, hydrological system, and soil science.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geomorphology, hydrology, ecology, and biogeochemistry. Students seeking employment with the Ph.D. degree will have many options in a wide variety of environmentally oriented careers in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy. In addition, the emphasis on basic science makes the SES major excellent preparation for medical school.

The requirements for the major are as follows:

1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

a. MATH 191 or 193, and MATH 192 (or MATH 111, 112)
b. PHYSICS 207 and 208 (or PHYSICS 112, 215)
c. CHEM 207 and 208
d. BIOGD 101/103-102/104 (or 105-106) or BIOGD 109/110
e. Three additional 3-4 credit courses in

   basic science and math, generally 100 and 200-level classes. At least one of the following courses must be included in the selection:

   GEOI 201 Physics and Chemistry of the Earth
   BIOEE 261 Ecology and the Environment

   Other examples are MATH 292 and MATH 294, biochemistry, organic chemistry, PHYS 214, and introductory statistics. With the exception of the introductory statistics course, the additional basic courses will require at least one of the classes listed above as a prerequisite.

2. Science of Earth Systems Core Courses

Three 4-credit courses that emphasize the interconnectedness of the Earth system are required. These classes are founded on the most modern views of the planet as an interactive and evolving system, and each class crosses the traditional boundaries of disciplinary science.
EAS 302 Evolution of the Earth System
EAS 331/ASTRO 331 Climate Dynamics
EAS 321/NATRES 321 Biogeochemistry

3. Concentration Courses
Four intermediate to advanced-level courses (300-level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses. These courses build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen before the junior year in consultation with an SES adviser whose interests match those of the student.

For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Science, khc6@cornell.edu, and visit the web site: www.geo.cornell.edu/SES/

Special Programs in Agriculture and Life Sciences

General Studies. The opportunity to develop an independent major in General Studies is available for students interested in pursuing a general education in Agriculture and Life Sciences. In consultation with a faculty adviser, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, the attitudes and the analytical ability that a general education fosters.

General Studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspiration. A course of study for a special major must be planned with and approved by a college faculty adviser.

Information on the options and names of faculty advisers prepared to advise in special areas is available for students interested in pursuing a concentration in one of several program areas of the college.

International Studies Minor for CALS Undergraduates
Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills and attitudes that build "global competencies." The minor for CALS students not majoring in International Agriculture will recognize an international concentration of coursework and experiences.

Requirements
- Four courses with significant international content, as recommended by students major departments (2 should be from CALS)
- One semester of the Global Seminar, INTAG 480
- Four semesters of foreign language instruction, or demonstrated language competency equivalent to that achieved by the end of the 4th semester of instruction at Cornell.
- An approved overseas experience (exchange, study abroad program, internship or faculty-led short course)

For more information contact the Student Services Coordinator in the International Agriculture Program Office, B22 Mann, (607) 255-3037.

INTERDEPARTMENTAL/INTERCOLLEGE COURSES

American Indian Studies
American Indian Studies is the instructional component of the American Indian Program. It is a multidisciplinary program offering course work that enhances students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the Western Hemisphere, especially in Canada. Students address such challenging topics as the sovereignty rights of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present and feature the perspectives of Native American people.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration is earned upon completion of five courses: AIS 100 and AIS 175, plus three other courses selected from the AIS course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 450 Caldwell. AIP also offers a graduate minor.

Students interested in choosing the minor should contact Professor Angela Gonzales, Associate Director of Academic Development and Research, American Indian Program, 255-1795.

J. Mt Pleasant, Director; B. Baker, J. Barreiro, S. Baughier, L. Donaldson, C. Geisler, A. Gonzales, B. Lambert, R. W. Venables

AIS 100 Introduction to American Indian Studies
Fall. 3 credits. T R 1:25-2:40 plus sections. R. W. Venables.

Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Africa, Asia, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. The course begins with a survey of Indian America before Columbus and ends at Wounded Knee in 1890, the event which marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

AIS 175 Indian America in the 20th Century (also RS 175)
Spring. 3 credits. M W 11:15-12:05 plus sections. B. Baker.

This course addresses major U.S. policies affecting American Indians in the 20th Century, and ways in which American Indians pursued strategies to deal with the processes of social change. American Indian political, economic, and cultural issues are examined through history, literature, art, and film. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians in the twenty-first century are explored. Guest lecturers, including...
AIS 230 **Cultures of Native North America** (also ANTHR 230)
Fall. 3 or 4 credits. M W F 1:25–2:15.
J. Lambert
A survey of principal Inuit and American Indian cultures north of Mexico. Selected cultures are examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

AIS 255 **Indian Country: Contemporary Life and Culture through Media** (also COMM 255)
J. Batteيه
The national and global growth of self-expression by Indigenous peoples has generated a vigorous Native American press. This course explores Native contemporary issues through resources in Native media, including national newspapers, magazines, book publishing and Internet activity. This course is grounded in contemporary journalistic networking, research and reporting skills. While studying and interacting with the Native media, students deepen their own research and writing on specific issues.

AIS 260 **Preindustrial Cities and Towns of North America** (also LA 260 and CRP 360)
S. Baugher
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

AIS 261 **Fieldwork: Urban Archaeology** (also LA 261 and CRP 261)
S. Baugher
Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now stand as boundaries of modern cities. This course explores how urban centers evolve, what lies beneath today’s cities, and how various cultures have altered the urban landscape. Students participate in a local archaeological excavation.

AIS 311 **Social Movements** (also R SOC 311)
Fall. 3 credits. T R 2:55–4:10. A. Gonzales
Social movements are collective efforts by relatively powerless groups of people to change society. Social movements have occurred throughout history and the world even under the most repressive regimes. The intellectual rationale underlying the study of social movements is the belief that they are an important source of social change. Social movements are typically conceptualized as non-(or extra-) institutional political activity. That is, they are "politics by other means." In this course, we concentrate on twentieth century U.S. movements for social justice, including the environmental justice movement, the American Indian (Red Power) movement, and the anti-globalization movement.

AIS 318 **Ethnohistory of the Northern Iroquois**
Spring. 3 credits. Enrollment limited to 20. T 1:25–4:25. R. W. Venables
The development of Iroquois (Haudenosaunee) history and culture is traced to the present day.

AIS 325 **Indigenous People and Globalization** (also R SOC 325)
Spring. 3 credits. T R 2:55–4:10.
A. Gonzales
This course examines processes of globalization and how they affect indigenous people worldwide. The processes of globalization, under the auspices of the World Trade Organization and regional economic agreements such as the North American Free Trade Agreement (NAFTA), have profound social, cultural, and economic impacts upon indigenous peoples. At issue are the lands, resources, traditional knowledge, cultural property, and tribal sovereignty of indigenous peoples. This course considers issues such as the effect of NAFTA on the Indian people of Mexico and Central America; issues of cultural ‘property’ such as songs and stories of native artists; intellectual property such as plant medicines; the question of treaties and water rights; and whether and to what extent civil society can truly include and address the interests of indigenous peoples.

AIS 361 **Sociology of American Indians** (also R SOC 360)
Spring. 3 credits. Prerequisite: R SOC 101/101H or approval of instructor. Enrollment limited to 20. W 2:30–4:25. B. Baker
This course is designed to emphasize the role of theory and research in our understanding of American Indians. Towards that end, the relationship between the nation-state and indigenous populations is emphasized. Students are exposed to the following theoretical perspectives: world systems and dependency, internal colonialism, social disintegration, the social construction of reality, political mobilization, and ethnic reorganization. The course is also historical and comparative, as students study different Indian tribes located in the United States and Canada.

AIS 365 **American Indians, Planners, and Public Policy** (also LA 263 and CRP 363)
Spring. 3 credits. T R 10:10–11:25.
S. Baugher
Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without impinging the cultural survival of minorities.

AIS 367 **American Indian Politics and Policy** (also GOVT 357 and R SOC 367)
Fall. 3 credits. Enrollment limited to 20. T R 2:30–4:10.
C. Geisler
This course addresses the Constitutional basis of the Federal-Indian relationship through an examination of treaties, Supreme Court decisions, and Congressional law-policy. The effects of Federal and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribal governments are addressed relative to state and federal governments.

AIS 440 **Social Impact of Resource Development** (also R SOC 440)
Spring. 3 credits W 7:00–10:00 p.m. C. Geisler
Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies and new technologies before they happen and a decision tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.

AIS 442 **American Indian Philosophies: Selected Topics**
Spring. 3 credits. Prerequisite: permission of instructor. Enrollment limited to 15. R 1:25–4:25. R. W. Venables.
This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

AIS 450 **Practicum in American Indian Studies**
Fall. 4 credits. Prerequisites: AIS 100 or 175; one additional AIS course at the 200 level or higher; and permission of instructor. Staff.

As a service learning initiative, this course provides students with the opportunity to work in American Indian reservation or urban communities. Students apply knowledge and skills derived from their AIS coursework and major field of study under the supervision of Cornell faculty affiliates and American Indian Program and representatives from Indian communities. Students are expected to contribute to the goals and objectives identified by Indian communities during the semester. Students meet in a weekly seminar where they engage in critical dialogue and self-reflection about the experience relative to academic knowledge. Students also write a series of short papers and submit a final project at the end of the semester. This course requires a time commitment of at least 60 hours outside the classroom.

AIS 486 **American Indian Women’s Literature** (also ENGL 486)
Fall. 4 credits. R 10:10–12:05.
L. Donaldson
This course explores the development of women’s literature in a number of different American Indian cultures. We attend to Native paradigms of cultural production such as women’s songmaking, weaving, basketmaking and storytelling, as well as the appropriation of European literary forms as novel. We read a diverse range of materials including novels, autobiography, poetry, drama, and short stories.

AIS 497 **Independent Study**
Fall or spring. 1–4 credits. Staff.
Topic and credit hours to be mutually arranged between faculty and student. Independent Study Forms must be approved by American Indian Program Office.

AIS 600 **American Indian Studies**
This seminar surveys the field of American Indian Studies across different academic disciplines. Designed specifically for students considering the graduate minor in American Indian Studies, it offers some common
used to teach skills such as intubation, emergency IV access, electrocardiogram and defibrillation, and patient assessment and pharmacological intervention. Extensive out of classroom (exceeds 140 hours) time is required.

ALS 400 Internship
Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only. Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant’s Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

ALS 402 Agricultural Study Tour to Burgundy, France
Spring. 2 credits. Prerequisite: must be a registered CALS student. S-U grades optional. L. A. Weston and P. Durand. A two-week study tour held in the month of May in Burgundy, France. Students experience French agriculture, history, and cuisine. Tour includes wine, cheese making, beef and poultry production, and French university facilities featuring modern agricultural research. Ten- to twenty-page paper requirement. Students travel throughout Burgundy and Eastern France with Pascal Durand, professor at ENESAD in Dijon France.

ALS 403 Internship Opportunities in Burgundy, France
Spring. Variable to 4 credits. Prerequisites: enrollment in the Agricultural Study Tour of Burgundy, France. Some French language experience preferred. S-U grades optional. L. A. Weston and P. Durand. Six- to eight-week internship experiences in Burgundy, France in agriculturally related subject areas including viticulture, agrihusness, agronomy, food science, and biotechnology. Final paper documenting internship experience required.

ALS 477 Environmental Stewardship in the Cornell Community
Each student undertakes an original project to improve the environment at Cornell while working with a faculty adviser and the Cornell infrastructure (generally campus life and/or facilities). Through seminar discussions and presentations on environmental activism, students learn how to be more effective at developing environmental programs in the future, both during and after college. The final written project report is also presented orally at a public forum. (Note: If students prefer to take one or two credits of independent research in a department in the College of Agriculture, this can be arranged. Assistance in finding a faculty adviser is provided. This course may be taken more than once.)

ALS 480 Global Seminar: Environment and Sustainable Food Systems (also EDUC 480 and IMT 480)
Spring. 3 credits. Prerequisite: juniors, seniors, and graduate students. Letter grade. Lec, R 8:00-9:55; lab 3:35-4:25 scheduled, one additional hour unscheduled. H. D. Sutphin and D. Lee.

NONDEPARTMENTAL COURSES

ALS 101 Transition and Success to Cornell
Fall. 1 credit. Prerequisites: must be an entering student in CALS. Letter grade only. Lec, M 2:30-3:20. B. O. Earle and CALS Career Development Office. Discussion-oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Lecture, discussion, guest speakers, student panels, and assignments that explore Cornell’s history, academic opportunities, services, and organizations are used. Emphasis on role of Agriculture and Life Sciences in future of all related careers.

ALS 134 Emergency Medical Technician
Fall and spring. 3 credits each semester. Two semester course. S-U grades optional. Prerequisite: none—but basic and advanced first aid recommended. Lec, M 1:30-5:00, lab, W 1:30-5:00. D. A. Grossman, P. Rach and A. E. Ganter. E.M.T. is an intensive 140-hour course taught throughout the fall and spring semesters. Enrollment, therefore, occurs in the fall term only. Course includes training in E.M.T. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, medical antishock trousers, and defibrillation. Students will qualify for the New York State E.M.T. Certification Exam upon successful completion of the course. Please consult Course and Room Roster for the location of the lab and lecture classes.

ALS 135 Advanced Emergency Medical Technician, Critical Care
Fall or spring. 4 credits each term. Two semester course. S-U grades optional. Prerequisite: must be currently certified as a NYS Basic EMT, or have applied for reciprocity. Lec, T 1:25-4:25; lab, R 1:25-4:25, Sat 9:00-12:00. D. Grossman, P. Rach, D. Spaulding. Advanced Emergency Medical Training includes topics such as Emergency Pharmacology, Patient Assessment, Advanced Cardiac Life Support, Emergency Hypoperfusion management and Basic Trauma Life Support. Classroom, lab, hospital and field sessions are

A distance learning course involving Cornell and universities in Australia, India, The Netherlands, Sweden, Costa Rica, and Honduras. The seminar provides students the opportunity to explore and learn about the dynamic linkages between sustainable development, food security, population, the environment, and socio-economic progress from a global perspective. Students across the different sites interact via Internet, satellite, and videoconferencing technologies to analyze a series of interdisciplinary case studies related to global sustainable development. Teams of international students collaborate on a number of projects that are presented during a live videoconference at the end of the semester.

ALS 494 Special Topics in Agriculture and Life Sciences
Fall or spring. 4 credits maximum. S-U grades optional. The college teaches "trial" or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 500 Politics and Policy: Theory, Research, and Practice (also AM ST 501, PAM 406 and GOVT 500)
Students in the College of Agriculture and Life Sciences must register for ALS 500. S. Jackson and staff. This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington Program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All the components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Applications are made through the Cornell in Washington office, 311 Caldwell Hall.

ALS 661 Environmental Policy (also Biology and Society 461 and BIOEE 661)
Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem R 2:30-4:30. D. Pimentel. This course focuses on complex environmental issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.
Courses by Subject

Farm management, agricultural finance, and production economics: 302, 403, 404, 405, 605, 608, 708

Statistics, quantitative methods, and analytical economics: 210, 410, 411, 412, 414, 415, 416, 417, 419, 610, 611, 711, 712, 714, 717

Policy and International Trade: 230, 335, 430, 431, 432, 433, 454, 630, 652, 653, 654, 730, 735

Environmental and resource economics: 250, 450, 545, 555, 652, 655, 750, 751

Economics of development: 464, 660, 667, 762, 765

Consumer economics: 670

General, contemporary issues, research, and other: 101, 380, 494, 497, 498, 499, 694, 698, 699, 700, 800, 900, 901

AEM 101 Introduction to Applied Economics and Management

Fall. 1 credit. Required of and limited to freshmen in Applied Economics and Management; S-U grades only. M. J. Hubbelt.

This freshman transition course explores the major courses of study available to AEM students, including a discussion of "hot topics," research, and career paths in each field. Numerous AEM faculty members are guest presenters. Students are introduced to campus resources such as the library system, study abroad opportunities, course planning, career planning, and learning strategies. Short written assignments and active group participation are required.

AEM 210 Introductory Statistics

Fall. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. 2 evening prelms. C. van Es.

An introduction to statistical methods. Topics covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

AEM 220 Introduction to Business Management

Spring. 3 credits. Enrollment limited to AEM majors and those in the process of transferring to the major. Preference given to other CALS majors. Additional enrollment as capacity permits, with permission of the instructor. 2 evening prelms. P. D. Perez.

This course provides an overview of management and business. Human resources, marketing, finance and strategy concerns are addressed with consideration paid to current issues such as the impact on operations, globalization, ethics, quality and entrepreneurship. Guest speakers are an important part of the course.

AEM 221 Financial Accounting

Fall. 3 credits. Not open to freshmen. Priority given to CALS majors. 2 evening prelms and a comprehensive final; weekly homework assignments; and one project using an electronic spreadsheet. S. F. Melendy.

A comprehensive introduction to financial accounting concepts and techniques, intended to provide a firm foundation in the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement interpretation. Coverage of topics includes methods of recording transactions, receivables, depreciation, bonds, and equity.

AEM 222 Business Management Case Analysis

Spring. 1 credit. Prerequisites: concurrent enrollment in AEM 220. Required of and limited to AEM majors in AEM 220; others admitted by permission of instructor. L. A. Robinson.

The course offers students, working in teams, the opportunity for hands-on application of general business management concepts through discussion and written analysis of a series of cases. All AEM majors registered in AEM 220 are required to take AEM 222. Additional students may be accommodated on a space available basis with permission of the instructor. Case topics are closely coordinated with both the content and sequencing of material being presented in AEM 220.

AEM 230 International Trade and Finance (also ECON 230)

Spring. 3 credits. Prerequisites: ECON 101 or equivalent required; ECON 102 or equivalent recommended. 1 evening prelmin. S-U grades optional. D. R. Lee.

This course provides a one-semester introduction to international economics principles and issues. The course first surveys key topics such as the elements of comparative advantage, trade and non-tariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Other issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets are discussed throughout. This course is designed as a less technical introduction to concepts covered at a more advanced level in AEM 430 and ECON 361-362.

AEM 240 Marketing

Fall. 3 credits. E. W. McLaughlin.

This course provides a broad introduction to the fundamentals of marketing. The components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services to people are explored. Industry guest lectures and current marketing applications from various companies are presented and analyzed. Concurrent enrollment in AEM 241 is required for AEM majors.

AEM 241 Marketing Plan Development

Fall. 1 credit. Prerequisites: concurrent enrollment in AEM 240. Required of and limited to AEM majors enrolled in AEM 240, other instructors.

The course offers students, working in teams, the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local not-for-profit organization. All AEM majors registered in AEM 240 are required to take AEM 241. Additional students are accommodated on a space available basis with permission of the instructor. Assignments are closely coordinated with both the content and sequencing of material being presented in AEM 240.

AEM 250 Environmental and Resource Economics

Spring. 3 credits. S-U grades optional. G. L. Poe.

The objectives of this course are to introduce fundamental economic principles and the "economic approach" to policy issues, and to demonstrate how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Subjects include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. These tools are used to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and non-renewable resources, and global warming.

AEM 302 Farm Business Management

Fall. 4 credits. Not open to freshmen. This course is a prerequisite for AEM 405 and 427. On days farms are visited the section period is 1.25:6-0. W. A. Knoblauch.

An intensive study of planning, directing, organizing, and controlling farm business operations, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

AEM 320 Business Law I (also NBA 560)

Fall and offered alternate summers. Next offered summer 2004. 3 credits. Limited to juniors, seniors, and graduate students.

1 evening prelmin. D. A. Grossman.

Consideration is given chiefly to legal issues such as contract law, and distribution of goods and services to people are explored. Industry guest lectures and current marketing applications from various companies are presented and analyzed. Concurrent enrollment in AEM 241 is required for AEM majors.

AEM 321 Business Law II (also NBA 561)

Spring. 3 credits. Limited to juniors, seniors, and graduate students.

1 evening prelmin. D. A. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships,
corporations, and limited liability companies. The second portion of the course reviews selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, bankruptcy, e-commerce law, and international business law.

**AEM 322 Technology, Information, and Business Strategy**
Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leiponen.
This course explores the impact of new technologies on business processes and industries. We focus particularly on the effects of information and communication technologies (ICT). The objective is to understand the nature of information as an economic good, business opportunities and challenges created by ICT, and organizational constraints involved in exploiting these opportunities.

**AEM 323 Managerial Accounting**
Spring. 3 credits. Priority given to CALS majors. Prerequisite: AEM 221 or equivalent. 2 evening prelms, a third exam, weekly homework, and one project using an electronic spreadsheet. S. F. Melendy.
An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, variance analysis, and accounting systems in the manufacturing environment. Use of electronic spreadsheets is required.

**AEM 324 Financial Management**
Spring. 4 credits. Priority given to CALS majors. Prerequisites: AEM 220, AEM 221, and AEM 222, or equivalents. 3 evening prelms. R. Curtis.
This course focuses on the mathematics of finance, the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, capital budgeting decisions, financing alternatives, the cost of capital and the capital structure decision, financial statements and acquisitions and restructuring, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

**AEM 325 Personal Enterprise and Small Business Management**
Spring. 4 credits. Limited to juniors and seniors. Prerequisites: AEM 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting. Term project work will amount to approximately $100 per term. D. Streeter.
Course is for students interested in starting a business as their career. Majors include business, psychology, and psychology majors with an interest in small businesses. Topics include human resources, marketing, accounting, and management. Students will be assessed on their progress in setting up and running their own business.

**AEM 326 Human Resource Management in Small Businesses**
Fall. 3 credits. Prerequisite: AEM 220 or AEM 302 or equivalent. S-U grades optional. 1 evening prelim. R. A. Milligan.
An introduction to the management of human resources in small businesses. The focus is on developing and using all of the capabilities of all small business personnel. Topics include people-oriented management, vision and mission, organizational change, coaching, performance evaluation, recruitment, selection, compensation, training, empowerment, team building, leadership, and conflict resolution. Student involvement and active learning experiences are emphasized.

**AEM 327 Technological Change and Innovation Strategy**
Fall. 3 credits. Prerequisites: AEM 220 and ECON 101 A. Leiponen.
This course explores innovation and technological change. We will study how technological change affects economies and industries, and how innovation of new products, processes, and services takes place in firms. The focus is on the creation, management, and exchange of knowledge within and across organizational boundaries.

**AEM 328 Innovation and Dynamic Management (also H ADM 449)**
Spring. 3 credits. Limited to juniors and seniors. C. Enz.
For description. see H ADM 449

**AEM 329 International Agribusiness Study Trip**
Fall. 2 credits. Prerequisites: AEM 220 or AEM 302, and AEM 240. Open by application prior to March 1 of the spring semester before the course is offered. A co-payment of $800 is required for the study trip. R. Gley and L. W. Tauer.
Provides students interested in agribusiness management an exposure to the managerial practices essential to the success of agriculture, agribusiness, and food companies competing in the global marketplace. The course involves a two-week international field study trip that takes place after the final exam period of the spring semester before the course is offered. The course meets for a few sessions in advance of the field study trip. A paper analyzing an aspect of the field study is required. Applications for the field study are due prior to March 1 of the spring semester before the course is offered. Approximately 12 students are selected with preference given to sophomores and juniors in CALS.

**AEM 330 International Technology Marketing of Biotechnology**
Spring. 3 credits. Prerequisites: AEM 220 and BIO G 109 or equivalents. S-U grades optional. W. H. Lesser.
This class explores international technology marketing from a biotechnology perspective, using biotechnology as an example. Topics include technology theories, products, risk (health and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, public trade, and international conventions. The class is of interest to students of biotechnology, public technology policy, and international technology marketing.

**AEM 340 Futures and Options Trading**
Spring. 3 credits. Limited to juniors and seniors, then out of college seniors. Prerequisites: ECON 101 or equivalent. S-U grades optional. Not offered spring 2003. Staff.
The focus of the course is on the use of futures and options as risk management tools. Commodities, exchange rate, and interest rate derivatives are covered from the perspective of the hedger, but those interested in arbitrage and speculation are provided some insights as well. Students participate in a simulated trading exercise in which they use price and market information and input from industry experts to manage a hedge position.

**AEM 344 Consumer Behavior**
Fall. 3 credits. Prerequisites: AEM 210 and AEM 240 or equivalents. Limited to 45 juniors and seniors. Priority given to CALS students. Not offered fall 2002. Staff.
This course introduces students to the psychological, sociological, and cultural theories of buyer behavior, with specific attention to consumer information processing and decision making. Class discussions, lectures, experiential exercises, and group projects are used to illustrate behavioral concepts and their application to marketing practice. The role of research in understanding and explaining consumer behavior is emphasized.

**AEM 346 Dairy Markets and Policy**
Spring. 2 credits. Limited to juniors and seniors. Prerequisites: ECON 101 or equivalent. S-U grades optional. M. Steepenson.
An introduction to dairy markets and policy. Major topics include: milk pricing, marketing channels, dairy trends and demographics, world trade for dairy products, and policy issues. Class participants are expected to have some previous economics background.

**AEM 360 Independent Honors Research in Social Science**
Fall or spring. 1-6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in AEM Undergrad Program Office in Warren Hall.

**AEM 403 Farm Management Study Trip**
Spring. 1 credit. Prerequisite: AEM 302. Open by application only. W. A. Knoblauch.
This is a special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

**AEM 404 Advanced Agricultural Finance Seminar**
Spring. 3 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. E. L. LaDue.
A special program in agricultural finance conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall term, a two- to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring term.
The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

AEM 416 Consumer Demographics and Market Analysis (also R SOC 331)
Fall. 3 credits. Prerequisite: AEM 210 or equivalent. W. Brown.
For description, see R SOC 331.

AEM 417 Decision Models for Small and Large Businesses
Spring. 3 credits. Limited to juniors and seniors. Preference given to AEM majors. Prerequisites: AEM 210 or equivalent. In weeks labs are held, there will be no Friday lecture. C. L. van Es.
The course focuses on economic and statistical models of decision analysis and their application in large and small business settings. The course demonstrates how use of models can improve the decision-making process by helping the decision maker: understand the structure of the decision, incorporate subjective utility as a way to portray risk, measure outcomes in a way that is consistent with attitudes toward risk, and understand the value of information. The importance of sensitivity analysis is emphasized, as is the need to combine both quantitative and qualitative considerations in decision making. Cases are drawn from small business scenarios, the public policy arena, and corporate settings. Implementing decision models with computers is the focus of lab sessions.

AEM 419 Strategic Thinking
Fall. 3 credits. Prerequisite: ECON 313 or an equivalent, microeconomics (PAM 200 or ECON 313), and either ECON 313 or PAM 200, or microeconomics equivalent. J. E. Pratt.
The art of thinking strategically puts outdoing your adversary at the core of your decision-making process, while anticipating that your adversary is doing exactly the same thing. Businesses make investment decisions and innovate new products in anticipation of the reaction of their rivals; managers make contingency planning decisions by accounting for the reaction of their subordinates and superiors; national trade policies are formulated based on whether trading partners are committed to make credible concessions; and how often your adversary pays attention to class based on whether or not someone else is paying attention? This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students' ability to think strategically on firm level issues (e.g. pricing, advertising wars, product differentiation, entry deterrence), strategic policy interaction in international economic relations (e.g. trade wars, arms race).

AEM 420 Investments
Fall. 3 credits. Prerequisites: AEM 210 or equivalent and AEM 324. Recommended: ECON 313 and a calculus course. Preference given to students in AEM. S-U grades optional. S. Wang.

AEM 421 Derivatives and Risk Management
Fall. 3 credits. Prerequisites: AEM 210 and AEM 324 or equivalents. Recommend: ECON 313 or equivalent and a calculus course. Preference given to students in AEM. S-U grades optional. S. Wang.
This course covers the pricing of derivatives and how derivatives can be used for the purpose of risk management and speculation. While no prior knowledge of futures and options is necessary, familiarity with calculus and probability and statistics will be helpful. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 422 Estate Planning (also NBA 562)
Fall. 1 credit. Limited to seniors. Prerequisites: AEM 210 and AEM 324 or equivalents. L. Tauer.
This is a capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Issues are approached from the standpoint of the board of directors, chief executive officer, and business unit managers. What should be considered and how strategic decisions should be made are the focus of the course.

AEM 423 Risk Management in Business
Fall. 4 credits. Limited to AEM seniors in Business. D. Streeter.
This is a capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Issues are approached from the standpoint of the board of directors, chief executive officer, and business unit managers. What should be considered and how strategic decisions should be made are the focus of the course.

AEM 424 Management Strategy
Spring. 3 credits. Limited to AEM seniors in Business. D. Streeter.

AEM 429 Small Business Management Workshop
Fall. 4 credits. Limited to seniors. Prerequisite: AEM 325 or MBA 300 and permission of instructor. Term project work will amount to approximately $100 per team. Not offered fall 2002. D. Streeter.

AEM 430 Cooperative Management and Strategies
Spring. 3 credits. Recommended: AEM 220 or equivalent. Estimated cost of field trip, $60. 2-day field trip required. Not offered spring 2003. B. L. Anderson.
Investigates the unique aspects of cooperative, membership, and not-for-profit organizations. Issues are approached from the point of view of management, the board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, taxation, as well as the unique nature of strategies, management, financing, and marketing in cooperative, membership, and not-for-profit organizations. Primary focus is on operating cooperatives in agriculture, although alternative types of cooperative organizations are discussed (credit unions, insurance cooperatives, employee stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations).

AEM 427 Agribusiness Strategy
Fall. 3 credits. Prerequisites: AEM 220 or AEM 302. B. A. Ogle.
This course is intended for students with an interest in agribusiness and is designed to integrate previous coursework and enhance problem identification and solving skills. The focus is on the evaluation, formulation, and implementation of strategies designed to create and sustain competitive advantage for agribusiness firms. The course covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, organizational design and structure, and leadership for agribusiness firms. This course is designed as a capstone course for the agribusiness management specialization.

AEM 428 Valuation of Capital Investment
Spring. 3 credits. Prerequisites: AEM 210 and AEM 324 or equivalents. Preference given to AEM students. D. T.-C. Ng.
This course is about the analysis of financial information - particularly firms' financial reports - for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given to credit analysis. Various valuation models are examined in detail and applied in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, and valuation generation in a firm, forecasting earnings and cash flows, pro-forma analysis for strategy and planning, analysis of risk, and the determination of price/earnings and market-to-book ratios.

AEM 429 International Finance
Spring. 3 credits. Prerequisites: AEM 210 and AEM 324. Preference given to students in AEM. S-U grades optional. D. T.-C. Ng.
The purpose of this course is to learn about issues in international financial management and international investment. The major issues that will be discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investment, determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

AEM 430 International Trade Policy
Spring. 3 credits. Prerequisites: ECON 101-102 or equivalents and intermediate microeconomics. Recommended: AEM 250. Optional section TBA. N. H. Chau.
This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, trade in primary commodities, and to both developed and developing countries are also emphasized.

AEM 431 Food and Agricultural Policies
Spring. 3 credits. Prerequisite: intermediate microeconomics. H. de Gorter.
The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

AEM 432 Business and Governments in a Global Marketplace
Fall. 3 credits. Prerequisite: Intermediate microeconomics. C. K. Ranney.
The government agency and the individual business enterprise are two of the most powerful institutions in modern society. The aim of this course is to look at the economic, political, and legal interfaces between government and business. The shifting and complicated relationships between them exert great influence on the changing performance of the economy and on the lives of citizens. The consequences of relationships ranging from cooperative to competitive, from friendly to hostile. It is an uneasy relationship, each side possessing basic powers and yet each having an important need for the other. In the United States, the result is a mixed economy in which the public and the private sectors interact in many ways. Government exercises a variety of important powers in dealing with the individual private enterprise, ranging from taxation to regulation. Business, in turn, relies on constitutional protections as well as on support of its basic role in creating income, employment, and material standards of living. In a dynamic and increasingly globalized economy the business-government relationship is a critical component of the economic equation and the line between public and private sectors frequently shifts. Future managers will be constantly confronted with issues that relate to government-business interfaces.

AEM 433 Devolution, Privatization, and the New Public Management (also CRP 412 and WOMNS 411)
Fall. 3 credits. S-U grades optional. M. E. Warner.
For description, see CRP 412.

AEM 434 Government Policy Workshop (also CRP 418 and WOMNS 420)
Spring. 4 credits. S-U grades optional. M. E. Warner.
For description, see CRP 418.

AEM 442 Emerging Markets
Fall. 3 credits. Prerequisites: AEM 240 and ECON 313. Limited to seniors and graduate students. R. D. Christy.
This course provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. The risk of entering markets in low-income economies is appraised and assessment of the political, legal, cultural, and economic forces is conducted. Case studies of companies are analyzed and discussed.

AEM 443 Food-Industry Strategy
Fall. 4 credits. Limited to AEM juniors and seniors in Business, Agricultural, Management and grad students. Prerequisite: AEM 240 or 448 or permission of instructor. G. A. German.
A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday afternoon section.

AEM 446 Food Marketing Colloquium
Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. D. J. Persoio.
AEM 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A number of field trips are taken. Students participate in research topics on various aspects of the food industry.

AEM 447 Food Marketing Colloquium
Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. D. J. Persoio.
AEM 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A number of field trips are taken. Students participate in research topics on various aspects of the food industry.

AEM 448 Food Merchandising
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: AEM 240. D. J. Persoio.
Covers merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

AEM 449 Global Marketing Strategy
Spring. 3 credits. Prerequisite: a previous marketing course. Limited to juniors, seniors, and graduate students. J. M. Hagen.
This course examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (exporting or establishing a local subsidiary), and issues in implementing those strategies. The course includes case analysis and discussion.
AEM 450 Resource Economics (also ECON 450)  
Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and a familiarity with EXCEL. J. M. Conrad.  
Dynamic models of renewable, nonrenewable, and environmental resources are constructed to examine market allocation and optimal resource management.

AEM 451 Environmental Economics (also ECON 409)  
Spring. 3 credits. Prerequisites: ECON 313, or intermediate microeconomics course, and calculus. Limited to undergraduate students. S-U grades optional. G. L. Poe.  
This course explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasis is placed on the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of nonmarket valuation techniques. Property rights, institutional perspectives and ecological economic concepts are also examined.

AEM 464 Economics of Agricultural Development (also ECON 464)  
Spring. 3 credits. Prerequisites: ECON 101–102, or permission of instructor. R. D. Christy.  
This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector are covered to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries are used to illustrate the basis for economic analysis.

AEM 494 Undergraduate Special Topics in Applied Economics and Management  
Fall or spring. 4 credits maximum. S-U grades optional. Staff.  
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 497 Individual Study in Applied Economics and Management  
Fall or spring. Variable credit. S-U grades optional. Staff.  
This course is about markets for agricultural commodities and nonagricultural resources. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions. The concepts of efficiency and productivity are discussed. Production response over time and under risk is introduced.

AEM 610 Econometrics I  
Spring. 3 credits. Prerequisites: statistical methods at the level of ILRST 311 or ECON 619. Undergraduates must have permission of instructor. T. D. Mount.  
This course, together with AEM 711, provides a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. AEM 610 covers linear regression models and the associated estimation and testing procedures. Methods from demand and production theory are used as illustrations.

AEM 611 Global Modeling  
Spring. 3 credits. Prerequisite: a course in graduate micro theory. T. D. Mount, R. N. Boisvert.  
This course is taught over the Internet by Tom Hertel at Purdue University. It is designed to teach people how to use a global general equilibrium model (GTAP) for research on trade and environmental policies. Weekly assignments start with the components of a single country model and end with a full global model. A final project and the assignments are the primary course requirements.

AEM 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 630)  
Spring. 4 credits. Prerequisites: AEM 608 or TAM 603, ECON 313, or equivalent intermediate micro theory incorporating calculus. H. de Gotter.  
The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of social welfare economics. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

AEM 632 Open Economy Analysis: Theory and Applications  
Spring. 3 credits. Prerequisites: ECON 313 and ECON 514. S-U grades optional. N. Chau and S. Kyle.  
This course explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economies. It brings together research methods pertaining to open economy macroeconomics and international trade policies, to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM 633 Devolution, Privatization, and the New Public Sector (also CRP 612 and WMNS 611)  
Fall. 3 credits. S-U grades optional. M. E. Warner.  
For description, see CRP 612.

AEM 634 Government Policy Workshop (also CRP 618 and WMNS 620)  
Spring. 4 credits. S-U grades optional. M. E. Warner.  
For description, see CRP 618.

AEM 640 Analysis of Agricultural Markets (also ECON 440)  
Fall. 3 credits. Prerequisites: AEM 411 and 415 or equivalents. H. M. Kaiser.  
This course focuses on the unique features of agricultural commodity markets. Focus is placed on government and private institutions impacting these markets, as well as on models of price behavior including marketing margins and imperfect competition. Empirical tools to evaluate market characteristics are also covered.

AEM 641 Commodity Futures Markets (also ECON 441)  
Spring. weeks 8–14 (starts Mar. 11). 2 credits. Prerequisites: AEM 411 and 415 or equivalents. Recommended: AEM 640. W. G. Trenck.  
This course is about markets for agricultural futures contracts. Emphasis is placed on
models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

**AEM 651 Environmental and Resource Economics**

Spring. 4 credits. Limited to graduate students. W. D. Schulze.

A review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and cost—including property value and wage hedonic approaches, travel cost models, and contingent valuation—are covered. Survey/data collection methods are described in detail. Innovative market mechanisms for resolving public good, common property, and externality problems are explored. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. Open to graduate students outside of economics. AEM 651 is a core course for the Environmental Management concentration/option.

**AEM 652 Land Economics Problems (co-listed with ECE 529)**

Fall or spring. 4 credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. D. J. Allee.

Special work on any subject in the field of land and resource economics.

**AEM 655 Electric Systems Engineering and Economics (also ECE 551)**

Fall. 2 credits. Prerequisites: basic calculus and microeconomics. T. D. Mount and R. Thomas.

For description, see ECE 551.

**AEM 660 Agroecosystems, Economic Development and the Environment**

Spring. 3 credits. Limited to graduate students. An additional section will be arranged for economics majors. S-U grades optional. D. R. Lee.

This course examines selected topics in agricultural and economic development, technology assessment, ecosystem management, and the environment, with a focus on developing countries. Topics covered include production, poverty, and environmental trade-offs, sustainable technology development, trade and environment linkages, economics of conservation and development, and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences. This course is open to graduate students outside of economics.

**AEM 667 Topics in Economic Development (also ECON 770)**

Fall. 3 credits. Prerequisite: basic first-year courses in ECON or AEM, or instructor's permission. S-U grades optional. Not offered fall 2002. R. Kanbur.

This course is targeted to second-year graduate students. Topics covered vary from year to year but may include: poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

**AEM 670 Economics of Consumer Demand (also PAM 608)**

Fall. 3 credits. Prerequisites: ECON 311 or 313 and 2 semesters of calculus. S-U grades optional. C. K. Ranney.

A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be introduced.

**AEM 684 Graduate Special Topics in Applied Economics and Management**

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the beginning of the semester.

**AEM 689 Supervised Graduate Teaching Experience**

Fall or spring. 1-4 credits. Total of 4 credits maximum during graduate program. Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). Open only to graduate students. Undergraduates should enroll in AEM 498. S-U grades optional. Prerequisite: permission of instructor. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

**AEM 699 M.P.S. Research**

1-6 credits. Prerequisite: registration as an M.P.S. student. Grades are granted for the M.P.S. project report. Staff.

This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

**AEM 700 Individual Study in Applied Economics and Management**

Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff.

This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

**AEM 708 Advanced Production Economics**

Fall. 3 credits. Prerequisites: AEM 608, 710, or equivalents. ECON 609 is highly recommended. Offered alternate years. Offered fall 2002 and 2004. Not offered fall 2003. R. N. Boisvert.

Covers theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economics, technical change, and factor substitution. Developments in flexible functional forms, duality, and dynamic adjustment models are emphasized. Considerable emphasis is given to empirical specification and estimation. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

**AEM 711 Econometrics II**

Fall. 3 credits. Prerequisite: AEM 610 or equivalent. T. D. Mount.

Coverage beyond AEM 610 of dynamic models, including single equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics covered include exogeneity, stability, causality, and cointegration.

**AEM 712 Quantitative Methods I**

Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended. R. N. Boisvert.

A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

**AEM 713 Quantitative Methods II**

Spring. 3 credits. Prerequisite: ECON 609. S-U only. J. M. Conrad.

This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of optimization and numerical analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

**AEM 714 Experimental Economics**

The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation and performance; public goods; externalities and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

**AEM 717 Research Methods in Agricultural Economics**

Spring. 2 credits. Limited to graduate students. R. N. Boisvert.

Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.
This course focuses on models of individual, applications. Topics covered include: agricultural household, firm/farm, and market behavior in externalities and asymmetric information. Land, labor and financial institutions, technology adoption, food security and nutrition, risk management, intrahousehold analysis, reciprocity networks, and product/factor markets analysis. Empirical investigation is emphasized.

AEM 765 Development Microeconomics Graduate Research Seminar
Fall or spring. 1–3 credits. Prerequisite: graduate students only with permission of instructor, C. B. Barrett. In this course graduate students and the faculty instructor present draft research proposals, papers, and preliminary thesis results for group review and discussion. Students who actively participate by offering written and oral comments on others’ work receive 1 credit. Students may present their own proposal or paper receive 2 credits. Presentations will be 45–90 minutes and thus represent a substantial investment of time. Students who present a second proposal or paper receive 3 credits.

AEM 800 Master’s-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted specifically to a master’s program.

AEM 900 Graduate-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students in a Ph.D. program only before the “A” exam has been passed.

AEM 901 Doctoral-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted to candidacy after the “A” exam has been passed.

ANIMAL SCIENCE

AN SC 100 Domestic Animal Biology I
Fall. 4 credits. S-U grades optional. Lees, M W F 9:05; lab/disc T W or R 2:00–4:25. W. R. Butler and staff. Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Students study the role of animal behavior in the domestication process, both historically and in modern attempts to domesticate new species, and in finding solutions to current issues related to animal welfare.

AN SC 212 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. Lees, M W F 10:10; lab, M T W R or F 1:25–4:25. A. W. Bell and D. J. R. Cherney. An introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

AN SC 213 Nutrition of the Dog
Spring, weeks 1–7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Next offered spring 2004, 2005; not offered spring 2004. Lees W 7:30–9:25 p.m.

AN SC 214 Nutrition of Exotic Animals

Agriculture and Life Sciences 2002–2003
Principles of nutrition for exotic animals. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation are discussed. Signs of nutrient deficiencies and excesses are described.

AN SC 215 Exotic Avian Husbandry and Propagation
Fall. 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150 or one year of introductory biology. Lec, M 2:30-4:25; J. Parks and D. Muscarella.

Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and local field trips.

AN SC 216 Nutrition of the Cat
Fall, weeks 1-7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Next offered fall 2002, 2004; not offered fall 2003. Lecs, W 7:30-9:25 p.m. H. F. Hintz.

Nutrition of the cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

AN SC 221 Introductory Animal Genetics

An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 222 Introduction to Canine Genetics
Fall, spring or summer. 1 credit. Prerequisites: introductory biology or permission of instructor. S-U grades only. To receive credit, register through the School of Continuing Education. http://www.scornell.edu/DL/html/caninegenetics.html. E. J. Pollak and P. A. Oltenacu.

Introduction to basic Mendelian genetics and simply inherited characteristics in the dog. This distance-education course delivered by CD and web interaction for residents and nonresidents consists of lectures on basic genetic principles, probabilities, linkage and genetic testing, and seminars on genome mapping, inherited sexual disorders, bleeding disorders, and eye defects. This course cannot be taken for credit by students who have successfully completed AN SC 221.

AN SC 250 Dairy Cattle Principles
Fall. 3 credits. S-U grade optional. Lecs, T R 10:10; lab, T or R 1:25-4:25.

D. M. Galton and T. Batchelder.

Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351, 354, and 355.

AN SC 251 Dairy Cattle Selection
Fall. 2 credits. Prerequisite: open only to seniors or permission of instructor. S-U grades optional. Lec, W 10:10-11:00; disc, W 11:15-12:55. D. M. Galton.

Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis is on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horses
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lec, T R 9:05; lab, R 1:25-4:25. H. F. Hintz.

Selection, management, feeding, breeding, and training of light horses.

AN SC 280 Molecular Biology in Agriculture and Medicine
Fall. 3 credits. Prerequisite: one year of introductory biology. Lec, T R 10:10-11:25. S. M. Quirk.

The applications of molecular biology to animal research, animal agriculture, industry and medicine are discussed. An introduction of basic recombinant DNA techniques is followed by topics such as genome projects, comparative and functional genomics, genetic screening, gene therapy, transgenic animal production, and mammalian cloning. Ethical issues raised by the use of these technologies are explored in class discussions. Laboratory demonstrations are used to support some lectures.

AN SC 290 Meat Science (also FOOD 290)
Fall. 2 or 3 credits. Lecs, T R 11:15, lab, M or R 12:20-3:20. Lecture only, 2 credits; lecture plus lab, 3 credits, lab cannot be taken without lecture. D. Shaw.

An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to commercial meat plant may be taken.

AN SC 300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and 1 year of introductory biology. Lecs, M W F 10:10.

J. E. Parks.

Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment or completion of AN SC 300 required to register. Labs, M W F or M 12:5-4:25. Each lab limited to 30 students. J. E. Parks.

Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

AN SC 305 Farm Animal Behavior (also BIOAP 312)
Spring. 2 credits. Prerequisites: one year of introductory biology and introductory animal physiology (AN SC 100 and 150 or equivalent is sufficient or BIOAP 311); at least 1 animal production course or equivalent experience is recommended. S-U grades optional. Lec, T R 11:15. E. A. Oltenacu and K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 321 Applied Animal Genetics Seminar
Fall. 2 credits. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, M 12:20; disc, M 1:25. Not offered fall 2002.

P. A. Oltenacu and E. J. Pollak.

Topics of interest related to the genetic definition and control of qualitative and quantitative traits in various species of animals are presented. Genetic conservation programs and current animal improvement strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture discussion-type format. Independent library research, a short written paper and an oral presentation in a one day symposium at the end of the course are part of this course.

AN SC 323 Equine Genetics Seminar
Fall. 2 credits. S-U grades only. Prerequisite: AN SC 221 or equivalent. Limited to 18 students, attendance at first class is mandatory. Disc, M 12:20. Not offered fall 2002. P. A. Oltenacu and staff.

Topics of equine genetics are presented and discussed. Independent library research, a written paper, and an oral presentation are required. Students are also required to view one seminar each week. These seminars are animated PowerPoint presentations available in computer lab and can be viewed at flexible times during the week.

AN SC 330 Poultry Biology, Nutrition, and Management
Spring. 2 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. Offered alternate years. Next offered spring 2004; not offered spring 2003, 2005. Lec, T R 2-4 (occasional field trips run past 4 p.m.). K. Keshavarz.

The course focuses on anatomy and physiology of various organs of poultry. Principles of poultry nutrition, breeding, and embryology are discussed with an emphasis on their practical application. The student becomes familiar with the concept of least-cost feed formulation for poultry. The course also is designed to provide an understanding of current technology involved in commercial poultry production.

AN SC 341 Biology of Lactation
Spring. 2 credits. Prerequisite: AN SC 100-150 or Animal Physiology. Offered alternate years. Next offered spring 2003, 2005; not offered spring 2004. Lecs, T R 9:05, Y. R. Boisclair and staff.

A comprehensive summary of the biology of the mammary gland. Lectures cover: (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact.
of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context to the course, but examples from other mammals including humans are used.

**AN SC 351 Dairy Herd Management**
Application of scientific principles to practical herd management with emphasis on herd health and animal well being. Laboratory emphasizes practical applications of herd health management including on-farm herd health analysis.

**AN SC 354 Dairy Cattle Health**
Fall. 3 credits. Prerequisite: AN SC 250 or permission of instructor. Letter only. Lec, T R 10:10; lab, R 1:25–4:25. T. T. Batchelder and L. E. Chase.
Application of scientific principles to practical herd health relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

**AN SC 360 Beef Cattle**
Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with management problems through computerized simulations and working directly with cattle. Students spend several days during the semester feeding and caring for cows and their newborn calves.

**AN SC 365 Equine Nutrition**
Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U grades optional. Lec, M W F 9:05–9:55. H. F. Hintz.
The principles of nutrition for horses are presented. Digestive physiology, sources of nutrients, feeding programs for various classes of horses and understanding of nutrition and diseases are discussed.

**AN SC 370 Swine Nutrition and Management**
This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnolog.
impact of consumption of animal products on human health, and impact of livestock farms on environmental/community problems, including odor, pathogens, and excess nutrient effects on water quality. May not be repeated for credit.

AN SC 414 Ethics and Animal Science
Fall. 2 credits. Enrollment limited to 40 students, juniors and seniors only. Lec, M 12:20; disc, W 12:20–1:10. D. J. R. Cherney. Exploration of the place of humans in the biological world, origins of ethics and morality, costs of animals for research and agricultural purposes, transgenic animals. A report on the farm tour or a book review, participation in discussion and a project of the student’s choice are used to evaluate the performance of each student.

AN SC 420 Quantitative Animal Genetics
Spring. 2 credits. S-U grades only. Prerequisite: AN SC 221 or equivalent. Limited to 30 students. Lec, M 12:20; sec, M 2:00–4:25. E. J. Poliak. A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra programs for problem solving.

AN SC 425 Gamete Physiology and Fertilization
Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Next offered fall 2003; not offered fall 2002, 2004. Lecs, R 2:30–4:25. J. E. Parks. Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and assignment of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

AN SC 427 Fundamentals of Endocrinology (also BIOAP 427)
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson. Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 453 Dairy Herd Business Management

AN SC 456 Dairy Management Fellowship
Fall. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and permission of instructor. S-U grades only. Hours TBA. D. M. Galton. The program is designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

AN SC 494 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: undergraduate standing. S-U grades optional. Staff. The department offers "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee of the same course is not offered more than twice under this number.

AN SC 495 Introduction to Research
Fall. 1 credit. S-U grades only. Required of students undertaking Honors in Animal Science. Open to Honors students in other programs and those planning to pursue research, by permission of the instructor. Disc, M 12:20–1:10. W. B. Currie. An exposure to the world of scientific research including: identifying problems; devising hypotheses and realistic research plans; evaluation of scientific writings and other forms of communication; finding and managing reference materials; examining the cost of research and opportunities for funding; discussing the obligations imposed on investigators by society and a host of regulatory agencies, along with responsibilities and freedom in science; and considering ethical issues that affect scientists. Students make oral presentations and prepare brief items of technical writing.

AN SC 496 Internship in Animal Science
Fall or spring. 1–3 credits; limited to 6 credits maximum during undergraduate career. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades only. Staff. Structured, on-the-job learning experience under supervision of qualified professionals in a cooperating organization (e.g., farm, agribusiness, pharmaceutical company, zoo, educational institution). Internships must be approved in advance by the student’s educational institution. Internships are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is given.

AN SC 497 Individual Study in Animal Science
Fall or spring. 1–3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

AN SC 498 Undergraduate Teaching
Fall or spring. 1, 2, or 3 credits; limited to 2 experiences during undergraduate career. Limited to students with a GPA of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to consolidate the student’s knowledge. A participating student assists in teaching a course, either a course allied with the student’s education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with a GPA of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Affords opportunity for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

AN SC 601 Amino Acids (also NS 601)

AN SC 603 Mineral Nutrition; Metabolic, Health, and Environmental Aspects (also NS 603)

AN SC 604 Vitamins (also NS 604)

AN SC 606 Ruminant Nutrition; Microbial Ecology and Forage Chemistry
Spring. 4 credits. Prerequisites: AN SC 212, Biochemistry. S-U grades optional. Lecs, M W F 9:05; disc, W 8:00. Offered alternate years. Next offered spring 2004; not offered spring 2003, 2005. A. N. Pell. This course provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.

AN SC 610 Animal Science Seminar
Fall and spring. 1 credit. Registration limited to graduate students. S-U grades only. Lec, T 12:20–1:10. J. R. Cherry. Students attend a weekly seminar on topics related to animal science. The requirement for an S grade is to regularly attend seminars and participate in discussions. For description, see NS 619.

AN SC 619 Field of Nutrition Seminar (also NS 619)
Fall and spring. No credit. No grades given. For description, see NS 619.
AN SC 620 Seminar in Animal Breeding
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours TBA. E. J. Baurack.
Seminar on current topics in animal breeding and statistics as applied to genetic evaluation and selection of domestic animals.

AN SC 621 Seminar: Endo/Reprod Biology
Fall and spring. 1 credit. Prerequisites: permission of instructor; enrollment limited to graduate students. S-U grades only.LEC, W 4:00. W. R. Butler and staff. Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

AN SC 625 Nutritional Toxicology (also TOX 625)
Exploration of toxicological principles and a selective survey of natural food and feed toxicants. At the end of this course, students understand relationships between nutrition and toxicology; are prepared to conduct research concerning the effects of naturally occurring toxicants; and are able to use multimedia to present their understanding of a class of toxicants. Occasionally, the class takes walking field trips. In addition, students read printed and electronic communications and create STELLA simulation models and a system of web pages related to a specific family of toxicants.

AN SC 630 Bioenergetics/Nutritional Physiology
Spring. 3 credits. Prerequisites: AN SC 410 and biochemistry or physiology, or permission of instructor. S-U grades optional. Offered alternate years. Next offered spring 2003, 2005; not offered spring 2004. Lec, M W F 10:10. A. W. Bell and D. E. Bauman.
An integrated systems approach to the nutritional physiology and energy metabolism of productive animals. Emphasis on extracellular regulation of tissue and organ metabolism, of specific nutrients in relation to pregnancy, lactation, and growth. Critical discussion of techniques and approaches to the study of animal bioenergetics.

AN SC 640 Individual Study in Animal Science
Fall or spring. 1 or more credits. S-U grades optional. Staff.
Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

AN SC 650 Molecular Techniques for Animal Biologists
Spring. 4 credits. Prerequisites: BIOBM 330 or BIOBM 343 or BIOBM 355 or equivalents and permission of instructors. Enrollment limited to 15 students. Offered alternate years. Next offered spring 2004; not offered spring 2003, 2005. Lec, T 11:15; labs, T 10:15; and R 12:50–1:35. Y. Boisclair and S. Quirk.
A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis is on modern techniques used in conducting research in animal-related sciences such as nutrition, physiology, pharmacology, and immunology (e.g., subcloning, mutagenesis of DNA, RT-PCR, analysis of gene expression, protein expression), as well as laboratory exercises and supplement laboratory topics. Students perform an independent project requiring time outside scheduled laboratories and give a scientific presentation.

AN SC 694 Special Topics in Animal Science
Fall or spring. 4 credits maximum.
Prerequisite: graduate standing. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[AN SC 720 Advanced Quantitative Genetics
Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. S-U grades optional. Hours TBA.
This course covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial focus is the estimation of breeding values for purposes of ranking and selection both within and between breeds or populations. The core of the course is the mixed linear model, linear estimators and predictors are treated extensively. The importance of appropriate modeling is emphasized. Generalizations to nonlinear models; various techniques in computer programs are made, i.e., inferences from posterior distributions.}

AN SC 800 Master's-Level Thesis Research
Fall or spring. Credit TBA, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.
For students admitted specifically to a Master's program.

AN SC 900 Graduate-Level Thesis Research
Fall or spring. Credit TBA, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.
For students in a Ph.D. program only before the "A" exam has been passed.

AN SC 901 Doctoral-Level Thesis Research
Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.
For students admitted to candidacy after the "A" exam has been passed.

Related Courses in Other Departments
Introductory Animal Physiology (BIOAP 311)
Introductory Animal Physiology Laboratory (BIOAP 319)

Lipids (NS 602)
Basic Immunology, Lectures (BIOG 305)

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

SPECIAL NOTE: The department formerly known as Agricultural and Biological Engineering (ABEN) is changing its name to the department of Biological and Environmental Engineering (BEE (ABEN)). Courses cross-listed as ABEN can be found here. Courses with the same numbers listed as either ABEN or BEE are identical.

BEE (ABEN) 102 Introduction to Microcomputer Applications
Fall or spring. 3 credits. Letter only.
Graduating seniors are guaranteed admittance. All students, including those pre-enrolled (and graduating seniors), must attend the first lecture to guarantee admittance and to select a laboratory section. Lec, fall; T 12:20–1:10; spring: M W 12:20–1:10; labs, M 12:25–4:25 or 7:30–10:30 p.m. or T 12:25–4:25 or W 12:25–4:25 or R 7:30–10:30 p.m. Fee, $25.

P. E. Hillman.
Introduction to application packages on microcomputers. Laboratories provide experience with word processing, object-oriented and bit mapped graphics, spreadsheets, visual basic macros database management, presentation graphics, and web page authoring. An independent project related to the student's major is required. These packages and others such as desktop publishing, multimedia, anti-virus software, and those used for searching the Internet for information are discussed and demonstrated in the lectures, along with an overview of computer hardware, health hazards of computing, and software privacy.

BEE (ABEN) 110 Introduction to Metal Fabrication Techniques
Spring. 3 credits. Each lab limited to 18 students.
Emphasis is on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. Covers hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

BEE (ABEN) 132 Introduction to Wood Construction
Fall. 3 credits. Each lab limited to 15 students.LEC, T R 9:05; labs, T W or R 12:25–4:25, T or W 7:30–10:30. T. J. Cook.
Principles and practice of wood construction. Covers selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and block construction. Each student plans and constructs an approved carpentry project.

BEE (ABEN) 151 Introduction to Computing

An introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language, JAVA, is used, implemented on interactive personal computers, and applied to problems of interest in biological and environmental engineering. No previous programming experience is assumed.

BEE (ABEN) 152 Computer Applications for Engineers
Spring, 1—3 credits variable (three 1-credit modules). A student can take any one, any two, or all three modules. Prerequisites: BEE (ABEN) 151 or equivalent computer programming course and 1 semester of calculus for the Matlab module. No prerequisites for the other two modules. Letter grades only. Lec, T 2:30—3:20, rec, R 1:25—2:15; lab, R 2:25—3:15; P. E. Hillman.

Major application packages useful to engineering and science students are covered in three modules. The first module introduces Matlab and explores the problem-solving capabilities of Matlab through example problems. The second module investigates the data processing and graphing capabilities of spreadsheets. The third module uses presentation graphics to create an effective professional presentation.

Module 01 Matlab (weeks 1 to 5 of the spring semester)
Covers matrix/vector manipulation, basic math functions, graphing of 2-D and 3-D plots, file I/O, string and numerical manipulation, problem solving of linear and nonlinear algebraic functions and ordinary differential equations, integration, curve fitting, and data analysis and statistics. In lab, students learn Matlab through examples. Grading is based on completion of lab assignments, lecture quizzes, and lecture attendance.

Module 02 Spreadsheets (weeks 6 to 10 of the spring semester)
Covers the use of a spreadsheet application such as Microsoft Excel to include built-in functions, lookup tables, graphs, Visual Basic macros, what-if analysis, and advantages and disadvantages compared to a programming language. Grading based on completion of lab assignments, lecture quizzes, and lecture attendance.

Module 03 Presentation tools for the Professional Engineer (weeks 11 to 14 of the spring semester)
Covers the use of a presentation graphics application such as Microsoft PowerPoint to create slides for an oral presentation of engineering projects for professional presentations. Special attention is given to the execution of quality presentations. Grading based on lab assignments, lecture quizzes, lecture participation, and an oral PowerPoint presentation and written report submitted as the final exam.

BEE (ABEN) 200 The BEE Experience
Spring, 1 credit. Letter only. Prerequisite: nonmajors by permission of instructor. Lec, T 1:25—2:15; K. M. Overton, J. A. Bartsch. A required course for freshmen majoring in Biological and Environmental Engineering. A forum covering the career opportunities for engineering students and the activities and curricula that lead to these opportunities. A series of seminars are given by practicing engineers. Cornell faculty members, alumni, staff from Cornell career offices, and students. Students develop their undergraduate course plans, complete a web search assignment to locate jobs and internships, and select future courses to meet their academic objectives and career goals.

BEE (ABEN) 250 Engineering Applications in Biological Systems (also Engineering Distribution 250)
Fall, 3 credits. Prerequisite: course in engineering curriculum, MATH 293 (coregistration permissible). Recommended for the sophomore year. Lec, M W F 12:20—1:10; B. A. Ahner.

Case studies of engineering problems in agricultural, biological, and environmental systems, including bioremediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

BEE (ABEN) 299 Sustainable Materials Development and Use
Spring, 3 credits. Prerequisite: sophomore standing and above. S-U grades optional. N. R. Scott.

Sustainable development is the dominant economic, environmental, and social issue of the twenty-first century. This web-based course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.

BEE (ABEN) 301 Renewable Energy Systems
Spring, 3 credits. Prerequisite: college physics. Lec, T R 10:10—11:25; L. D. Albright.

Introduction to energy systems with emphasis on quantifying costs and designing renewable energy systems to meet environmental inputs into urban systems. Course covers solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances. Focus is on the technologies and small-scale system design, not policy issues. Use of spread sheets is extensive.

BEE (ABEN) 305 Principles of Navigation
Fall, 4 credits. 4 classes each week (lecture-recitation-project work). Lecs, M W F 8:00—8:50; lab, R 8:00 or 9:05; Lt. Seymour.

An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are also briefly discussed.

BEE (ABEN) 310 Advanced Metal Fabrication Techniques
Spring, 1 credit (2-credit option available). Prerequisite: BEE (ABEN) 210 or permission of instructor. Lab, F 1:25—4:30; T. J. Cook.

Principles and practices extending beyond the scope of BEE (ABEN) 110. Includes out-of-position, high carbon steel and cast iron welding. Topics such as soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc and oxy cutting of metals are covered. Planning, development, and fabrication of a metal construction project is required for the two-credit option.

BEE (ABEN) 350 Biological and Environmental Transport Processes
Fall, 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible). Lec, M W F 11:15—12:05; disc, W 2:30—4:20; 2 evening prelims. K. G. Gebremedhin.

Focus is on understanding the principles of heat and mass transfer in the context of biological, biomedical and environmental systems. Physical understanding of transport processes and simple reaction rates with application examples from plant, animal and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials are emphasized.

BEE (ABEN) 365 Properties of Biological Materials
Spring, 3 credits. Prerequisites: ENGRD 202 (coregistration permissible). Lec, T R 12:20—1:10; lab W 2:30—4:25; R 2:30—4:25 or F 2:30—4:25; J. A. Bartsch. Mechanics and structural properties of biological materials. Mechanical testing of animal, plant, and food products. Laboratory exercises in quasi-static and dynamic testing of materials and interpretation of test results. Experimental techniques for determining engineering properties of these materials. This course satisfies the BEE laboratory experience requirement.

BEE (ABEN) 371 Hydrology and the Environment
Spring, 3 credits. Prerequisite: one course in calculus. 2 lecs, 1 lab. Lecs, T R 9:05—9:55; lab, F 2:30—4:25; M. T. Walter, T. S. Steenhuis.

Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, evaporation, surface runoffs, ground water, surface runoff, rivers, meandering, floods, and droughts. Case studies, short field trips, and laboratories foster an understanding of concepts and principles of hydrologic processes.

BEE (ABEN) 411 Biomass Processing: Systems, Modelling and Analysis
Spring, 3 credits. Prerequisites: BEE (ABEN) 250, BEE (ABEN) 350 (or any course in heat and mass transport); BIOBM 351, 352, or BIOML 290. Lec, M W F 9:05—9:55, L. P. Walker.

This course is designed to introduce students to how basic concepts from physical chemistry, enzyme and microbial kinetics, and transport phenomena are used to model
General analog and digital signal condition circuits are designed, constructed, and tested. This course satisfies both the BEE laboratory experience and the BEE capstone design requirement.

**BEE (ABEN) 453 Computer-Aided Engineering: Applications to Biomedical Processes (also M&AE 453)**
Spring. 3 credits. Prerequisite: heat and mass transfer (BEE (ABEN) 350 or equivalent). Lecs, M W 11:15-12:05; comp, M W Th,F 1:25-4:25; A. K. Datta. Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes using an industry-standard physics-based computer software on a supercomputer or on high end personal computers. Biomedical processes and industrial food processing applications of heat and mass transfer are covered. Computational topics introduce the finite element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major component of the course (no final exam). The course satisfies the College of Engineering upper-level computing application requirement. This course satisfies the BEE capstone design requirement.

**BEE (ABEN) 454 Physiological Engineering**
Fall. 3 credits. Corequisite: fluid mechanics. Lecs, T R 12:20-1:10; lab T R 1:25-4:25. D. J. Aneshansley. Engineering analysis and design in the physiology of animals and humans. Covers the use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: signal processing as related to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, biometrics, and bird flight. Laboratories involve experiments, computing applications, field trips, and live animal demonstrations. This course satisfies the BEE laboratory experience requirement.

**BEE (ABEN) 456 Biomechanics of Plants (also BIO PL 456)**
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. Lecs, M W 8:40-9:55; lab, M or W 2:30-3:20; J. A. Baunum. An engineering approach is taken to plant form and function following the text, Plant Biomechanics. Topics include: mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, mechanical attributes of organs, the plant body, fluid mechanics and biomechanics, and plant evolution.

**BEE (ABEN) 458 Biotechnology: Principles and Application in Engineering**
Fall. 4 credits. Prerequisites: BEE (ABEN) 350 (co-registration allowed), biochemistry, microbiology, fluid mechanics, or permission of instructor. Lecs, M W Th,F 8:40-9:55; lab, M 1:25-4:25 and 7:30-10:30. A. J. Baunum.

This course provides students with an understanding of the scientific and engineering principles of biotechnology and their applications in agriculture, environmental and consumer protection, bio-processing and medicine. Topics include microbial synthesis, production and degradation, genetic engineering, immobilization, biosensor techniques, bioseparations, fermentation technology, and nanobiotechnology. This course satisfies both the BEE laboratory experience requirement and the BEE capstone design requirement.

**BEE (ABEN) 459 Biosensors and Bioanalytical Techniques**
Spring. 4 credits. Prerequisites: biochemistry and permission of instructor. Lecs, T R 8:30-9:55; lab, M 1:25-4:25. A. J. Baunum.

This course provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. The course addresses selected topics from simple biosensors to micro/nanofabricated Micro-Tensor Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, prepare a biosensor of their choice in the laboratory and present a poster in a biosensor workshop at the end of the semester. Undergraduate students work together in teams of 2 to 4 students. This course satisfies the BEE capstone design requirement and the BEE laboratory experience requirement for engineering students.

**BEE (ABEN) 471 Geohydrology (also CEE 431 and EAS 445)**
Fall. 3 credits. Prerequisites: MATH 294 and ENGR 202. 2 lecs, 1 lecture, field trip. W. Brutsaert, J. M. Cather, J. Y. Parlangue, T. S. Steenhuis. Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport processes.

**BEE (ABEN) 473 Watershed Engineering**
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology. Lecs, T R 10:10-11:00, disc, R 1:25-4:30. M. F. Walter. Engineering principles are applied to the design of management strategies aimed at solving natural resource problems in the context of watersheds. Emphasis is placed on rural systems and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supply. BEE (ABEN) students who wish to take this course to satisfy the BEE capstone design requirement, must co-register in BEE (ABEN) 496 for one credit hour. This course satisfies the College of Engineering technical writing requirement when co-registered in BEE (ABEN) 493.

**BEE (ABEN) 474 Drainage and Irrigation Design**
Spring. 3 credits. Prerequisites: fluid mechanics or hydrology. Lecs, M W Th,F 12:20-1:10. T. S. Steenhuis and L. D. Geohring.

This course will focus on design of drainage and irrigation systems for agriculture and nonagricultural purposes. The course will also briefly cover design of rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used.
wherever possible. One major design project is required of each student. This course satisfies the BEE capstone design requirement.

BEE (ABEN) 475 Environmental Systems Analysis
Spring. 3 credits. Prerequisites: Matlab and 2 years of calculus. Lecs, M W F 10:10-11:00. L. P. Walker. Systems analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computational algorithms, and using computer simulation and optimization procedures (search techniques, linear programming, and dynamic programming) to evaluate management alternatives. Applications include water quality management, air pollution control, solid waste management, and industrial ecology. This course satisfies the College of Engineering upper-level computing application requirement.

BEE (ABEN) 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry. Lecs, T R 11:40-12:55. D. A. Haith. Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction, collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; and hazardous waste management. Emphasis is on quantitative analyses.

BEE (ABEN) 478 Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent. Lecs, T R 2:30-3:45. W. J. Jewell. Ecological Engineering is the language of sustainable living. Waste management with natural systems, the most advanced form of this new engineering direction, includes: constructed wetlands, hydroponic: applications of plants in resource-recovery waste management systems, soil restoration, phytoremediation, and bioremediation of toxics. Biomass refinement to create energy independent communities, sustainable drinking water systems, carbon sequestration and zero polluting farms are future sustainable living topics that also solve some of societies larger problems. BEE students who wish to take this course to satisfy the BEE capstone design requirement must co-register in BEE (ABEN) 496 for one credit hour.

BEE (ABEN) 481 LRFD-Based Engineering of Wood Structures (also CEE 481)
Spring. 3 credits. Prerequisite: ENGRD 270, 277, or CEE 301 or equivalent, junior standing. Lecs, T R 11:25-2:40, lab, one overnight field trip during semester. M. B. Timmons. The course focuses on Engineering Economics, Engineering Management and Professional Ethics, and associated ethical issues. Course objectives include coverage of: prediction/probability of net returns; financial calculations (internal rate of return, time value of money, pro forma statements); legal structures of businesses, project management; develop an awareness of issues related to professional ethics, and technical writing and communication. This course satisfies the College of Engineering technical writing requirement.

BEE (ABEN) 493 Technical Writing for Engineers
Fall. 1 credit. Prerequisites: co-registration with BEE (ABEN) 473. Lecs, M T 7:30-9:25 (5 evenings in first half of semester). Staff. This course meets the College of Engineering technical writing requirement when taken concurrently with BEE (ABEN) 473. Class meets for five evenings during the fall semester and covers writing skills necessary for technical project reports. Also considered: outlines, style, audience, and general writing mechanics.

BEE (ABEN) 494 Special Topics in Biological and Environmental Engineering
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

BEE (ABEN) 495 BEE Honors Research
Fall or spring. 1-6 variable credits. Prerequisite: enrollment in the BEE Honors Research program. Staff. Intended for students pursuing the Research Honors program in BEE (ABEN). Students must complete the Honors program application by the 3rd week of the fall semester senior year.

BEE (ABEN) 496 Capstone Design in Biological and Environmental Engineering
Fall and spring. 1 credit. Corequisite: students must co-register in one of the approved upper level courses (BEE (ABEN) 477, 478, 481). Students must register with an independent study form (available in 140 Roberts Hall). Staff. Involves capstone design experience, including a team project incorporating analysis, design, evaluation, synthesis, and a written and oral report of the end-product. This course must be taken in conjunction with one of the following approved BEE courses (BEE (ABEN) 473, 478, 481).

BEE (ABEN) 497 Individual Study in Biological and Environmental Engineering
Fall and spring. 1-4 credits. U.S. option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in the upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall). Staff. Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

BEE (ABEN) 498 Undergraduate Teaching
Fall and spring. 1-4 credits. Prerequisite: written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Staff. The student assists in teaching a biological and environmental engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

BEE (ABEN) 499 Undergraduate Research
Fall and spring. 1-3 credits. Prerequisites: normally reserved for seniors in the upper two-fifths of their class; adequate training for work proposed; and written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Staff. Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

BEE (ABEN) 501-502 M.P.S. Project
Fall and spring. 1-6 credits. Required of each M.P.S. candidate in the field. ABEN graduate faculty. A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

BEE (ABEN) 551-552 Agricultural and Biological Engineering Design Project
Fall and spring. 3-6 credits. Prerequisite: admission to the M.Eng. (ABEN) degree program. ABEN graduate faculty. Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. There, however, is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course. A minimum of 2 credits of 551-552 is required for the Master of Engineering degree. Students should register for 551 their first semester and complete one additional design project credits with 552. If more than six design project credits are desired in one semester, both 551 and 552 may be taken.
This course examines ways in which organisms may be used to remove or metabolize pollutants in the environment including bacterial degradation of organics and phytoremediation of heavy metals. Through lectures and current literature, students evaluate the benefits as well as the current obstacles. The current efforts to bioremediation and the potential risks of releasing them into the environment are examined.

**BEE (ABEN) 652 Instrumentation: Sensors and Transducers**

Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of the instructor. Lec T R 12:20-1:10; lab 2:00-4:25. D. J. Aneshansley.

Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers is emphasized. Image processing techniques are introduced. A final project is required.

**BEE (ABEN) 655 Thermodynamics and Its Applications**

Spring. 3 credits. Prerequisite: MATH 293 or equivalent. Lec, R 2:30-4:30. J.-Y. Parlange.

Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, environmental fate of surface phenomena, heat and mass transport, and structure of organizations).

**BEE (ABEN) 659 Biosensors and Bioanalytical Techniques**

Spring. 4 credits. Prerequisites: biochemistry and permission of instructor. Lec, T R 8:40-9:55, lab, T 2:25-4:25 and 7:30-10:30 p.m. A. J. Baeumner.

This course provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. The course addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, prepare a biosensor of their choice in the laboratory and present a poster in a biosensor workshop at the end of the semester. Graduate students work independently on individual biosensor projects.

**BEE (ABEN) 671 Analysis of the Flow of Water and Chemicals in Soils**

Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics. Lec, R 3:35-4:50 (first meeting—TBA). J.-Y. Parlange.

The course covers a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer.

Current analytical, semi-analytical, and computer-based techniques are discussed. Both heterogeneous and homogeneous soils are analyzed. Offered alternately with Civil and Environmental Engineering 653 or 654 as a complementary, but not identical, course.

**BEE (ABEN) 672 Drainage Systems**

Theory of water and solute flow in aquifers, hilltops, and terrains as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites is critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined. Laboratories are used for hands-on experience with measuring soil parameters and for actual drainage design. This course satisfies the capstone design experience requirement.

**BEE (ABEN) 673 Sustainable Development Seminar (also NAB 573)**

Spring. 1–3 credits. Prerequisites: upper division undergraduate and graduate students or permission of instructor. Lec, F 1:30-3:30. N. R. Scott.

Sustainable development is the most beneficial concept to come out of the environmental movement in years. The concept of a sustainable world, however, is not a constant. There are many aspects of sustainability involving economics, environment, and political, social, scientific, and technological developments. This seminar explores topics such as energy, agricultural and food systems, green buildings and ecological design, corporate sustainability, and other contemporary issues.

**BEE (ABEN) 678 Nonpoint Source Models**

Spring. 3 credits. Prerequisites: computer programming and calculus. Lec, T R 8:40-9:55. D. A. Haith.

Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include watershed hydrology and sediment yield, urban and rural runoff, lake eutrophication, waste disposal sites, and pesticides, nutrients, and salts in drainage.

**BEE (ABEN) 685 Biological Engineering Analysis**

Spring. 4 credits. Prerequisite: T&M 310 or permission of instructor. Lec, M W F 11:15-12:05. J. R. Cooke.

Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

**BEE (ABEN) 694 Graduate Special Topics in Agricultural and Biological Engineering**

Fall or spring. 4 credits maximum. S-U grades optional. ABEN graduate faculty. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**BEE (ABEN) 697 Graduate Individual Study in Agricultural and Biological Engineering**

Fall or spring. 1–3 credits. Prerequisite: permission of instructor. S-U grades optional. ABEN graduate faculty. Topics are arranged by the student at the beginning of the term.

**BEE (ABEN) 700 General Seminar**

Fall. 1 credit. S-U grades only. Staff.

Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

**BEE (ABEN) 750 Orientation to Graduate Study**

Fall. 1 credit. Limited to new graduate students. S-U grades only. Lecs, first 7 weeks, M 3:35-4:25. D. J. Aneshansley.

An introduction to ABEN research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

**BEE (ABEN) 754 Watershed Management**

Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructors. Lec, W 2:30-4:25; T. S. Steenhuis and M. J. Pfeffer.

Traditional top-down approaches to watershed management have been challenged by advocates of public participation. These challenges have raised questions about how to effectively integrate science, policy, and public participation. This course reviews different management approaches and evaluates their usefulness in dealing with different watershed management problems. Case examples from watersheds in the United States and overseas are considered.

**BEE (ABEN) 771 Soil and Water Engineering Seminar**

Fall and spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional. T. S. Steenhuis, J.-Y. Parlange, and M. F. Walter.

Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

**BEE (ABEN) 781 Structures and Related Topics Seminar**

Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. TBA. Staff.

Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations.

**BEE (ABEN) 785 Biological Engineering Seminar**

Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. J. R. Cooke.

The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

**BEE (ABEN) 800 Master's-Level Thesis Research**

Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.
BIOLOGICAL SCIENCES
The program of study in biology is coordinated by the Office of Undergraduate Biology. For course descriptions, see the section on Biological Sciences.

BIOLOGY & SOCIETY
The undergraduate major field of study in biology and society is offered through the Department of Science and Technology Studies. For a full description of courses that fulfill field requirements, see the Biology and Society listing in Programs and Interdisciplinary Studies in this publication.

BIOMETRY AND STATISTICS
M. Wells, chair, C. Bustamante, C. Castillo-Chavez, D. Hiebeler, R. Lloyd, R. Nielsen, S. J. Schwager, R. Strawderman

The Department of Biological Statistics and Computational Biology in Statistical Science offers the following courses in Biometry and Statistics. Students need to register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

BTRY 100 Statistics and the World We Live In (also STBTRY 100)
Fall. 3 credits. Lecs, M W F 11:15-12:05; sec, M or T 1:25-2:15 or 2:30-3:20
Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include: sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

BTRY 101 Introduction to Biometry I
Spring. 4 credits. S-U grades optional. Prerequisite: pre-calculus. Lecs, M W F 11:15-12:05; lab, R or F 12:20-1:10 or 2:30-3:20.
An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation. Selected topics in differential and difference equations and integration are also covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) is taught and used throughout the course.

BTRY 102 Introduction to Biometry II
Fall. 4 credits. S-U grades optional. Prerequisite: BTRY 101 or 2 semesters of calculus. Lecs, M W F 11:15-12:05; lab, T 12:20-1:15 or 2:30-3:25.
This course is the continuation of Biometry 101. It provides a more in-depth view of the use of mathematics, computing, and probability and statistics in the biological sciences.

BTRY 261 Statistical Methods I (formerly BTRY 261) (also STBTRY 301)
Fall and summer. 4 credits. Lecs, M W F 12:20-1:10; sec, M or T 1:25-2:15 or 2:30-3:20.
Statistical methods are developed and used to analyze data arising from a variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of the statistical techniques. The lectures may co-meet with BTRY 601. Sections, homeworks, and exams are administered separately.

BTRY 302 Statistical Methods II (also STBTRY 302)
Spring, 4 credits. Prerequisite: BTRY 301 or BTRY 601. Limited to undergraduates. Lecs, M W F 11:15-12:05; sec, W 3:35-4:45.
A continuation of BTRY 301. Emphasis is on the use of multiple regression analysis, analysis of variance and related techniques to analyze data in a variety of situations. Topics include: least squares estimation; multiple regression; model selection techniques; detection of influential points; goodness-of-fit criteria; principles of experimental design; analyses of variance for a number of designs including multivariate factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on the appropriate design of studies prior to data collection and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done using the SAS statistical package. The lectures co-meet with BTRY 602. Homeworks and exams are administered separately.

BTRY 400 Biometry Seminar (also STBTRY 400)
Fall and spring. 1 credit. S-U grades only. Prerequisite: BTRY 302, or 409, or 602, or permission of instructor. Sem, R 3:35-4:45.
Students attend a weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor. Students can only take this course twice.

BTRY 408 Theory and Probability (also STBTRY 408)
Fall. 4 credits. Prerequisites: MATH 111, 112, 213, 231 or equivalents. Lecs, M W F 10:10-11:00, Sec, M 3:35-5:00.
An introduction to probability theory: axiomatic foundations; combinatorics and equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations: extensions to problems involving two or more random variables; random samples. Can serve as either one-semester introductory course or a foundation for a course in statistical theory. At least one introductory course in statistical methods is additionally recommended but not required.

BTRY 421 Matrix Computation
Fall. 4 credits. Prerequisite: calculus. Lecs, MW 1:25-2:15 or T 12:20-1:10.
Introductory course in matrix computations that reviews linear algebra (vector spaces, linear independence) and emphasizes a matrix approach to solving systems (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Positive definite matrices, eigenvalues, and their applications in mathematical modeling and statistics are discussed.

BTRY 482 Statistical Genomics (also STBTRY 482)
Spring. 4 credits. S-U grades optional. Prerequisite: BTRY 102, BIO G 102, or equivalents. Lec, T R 11:40-12:55; sec, F 12:20-1:10.
This course covers topics in the statistical analysis of genetic, molecular and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of comparative molecular data, QTL mapping and association mapping. Topics may vary from year to year. This course will be co-taught with BTRY 682. However, undergraduate students will be evaluated on the basis of a final exam and a term paper instead of a research project.

BTRY 494 Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494)
Fall or spring. 1-3 credits. S-U grades optional.
A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 495 Statistical Consulting (also STBTRY 495)
Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or co-requisites: BTRY 302 or 602 and permission of instructor. Lecs, W 1:25-2:15.
Participation in the Department of Biometrics consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

BTRY 497 Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497)
Fall and spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).
Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.
BTRY 498 Undergraduate Supervised Teaching (also STBTRY 498)  
Fall and spring. 2 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students meet with the course instructor to discuss objectives with the course instructor.

BTRY 499 Undergraduate Research (also STBTRY 499)  
Fall or spring. 1–3 credits. S-U grades only. Prerequisite: BTRY 409 or permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall).

BTRY 600 Statistics Seminar (also STBTRY 600)  
Fall and spring. 1 credit. S-U grades only. Prerequisite: BTRY 409 or permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall).

BTRY 601 Statistical Methods I (also STBTRY 601)  
Fall and summer. 4 credits. Limited to graduate students; others by permission of the instructor. Lecs, M W F 12:20-1:10; sec, M or T 2:30-4:00 or 7:30-9:00 p.m. or T 10:10-11:40.

Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

BTRY 602 Statistical Methods II (also STBTRY 602)  
Spring. 4 credits. Limited to graduate students; others by permission of the instructor. Prerequisite: BTRY 601 or equivalent. Lecs, M W F 11:15-12:05; sec, M 1:00-2:45 or T 2:30-3:45 or 10:00-11:30.

A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques, least squares estimation, multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection and on the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

BTRY 603 Statistical Methods III (also STBTRY 603)  
Spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered spring 2004. Lecs T R 8:40-9:55.

Categorical data analysis, including logistic regression, loglinear models, stratified models, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

BTRY 604 Statistical Methods IV: Applied Design (also STBTRY 604)  
Spring. 4 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered spring 2004. Lecs M W F 12:20-1:10; lab T 2:30-4:25.

Applications of experimental design including such advanced designs as split plots, mixed models, fractional factorial. Use of the computer for both design and analysis is stressed, with emphasis on solutions of real data problems.

BTRY 652 Computationally Intensive Statistical Inference (also STBTRY 652)  

Modern applications in statistics often require intensive computation not handled by "off-the-shelf" software. This course covers topics in statistical computing including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and poisson regression), kernel density estimation, resampling methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Markov Chain methods for tests and interval estimation). Programming will be done in Matlab. The focus of the course is on the use of numerical analysis methods for solving problems in statistical inference and estimation.

BTRY 662 Mathematical Ecology (also STBTRY 662)  
Fall. 3 credits. S-U grades optional. Prerequisites: a year of calculus and a course in statistics. Lecs, T R 1:25-2:40.

Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

BTRY 672 Topics in Environmental Statistics (also STBTRY 672)  
Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor. Not offered 2002-2003.

This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

BTRY 682 Statistical Genomics (also STBTRY 682)  

This course covers topics in the statistical analysis of genetic, molecular and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of comparative molecular data, QTL mapping and association mapping. Topics may vary from year to year. All students are expected to participate in small research projects.

BTRY 694 Graduate Special Topics in Biomtry and Statistics (also STBTRY 694)  
Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 697 Individual Graduate Study in Biomtry and Statistics (also STBTRY 697)  
Fall, spring, or summer. 1–3 credits. S-U grades optional. Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 717 Linear and Generalized Linear Models (also STBTRY 717)  
Spring. 3 credits. S-U grades optional. Prerequisites: BTRY 409, BTRY 417, and 602 or equivalents. Offered alternate years. Not offered 2002-2003.

Statistical modeling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, quasi-likelihood, and generalized estimating equations. Covers the use of link functions and generalized linear models to accommodate nonlinear models and non-normally distributed data. Also covers the use of random effects to accommodate correlation structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.

BTRY 726 Problems and Perspectives in Computational Molecular Biology (also PL BR 726 and COM S 726)  
Fall and spring. 1 credit. S-U only. Prerequisite: permission of instructor. Lec, M 1:25-2:15.

This is a weekly seminar series discussing timely topics of computational molecular biology. The course addresses methodological approaches to sequence annotation, protein structure and function relationships, evolutionary relationships across species. Statistical and deterministic computational approaches are covered and specific and detailed biological examples are discussed. Topics of interest are discussed in relation to papers prepared by teams of students and/or faculty. We pair students/faculty from biology backgrounds with students from math, computer science, and statistics for paper preparation. Students summarize the salient questions addressed by the paper, the research methods used and the results obtained. At the end of the presentation, questions should be listed on an overhead slide to initiate discussion in the group.
An overview of current knowledge about contexts such as friendships, small groups, communication, with particular emphasis on research about effective communication in a wide range of contemporary theories and disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous weeks. Since consultations usually change from semester to semester, the course may be repeated for credit.

BTRY 795 Statistical Consulting (also STBTRY 795)
Fall and spring. 2 credits. S-U grades only. Limited to graduate students. Prerequisite or corequisite: BTRY 602 and BTRY 409 or equivalent. Lec. W 1:25–2:15.
Participation in the Department of Biometrics consulting service: faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous weeks.

BTRY 798 Graduate Supervised Teaching (also STBTRY 798)
Fall and spring. 2–4 credits. S-U only. Permission of instructor and chair of special committee plus at least 2 advanced courses in statistics and biometry.

Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the M.S. level.

BTRY 900 Graduate-Level Dissertation Research
Fall or spring. Credit TBA. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the Ph.D. level.

BTRY 901 Doctoral-Level Dissertation Research
Fall or spring. Credit TBA. S-U grades only.

COMMUNICATION

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

COMM 116 Communication in Social Relationships
Spring or summer. 3 credits. Spring: lecs, M W F 1:25–2:15. Staff.
An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, organizations, and health care settings.

COMM 117 Writing about Communication

Students develop skill in various writing styles and genres. The class explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, to analyze information, and to integrate ideas about communication, and to express those ideas clearly and cogently.

COMM 120 Contemporary Mass Communication
Fall or summer. Lecs, M W F 12:20–1:10. J. Shanahan.
The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about media consumption, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students' personal experience. Assignments include case studies, experimental learning exercises, and short papers.

COMM 121 Investigating Communication
Fall. 1 credit. Communication majors only. Students must be enrolled concurrently in COMM 120. Lecs, T 10:10–11:00. J. Shanahan.
An examination of research methods in communication, with particular emphasis on the mass communication. Lecture and exercises are linked to lectures from COMM 120, providing an introduction to how. Fall is required for communication majors.

COMM 201 Oral Communication
Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. K. Berggren, J. Hayman, T. Russo and staff.

Through theory and practice students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203 Argumentation and Debate
Students learn the principles of argumentation and debate. Topics emphasize Internet database research, synthesis of collected data, analysis of evidentiary quality, refutation of counter claims, identification of logical fallacies, risk evaluation, framing of issues, and coherent storytelling. Students are prepared to work with a great range of opinion and evidence. The course emphasizes different viewpoints, including those of different cultures. Assumptions are questioned and interrogated.

COMM 230 Visual Communication
An introduction to visual communication theory. The course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print and interactive media are used to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 240 Communication and Information Technology
Fall. 3 credits. Lec. M 10:10–11:00; disc, W F 01: 9:05–9:55; 02: 10:10–11:00; 03: 11:15–12:05. J. B. Walther.
An exploration of the nature of communication systems and technologies. Topics include a brief history of communication technologies and functions, types of Internet communication systems, their barriers and benefits, descriptions of their uses and impacts in cultural, professional, community and personal social systems, as well as consideration of electronic message adaptation and design.

COMM 250 Newswriting for Newspapers

COMM 255 Indian Country: Contemporary Life and Culture through Media (also AIS 255)
The national and global growth of self-expression by Indigenous peoples has generated a vigorous Native American press. This course explores the contemporary issues through resources in Native media, including national newspapers, magazines, book publishing and Internet activity. This course is grounded in contemporary journalistic networking, research and reporting skills. While studying and interacting with the Native media, students deepen their own research and writing on specific issues.

COMM 260 Science Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Fall: Lec. 01, M W F 9:05–9:55; Lec. 02, M W F 10:10–11:00; spring: Lec. 01, M W F 9:05–9:55 or Lec. 02, M W F 1:25–2:15. S. Conroe.

An intensive course on simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis is emphasized. Not oriented to the mass media.

COMM 263 Organizational Writing
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Fall: lec. 01, M W F 9:05–9:55; lec. 02, M W F 10:10–11:00; spring: lec. 01, M W F 11:15–12:05. Spring: lec. 01, M W F 10:10–11:00; lec. 02, M W F 11:15–12:05. L. VanBuskirk and staff.

Students write from the point of view of various organizations, including businesses, government agencies, and non-profit organizations. Emphasis is on appropriate representation of the writer's organization, audience analysis, and clear and effective written presentation of detailed content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.
COMM 272 Principles of Public Relations and Advertising
Summer. 3 credits. Not open to freshmen.
T. Martin.
Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the components system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

COMM 282 Communication Industry Research
Fall. 3 credits. Prerequisite: COMM 116, 120, 121. Lec: M W F 1:25-2:15. D. Scheufele.
Public opinion polls, reader/viewer/stud­ies, audience segmentation techniques, and media and message effect evaluation are all widely used in communication industries. This course covers the use of basic research design, measurement, sampling, and simple descriptive statistics in conducting these studies.

COMM 284 Sex, Gender, and Communication
Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. VanBuskirk.
The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285 Communication in Life Sciences (also S & T S 285)
Spring. 3 credits. M W F 10:10-11:05. B. Lewenstein.
Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define research and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301 Business and Professional Speaking
Fall, spring, or summer. 3 credits.
Prerequisite: COMM 201. Limited to second term sophomores, juniors, and seniors during fall and spring.
Lec, M W F 11:15-12:05; sec, T 12:20-1:05 and 2:30-4:25; W 1:25-2:10; R 10:30-12:05. B. Earle.
The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentational skills needed in particular settings suited to their own business and professional careers.

COMM 303 Speech and Debate Practicum
Fall and spring. 2 credits. Limited to 10-15 Program in Speech and Debate members only; permission of instructor and completion of 1-year trial basis. J. Hayman.
Students learn preparation for practice in CEDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class is divided into four groups according to level of experience; therefore it may be repeated to a maximum of eight credits.

COMM 330 Psychology and the Internet
Fall. 3 credits. Prerequisite: COMM 240 or permission of instructor. T R 11:40-12:55. J. Hancock.
Focuses on how on-line behavior can be understood as validating principles and processes derived from research in cognitive and social psychology, and why on-line behavior may sometimes differ from what we might expect given what we know about psychology. Topics considered include impression formation, group behavior, disinhibition, interpersonal attraction, social support, "internet addiction," and sex on the net.

COMM 350 Writing for Magazines
Fall, spring, and summer. 3 credits. Prerequisite: any college-level writing course. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drop after third week.
A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

COMM 352 Science Writing Practicum
Spring. 3 credits. Not open to freshmen. Limited to 24 students.
Prerequisite: 1 college-level writing course. Lec, M 9:05-9:55; lab, W 12:20-2:15.
B. Lewenstein.
How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

COMM 353 Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 260, COMM/S&T S 352, ENG. 350 or permission of instructor. Offered odd-numbered years.
B. Lewenstein.
Students cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting students prepare science writing techniques and issues. At the meeting, students meet with science writers and attend press conferences and scientific sessions. Students write at least two stories. Students are responsible for all costs of travel, lodging, and meals.

COMM 355 Planning Communication Campaigns
Spring. 3 credits. Prerequisites: COMM 282 or equivalent social research course (may be taken concurrently). T R 11:40-12:55. D. Scheufele.
This course provides a theoretical and practical overview of the audiences, messages, and evaluation of political and other types of communication campaigns. Emphasis is placed on political campaigns, but principles of campaign planning and evaluation relevant to other kinds of campaigns are stressed. Topics include campaign tactics and audience responses, audience segmentation, message construction, political advertising, agenda-setting, priming and framing in political campaigns, inter-relationships between issues, framing of issues with regard to attitude-change, and audience behaviors. Common methods of data collections (focus groups, experiments, surveys, etc.) and analysis of campaign-related data sources will be included.

COMM 380 Independent Honors Research in Social Debate Association
Fall or spring. 1-6 credits. Limited to undergraduates who have met the requirements for the honors program. Students who have successfully completed COMM 382 will register for no more than 3 credits. Students who have not completed an advanced research methods course may register for up to 6 credit hours. R. Ostman.

COMM 382 Advanced Communication Research
Fall. 3 credits. Prerequisites: COMM 120, 121, 282, may be restricted to honors students. TBA. D. Scheufele and staff.
This course provides an advanced approach to data analysis and methods of data collection in communication research. It is intended for seniors who intend to complete an honors project or other advanced research. Every week we examine one or two research situations in greater detail, analyze specific problems connected to the method used, and discuss strategies for data analysis and presentation. This provides all students who graduate with distinction in research—inde­pendent of their specific thesis topic—with a more in-depth understanding of the methods used in communication research and how they are applied to concrete projects.

COMM 398 Issues in Teaching Communication
Fall and spring. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301.
Alternate M 7:30-9:10 p.m. K. Berggren.
This seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405 Community Service Practicum
Fall and spring. 2 credits. May be repeated for credit. Limited to 10-15 Program in Speech and Debate members; permission of instructor required TBA. J. Hayman.
Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 498 Issues in Teaching Communication
Spring and fall. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301.
Alternate M 7:30-9:10 p.m. K. Berggren.
This seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 498 Issues in Teaching Communication
Spring and fall. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301.
Alternate M 7:30-9:10 p.m. K. Berggren.
This seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 498 Issues in Teaching Communication
Spring and fall. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301.
Alternate M 7:30-9:10 p.m. K. Berggren.
This seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.
COMM 410 Organizational Communication: Theory and Practice
Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or permission of instructor. Lec, M W 11:15-12:05; lab 01, W 12:20-2:15; lab 02, W 2:30-4:15; lab 03, R 12:20-2:15; lab 04, R 2:30-4:15. D. Krikorian. Study of management communication processes in formal organizations. Application of relevant organizational behavior and communication principles in today's business environment. Examination of formal and informal communication networks, and exploration into the craft of consulting. Case studies analyzed in lab.

COMM 418 Communication and Persuasion
Spring. 3 credits. Limited to juniors and seniors only. Prerequisite: COMM 282 or equivalent social science research methods course; and COMM 116 and 120 or introductory psychology or social psychology. T R 10:10–11:40. M. Campo. The course focuses on the influence of communication's influence on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories are applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

COMM 420 Public Opinion and Social Processes
Fall. 3 credits. Limited to juniors and seniors only. Prerequisite: COMM 282 or equivalent social science research methods course; and COMM 116 and 120 or introductory psychology or social psychology. T R 10:10–11:25. M. Campo. The course focuses on theories of communication's influence on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories are applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

COMM 421 Communication and the Environment
Spring. 3 credits. Lec, T R 10:10–11:25. Offered odd-numbered years. J. Shanahan. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television (and Beyond)
Fall. 3 credits. Prerequisites: introductory psychology, T&DPS or COMM 120 or COMM 116. Lec, M W F 12:20-1:10. Disc 01: T 11:15-12:05 every other week starting 1st week; Disc 02: T 11:15–12:05 every other week starting 2nd week; Disc 03: W 12:20–1:10 every other week starting 1st week; Disc 04: W 12:20–1:10 every other week starting 2nd week; Disc 05: R 1:25–2:15 every other week starting 1st week; Disc 06: R 1:25-2:15 every other week starting 2nd week. M. Shapiro. A survey of knowledge about how people mentally process television and other audio-visual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include: why people watch, what happens mentally when they watch, how people understand and mentally process media, how media psychologically influence beliefs, attitudes, thinking and emotion.

COMM 424 Communication in the Developing Nations
Fall. 3 credits. Limited to juniors and seniors. Lec, T 1:25–2:25; lab T 2:35–4:25. R. Cols. The role of communication in development programs, particularly in the Third World. Emphasis is on communication interventions in agriculture, health, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.

COMM 426 Impact of Communication Technologies
Spring. 3 credits. M W 2:55–4:10. Not offered 2002–2003. Staff. Examine emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communications from cave painting to television. Meets with COMM 625; graduate students should enroll in COMM 625.

COMM 428 Communication Law
Spring. 3 credits. Limited to junior, senior, and graduate students; others by permission of the instructor. Lec, M W F 11:15–12:20. D. Grossman. This course deals with the law-governing communication media. Topics covered include First Amendment concepts, restraints on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.

COMM 439 Designing for Human Computer Interaction
Fall. 3 credits. Prerequisite: permission of instructor. Lec, M W F 11:40–12:55; lab 01, T 1:25–2:15, lab 02, R 1:25–2:15. Not offered 2002–2003. Staff. This course is concerned with key issues of the design of the interaction between computers and people. Students come away from the course with an ability to evaluate solutions to design problems and a familiarity with implementing HCI designs. Lectures concurrent with COMM 639; grad students should enroll in COMM 639.

COMM 440 Computer-Mediated Communication Theory and Research
Spring. 3 credits. Permission of instructor. Letter grade only. M W 2:55–4:10. J. Walther. Advanced study of conceptual and empirical approaches to understanding online communication, and the evaluation of contemporary research advancing these approaches. Topics include ongoing and emergent issues in mediated communication such as identity, community, collaboration, virtual work teams, online relationships, the benefits and detriments of alternative systems, and others. When possible, course involves collaboration with students at other locations via Internet. Students create and/or assist in original research on some aspect of computer-mediated communication. Lectures concurrent with COMM 640; graduate students should enroll in COMM 640.

COMM 466 Public Communication of Science and Technology (also S&TS 466)
Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 560, or ENGR 350, or permission of instructor. Offered even numbered years. Not offered 2002–2003. M W 2:55–4:10. B. Lewenstein. Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of PCST. Tackle existing systems about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.

COMM 476 Communication Fellows Program
Spring. 2 credits. Prerequisites: permission of instructor, limited to communication seniors selected based on goals and academic preparation. M 2:55–4:10. B. O. Earle. A series of lectures, seminars and guest speakers exploring the planning, evaluation and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers. Fee of $150.00 charged.

COMM 486 Risk Communication
Spring. 3 credits. T R 1:25–2:15; lab R 2:30–4:25. C. Scherer. An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.
COMM 494 Special Topics in Communication
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 496 Internship
Fall, spring, summer, and intersession. 1–3 credits must apply no later than the spring pre-course enrollment period for a fall internship or the fall pre-course enrollment period for a spring or summer internship. Prerequisites: limited to communication juniors or seniors, 3.0 average in communication courses, and approval of academic advisor. S-U grades only. Structured, on-the-job learning experience under supervision of communication professionals in an operating organization. Maximum of six credits total may be earned; no more than three per internship but flexibility allows six for one credit each, three for two credits each, or two for three credits each. Internships must be approved in advance by the student’s academic advisor and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required.

COMM 497 Individual Study in Communication
Fall or spring. 1–3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

COMM 498 Communication Teaching Experience
Fall or spring. 1–3 credits; may be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall). Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research
Fall or spring. 1–3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 510 Organizational Communication Theory and Practice
Fall. 3 credits. Lec. M W 11:15-12:05; sec. TBA. D. Krikorian. Study of management communication processes in formal organizations. Application of relevant organizational and communication principles in today’s business environment, examination of formal and informal communication networks, and exploration into the craft of consulting. Case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.

COMM 540 Impact of Information Technology
Spring. 3 credits. Prerequisite: permission of instructor. Letter grade only. T R 1:25-2:40. G. Gay. The collection, management, analysis, and representation of data are increasingly mediated through electronic tools. This course examines a range of approaches and tools, including Internet-based data collection, tracking, digital video analysis, information visualization, eyetracking and analysis. Students also examine social and ethical implications and concerns. Readings range from classic papers in cognitive science, social psychology, film theory, and anthropology to recent studies of the sociology of online communities.

COMM 610 Seminar in Communication and Social Networks
Fall. 3 credits. Prerequisites: one advanced statistics course or permission of instructor. Lec. T 3:00-6:00. D. Krikorian. Examination of the structures and processes of group, organizational, and social networks. Review of research literature in communication and social networks. Survey of network methods with an emphasis on quantitative analysis and software. Application of graph theory, matrix algebra, and sociometry techniques. Analysis and social interpretation of extant network datasets.

COMM 618 Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course. T R 10:10-11:25. M. Campo. The course focuses on theories of communication’s influence on persuasion and attitude change. Students become familiar with a variety of psychological theories of attitude change and persuasion. Those theories are also applied to a variety of communication situations including mass communication, advertising, public relations, and public information/insular communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.

COMM 620 Public Opinion and Social Processes
Fall. 3 credits. T R 10:10-11:25. M. Campo. The course provides an overview of the theoretical and applied literature related to the concept “public opinion.” Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 420; graduate students should enroll in COMM 620.

COMM 622 Advanced Psychology of Television (and Beyond)
Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. TBA. M. Shapiro. A survey of knowledge about how people mentally process television and other audio-visual communication technologies—including movies, video games, virtual reality, the Internet. Topics include: why people watch, what happens mentally when they watch, how people understand and mentally process media, how media psychologically influence beliefs, attitudes, thinking, and emotion.

COMM 624 Communication in the Developing Nations
Fall. 3 credits. Open to juniors, seniors, and graduate students. Lec. T 1:25-2:35; lab. T 2:30-4:25. R. D. Colle. The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 626 Impact of Communication Technologies
Spring. 3 credits. Open to seniors. M W 2:55-4:10. Not offered 2002-2003. Staff. Examines emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Meets with COMM 426; graduate students enroll in COMM 626.

COMM 639 Designing for Human Computer Interaction
Fall. 3 credits. Prerequisite: permission of instructor. Lec. T 11:40-12:55; lab 01, T 12:55-2:15; lab 02, T 1:25-2:15. Not offered 2002-2003. Staff. This course is concerned with key issues of the design of the interaction between computers and people. Students come away from the course with an ability to evaluate solutions to design problems and a familiarity with implementing HCI designs. Lectures concurrent with COMM 439; grad students should enroll in COMM 639.

COMM 640 Computer Mediated Communication: Theory and Research
Spring. 3 credits. Prerequisite: permission of instructor. Lec. M W 2:55-4:10. J. Walther. Advanced study of conceptual and empirical approaches to understanding online communication, and the evaluation of contemporary research advancing these approaches. Topics include ongoing and emergent issues in mediated communication such as identity, community, collaboration, virtual work teams.
online relationships, the benefits and detriments of alternative cue systems, and others. When possible, course involves collaboration with students at other locations via Internet. Students create and/or assist in original research on some aspect of computer-mediated communication. Lectures concurrent with COMM 440; graduate students enroll in COMM 640.

COMM 676 Communication Planning for Social and Behavioral Change

COMM 680 Studies in Communication
Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W 8:40–9:55. Staff.
A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

COMM 681 Advanced Communication Theory
Spring. 4 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. M W with additional meetings TBA. Staff.
Development of, and contemporary issues in, communication theory. Discussion includes the interaction between communication and society, social groupings, and mental processing.

COMM 682 Methods of Communication Research
Spring. 3 credits. Lec, M W F 12:20. Staff.
An analysis of the methods used in communication research. Emphasis is on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 683 Quantitative Research Methods in Communication
Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lec, M. Not offered 2002–2003. Staff.

COMM 686 Risk Communication
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 486; graduate students should enroll in COMM 686.

COMM 691 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only. Staff.
Some weeks scholars from a wide variety of fields present varied topics in theory or research as it relates to communication, other weeks graduate students present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1–3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Staff.
Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 700 MPS Project Research
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: completion of "A" exam; permission of committee chair. Project research for Master of Professional Studies (Communication) students.

COMM 781 Seminar in Psychology of Communication
Spring. 3 credits. Letter grade. Offered odd-numbered years. Prerequisite: COMM 680 and 681 or equivalent graduate level theory in psychology or social psychology.
Hour TBA. M. Shapiro.
Discussion and analysis of selected current issues in the psychology of communication. Students discuss and synthesize current research and theory in the mental processing of communication.

COMM 794 Seminar in Communication Issues
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor.
Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor.
Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory
Fall and spring. 1–3 credits each semester. Letter grade only. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.
Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799 Graduate Research
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.
Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 800 Master's-Level Thesis Research
Fall or spring. 1–4 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.
Thesis research for Master of Science (Communication) students.

COMM 901 Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits. May be repeated for a maximum of 9 credits. S-U grades only. Prerequisite: permission of instructor.
Dissertation research for doctoral candidates.

CROP AND SOIL SCIENCES

CSS 190 Sustainable Agriculture
Fall. Credits variable, 2 or 3. Limited to 60 students. S-U grades only. Lec, R 10:10; labs, M T 2:00–4:25. G. W. Fick and T. A. LaRue. Staff.
This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes scientific principles of management that conserve or renew those resources for continuing benefit to society. The information is of general value for nonmajors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the web. Extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

CSS 494 Special Topics in Crop and Soil Sciences (undergraduate level)
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.
CSS 497 Individual Study in Crop and Soil Sciences
Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). The topics in soil science, crop science, or environmental information science are arranged at the beginning of the term for individual study or for group discussions.

CSS 498 Teaching Experience in Crop and Soil Sciences
Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course.

CSS 499 Undergraduate Research
Fall or credit. Credit TBA. Students must register with an Independent Study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science or soil science.

[CSS 695 Planning and Reporting Research]
Spring. 2 credits. First meeting the first T of the semester in 102 Bradford. Not offered 2002-2003. G. W. Fick. New graduate students and students starting to write their theses have found this course very helpful. Topics covered include scientific writing, reviewing, seminar presentations, and poster presentations. The nature of science and the scientific method are also discussed along with professional ethics in the conduct and communication of science.

CSS 696 Seminar in Crop and Soil Sciences
Fall and spring. 1 credit. S-U grades only. Lect. T 3:30-4:30. Staff. Seminars cover current research and selected topics in the crop and soil sciences and related fields.

Crop Science

CSS 311 Grains and Nutriceuticals
Fall. 4 credits. Prerequisite: CSS 260 or BIOL 241. Lecs. M W F 10:10, lab. M 1:30-2:30, 1 or 2 field trips during lab period (until 5 p.m. or on weekends). R. L. Obendorf. Globally, six seed crops provide 75 percent of the caloric and protein needs of mankind by direct consumption or indirectly through animal and microbial products. Seed crops for starch, protein, oil, fiber, sugar, nutricultural, pharmaceutical, and industrial uses are emphasized, including adaptation, growth and development, environmental stress, optimization of yield and quality, and genetic improvement in the context of food systems for improved health. Laboratory uses living plants, extensive crop garden, and computer simulation.

CSS 312 Forage Crops
Spring. 4 credits. Prerequisites: introductory course in crop and soil science. Recommended: course in animal nutrition. Lecs. M W F 11:15, lab. M or W 1:25-2:25. G. W. Fick. The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

CSS 314 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also INTAG 314)
Fall. 3 credits. Prerequisite: Introductory course in crop science or soil science or biology or permission of instructor. Lec. T R 8:40-9:55. E. C. Fernandes. Characterization and discussion of: traditional shifting cultivation; lowland rice-based systems; upland cereal-based systems; smallholder mixed farming including root crops and livestock; plantation fruit and oil crop systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The impact of tropical cropping systems on the environment are evaluated.

CSS 315 Weed Science
Fall. 4 credits. Prerequisite: introductory course in biology or botany. Lecs. T R 10:10-11:25, lab. T or W 2:00-4:25. A. DiTommaso. Principles of weed science are examined. Emphasis is on: (a) weed biology and ecology; (b) chemistry of herbicides in relation to effects on plant growth and the environment; and (c) current management strategies that are relevant to both crop and noncrop ecosystems. Hands-on laboratory sessions cover weed identification and ecology, and herbicide selectivity and symptomology.

[CSS 317 Seed Science and Technology (also HORT 317)]
Fall. 3 credits. Prerequisite: BIOL 241 or equivalent. Lecs. T R 11:15-12:05, lab. R. Two all-day field trips will be scheduled during the semester. Offered alternate years. Next offered 2003. A. G. Taylor, Geneva Experiment Station. (thaca contact: R. R. Mudge, L. Buck, J. Lassoie.) The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

[CSS 415 Principles and Practices of Agroforestry (also NTRES 415 and HORT 415)]
Fall. 3 credits. Prerequisites: senior or graduate standing and consent of instructor. S-U option. Lec. M W F 10:10-11:00. Optional laboratory, CSS [SCAS] 416 (also NTRES 416 and HORT 416). Offered alternate years. Offered 2003. K. Mudge, L. Buck, J. Lassoie. An introduction to modern and traditional agroforestry systems which involves spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and nonwoody components of agroforestry systems are considered, based on above and below ground processes. The sustainability of agroforestry information is examined from biophysical, socio-economic, and policy perspectives.

[CSS 416 Principles and Practices of Agroforestry—Laboratory (also NTRES 416 and HORT 416)]
Fall. 1 credit. Optional lab component of HORT 415 (also NTRES and CSS [SCAS]). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; prior or concurrent enrollment in HORT 415. R. L. Obendorf. Offered alternate years. Offered 2003. K. Mudge, E. Fernandes, L. Buck, J. Lassoie. An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

[CSS 455 Mineral Nutrition of Crops and Landscape Plants (also HORT 455)]
Spring. 3-5 credits. Prerequisite: CSS 260 and BIOL 242, or equivalent. Lecs. M W F 9:05, lab. R 3:30-4:00. Offered alternate years. Not offered spring 2003. H. C. Wiem and staff. A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetable floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

CSS 608 Water Status in Plants and Soils
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lec. 1 hour TBA, lab. 1:25-4:25, first class meeting R. Offered alternate years. T. L. Setter. Covers techniques for field appraisal of the status of water in plants and soil, including methods used in plant physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

CSS 610 Physiology of Environmental Stresses
Fall. 3 credits. Prerequisite: plant physiology. BIOL 242 or 341 or permission of instructor. Offered even years. Lecs. T R 10:10-11:25. T. L. Setter. A study of the responses of plants to environmental stresses, including chilling, freezing, and high and low salinity, drought, hypoxia, and toxic elements. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

CSS 612 Seed Physiology and Biotechnology
Spring. 3 credits. Prerequisite: plant physiology. T R 8:30-9:55. R. L. Obendorf. This course in seed biology describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds.
Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

**CSS 613 Physiology and Ecology of Yield**
A study of environmental constraints on crop-plant productivity from an eco-physiological perspective. Acclimation responses and genetic adaptation are examined for temperature, light, water, compacted soil, and mineral environments. Topics include photosynthesis and nitrogen assimilation, translocation, and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral sinks in response to environment; seed set; water transport and stomatal regulation; growth root in flooded and compacted soils; and drought responses. Emphasis is on growth processes of vegetative plant organs.

**CSS 614 Weed Ecology and Management**
Spring. 3 credits. Prerequisite: CSS 315 or equivalent. Lec. T R 10:10-11:25. Offered alternate years. A. DiTommaso.
An examination of plant ecological principles governing weed population dynamics and weed-crop competitive interactions in different crop and weed ecosystems. Application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies is explored. Topics include seed biology and seedbank dynamics, weed demography and spatial variation, weed-crop interfences, bio-economic weed thresholds, and site-specific weed management.

**CSS 642 Plant Mineral Nutrition** (also BIO PL 642)
Spring. 3 credits. Prerequisite: BIO PL 341 or equivalent. Lec. M W F 10:10-11:00. Offered alternate years. L. V. Kochian, R. M. Welch.
A detailed study of the processes by which plants acquire and utilize mineral nutrients from their environment include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate the above topics.

**CSS 691 Special Topics in Crop Science**
Fall or spring. 1-6 credits. S-U grades optional. Staff.
Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

**CSS 820 Master's-Level Thesis Research in Crop Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students specifically in a master's program.

**CSS 920 Graduate-Level Thesis Research in Crop Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students in a Ph.D. program only before the "A" exam has been passed.

**CSS 921 Doctoral-Level Dissertation Research in Crop Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students admitted for candidacy after the "A" exam has been passed.

**Environmental Information Science**

**CSS 398 Environmental Microbiology** (also BIOMI 397)
Fall. 3 credits. Prerequisite: BIOES 261 or BIOMI 290 or CSS (SCAS) 265 or permission of instructor. Lec. M W F 10:10-11:00. W. C. Ghoron.
The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

**CSS 411 Resource Inventory Methods** (also CEE 411)
Spring. 3 credits. Prerequisite: permission of instructor. Lec. M W F 9:05-9:55; lab, M R 1:25-4:25. A. Lembo.
A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

**CSS 420 Geographic Information Systems**
Fall. 4 credits. Prerequisite: CSS (SCAS) 411 or permission of instructor. Lec. T R 9:05-9:55; lab, T 10:10-1:10; M W R F 1:25-4:25. A. Lombo.
Principles and applications of geographic information systems, the characterization and assessment of agronomic and environmental resources. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment are considered.

**CSS 465 Global Positioning System**
Fall and spring. 1 credit. Prerequisite: CSS 411 or CSS 420, or equivalent, or consent of instructor. Lec. F 1:25-4:25. A. Lombo.
Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization, field-data collection and processing, real-time and post-differential correction, and GPS-GIS integration.

**CSS 620 Spatial Modeling and Analysis**
Spring. 3 credits. Prerequisites: CSS (SCAS) 420, CSS (SCAS) 461, or permission of instructor. Lec. T R 9:05-9:55; lab, T W 1:25-4:25. A. Lombo.
Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification and evaluation. Application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

**CSS 660 Remote Sensing Fundamentals** (also CEE 610)
Fall. 3 credits. Prerequisite: permission of instructor. Lec. M W 12:20-1:10; lab, F 2:30-4:25. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensor and ground-data acquisition, data analysis and interpretation, and project design.

**CSS 675 Modeling the Soil-Plant-Air atmosphere System** (also EAS 675)
Spring. 3 credits. Prerequisite: CSS (SCAS) 483 or equivalent. Offered alternate years. Lec. T: M W 8:40-9:55. J. Riha.
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and plant-plant competition; and land surface processes as well as model data requirements, validation and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation are discussed.

**CSS 694 Special Topics in Environmental Information Science**
Fall or spring. 1-6 credits. S-U grades optional. Staff.
Study of topics in environmental science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

**CSS 860 Master's-Level Thesis Research in Environmental Information Science**
Fall or spring. Credit by arrangement. S-U grades only. Graduate faculty.
Limited to students specifically in master's program.

**CSS 960 Graduate-Level Dissertation Research in Environmental Information Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students in a Ph.D. program only before the "A" exam has been passed.

**CSS 961 Doctoral-Level Dissertation Research in Environmental Information Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students admitted to candidacy after the "A" exam has been passed.

**Soil Science**

**CSS 260 Soil Science** (also EAS 260)
Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in...
Aspects of soil and water management, which soil survey is based, are discussed. Factors and processes of soil formation on quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

**[CSS 321 Soil and Water Management](#)**  
Fall. 4 credits. Prerequisites: CSS (SCAS) 260 or S-U grades optional. Lecs, T R 11:40-12:55; lab, W 1:25-3:25. Offered alternate years. H. M. van Es.

Introduces students to the principles of soil and water interaction and to the effects of human intervention on these processes. Aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, soil compaction, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

**[CSS 362 Soil Morphology](#)**  
Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. All day field trip required. R 1:25-4:25. Staff.

The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

**[CSS 363 Soil Genesis, Classification, and Survey](#)**  
Fall. 4 credits. Prerequisite: CSS (SCAS) 260. Lecs, M W F 1:15; lab, W 1:25-4:25. One all day field trip is required. Staff.

Factors and processes of soil formation on which soil survey is based are discussed. Principles of field identification, classification, survey, and interpretation are practiced in a field setting. An overview of soil databases, their content, development, and use for site evaluation and land classification is provided.

**[CSS 365 Environmental Chemistry: Soil, Air, and Water](#)**  

An overview of the chemical processes that control the concentrations and bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil's function as a filter for contaminants. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

**[CSS 366 Soil Ecology (also HORT 366)](#)**  
Spring. 4 credits. Prerequisite: one year intro biology and CSS 250 or permission of instructor. Lecs, T R 10:10-11:25; lab, W 1:25-4:25. E. J. Thies, L. E. Drinkwater.

Activities of the soil biota are crucial for the continued functioning and renewal of soil ecosystems. Through study of the soil as an ecosystem, students gain an understanding of the diversity of soil organisms and the critical roles that microbial activities and interactions have in agricultural production and environmental protection. Through a small research project, students also gain competencies in developing research questions, formulating hypotheses, planning appropriate methods for gathering and interpreting data, and summarizing research work. Graduate students should enroll in CSS/HORT 466.

**[CSS 372 Nutrient Management in Agro-Ecosystems](#)**  
Spring. 4 credits. Prerequisite: CSS (SCAS) 260 or permission of instructor. Lec, T R 8:40-9:55; lab, R 1:25-4:25. J. Lehmann.

Students become familiar with the basic concepts of soil fertility, and how soil and environmental processes affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agro-ecosystems. Emphasis is placed on how nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations. Graduate students should enroll in CSS 472.

**[CSS 412 Whole Farm Nutrient Management (also AN SC 412)](#)**  
Spring. 2 or 4 credit option. Open to juniors, seniors, and graduate students only. Course offered as two modules.

Module 1: Crop and manure nutrient management planning; no prerequisites for CALS students. Enrollment in Module 2 for the second half of the semester is optional (additional 2 credits). This module expands on and integrates agronomic nutrient management planning with herd nutrient management planning. AN SC 411 required. Lec, T R 11:15 and lab, T 1:25-4:25 for both halves, with work on case studies outside of lab. D. G. Fox and Q. M. Ketterings.

This course provides students with an understanding of the concepts underlying whole farm nutrient management planning to improve profitability while protecting water and air quality. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for the National Feeding Operation plan to meet environmental regulations. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning System and others. All students enrolled learn the concepts and processes of developing the crop and manure nutrient management plan component of a CNMP during the first half of the semester in Module 1. Students opting to continue to the end of the semester in Module 2 (4 credit option) build upon knowledge gained in the first half of the semester by learning the knowledge and skills necessary to integrate crop production and animal management for reducing nutrient imports on farms.

**[CSS 466 Soil Ecology and Research (also HORT 466)](#)**  

Activities of the soil biota are critical for the continued functioning and renewal of soil ecosystems. Through study of the soil as an ecosystem, students gain an understanding of the diversity of soil organisms and the critical roles that microbial activities and interactions play in agricultural production and environmental protection. Through a small independent research project, students also gain competencies in developing research questions, formulating hypotheses, planning appropriate methods for gathering and interpreting data, and summarizing research work.

**[CSS 472 Nutrient Management and Research in Agro-Ecosystems](#)**  
Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. Lecs, T R 8:40-9:55; lab, R 1:25-4:25. J. Lehmann.

Students become familiar with the basic concepts of soil fertility, and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agro-ecosystems. Emphasis is placed on how nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations. The laboratory experiences conclude with a final paper.

**[CSS 473 Ecology of Agricultural Systems (also BIOEE 473)](#)**  
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. Lecs and disc, T, R. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips. T 2:30-3:45. Offered Fall 2003. A. G. Power and E. C. Fernandes.

Analysis of the ecological processes occurring in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

**[CSS 483 Environmental Biophysics (also EAS 483)](#)**  
Spring. 3 credits. Prerequisite: CSS (SCAS) 260 or equivalent or permission of instructor. Lecs, M W F 11:15. S. J. Riba.
Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum are covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

[CSS 666 Applied Plant/Microbe Interactions] Fall. 4 credits. Prerequisite: CSS 366 or equivalent, or permission of instructor. Lect. T R 10:10-11:25; lab, F 1:25-4:25. J. E. Thies. Discussions on current research into applied plant/microbe interactions including: molecular signaling between plants and microbes involved in symbiotic, associative, or pathogenic interactions; and new methodologies for understanding the role(s) soil microorganisms play in plant production. In the lab, students undertake an individual research project matched to their interests in which they employ current methods. Project results as a final poster.

[CSS 667 Advanced Soil Physics] Spring. 4 credits. Prerequisite: one year of college physics and CSS (SCAS) 483 or permission of instructor. S-U grades optional. Offered alternate years. M W F 11:15-12:05. P. C. Baveye. A detailed study of measurement processes and of the hydrostastics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrinkage and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamical and mechanistic (molecular) standpoints. Also covered are mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.

[CSS 671 Soil Chemistry] Fall. 3 credits. Prerequisite: 1 year of physical chemistry or permission of instructor. Lect. M W F 10:10. Offered alternate years. Offered fall 2003. M. B. McBride. A detailed examination of the structure and surface chemistry of colloidal particles common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays, oxides, and organic matter are emphasized. The behavior of environmental contaminants in soils, particularly metals and toxic organics, is described.

[CSS 672 Nutrient Cycling in Natural and Managed Ecosystems] Fall. 3 credits. Prerequisite: CSS 373 or NTRES 321 or BIOEE 478, or permission of instructor. Lect. T R 10:10-11:00; lab, F 1:25-4:25. J. Lehmann. Nutrient cycling in soil and the interface between the soil and the vegetation, atmosphere and ground water are covered. We examine the biogeochemistry of nutrient elements in natural ecosystems, disturbed or degraded ecosystems, and agricultural systems including pollution in watersheds. Students develop independent projects, present a research proposal and conduct field research which concludes in a presentation and a paper in publishable format.

[CSS 693 Special Topics in Soil Science] Fall, spring, or summer. 1-6 credits. S-U grades optional. Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

[CSS 696 Seminar: Organic Inputs in Tropical Soils and Agroforestry (also NTRES 596 and INTAG 696)] Fall, spring. 1 credit. Section 2: S-U grades only. Lect. F 12:20-1:10. F. Fernandes, L. Fisher. A variety of speakers present seminars on organic inputs in the tropics and agroforestry. Students are required to prepare synopsis of each seminar.

[CSS 690 Master's-Level Thesis Research in Soil Science] Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

[CSS 980 Graduate-Level Dissertation Research in Soil Science] Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only before the "A" exam has been passed.

[CSS 981 Doctoral-Level Dissertation Research in Soil Science] Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the "A" exam has been passed.

EART H AND ATMOS PH E SC IENCES

EAS 101 Introductory Geological Sciences

Fall, spring, or summer. 3 credits. Fall and spring. A. Moore. Designed to enhance an appreciation of the physical world. Natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems are emphasized. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth System Science) are covered. Water, mineral, and fuel resources and environmental concerns are also examined. Field trips in the Ithaca region.

EAS 102 Evolution of the Earth and Life (also BIO G 102)

Spring. 3 credits. Lect T R 9:05-9:55 or 11:15-12:05, labs T W R 2:00-4:25. J. L. Cisne. This course covers: earth systems and their evolution; earth history's astrochronology context; plane tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; precedents for ongoing global change; and dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil collecting on field trips.

EAS 105 Writing on Rocks

EAS 106 Vertebrate Fossil Preparation

Spring. 1 credit. Prerequisites: 1 introductory geology course and concurrent enrollment, class size is limited, J. Chiment. A laboratory-oriented course that exposes students to techniques of vertebrate fossil preparation. Roughing-out and fine preparation of large specimens in solid matrix are covered, as well as screen washing and microscope techniques for the recovery of micro-vertebrate remains. Specialized scanning techniques are discussed. The class meets for one hour each week for the first six weeks of the semester. Students are assigned to an individual or group project requiring two hours of participation each week for the remainder of the semester.

EAS 107 How the Earth Works

Fall. 1 credit. Lects M 12:20-1:10. J. L. Cisne. A user-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

EAS 109 Dinosaurs

Fall. 1 credit. Lects T W or R 12:20-1:10. J. L. Cisne. An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 111 To Know the Earth

Fall. 3 credits. Lects T R 10:10-11:25. J. M. Bird. Acquaints the nonscientist with Earth, its major features, how the Earth has evolved, Earth System Science, and building a habitable planet. Covers the effects of human activity on geologic environments, mitigating environment damage, and living with natural hazards.
Also covers mineral resource use in the twentieth-first century and an environmentally sound fuel-minerals cycle.

EAS 122 Earthquake! (also ENGR 122)

The science of natural hazards and strategic resources is explored. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 131 Basic Principles of Meteorology
Fall. 3–4 credits (4 credits with lab section). Lecs T R 11:15; lab, T W or R 1:25–4:25 and M W 7:00–9:30 p.m.
M. W. Wysocki.

A simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations, air masses, fronts, and cyclones; and hurricanes and tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

EAS 150 Introduction to Fortran Programming
Fall. 3 credits. Lec, T R 12:20–1:10; lab T W F 9:05–10:20.
M. W. Wysocki.

An introduction to the elements of computer programming using Fortran. Exercises involve mainly meteorological problems.

EAS 154 The Sea: An Introduction to Oceanography, Lecture (also BIOEE 154)
Spring, summer. 3 credits. The optional one-credit laboratory for this course is offered as EAS/BIOEE 155. S-U grades optional. Lecs T R 11:40–12:55.
C. H. Greene, W. M. White.

A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: seafloor spreading and plate tectonics, marine sediments, chemistry of seawater, ocean currents and circulation, the oceans and climate change, ocean ecology, and coastal processes.

EAS 155 The Sea: An Introduction to Oceanography, Laboratory (also BIOEE 155)
Laboratory course covering topics presented in EAS/BIOEE 154.

EAS 200 Art, Archaeology, and Analysis (also ARKEO 285, ARTH 200, ENGG 155, PHYS 200)

An interdisciplinary course on the use of techniques of science and engineering in cultural research. Applies physical and physiological principles to the study of archaeological artifacts and works of art. Covers historical and technical aspects of artistic creation. Includes analyses by modern methods, including stratigraphic, geologic, and historical methods.

EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)
Fall. 3 credits. Prerequisites: PHYS 112 or 207. Lecs T R 10:10–11:00, lab R 2:00–4:25 or W 7:30–9:55. L. M. Cathles.

This course covers formation of the solar system; accretion and evolution of the Earth; the rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport; and the rock cycle: chemical cycles and accelerating greenhouse gases; and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

EAS 202 Environmental Geology
Summer. 3 credits. W. R. Brice.

In-depth introduction to geologic processes that affect or are affected by human society, including stream behavior and floods, earthquakes, land stability and mass wasting, and volcanic hazards. This material provides an application of geology to engineering, natural resources, and land-use planning.

EAS 210 Introduction to Field Methods in Geological Sciences
1 lec, Saturday field trips. 3 credits. Prerequisite: EAS 101 (or 201) or permission of instructor. D. L. Turcotte.

Studies of natural hazards; earthquakes, volcanic eruptions, floods, hurricanes, tornadoes, severe storms, wildfires, and meteor impacts. Covers applications of the science of complexity to natural hazards: fractals, chaos, and self-organized criticality.

EAS 213 Marine and Coastal Geology
Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor. Staff.

A special one-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G141 Simonson Hall. Estimated cost for 2002 (including tuition, room, board, and ferry transportation) is $1,100.

EAS 250 Meteorological Observations and Instruments
Spring. 3 credits. Prerequisite: EAS 131. Lecs, M W 12:20; lab, R 1:25–5:20.
M. W. Wysocki.

This course covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covered are: instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Lab fee $50.

EAS 260 Soil Science (also CSS 260)
Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05; lab, M T W or R 1:25. S. J. Riha.

Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. This course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. Soil management unit addresses fertility, nutrient management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

EAS 266 Climate and Global Warming

Students from a range of disciplines become familiarized with such contemporary issues in climateology as global warming and El Niño. Introductions to the natural greenhouse effect, past climates, observed and projected climate changes and impacts. Also natural climate variations (e.g. El Niño) and their consequences and predictability. Weekly student-led discussions of issues appearing in journals such as Nature.

EAS 296 Forecast Competition
Fall and spring. 1 credit. S-U grades only. Prerequisites: sophomore undergraduate standing in atmospheric science, or permission of instructor. D. S. Wilks.

This two-semester course provides daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded after the second semester. May be repeated for credit.

EAS 302 Evolution of the Earth System
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lecs M W F 11:15–12:05, Disc W 2:30–3:20.
W. White and staff.

Co-evolution of life and the Earth system: Earth's early history; plate tectonics, continental drift, and volcanic hazards. This material provides an introduction to geology or as a continuation of EAS 101.

EAS 303 Natural Hazards and the Science of Complexity
Fall. 3 credits. Prerequisites: 1 calculus course. Not offered 2002-2003. D. L. Turcotte.

Studies of natural hazards; earthquakes, volcanic eruptions, floods, hurricanes, tornadoes, severe storms, wildfires, and meteor impacts. Covers applications of the science of complexity to natural hazards: fractals, chaos, and self-organized criticality.

EAS 315 Geomorphology
Spring. 2 credits. Prerequisite: permission of instructor. R. Allmendinger.

Considers the physical processes by which rocks are used as a geological database. Covers field methods used in the construction of geologic maps and cross sections; systematic description of stratigraphic sections. Field and laboratory seminars meet on Saturdays until Thanksgiving. There is also one additional lecture during most of these weeks. There is one weekend field trip to eastern New York.

EAS 321 Marine and Coastal Geology
Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor. Staff.

A special one-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G141 Simonson Hall. Estimated cost for 2002 (including tuition, room, board, and ferry transportation) is $1,100.

EAS 351 Geomorphology
Fall. 4 credits. Prerequisite: one course in either geology, hydrology, or soil science. Lecs T R 8:40–9:55, lab M 2:00–4:25.
T. E. Jordan and B. L. Baars.

A study of the processes which have shaped the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure, as we examine their
modification by physical interaction with the atmosphere and oceans. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe. Two Saturday field trips.

EAS 321 Introduction to Biogeochemistry (also NTRES 321) Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. Lees T R 12:20-1:30, disc W or R 2:00-3:25. J. Yavitt. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox cycles, cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 326 Structural Geology Spring or Fall. 4 credits. Prerequisite: MATH 112, EAS 301 or 201, or permission of instructor. One weekend fieldtrip. Lees M W F 11:15-12:05, lab T 2:00-4:25. R. W. Allmendinger. Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

EAS 331 Climate Dynamics (also ASTRO 361) Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lees M W F 12:20-1:10; disc, F 12:25-1:25, K. H. Cook and P. J. Gierasch. Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

EAS 334 Microlimnology Spring. 3 credits. Prerequisite: A course in physics. T R 10:10-11:25. Offered alternate years. Not offered 2002-2003. D. S. Wilks. The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 341 Atmospheric Thermodynamics and Hydrostatics Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. M W F 9:05-9:55, A. T. DeGaetano. Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in the atmosphere. Topics cover the thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrospheric and stability.

EAS 342 Atmospheric Dynamics (also ASTRO 342) Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. Lees M W F 10:10-11:00. K. H. Cook and P. J. Gierasch. An introduction to the basic equations and techniques used to understand motion in the atmosphere, with emphasis on the space and time scales typical of storm systems (the synoptic scale). The governing equations of atmospheric flow are derived from first principles and applied to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

EAS 350 Dynamics of Marine Ecosystems Fall. 3 credits. Prerequisites: one year of calculus and a semester of oceanography (i.e., EAS 154), or instructor's permission. Lees, T R 12:15-2:40. C. H. Greene. This lecture course covers the interactions of physical and biological processes in marine ecosystems. It begins by looking at these processes on a global scale and works down to the scales relevant to individual organisms. Topics include: global patterns of ocean circulation; global patterns of ocean production; climate variability and the role of the ocean in global climate change; the El Nino/Southern Oscillation; ecosystem dynamics of the open ocean and coastal environments.

EAS 352 Synoptic Meteorology I Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. Lees, T R 9:05; lab, M 1:25-3:25. M. W. Wysocki. Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course strengthens previously introduced meteorological concepts which are applied to forecasting midlatitude synoptic scale weather systems, such as anticyclones, jet streams, fronts, and waves.

EAS 355 Mineralogy Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. Lees M W F 10:10-11:00, lab W 2:00-4:25. S. Mahlburg Kay. Examination of minerals by hand specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals are covered. X-ray diffraction is introduced. Includes an independent research project.

EAS 356 Petrology and Geochemistry Spring. 4 credits. Prerequisite: EAS 335. Lees T R 12:20-1:35, lab W or R 2:00-4:25. R. W. Kay. Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems also covers the petrological evolution of the planets.

EAS 375 Sedimentology and Stratigraphy Fall. 4 credits. Prerequisite: EAS 101 or 201. Lees M W F 11:15-12:05, lab T 2:00-4:25. J. L. Cisne.

Centers formation of sedimentary rocks, depositional processes and environments, correlation of strata in relation to time and environment, petrology of sandstones and limestones, geological age determination, reconstruction of paleogeography and interpretation of Earth history from stratigraphic evidence. Organization of strata in stratigraphic sequences.

EAS 388 Geophysics and Geotectonics Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. Lecs M W F 12:20-1:10, lab M 2:00-4:25. B. L. Isacks. Covers global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

EAS 417 Field Mapping in Argentina Summer. 3 credits. Prerequisites: EAS 210 and 326. Spanish desirable, but not required. S. Mahlburg Kay. Modern techniques of topographic mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock outcrops of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampean Ranges (Piede de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullum).

EAS 434 Reflection Seismology Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. Lees T R 1:25-2:40, labs TBA. L. D. Brown. Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geophysical investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling, and interpretation software from LandMark.

EAS 435 Statistical Methods in Meteorology and Climatology Fall. 3 credits. Prerequisites: 1 introductory course each in statistics (e.g., AEM 210) and calculus. T R 10:10-11:25. D. S. Wilks. Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes some statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models including the MOS system. Also covers forecast verification techniques and scoring rules, time series analysis, EOFs, and other research topics as time permits.

EAS 437 Geophysical Field Methods Fall. 3 credits. Prerequisites: PHYS 213 or 208, or permission of instructor. L. D. Brown. Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis is on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted.
[EAS 447] Physical Meteorology
Fall. 3 credits. Prerequisite: 1 year each of calculus and physics. M W F. Offered alternate years. Not offered 2002-2003.
A. T. DeGaetano.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, microphysical cloud processes, and principles of radar probing of the atmosphere.

EAS 451 Synoptic Meteorology II
Fall. 3 credits. Prerequisites: EAS 341 and 342. Lecs, T R 9:05, lab. M 1:25-3:20.
S. J. Colucci.
Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

EAS 453 Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. Not offered 2002-2003.
R. W. Kay.
Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stresses in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

EAS 455 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended. EAS 356. Offered alternate years. Not offered 2002-2003.
W. M. White.
The Earth from a chemical perspective. Covers: the formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; terrestrial geochemistry; isotope geochemistry; geochronology; chemical evolution of the crust, mantle, and core; and weathering and the chemistry of natural waters; chemistry of rivers and the oceanic and hydrothermal systems; and ore deposition.

EAS 456 Mesoscale Meteorology
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40-12:55. Offered alternate years. Not offered 2002-2003.
S. J. Colucci.
Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. The course also considers tropical weather systems and mountain breezes, sea breeze circulations, and jets, squall lines, convective complexes, microphysical cloud processes, and principles of radar monitoring. Ore deposits associated with volcanism.

EAS 458 Volcanology
Fall. 3 credits. Prerequisite: EAS 356 or equivalent. Offered alternate years.

EAS 462 Marine Ecological Processes (also BIOEE 462)
Spring. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years.
C. D. Harvell and C. H. Greene.
Lectures and discussion focus on current research in forage areas in an attempt to synthesize with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, and ecosystem levels of organization. Emphasis is on current models of Earth's evolution. Techniques, and time resolution in sedimentary rocks are considered as are, physical controls on the stratigraphic record, and numerical modeling.

EAS 476 Sedimentary Basins: Tectonics and Dynamics in the Solar System
Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum are covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.

EAS 478 Advanced Stratigraphy
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Not offered 2002-2003.
T. E. Jordan.
Course covers modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships, and introduces techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks are considered as are, physical controls on the stratigraphic record, and numerical modeling.

EAS 479 Paleobiology (also BIOEE 479)
Fall. 4 credits. Prerequisites: 1 year of introductory biology for majors and either BIOEE 274, 373, EAS 375, or permission of instructor. Offered alternate years. Not offered 2002-2003.
W. M. Almon.
A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of earth and atmospheric science students concerning the structure and signification of the fossil record for their respective studies.

EAS 481 Senior Survey of Earth Systems
Spring. 3 credits. Limited to seniors majoring in geologic science. J. M. Bird.
A survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis is on current models of Earth's dynamic systems (e.g., global climate change, mantle evolution). Utilizes guest lecturers; synthesis and review of literature; scientific literature readings; discussions; and student presentations.

EAS 483 Environmental Biophysics (also CSS 483)
Spring. 3 credits. Offered alternate years.
S. J. Riha.
Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum are covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.

EAS 487 Intro to Radar and Remote Sensing (also ECE 487)
Fall. 3 credits. Prerequisite: ECE 303, AEP 355, PHYS 323 or equivalent. Lecs, M W F 9:05-9:55. D. L. Hysell.
Course on the fundamentals of radar, antennas, and remote sensing. Students are exposed to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. They also encounter both a mathematical and a practical description of how radar functions, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds will be able to take the course. Emphasis placed on radar applications in geophysics, meteorology and atmospheric...
sciences, astronomy and space sciences. Radar remote sensing of the Earth from spacecraft receives special attention.

**EAS 491-492 Undergraduate Research**
Fall, spring. 1 to 4 credits. Staff.
Introduction to research techniques and philosophy of research in the geosciences and an opportunity for undergraduates to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.

**EAS 494 Special Topics in Atmospheric Science (undergraduate level)**
Fall or spring. 8 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. The same course is not offered more than twice.

**EAS 496 Internship experience**
Fall or spring. 1–2 credits. S-U grades only. Staff.
Teaching experience is obtained by assisting in the instruction of an atmospheric science course.

**EAS 497 Individual Study in Atmospheric Science**
Fall or spring. 1–6 credits. S-U grades optional. Students must register with an Independent Study form. Staff.
Topics are arranged at the beginning of the term for individual study or for group discussions.

**EAS 498 Teaching Experience**
Fall or spring. 1–5 credits. S-U grades only. Students must register with an Independent Study form. Staff.
Teaching experience is obtained by assisting in the instruction of an atmospheric science course.

**EAS 499 Undergraduate Research in Atmospheric Science**
Fall or spring. Credit by arrangement. S-U grades only. Students must register with an Independent Study form. Staff.
Independent research on current problems in atmospheric science.

**EAS 500 Design Project in Geohydrology**
Fall, spring. 3–12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters. L. M. Cathles.
The project may address one of the many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

**EAS 502 Case Histories in Groundwater Analysis**
Spring. 4 credits. L. M. Cathles.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of the term.

**EAS 622 Advanced Structural Geology I**
Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite strain, strain measure­ment; microstructure; preferred orientation, and TEM analysis; and pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated and consolidated rocks; brittle and brittle-ductile deformation of sapropellic strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

**EAS 624 Advanced Structural Geology II**
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.
Geometry, kinematics, and mechanics of structural provinces. Concentration is on thrust belts, rift provinces, or strike-slip provinces. Covers techniques of balanced cross sections.

**EAS 628 Geology of Orogenic Belts**
Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term.

**EAS 634 Advanced Geophysics I: Fractals and Chaos In Geology and Geophysics**
Fall. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. D. L. Turcotte.
Course covers: definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation, wavelet transforms, applications to mantle convection, the Earth's dynamo, and distributed seismicity.

**EAS 636 Advanced Geophysics II: Quantitative Geodynamics**
Stress and strain in the Earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.

**EAS 641 Analysis of Biogeochemical Systems**
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry.
Covers: dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, residence time, response time. Analytical and numerical solutions of model systems. Eigen-analysis of linear systems. Feedback and nonlinear cases, problems of uncertainties in natural systems. Modeling software such as Stella II and Matlab; applications to current research of participants or from recent literature.

**EAS 651 Atmospheric Physics (also ASTRO 651)**
Fall. 3 credits. Prerequisites: a good background in undergraduate calculus and physics is required. Offered alternate years. K. H. Cook, P. J. Gierasch, S. J. Colucci.
A survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, moist effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Thermal structure and greenhouse effects on the Earth and other planets is discussed. The course is taught at the level of Fundamentals of Atmospheric Physics by Salby.

**EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652)**
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40–12:55. Offered alternate years. S. J. Colucci and P. J. Gierasch.
Course covers quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

**EAS 656 Isotope Geochemistry**
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years.
W. M. White.
Nucleosynthetic processes and the isotopic abundance of the elements. Geochronology and cosmochronology. Radiometric decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 14C and 234Th. Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotope evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontol­ogy, and the global climate system.

**EAS 666 Applied Multivariate Statistics**
Spring. Prerequisite: multivariable calculus, matrix algebra, two previous courses in statistics. Offered alternate years. T R 10:10–11:25.
Statistical techniques for multivariable data. Topics include multivariate exploratory data analysis, the multivariate normal distribution, principal component analysis, canonical correlation analysis, discriminant analysis, and cluster analysis. Geophysical applications are emphasized, using primarily atmospheric and oceanographic data as examples, but the development is general enough to be of broader interest.

**EAS 675 Modeling the Soil-Plant-Atmosphere System (also CSS 675)**
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, phyllo­logy, and development; potential crop production and crop production limited by moisture and nutrient availability, plant-plant competition; and land surface processes as
**EAS 789 Lithospheric Seismology**
Seminar
L. D. Brown.

**EAS 793 Andes-Himalaya Seminar**

**EAS 795 Low Temperature Geochemistry**
L. A. Derry.

**EAS 796 Geochemistry of the Solid Earth**
W. M. White.

**EAS 797 Fluid-Rock Interactions**
L. M. Cathles.

**EAS 799 Soil, Water, and Geology Seminar**
L. M. Cathles and T. S. Steenhuis.

**EAS 850 Master's-Level Thesis Research in Atmospheric Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in the master's program in atmospheric science.

**EAS 950 Graduate-Level Dissertation Research in Atmospheric Science**
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy in the atmospheric science Ph.D. program only before the "A" exam has been passed.

**EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science**
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy in the atmospheric science Ph.D. program after the "A" exam has been passed.

**EDUC 151 Engaging Diversity: Multicultural Issues in Education and Society**
Fall or spring. 3 credits. Limited to 20 credits. S-U grades only. Lee, T. R 1:25-2:40. S. K. Kroma.

The course explores diversity issues that affect students for example, race, culture, gender, and class in the context of modern American society. Through selected readings and course activities, students recognize the strengths of a diverse community and acquire the knowledge and skills necessary for living and working in it. The focus is on critical thinking about the differences in our society, and the strategies we need for cross-cultural interactions.

**EDUC 210 Psychology of Learning and Memory**
Fall and spring. 3 credits. Prerequisite: introductory psychology. W 2:00-4:25, plus time TBA. Not offered 2002-2003. J. A. Dunn.

This course deals with contemporary theories of learning, issues in the study of learning, and the principles of learning to the management of teaching and learning. Practical applications of research findings are emphasized. One or more experimental projects and the use of microcomputers are required.

**EDUC 212 Psychological Foundations of Education**
Spring and fall. 3 credits. Limited to 20 students. S-U option available. Prerequisite: introductory psychology. W 2:00-4:25 plus times TBA. Not offered 2002-2003. J. A. Dunn.

A lecture/discussion survey of the psychological foundations of educational practice. Topics include the subjective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.
EDUC 220 Community Learning and Service Partnership
Fall and spring. 4 credits. Limited to 25 students. S-U grades optional. T 1:25-4:10.

Students learn to be self-directed learners and to be critical observers of their own experiential learning; class focuses on issues of diversity and empowerment, interpersonal communication, and methodology. Students practice adult education facilitation techniques through participation in a campus-based adult education program, the Community Learning and Service Partnership (CLASP).

EDUC 240 The Art of Teaching

This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nontraditional situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

EDUC 317 Psychology of Adolescence

This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodology tool. Educational implications are discussed for both formal and informal settings.

EDUC 331 Careers in Agriculture, Extension, and Adult Education
Fall. 1-3 credits. Letter grade only. F 2:00-4:25. M. W. J. Applebee.

This course offers modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module offers one hour of credit and students may take one or more of the modules. The course provides an historical perspective and an introduction to the organization and scope of programs for each module. Students examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

EDUC 332 Instructional Methods in Agricultural Science Education
Spring. 1-3 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. R 2:00-4:25. C. Shelley.

Selection, practice, and evaluation of methods in Agricultural Science education are stressed. The course offers an opportunity to explore teaching strategies and methodology unique to teaching agriculture in schools. Content includes program planning and youth leadership in secondary agricultural education programs. Participants are required to participate in field experiences at arranged times.

EDUC 335 Youth Organizations
Spring. 3 credits. T R 10:10-11:15; lab TBA. Staff.

Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

EDUC 380 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program. Staff.

EDUC 401 Our Physical Environment
Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $7. T 1:25-4:25. V. N. Rockcastle.

A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and techniques for teaching. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

EDUC 404 Learning and Teaching I
Fall. 4 credits. Prerequisites: admission to Cornell Teacher Education program or permission of instructor. Letter grade. Lec, M W 7:30-8:45 p.m.; lab, 4 hours fieldwork TBA. Staff.

This course is designed to foster development of pedagogical and reflective understandings crucial to good teaching. Students explore what it means to understand teaching through examining disciplinary topics, which require disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on learners' understandings and classroom structures.

EDUC 405 Learning and Teaching in Agriculture, Mathematics, and Science
Spring. 4 credits. Prerequisites: EDUC 404 or permission of instructor. Letter grade. Lec, M W 7:30-8:45 p.m.; lab, 4 hours fieldwork TBA. Staff.

Students analyze the art and science of teaching agriculture, mathematics or science and develop their skills and knowledge as teachers through furthering their study of the processes of learning, planning (in relation to state and national standards), assessment, and teaching. There are 40 hours of field work required.

EDUC 411 Educational Psychology
Fall. 3 credits. Prerequisites: PSYCH 101 or permission of instructor. S-U grades optional. Lec, T R 11:15-12:05; disc, F TBA. D. Schafer.

This course applies psychological concepts to educational settings with a focus on understanding the interaction between people, context, and knowledge in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and learning across the life span, but has a focus on secondary education.

EDUC 413 Psychology of Human Interaction

Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

EDUC 420 Field Experience
Fall or spring. 1-4 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff.

Students may engage in planned, semiprofessional, or professional practice in an educational setting. Each student prepares a plan of action including rationale, purposes, and procedures and arrangements with a faculty member to supervise and evaluate their field experience.

EDUC 441 Language and Literacy Development
Spring. 3 or 4 credits. M W 2:55-4:10, lab, TBA. S. Kroma.

This course is a foundation for literacy activities in secondary education. It examines current research, policy, and practice relating to the acquisition of reading and writing, the development of oral language, the dynamics of literacy in school contexts, and the development of academic language proficiency. For the fourth credit hour, students spend two out-of-class hours a week on individual project activities.

EDUC 445 Curriculum Design Workshop
Summer. 3 credits. Staff.

A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an at-risk and an institutional setting of the student's choosing.

EDUC 448 Instruction for Students with Disabilities
Summer. 3 credits. Prerequisites: educational psychology, introductory psychology, or permission of the instructor. S-U grades optional. Lec, TBA: 3 hours weekly. Staff.

This course provides preservice middle and secondary school teachers a comprehensive overview of disability law, functional limitations caused by disabling conditions, and classroom strategies to provide academic accommodations/adjustments to meet the needs of students with disabilities. The course focuses on specific classroom and curriculum strategies for adapting instruction to meet the needs of students with disabilities.

EDUC 450 Education Technology
Spring. 3 credits. Letter grade. Lec, TBA: 3 hours weekly. Staff.

The use of intelligent tools changes how and what teachers teach. This course addresses applications and implications of technology in the educational setting. Students work with a variety of educational technologies including...
distance and distributed learning and investigate how technology can be used to facilitate the teaching of disciplinary knowledge and manage student data.

**EDUC 451 Multicultural Issues in Education**

This course explores issues pertaining to teaching and learning in multicultural classrooms in American schools. It examines events that have shaped contemporary American society, the educational policies and practices that affect cultural diversity that have emerged, and the teacher's role in dealing with cross-cultural issues in the classroom.

**EDUC 459 Education in Africa and the Diaspora (also AS&RC 459)**

Fall. 3 credits (4 in CA&S). T 10:10-12:35. N. Assi-Lumumba.

This course deals with educational innovations geared to promoting equal opportunity based on gender, race, and class in Africa and the African Diaspora. After an introduction on the concepts and interventions and the stages of innovation as planned change, the course focuses on concrete cases and different types of educational innovations. The selected case studies in the United States, include the creation and expansion of historically black institutions with a focus on Tuskegee Institute (now Tuskegee University), Lincoln University, Spelman College, and the Westside Preparatory School in Chicago. The African cases to be studied include African languages for instructing in Nigeria and science educational in Nigeria, Ujamaa and education for self-reliance in Tanzania, television as a medium of instruction and technological intake, in Cuba, the role of international organization and classroom action research in Lesotho, and higher education and distance learning in South Africa.

**EDUC 463 Policies, Practices and Critical Issues of Distance Learning in Developing Countries**

Spring. 3 credits. S-U grades optional. T R 2:00-4:25. N. Assi-Lumumba.

Distance Learning is being increasingly adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (Information and Communication Technologies) used and the different forms of virtual learning institutions are examined.

**EDUC 471 Social and Political Context of American Education**

Fall. 3 credits. Prerequisite: permission of instructor. S-U grades optional. Lec. T R 8:40-9:55. J. W. Sipple.

Investigation of goals, roles, and outcomes of schooling in American society and the policy environment in which schools operate. We analyze the behavior and impact of educational organizations (at local, state, and national levels) as they attempt to address societal problems and interpret and respond to changes in policy. The course includes current, historical, urban, and rural issues and problems.

**EDUC 473 Philosophies of Education**

This course provides historical and conceptual frameworks for students to develop theoretical perspectives on education and to analyze and critique arguments in contemporary education.

**EDUC 477 Law and Educational Policy**

A study of recent federal court decisions concerning education. Emphasis is on examining legal issues against a background of related educational issues and of the consequences of legal decisions for the development and operation of educational institutions.

**EDUC 480 Global Seminar: Environment and Sustainable Food Systems (also ALS 480 and INTAG 480)**

Spring. 1-3 credits. Prerequisite: juniors, seniors, and graduate students. Letter grade. Lec, R 8:00-9:55 A.M., lab 3:35-4:25, one additional hour unscheduled. H. D. Sutphin and D. Lee.

For description, see ALS 480.

**EDUC 483 Comparative Studies in Adult Education**

Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

**EDUC 494 Special Topics in Education**

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offers vary by semester, and will be advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**EDUC 495 Senior Seminar**

Spring. 2 credits. Education majors or permission of instructor. S-U only. TBA. Undergraduate coordinator for the department.

This seminar focuses in depth on two or three significant educational issues, which may vary from year-to-year depending on the interests and background of students and faculty. The seminar attempts to help students relate the knowledge gained in their particular concentrations to a set of broad issues in education. While education faculty is involved in selecting the issues and providing guidance for the seminar, students are expected to provide the initiative and leadership in the classroom.

**EDUC 497 Individual Study in Education**

Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study Form (available in 140 Roberts Hall). Staff.

A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

**EDUC 498 Undergraduate Teaching**

Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with GPA of at least 2.7. S-U grades optional. Students must register with an Independent Study Form (available in 140 Roberts Hall). Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and to regularly discuss teaching objectives, techniques, and subject matter with the professor in charge.

**EDUC 499 Undergraduate Research**

Fall or spring. 6 credits maximum during undergraduate career. Limited to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with GPAs of at least 2.7. Students must register with an Independent Study Form (available in 140 Roberts Hall). Staff.

Afford opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

**EDUC 502 Education and Development in Africa (also AS&RC 502)**

Spring. 3 credits (4 in CA&S). S-U grades optional. T 2:00-4:25. N. Assi-Lumumba.

In the 1950s and 1960s, human capital theory that emphasizes the importance of formal education for achievement of full productive potential of individuals and economic growth and development of countries enjoyed a renewed popularity. African countries promoted educational development with the expectation that it would lead to socioeconomic development. The initial euphoria, however, was followed by skepticism and then disillusion. Education, as it was being organized, delivered, and utilized began to be perceived even as a hindrance to development. This course examines the relationship between formal education and individual and national development. Different paradigms of development, including modernization and dependency theories, and Third World Forum are examined. Issues discussed include education and schooling, the role of primary, secondary, and higher education in development, the problems of employment, language, equity in access, and results based on social class, ethnicity, race, and gender. Endogenous knowledge, new perspectives for relevant education, and the role of international organization and cooperation are also discussed.

**EDUC 503 Professional Seminar in Education**

Fall, spring, or summer. 1-4 credits (1 credit each seminar). Prerequisite: admission to the CTE program. S-U grades optional. Discussion TBA.

This is a series of four seminars to be taken in each semester of the Cornell Teacher Education Program. Students develop a professional portfolio aligned with core competencies in pedagogy, educational foundations, cultural diversity, exceptionalities, subject matter expertise, classroom competencies of planning, delivery, assessment, classroom management and technology, community context, and professionalism and ethics.
Seminar 1—Development of the Professional Portfolio. This segment lays the foundation for the student's professional portfolio; focus is on career opportunities, professional development, and linkages with outreach programs such as CERP and ICD.

Seminar 2—Teaching in Diverse Classrooms. In this seminar, students consolidate their knowledge of diversity issues gained from other courses in the program and explore strategies for teaching in culturally diverse classrooms. Major topics include: cultural and cultural diversity, cross-cultural communication, and limited English proficiency (LEP).

Seminar 3—Learning with Instructional Technologies. Technology and distance learning topics are covered in this seminar taken concurrently with the student teaching experience.

Seminar 4—Capstone Seminar. In this segment, students refine their program portfolio by integrating experiences in the field and the principles of culturally responsive teaching. Cultural diversity, literacy development, and connections with outreach programs are revisited in this capstone seminar in the Cornell Teacher Education experience.

EDUC 507 Environmental Inquiry (also NTRES 507) Summer. 1–3 credits. S-U grades optional. Prerequisite: limited to preserve or inservice secondary science teachers. Permission of the instructor required. L. Avery, M. E. Krasny and N. Trautman. Exploration of selected topics in environmental science and environmental science education at the secondary school level. The subject-matter focus varies from year to year, and tracks ongoing research and development conducted through Cornell’s Environmental Inquiry project, a collaboration between the Departments of Education and Natural Resources and the Center for the Environment. Current work centers on watershed dynamics, biodegradation, environmental toxicology, and invasive species.

EDUC 523 Food and Fiber Across the Curriculum Summer. 0–3 credits. J. Hawkes. An intensive five-day course designed to help New York State elementary teachers and administrators implement the New York Agriculture in the Classroom Program and understand the complexity of New York's leading industry. Participants learn how instructional materials and experiences with our food-fiber system can be used to teach students language arts, mathematics, science, and social studies. One credit is earned by class attendance and participation. Two credits require one additional project. Three credits require two additional projects.

EDUC 548 Effective College Teaching Spring. 1–3 credits. S-U grade option. T 5:00–7:00. D. Way. This course is designed to help participants become more effective college teachers. It examines the basic principle of learning, identifies different learning styles, and explores a variety of teaching techniques, methods, and technologies. Participants also learn how to design a course and improve their effectiveness as teachers.

EDUC 578 International TA Training Course: Cross-Cultural Classroom Dynamics, Pronunciation and Language, Video Teaching Practicum Fall and spring. 3 credits. S-U only. TBA. I. Arnesen, E. Burns, G. Wolek, D. Mendelson. Designed for first-time international teaching assistants from countries in which English is not the primary language, the ITATP course focuses on three areas: cross-cultural classroom dynamics, video-teaching practicum, and language—enhancing communicative skills in English. Through small group seminars and individual conferences, the ITATP helps international TAs develop their linguistic and pedagogical skills as they gain sensitivity to the dynamics of U.S. classrooms.

EDUC 579 Further Training for International Teaching Assistants Fall, spring, summer. 1–2 credits. Prerequisite: EDUC 578. S-U grades optional. Lec. TBA: 3 contact hours per week. I. Arnesen, E. Burns, G. Wolek, and other ITATP staff. Designed for international teaching assistants from countries in which English is not the primary language and who have completed EDUC 578, the International TA Development follow-up course provides further instruction and practice in oral English and pedagogical skills. Students participating in the course through midterm receive one credit, those who are enrolled throughout the semester receive two credits.

EDUC 601 Secondary Agriculture, Science, and Mathematics Teaching Practicum Fall or spring. 6 credits. Prerequisite: permission of instructor. S-U grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics Program. M T W R 8:00–5:00. S. C. Piliero, A. Simonson, and D. J. Trumbull and staff. Supervised student teaching in agriculture, mathematics or science at the secondary level. Program includes teaching in a local school for fourteen weeks.

EDUC 602 Teaching Agriculture, Science, Mathematics: Methods, Materials, Practice Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. M T W R 5:00–3:00. Staff. The course begins with full day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the semester require students to use those theories to develop and evaluate teaching materials and practices. Students complete an extensive portfolio documenting their work.

EDUC 609 Methods for Interpretive Research Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor. T 2:55–4:10. D. J. Trumbull. This course examines some of the methods of educational interpretive research. An interpretive research perspective attends to the complex interactions between researcher, researched, and contexts and accepts the centrality of interpretation in the conduct of human affairs. This perspective imposes some unique demands on researchers wishing to justify the quality of their projects. In the class, students practice methods for generating and interpreting data by conducting a small project using methods as they relate to the aims and assumptions of interpretive research.

EDUC 611 Educational Psychology Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15–12:05. R. E. Ripple. A basic survey course for graduate students (selected undergraduates admitted with permission). Emphasis is on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any behavioral setting for learning. A life span developmental approach is used, appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

EDUC 614 Gender, Context, and Epistemological Development (also WOMNS 624) Fall. 3 credits. S-U grades optional. T 12:20–2:15. D. E. Schrader. Insight into how individuals make sense of knowledge is essential to teaching and learning. This course explores theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

EDUC 615 Self and Interpersonal Development and Education (also WOMNS 625) Spring. 3 credits. S-U grades optional. T 12:20–2:15. Offered alternate years. D. E. Schrader. Interpersonal interactions affect teaching and learning. This course takes a life-span perspective as it explores constructive-developmental theories of self and others, the influence of gender, and how such theories explain students' understanding of their own and others' actions in educational contexts.

EDUC 620 Internship in Education Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. An opportunity for practical experience in educational professions development.

[EDUC 621 Work-Experience Coordinator Certification Course I Summer. 3 credits. S-U grades optional. Not offered 2002-2003. D. E. Foster. The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of work-experience programs including articulation with JPTA and VESID. Field interviews are required. A prerequisite for Course II, EDUC 622.]

[EDUC 622 Work-Experience Coordinator Certification Course II Summer. 5 credits. Prerequisite: EDUC 621 Work-Experience Certification Course I. Not offered 2002-2003. D. E. Foster.]
The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

EDUC 630 Special Problems in Agricultural, Extension, and Adult Education
Fall or spring, may also be offered in summer. 1-3 credits. S-U grades optional. Staff.

The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural, extension, and adult education.

EDUC 632 Teaching Agricultural, Extension, and Adult Education
Summer. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. C. A. Conroy.

The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

EDUC 633 Program Planning in Agricultural, Extension, and Adult Education
Spring. 3 credits. S-U grades optional. Lec, R 2:00-5:00. A. Wilson.

Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are analyzed to aid in program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 635 Experiential Learning

Participants explore various dimensions of scholar and practitioner thinking about the understanding and practice of experiential learning. Theoretical perspectives on experiential education, reflective practice, and a critical learning systems perspective are explored through readings and applied assignments. The instructor introduces methods of facilitating reflection designed to encourage inquiry and dialogue for improvement of both nonformal and formal educational activities. The course process is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.

EDUC 645 Curriculum for a Diverse and Technological Society
Spring. 3 credits. Letter grade only. Disc. TBA. Staff.

Basic curriculum concepts, principles, and theories are examined. Special emphasis is given to the ways that diversity and technology drive changes in the development of curriculum. Each student chooses a particular curriculum for analysis as a project. Within that context theoretical perspectives on curriculum and the basic elements of any curriculum are discussed.

EDUC 661 Administration of Educational Organizations
Fall. 3 credits. R 3:35-6:00. J. W. Sipple.

Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 671 American School Reform: Organizational and Sociological Perspectives

For individuals interested in the role of schools in society, in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization given the long history of policy initiatives designed to reform schools. The focus is American K-12 public education, through issues of pre-K, private, and post-secondary education are covered.

EDUC 680 Foundations of Extension Adult Education
Fall. 3 credits. Limited to 20 students. S-U grades optional. A. Wilson.

An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions are examined through a seminar approach.

EDUC 682 Community Education and Development
Fall. 3 credits. Limited to 25 students. S-U grades optional. S. Peters.

An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making. Volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

EDUC 685 Training and Development: Theory and Practice (also INTAQ 685)
Spring. 4 credits. S-U grades optional. F 9:05-12:05, lab TBA. M. Kroma.

Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

EDUC 694 Special Topics in Education
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Staff.

Topics to be announced.

EDUC 711 Contemporary Issues in Educational Psychology
Fall and spring. Variable. 3 credits. TBA.

This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics vary from semester to semester. Students may take the course more than once.

EDUC 714 Moral Development and Education

This seminar focuses on current topics in moral development research related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis is placed on development from adolescence through adulthood.

EDUC 718 Adult Learning and Development

Deals with adult development and learning behavior from points of view of educational psychology and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 730 Seminar in Agricultural, Extension, and Adult Education
Spring. 3 credits. S-U grades optional. R 8:00-9:55. S. Peters.

Emphasis is on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

EDUC 762 Comparative and International Education
Fall. 3 credits. S-U grades optional. M 2:00-4:25. N. Assie-Lumumba.

This seminar critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics of the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies and developing countries. Specific case studies are drawn from different countries.

EDUC 783 Farmer-Centered Research and Extension (also INTAQ 783)
Fall. 3 credits. S-U option. M. Kroma.

This course provides an introduction to participatory traditions in farming systems research, extension, evaluation of training programs, development, technology generation, gender analysis, participatory rural appraisal, and
Appropriate roles of researchers and documentation of local and indigenous centered research and extensions is its examined. A major contribution of farmer-extensionists as partners with farmers are action to solve those problems.

EDUC 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

EDUC 900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Limited to students working on thesis or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

ENTOMOLOGY

Courses by Subject

Apiculture: 260, 264
Behavior: 215, 325, 400, 471, 662
Conservation: 344
Ecology: 452, 455, 460, 470, 471, 672
Introductory courses: 201, 212, 215
Medical entomology and veterinary entomology: 352
Morphology: 322
Pathology: 400, 403, 460
Pest management: 241, 277, 441, 443, 444, 477, 644, 670
Physiology, development and toxicology: 370, 394, 400, 483, 490, 685
Systematics: 331, 333, 453, 651, 632, 634, 635

Note: class meeting times are accurate at the time of publication. If changes are necessary, this department will provide new information as soon as possible.

[ENTOM 201] Alien Empire: Bizarre Biology of Bugs

Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects by examining their evolutionary history, anatomy, development, feeding habits, life-history strategies, behavior, and their interactions with humans (both positive and negative) through history. Optional field trips and one open lab provide hands-on opportunities for examining these amazing animals.

[ENTOM 212] Insect Biology
Fall. 4 credits. Prerequisites: BIO G 101-102 (may be taken concurrently) or equivalent. Lects, W F 10:10-11:00; labs T W R 1:25-4:25. Lab fee $35. T. A. Blackledge.

Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral, and taxonomic categories is required.

[ENTOM 215] Spider Biology: Life on a Silken Thread
Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U grades optional. Lects, W F 1:25-2:15. B. N. Rayor.

An introduction to the fascinating world of spiders. Evolution, ecology, behavior, and physiology of spiders and their close kin are explored from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM.

[ENTOM 241] Applied Entomology
Spring. 3 credits. Prerequisites: BIO G 101-102 or equivalent. Lects, T R 10:10; lab/disc, T or W 12:20-3:15. W. M. Tingey.

An introduction to the fascinating world of insects. Evolution, ecology, behavior, and physiology of insects and their close kin are explored from a modern perspective. Topics include identification of major insect families, insect-plant relationships, the laboratory studies of insect-plant interactions, and economic relevance. Laboratories include field trips to commercial farming areas, natural history studies of an insect order, and a discussion of the economic importance of insects in the environment. The laboratory portion of the course introduces students to the basic methods of insect microdissection, specimen preparation, and scientific illustration. High-quality, publishable illustrations are produced based on student artwork.

[ENTOM 325] Comparative Insect Morphology
Spring. 3 credits. Prerequisites: ENTOM 212 or 241. Lecs, M W F 9:05; labs, M W 1:25-4:25. Offered alternate years. B. N. Danforth.

This course provides a detailed introduction to the external and internal anatomy of insects. Lectures introduce basic concepts in insect morphology, such as the organization of the insect body plan and organ systems, functional morphology, homology, phylogeny, modularity, and development. The laboratory portion of the course introduces students to the basic methods of insect microdissection, specimen preparation, and scientific illustration. High-quality, publishable illustrations are produced based on student artwork.

[ENTOM 331] Introductory Insect Systematics

An introduction to the classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect populations. (Note: research collections are required.)

[ENTOM 333] Maggots, Grubs, and Cutworms: Larval Insect Biology
Fall. 5 credits. Prerequisites: ENTOM 212 and permission of instructor. S-U grades optional. Lects, T R 11:15-12:05; labs, T R 1:25-4:25. Offered alternate years. J. K. Liebherr.

This course introduces larval biology, anatomy, ecological and physiological relationships. The laboratory includes weekly field sampling, preparation of specimens for descriptive study, and identification of unknowns. An independent project involving
description of one or more larval stages is required. See instructor before course to best satisfy this requirement.

**ENTOM 344 Insect Conservation Biology**
Spring. 3 credits. Prerequisites: one course in either entomology or conservation biology or permission of instructor. S-U grades optional. Lecs., T R 10:10-11:25. Offered alternate years. Not offered spring 2003; next offered spring 2004. J. E. Losey. Provides an in depth look at the concepts and issues surrounding the conservation of insects and other invertebrates. Topics covered include: sampling rare populations, insect conservation genetics, the role of phylogeny in determining conservation priorities, refuge design, saving individual species, plus the unique political, social and ethical aspects of insect conservation and preservation of the ecological services (i.e. pollination, decomposition, pest suppression, insectivore food sources).
with an experimental approach to study evolution in nature, the course includes methods for measuring genetic variation and natural selection; biometrical and molecular analysis of genetic architecture; constraints and limits on evolution in natural populations; genetic aspects of coevolution, phenotypic plasticity, and conservation of endangered species. Examples are taken from studies of animals and plants.

[ENTOM 471 Freshwater Invertebrate Biology and Biomonitoring]
Fall. 3 credits. Prerequisite: ENTO 212 or permission of instructor. Labs, M W F 11:15; lab W 1:25-4:25 and a disc, TBA. Offered alternate years. C. Gilbert.

An introduction to the common freshwater invertebrates, their morphology, physiology, phylogeny, life histories, behavior, feeding ecology, and evolution of macroscopic freshwater invertebrates with an emphasis on contrasting the attributes of aquatic and terrestrial insects. Laboratory involves field collections and identification of invertebrates and stresses the use of taxonomic keys. Students prepare a collection of freshwater invertebrates or conduct a project using freshwater invertebrates to biomonitor stream habitat quality.

[ENTOM 483 Insect Physiology]
Fall. 5 credits. Prerequisite: ENTO 212 or permission of instructor. Lecs, T R 9:05; labs, T R 1:25-4:25. Offered alternate years. Not offered spring 2003; next offered spring 2004. B. L. Peckarsky.

Lecture explores the morphology, physiology, phylogeny, life histories, behavior, feeding ecology, and evolution of macroscopic freshwater invertebrates. This course will cover the anatomy and physiology of invertebrates. Laboratory involves field collections and identification of invertebrates and stresses the use of taxonomic keys. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and object matter with the professor in charge.

[ENTOM 634 Special Topics in Systematic Entomology]
Fall or spring; taught on demand. 2-4 credits. Prerequisite: permission of instructor. Staff.

 Lectures on the classification, evolution, and biometrics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

[ENTOM 635 Insect Molecular Systematics]
Spring; 2 credits. Prerequisites: permission of instructor. Limited to 6 students. Offered alternate years. Not offered spring 2003; next offered spring 2004. TBA. B. N. Danforth.

Analysis of DNA sequence variation can provide a powerful tool for resolving problems in insect systematics, from species level taxonomic decisions to higher level (ordinal) relationships. This course introduces students to the basic methods of insect molecular systematics, including DNA extraction, gel electrophoresis, PCR, DNA purification, and DNA sequencing (manual and automated). Results are analyzed using available computer programs. Students are encouraged to collect preliminary data for thesis or post-doctoral research.

[ENTOM 644 Advanced IPM: Theory and Implementation]

This advanced course in integrated pest management (IPM) is comprised of a rotating series of four-week intensive modules on specialized topics. Topics range from basic ecology and genetics of pests and their natural enemies to specific strategies for pest management implementation. The course is designed to provide advanced IPM instruction for graduate and upper-level undergraduate students with intermediate backgrounds in IPM. In special cases, students with little or no background in IPM seeking intensive instruction on a specialized topic may enroll with permission of the instructor. Each module is a unique unit and students may take any or all modules each time the course is offered. Prerequisites and grading procedures are determined by the instructor(s) of each module. Potential modules include: Insecticide Resistance and Resistance Management—J. Scott; Entomology (Ithaca); Crop Protection Decision Making—J. Nyrop; Entomology (Geneva); Greenhouse and Floriculture IPM—J. Sanderson; Entomology (Ithaca); Agricultural Acarology—C. Gilbert; Entomology (Ithaca); Plant Resistance—W. Tingey; Entomology (Ithaca); Aerial Sampling in Pest Management—E. Shields; Entomology (Ithaca); Conservation Biological Control—J. Nyrop and G. English-Loeb; Biometric Tools for IPM Methods in NY—P. Kaufman and D. Rutz; Entomology (Ithaca); Chemical Conversations and Integrated Pest Management—C. Linn; Entomology (Geneva).

[ENTOM 662 Insect Behavior Seminar]
Spring. 2 credits. Prerequisites: permission of instructor and ENTO 212 and BION 221 or equivalents. S-U grades optional. Offered alternate years. Not offered spring 2003; next offered spring 2004. Hours TBA. Staff.

This is an upper level seminar series in biological control covering topics chosen by participating students and faculty. The format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading or research focussing on a central theme for the semester.

[ENTOM 672 Seminar in Aquatic Ecology]
Spring. 1 credit. Prerequisites: permission of instructor or either ENTO 456, 471, or BION 261, 462. S-U grades optional. Hours TBA. Not offered spring 2003; next offered spring 2005. Offered alternate years. B. L. Peckarsky.

Discussion and analysis of current topics in the ecology of streams, lakes, and marine ecosystems, including student-generated synthesis of key papers in the literature. Generally appropriate for graduate students only. Interested undergraduates must contact the instructor.

[ENTOM 685 Seminar in Insect Physiology]
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Hours TBA. Offered alternate years. C. Gilbert.

[ENTOM 707 Individual Study for Graduate Students]
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

[ENTOM 767 Current Topics in Entomology]
Fall. 1 credit. Required of graduate students pursuing a degree in the Field of Entomology. Lect and disc, TBA. Coordinator: E. J. Shields.

This course provides lectures, readings and discussion to introduce first-year graduate students to the research activities of faculty in the Graduate Field of Entomology. Class meets weekly for one hour.
Journal of Agricultural and Food Chemistry

FOOD SCIENCE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Fall: 1 credit. S-U grades only. M 1:25-2:15. J. H. Hotchkiss and staff.

This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice is given.

Spring: 1 credit. S-U grades only. F 12:20, 5 field trips: one on F 12:30-4:00, four on F 12:30-5:30. D. P. Brown.

A series of seminars on current technological and regulatory developments in food science. Field trips to five commercial food manufacturing/processing plants are used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, is required.

Spring: 2 credits. S-U grades only. T R 11:15-12:00. B. Gravani and D. D. Miller. This course provides Cornell students with the knowledge needed to make healthy food choices. Topics include the U.S. food system; relationships between diet and health; food processing; food safety; and discussions of contemporary issues relating to food quality, safety, and nutrition. Students assess the nutritional quality of their personal diets and learn how to make changes to improve their diets.

FOOD 200 Introductory Food Science

Fall: 3 credits. Prerequisite: college-level courses in chemistry and biology. M W F 11:15-12:05. J. H. Hotchkiss.

A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods; nutritional significance; food formulation, preservation, and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging are stressed.

Fall: 2 credits. Prerequisite: BIOMI 290 or equivalent. T R 9:05-9:55. Lee M 7:30-9:25 p.m.

This course focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of class focus on the scientific and critical analysis of the assigned reading materials, questions, and hot topics.

FOOD 394 Applied and Food Microbiology (also BIOMI 394)

Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their impact on the safety and production of foods. Issues related to the microbiology, genetics, and physiology of microorganisms important in these processes are reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnological applications.

FOOD 395 Food Microbiology Laboratory

Fall: 2 credits. Prerequisite: BIOMI 291 or equivalent. M W 2:00-4:25. J. M. Brown.

Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

FOOD 396 Food Safety Assurance

This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Case studies and exercises are used to demonstrate and apply the key principles that are discussed.

FOOD 400 Senior Seminar in Food Science and Technology

Fall: 1 credit. Limited to seniors. M 4:30-5:20. Staff.

Students prepare and present a seminar on a topic of current interest in food science and technology.

FOOD 401 Concepts of Product Development

A discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging, and introduction of the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, heat and mass transport, and refrigeration and psychrometrics.
and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

**FOOD 405 Managing Food Waste without Trashing the Environment**

A look at the various waste streams generated by food plants, institutional feeders, supermarkets, and restaurants. What is the role of waste minimization? What technologies can control or remediate the problems? What are the disposal, composting, and recycling options? What are the legal requirements locally, statewide, and nationally that affect various food waste processes? This course serves as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.

**FOOD 406 Dairy and Food Fermentations**

This is a lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.

**FOOD 410 Sensory Evaluation of Food**

Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing, consumer testing for product acceptability; sensory tests in quality control; strategic product research; and product development. The psychological principles in sensory testing and statistical methods for sensory data analysis are presented. Laboratory provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis. Undergraduate Food Science majors are required to take both the lecture and the laboratory.

**FOOD 415 Principles of Food Packaging**

The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly discussed.

**FOOD 417-418 Food Chemistry I and II**
Spring 417; fall 418. 3 credits, spring; 2 credits, fall. Prerequisites: CHEM 257 or BIOMI 330 or 331. S-U or letter grade. Food 417, M W F 9:05-9:55; Food 418, M W F 9:05-9:55. J. W. Brady.

A course on the chemistry of foods and food ingredients. The chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components and additives are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on the quality and nutritional aspects of several food commodity groups (dairy, meat, fruit, vegetables, cereals, and legumes) are described.

**FOOD 419 Food Chemistry Laboratory**
Spring. 2 credits. Prerequisites: biochemistry (IBIOBM 330 or 331 or CHEM 257 or equivalent) and concurrent registration in food chemistry (FOOD 417). W 12:20-4:25. D. M. Miller, J. M. Brown.

Laboratory exercises dealing with the chemical properties of food components and changes they undergo in processing and storage. Relationships between the chemical composition of foods and functional, nutritional, and organoleptic properties are stressed. Laboratory techniques commonly used in food research are introduced. A laboratory research project is required. This involves writing a research proposal for the project, conducting laboratory research, and analyzing and interpreting results. The project is described in the proposal, analyzing the data, and writing a paper following the format used by the Journal of Food Science.

**FOOD 423 Physical Principles of Food Preservation and Manufacturing**

This course emphasizes the physical principles that underlie much of food preservation and manufacturing. A systems analysis approach is used to make connections between food and physical changes that occur in food processing and their impact on food quality. Topics include material properties of foods, heat processing, freezing, concentration and drying. Selected products serve as case studies for more complex manufactured foods.

**FOOD 424 Food Polymer Science: Principles and Applications**

Integration of polymer science, food science, and materials science provides the basis for characterization of the physical properties of food material. Emphasis is on unique aspects of food materials, e.g., plasticization by water, gelation, lipids, transient networks, and effects of thermal treatments on material properties. Problems and case studies based on proteins, starches, and hydrocolloids relevant to foods.

**FOOD 425 Dairy Foods Processing**

A lecture/laboratory course focused on principles and practices fundamental to the manufacture, evaluation, and storage of dairy foods. A variety of common food processing unit operations are included. Offered alternate years. Offered spring 2003. F 1:25-3:20. H. T. Lawless.

Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis is on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also refers to other regulatory agencies. Emphasis is placed on how a food or agricultural professional must interact with this legal system during legislative action, regulatory rule making, and with respect to compliance.

**FOOD 456 Advanced Concepts in Sensory Evaluation**

Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory psychological perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. A major independent research
project is conducted on a current issue in sensory evaluation.

**FOOD 494 Special Topics in Food Science**

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be reviewed by the department curriculum committee, and the same course is not offered more than twice under this number.

**FOOD 497 Individual Study in Food Science**

Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study Form (available in 140 Roberts Hall). S-U grades optional. Staff.

May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

**FOOD 498 Undergraduate Teaching Experience**

Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study Form (available in 140 Roberts Hall). S-U grades only. Staff.

Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**FOOD 499 Undergraduate Research in Food Science**

Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study Form (available in 140 Roberts Hall). This course may be repeated for credit. Staff.

Students conduct original research directed by a food science faculty member.

**FOOD 599 Research for Lausanne Exchange Students**

Fall/spring. 10 credits maximum. Prerequisite: permission of instructor. S-U grades optional. Staff.

Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a Food Science faculty member. A final report is written and presented to the faculties of both Cornell University and the University of Lausanne.

**FOOD 600 Seminar in Food Science**

Fall and spring. 1 credit. S-U grades only. Required of all food science graduate students. T 4:00-5:00. Staff.

A weekly seminar series on contemporary topics and issues in the Field of Food Science and Technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in Food Science and Technology may use the forum to present their required thesis research seminar. Required of all graduate students in the Field of Food Science and Technology. Strongly recommended for graduate students minoring in Food Science and Technology.

**FOOD 604 Chemistry of Dairy Products**

The chemical and physical changes that occur in dairy products prior to, during, and after processing are covered. This course emphasizes current research in dairy chemistry.

**FOOD 607 Advanced Food Microbiology**

Spring. 2 credits. Prerequisites: Microbiology (BIOM 290), Food Microbiology (FOOD 394). M. W. Offered alternate years.

This two-credit course explores advanced topics in Food Microbiology. Emphasis is placed on critical evaluation of current literature and on microbiological concepts that affect food microbiology. Specific areas that are covered include microbial epidemiology, rapid detection and typing methods for foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to reaction to other advanced food microbiology topics (e.g., risk assessment).

**FOOD 608 Chemometric Methods in Food Science**

Fall. 2 credits. Prerequisites: basic statistics and chemistry or permission of instructor. S-U grades optional. W 1:25-3:20. Offered alternate years. Not offered fall 2003, next offered in 2002. K. J. Siebert.

Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and physical properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration.

The techniques covered are also applicable to many other problems in biology and chemistry.

**FOOD 616 Flavors—Analysis and Applications**

An advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. The course surveys taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems, and consumer acceptance.

**FOOD 620 Food Carbohydrates (also NS 620)**

Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: BIOM 530 or equivalent. T R 10:10-11:00. Offered alternate years. Next offered spring 2004; not offered spring 2003. B. A. Lewis and J. W. Brady.

A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

**FOOD 621 Food Lipids**

Fall. 2 credits. Letter grade only. Prerequisite: a basic biochemistry course. Offered alternate years. Next offered fall 2003; not offered fall 2002 or 2004. R. H. Liu.

An advanced course in food lipids. Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasis is on lipid oxidation, emulsions, and functional foods associated with lipids.

**FOOD 665 Food and Bioprocessing Systems**

Fundamental and quantitative analyses of processes for manufacture of foods and related biological products. Topics covered include centrifugation, membranes, supercritical fluids, extrusion, high pressure, pulsed electric field, thermal processing, drying and crystallization.

**FOOD 694 Special Topics in Food Science**

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**FOOD 695 Current Readings in Food Science**

Fall and spring. 1 credit. Prerequisite: 300- to 400-level course relevant to the chosen topic. S-U grades only. Lec., by arrangement/1 hour per week. Staff.

A seminar series on current topics chosen by participating faculty and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include (but are not limited to) Food Microbiology and Food Safety; Food Chemistry; Packaging; Food Engineering. This course can be taken multiple times. Graduate students in Food Science are strongly encouraged to enroll in this course. Interested students should contact the designated instructor(s) for each term.

**FOOD 698 Graduate Teaching Experience**

Fall and spring. 1 to 3 credits. S-U grades only. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

**FOOD 800 Masters-Level Thesis Research**

Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to master's candidates; permission of Special Committee Chair. S-U grades only. Graduate faculty.
A survey of watercolor techniques. Subject the-spot outdoor painting. Matter largely still life, sketchbook, and rendering in different media are considered. Composition, perspective, and ways of sketchbooks, still life, and imagination. Illustrations. Matter largely from FR DR 214 Watercolor

FR DR 214 Watercolor
Spring. 2 credits. S-U grades optional. 4 studio hours scheduled in 2 hour units between 9:05 and 12:05 and 2 hours outside sketching. T W R. R. J. Lambert. A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

FR DR 316 Advanced Drawing
Fall. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 4 hours TBA. T W R, 9:05-12:05 2 hours outside sketching. R. J. Lambert. For students who want to attain proficiency in a particular type of illustration or technique.

FR DR 417 Scientific Illustration
Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered fall 2002. R. J. Lambert. A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.

FRUIT AND VEGETABLE SCIENCE: HORTICULTURAL SCIENCE
See Horticulture.

HORTICULTURE

Courses by Subject:
General horticulture: 101
Public garden management: 485
Crop production:
Agroforestry: 415
Forest: 442, 444, 445
Greenhouse and controlled environments: 310, 400
Nursery: 400, 420
Turfgrass: 330, 475
Vegetable: 225, 360, 460
Extension education: 476
Horticultural physiology: 400, 449, 455, 460, 461, 615, 620
Independent study, research, and teaching: 495, 496, 497, 498, 499, 500, 500, 700, 800, 900
Internships: 496
Landscape horticulture: 301, 435, 440, 485, 491, 492
Plant materials: 243, 300, 301, 317, 491, 492
Plant propagation: 317, 400
Postharvest physiology: 325, 625
Seminars: 600
Special topics: 494, 635, 694
Turfgrass management: 530, 475

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HORT 101 Horticultural Science and Systems
Fall. 4 credits. Lect, M W F 9:05; lab, W 1:25-4:25. L. A. Merwin. The science and technology of horticultural plants grown for flowers and landscaping, and ornamental, landscape or recreational purposes. Lectures, labs and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

HORT 225 Vegetable Production
Fall. 4 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOL 248. Lect, M W F 10:10-11:00; lab, M or W 2:00-4:25. Offered even years. M. A. Luckow.
A study of fruits and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

HORT 300 Herbaceous Plant Materials
Fall. 3 credits. Fee for field trip: $75. Lecs, T R 10:10, lab, T 2:00-4:25. W. B. Miles. Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

HORT 301 Plants for Interiors
Spring. 3 credits. Lecs, M W 11:15; lab, M 1:25-4:25. Offered even years. Next offered 2004. T. C. Weiler. Study of plants for interiors: identification, design characteristics, and cultural requirements; use of plants as elements of plant design (trees, shrubs, groundcovers, and accent plants including potted flowering plants and cut flowers); the interior landscape industry (organization, bidding, installation, maintenance). Required three-day field trip, estimated cost: $130.

HORT 310 Production and Marketing of Crops Grown in Controlled Environments
Spring. 4 credits. Letter grade only. Offered odd years. Lecs, T R 10:10; lab R 1:25-4:25. T. C. Weiler. Basics of establishing and managing agricultural production in environmentally optimized facilities; technology basics, systems and practices, structures, systems and equipment, materials handling, heating and cooling, lighting, fertilizing and irrigation, environmental stewardship, integrated pest management, business management; world centers of production, production of cut, potted, bedding, vegetable, and fruit crops in controlled environments, emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student grows one or
more crops. Required three-day field trip, estimated cost, $130.

[HORT 317 Seed Science and Technology (also CSS 317)]
Fall. 3 credits. Prerequisites: BIOL 241 or an equivalent course approved by instructor. Letter grade only. Offered alternating years: T, R 11:00–12:30; lab: R 1:25–4:25. A. G. Taylor, Geneva Experiment Station.

Study of the principles and practices involved in seed production, conditioning, storage, quality management, and stand establishment. Information is applicable to various kinds of agricultural and horticultural seeds. Hands-on laboratory experience.

[HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops]
Spring. 3 credits. Lees, M W 9:05; lab T 1:25–4:25. Staff.

A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Methods of improving quality, preharvest treatments, and harvesting/handling practices and storage/transportation requirements of selected horticulture crops are covered.

[HORT 330 Turfgrass Management]
Fall. 4 credits. Prerequisite: CSS 260 or permission of instructor. Lec, M W F 11:15–1:25; lab: M T W F 8:45–9:25. A. J. Petrovic.

Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, pest management, and nutrition of the management of turfgrass sites.

[HORT 366 Soil Ecology (also CSS 366)]

Activities of the soil biota are crucial for the continued functioning and renewal of soil ecosystems. Through study of the soil as an ecosystem, students gain an understanding of the diverse communities and the critical roles that microbial activities and interactions have in agricultural production and environmental protection. Through a small research project, students also gain competency in developing research questions and formulating hypotheses, planning appropriate methods for gathering and interpreting data, and summarizing research work. Graduate students should enroll in HORT/CSS 466.

[HORT 400 Principles of Plant Propagation]
Fall. 3 credits. Prerequisites: BIOL 242 and 244 or another course in plant physiology. Lees, T R 9:05; lab, R 1:25–4:25. K. W. Mudge.

Sexual (seed) propagation and asexual (vegetative) propagation including cutting, graftage, tissue culture, layering, and specialized vegetative reproductive structures. Physiological, environmental, anatomical principles, and industry applications are stressed in laboratory and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

[HORT 401 The How, When and Why of Grafting—A Distance Learning Approach]
Spring. 2 credits. Lees: autotutorial (web); lab: greenhouse/autotutorial (web); discussion: web. One introductory face-to-face meeting TBA. K. W. Mudge.

A ten-week, web/CD-based autotutorial approach to the principles and practices of grafting and budwood as applied to plant propagation. Emphasis is on the role of grafting in modern horticultural practice and on student development of hands on grafting skills. Instruction involves web-based asynchronous discussion and lab materials (web, CD-ROM), asynchronous discussion and hands-on, autotutal laboratory exercises in grafting.

[HORT 415 Principles and Practices of Agroforestry (also NTRES 415 and CSS 415)]
Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor, S-U option. Lees, M W F 10:10–11:00. Optional laboratory. HORT 416 (also NTRES 416 and CSS[SCAS] 416) Offered alternating years. E. Fernandes, K. Mudge, L. Buck.

An introduction to modern and traditional agroforestry systems which involves spatial or temporal integration of multiple-use woody plants (trees or shrubs) with annual or perennial crops or with livestock. Interactions between woody and nonwoody components of agroforestry systems are considered, based on above- and below-ground processes. The sustainability of agroforestry systems is critically evaluated from biophysical, socio-economic and policy perspectives.

[HORT 416 Principles and Practices of Agroforestry—Laboratory (also NTRES 416 and CSS 416)]
Fall. 1 credit. Optional lab component of HORT 415 (also NTRES 415 and CSS[SCAS] 416). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor, prior or concurrent enrollment in HORT 415. W 1:25–4:25. Offered alternate years. K. Mudge, E. Fernandes, L. Buck.

An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

[HORT 420 Principles of Nursery-Crop Production]
Fall. 4 credits. Prerequisite: HORT 400. Lees, M W F 9:05; lab, M 2:00–4:25. Field trips. Offered in 2003. G. L. Good.

Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.

[HORT 425 Landscape Management]
Fall. 4 credits. Prerequisites: HORT 230 or 335. Lees, M W F 9:05; lab, M 2:00–4:25. Offered odd years. I. A. Merwin.

A study of the practices involved in the maintenance of woody ornamental plants in the landscape. The major emphasis is on post-planting techniques, including water and fertilization management, weed management, pruning, and general tree care. Labs have a hands-on focus.

[HORT 440 Restoration Ecology]

An inquiry based treatment of the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.

[HORT 442 Berry Crops: Culture and Management]
Fall. 3 credits. Lees, M W 9:05; lab, M 1:25–4:25. Offered even years. M. P. Pritts.

A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics are considered, and alternative production practices for both commercial and home gardeners are discussed. Field trip experiences enhance classroom activities.

[HORT 444 Vineyard Management]
Fall. 3 credits. Lees, T R 9:05; lab, R 1:30–4:25. R. M. Pool.

Commercial grape production with an emphasis on the problems of production in cold climates. Students examine site selection, world and regional grape varieties, and the anatomical and physiological basis for vineyard management decision making. Laboratory exercises and field trips offer hands-on experience.

[HORT 445 Ecological Orchard Management]
Spring. 3 credits. S-U grades optional. Lees, T R 10:10; lab, T 1:25–4:25. Offered even years. I. A. Merwin.

The ecology and technology of deciduous tree-fruit production. Topics include basic tree anatomy, physiology, pest control, and design systems, nutrition, irrigation and freeze protection practices, tree pruning and training, post-harvest fruit storage, marketing and economic forecast models, monitoring and decision systems for integrated pest management, and efficient use of orchard equipment. Emphasis is on the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management. Previous coursework in horticulture and other plant sciences is suggested, and introductory biology is a prerequisite.

[HORT 449 Green Signals and Triggers—The Plant Hormones (also BIOL 449)]
Fall. 1 credit. Prerequisites: introductory biology course and permission of instructor. S-U grades optional. Offered odd years. Lees, C 1:25–2:15. P. J. Davies.

A study of the plant hormones and how they regulate plant growth and development. Topics include the discovery, role in growth and development, mode of action and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.
HORT 475 Golf Course Management
Fall. 2 credits. Prerequisite: HORT 350 or equivalent. Lecs, T 1:25–4:25. Offered fall 2003. A. M. Petrovic.
Advanced study in the management of golf course operations including selection of root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management, and financial operations. Analysis of a central New York golf courses provides the basis for discussion.

HORT 476 Practical Problem Solving in Horticulture
Fall. 2 credits. Prerequisite: permission of instructor. Minimum class size for semester is 8 students. Lecs/disc, W 1:25–4:25.
C. P. Mazza.
Foundation for extension or similar career oriented students. Application of horticultural science principles to practical situations faced primarily by growers. Techniques of synthesizing information from various scientific disciplines and strong emphasis on communications skills. Classes led by staff in several departments. Topics are interdisciplinary, drawing on topics in horticulture and related sciences (landscape and food), entomology, plant pathology, natural resources, and Cornell Plantations.

HORT 480 Plantations Seminar Series
Fall. 1 credit. S-U grade only. W 7:30.
D. A. Rakow.
A 10-week series of seminars given by prominent speakers on a variety of horticultural, natural sciences, and human cultural themes.

HORT 485 Public Garden Management
Spring. 3 credits. Prerequisites: HORT 300 or HORT 301; HORT 230 or HORT 335. Lec, T 10:10–11:00, lab, T 11:15–12:05. Two-and-a-half-day field trip to visit other botanical gardens and arboretums. Next offered spring 2003. D. A. Rakow.
The course explores the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboreta. Included are separate units on collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.

HORT 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 492)
Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Limited to 48 students. Lecs, T 12:20–1:10; labs, T 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
This course focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project where students implement what they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

HORT 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 492)
The second half of this course continues focus on the winter identification, uses and establishment of woody plants in urban and garden settings. Issues on soil and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites, select appropriate trees, shrubs, vines and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement in a hands-on manner, site selection and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

HORT 494 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches “trial” courses under this number. Offerings may vary by semester, and will be advertised when the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 495 Undergraduate Seminar—Current Topics in Horticulture
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student’s advisor in advance of participation.
Graduate students should enrol in this series. Graduate students should enrol! in this series. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 496 Internship in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student’s advisor in advance of participation in internship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Staff.

HORT 497 Independent Study in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Staff.

HORT 498 Undergraduate Teaching Experience
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Staff.
Described to give qualified undergraduate students teaching experience through active involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. The department expects leading discussion sessions; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 489 Undergraduate Research
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.) Staff. Undergraduate research projects in horticultural sciences.

HORT 500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1–6 credits. (6 credits maximum toward M.P.S. (Agriculture) degree) S-U grades optional. Staff. A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Master of Professional Studies students or those registered in the respective graduate fields of horticulture.

HORT 600 Seminar in Horticulture
Fall and spring. 1 credit. S-U grades only. R 4:00. D. W. Wolfe and L. A. Weston. Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities. Required of graduate students majoring or minoring in horticulture. Undergraduate students register under HORT 495.

HORT 615 Quantitative Methods in Horticultural Research
Spring. Weeks 1–7. 2 credits. Prerequisite: BTRY 601, BTRY 602 or permission of instructor. S-U grades only. W F 2:30–4:25. Offered even years. Next offered 2004. D. W. Wolfe. This course provides experience in applying statistics principles to real-world agricultural research problems. Examples of lab, greenhouse, and field studies from the published literature are utilized. Other quantitative methods are explored. Topics include: approaches to controlling and analyzing variation; common block and incomplete block designs; selecting an appropriate significance level; designing on-farm experiments and demonstration plots; regression methods in relation to mechanistic models and path and principal components analysis; and plant growth analysis techniques.

HORT 618 Breeding for Pest Resistance (also PL BR 618)
Fall. 2 credits. S-U grades optional. Prerequisites: BIOG 281 and PL BR 403 or equivalent. An introductory course in Plant Pathology and/or Entomology also highly recommended. Offered alternate years. Lec, F 1:25–3:20. P. Griffiths. For description, see PL BR 618.

HORT 620 Woody Plant Physiology
Spring. 4 credits. BIOPL, BIOBM 351, CHEM 354, or equivalent, or permission of instructor. Letter grade only. Lecs, T 8:40–9:55; lab, T 1:25–4:25. T. H. Whitlow. An examination of physiological processes in woody plants emphasizing whole plant integration and how these processes affect plant growth under both natural and cropping systems. Topics include: evolution of the woody plant form, structure and function of the root and shoot, growth periodicity, dormancy, growth analysis, carbon balance and allocation for synthetic and physiological responses to biotic and abiotic stress. Faculty from Geneva and Fruit and Vegetable Science collaborate in teaching.

HORT 625 Advanced Postharvest Physiology of Horticultural Crops
Spring. 3 credits. Prerequisites: BIOPL 242 and/or HORT 325, Lecs, T R 10:10, disc, TBA. Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage life, some physiological disorders, aspects of hormone action and interactions, and a consideration of control.

HORT 635 Tools for Thought
Fall. 1 credit. Open to graduate students only. S-U grade only. 1 hour per week. TBA. T. H. Whitlow. A discussion of readings from Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real world practices of scientists.

HORT 636 Current Topics in Horticulture
Fall or spring. 1 credit. S-U grades only. One hour per week, TBA. Staff. A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

HORT 664 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S–U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course are not offered more than twice under this number.

HORT 700 Graduate Teaching Experience
Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours TBA. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800 Thesis Research, Master of Science
Fall or spring. Credit TBA. S-U grades only.

HORT 900 Thesis Research, Doctor of Philosophy
Fall or spring. Credit TBA. S–U grades only.

INTERNATIONAL AGRICULTURE
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

INTAG 300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits. F 1:25–3:20. R. W. Everett. A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

INTAG 311 Tropical Crop Systems: Biodiversity, Social, and Environmental Impacts (also CSS [SCAS] 314)
Fall. 3 credits. Prerequisite: an introductory course in crop science, soil science, or biology or permission of instructor. Lec, T R 8:40–9:55, E. C. Fernandez.

Characterization and discussion of traditional shifting cultivation-based case systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The effect of tropical cropping systems on the environment is evaluated.

INTAG 402 Agriculture in the Developing Nations I
The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and non-government agencies. The lectures/discussions attempt to establish the global context for sustainable agricultural development and focus on agriculture and rural development in the tropics, using case studies. This course may be taken as a stand-alone survey course in international agriculture, but it is also the preparatory course for participation in Agriculture in the Developing Nations II (International Agriculture 602), which includes a trip to a developing country during the intersession.

INTAG 403 Traditional Agriculture in Developing Countries

Today, perhaps over half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course examines traditional systems from several disciplinary points of view.
INTAG 404 Crop Evolution, Domestication and Diversity (also PLBR 404, BIOL 404)
Spring. 2 credits. Prerequisites: BIOGD 281 or PL BR 225 or permission of instructor. S-U grades optional. Lect R 9:05-10:20. D. Kresovich. Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Underlying ethical, legal, and social issues affecting conservation and use also are addressed.

INTAG 471 Introduction to Intellectual Property Management (also PL BR 471)

INTAG 480 Global Seminar: Environment and Sustainable Food Systems (also ALS 480 and EDUC 480)
Spring. 1–3 credits. Prerequisite: juniors, seniors, and graduate students. Letter grade. Lect, R 8:00-9:55, lab, 3:35-4:25 one additional hour unscheduled. H. D. Sutphin, D. Lee. For description, see ALS 480.

INTAG 494 Special Topics in International Agriculture (also INTAG 694)
Fall, spring, summer. 1–3 credits. S-U grades optional. Staff. The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

INTAG 496 International Internship
Fall, spring. 1–6 credits. See CALS internship policy guidelines and submit approved internships form prior to enrollment. S-U grades optional. Staff. An international internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student's work. The student researches and initiates an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting.

INTAG 497 Independent Study in INTAG
Fall and spring. 1–3 credits. S-U or letter grade. Prerequisites: permission of instructor and signed Independent Study Form. Staff. Independent Study in INTAG allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

INTAG 588 International Development M.P.S. Project Paper
Fall and spring. 1–6 credits. A maximum of 6 credits may be applied toward M.P.S. degree requirements. Limited to M.P.S. candidates in the Field of International Development (ID). S-U grades only. N. Uphoff. A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

INTAG 599 International Agriculture and Rural Development M.P.S. Project Paper
Fall and spring. 1–6 credits. A maximum of 6 credits may be applied toward M.P.S. degree requirements. Limited to M.P.S. candidates in the Field of International Agriculture and Rural Development (IARD). S-U grades only. R. Blake. A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

INTAG 602 Agriculture in The Developing Nations II
Spring. 3 credits. Prerequisites: INTAG 402 and/or permission of instructors. Field trip during January intercession. Note: cost of January 2003 field-study trip is $2500, which includes air fare, board and lodging (some merit and need based financial aid may be available). R. Toll 2:30-4:25. Midterm only. K. V. Raman and W. R. Coffman. Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week overseas field-study trip during January is followed by discussions and assignments dealing with problems in food, agriculture and livestock production in the context of social and economic conditions.

INTAG 603 Administration of Agricultural and Rural Development (also GOVT 682)
Spring. 4 credits. M 2:30-5:30. N. T. Uphoff and T. W. Tucker. An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities during their professional careers.

INTAG 612 Intellectual Property Management in Agriculture and Life Sciences (also PL BR 612)

INTAG 620 Rural Livelihoods and Biological Resources: Technologies and Institutions
Fall and spring. 1–2 credits. Prerequisites/comments: limited to Ph.D. candidates with permission of instructors. S-U grades only. A. Pell, C. Barrett, E. Fernandes. This seminar explores issues that straddle the boundaries of the biological and social sciences as they relate to rural livelihoods, food security and the management of biological resources.

INTAG 685 Training and Development: Theory and Practice (also EDUC 685 and ILR 685)
Spring. 4 credits. S-U grades optional. M. Kroma. Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educators-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

INTAG 684 Graduate Special Topics in INTAG
Fall or spring. 1–4 credits. S-U or letter option. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

INTAG 696 Organic Inputs in Tropical Soils and Agroforestry (also NTRES 696 and CSS 696)
Fall, spring. 1 credit. S-U grades only. R 12:20-1:10. E. Fernandes, L. Fisher, L. Buck. A variety of speakers present seminars on organic inputs in the tropics and agroforestry. Students are required to prepare synopsis of each seminar.

INTAG 697–698 International Development M.P.S. Seminar
Fall, spring. 1 credit. S-U only. N. Uphoff. A seminar for M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

INTAG 699 International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. S-U grade only. Required for, and limited to, M.P.S. IARD students or with permission of instructor. R. Blake. The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

INTAG 783 Farmer Centered Research and Extension (also EDUC 783)
Fall. 3 credits. S-U or letter option. M. Kroma and T. Tucker. This course provides an introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and
documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people’s knowledge by enhancing their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

Related Courses in Other Departments
Related Courses in Other Departments
In addition to International Agriculture (INTAG) courses, there are a wide variety of other courses with an international focus. The following are suggested relevant courses:

Agricultural & Biological Engineering
How to Manage a Watershed (BEE [ABEN]/GOVT 644)

Applied Economics & Management
International Trade and Monetary Economics (AEM 230)
*Global Agribusiness Management (AEM 329)
International Trade Policy (AEM 430)
*Food Marketing Colloquium (AEM 446/447)
Global Marketing Strategy (AEM 449)
Seminar on Agricultural Trade Policy (AEM 730)
Macro Policy in Developing Countries (AEM 763)

Agriculture & Life Sciences
*Agriculture Study Tour to Burgundy, France (ALS 402)
*Internship Opportunities in Burgundy, France (ALS 403)
Global Seminar (ALS 480)

Animal Science
Tropical Livestock Production (AN SC 400)
Tropical Forages (AN SC 403)

Asian Studies
Southeast Asia Seminar: Country Seminar (ASIAN 601)

Biology
Biological Studies of the Neotropics (BIOE 405)
Food, Agriculture, and Society (BIOE 469)
The Healing Forest (BIO PL 348)

Communication
Communication in the Developing Nations (COMM 424)
Intercultural and Development Communication (COMM 612)

City & Regional Planning
Seminar in International Planning (CRP 671)
Seminar in Project Planning in Developing Countries (CRP 675)

Crop & Soil Science
Properties and Appraisal of Soils of the Tropics (CSS 471)
Ecology of Agricultural Systems (CSS 473)

Tropical Cropping Systems (CSS/INTAG 314)

Education
Comparative Studies in Adult Education (EDUC 483)
Farmer-Centered Research & Extension (EDUC/INTAG 783)

Food Science
Food Science

Horticulture
Genetic Improvement of Crop Plants (HORT 403)

Nutritional Science
Nutritional Problems in Developing Nations (NS 306)
Integrating Food Systems and Human Needs (NS 380)
National and International Food Economics (NS 457)
International Nutrition Problems, Policy, and Programs (NS 680)

Natural Resources
Ecological Dimensions of Global Change (NTRES 350)
International Environmental Issues (NTRES 400)
Religion, Ethics, and the Environment (NTRES 407)
Principles and Practices of Agroforestry (NTRES/HORT 415)

Plant Breeding
Introduction to Plant Breeding (PL BR 201)
Geneic Diversity (PL BR 404)

Plant Pathology
Plant Diseases in Tropical Agriculture (PL PA 655)
Integrated Pest Management in Tropical Agriculture (PL PA 655)

Rural Sociology
Population Dynamics (RSOC 201)
International Development (RSOC 205)
Social Indicators, Data Management and Analysis (RSOC 213)
Sustainable Development (RSOC 261)
Education, Inequality and Development (RSOC 305)
Comparative Issues in Social Stratification (RSOC 370)
Human Fertility in Developing Nations (RSOC 408)
Population and Environment (RSOC 410)
Population Policy (RSOC 418)
Migration and Population Redistribution (RSOC 430)
Social Impact of Resource Development (RSOC 440)
Society and Survival (RSOC 490)
Population, Environment, and Development in Sub-Saharan Africa (RSOC 495)

Sociological Theories of Development (RSOC 606)
The Sociology of “Third World” States (RSOC 725)
*Includes overseas travel
various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 263/547 American Indians, Planners, and Public Policy (also CRP 363/547, ARS 336)
Spring. 3 credits. Offered in alternate years. Offered spring 2003.
Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other desultories of American Indian reservations, archaeological sites, and burial grounds. The central focus of this course is how to address urban and regional problems without imperiling the cultural survival of minorities.

LA 282 The American Landscape
Fall. 3 credits.
An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature.

LA 301 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
Course participants are engaged in the art and science of site-scaled design. This includes relating construction and planting details to concepts and program.

LA 302 Urban Design in Virtual Space
Spring. 5 credits. Cost of supplies and fees, about $250; basic expenses for field trip, about $250.
A sequence of projects introducing students to advanced skills in large-scale urban design, including 3-D computer modeling and digital design media as tools for shaping the form of the city.

LA 315 Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor.
Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316 Site Engineering II
Fall. 2 credits. Prerequisite: LA 315 or permission of instructor.
Lectures and studio projects dealing with earthwork estimation, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 318 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor.
The emphasis of this course is detail design and the use of landscape materials in project implementation. Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the focus for this course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Students develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants fabricate material prototypes in wood and metal.

LA 402 Integrating Theory and Practice: Community Design Studio
Spring. 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
This course engages the theory and practice of participatory community design through a real community service project. Participants gain an understanding of the role of public service in design and the potential for community centers to influence the design of communities and their environments. Students will be expected to work independently and collaboratively on team projects in a community. One class period per week will be designated for community fieldwork. Studio theme for 2002–2003 to be announced.

LA 403 Directed Study: The Concentration
Fall, spring. 1 credit. Prerequisite: any coursework in landscape architecture undergraduate students in their final year of study. Working with their adviser, students create a written and visual paper that documents the concentration intent.

LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students.
This course is designed to develop a working knowledge of various computer software applications with emphasis on Autocad. The course explores other applications relative to land use planning and the profession of Landscape Architecture.

LA 412 Professional Practice
Spring. 1 credit.
Provides the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or in other professional situations. Topics discussed include practice diversity, marketing, professional services, office and project management, construction management, computers in the profession, and ethics.

LA 486 Placemaking by Design
Fall. 3 credits. Preference given to juniors, seniors and graduate students. Limited to 20 students. S/U grades optional.
This seminar provides an understanding of contemporary planning and landscape architectural design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. The seminar addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

LA 490 Rome Wasn't Built in a Day
Spring. 3 credits.
In this electronic course, students learn about how the form and spatial structure of the city of Rome has evolved over time. Using the interactive CD-ROM Layers of Rome as a digital text, the course engages participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, readings and exercises are developed using the CD-ROM. Selected CD searches, digital networking, and various interactive learning technologies geared toward urban analysis and visual design media.

LA 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492)
Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Limited to 48 students. Pre-registration required. Cost of supplies, about $50; expenses for field trips, about $50.
This course focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site. Students learn about the principles and practices of site inventory and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices.

LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492)
Spring. 4 credits. Prerequisites: a passing grade in HORT/LA 491. Attendance limited to 90. This course is open to horticulture and landscape architecture majors or permission of the instructors. Limited to 48 students. Preregistration is required. Cost of supplies about $50; expenses for field trips $50.

LA 493 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits; may be repeated for credit. S/U grades optional.
Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 495 Green Cities: The Future of Urban Ecology (also CRP 495)
Fall. 4 credits.
Explores the history and future of the ecology of cities and their role in solving the present
global ecological crisis. The politics, design, and economics of "green cities" are examined in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

LA 488 Individual Study in Landscape Architecture* Fall or spring. 1–5 credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

LA 498 Undergraduate Teaching Fall or spring. 1–2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.

LA 501 Composition and Theory Fall. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250. Field trip about $250. Basic principles of natural and cultural processes that form "places" in the landscape. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

LA 502 Composition and Theory Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250. The studio focuses on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

LA 505 Landscape Representation I Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor. This course introduces students to both conventional and unconventional modes of landscape architectural design representation. Drafting, orthographic drawing, axonometric project, lettering, analysis and concept drawing are taught alongside more expressive modes of direct site study and representation.

LA 506 Graphic Communication II Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor. An intermediate level course focused on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing, concept modelling, composite drawings, and visual books.

LANAR 524 History of European Landscape Architecture* Fall. 3 credits. Offered through the College of Architecture, Art, and Planning.

LANAR 525 History of American Landscape Architecture* Spring. 3 credits. Offered through the College of Architecture, Art, and Planning.

[LA 545 The Parks and Fore of Imperial Rome Spring. 3 credits. Prerequisites: advanced standing in a design field, classics or history of art, other disciplines, or by permission of the instructor. Offered spring 2004. This advanced seminar is seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome. Opportunity for a spring break trip to Rome.]

LA 559 Archaeology in Preservation Planning and Site Design (also CRP 569) Spring. 3 credits. Offered alternate years. Offered spring 2003. In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

LA 580 Landscape Preservation: Theory and Practice Fall. 3 credits. Prerequisites: limited to junior and senior undergrads, and graduate students. This course examines the evolving practice of landscape preservation in the United States. Topics include the recent history of the discipline, methodology in documentation of historic landscapes, and important practitioners and notable projects. Format for the class is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

[LA 582 The American Landscape Studio Fall. 3 credits. An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature. Graduate students complete additional outside work and attend an additional class session.]

[LA 590 Theory Seminar Spring. 3 credits. Seminar in landscape design theory. For graduate students and seniors.]

LA 598 Graduate Teaching Fall or spring. 1–3 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form. Staff. Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in seminars, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the term. (Credit hours are determined by: 2 hours per week = 1 credit hour).

LA 601 Integrating Theory and Practice I Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250. The studio focuses on site-scaled projects that consider significant cultural and natural landscapes. Theories of landscape restoration, sustainable design, and landscape representation are explored through projects that derive form site and place. The integration of site history and ecology and site construction supports an understanding and relationship between design and site.

LA 602 Integrating Theory and Practice II Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250. The studio builds upon prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary design technology. The course focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

LA 603 Directed Study: The Concentration Fall, spring. 1 credit. Prerequisite: any Landscape Architecture graduate student in their final year of study. Working with their advisor, students create a written and visual paper that documents the concentration intent.

LA 615 Site Engineering I Fall. 3 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 616 Site Engineering II Fall. 2 credits. Prerequisite: LA 615 or permission of instructor. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 618 Site Construction Spring. 5 credits. Prerequisite: permission of instructor. The emphasis of this course is detail design and use of landscape materials in project implementation. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants fabricate material prototype in wood and metal.

[LA 619 Advanced Site Grazing Fall. 2 credits. Limited to 10 students. Prerequisite: LA 315 or LA 615. Not offered 2002.]
Grading skills and knowledge applied as a design component of site planning projects.

**LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)**

Fall. 3 credits. Offered alternate years. Next offered fall 2003.
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. This course considers how each culture altered the landscape in their own way as they created their own built environments.

**LA 680 Graduate Seminar in Landscape Architecture**

Fall or spring. 1–3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional.
Topical subjects in landscape architectural design, theory, history, or technology. Includes seminar topics and group study not considered in other courses.

**LA 690 Special Topics in Landscape Architecture**

Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional.
Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

**LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)**

Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250. Application of urban-design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-D computer modeling and digital design media are introduced as tools for urban design.

This is a specially arranged collaborative studio with the Department of City and Regional Planning.

**LA 702 Advanced Design Studio**

Spring. 5 credits.
A capstone studio that provides the opportunity to explore issues in contemporary landscape architecture and to integrate related fields. Topics include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

**LA 800 Master's Thesis in Landscape Architecture**

Fall or spring. 9 credits.
Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

**NATURAL RESOURCES**

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

**NTRES 110 Introduction to the Field of Natural Resources**

This course provides a comprehensive overview of the modern field of natural resources and environmental studies. The course focuses on identifying the components of knowledge required to understand the Earth's natural resources and ecological systems, and to participate intelligently in their conservation and management. Local case studies are used to introduce students to the scientific, ethical, and societal basis for protection and management of natural resources and environments. Students become engaged in data collection and analysis, use quantitative models to analyze and interpret data, explore the human dimensions of natural resource issues, and come to understand the complexities of the policy process and management strategies.

**NTRES 201 Environmental Conservation**

Spring. 3 credits. M W F 12:20–1:10; 1 hr disc sec TBA. T. J. Fahey.
At the beginning of the twenty-first century, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

**NTRES 210 Introductory Field Biology**

Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. 2 overnight weekend field trips required. Cost of field trips, approximately $125. Lee, W 9:05; labs, M W 12:25–4:25 or T R 12:25–4:25. T. Gavin and C. Smith.
Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of these events is emphasized.

**NTRES 212 People, Values, and Natural Resources**

Spring. 3 credits. M W F 10:10–11:00.
J. Tantillo.
Cultural and political context for natural resources conservation and management in North America. Historical basis is explored through analysis of North American environmental history, examining shifts in attitudes and conceptions of human relationships to natural resources and the environment. Key laws guiding policy, conservation, and management of natural resources are reviewed. Concepts underlying the study of human attitudes, behaviors, institutions, and decision-making processes related to natural resource conservation and management are introduced.

**NTRES 301 Forest Ecology**

Fall. 3 credits. Prerequisite: introductory biology. M W F 11:15–12:05. T. J. Fahey.
A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests, eco­physiology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.

**NTRES 302 Forest Ecology Laboratory**

Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

**NTRES 303 Forest Management and Maple Syrup Production**

A practical, field-oriented course emphasizing principles and practices of multiple purpose management of small, nonindustrial, private forest land in the northeastern United States, including the production of maple syrup.

**NTRES 305 Applied Population Ecology**

Fall. 3 credits. Letter grade only. Prerequisite: NTRES 210 and background in biology or ecology is strongly recommended. Completion or concurrent enrollment in CALS math requirement. M W F 9:05–9:55. E. Cooc.
An in-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. The course examines in detail models of single species and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Computer and field-based exercises are used to reinforce concepts presented in lecture.

**NTRES 306 Coastal and Oceanic Law and Policy**

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Maine.
Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of these events is emphasized.

**NTRES 422 People, Values, and Natural Resources**

Spring. 3 credits. M W F 10:10–11:00.
J. Tantillo.
sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

NTRES 308 Natural Resources Management
Fall. 3 credits. Prerequisite: junior standing. T R 2:55-4:10. T. B. Lauber. Focus is on terrestrial and aquatic resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 309 Sovereign Tribal Environments
Summer. 1 credit. Prerequisite: none; recommended: one course each in Natural Resources and Native American Indian Program Consult Cornell University Summer Session Catalog for the Summer Session and Continuing Education section of this book for scheduling information. S. M. Pereira
Under federal law, Native American tribes possess significant attributes of sovereignty. This course introduces American Indian territories as a unique policy arena where treaty jurisdiction and traditions merge with the goals of economic development and cultural survival to shape resource management decisions. Course includes lectures, class discussions, case studies, and a mandatory field trip to an Iroquois territory.

NTRES 310 Fish Ecology, Conservation and Management
Spring. 3 credits. Prerequisites: NTRES 210 or permission of instructor; NTRES 305 or a general ecology course recommended. T R 1:25-2:40. J. Jackson, E. Mills, L. Rudstam
Basic principles of fish ecology at the individual, population, and community level are covered, particularly as they relate to interactions between fish and the aquatic environment. Emphasis is placed on the application of these principles to the conservation and management of fisheries resources and aquatic habitats. Illustrative examples are provided from current literature and case studies.

NTRES 311 Fish Ecology Laboratory
Spring. 1 credit. Prerequisite: NTRES 310 or concurrent enrollment. Two weekend field trips. J. Jackson, E. Mills, L. Rudstam. Two overnight weekend field trips to the Cornell Biological Field Station and the Adirondack Field Station. Activities include experiences with various fish sampling gear and analysis of collected samples. Discussions about sampling considerations and inferences we can make by contrasting the ecology of fish in lakes of different productivity. Includes visit to a state of the art fish hatchery and evening discussion session during the field trips. Written reports required.

NTRES 320 Principles of Toxicology (also TOX 320)
Spring. 3 credits. Prerequisites: one year each of chemistry and biology with labs; 1 semester of organic chemistry lecture or permission of instructor. T R 2:55-4:10 p.m. J. W. Gillett.
This introductory lecture course in human and environmental toxicology emphasizes basic principles (exposure, dose-response, effects) involved with pesticides, hazardous wastes, and natural products. Science-based assessments for risk analysis and policy are integrated with other considerations. Guest speakers and extensive case studies augment lectures and student team exercises applied to management.

NTRES 321 Introduction to Biogeochemistry (also SES 321)
Fall. 4 credits. Prerequisites: college-level chemistry, plus a course in biology and/or geology. Lec. T R 12:20-1:10; lab, W or R 2:30-4:25. J. B. Yavitt and L. A. Derry. Control and fluxes of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

NTRES 340 Quantitative Population Analysis
Spring. 4 credits. Prerequisites: college-level course in statistics or mathematics recommended. M W F 9:05-9:55, lab M 2:30-4:25. P. J. Sullivan
The dynamics and demographics of aquatic and terrestrial populations are examined using statistical techniques and computer modeling. The course emphasizes: estimation of population abundance using statistical surveys, and other sampling techniques; and characterization of population dynamics through mathematical and statistical models representing the fundamental processes of birth, death, growth, and movement. Topics include applications to aquatic and terrestrial organisms of resource and conservation interest.

NTRES 350 Global Ecology and Management
Spring. 3 credits. Prerequisites: college-level courses in biology and chemistry. M W F 12:20-1:10, disc sec, M or W 1:25-2:15. J. B. Yavitt
Human accelerated environmental changes threaten the integrity of nature. This course explains the ecological principles that comprise this threat. Topics include increasing air temperature, atmospheric carbon dioxide and other greenhouse gases, and pollution. Discussions explore the likely future behavior of nature given different global change scenarios.

NTRES 370 Conservation of Birds
Spring or summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. T R 11:15-12:05. Offered alternate odd years. Next offered spring 2003. C. R. Smith
A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds are explored in the contexts of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change, and the economic importance of bird study as an outdoor recreational activity.

NTRES 371 Conservation of Birds Laboratory
Spring or summer. 1 credit. Concurrent enrollment in NTRES 370 required. Saturday mornings TBA. Offered alternate odd years. Next offered spring 2003. C. R. Smith
A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered include the choice and effective use of field guides, binoculars, and other tools for bird identification, procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations.

NTRES 400 International Environmental Issues
Fall. 4 credits. Prerequisite: junior standing or above. T R 10:10-12:05. Not offered fall 2002. Staff
A survey of current international environmental issues and the institutions through which we deal with them. Among subjects included are: biodiversity and endangered species, global climate change, Antarctica, Law of the Sea, parks and protected areas, and tourism. International organizations, such as World Bank, World Trade Organization, nongovernment environmental organizations, governments and their policies are studied. Laws and treaties are examined, as are negative forces such as corruption and colonialism. Lectures, discussion, term paper. I

NTRES 402 Environmental and Natural Resources Policy Processes
Spring. 3 credits. Prerequisites: junior standing, special application process, and course fee (approx. $380). Lec. January 12-day intersession; three 2-hour orientation sessions in fall semester and four 2-hour sessions in February and March. Completed applications due by October 10. Applications are available by contacting map1@cornell.edu or at www.dnr.comell.edu/courses/course.html. B. A. Knowlton
An introduction to the environmental policy process and its conceptual framework. Recognizing and defining natural resource or environmental problems and issues; aggregating interests; formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislature, executive branch, and other actors. Case studies; presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, and oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

NTRES 403 Environmental Governance (also S&TS 403 and B&SOC 403)
Fall. 3 credits. T R 11:40-12:55. S. Wolf
This course considers the question of environmental governance, defined as the
assembly of social institutions that regulate natural resource use and shape environmental outcomes. Participants will explore the roles of public policy, market exchange, and collective action in resource (mis)management. Theoretical concepts from a variety of social science perspectives will be introduced to support case studies and student-led discussions. Comparative analysis of how governance is pursued in different countries, historical periods, and ecological contexts (forestry, endangered species, water quality) will highlight scope for institutional innovation. Students who wish to take the course for graduate credit should see NTRES 603.

NTRES 406 Ecology Risk Assessment (also TOX 406)
Fall. 3 credits. Prerequisites: BIOES 261 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. M W F 11:15–12:05.
J. W. Gillett.
This course strives to develop understanding of and competence in the different types of ecological (and human health) risk assessments based on USEPA principles and methods. Focus is on cases for chemical, physical, and biological stressors in a variety of circumstances.

NTRES 407 Religion, Ethics, and the Environment
Fall. 4 credits. For juniors, seniors, and graduate students; others by permission only. S-U grades optional. T R 10:10–11:00; 50-min disc. TBA. R. A. Baer.
How religion (especially Christianity and Judaism) affects philosophy, and ethics influence our treatment of nature. Terms like religion, nature, fact, value, knowledge, and public interest are examined in detail. Particular themes include character and moral development, similarities and differences between moral and scientific claims, truth telling, public reason, and property. Also covers animals' rights vs. ecosystem concerns, responsibility to future generations, the limitations of rationalism in ethics, and discussion of whether women approach moral issues differently than men.

NTRES 411 Seminar in Environmental Ethics
Fall. 3 credits. For seniors, juniors and graduate students. S-U grades optional. W 12:55–3:50.
Moral concerns relative to the natural environment and agriculture. Major themes generally include: animal rights vs. ecosystem concerns; natural resource management and the concept of the public interest; applying environmental ethics in a democratic and pluralistic society; how our treatment of one another parallels our treatment of nature, and land use ethics. Several classes focus on the nature of facts, values, knowledge, and truth telling.

NTRES 415 Principles and Practices of Agroforestry (also HORT 415 and CSS 415)
Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor, S-U option. Lec; M W F 10:10–11:00. Offered alternate years. Next offered fall 2003. L. Buck, E. Fernandes, K. Mudge.
An introduction to modern and traditional agroforestry systems which involve spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or livestock. Interactions between woody and non-woody components of agroforestry systems are considered, based on above- and below-ground processes. The sustainability of agroforestry systems is critically examined from biophysical, socioeconomic, and policy perspectives. Optional laboratory, NTRES 416 (also CSS and HORT.)

[NTRES 416 Principles and Practices of Agroforestry—Laboratory (also HORT 416 and CSS 416)]
Fall. 1 credit. Optional lab component of NTRES 415 (also HORT and CSS ICSAS). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor, prior or concurrent enrollment in NTRES 415. Offered alternate years; next offered fall 2003. W 1:25–4:25.
K. Mudge. E. Fernandes, L. Buck.
An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, and computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

NTRES 417 Wetland Resources
Summer. 2 credits. Prerequisite: 1 year of college biology. A special 1-week course offered at Cornell's Shulls Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Simon Hall.
An examination of coastal and adjacent freshwater wetlands from historical, disturbance, and preservation perspectives, including fresh and salt water-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratory exercises emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

NTRES 418 Wetland Ecology and Management—Lecture
Fall. 3 credits. T R 10:15–11:30. B. L. Bedford.
Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered.

NTRES 419 Wetland Ecology and Management—Laboratory
Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. F 12:20–4:25. 1 weekend fieldstrip required. B. L. Bedford.
An integrated set of laboratory field exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, water, and methods of wetland identification and delineation.

NTRES 420 Ecological Management of Water Resources
Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. M W F 9:05–9:55. R. Schneider.
In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include: linkages between hydrologic variability and communities, groundwa­ter—surface connection, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

NTRES 428 Landscape Impact Analysis
Spring. 3 credits. Prerequisites: 1 introductory and 1 advanced course in ecology or the equivalents, and junior standing. T R 1:25–2:40. B. L. Bedford.
This course presents ecological concepts and analytical tools needed to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the landscapes in which these resources occur. It explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

NTRES 444 Resource Management and Environmental Law (also CRP 444)
Spring. 3 credits. For juniors, seniors, and graduate students. S-U grades optional. Lec M W F 12:30–1:10; sec. F 1:25–2:15. R. Booth.
For description, see CRP 444.

NTRES 450 Conservation Biology: Concepts and Techniques
Fall. 4 credits. Prerequisite: NTRES 210. Limited to first 30 seniors, plus graduate students. Lec, T R 11:10–11:55; lab, R 10:10–12:05. T. A. Gavin and E. G. Cooch.
A thorough analysis of the ecological and quantitative dimensions for decision making in modern conservation biology and management. Emphasis is on analysis of variation and maintenance of biological diversity, and will focus on principles and techniques, including demographic viability analysis of populations, genetic analysis, as well as aspects of the human dimensions of conservation biology.

[NTRES 456 Stream Ecology (also ENTOM 456, BIOEE 456)]
For description, see ENTOM 456.

NTRES 458 Human Dimensions of Natural Resource Management
This course focuses on how a social science-based understanding of human attitudes, values, and behaviors can be incorporated into natural resource management decisions and actions. Examples from federal, state, and nongovernmental fish, wildlife, and forest management programs are used to illustrate the importance of socioeconomic considerations in problem solving and decision making.

NTRES 459 Wildlife Population Analysis: Techniques & Models
Spring. 3 credits. Prerequisites: NTRES 305 (or equivalent, or by permission of instructor), a college-level math or statistics class. Lecture/lab: 2-week intensive course (M T W R; Morning lectures, afternoon labs) in January with follow-up meetings during the spring semester.
This course will explore the theory and application of a variety of statistical estimation and modeling techniques used in the study of wildlife population dynamics. The course will focus on exploration of a selection of the tools needed for modern wildlife conservation and management, including (possibly) analysis of mark-recapture data, population viability analysis, decision theory, and matrix modeling.

**NTRES 460 Quantitative Ecology and Management of Fisheries Resources**
Spring. 4 credits. S-U grades optional. Prerequisites: NTRES 304 recommended or permission of instructor. Lec M W F 11:15-12:05; Lab W 2:25-3:15. Offered alternate even years. Next offered 2004.

P. J. Sullivan.
The dynamics of marine and freshwater fisheries resources are examined with a view toward objectives of assessment, analysis, and decision making within a quantitative framework. Growing pressure on fisheries' resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries' issues. Quantitative models are useful for integrating information needed by decision makers in addressing these issues. The course develops analytical methods to assess the dynamics and status of fisheries resources and then demonstrates how the information may be transformed into useful information for decision makers.

**NTRES 471 Ecoregions: Ecology and Conservation**
Spring. 2 credits. Letter grade only. Prerequisites: NTRES 210, 305; statistics recommended; junior standing or above. Lec/Lab, W 1:25-4:25. Offered alternate even years. Next offered 2004. C. R. Smith.
Approaches to characterizing and classifying terrestrial habitats and ecoregions at a variety of scales are introduced and discussed. A landscape approach is used to introduce habitat management concepts and land cover classifications. Legislation guiding federal land management decisions is discussed, and field trips go to public and private land management organizations.

**NTRES 485 Individual Study in Fish and Wildlife Biology and Management**
Topics in fisheries and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 496 Individual Study in Ecology and Management of Landscapes**
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, B. Blossey, T. Fahey, M. Krusny, J. Lassoe, R. Schneider, R. Sherman, P. Smallidge, J. Yavitt.
Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 498 Teaching in Natural Resources**
Fall and spring. 1–4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

**NTRES 500 Professional Projects—M.P.S.**
Fall and spring. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Limited to graduate students working on professional master's projects. S-U grades only.

**NTRES 507 Environmental Inquiry (also EDUC 507)**
Spring. 1–3 credits. S-U grades optional. Prerequisite: limited to preservice or inservice secondary science teachers. Permission of one of the instructors required. L. Avery, M. E. Krasny, and N. Trautman.
Exploration of selected topics in environmental science and environmental science education at the secondary school level. The subject-matter focus varies from year to year, and tracks ongoing research and development conducted through Cornell's Environmental Inquiry project, a collaboration between the Departments of Education and Natural Resources and the Center for the Environment. Courses include introduction to environmental dynamics, biodegradation, environmental toxicology, and invasive species.

**NTRES 600 Introduction to Graduate Study in Natural Resources**
Fall. 2 credits. Prerequisite: open to beginning graduate students whose faculty advisers are in Natural Resources. S-U grades. Lec TBA. M. E. Krasny.
Designed for beginning Natural Resources graduate students, this course includes faculty-led discussions of key natural resources issues, student discussions of research ideas, and skill building sessions on proposal writing and giving research presentations. Students are required to complete a research proposal.

**NTRES 601 Seminar on Selected Topics in Natural Resources**
Fall or spring. 1 credit. S-U grades only. T. disc sec, T.
Selected readings and discussions of research and/or current problems in natural resources.

**NTRES 603 Environmental Governance**
Fall. 3 credits. T R 11:40-12:55. S. Wolf.
For description, see NTRES 603. Students taking the course for graduate credit will be required to read supplemental materials and undertake more complex research assignments.

**NTRES 604 Seminar on Selected Topics in Resource Policy and Management**
Primarily for graduate students with a major or minor in resource policy and management and upper level undergraduates with a strong interest in resource policy analysis. Topics include the policy process, actors and stakeholders, ethical dimensions, and evaluation. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.

**NTRES 605 Issues in Risk Analysis Seminar (also CEE 605)**
Fall. 1 credit. Prerequisite: calculus, advanced course in statistics and basic natural sciences (Chemistry, Biology, Earth Systems). S-U only. Lec, TBA. J. Gillett and R. Davidson.
Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risks, communication issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series. Enrollment in seminar requires short reports and participation in two required discussion meetings for class members designed to integrate the issues raised during the semester.

**NTRES 607 Ecotoxicology (also TOX 507)**
Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. M W F 11:15-12:05. Offered alternate even years. Next offered spring 2004.
J. W. Gillett.
Lectures, readings, and special guest focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcomputer) models, and relationships to regulation and environmental management.

**NTRES 612 Wildlife Science Seminar**
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Check with department for availability.
Staff.
Discussion of individual research or current problems in wildlife science.
NTRES 615 Case Studies and Special Topics in Agroforestry
Fall. 2 credits. Prerequisites: NTRES/CSS/HORT 415 or permission of instructor. S-U grades optional. W 1:25–3:20. Offered alternate years; next offered fall 2002. L. E. Buck.
Multidisciplinary groups of students examine case study examples of agroforestry practice and research in developed and developing countries. Key current topics in the field are examined in depth, through lecture presentations, library research, and class discussion. Students prepare individual or team-written original case studies or critical analyses of existing case studies for presentation to class.

NTRES 616 Forest Science and Management Seminar
Fall. 2 credits. For graduate students and upper-level undergraduates. J. R. Yavitt. This seminar course includes review of current literature, student research, and selected topics of interest. Topics include biogeography, ecology, and human use of forests located in boreal, temperate, and/or tropical environments.

NTRES 618 Critical Issues in Conservation and Sustainable Development
Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30–4:25. Staff. Establishes a conceptual foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and rural development. Students work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

NTRES 659 Wildlife Population Analysis: Techniques and Models
Spring. 3 credits. Prerequisites: NTRES 305 (or equivalent, or by permission of instructor), a college-level math and statistics class. Lecture/lab: 2-week all-day (Monday through Friday) course in January with follow-up meetings during the spring semester.
For description, see NTRES 459.

NTRES 660 Quantitative Ecology and Management of Fisheries Resources
This course is taught in conjunction with NTRES 460 (see description above). Students taking the course for graduate credit are asked, in addition to the 400-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

NTRES 670 Spatial Statistics
Spring. 3 credits. Prerequisites: BTRY 601 and 602; an intro GIS course strongly recommended. S-U grades optional. M W F 10:10–11:00. Offered alternate odd years. Next offered spring 2003. P. J. Sullivan. Spatial statistical concepts and techniques are developed and applied to ecological and natural resource issues. Topics include visualizing spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. Students should consider taking this course simultaneously with CSS 620.

NTRES 694 Special Topics in Natural Resources
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 696 Organic Inputs in Tropical Soils and Agroforestry (also INTAG 696 and CSS 696)
Fall and spring. 1 credit. S-U grades only. F 12:20–1:10. E. Fernandes, L. Fisher. For description, see INTAG 696.

NTRES 698 Current Topics: Environmental Toxicology (also TOX 698)
Fall, spring. 1–3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

NTRES 699 Graduate Individual Study in Natural Resources
Fall or spring. Credit TBA. S-U grades only. Prerequisite: permission of instructor. NTRES graduate faculty.
Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

NTRES 800 Master's Thesis Research
Fall and spring. Credit TBA. Limited to graduate students working on master's thesis research. S-U grades only.

NTRES 900 Graduate-Level Thesis Research
Fall and spring. Credit TBA. Limited to graduate students in a Ph.D. program only before the "A" exam has been passed. S-U grades only.

NTRES 901 Doctoral-Level Thesis Research
Fall and spring. Credit TBA. For students admitted to candidacy after the "A" exam has been passed. S-U grades only.

Related Courses in Other Departments
Courses in many other departments are relevant to students majoring in Natural Resources. The following list includes some of the most closely related courses but is not exhaustive.

Environment and Society (R SOC 208, 324, 410, 440, 495)
Environmental Law, Ethics, and Philosophy (S&TS 206; CRP 390, 443, 444, 451, 453; PHIL 241, 246, 247, 381)

Human Systems and Communication (COMM 280, 285, 352, 421)
Physical Sciences (BEE (ABEN) 151, 301, 371, 425, 435, 471, 473, 475, 478; CSS and EAS 260, 321, 365, 371, 398, 483; EAS 102, 104; CEE 433)
Public Policy and Politics (GOVT 427, 428; BIO & SOC 461; CEE 529)
Resource Economics (AEM 250, 260, 451)
Spatial Data Interpretation (CSS 411, 420, 620, 660)

PLANT BREEDING
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL BR 201 Plants, Genes, and Global Food Production
Fall. 2 credits. Prerequisite: 1 year of introductory biology or permission of instructor. Lecs, T R 11:15–1:15. S. R. McCouch. This course provides an introduction to plant breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B—Biological Sciences.

PL BR 225 Plant Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Prerequisites: 1 year of introductory biology or equivalent; permission of instructor required for students who have taken BIOGD 281. Lecs, M W 11:15–12:05, lab, R 1:25–4:25. M. Jahn and M. Mutschler.
This course surveys the fundamentals of plant genetics. It shows how this information is used in plant biology and allied agricultural sciences and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance, linkage analysis, polyplody, analysis of nuclear, chloroplast, and mitochondrial genomes, pollenination controls, and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

PL BR 401 Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisites: a course in plant biology or genetics, or permission of instructor. Lecs, T R 10:10. E. D. Earle. Lectures and demonstrations dealing with the techniques of plant tissue cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and...
agricultural studies. Methods for plant improvement via manipulations of cultured cells are discussed.

**PL BR 402 Plant Tissue Culture Laboratory**
Fall. 1 credit. Enrollment limited. Prerequisites: PL BR 401 (may be taken concurrently) or permission of instructor. W or R 1:25-4:25 (alternate weeks) plus 1 hr TBA. E. D. Earle.

This course provides hands-on experience in plant tissue culture and complements PL BR 401. Lab work includes cell, tissue and organ culture techniques related to propagation, storage, and genetic manipulation. Experiments use a broad range of plant materials and include protoplast culture and Agrobacterium-mediated gene transfer.

**PL BR 403 Genetic Improvement of Crop Plants**
Fall. 3 credits. Prerequisites: genetics (BIOGD 281 or other standard genetics course), and a course in crops or horticulture. M W F 9:05-9:55. V. Gracen, M. E. Smith.

Genetic enhancement of crop value to humans began with domestication and continues with farmers' variety development and scientifically designed plant breeders' applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

**PL BR 404 Crop Evolution, Domestication and Diversity (also BIOPL 404, INTAG 404)**
Spring. 2 credits. S-U letter. Prerequisites: BIOGD 281 or PL BR 225 or permission of the instructor. Lec. T R 9:05-11:00. S. Kresovich. Evolution, domestication, and breeding of cultivated plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Underlying ethical, legal, and social issues affecting conservation and use also are addressed.

**PL BR 446 Plant Cytogenetics Laboratory**
Spring. 1 credit. S-U only. Prerequisites: a course in genetics or permission of instructor. Will be offered as a 2-week module at a time to be arranged. Check with department for further information. K. N. Watanabe.

This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis is on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Basic techniques for examination of plant chromosomes are covered.

**PL BR 471 Introduction to Intellectual Property Management (also INTAG 471)**

Introductory course for students in agriculture and the life sciences on Intellectual Property management comprising forms of protection (e.g. copyright, patents, plant breeders' rights), contracts (e.g. material transfer, licensing), and the management of IP (e.g. freedom-to-operate, laboratory notebook, genetic resources). Emphasis will be placed on aspects of technology transfer. The course will be of interest to students wishing to know more about the interface of research and business development.

**PL BR 494 Special Topics in Plant Breeding**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL BR 496 Internship in Plant Breeding**
Fall or spring. Credits variable. May be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades optional. On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

**PL BR 497 Individual Study in Plant Breeding**
Fall or spring. Credits variable. May be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

**PL BR 498 Undergraduate Teaching**
Fall or spring. Credits variable. May be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

**PL BR 499 Undergraduate Research**
Fall or spring. Credits variable. S-U optional. Prerequisites: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate research projects in plant breeding.

**PL BR 604 Methods of Plant Breeding Laboratory**
Fall. 2 credits. S-U grade. Prerequisite: PL BR 403 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Sorrells and R. E. Anderson.

Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

**PL BR 606 Advanced Plant Genetics**

Provides an advanced survey of genetics in higher plants. Topics include discussion of the complete genome sequence of Arabidopsis, forward and reverse genetic analyses, biochemical and developmental pathways, mating behavior and barriers, polyplody, transposable elements, and the relationship between nuclear and chromosome structure and gene expression.

**PL BR 607 Analysis of Sequence Similarity**
Spring. 1 credit. Enrollment limited. S-U grades only. Prerequisites: basic biology, basic genetics, familiarity with computers. Permission of instructor required. M W F 11:15-12:05 for 4 weeks. Dates TBA. Check with Plant Breeding Office after June for details.

This course focuses on the tools available for accessing nucleotide and protein sequence similarity in plants, animals, and microbes and the strengths and limitations of these approaches for answering biological questions. The mathematical and statistical background of the algorithms is presented in lectures, and weekly on-line projects provide students with experience in addressing a range of biological problems involving sequence analysis.

**PL BR 612 Intellectual Property Management in Agriculture and Life Sciences (also INTAG 612)**

Comprehensive course for ag scientists on Intellectual Property management comprising forms of protection (copyright, trademarks, patents, plant breeders’ rights), agreements (from material transfer to licensing), and management tools and strategies (policy, freedom-to-operate, IP audits, laboratory notebook, litigation, ethics, conflict resolution, cross-cultural issues, technology transfer, genetic resources and trade) and negotiation. The course will be of particular relevance to students interested in science management, technology transfer, international agriculture and business.

**PL BR 618 Breeding for Pest Resistance (also HORT 618)**
Fall. 2 credits. S-U grades optional. Prerequisites: BIOGD 281 and PL BR 403 or equivalents. An introductory course in Plant Pathology and Entomology also highly recommended. Lecs. F 1:25-3:20. Offered alternate years. P. Griffiths.
A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance, stability of genetic resistance mechanisms, and the use of biochemical, physiological, and molecular tools in breeding for pest resistance.

**PL BR 622 Seminar**
FALL OR SPRING. 1 CREDIT. S-U Grades Only. T. 12:20-1:30. STAFF AND GRADUATE STUDENTS.

**PL BR 650 Special Problems in Research and Teaching**
FALL OR SPRING. 1 OR MORE CREDITS. PREREQUISITE: PERMISSION OF INSTRUCTOR SUPERVISING THE RESEARCH OR TEACHING. STAFF.

**PL BR 653.2 Plant Biotechnology (also PL PA 663 and BIO PL 653.2)**
FALL OR SPRING. 3 CREDITS. S-U Grades Optional. PREREQUISITES: BIO PL 653.1 OR PERMISSION OF INSTRUCTOR. LECs, M W F 1:25-2:15 (12 LECS) OCT. 2- OCT. 30. E. D. EARLE AND M. ZAITLIN. THIS COURSE DEALS WITH PRODUCTION AND USE OF TRANSGENIC PLANTS FOR AGRICULTURAL AND INDUSTRIAL PURPOSES. TOPICS INCLUDE PROCEDURES FOR GENOME INJECTION AND CONTROL OF GENE EXPRESSION, AS WELL AS STRATEGIES FOR OBTAINING TRANSGENIC PLANTS THAT ARE RESISTANT TO INSECTS, DISEASES, AND HERBICIDES, PRODUCE USEFUL PRODUCTS, OR HAVE IMPROVED NUTRITIONAL AND FOOD PROCESSING CHARACTERISTICS. REGULATORY AND SOCIAL ISSUES RELATING TO PLANT BIOTECHNOLOGY ARE DISCUSSED.

**PL BR 653.3 Plant Genome Organization (also BIO PL 653.3)**
FALL. 1 CREDIT. S-U GRADE OR LETTER OPTION. PREREQUISITES: BIO PL 653.1. M W F 10:10-11:00 (12 LECTURES) OCT. 2- OCT. 30. OFFERED ALTERNATE YEARS. S. D. TANKSLEY. THE STRUCTURE AND FUNCTION OF PLANT NUCLEAR GENOMES, INCLUDING CHANGES IN GENOME SIZE, CENTROMERE STRUCTURE, DNA PACKAGING, TRANSPORTABLE ELEMENTS, GENETIC AND PHYSICAL MAPPING, POSITIONAL GENE CLONING, GENOMIC SEQUENCING, AND COMPARATIVE GENOMICS.

**PL BR 653.6 Molecular Breeding (also BIO PL 653.6)**
FALL. 1 CREDIT. S-U GRADE OR LETTER OPTION. LECs, M W F 10:10-11:00 (12 LECTURES) OCT. 1- OCT. 29. OFFERED ALTERNATE YEARS. S. TANKSLEY. APPLICATION OF DNA MARKERS TO THE IDENTIFICATION, MANIPULATION AND ISOLATION OF GENES IMPORTANT TO PLANT AND ANIMAL PRODUCTIVITY USING MOLECULAR GENETIC TECHNIQUES. STUDENTS LEARN HOW TO DESIGN AND EXECUTE EXPERIMENTS TO IDENTIFY QUALITATIVE TRAIT LOCUS (QTLS), AS WELL AS HOW TO APPLY DNA MARKERS TO PLANT AND ANIMAL BREEDING PROGRAMS.

**PL BR 694 Special Topics in Plant Breeding**
FALL OR SPRING. 4 CREDITS MAXIMUM. S-U GRADES OPTIONAL. THE DEPARTMENT TEACHES "TRIAL" COURSES UNDER THIS NUMBER. OFFERINGS VARY BY SEMESTER, AND ARE ADVERTISED BY THE DEPARTMENT BEFORE THE SEMESTER STARTS. COURSES OFFERED UNDER THE NUMBER WILL BE APPROVED BY THE DEPARTMENT CURRICULUM COMMITTEE, AND THE SAME COURSE IS NOT OFFERED MORE THAN TWICE UNDER THIS NUMBER.

**PL BR 716 Perspectives in Plant Breeding Strategies**

**PL BR 717 Quantitative Genetics in Plant Breeding**
SPRING. 3 CREDITS. S-U GRADES OPTIONAL. PREREQUISITES: PL BR 403 AND BTRY 601 OR EQUIVALENT. M F 2:55-4:10. OFFERED EVERY FALL. D. R. VIANDS. DISCUSSION OF QUANTITATIVE GENETICS AND QUANTITATIVE TRAIT LOCUS (QTLs) FOR MORE EFFICIENT PLANT BREEDING. SPECIFIC TOPICS INCLUDE COMPONENTS OF VARIANCE (ESTIMATED FROM VARIOUS MATERIALS), THEORY AND COMPUTER ANALYSIS FOR QTL, POPULATION STRUCTURE, MULTIPLE LOCUS REGRESSIONS, AND INTERVAL ANALYSIS; HERITABILITY; THEORETICAL GAIN FROM SELECTION; AND GENOTYPIC AND PHENOTYPIC CORRELATION. DURING THE SECOND PERIOD, PLANTS IN THE GREENHOUSE ARE EVALUATED TO PROVIDE DATA FOR COMPUTING QUANTITATIVE GENETIC PARAMETERS.

**PL BR 726 Problems and Perspectives in Computational Molecular Biology (also CS 726 and BTRY 726)**
FALL AND SPRING. 1 CREDIT. S-U Only. PREREQUISITE: PERMISSION OF INSTRUCTOR. LEC M 1:25-2:15. THIS IS A WEEKLY SEMINAR SERIES DISCUSSING TIMELY TOPICS OF COMPUTATIONAL MOLECULAR BIOLOGY. THE COURSE ADDRESSES METHODOLOGICAL APPROACHES TO SEQUENCE ANNOTATION, PROTEIN STRUCTURE AND FUNCTION RELATIONSHIPS, EVOLUTIONARY RELATIONSHIPS ACROSS SPECIES. STATISTICAL AND DETERMINISTIC COMPUTATIONAL APPROACHES ARE COVERED AND SPECIFIC AND DETAILLED BIOLOGICAL EXAMPLES ARE DISCUSSED. TOPICS OF INTEREST ARE DISCUSSED IN RELATION TO PAPERS PREPARED BY TEAMS OF STUDENTS AND/OR FACULTY. WE INTERACT WITH OTHERS FROM BIOLOGY BACKGROUNDS WITH STUDENTS FROM OTHER DEPARTMENTS AND FACULTY AND STUDENTS PREPARE THE PAPERS. STUDENTS SUMMARIZE THE ESSENTIAL QUESTIONS ADDRESSED BY THE PAPERS. THEY DETERMINE THE METHODS USED AND THE RESULTS OBTAINED. AT THE END OF THE PRESENTATION, QUESTIONS SHOULD BE LISTED ON AN OVERHEAD SLIDE TO INITIATE DISCUSSION IN THE GROUP.

**PL BR 800 Master's-Level Thesis Research**
FALL OR SPRING. CREDIT TBA. PREREQUISITE: PERMISSION OF INSTRUCTOR. S-U GRADES OPTIONAL. GRADUATE FACULTY. FOR STUDENTS WORKING ON A MASTER'S THESIS.

**PL BR 900 Graduate-Level Dissertation Research**
FALL OR SPRING. CREDIT TBA. PREREQUISITE: PERMISSION OF INSTRUCTOR. S-U GRADES OPTIONAL. GRADUATE FACULTY. FOR STUDENTS IN A PH.D. PROGRAM. FOR STUDENTS WORKING ON A DISSERTATION. FOR STUDENTS ADMITTED TO CANDIDACY AFTER THE "A" EXAM HAS BEEN PASSED.

**PL BR 901 Doctoral-Level Dissertation Research**
FALL OR SPRING. CREDIT TBA. PREREQUISITE: PERMISSION OF INSTRUCTOR. S-U GRADES OPTIONAL. GRADUATE FACULTY. FOR STUDENTS ADMITTED TO CANDIDACY AFTER THE "A" EXAM HAS BEEN PASSED.

**PL BR 902 Doctoral-Level Thesis Research**
FALL OR SPRING. CREDIT TBA. PREREQUISITE: PERMISSION OF INSTRUCTOR. S-U GRADES OPTIONAL. GRADUATE FACULTY. FOR STUDENTS WORKING ON A THESIS. FOR STUDENTS ADMITTED TO CANDIDACY AFTER THE "A" EXAM HAS BEEN PASSED.
The responses of organisms and cells to their surroundings are examined to illustrate how similar systems are perturbed by mutation and how they produce disease. Material covered includes: funga, bacteria, viruses, nematodes, and other plant pathogens. Disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course shares lectures with PL PA 241, but laboratory exercises are separate. The laboratory is similar to that of PL PA 241, but more basic principles in plant pathology are emphasized. This course is intended for students who want preparation for graduate-level studies in plant pathology.

**PL PA 407 Nature of Sensing and Response: Signal Transduction in Biological Systems (also BIO BM 407)**

Spring. 3 credits. Prerequisites: BIO BM 350 or 353 or 351 and previous or concurrent registration in 332. Recommended: BIO GD 281. Rec. Lec. T 10:10-11:25; T. P. Delaney.

An introduction to plant diseases, their diagnosis, and their management. Topics covered include: fungi, bacteria, viruses, nematodes, and other plant pathogens. Disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course shares lectures with PL PA 241, but laboratory exercises are separate. The laboratory is similar to that of PL PA 241, but more basic principles in plant pathology are emphasized. This course is intended for students who want preparation for graduate-level studies in plant pathology.

**PL PA 411 Plant Disease Diagnosis**

Fall. 5 credits. Limited to 18 students. Prerequisites: PL PA 241 or equivalent and permission of instructor. Lec. T 10:10-11:25; lab T R 1:25-4:25. Offered alternate years. Next offered 2003. G. W. Hudler.

A method of diagnosing plant diseases caused by infectious and noninfectious agents is taught with an emphasis on the application of contemporary laboratory techniques and effective use of the literature. After seven weeks of formal lecture and laboratory sessions, students spend the rest of the semester working on their own to determine the causes of plant diseases on samples that have either been received by the Plant Disease Diagnostic Lab or that have been prepared by instructors.

**PL PA 443 Pathology and Entomology of Trees and Shrubs (also ENYOM 443)**

Fall. 4 credits. Limited to 30 students. Prerequisites: PL PA 241 or equivalent. ENYOM 212 or equivalent. Lec. M W F 11:15; lab F 1:25-4:25. Offered alternate years. G. W. Hudler, P. A. Weston.

For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasis is on pests of northeastern flora but examples from other parts of the country and the world are also used. Forest, shade, and ornamental plants are considered.

**PL PA 444 Integrated Pest Management (also ENYOM 444)**

Fall. 4 credits. Prerequisites: BIO ES 261, ENYOM 212 or 241, or PL PA 241 or their equivalents or permission of instructor. Lec. M W F 9:05; lab. 1:25-4:25.

G. W. Hudler and J. Losey.

Lectures integrate the principles of pest control, ecology, and economics in the management across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

**PL PA 494 Special Topics in Plant Pathology**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL PA 497 Independent Study**

Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

**PL PA 498 Teaching Experience**

Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

**PL PA 499 Undergraduate Research**

Fall or spring. 3-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for research experience under the direction of a faculty member.

**PL PA 601 Concepts of Plant Pathology**

Spring. 2 or 4 credits. Prerequisites: PL PA 401 or equivalent. S-U grades optional. Lec. T R 8:40-9:55; lab R 2:00-4:45.

A. R. Collmer, M. G. Milgroom.

Concepts in plant-pathogen relationships uniting molecular and population biology approaches, with emphases on molecular and cellular investigations of model pathosystems and population biology. Special studies integrating host-pathogen evolution, genetics, and ecology. The discussion section is used for examining current research literature and other exercises complementary to lecture topics; emphasis is on critical thinking in science. Students prepare and review mock grant proposals.

**PL PA 605 Viral Plant Diseases**

Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec. M W 11:15 (7 weeks, 1st half of semester). Offered alternate years. Next offered 2003. S. M. Gray.

Introduces students to plant viruses and the disease they cause. Addresses nomenclature, taxonomy, disease economics, ecology and epidemiology, transmission, and disease control. A virtual laboratory is used to introduce students to virus disease diagnosis.

**PL PA 606 Molecular Plant Virology (also BIOMI 650)**

Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Material covered includes virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.

**PL PA 607 Bacterial Plant Diseases**

Fall. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec. W 9:05 (7 weeks, 1st half of semester only); lab W 1:25-4:25 (7 weeks, 1st half of semester only). Offered alternate years. S. V. Beer.

This course emphasizes bacterial disease of plants, their occurrence in the field, isolation of bacterial pathogens and their identification by traditional and contemporary techniques. Bacterial culture and plant inoculation, epidemiology and control.

**PL PA 608 Genomics of Bacterium-Host Interactions (also BIOMI 651)**

Fall. 1 credit. S-U grades optional. Prerequisites: BIOMI 290 or equivalent or permission of instructor. Lec. M W 9:05 (2nd half of semester). Offered alternate years. A. Collmer and S. Winans.

Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artemis tools, the pathogens Yersinia pestis, V. enterocolitica, Pseudomonas syringae, Ralstonia solanacearum, and Agrobacterium tumefaciens, and the symbiont Sinorhizobium melilotii.

**PL PA 609 Fungal Plant Diseases**

Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 309, 401 or equivalents, or permission of instructor. Lec. F 1:25-2:15 (7 weeks, 2nd half of semester); lab F 2:30-4:25 (7 weeks, 2nd half of semester). Offered alternate years.

J. W. Lobreer.
A team taught course providing basic information on the biology of fungal pathogens and the diseases they cause. The life cycles and disease cycles of representative pathogens and diseases they cause are emphasized along with etiological and epidemiological aspects of the diseases covered.

PL PA 610 Oomycete Biology and Pathology
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05-9:55 (7 weeks, 1st half of semester). Offered alternate years. Next offered 2003. E. B. Nelson. This course is intended to provide students with a broad exposure to the biology of Oomycetes. The basic attributes of this important group and animal, plant, and invertebrate parasites are detailed in lectures and demonstration sessions. Emphasis is placed biological characteristics important to the pathology of these organisms. Topics address evolutionary biology, systematics, genetics, developmental biology, mechanisms of pathogenesis, unique aspects of Oomycete metabolism and reproduction, growth, and dormancy. Key ecological aspects of the interaction of Oomycetes with plants and other microbes are covered. Practical aspects of Oomycete biology, including isolation from environmental samples, epidemiology and disease control are also addressed.

PL PA 620 Ecology of Plant Pathogens
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05-9:55 (7 weeks, 1st half of semester). Offered alternate years. Next offered spring 2004. E. B. Nelson. The basic ecological concepts, principles, methods, and literature important to the understanding of the interactions of plant pathogens with their physical, biochemical, and microbial environment are covered. Ecological processes that regulate the pre-infection behavior of plant pathogens are emphasized in both aboveground and belowground habitats. Topics include the nature and behavior of pathogen inoculum, population and community biology, pathogen interactions with plant-associated microbial populations and communities, rhizosphere and phytosphere dynamics, and more.

PL PA 621 Chemical and Biological Disease Control
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05-9:55 (7 weeks, 2nd half of semester). Offered alternate years. Next offered spring 2004. E. B. Nelson and W. Koelsch. A discussion of the principles and methods used for the control of plant diseases. Emphasis is placed on chemical and biological strategies for disease control. Topics include historical aspects of disease management in plant pathology, the discovery, use and mode of action of major fungicide groups, pathogen resistance to fungicides, microbial strategies for biological control, regulation and commercialization of microbial pathogens, transgenic microorganisms and strategies for integrating biological and chemical control strategies.

PL PA 622 Plant Disease Epidemiology
Fall. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05 (7 weeks, 1st half of semester). Offered alternate years. Next offered 2005. M. G. Milgroom.

PL PA 623 Pathogen Population Genetics
Fall. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05 (7 weeks, 2nd half of semester). Offered alternate years. E. B. Nelson. An introduction to basic concepts of population dynamics of plant pathogens and plant diseases in time and space. Emphasis is on the interplay between theory and empirical studies on disease progress, spatial patterns and spread, forecasting and risk assessment for plant pathogens.

PL PA 638 Filamentous Fungal Genomics and Development
Spring. 1 credit. S-U grades optional. Prerequisite: BIOG 281 or equivalent. Lec, M W 10:10 (4 weeks, last 4 of semester) B. G. Turgeon. Molecular genetic and genomic approaches to the study of fungal development. Applications of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity) and reproduction, both sexual and asexual, are described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as Cochliobolus heterostrophus, Magnaporthe grisea, and Ustilago maydis and from well known genetic models such as Aspergillus nidulans and Neurospora crassa.

PL PA 642-661 Special Topics Series
Unless otherwise indicated, the following description applies to courses 642-661. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PL PA 642 Pathogen Population Biology
Fall. TBA. M. G. Milgroom.

PL PA 644 Ecology of Soil-Borne Pathogens

PL PA 645 Plant Virology

PL PA 647 Phytobacteriology Research Updates

PL PA 649 Fungal Biology
Spring. 1 credit. TBA. R. T. Hodge.

PL PA 650 Diseases of Vegetable Crops

PL PA 652 Field Crop Pathology

PL PA 661 Diagnostic Lab Experience
Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. T. A. Zitter. For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. Coursework or experience in diagnostic techniques is strongly advised. Priority is given to graduate students in plant pathology and plant protection.

PL PA 662 Molecular Plant-Pathogen Interactions (also BIOL 652.1)
Spring. 1 credit. Prerequisites: BIOG 281, BIOM 330 or 331, and BIOM 653.1. Lecs, M W F 10:10 (12 lecs) Jan.-Feb. 14. T. P. Delaney, A. R. Collmer, S. G. Lazarowitz. An examination of the molecular properties that control the development of host-parasitic interactions in both microorganisms (bacteria, viruses, and fungi) and higher plants. Contemporary theories describing the genetic and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.

PL PA 663 Plant Molecular Biology 1
Fall. 1-5 credit. Prerequisites: BIO GS 281, BIO BM 330 or 331.

Section 01 Concepts and Techniques in Plant Molecular Biology (BIO PL 653.1)
Fall. Lecs, M W F 1:15-3 (6 lecs) Sept 4—Sept 28. T. P. Delaney, G. B. Martin. This is an introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences, and serves as a prerequisite to other modules in the BIO PL series. The course is divided into two sections: 1) gene discovery, which covers genetic, molecular, and genomics approaches to the isolation of new genes; and 2) the characterization, which covers DNA sequencing, DNA and RNA blotting, use of gene databases, and various approaches to producing transgenic plants. Emphasis is on understanding the appropriate approach that is needed for different experiments.

Section 02 Plant Biotechnology (BIO PL 653.2 and BI PL 653.2.1)
Fall. 1 credit. Lecs, M W F 1:25 (12 lecs) Oct. 2—Oct. 30. M. Zaitlin, E. D. Earle. This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

PL PA 664 Molecular Plant-Microbe Interactions (also BIOL 656.1, Sec 02 and BIOM 656.2, Sec 02)
Spring. 1 credit. Prerequisites: BIOG 281, BIOM 330 or 331 or 333, and BIOM 653 (section 01) or their equivalents. S-U grades optional. Lecs, M W F 12:20 (12 lecs) Jan—Feb. 15. Offered alternate even years. Not offered 2002-2003. S. C. Winans.
PL PA 681 Plant Pathology Seminar
Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only. W 12.20–1:30. S. V. Bear.

PL PA 694 Special Topics in Plant Pathology
Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 780 Research in Molecular Plant Pathology
Fall and spring, 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S-U grades only. S. V. Bear.

Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Plant Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PL PA 797 Special Topics
Fall or spring. 1–5 credits. S-U grades optional.

An opportunity for independent study of a special topic.

PL PA 799 Graduate Teaching Experience
Fall or spring. 1–5 credits. S-U grades.

Staff.

Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PL PA 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.
For students working on a master's degree.

PL PA 900 Graduate-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.
For students in a Ph.D. program who have not passed the "A" exam.

PL PA 901 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.
For doctoral candidates who have passed the "A" exam.

POMOLOGY (FRUIT SCIENCE)
See Horticultrue.

RURAL SOCIOLOGY

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

R SOC 101 Introduction to Sociology
Fall, spring, or summer. 3 credits. Enrollment limited to 500 in the fall, 400 in the spring. Lecs, T R 10:10–11:00; sec. various times. Fall, T. Hirschl; spring, C. Geisler and S. Feldman.

This course provides an introduction to theory and research in sociology. It demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. The course provides "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

R SOC 103 Self and Society (also SOC 103)

An introductory course in microsociology focusing on social processes in small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

R SOC 105 Economic Sociology (also SOC 105)

This course examines how sociologists understand the economy as a social phenomenon. The focus is on classical and contemporary theorists as well as empirical studies in economic sociology. Students consider the impact of the dynamics of capitalism and globalization on social life and how the economic organization of society can be related to religion, culture, and concepts of leisure. Also investigated are areas in which people interact with the economy on a daily basis: in selling, shopping, and consuming.

R SOC 175 Indian America in the Twentieth Century (also AIS 175)

This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways in which American Indians pursued strategies to sway the process of social change. American Indian political, economic, and cultural issues are examined through history, literature, music/art, and film/documentary. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians in the twenty-first century are explored. Guest lecturers, including American Indian scholars, leaders, and activists, provide additional perspectives.

R SOC 200 Social Problems (also SOC 200)

This course investigates a variety of current social problems from a sociological perspective with an overview of sociological theories applied to analyze these problems.

R SOC 201 Population Dynamics (also SOC 202)
Spring. 3 credits. S-U grades optional. Enrollment limited to 35. ALS students must register for this course as R SOC 201. T R 2:55–4:10. P. Blouduou-Enyegue.

This course provides an introduction to population studies. After reviewing basic concepts and demographic principles and techniques, the course focuses on how demographic processes (fertility, mortality, and migration) affect social and economic outcomes. Discussions cover special topics related to population growth and distribution, including mass education, marriage and family formation, labor force participation, inequality and poverty, women's status, resource allocation, and the environment.

R SOC 205 International Development (also SOC 206)
Spring. 3 credits. Enrollment limited to 74. M W F 10:10–11:00. P. McMichael.

New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is on the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. Also examined are the new social movements, inequality, such as environmentalism, feminism, and grassroots activism.

R SOC 206 Gender and Society (also WOMNS 206)
Spring. 3 credits. Enrollment limited to 100. M W F 11:15–12:05; sec, various times. B. Wojcikr.

Course familiarizes students with origin of gender hierarchies, social and behavioral similarities/differences between females and males, and the degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality are a major focus of the course. Objectives are met through readings, films, participant observation, and personal experiences.

R SOC 207 Problems of Contemporary Society (also SOC 207)
Fall. 4 credits. S-U grades optional. Lec, M W F 11:15–12:05; Sec F. D. Heckathom.

This course examines contemporary social problems, with a focus on their sources in the organization of society. Modern societies are based on three fundamental types of
The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identifying problems associated with technology transfer to other societies, learn ways to control technologies, and resolve some of the technologies lasting paradoxes.

R SOC 209 Social Inequality (also SOC 208)
This course reviews contemporary approaches to understanding the distribution of valued goods and the social processes by which such inequality comes to be seen as legitimate, natural, or desirable. We address questions of the following kinds: Are the major forms of stratification in human history? Is inequality and poverty an inevitable feature of human life? How many social classes are there in advanced industrialism? Is there a "ruling class"? Are lifestyles, attitudes, and personalities shaped fundamentally by class membership? Can individuals born into poverty readily escape their class origins and move upward in the class structure? Is there much countervailing power and mobility? Are social contacts and "luck" important forces in matching individuals to jobs and class positions? What types of social processes serve to maintain and alter racial, ethnic, and sex discrimination in labor markets? Is there an "underclass"? Will stratification systems take on new and distinctive forms in the future? These and other questions are addressed in light of classical and contemporary theory and research.

R SOC 213 Social Indicators, Data Management, and Analysis
Fall. 3 credits. Offered alternate years (complement of R SOC 214). T R 11:40–12:55. P. Ekoundou-Enyegue.
A survey of definitions of social indicators and general principles of social indicators research is illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, and so on, based on household surveys, key-informant surveys, and fieldwork are examined using personal computers.

R SOC 214 Research Methods for the Social Sciences
Various approaches to conducting research including observation techniques, unstructured, semi-structured, and structured interviews, experiments and focus groups are presented.

R SOC 215 Introduction to Organizations (also SOC 218)
Organizations provide the context for much of our everyday activity and are important not only in their own right but for their impact on our individual and collective choices. This course introduces the sociological study of organizations, from project teams to multinational.

R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also LSP 520)
Fall. 3 credits. S-U grades optional. Enrollment is limited to 15. T R 10:10–11:25. P. A. Parra.
Discusses the health status of minorities in the United States. This course explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

R SOC 261 Sociology of Sustainable Development
Fall. 3 credits. S-U grades optional. M W 2:55–4:10. Staff.
This course is designed to offer a critical evaluation of sustainable development as concept and practice. Although scholars and practitioners now analyze and debate it, sustainable development originated more in practice than in theory. Powerful global organizations, governments, and local activists have adapted and advanced it since it was popularized in the 1987 Brundtland report, giving rise to more than 40 definitions by 1994. To determine the social usefulness of such a widely debated term, students examine its evolution from the original eighteenth-century concept of development into sustainable development originated in the field of natural resource management in the 1970s and into an environmental concept of economic growth, or market society, in the 1980s. Then students debate this concept by evaluating case studies in the United States and other parts of the world.

R SOC 301 Theories of Society (also SOC 375)
Spring. 3 credits. Prerequisites: Rural sociology or sociology course. S-U grades optional. Enrollment is limited to 30. M W F 11:15–12:05. P. K. Gellert.
An introduction to the "classical" sociological theorists (Marx, Weber, Durkheim) of the late nineteenth and early twentieth century, as well as "emerging" and "missed" sociological voices of the period (such as C. Perkins, Gilman, W.E.B. DuBois). The course addresses the dramatic social upheavals including the fall of the 'old order', industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. The intellectual history, the influence of the theorists on subsequent sociology, and the relevance to contemporary society are emphasized.

R SOC 302 Evaluating Statistical Evidence (also SOC 301)
Fall. 4 credits. S-U optional. Lec, M W 11:15–12:05. S. Szelenyi.
A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

R SOC 305 Education, Inequality and Development
Improvements in formal school systems are often advocated as solutions for a variety of economic, health, political, and environmental problems in non-industrial nations. Commonly suggested improvements include: raising enrollments, reducing school inequalities, improving the quality and relevance of instruction, and adjusting the private returns to schooling. This course offers a critical assessment of human capital approaches to development. The course examines how improvements in mass schooling can be achieved in poor countries and how much such improvements are likely to boost these countries' economic growth. Specific reviews focus on: current trends in mass schooling across the developing world; patterns of schooling inequalities; policy tools for evaluating the impact of alternative education policies; and the theory and evidence on the benefits of mass schooling on development indicators.

R SOC 311 Social Movements (also AIS 311)
Social movements are collective efforts by relatively powerless groups of people to change society. Social movements have occurred throughout history and the world, even under the most repressive regimes. The intellectual rationale underlying the study of social movements is the belief that they are an important source of social change. Social movements are typically conceptualized as non- (or extra-) institutional political activity. That is, they are "politics by other means." In this course, we will present a sociological understanding of the twentieth century U.S. movements for social justice, including the environmental justice movement, the American Indian (Red Power) movement, and the anti-globalization movement. Through an examination of these and other movements, we will focus on the following questions: Under what circumstances do movements emerge? How do movements internally organize and choose political tactics and strategies to achieve their goals? How have these movements changed history, identities, society and politics?

R SOC 318 Ethnohistory of the Northern Iroquois (also AIS 318)
The development of Iroquois (Haudenosaunee) history and culture is traced to the present day.

R SOC 324 Environment and Society (also S&TS 324 and SOC 324)
Spring or summer. 3 credits. Enrollment limited to 40. T 2:55–4:10. C. Cahoon.
The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize
students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

This course examines issues of globalization and how they affect indigenous peoples worldwide. The processes of globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the North American Free Trade Agreement (NAFTA), have profound social, cultural and economic impacts upon indigenous peoples, such as the effect of NAFTA on the Indian people of Mexico and Central America, the impact of biotechnology and bioprospecting on the protection of indigenous knowledge and intellectual property rights, and whether to what extent civil society can truly include and address the interests of indigenous peoples.

[R SOC 331 Consumer Demographics (also AEM 416)] Fall. 3 credits. Letter grades only. M W 8:40-9:55. W. Brown.

Students participate in a consulting project, using demographic and geographic analysis to describe consumer characteristics and behavior for a chain of retail establishments. Requires skills in both quantitative analysis and technical writing.

The implications of genomics for society are far-reaching and controversial. In this course, a sociological perspective is deployed to examine and situate the debate by examining proponents’ and opponents’ assumptions about science and society. Special attention is given to the social origins and goals of agricultural and food biotechnologies, questions of social and environmental risk and reward, its relationship to previous trends in agricultural and food technologies, and the social forces and conditions that put biotechnology on the research and commercial agenda at this time. Placing the debate in social context promotes understanding and constructive dialogue regarding an important social issue.

[R SOC 336 Rural Areas in Metropolitan Society] Spring. 3 credits. K. Schaff.

This course analyzes the changing structure and role of small towns and rural areas in developed nations.

Our changing food and agricultural systems are examined sociologically, with attention to how these reflect the social organization of an increasingly global society. This course addresses such questions as: What are the major trends? What drives them? What do these trends imply for people, communities, and the environment? What are the social, human health, and environmental issues? What might be better alternatives and what strategies of development might achieve them?

[R SOC 360 Sociology of American Indians (also AIS 361)] Spring. 3 credits. S-U grading. Enrollment limited to 20. T R 2:30-3:45. Offered spring 2003.

This course is designed to emphasize the role of history and research in our understanding of American Indians. Towards that end, the relationship between the nation-state and indigenous populations is emphasized. Students are exposed to the following theoretical perspectives: world systems and dependency, internal colonialism, social disintegration, the social construction of reality, political mobilization, and ethnic reorganization. The course is also historical and comparative, as students study different Indian tribes located in the United States and Canada.

[R SOC 367 American Indian Politics and Policy (also AIS 367)] Fall. 3 credits. S-U grading. Enrollment limited to 20. T R 2:55-4:10. B. Baker.

This course addresses the Constitutional basis of the Federal-Indian relationship through an examination of treaties, Supreme Court decisions, and congressional law/policy. The effects of European and American forms of governance on traditional American Indian political structures are discussed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribal governments are addressed relative to state and federal governments.

[R SOC 370 Comparative Issues in Social Stratification (also SOC 371)] Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25-2:40 or T R 8:40-9:55 (depending on professor). T. A. Lyon or S. Feldman.

This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning, and experiences of inequality. Throughout the course special attention is given to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

[R SOC 380 Independent Honors Research in Social Science] Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. Staff.

Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

[R SOC 418 Population Policy (also B&SOC 414)] Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Enrollment limited to 15. T R 10:10-11:25. Offered alternate years. Not offered 2003. Staff. The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.

This course analyzes the determinants and consequences of internal and international migration in developed and developing nations. Multilevel and multidisciplinary approaches are emphasized. Public policy implications of the volume and composition of migration for origin and destination communities are examined. Techniques and measurement issues are discussed. (For 629, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to term project.)

A comparative examination of ethnic stratification and mobility that focuses principally on dimensions of social groups that can be empirically measured using readily available demographic sources. These include residential segregation, occupational status and mobility, marriage and family formation patterns, health and mortality, family structure, fertility, and intermarriage. The role of migration in shaping ethnic stratification systems is also examined. About half of the course examines the U.S. situation. Other societies receiving significant attention include India, Brazil, Nigeria, and several European societies. For 631, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

An analysis of the "graying" of America and the responses of the public and private sectors to this demographic revolution.

Examines major historical and recent demographic transitions in mortality, fertility, age structure, and composition and explores the relationships between these transitions and the social, or economic, and cultural changes been experienced by diverse societies prior to, during, and following the
onset and conclusions of the demographic shifts. Case studies from diverse historical periods and geographic locations are used. Graduate students also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

[R SOC 440 The Social Impact of Resource Development (also AIS 440)]
This seminar explores social impact assessment applications in different parts of the world paying particular attention to impacts on native/indigenous peoples.

[R SOC 494 Special Topics in Rural Sociology]
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[R SOC 495/695 Population and Development in Sub-Saharan Africa]
Fall. 3 credits optional. Prerequisite: permission of instructor. T R 2:55-4:10. Not offered 2002-2003. P. Eloundou-Enyegue. This course examines recent trends in population, the economy and environment in sub-Saharan Africa. After reviewing these individual trends, the course examines possible linkages among these three processes. Specific discussions examine the theory and evidence on the effects of rapid population growth on the economy, mass schooling, health, gender and community structures, sustainable agriculture, and inequality. Graduate students are assigned additional reading and writing and meet bi-weekly in a seminar format.

[R SOC 497 Independent Study in Rural Sociology]
Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional. Informal study may include a reading course, research experience, or public service experience.

[R SOC 560 Managing Local Environmental Systems: Social Perspectives and Research Bases]
Fall. 3 credits. S-U optional. Enrollment limited to 15. Not offered 2002-2003. W 1:25-4:25. Staff. Course is for students with diverse backgrounds: undergrads, grads, people in professional careers, others with interest in environmental issue identification, resolution, and management. Course discussions include ecological, social, economic, and local government perspectives. Via lab exercises throughout the semester, students have opportunities to apply the concepts and principles of these perspectives to analysis of specific local environmental management problems. Readings, lectures, and a course project are mandatory.

[R SOC 599 M.P.S. Project]
Fall and spring. 1-6 credits. S-U optional. Lee, TBA. Graduate faculty. For students admitted specifically to a M.P.S. program.

[R SOC 601 Theoretical and Methodological Approaches to Community and Rural Development]
Fall. 3 credits. Letter grade only. Prerequisite: graduate student. Lec. W 7:30-10:00 p.m. Staff. A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: (1) community structural change-making, (2) participatory processes for generating community development, and (3) planning strategies as mechanisms for creating community development opportunities.

[R SOC 602 Community Development Seminar]
Spring. 1 credit. Prerequisite: R SOC 601. W 7:30-10:00 p.m. (meets tri-weekly.) Staff. A participatory seminar for feedback, collective learning, and guidance as M.P.S. students apply community and rural development theory and methods in these projects, work with local and regional communities.

[R SOC 603 Classical Sociological Theory]
Fall. 4 credits. Prerequisites: open to graduate students only. T R 2:55-4:10. M. J. Pfeffer. Students review the mainstreams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature, used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives of the course are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

[R SOC 606 Sociological Theories of Development]
Spring. 3 credits. T 2:30-5:30. P. K. Gellert. This course is a critical examination of a historical range of theories and research in the sociology of development from the post-war period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and criticized both theoretically and in terms of practical challenges from environmental, indigenous and other social movements.

[R SOC 607 Sociology of Natural Resources and Development]
Fall. 3 credits. Not offered 2002-2003. P. Gellert. By examining historical cases primarily from Southeast Asia, students engage in theoretical debates and practical implications i.e., control and conflict among various individuals.

[R SOC 608 Demographic Techniques (also PAM 606)]
Fall. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U grades optional. W 3:30-7:30. D. Gurak, K. Joyner. This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, and quality of demographic data, population estimation and projection, and stable population models.

[R SOC 611 Globalization and Social Movements]
Spring. 3 credits T 1:25-4:25. A. Gonzales. This seminar explores the changing trajectories of social movements amidst economic, political and cultural globalization. Social movements have organized in opposition to the increased environmental destruction, class disparities and social inequalities that have often accompanied the global spread of capitalism. Globalization from above has given rise to globalization from below as activists have employed new technologies of communication and issued universal human rights appeals. However, in organizing transnationally and utilizing structural principles, movements may displace their energies and targets from local to transnational arenas, from substantive to procedural inequalities, and from grassroots activism to incorporation within institutions. We examine these issues in the context of social justice movements, indigenous rights movements, environmental movements, and democracy movements in several regions of the world. We consider to what extent globalization heightens divisions between universalistic and particularistic movements or contributes to the creation of a global civil society which can protect and extend human rights.

[R SOC 612 Population and Development in Asia (also WMNS 612)]
Spring. 3 credits. Offered odd years. W 4:30-7:30. L. B. Williams. This graduate seminar considers issues surrounding population and development in Asia. Case studies pertaining to Southeast Asia are highlighted. The linkages between population and development are elaborated and both are considered from a historical perspective. Recent social, economic, and demographic changes in the region are considered in depth. Students will consider the role of the family, labor force, and broader social context are also examined.

[R SOC 615 Qualitative Research Methods]
Fall. 3 credits. Letter grades only. Lec. W 10:10-11:10. L. Williams. This seminar will introduce students to a number of qualitative methods of field research for the social sciences. We will discuss field observation, archival research, in depth individual interviews, and focus group interviews. We will assess the strengths and weaknesses of various strategies of field research and consider a range of practical matters such as choice of research site (and sample where appropriate), interviewing and observational techniques, choice of questions, issues of validity and reliability of the information obtained, and (briefly) interpretation of findings. The ethics of fieldwork will be highlighted.

[R SOC 617 Foundations in Social Research: Comparative Epistemologies]
Fall. 3 credits. Letter grades only. W 1:25-4:25. T. Lyson. This seminar is designed to introduce graduate students to the social science to the variety of epistemological approaches used by social
scientists to analyze social change and development. Both positivist and non-positivist approaches are examined. The relationship of quantitative and qualitative methodologies are related to different epistemologies.

[R SOC 618 Research Design I
Students apply principles to development of several common types of scales including extensive computer use. Problems of measurement, design of instruments and reliability are discussed.]

R SOC 619 Quantitative Research Methods
Graduate level course in measurement and analysis of survey, demographic and observational data. Topics include linear regression, analysis of variance, and analysis of covariance with both continuous and categorical variables. Introduction to logistic regression and some nonlinear models. Special attention is given to handling ordered and unordered categorical data as these are prevalent in social/demographic data sets. Data from real surveys like the American National Election Studies and the General Social Surveys will be analyzed using programs like SAS and SPSS. Includes labs writing programs to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting and other data handling procedures.

R SOC 620 Sociology of the Community
This graduate seminar critically analyzes the intellectual core of community sociology, and its theoretical development over time. “Community,” as a concept, is often reified and rarely critically examined, hence the course begins by clarifying the various ways in which “community” has been conceptualized by contemporary sociologists. The course provides students with both a grounded conceptual foundation and an overview of multiple strategies for conducting research on community structure and change in the United States and internationally. The course includes a critical examination of the forms and shapes sociological research on the community assumes. A case study approach is used to examine the assumptions driving the methodologies and analysis of both contemporary and historical research.

R SOC 621 Foundations of Environmental Sociology
Fall. 3 credits. Open to graduate students only. S-U grades optional. Enrollment limited to 20. W 10:10-12:35. Offered every year. Staff.
Foundations of Environmental Sociology provides graduate students with a broad survey of the literature in this disciplinary specialty area. Students review the history of thought in environmental sociology as well as key literature in the various substantive foci of this specialty. The principle objective of this course is to provide graduate students specializing in environmental sociology with a firmer grasp of the content, controversies, and trends in the area. Sessions are conducted in a seminar style, and discussions are focused on close review of assigned readings.
[R SOC 718 Multidimensional Measurement and Classification]

An advanced course in measurement and scaling, building from work by Thurstone, Guttman, and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor-analysis models, factoring design, factoring techniques, and comparison with factor-analysis models. Cluster analysis and multidimensional scaling are the other major techniques discussed. As matrix algebra is an integral part of these procedures, class time is devoted to this topic. Computers are used to analyze fit to models.

[R SOC 719 Logistic and Log Linear Models]

The first part of the course reviews multiple regression theory and procedures, after which extensions of these models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. There are advanced regression concepts and estimation techniques are discussed. The main focus of the course is on logit and log linear models. Computerized labs are an integral part of the course.

[R SOC 725 Theories of State, States of Theory]
Fall. 3 credits. W 1:25-4:25. S. Feldman.

This course examines how processes of political, economic, and social restructuring reshape state capacities and processes of state formation. The animating question: How have political, economic, and social restructuring reshaped state capacities and processes of state formation? How have we understood the meanings, activities, and power of rule? Critical to these discussions are the contours of nationalisms, communalisms, and fundamentalisms as these emerge and reconfigure national, regional, and global alliances and practices, as well as shape interpretations of current processes of resistance, change, and terms of intervention and exchange. The course engages with historical, poststructural, postcolonial, and comparative theories particularly as these have emerged and been refined by current debates in South Asia, Latin America, and Africa.

[R SOC 730 Sociology of Global Change]

Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multi-layered entity anchored in an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and transnational social movements). The seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.

[R SOC 791 Teaching Experience]
Fall or spring. Limited to graduate students. S-U grades only. Graduate faculty. Participation in the ongoing teaching program of the department.

[R SOC 800 Master's-Level Thesis Research]
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted specifically to a Master’s program.

[R SOC 872 Development Sociology]
Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional. Graduate faculty.

[R SOC 900 Graduate-Level Thesis Research]
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

[R SOC 901 Doctoral-Level Thesis Research]
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

ADMINISTRATION

Purus Otpadwala, dean
John E. Zissovici, associate dean
Nasrine Seraji, chair, department of architecture
Buzz Spector, chair, department of art
Pierre Clavel, chair, department of city and regional planning
Cynthia K. Prescott, director, administration and finance
Elizabeth A. Cutter, director, admissions and student services
Walter C. Williams, director, alumni affairs and development
Leon Lawrence, director, multicultural affairs
Margaret N. Webster, director, visual resources facility
Jayne A. Worden, registrar

FACULTY ADVISERS

Architecture students are assigned faculty advisers. Juniors and seniors have one assigned adviser and are also invited to share their concerns with and to seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean. Students in the fine arts department are assigned a faculty adviser for the first year. After the first year, students may select their advisers. Students are required to have an adviser throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers. All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

The college offers programs leading to the bachelor's degree—the five-year program in architecture lead to the Bachelor of Science. Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines. Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over sixty, supplemented by visiting professors, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the lower level of Sibley Dome. There are darkrooms in the Department of Art that are available for general use by students in the college and are primarily used as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lilian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 183,900 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,400 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 450,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its program freely crosses academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the Johnson Art Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored 17th century Palazzo Lazzaroni in the center of the eternal city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, fine arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that
COLLEGE ACADEMIC POLICIES

Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dom. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

Scholastic Standards
Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have an average for the term of not less than C (2.0). The record of each student who falls below the standard will be reviewed by the college Academic Records Committee for appropriate action, as described below:

1) Warning means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.

2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.

3) Required leave of absence: academic deficiency. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after a leave of absence of at least two semesters. Application for readmission is made by letter addressed to the college Academic Records Committee. The student must submit evidence that the time has been well used and, if employed, must submit a letter from the employer. Students on required leave are not allowed to register extramurally at Cornell as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department to request credit for courses taken. Readmission to the college after a required leave of absence is at the discretion of the college Academic Records Committee. Application for spring-term readmission must be made by November 15, and application for fall-term readmission must be made by April 15. The second required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college. Refer to the Architecture, Art, and Planning Handbook (whitebook) for further information regarding required leaves of absence.

4) Required withdrawal: may not reregister in the College of Architecture, Art, and Planning. The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient. A cumulative average of at least C- (1.7) is required for graduation.

ARCHITECTURE

Professional Degree Program
The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence of courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental controls, structures, construction and computer applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

Note on Professional Accreditation
In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes two types of degrees: the Bachelor of Architecture and the Master of Architecture. A program may be granted a five-year, three-year, or two-year term of accreditation depending on its degree of conformance with established educational standards. Master's degree programs may consist of a preprofessional undergraduate degree and a professional graduate degree, which, when earned sequentially, comprise an accredited professional education. The preprofessional degree, however, is not, by itself, recognized as an accredited degree.

Rome Program
The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students, outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, thesis introduction, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

Overlap Program
For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year, interested students petition the department to substitute ARCH 601-602 or 603-604 for ARCH 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501-502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 33 credits, including ARCH 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

### Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students. It is often advantageous for undergraduates to concentrate in specific sub-disciplines of architecture, especially if they anticipate application to specialized graduate programs, therefore, the following concentrations in architecture are offered within the department for B.Arch. and B.F.A. in Architecture candidates only:

- Architecture, Culture, and Society 342 (or equivalent), plus 9 credits in this area.
- Architectural Science and Technology 261, 262, 263, 264, 361, 362, 363, distribution requirement (3 credits), plus 6 credits in this area.
- History of Architecture 181, 182, distribution requirements (9 credits), plus 7 credits (including a 4 credit hour seminar course) in this area.
- Theory of Architecture 231, 232, distribution requirements (6 credits), plus 6 credits in this area.
- Visual Studies in Architecture 151, 152, distribution requirement (3 credits), plus 9 credits in this area.
- Students wishing to receive recognition for a concentration, must submit a Concentration Request form to the Architecture Department Office. In order for a course to count toward a concentration, the student must receive a grade of C or better.

### Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.
Curriculum. A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 24 credits of 300-level courses in architectural history: ARCH 380 through ARCH 399
2) 12 credits in 600-level architectural history seminars: ARCH 681 through ARCH 699; or
8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only
3) One 300-, 400-, or 600-level course in architectural theory
4) 24 credits in electives selected in consultation with the student's adviser
5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual Degree Options
Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information on this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture
The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program offered for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

Concentration In Architecture For Non-Majors
A special concentration has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Non-Majors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students are admitted to this program through application to the Department of Architecture.

The curriculum for students accepted to the Concentration in Architecture Program totals 15 credit hours. Grades received must be C or better in all courses.

9 credits of required courses, including one semester each of:

ARCH 130, 131, or 132: Introduction to Architecture 3 credits
ARCH 151: Drawing 1 2 credits
ARCH 111: Concentration in Architecture: Design Studio 4 credits

(ARCH 110: Introduction to Architecture: Design Studio, offered in the summer only, may substitute for ARCH 111.)

And 6 credits of elective department courses, chosen, for example, from among the following:

ARCH 130, 131, 132: Introduction to Architecture 3 credits
ARCH 152: Drawing II 2 credits
ARCH 181, 182: History of Architecture I, II 3 credits each
ARCH 342: Architecture as a Cultural System 3 credits each
ARCH 231, 232: Architectural Analysis I, II 2 credits each
ARCH 263, 264, 363: Structures 3 credits each
ARCH 261, 351, 362: Environmental Controls 3 credits each
ARCH 262: Building Technology 3 credits
ARCH 476: Computer Applications 3 credits

Architectural Design
Courses in brackets are not offered this year.

Each student in the architecture program (undergraduate, graduate, and in the Rome Program) is charged a fee each semester to help defray the continuing costs of refurbishing and replacing equipment.
An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102 Design II
Spring. 6 credits. Limited to department students. Prerequisite: ARCH 101 and ARCH 151. A continuation of ARCH 101. Staff. Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201-202 Design III and IV
Fall and spring. 6 credits each term. Coregistration in 251-252 and completion of ARCH 151-152 required. Limited to department students. Prerequisite for ARCH 201 is ARCH 102 and ARCH 152. Prerequisite for ARCH 202 is ARCH 201. Staff.

ARCH 301-302 Design V and VI
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 301 is ARCH 202. Prerequisite for ARCH 302 is ARCH 301. Staff.

ARCH 401-402 Design VII and VIII
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 401 is ARCH 502. Prerequisite for ARCH 402 is ARCH 401 or ARCH 309. Staff. Programs in architectural design, urban design, architectural technology and environmental science, and other topics.

ARCH 501 Design IX
Fall or spring. 6 credits. Limited to department students. Prerequisite: ARCH 102. Staff. Programs in architectural design, building typology investigations, and research leading to the completion of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 502 Design X—Thesis
Fall or spring. 8 credits. Prerequisite: ARCH 501 or ARCH 500 and ARCH 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement. Staff.

ARCH 601-602 Special Program in Architectural Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only. Staff.

ARCH 603-604 Special Program in Urban Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only. Staff.

Graduate Courses

ARCH 701-702 Problems in Architectural Design
Fall and spring. 9 credits each term. Staff. Basic first-year design course for graduate students whose major concentration is architectural design.

ARCH 703-704 Problems in Urban Design
Fall and spring. 9 credits each term. Staff. Basic first-year design course for graduate students whose major concentration is urban design.

ARCH 801 Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH 701 and ARCH 702. Staff. Second-year design course for graduate students whose major concentration is architectural design.

ARCH 802 Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: ARCH 703 and ARCH 704. Staff. Second-year design course for graduate students whose major concentration is urban design.

Elective Design Courses

ARCH 103-104 Elective Design Studio
103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for ARCH 103: permission of instructor required. Prerequisite for ARCH 104: ARCH 103 and permission of instructor. Staff.

ARCH 200, 300, 400 Elective Design Studio
Fall or spring. 6 credits. This course is for students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Staff.

ARCH 309 Elective Design Studio
Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 202. Staff. ARCH 309 is a design studio that, upon completion, will be credited as an elective design studio. With the successful completion of ARCH 302, ARCH 309 may be used as a substitute for ARCH 401.

ARCH 500 Design IX Alternate Studio
Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 402. Co-requisite: ARCH 510. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510. In order to take ARCH 502, one must have a grade of C or better in ARCH 500 and a passing grade in ARCH 510. Staff. For description, see ARCH 401-402.

ARCH 503 Design IXa
Fall and spring. 6 credits. Limited to department students. Prerequisites: ARCH 402 and a passing, but non-advancing, grade in ARCH 500. A structured studio for those needing to retake ARCH 501. The course operates within the fourth-year design studios. Only if ARCH 502 is taken in conjunction with ARCH 503 can it be followed by ARCH 502.

ARCH 504 Design Xa
Fall or spring. 6 credits. Limited to department students. Prerequisite: ARCH 503 or a passing, but non-advancing, grade in ARCH 502. A structured studio for those needing to take an alternative to design thesis. This course operates within the fourth-year design studios.

Related Courses and Seminars

ARCH 110 Introduction to Architecture: Design Studio
Summer. 3 credits. S-U option. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year. Staff. A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty, as well as periodic reviews of the group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 111 Concentration in Architecture: Design Studio
Fall or spring. 4 credits. Open to architecture majors. Prerequisite: acceptance into the Concentration in Architecture Program. Staff. A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as, by periodic reviews by guest critics.

ARCH 303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study. This course does not count for design sequence credit.

ARCH 306 Praxis: Community Design Workshop (also ARCH 606)
Fall or spring. 3 credits. Prerequisites: permission of instructor. Not offered every year. F. Davis. Praxis is a workshop-based, hands-on course directed to underserved local and global communities who seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork, as well as written, verbal, and graphic communication skills to negotiate the public realm.
ARCH 313.01 Furniture Design (Visual Studies)  
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn an architectural credit must enroll in this section. Prerequisite: permission of instructor. Not offered every year. G. Hascup. This course explores the history, design and materiality of furniture. Analysis of materials and joinery-connector systems are developed in parallel with ergonomic restraints. Design transformation occurs through cycles of conceptual alternatives (models and drawings), increasing in scale as the idea evolves. Full-scale prototypes and detailed tectonic drawings are required on three pieces.

ARCH 313.02 Furniture Design (Technology)  
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn an architectural technology credit must enroll in this section. Prerequisite: permission of instructor. Not offered every year. G. Hascup. For description, see ARCH 313.01.

ARCH 313.03 Furniture Design (Free Elective)  
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn in-college elective credit must enroll in this section. Prerequisite: permission of instructor. Not offered every year. G. Hascup. For description, see ARCH 313.01.

ARCH 317 Contemporary Italian Culture  
Fall or spring. Variable credit (maximum 5). For students in the Rome Program only. Staff. This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice  
Fall or spring. 3 credits. M. Schack. An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect’s responsibilities from the precontract phase through construction completion. Application of computer technology in preparing specifications.

ARCH 412 Professional Seminar  
Fall or spring. 3 credits. Prerequisite: ARCH 411. M. Schack. Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of the firm’s practice and the identification of agency roles.

ARCH 510 Thesis Introduction  
Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with ARCH 500. Prerequisite for ARCH 500 is ARCH 402. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510 during a foreign summer program or in Rome. Staff. Lectures, seminars, and independent research leading to complete development of the student’s thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 605 Special Problems in Design  
Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Staff. Independent study. This course does not count for design sequence credit.

ARCH 606 Praxis: Community Design (Workshop to 500E)  
Fall or spring. 3 credits. Prerequisites: permission of instructor. Not offered every year. F. Davis. For description, see ARCH 506.

ARCH 610 Graduate Design Seminar  
Fall. 3 credits. Intended for, but not limited to, graduate students in the Architectural Design and Urban Design Program. Not offered 2002-2003. Staff. Issues in architectural and urban design.

ARCH 611-612 Urban Housing Developments  
611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisites: permission of instructor. Not offered every year. Staff.

ARCH 613 Transportation  
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 2002-2003. Staff. The affect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 614 Low-Cost Housing  
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 616 Seminar in Urban and Regional Design  
618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students. Not offered 2002-2003. Staff. A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by participants and visitors.

ARCH 130 An Introduction to Architecture: Lectures  
Summer. 3 credits. S-U option. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any individual with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year. Staff. A survey course that covers the many facets of architecture: history, design principles, preservation, landscape architecture, building technology, and cultural factors. The format of the course comprises lectures, demonstrations, films, and field trips. Course evaluation is based on quizzes and a final examination.

ARCH 131 An Introduction to Architecture  
Fall. 3 credits. Open to out-of-department students only. ARCH 131 is not a prerequisite for ARCH 132. Staff.

ARCH 231 Architectural Analysis I  
Fall. 2 credits. Architecture students must register concurrently in ARCH 201. Staff. An introduction to analysis of the object of study in the interest of broadening one’s understandings of the ways in which architecture can connote and denote meanings.

ARCH 232 Architectural Analysis II  
Spring. 2 credits. Architecture students must register for this course concurrently with ARCH 202. Staff. Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 334 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture [also ARCH 634]  
Fall or spring. 3 credits. Limited to third-year level students and above. J. Wells. Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the seminar is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 335 Theory of Architecture  
Fall or spring. 3 credits. Prerequisite: ARCH 231-232 or permission of instructor. Not offered 2002-2003. Staff.

ARCH 336 Theory of Architecture  
Fall or spring. 3 credits. Limited to third-year students and above. Not offered 2002-2003. Staff. Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier’s architecture and urban theories, architectural sequence, facades, the free plan, and “DOMINO” theory.
ARCH 337 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 338 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic is announced before preregistration.

ARCH 339 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. L. Mirin and C. Pearman. An examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 431 Theory of Architecture
Fall. 3 credits. Prerequisite: third-year status. Not offered 2002-2003. Staff. Gardening and architecture; urban parks; villas and country houses; and Italian, French, and English landscape gardens. Site planning.

ARCH 432 Theory of Architecture
Spring. 3 credits. Prerequisite: third-year status. Not offered 2002-2003. Staff. The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and cultural change.

ARCH 434 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334)
Fall or spring. 3 credits. Limited to third-year level students and above. J. Wells. For description, see ARCH 334.

ARCH 634 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture
Fall or spring. 3 credits. Limited to third-year level students and above. J. Wells. For description, see ARCH 334.

ARCH 637 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 638 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic is announced before preregistration.

ARCH 648 Architecture in its Cultural Context I and II
Fall, 6 credits; spring, 4 credits each term. Prerequisite: permission of instructor. Not offered every year. B. MacDougall. Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.

ARCH 650 Architectural Publications
Fall or spring. 3 credits. B. MacDougall. For description see ARCH 334.

Visual Studies
Darkroom fees are charged for all photography courses.

ARCH 151 Drawing I
Fall. 2 credits. Staff. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151. Staff. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also ART 161)
Fall, spring or summer. 3 credits. Staff. For description see ART 161.

ARCH 252 Introductory Photo II (also ART 261)
Fall, spring or summer. 4 credits. Prerequisite: ARCH 251 or ART 161, or permission of instructor. Staff. For description see ART 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 4). May be repeated for credit. Staff. Colloquy and practicum on issues related to the production of an architectural journal, as
well as other theoretical and practical production issues related to the exchange of architectural ideas. Exercises cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography
Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Staff. Independent study.

ARCH 458 Special Investigations in Visual Studies I
Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 459 Special Topics in Visual Studies I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff. Topics announced before preregistration.

ARCH 465 Special Investigations in Visual Studies II
Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 467 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff. Topics announced before preregistration.

ARCH 473 Special Investigations in Structures
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 475 Special Investigations in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, and 265 or permission of instructor. Not offered every year. Staff. Topics announced before preregistration.

ARCH 485 Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 262 or permission of instructor. Not offered every year. Staff. Topics announced before preregistration.

ARCH 475 Special Investigations in Construction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 467 Working Drawings (also ARCH 665)
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, 265 or permission of instructor. Not offered every year. J. Ochshorn. For description, see ARCH 367.

Environmental Controls
ARCH 261 Environmental Controls—Site Planning
Fall. 3 credits. Staff. The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361 Environmental Controls—Lighting and Acoustics
Fall. 3 credits. Staff. Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design, light, color, and form. Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems
Spring. 3 credits. Staff. Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems, and plumbing.
ARCH 464 Special Topics in Environmental Controls
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year. Staff.
Topics announced before preregistration.

ARCH 474 Special Investigations in Environmental Controls
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff.
Independent study.

Computer Applications

ARCH 372 Imaging and the Electronic Age
Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures, 1 recitation. Not offered every year. D. Greenberg.
Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology are presented. Technical fundamentals of computer graphics capabilities are emphasized. The latter half of the course covers the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education. The course is heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 374 Computer Graphics and Visualization (also COM S 417)
Fall. 3 credits. Prerequisite: COM S/ENGRD 211. Staff.
For description, see COM S 417.

ARCH 375 Practicum in Computer Graphics (also COM S 418)
Fall. 2 credits. Enrollment limited. Prerequisites: COM S 212 and permission of instructor. Recommended: COM S 314. Corequisite: COM S 417. Staff.
For description, see COM S 418.

ARCH 376 Microcomputer Applications in Design
Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor. Not offered 2002-2003. Staff.
This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It combines seminar-style presentations with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 379 Design by Computer
Spring. 3 credits. Prerequisites: limited to third-year and above. Not offered every year. Staff.
Exploration of the formalization of the design process for computability with the computer, and the role of computers in design. Lecture with CAD lab.

ARCH 476 Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 374 or 379 or permission of instructor. Not offered every year. Staff.
Topics announced before preregistration.

ARCH 477-478 Special Projects in Computer Graphics
477, fall; 478, spring. Variable credit (maximum 3). Prerequisite: fourth-year students or above. Prerequisites: ARCH 374, plus concurrent registration in COM S 314 or equivalent, and permission of instructor. D. Greenberg.
Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector, and color raster displays.

ARCH 479 Micro-Computer Applications in Design (also ARCH 479)
Fall. 3 credits. Prerequisites: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate status. H. Richardson.
The course explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course is devoted to examining the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second part of the course explores the uses of information technologies to model and simulate the creative design process. These explorations include developing a library of design ideas as building blocks for design, creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts, and "reverse architecture" of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

Graduate Courses

ARCH 679 Micro-Computer Applications in Design (also ARCH 479)
Fall. 3 credits. Prerequisite: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate studies. H. Richardson.
For description, see ARCH 479.

ARCH 761-762 Architectural Science Laboratory
761, fall; 762, spring. 6 credits each term. Open to architectural science graduate students only. D. Greenberg.
Projects, exercises, and research in the architectural sciences.

ARCH 763-764 Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit (maximum 12). Limited to architectural science graduate students. Staff.
Independent study.

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology.Incoming students take ARCH 181-182 in the first year, and three additional courses from the 380-399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to satisfy history of architecture or in-college requirements.

Sequence Courses

ARCH 181 History of Architecture I
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain. Staff.
The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 182 History of Architecture II
Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of ARCH 181. Staff.
The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

Directed Electives

ARCH 380 History of Theory
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.
This course, in which classroom discussion and debate play a central role, explores the history of important intellectual questions involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 381 From Eutopia to the Ghetto: Renaissance Urban Form
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky.
Significant developments in European urban design from 1300-1800. Particular attention will be awarded to Italy and Spain. The course focuses on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions contextualize the city within a larger cultural framework. We will consider how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and patronage of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice is also emphasized through the discussion of several twentieth-century urban plans and built projects.

ARCH 382 Architecture in the Middle Ages (also ART H 332 and RELST 332)
Fall. 4 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.
For description, see ART H 332.

ARCH 383 The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky.
This course examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. We focus on late eighteenth-, nineteenth-, and twentieth-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovanni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (such as the world's fair, department stores, morgues, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 384 The Urban Landscape of Renaissance Rome: 1450-1600
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Latsansky.

This class is an exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. We survey the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity; the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that put the city on the map and served as an excellent laboratory for architects to test their ideas.

ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. C. Otto.

Architects put revolutionary attitudes about form and space into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 387 The 19th Century: Tales of the City
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods.

Nineteenth-century cities as settings for modernism and modernities, new visions, and experiences of modern life, are the focus of this course. The relationship between urbanity and creativity that emerges during the 19th century engages us in Berlin, Paris, London, New York, Chicago, New Orleans, and other cities. Issues of center and periphery, nation and locality, and capital and countryside also shape urban pleasures and dangers for men, women, and the other as revealed through histories of the built environment but also through literature, painting, photography, and film are examined.

ARCH 388 Modernism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. C. Otto.

Preoccupations and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in serving the state during the 1930s.

ARCH 389 Architecture, Revolution, and Tradition
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. C. Otto.

From early eighteenth to early nineteenth-century European society underwent profound changes—absolutism—the doctrine of unlimited governmental control was challenged; Enlightenment attitudes—commitments to human reason, science, and education—gained ascendancy. This course considers architectural and urban design during these tumults of time. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 390 American Architecture and Building I (also AM ST 390)
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods.

A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts are emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders are examined. The architectural expressions of Native Americans, African Americans, women, and others are treated in addition to those of European colonists and settlers.

ARCH 391 American Architecture and Building II (also AM ST 391)
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods.

A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392 Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods.

An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in commercial and avant-garde films from the medium's birth until the present day. The focus varies each semester with particular emphases to include the modern house and housing, the modern city, technology, and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theatre, literature, and advertising also are examined. The course includes selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

ARCH 393 The Cumulative City
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. C. Otto.

Well-established cities were transformed by radical and uninformed change in the nineteenth and twentieth centuries. Politics and economies were fast, populations expanded, and new technologies shaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 394 Toward the Millennium
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.

Topics to be announced.

ARCH 395 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.

Topics to be announced.

ARCH 396 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.

Topics to be announced.

ARCH 397 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.

Topics to be announced.

ARCH 398 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.

Topics to be announced.

ARCH 399 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.

Topics to be announced.

Courses in Preservation

ARCH 563 Measured Drawing (also CRP 567)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor. M. Tomlan.

For description, see CRP 567.

ARCH 564 Problems in Contemporary Preservation Practice (also CRP 563)

For description, see CRP 563.

ARCH 565 Perspectives on Preservation (also CRP 565)
Fall. 3 credits. M. Tomlan.

For description, see CRP 562.
ARCH 566 Documentation for Preservation (also CRP 560)  
Fall or spring. 3 credits. M. Tomlan.  
For description, see CRP 560.

ARCH 567 Building Materials Conservation (also CRP 564)  
Spring. 3 credits. Open to juniors, seniors, and graduate students. M. Tomlan.  
For description, see CRP 564.

ARCH 568 Historic Preservation Planning Workshop: Surveys and Analyses (also CRP 561)  
Fall or spring. 4 credits. M. Tomlan.  
For description, see CRP 561.

Graduate Seminars in the History of Architecture and Urbanism  
All topics for ARCH 682 to ARCH 699 will be announced prior to the start of the semester.

ARCH 680 Seminar in Historiography  
Fall. 4 credits. Prerequisite: permission of instructor. Staff.  
Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.

ARCH 682 Seminar in Urban History  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 683 Seminar in the History of Theory  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. M. Lasansky.

ARCH 686 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. C. Otto.

ARCH 688 Seminar in Twentieth-Century Architecture and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. C. Otto.

ARCH 689 Seminar in the History of Cities  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 690 Seminar in American Architecture, Building, and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. M. Woods.

ARCH 692 Seminar in Nineteenth-Century Architecture, Building, and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. M. Woods.

ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism  
Fall or spring. Variable credit (maximum 5). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements. Staff.  
Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism  
Fall or spring. 4 credits. For B.S. honors candidates in history only. Staff.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism  
Fall or spring. Variable credit (maximum 12). Prerequisite: permission of instructor. Staff.  
Independent study for graduate students only.

ARCH 899 M.A. Essay in the History of Architecture and Urbanism  
Fall or spring. 4 credits. Staff.  
Independent preparation of the M.A. essay, often developed from topics investigated in ARCH 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism  
Fall or spring. Variable credit (maximum 12). Staff.  
Independent study for the doctoral degree.

ART  

Undergraduate Program  
The curriculum in art is a program of study within the College of Architecture, Art, and Planning, as well as other colleges at Cornell University. The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it to be an excellent preparation for a career in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four years, students follow a common course of study designed to provide a broad introduction to the arts and a basis for a broad studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression. A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, or a Bachelor of Science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an adviser in both colleges of their dual degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met.

It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

Bachelor of Fine Arts Degree Requirements  
Credits and Distribution  
130 credits are required for the B.F.A. degree. A minimum of 62 are taken in the Department of Art. A minimum of 57 are taken outside the department.

Curriculum  
Students are expected to take an average course load of 16 credits per semester during their four years. If a student wishes to take more than three studio courses in any one semester they must file a petition. All students must take at least one studio course a semester unless otherwise excused by exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned to the department prior to the act. No student unless in the first year of the BFA program will be permitted to deviate from the required curriculum.
Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, photography, or printmaking (26 credits). Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved projected course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in printmaking)

The required courses for each concentration are as follows:

- **Painting**: ART 121, 221, 321, 322, 421, 422 (Senior Thesis)
- **Sculpture**: ART 141, 241, 341, 441, 442 (Senior Thesis)
- **Printmaking**: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 (Senior Thesis)
- **Photography**: ART 161, 261, 263, 264, 265, 361 (1 of 3); 461, 462 (Senior Thesis)

Dual Concentration

If a student is interested in studying in more than one area, they may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration (14 for printmaking). Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

- **First Area of Concentration**
  - Total Credits
  - **Painting**: ART 121, 221, 321, 322, 421, 422 23
  - **Sculpture**: ART 141, 241, 341, 441, 442 23
  - **Printmaking**: ART 131/132/133 (2 of 3); 231/232/233 (1 of 3) 431, 452 22
  - **Photography**: ART 161, 261, 263/264/265/361 (1 of 4), 461, 462 23

- **Second Area of Concentration**
  - Total Credits
  - **Drawing**: ART 151, 152, 251, 252, independent study 15
  - **Painting**: ART 121, 221, 321, 322 15
  - **Sculpture**: ART 141, 241, 341, 342 15
  - **Printmaking**: ART 131/132/133 (2 of 3); 231/232/233 (1 of 3) 331 14
  - **Photography**: ART 161, 261, 263/264, 265/361 (2 of 4) 15

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.

Students must file an approved “Area of Concentration” form. In addition to the courses required of all BFA majors during their first and second year (see BFA curriculum), students must take two studios at a 200 level or 300 level, a minimum of 2 “Out of College” studio electives (OCE Studio) of 3-4 credits each, ART 481/Pre-Thesis Combined Media and ART/482 Thesis Combined Media.

Note: the total number of in/out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty advisor, the Art Department Rome Program advisor, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. (Under special circumstances, seniors may petition to attend the Rome Program.) Only under special circumstances, and with prior petition and approval, are seniors allowed to attend the Rome Program. Students wishing to spend two consecutive semesters in Rome must petition which should include the proposed course schedule for both semesters and must have appropriate faculty approval.

Rome Curriculum

</table>

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level Theory and Criticism requirement.

Out-of-College Requirements

A minimum of 57 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each); Social Sciences (minimum of three courses, of at least 3 credits each); and, Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the History of Art. One course must be taken in each of the following areas:

Three electives: any art history elective at the 300 level or above or any architectural history elective. (Note: course offerings may vary each semester. Students are encouraged to consult with their adviser. Students may petition to substitute courses of similar content.)

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

For these students matriculating in fall of 2002:

- Students are required to take ART 111 Introductory Art Seminar. ART 121, Introductory Painting; or ART 141, Introductory Sculpture; Art History elective; and a Freshman Writing Seminar during the fall semester of the freshman year. ART 131/132/133, Introductory Printmaking; Art History elective; and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year. Courses that will fulfill Theory and Criticism requirement (note: offerings may change from year to year. Check the current course catalog):

### The M.F.A. Program

The Master of Fine Arts program requires four terms of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to participate in the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each term; of these, nine credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 613, 614). Students are required to take at least twelve credits of academic work outside of the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition in studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

### Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Fees are charged for all studio courses. See the specific course description for course fees. To take advantage of the special opportunities afforded by summer study, there are several course offerings during summer session.

### Guidelines for Independent Study

A student who wishes to undertake an Independent Study must be a junior and in good academic standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of four.

ART 611  Professional Skills for the Visual Artist
Fall. 3 credits. Limited to M.F.A. students. Staff.
This seminar will help fine arts graduate students build professional skills that will assist them in their careers as practicing artists, and in their work at art-related employment. Students will complete a resource notebook that will be useful to them in the years after they graduate. Topics include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612  Recent Practice in the Visual Arts
Spring. 3 credits. Limited to M.F.A. students. Staff.
This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, Venice Bienale, and Whitney Biennial are discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

ART 613  On-Line Publication for the Visual Artist
Fall. 3 credits. Limited to M.F.A. students. Staff.
This seminar is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an on-line magazine. Additionally each student learns to create a home page on the web.

ART 614  Contemporary Theory in the Visual Arts
Spring. 3 credits. Limited to M.F.A. students. Staff.
This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

Studio Courses in Painting

Fees for painting courses: 121, 221, 321, 322, 421, 422, 429 $40

ART 121  Introductory Painting
Fall, spring, or summer. 3 credits. Staff.
This course studies the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

ART 221  Painting II
Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor. Staff.
This course is a continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

ART 321  Painting III
Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor. Staff.
This course is an intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, encaustic, and oil. In addition, paints and associated techniques developed in the twentieth century are used as well as developing technologies applicable to the painting process.

ART 322  Painting IV
Fall or spring. 6 credits. Prerequisite: ART 321 or permission of instructor. Staff.
This course is an advanced study of painting through assigned and independent projects using a variety of materials leading to the formulation of a thesis project.

ART 421  Pre-Thesis in Painting
Fall or spring. 6 credits. Prerequisite: ART 422. Staff.
This course is an advanced study of painting through assigned and independent projects leading to the formulation of a thesis project.

ART 422  Thesis in Painting
Fall or spring. 6 credits. Prerequisite: ART 421. Staff.
This course is a focused independent project demonstrating creative ability and technical proficiency. Projects are exhibited in an appropriate space at the end of the term.

ART 429  Independent Studio in Painting
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 721-722 282-822  Graduate Painting
721, fall; 722, spring; 1st-year M.F.A. students; 9 credits. 821, fall; 822, spring; 2nd-year M.F.A. students; 9 credits. Staff.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

Studio Courses in Printmaking

Fees for printmaking courses: 131, 331, 431, 432, 439 $95

ART 131  Introductory Intaglio
Fall and spring. 3 credits. Staff.
This course is a basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

ART 332  Intaglio II
Fall or spring. 4 credits. Prerequisite: ART 331. Staff.
A studio course in advanced etching techniques. Refinement of processes and ideas through the use of aquatint, spit bite, line ground, soft ground, and dry point in black and white with an introduction to multiple plate color printmaking.

ART 232  Advanced Screen Printing
Fall, spring. 4 credits. Prerequisite: ART 132. Not offered 2002-2003. Staff.
This course is an exploration of the screen printing process as it applies to the fine arts. Students develop skills in multi-color printing using transparent inks and additives. Stencils are made by the handcut and the photo process.

ART 333  Lithography II
Spring. 4 credits. Prerequisite: ART 133. Staff.
The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

ART 331  Printmaking III
Fall or spring. 4 credits. Prerequisite: ART 231, 232, 3 or permission of instructor. Staff.
The course is a continuation and expansion of ART 331.

ART 431  Pre-Thesis in Printmaking
Fall or spring. 6 credits. Prerequisite: ART 332. Staff.
This course is a further study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 332  Printmaking IV
Fall. 4 credits. Prerequisite: ART 331 or permission of instructor. Staff.
This course is a further study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 431  Pre-Thesis in Printmaking
Fall or spring. 6 credits. Prerequisite: ART 332. Staff.
This course is a further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 432  Thesis in Printmaking
Fall or spring. 6 credits. Prerequisite: ART 431. Staff.
Advanced printmaking project to demonstrate creative ability and technical proficiency.

ART 439  Independent Studio in Printmaking
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in printmaking that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the
supervision of a faculty member selected to guide their progress and evaluate their results.

ART 731-732, 831-832 Graduate Printmaking
731, fall; 732, spring; first-year M.F.A. students, 9 credits. 831, fall; 832, spring; second-year M.F.A. students. 9 credits. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

### Studio Courses in Sculpture

Fees for sculpture courses:

- 141: $50
- 241, 341, 342, 343, 441, 442: $75

**ART 141 Introductory Sculpture**
Fall, spring, or summer. 3 credits. Staff. A series of studio problems introduce the student to the basic principles of artistic expression in three-dimensional, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

**ART 241 Sculpture II**
Fall or spring. 4 credits. Prerequisites: ART 141, or an architecture design studio, or permission of instructor. Staff. Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze/metal casting processes. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

**ART 341 Sculpture III**
Fall or spring. 4 credits. Prerequisite: ART 241 or permission of instructor. Staff. This course is a continued study of the principles of sculpture and conceptual development. Each student explores the selection and expressive use of materials, media, scale and content. Group discussions and individual criticism. Experimentation is encouraged.

**ART 342 Sculpture IV**
Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor. Staff. This course is a continuation and expansion of ART 341. Special projects may include site-specific and/or large-scale installations.

**ART 343 Sculpture V**
Fall or spring. 4 credits. Prerequisite: ART 342 or permission of instructor. Staff. This course is a continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

**ART 441 Pre-Thesis in Sculpture**
Fall or spring. 6 credits. Prerequisite: ART 343. Staff. This course is a further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through bi-monthly group discussions and individual criticism. Students complete a body of work through an approved statement of purpose and proposed schedule.

**ART 442 Thesis in Sculpture**
Fall or spring. 6 credits. Prerequisite: ART 441. Staff. Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

**ART 449 Independent Studio in Sculpture**
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff. This course is an independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 741-742, 841-842 Graduate Sculpture**
741, fall; 742, spring; first-year M.F.A. students. 9 credits. 841, fall; 842, spring; second-year M.F.A. students. 9 credits. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

### Studio Courses in Photography

**ART 139 Printmaking**
341, 441, 442, 443, 541, 542: $75

**ART 263 Color Photography**
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff. This course is a studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

**ART 264 Photo Processes**
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff. This is a studio course in alternative and nonsilver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

**ART 265 Studio Photography**
Fall or spring. 6 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff. This is a studio course intended for photography majors and other qualified students.

**ART 461 Pre-Thesis in Photography**
Fall or spring. 4 credits. Prerequisite: ART 161, 261, or permission of instructor. Staff. This course is the continued study of creative use of photography, with emphasis on specialized individual projects.

**ART 462 Thesis In Photography**
Fall or spring. 6 credits. Prerequisite: ART 161, 261. Staff. This is a studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

**ART 469 Independent Studio In Photography**
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff. This course is an independent studio in photography that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 761-762, 861-862 Graduate Photography**
761, fall; 762, spring; first-year M.F.A. students. 9 credits. 861, fall; 862, spring; second-year M.F.A. students. 9 credits. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of works in progress are held.
Studio Courses in Drawing

Fees for all drawing courses: $25

ART 151 Drawing I
Fall, spring, or summer. 3 credits. Staff.
This course is general in nature and introduces students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink and wash, etc.

ART 152 Drawing II
Spring. 3 credits. Prerequisite: ART 151. Staff.
This is a general course in drawing that emphasizes figure study and life drawing. This course builds on the foundation of ART 151 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

ART 158 Conceptual Drawing
Summer. 3 credits. 6-week session only. Staff.
This course puts emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159 Life and Still-Life Drawing
Summer. 3 credits. 6-week session only. Staff.
In this course the human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses are on helping the student observe and discover.

ART 251 Drawing III
Fall. 3 credits. Prerequisite: ART 152. Staff.
This course is an intermediate drawing course where students study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials are stressed.

ART 252 Drawing IV
Spring. 3 credits. Prerequisite: ART 251. Staff.
An advanced drawing course with emphasis on life drawing and figure composition. Individual expression is encouraged along with creative investigation of materials and processes.

ART 459 Independent Studio in Drawing
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in drawing that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 471 Electronic Imaging in Art
Fall or spring. 3 credits. Staff.
This course is an introductory studio course using the computer as a tool for making art. Students explore various approaches to 2- and 3-D webart using software programs and various functions. This course is an introduction to the web.

ART 271 Electronic 3-D Modeling and Animation
Fall or spring. 4 credits. Prerequisite: ART 171. Not offered every year. Staff.
This is a studio course in creating 2- and 3-D still and animated visualizations using computers and 3-D software for object modeling, animation, and rendering. This course concentrates on the web.

ART 272 Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: ART 171. Not offered every year. Staff.
This is a studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD ROM production. This course concentrates on the web.

ART 372 Special Topics in Art Studio
Fall, spring, or summer. 4 credits variable. Rome Program only. Staff.
This course is an exploration of a particular theme or project.

ART 372.20 Special Topics in Art History
Fall or spring. 4 credits variable. Rome Program only. Staff.
Topic to be announced.

ART 379 Independent Studio in Rome
Fall and spring. 4 credits variable. Prerequisite: student must be a junior in good academic standing, and have the written permission of the instructor. Rome Program only. Staff.
This course is an independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 391 Media Arts Studio I
Fall. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent; and student must be a junior and have permission of the instructor. Lab fee $50. Not offered 2002-2003. Staff.
This course is a collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, film and video, and dance. Group projects and discussions also investigate the artistic and interactive potential of a high-speed Intranet connecting arts spaces on campus, including virtual and performative events.

ART 392 Media Arts Studio II
Spring. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee $50. Not offered 2002-2003. Staff.
This course is a continuation of ART 391. A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video. Group projects and discussions also investigate the artistic and interactive potential of a high-speed Intranet connecting arts spaces on campus, including virtual and performative events.

ART 400 Rome Studio
Fall or spring. 4 credits. Rome Program only. Content for the Rome studio is determined by the instructor. Prerequisite: permission of instructor. Fee: $60. Additional fees apply for photography and printmaking. Staff.
Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media consist primarily of painting, sculpture, and photography, or those assigned by the instructor. ART 400 fulfills four credits of the concentration requirement.

ART 479 Independent Studio in Electronic Imaging
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 481 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in the course. Staff.
In this course students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482 Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: ART 481 and written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in this course. Staff.
In this course students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.
ART 489 Independent Studio in Combined Media

Fall, spring, or summer. Credits variable (maximum 4). Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.

This course is an independent studio in combined media that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CITY AND REGIONAL PLANNING

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies

The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements

Requirements for Graduation: URS requirements include: (1) eight semesters of residence; (2) 120 credits; (3) two freshman seminars; (4) qualification in one foreign language; (5) four groups of distribution requirements; (6) required courses for major; (7) area requirements for major; (8) free electives; (9) a minimum of 34 courses; and (10) completion of the university requirement of two one-credit nonacademic courses in physical education. Please note that physical education credit does not count toward satisfactory of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S-U courses cannot be applied to the distribution requirements.

2. Required Courses for the Major in Urban and Regional Studies: 5 courses

- CRP 100: The American City
- CRP 101: The Global City: People, Production, and Planning in the Third World
- Statistics (at least 3 credits from approved list below)
- AEM 210: Introduction to Statistics
- BTRY 261: Statistical Methods
- ECON 219: Introduction to Statistics and Probability
- ILRST 210: Statistical Reasoning I
- MATH 171: Statistical Theory and Application in the Real World

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses

A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis...

b. Economics
- CRP 370: Regional Question: The Case of Italy (Rome)
- CRP 401: Seminar in Urban Political Economy
- CRP 404: Urban Economics
- CRP 417: Industrial Restructuring: Implications for State and Local Policy

b. Environment
- CRP 354: Introduction to Environmental Planning
- CRP 378: Recycling Resource Management
- CRP 380: Environmental Politics
- CRP 384: Green Cities
- CRP 443: Emerging Global Environmental Trends
- CRP 444: Resource Management & Environmental Law
- CRP 451: Environmental Law
- CRP 453: Environmental Aspects of International Planning
- CRP 454: Environmental Aspects of International Planning

C. History
- CRP 261: Urban Archaeology
- CRP 360: Pre-Industrial Cities and Towns of North America
- CRP 361: Seminar in American Urban History
- ART 309: Special Topics
- ART 371: Art History: Early Christian, Romanesque, and Gothic Art in Rome and Central Italy (Rome)

D. History
- ART 318: European History
- ART 417: Art History: Early Christian, Romanesque, and Gothic Art in Rome and Central Italy (Rome)

E. Politics/Policy
- CRP 293: Inequality, Diversity, and Justice
- CRP 314: Planning, Power, and Decision Making
CRP 318: Politics of Community Development
CRP 363: American Indians, Planners, and Public Policy
CRP 371: Cuba: The Search for Developing Alternatives
CRP 376: Latin American Cities
CRP 412: Devolution, Privatization, and the New Public Management
CRP 416: European City-Urban Political Economy (Rome)
CRP 418: Government Policy Workshop
CRP 448: Social Policy and Social Welfare (also Cornell-in-Washington)
CRP 474: The Third World Urbanization
GOVT 500: Politics/Policy: Theory, Research, and Practice (Cornell-in-Washington)

The Student Concentration

(4 credits of the 8-credit course—see B below)

4. Free Electives: 6-9 courses
5. Physical Education (2 terms of PE)

Required courses for graduation: 34
Required credits: 120

Honors Program
Each year a few well-qualified juniors may join the honors program. Each honors student develops and writes an honors thesis under the guidance of his or her faculty adviser.

Concentrations
The department recognizes concentrations earned within the university (accepting standards set by various colleges). Students may apply for concentrations in any college (e.g. Africana Studies, Architecture, Latino Studies, Southeast Asian Studies, Women's Studies, etc.). When a student satisfies the requirements for a concentration, and formal notification is received by the AAP Registrar, the concentration will be recorded on the student's official transcript.

Off-Campus Opportunities
Cornell-in-Washington Program. Students in good standing may earn degree credits in the Cornell-in-Washington program through course work and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study abroad opportunities are continually being developed. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. We encourage UBS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options
Linked degree options. Urban and regional studies students may earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree option. A student accepted in the Cornell College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures
Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, interests, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students who have a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students
In most cases, transfer applicants should no longer be affiliated with other institutions or a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor William W. Goldsmith, Dean, Director, Urban and Regional Studies, Cornell University, 105 West Sibley Hall, Ithaca, NY 14853-6701 (telephone: 607-255-4613).

The Graduate Program in City and Regional Planning
There are five graduate degree programs in the city and regional planning department. The Master of Regional Planning program stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in three areas of planning. The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts.

The Master of Professional Studies in International Development (MPS/ID) degree is
administered jointly with the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). Is it intended to meet the specific training needs of experienced planners or mid-career professionals in related fields.

The 60-credit Master of Arts (MA) in Historic Preservation Planning prepares students for professional work in the creative preservation and utilization of our physical heritage.

The Master of Science (MS) or Master of Arts (MA) in Regional Science is the study of regional economies and their interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations.

The Doctor of Philosophy (PhD) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

**Ottawa Opportunities**

**Rome Program.** Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

**Course Information**

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor. The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

**Undergraduate Program in Urban and Regional Studies**

**CRP 100 The American City**

Fall. 3 credits. S-U grades optional for out-of-department students only.

W. W. Goldsmith

An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the twentieth-first century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

**CRP 101 The Global City: People, Production, and Planning in the Third World**

Spring. 3 credits. S-U grades optional for out-of-department students only.

N. Kudra

A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

**CRP 251 Fieldwork in Urban Archaeology**

Fall. 3 credits. Not offered 2002-2003. For description, see LA 261.

**CRP 293 Inequality, Diversity and Justice (also GOVT 293, PHIL 193, SOC 293)**

Fall. 4 credits. R. Miller.

For description, see PHIL 193.

**CRP 309 Community Development Seminar (also CRP 509)**

Spring. 3 credits. Letter grade. K. Reardon.

This seminar provides an introduction to the theory, method, and practice of contemporary community development. Topics examined include: the role community-based organizations are playing in promoting sustainable development in distressed communities, the contribution planners are making to enhancing the organizational capacity of community-based organizations; and the interplay between neighborhood-based community development approaches and regional economic development policy-making.

**CRP 314 Planning, Power, and Decision Making**

Fall. 3 credits. Staff.

This seminar examines various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these questions and many others.

**CRP 316 Politics of Community Development (also CRP 518)**

Spring. 3 credits. Letter grade. P. Clavel.

A seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

**CRP 321 Introduction to Quantitative Methods for the Analysis of Public Policy**

Spring. 3 credits. Not offered every year.

This course introduces students to the basic tools that are used in policy analysis. Its goal is to set the context for the techniques presented, to understand the questions that each addresses, to be aware of their potential and limitations, their range of applicability, and the pitfalls to be avoided.

**CRP 328 Overviews of Quantitative Methods in Policy Planning (also CRP 528)**

Fall. 3 credits. S-U grades optional.

P. Stein.

This course introduces students to the basic tools that are used in policy analysis. Its goal is to set the context for the techniques presented, to understand the questions that each addresses, to be aware of their potential and limitations, their range of applicability, and the pitfalls to be avoided.

**CRP 330 Neighborhood Planning Workshop (also CRP 530)**

Fall. 4 credits. Letter grade. K. Reardon.

This workshop offers students the opportunity to collaborate with local residents, leaders and officials in the development of revitalization plans that address the critical environmental, economic, and social challenges confronting their neighborhoods. A participatory action research approach is used to produce professional-quality development plans with local stakeholder groups. Significant fieldwork required.

**CRP 343 Affordable Housing Policy and Programs (also CRP 543)**

Spring. 3 credits. S-U grades optional.

R. Pendall.

An overview of federal, state, and local policies and programs to deliver affordable housing to low-income people, public housing, vouchers, inclusionary zoning, rent control, and much more. Lectures, debates, short papers, and term paper.

**CRP 354 Introduction to Environmental Planning (also CRP 554)**

Spring. 3 credits. S-U grades optional.

A. M. Esnard.

An introduction to problems facing planners and decision makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventories and risk analysis.

**CRP 360 Pre-Industrial Cities and Towns of North America (also LA 260/LA 666 and CRP 666)**

Fall. 3 credits. S-U grades optional. Not offered 2002-2003. For description, see LA 260.

**CRP 361 Seminar in American Urban History (also CRP 661)**

Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.

Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

**CRP 363 American Indians, Planners, and Public Policy (also CRP 547 and LA 263/LA 547)**

Spring. 3 credits. S. Baugher.

For description, see LA 263.

**CRP 368 The History of Urban Form in America (also CRP 668)**

Fall. 3 credits. Letter grade. M. Tomlan.

This course covers the history of city planning in America from colonial times to the early 20th century including brief reviews of European influences on urban form. Lectures, discussions, and short papers.

**CRP 370 The Regional Question: The Case of Italy**

Spring. 4 credits. For majors in urban and regional studies only. Rome Program only.

Staff.

The "regional problem" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore...
theoretical and practical aspects of regional inequality. The question of how Italy’s integration into the European Union affects and is affected by its regional issues will be considered.

CRP 371 Cuban: The Search for Development Alternatives
Fall. 3 credits. Open to sophomores, juniors, seniors. Not offered every year. B. Lynch.
Cuba is a symbol; it is also a society. This course looks beyond the symbol to Cuban society, environment, and political economy in a Caribbean context. The 1959 Revolution was a defining moment in Cuban history and a central element in Cuban culture. Students learn about the experiences that shaped the revolution, altered its course in the 1970s and 1980s, and led to the special period of the 1990s.

CRP 376 Latin American Cities (also CRP 676)
Fall. 3 credits. Not offered every year. B. Lynch.
This course offers students an opportunity to understand urban dynamics in a rapidly changing region of the world. We ask how colonial powers, the nation-state, and global economic forces have shaped Latin American urban landscapes and the patterns of daily life in the city. The first part of this course explores the social, political, and spatial dimensions of these processes. Topics include role of urban flows, socio-spatial segregation, housing environment and employment. The second half of the course focuses on responses to these social and economic transformations: violence and repression, coping strategies, social movements, and transmigration.

CRP 378 Recycling and Resource Management (also CRP 578)
Spring. 3 credits. S-U grades optional. Not offered every year. R. Young.
Advanced resource recycling and management systems are critical to the development of a sustainable society. This course reviews the political, technological, and economic strategies necessary for cities and communities to achieve a closed loop resource management system. Drawing from readings, speakers, and field trips that examine the cutting edge of recycling program development, the course provides students with comprehensive exposure to leading practitioners and best practices in the recycling field. Open to undergraduate and graduate students. Graduate students have additional research requirements.

CRP 380 Environmental Politics
Fall. 4 credits. Letter grade. R. Booth.
Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 381 Principles of Spatial Design and Aesthetics (also CRP 581)
Fall. 3 credits. Course enrollment is limited to 30 students. R. Booth.
A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces. Drawings in Cuban art of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 384 Green Cities (also CRP 584 and LA 495)
Fall. 4 credits. S-U grades optional. Not offered every year. R. Young.
For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life that are ecologically sound. This course examines the history and future of urban ecology and the technologies and policies that shape it. Alternative transportation, renewable energy, urban design, recycling and resource management, and sustainable economics are explored as means toward transforming cities to become the basis of a new, ecological society. Open to both graduate and undergraduate students. Graduate students have additional research requirements.

CRP 395 Special Topics
Fall, spring, summer. 4 credits variable. Hours to be arranged. Staff.
For description, see department coordinator, 106 West Sibley.

CRP 395.03 Wilderness and Wildlands: Issues in Policy and Planning (also CRP 679.03)
Fall. 2-3 credits variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thordalke.
Wilderness and Wildland resources have been under assault by the Congress, the "Wise Use" movement, property rights activists, politicians and the actual users. This seminar will consider historical and philosophical foundations and political factors that impact decisions about wilderness policies, planning, acquisition, protection and management. The role of government, professional planners and managers, organized special interests, legal system, citizens, and user groups will be examined. Practical exposure to planning and policy development through readings, discussions with practitioners and field trips to Finger Lakes National Forest. Optional weekend trip to Adirondack Park Wilderness area.

CRP 400 Introduction to Urban and Regional Theory
Fall. 4 credits. Not offered 2002–2003. [Staff]

CRP 401 Seminar in Urban Political Economy
Spring. 4 credits. Not offered 2002–2003. [Staff]

CRP 404 Urban Economics (also CRP 504)
Spring. 4 credits. Prerequisite: microeconomics. M. Drennan.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization, processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time is spent in discussing problems of cities in developing countries.

CRP 408 Introduction to Geographic Information Systems (GIS) (also CRP 508)
Spring. 4 credits. Letter grade. A-M. Esnard.
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatially referenced data. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 412 Devolution, Privatization, and the New Public Management (also CRP 612, AEM 443/633, and WOMNS 411/611)
Fall. 3 credits. S-U grades optional. M. Warner.
This course addresses devolution and decentralization of government services in a national and international context and then focuses on the local public sector response in the United States. Privatization, intermunicipal cooperation, and intergovernmental relations are reviewed including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the term.

CRP 416 European City: The Public Sphere and Public Space
Spring. 2–4 credits variable. Open to all juniors and seniors. S-U option available to non-majors. Enrollment may be limited by the instructor. Rome Program only. Staff.
An examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socioeconomic underpinnings of the city. How are cities organized, and how do citizens relate to the state, the city to the nation, the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city tocity? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italian/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian or (European) conditions and policies differ from those in the United States (or elsewhere)? All of these questions are covered.

CRP 417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)
Spring. 4 credits. S. Christopherson.
A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse United States localities. The course focuses on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases are drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.
In this electronic course, students learn about how the form and spatial structure of the city of Rome has evolved through time. Using the interactive CD-ROM, Layers of Rome as a digital text, the course engages participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the interaction between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, readings, and exercises are developed using the Layers of Rome CD, web searches, digital networking, and various interactive learning technologies geared toward urban analysis and visual design media.

CRP 492 Honors Thesis Research
Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty. Staff. Each selected student works with his or her thesis adviser.

CRP 493 Honors Thesis Writing
Fall or spring. 4 credits. Prerequisite: completion of CRP 492. Staff. Each selected student works with his or her thesis adviser.

CRP 497 Supervised Readings
Fall or spring. Variable 4 credits. Limited to juniors and seniors. Prerequisite: permission of instructor. Staff.

Graduate Courses and Seminars
Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 499. Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.

CRP 504 Urban Economics (also CRP 404)
Spring. 4 credits. Prerequisite: microeconomics. M. Drennan. For description, see CRP 404.

CRP 508 Introduction to Geographic Information Systems (GIS) (also CRP 408)
Spring. 4 credits. Letter grade. For description, see CRP 408.

CRP 509 Community Development Seminar (also CRP 309)
Spring. 3 credits. Letter grade. K. Reardon. For description, see CRP 309.

CRP 512 Public and Spatial Economics for Planners
Fall. 3 credits. Letter grade. M. Drennan. Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both spaces and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course
also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513 Introduction to Planning Practice and History
Fall. 4 credits. P. Clavel and N. Kudva. An introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs. Topics are analyzed from the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)
Spring. 4 credits. S. Christopherson. For description, see CRP 417.

CRP 518 Politics of Community Development (also CRP 318)
Spring. 3 credits. Letter grade. P. Clavel. For description, see CRP 318.

CRP 519 Urban Theory and Spatial Development
Spring. 3 credits. Letter grade. W. W. Goldsmith. This course surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. We consider orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists, and the use of a microcomputer statistical package.

CRP 520 Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits. Not offered every year. Staff. An introduction to statistical and mathematical concepts and methods of importance in analysis. Topics include matrix algebra, probability, sampling, estimation, and the use of a microcomputer statistical package.

CRP 521 Mathematical Foundation for Planning Analysis
Fall. 1 credit. S-U grades only. Meets for two hours, once each week, for approximately half the semester. Not offered every year. Staff. Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

CRP 525 Introductory Methods of Planning Analysis
Fall. 4 credits. Letter grade. R. Pendall. A course on quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include: descriptive and inferential statistics, mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 528 Overview: Quantitative Methods in Policy Planning (also CRP 328)
Fall. 3 credits. S-U grades optional. P. Stein. For description, see CRP 328.

CRP 529 Mathematics for Planners
Fall. 4 credits variable. S-U grades optional. Staff. This course covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences, and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

CRP 530 Neighborhood Planning Workshop (also CRP 330)
Fall. 4 credits. Letter grade. K. Reardon. For description, see CRP 330.

CRP 532 Real Estate Development Process
Fall. 3 credits. Letter grade. B. Olson. Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 533 Real Estate Marketing and Management
Fall. 3 credits. R. Abrams. The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 537 Real Estate Seminar Series
Fall and spring. 1/2 credit per term. S-U grades only. Restricted to MPS/RE students. B. Olson. A one-credit course designed to bring students weekly into direct contact with real estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 543 Emerging Global Environmental Trends (also CRP 443)
Spring. 3 credits. Letter grade. Limited to 20 students. R. Booth. For description, see CRP 443.

CRP 544 Resource Management and Environmental Law (also CRP 444 and NTRES 444)
Spring. 4 credits. Letter grade. R. Booth. For description, see CRP 444.

CRP 545 Introduction to Quantitative Methods for the Analysis of Public Policy
Spring. 3 credits. Basic statistics is a prerequisite for this course. Not offered every year. M. Brennan. An introduction to econometrics, covering bivariate and multivariate regression.

Applications include population, employment, and tax revenue forecasting for sub-national economies. Probabilistic models explained. Lectures and plan-making exercises included.

CRP 548 Introduction to Community and Environmental Dispute Resolution
Fall. 3 credits. J. Forester. This course explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 549 Ethics and Practical Judgment in Planning
Spring. 4 credits variable. Not offered 2002-2003. Staff. An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 451)
Fall. 4 credits. Letter grade. R. Booth. For description, see CRP 451.

CRP 552 Urban Land-Use Planning I
Fall. 3 credits. Letter grade. A.-M. Esnard. Course covers surveys, analyses, and planning techniques for guiding physical development of urban areas, location requirements, space needs, and the main tools for implementing a land-use plan. Also covers agriculture and open space preservation, infrastructure timing controls, and related public intervention in urban affairs. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans.
Computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 556 Design in Real Estate Development
Spring. 3 credits. S-U grades optional. M. Schack.

This course provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating and recognizing quality in design are addressed. The analysis of case study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 557 City Planning Design Studio
Spring. 4 credits. Prerequisite: previous design courses or permission of instructor. Not offered every year. Staff.

A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop
Fall or spring. 4 credits variable. S-U grades optional. R. Pendall.

Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 559 Documentation for Preservation (also ARCH 586)
Fall or spring. 3 credits. Letter grade. M. Tomlan.

Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also ARCH 588)
Fall or spring. 4 credits. Letter grade. M. Tomlan.

Course covers techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and exploration of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 562 Perspectives on Preservation (also ARCH 589)
Fall. 3 credits. Letter grade. M. Tomlan.

Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563 Problems in Contemporary Preservation Practice (also ARCH 584)

A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation (also ARCH 587)
Spring. 3 credits. Letter grade. Open to juniors, seniors, and graduate students. M. Tomlan.

A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 565 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit. M. Tomlan.

Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 566 Planning and Preservation Practice
Fall. 1 credit. S-U grades only. Prerequisite: graduate standing in CRP programs or MPS/RE or permission of instructors. R. Pendall and M. Tomlan.

Students participate in field study of city planning and preservation. They examine the issues with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance.

CRP 567 Measured Drawing (also ARCH 583)
Fall. 3 credits. Prerequisite: graduate standing in CRP programs or MPS/RE or permission of instructors. M. Tomlan.

Combines study of architectural drawing as historical documents with exercises in preparing drawings of small buildings. Presents the basic techniques of measuring, sketching, and analyzing and measuring a building and the preparation of a finished drawing for publication.

CRP 569 Archaeology in Preservation Planning and Site Design (also LA 569)
Spring. 3 credits. For description, see LA 569.

CRP 570 Recycling and Resource Management (also CRP 378)
Spring. 3 credits. S-U grades optional. R. Young.

For description, see CRP 378.

CRP 581 Principles of Spatial Design and Aesthetics (also ARCH 381)
Fall. 3 credits. Course enrollment limited to 30 students. R. Trancik.

For description, see CRP 381.

CRP 584 Green Cities (also CRP 384 and LA 498)
Fall. 4 credits. S-U grades optional. R. Young.

For description, see CRP 384.

CRP 607 GIS Applications Workshop
Fall. 4 credits. Letter grade. Prerequisites: an introductory GIS course or permission of instructor. A.M. Hoffman.

This course is an advanced GIS class that focuses upon GIS applications and projects for one or more clients. During some semesters students will work on their own projects. Contact the instructor directly to learn about project options for the current semester.

CRP 612 Devolution, Privatization, and the New Public Management (also CRP 412, AEM 433/633 and WOMNS 411/611)
Fall. 3 credits. S-U grades optional. M. Warner.

For description, see CRP 412.

CRP 614 Gender and International Development (also WOMNS 614)
Spring. 3 credits. L. Beneria.

This course has four main objectives: (1) to provide an analysis of the location of women in development processes and to understand the centrality of gender to them; (2) to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity; (3) to reflect upon the linkages between the global economy and the macro and micro processes of development from a gender perspective; and (4) to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

CRP 616 Globalization and Development

This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of processes through which the current neoliberal model has been built, such as trade liberalization, labor market flexibility, the erosion of nation states as economic units, and the formation of trade blocks and global institutions, and the discussion of current debates about future directions.

CRP 618 Government Policy Workshop (also CRP 418, AEM 434/634 and WOMNS 420/620)

For description, see CRP 418.

CRP 621 Quantitative Techniques for Policy Analysis and Program Management
Spring. 4 credits. D. Lewis.

Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics
include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

**[CRP 631] Local Economic Policy—Field Workshop**

**CRP 632 Methods of Regional Science and Planning I**
Spring. 4 credits variable. Staff.
An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation is considered. CRP 730 emphasizes statistical and econometric models.

**[CRP 633] Methods of Regional Science and Planning II**
Fall. 4 credits. Not offered 2002-2003. Staff. See CRP 632. CRP 633 will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

**CRP 635 Workshop: State Economic Development Strategies**
Fall. 4 credits. S-U grades optional. S. Christopherson.
The purpose of this workshop is twofold: (1) to provide students with research tools useful in developing state-level economic development strategies, and (2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers—firm-specific subsidies. The course consists of lecture and discussion meetings. The workshop sessions include exercises in qualitative information gathering on economic development topics, use of the census in combination with geographic information systems for analysis and presentation, and shift-share analysis.

**CRP 637 Regional Development Planning: An International Perspective**
Fall. 4 credits variable. S-U grades optional. T. Vietorios.
This course develops a broad historical and theoretical context within which urban and regional planning problems across the world are embedded; addresses aspects of the global information economy affecting economic development and cultural identity; and demonstrates how such a broad perspective can make for more viable local plans. From the perspective of commitment to an open society, the course also examines the tension between pluralism and demand for equity and the polarizing forces of market fundamentalism.

**CRP 638 Planning and the Global Knowledge Economy: Sustainability Issues**
Spring. 4 credits variable. S-U grades optional. T. Vietorios.
The course analyzes the current sustainability crisis in terms of major changes in the social organization of production, emphasizing the worldwide economic and cultural shocks created by the emerging knowledge economy. Insight into the dynamics of this transition, in the light of similarly dramatic transitions in the past, can guide attempts to move toward sustainability and high-quality urban and regional living environments.

**CRP 642 The Micro-Politics of Participatory Planning Practices**
Spring. 4 credits variable. Letter grade. J. Forester.
This seminar explores issues of "practice" (rhetoric and negotiation, interpretation and judgment, narrative and recognition) as they influence democratic deliberations involving questions of ethics and arguments—participation and identity, historical trauma and working-through, and more. The approach we take can be called a "critical pragmatism." We use practitioners' oral histories to investigate the challenges of participatory planning practices.

**CRP 643 Affordable Housing Policy and Programs (also CRP 343)**
Spring. 3 credits. S-U grades optional. R. Pendall.
For description, see CRP 343.

**CRP 653 Legal Aspects of Land-Use Planning**
Spring. 3 credits. Letter grade. R. Booth.
Survey of leading cases and legal concepts in land-use planning with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

**CRP 655 Real Estate Project Workshop**
Spring. 4 credits. Permission of instructor required. R. Abrams and M. Schack.
Students are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field are addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, and others. Projects focus on real world case studies and require professional level reports suitable for oral and written presentations.

**CRP 657 Real Estate Law**
Spring. 3 credits. Letter grade. R. Booth.
Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

**CRP 659 Residential Development**
Spring. 3 credits. Letter grade. B. Olson.
The course explores the residential development process from site acquisition through delivery and servicing of the finished product. Topics covered include: market feasibility, land planning and acquisition, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, sales and services, and customer service. Current issues in providing competitive housing products in today's markets are also explored. Composition of the residential development project team is discussed and supplemented by presentations from visiting professionals as well as at least one visit to an actual project.

**CRP 661 Seminar in American Urban History (also CRP 361)**
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.
For description, see CRP 361.

**CRP 662 Historic Preservation Planning Workshop: Plans and Programs**
Fall or spring. 1-4 credits. Prerequisite: CRP 501. M. Tomlan.
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

**CRP 663 Historic Preservation Law**
Spring. 3 credits. Offered alternate years. R. Booth.
The course covers: law of historic district and landmark designation; tools for preservation (such as police power, taxation, eminent domain); and recent developments in state and federal historic preservation.

**CRP 664 Economics and Financing of Neighborhood Conservation and Preservation**
Spring. 3 credits. Letter grade. M. Tomlan.
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

**CRP 665 Preservation Planning and Urban Change**
Fall or spring. 3 credits. Letter grade. M. Tomlan.
An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

**[CRP 666 Pre-Industrial Cities and Towns of North America (also LA 666)]**
For description, see LA 666.

**CRP 668 The History of Urban Form in America (also CRP 368)**
Fall. 3 credits. Letter grade. M. Tomlan.
For description, see CRP 368.

**CRP 670 Regional Planning and Development in Developing Nations**
Fall or spring. 4 credits. Prerequisite: second-year graduate standing. Not offered 2002-2003. Staff.
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

**CRP 671 Seminar in International Planning**
Spring. 1 credit. S-U grades only. B. Lynch.
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.
CRP 672 International Institutions
Spring. 3 credits. Letter grade. L. Beneria. The course focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the UN system up to the early 1970s, how these function and have evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

CRP 674 Third World Urbanization (also CRP 474)
Spring. 4 credits. S-U grades optional. B. Lynch. For description, see CRP 474.

CRP 675 Seminar in Project Planning in Developing Countries
Fall. 4 credits. D. Lewis. An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 676 Latin American Cities (also CRP 376)
Fall. 3 credits. B. Lynch. For description, see CRP 376.

CRP 677 Issues in African Development (also CRP 477)
Fall or spring. 1 credit. S-U only. M. Ndulu. For description, see CRP 477.

CRP 679.03 Wilderness and Wildlands: Issues in Policy and Planning (also CRP 395.03)
Fall. 2–3 credits variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thordike. For description, see CRP 395.03.

CRP 683 Environmental Aspects of International Planning (also CRP 453)
Fall. 4 credits. B. Lynch. For description, see CRP 453.

CRP 703 Contemporary Theories of Regional Development
Fall or spring. 4 credits. Not offered 2002–2003. Staff.

CRP 711 Planning and Organization Theory

CRP 714 Gender, Race, and Class in Planning
Fall. 3 credits. Letter grade. L. Beneria. This course introduces students to the importance of gender, race, and class issues in planning theory and practice. Both domestic and international topics are covered. Discussions, short papers, and term paper required.

CRP 732 Methods of Regional Science and Planning III
Fall or spring. 3 credits. Not offered 2002–2003. Staff.

CRP 733 Seminar in Regional Models
Fall or spring. 3 credits. Not offered 2002–2003. Staff.

CRP 790 Professional Planning Colloquium I
Fall. 1 credit. Staff. Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

CRP 791 Master's Thesis in Regional Science
Fall or spring. 12 credits variable. S-U grades optional. Hours to be arranged. Regional Science faculty. Staff.

CRP 792 Master's Thesis, Project, or Research Paper
Fall or spring. 10 credits variable. S-U grades optional. Staff.

CRP 794 Planning Internships
Fall, spring, or summer. 1–12 credits variable. Staff. Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internship plan federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspectives of planning practice.

CRP 795 Master's Thesis in Preservation Planning
Fall or spring. 1–6 credits variable. Staff.

CRP 796 Professional Writing and Publishing (Colloquium)
Fall or spring. 2 credits. S-U grades only. Staff. Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings
Fall or spring. 4 credits variable. Limited to graduate students. Prerequisites: permission of instructor. Staff. For description, see department coordinator, 106 West Sibley.

CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis
Fall or spring. 1 credit. Not offered 2002–2003. Staff.

CRP 800 Advanced Seminar in Urban and Regional Theory I

CRP 801 Advanced Seminar in Urban and Regional Theory II
Fall. 5 credits. S. Christoperson. The course is a continuation of CRP 800, concentrating on recent development.

CRP 810 Advanced Planning Theory

CRP 830 Seminar in Regional Science, Planning, and Policy Analysis
Fall or spring. 4 credits variable. S-U grades only. Staff.
discipline and the development of concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual Degree Options
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information
Note: All of the following courses are offered through the College of Agriculture and Life Sciences except LANAR 497, 524, and 525.

LA 141 Grounding in Landscape Architecture
Fall. 4 credits.

LA 142 Grounding in Landscape Architecture
Spring. 4 credits.

LA 201 Medium of the Landscape
Fall. 5 credits.

LA 202 Medium of the Landscape
Spring. 5 credits.

LA 260 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)
Fall. 3 credits. Not offered 2002-2003.

LA 261 Fieldwork in Urban Archaeology (also CRP 261)
Fall. 3 credits. Not offered 2002-2003.

LA 262 Laboratory in Landscape Archaeology (also ARKEO 262)
Fall. 3 credits. Not offered 2002-2003.

LA 263 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 547)
Spring. 3 credits.

LA 282 The American Landscape
Fall. 3 credits.

LA 292 Creating a Second Nature
Spring. 3 credits.

LA 301 Integrating Theory and Practice I
Fall. 5 credits.

LA 302 Urban Design in Virtual Space
Spring. 5 credits.

LA 315 Site Engineering I
Spring. 3 credits.

LA 316 Site Engineering II
Fall. 2 credits.

LA 318 Site Construction
Spring. 5 credits.

LA 402 Integrating Theory and Practice: Community Design Studio
Spring. 5 credits.

LA 403 Directed Study: The Concentration (also LA 603)
Fall or spring. 1 credit.

LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits.

LA 412 Professional Practice
Spring. 1 credit.

LA 486 Placemaking by Design: Theory Seminar
Fall. 3 credits.

LA 490 Rome Wasn't Built in a Day
Spring. 3 credits.

LA 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491)
Fall. 4 credits.

LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment
Spring. 4 credits.

LA 494 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

LANAR 497 Individual Study in Landscape Architecture
Spring. 1–5 credits; may be repeated for credit. S-U grades optional. L. J. Mirin. Work on special topics by individuals or small groups.

LA 498 Undergraduate Teaching
Fall or spring. 1–2 credits.

LA 501 Composition and Theory
Fall. 5 credits.

LA 502 Composition and Theory
Spring. 5 credits.

LA 505 Graphic Communication I
Fall. 3 credits.

LA 506 Graphic Communication II
Spring. 3 credits.

LANAR 524 History of European Landscape Architecture
Fall. 3 credits. L. Mirin. A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 525 History of American Landscape Architecture
Spring. 3 credits. L. Mirin. Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

LA 545 The Parks and Fora of Imperial Rome
Spring. 3 credits.

LA 547 Americans, Indians, Planners, and Public Policy (also CRP 363/547 and LA 263)
Spring. 3 credits.

LA 569 Archaeology in Preservation Planning and Site Design (also CRP 569)
Spring. 3 credits.

LA 580 Landscape Preservation: Theory and Practice
Fall. 3 credits.

LA 582 The American Landscape
Fall. 3 credits.

LA 590 Theory Seminar
Spring. 3 credits.

LA 598 Graduate Teaching
Fall or spring. 1–2 credits.

LA 601 Integrating Theory and Practice I
Fall. 5 credits. Limited to graduate students.

LA 602 Integrating Theory and Practice II
Spring. 5 credits. Limited to graduate students.

LA 603 Directed Study: The Concentration (also LA 403)
Fall or spring. 1 credit.

LA 615 Site Engineering I
Spring. 3 credits.

LA 616 Site Engineering II
Fall. 2 credits.

LA 618 Site Construction
Spring. 5 credits. Weeks 8–15.

[LA 619 Advanced Site Grading
Spring. 2 credits. Not offered 2002–2003.]

[LA 666 Pre-Industrial Cities and Towns of North America (also CRP 360/666 and LA 260)
Fall. 3 credits. Not offered 2002–2003.]

LA 680 Graduate Seminar in Landscape Architecture
Fall or spring. 1–3 credits.

LA 694 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)
Fall. 5 credits.

LA 702 Advanced Design Studio
Spring. 5 credits.

LA 800 Master's Thesis in Landscape Architecture
Fall or spring. 9 credits.

</tbody>
</table>
The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

**ORGANIZATION**

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.bio.cornell.edu, which includes the Behrman Biology Advising Center. Co-located in Stimson Hall, the professional and student advisers provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisers in the OUB also follow the progress of biology majors and work closely with faculty advisers. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic and career advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Robert C. Seamans or brigantine Corwith Cramer.

**DISTRIBUTION REQUIREMENT**

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) satisfies the distribution requirement in the natural sciences.

Switching from one introductory biology course to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged.

**USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY**

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching."

2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals. (DHEW publication 86–23, revised 1996; see p. 14, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253–3520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS...) at the first meeting of the course.*

**ADVANCED PLACEMENT**

For information on credit for advanced placement in Biological Sciences, please see the section on Advanced Placement in the front of this publication.

**THE MAJOR**

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology adviser, and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–9 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is...
offered for S-U only or if the student's adviser grants permission.

1) Introductory biology for majors

(1) Introductory biology for majors

1) Introductory biology for majors

one year): BIO G 101 and 103 plus

BIO G 101, 107, 108, offered during the eight-week

Placement Examination of the College

Entrance Examination Board (CEEB).

Students with a score of 4 must fulfill

the introductory biology requirement

by taking BIO G 101–102, 101 and 102,

101 and 104, 103–104, or 105 or 106.

These students should consult

information available in the respective

course offices and in the Office of

Undergraduate Biology (216 Stimson

Hall) which semester to

complete the introductory biology

requirement. For students in doubt,

completion of BIO G 101 and 103 or

BIO G 105 is advised. These students

receive a total of eight introductory

biology credits (four AP credits plus

course credits).

2) General chemistry (one year): Chemistry 207–208,* or 206–208, or

215–216.*

3) College mathematics (one year): one semester of calculus (Mathematics 106,

111, 191 or their equivalent) plus one

semester selected from the following:

a. a second semester of calculus

(Mathematics 112, 192, or their

equivalents).

b. a course in finite mathematics

(Biometry 101, 417, Mathematics

105, 231).

c. a course in statistics (Biometry 301, Mathematics

171, Applied Econom­

ics and Management 210, Psychol­

ogy 350, Industrial and Labor

Relations 210).

4) Organic chemistry: Chemistry 257 and

251, or 357–358 and 251, or 357–

358 and 301, or 359–360 and 251,

or 359–360 and 301.

5) Physics: Physics 207–208,* 112–213,*

or 101–102. Those who take Physics

112–213 are advised to complete

Physics 214 as well.

6) Genetics: BIOG 281.

7) Biochemistry: BIOBM 330, or 331

and 332, or 333.

8) Evolutionary Biology: BIOEE 278 or

BIOPL 448. Note: BIOPL 241, Botany, is a

prerequisite course to BIOPL 448.

9) A program of study selected from the

above list and a list of optional courses from that area or

related areas, many of which are at an

advanced level (300 or higher). Because

biology is an experimental science, most

Programs of Study require one or more

laboratory courses. The laboratory require­

ment in some Programs of Study can be met

by participation in the independent research

course (BIO G 499). The possible Programs of

Study and their requirements are listed below:

1) Animal Physiology: BIOAP 311 Intro­

ductory Animal Physiology, BIOAP 316

Cellular Physiology, plus a minimum of 7

credit hours selected from the following

lecture and laboratory courses, of which

at least 4 credit hours must be a

laboratory course:

a) Lecture courses: BEE 454 Physi­

ological Engineering; AN SC 300

Animal Reproduction and Develop­

ment, AN SC 410 Nutritional

Physiology and Metabolism; AN SC

427 Fundamentals of Endocrinol­

ogy; BIO G 305 Basic Immunology;

BIOAP 214 Biological Basis of Sex

Differences; BIOAP 458 Mammalian

Physiology; BIOBM 407 Nature of

Sensing and Response: Signal

Transduction in Biological Systems;

BIOBM 440 Cell Proliferation.

BIOG 385 Developmental Biology;

BIOG 483 Molecular Aspects of Development;

BIONB 322 Hormones and Behavior;

BIONB 325 Neurodegenerative Molecular Aspects;

BIONB 326 The Visual System;

BIONB 492 Sensory Function; NS

331 Physiological and Biochemical

Bases of Human Nutrition.

b) Laboratory courses: BEE 454 AN SC

301 Animal Reproduction and

Development; BIO G 401 Introduc­

tion to Scanning Microscopy; BIO G

403 Transmission Electron

Microscopy for Biologists; BIOAP

413 Histology. The Biology of the

Tissues; BIOAP 319 Animal

Physiology Laboratory; BIOBM 440

Experimental Molecular Biology;

BIOBM 441 Experimental Proteins and

Enzymology; BIOBM 442 Experimental Cell Biology; BIOBM

443 Experimental Molecular Neurobiology; BIONB 491

Principles of Neurophysiology.

2) Biochemistry: Chemistry 300, Quantita­

tive Chemistry; six credits of organic

chemistry (Chemistry 350–358, 350–360), or a minimum of four credits of

organic chemistry laboratory (Chemis­
	ry 301–302 or 301 or 251–252); four

credits of biochemistry laboratory

courses (BIOBM 440–442); and Physical

Chemistry (Chemistry 380–390 or 287–

288 or 389–390). Note: Chemistry 288 is designed for biologists.

Five hours of Biochemistry are recommended (331 and 332 or 334 and 333 or 334) and students interested in graduate work in biochemistry should take Physics 207–208 and consider taking a third semester of calculus in preparation for CHEM 389–390. Be sure to complete CHEM 207–208 or 215–216 during the

freshman year.

Note: Biology majors in the College of

Agriculture and Life Sciences who select this program of study are allowed to take up to 61

credit hours in the endowed colleges due to

the high number of required endowed courses for this program of study.

3) Computational Biology: One course in computer programming (COM S 100,

Introduction to Computer Programming or BEE 151, Introduction to Compu­

ting), one course in scientific computing (MATH 221, Linear Algebra and

Calculus; MATH 231, Linear Algebra; MATH 294, Engineering Mathematics II; MATH 420, Differential Equations and

Dynamical Systems; BTRY 408, Theory of Probability; or BTRY 421, Matrix

Computation); a bridging course, i.e., a

course in mathematical modeling

applied to biology (BIOEE 362, Dynamic Models in Biology, BIOEE

460, Theoretical Ecology, or BIOBM 321, Numerical Methods in Computa­

tional Molecular Biology); and one course from the following list of advanced courses:

BIOBM 651, Protein Structure and Function; BIOG 481, Population

Genetics; BIOG 484, Molecular Evolution; BIONB 330, Introduction to

Computational Neuroscience; BIONB

422, Modeling Behavioral Evolution;

BIOPL 440, Phylogenetic Systematics;

AN SC 420, Quantitative Animal

Genetics; NTRES 305, Wildlife Ecology;

NTRES 340, Quantitative Population

Analysis; NTRES 410, Quantitative

Methods in Wildlife Management; NTRES

670, Spatial Statistics; BTRY 451,
Note: MATH 112, calculators should be used to fulfill the core requirement for a second term of math.

Note: Bridging courses require linear algebra (MATH 221, Linear Algebra and Calculus; or MATH 231, Linear Algebra; or MATH 294, Engineering Mathematics II; or BTRY 421, Matrix Computation). For bridging course BTRY 460 Theoretical Ecology, MATH 420 Differential Equations and Dynamical Systems will also serve as a prerequisite.

Note: BTRY 408 and MATH 420 can satisfy either the math requirement or a requirement in all three areas: as a course in the Animal Biology major, as a course in the Ecological Biology major, or as BIOS 376, Marine Ecology. It is possible to use a single course to meet all three requirements of this program of study.

Note: Students who use BTRY 408 to fulfill the additional mathematics requirement should not use ORIE 360, Engineering Probability and Statistics II to fulfill the requirement for an additional course.

Note: Students who use BTRY 408 to fulfill the additional mathematics requirement should not use ORIE 360, Engineering Probability and Statistics II to fulfill the requirement for an additional course.

Note: Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.
and Response: Signal Transduction in Biological Systems; BIOBM 434, Applications of Molecular Biology; BIOBM 437, Eukaryotic Cell Proliferation; BIOBM 636, Advanced Cell Biology; BIOBM 639, The Nucleus; BIO G 305, Immunology; BIOGD 385, Developmental Biology; BIOGD 483, Advanced Developmental Biology; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOGD 682, Fertilization and the Early Embryo; BIOI 290, General Microbiology, Lectures; BIOI 408, Viruses and Disease; BIOI 451, Human Disease II; BIOI 485, Bacterial Genetics; BIOI 420, Microbial Genomics; BIONB 222, Neurobiology and Behavior II. Introduction to Neurobiology; BIONB 325, Neurodiseases-Molecular Aspects; BIONB 425, Molecular Neurophysiology; BIONB 495, Molecular and Genetic Approaches to Neurosciences; BIOPL 343, Molecular Biology and Genetic Engineering of Plants; BIOPM 347, Laboratory in Molecular Biology and Genetic Engineering of Plants; BIOPM 444, Plant Cell Biology; BIOPM 641, Laboratory in Plant Molecular Biology; BIOPM 652, Plant Molecular Biology II. Five hours of biochemistry are recommended (BIOBM 331 and 332, or 350 and 354). CHEM 207-208 or 215-216 should be completed during the freshman year.

10) Neurobiology and Behavior: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section (four-credits per term), and seven additional credits. These additional credits must include a course from the neurobiology and behavior offerings (this course can NOT be BIONB 420, 720, or BIOG 499). However, BIONB 420, 720 and BIO G 499 MAY be used to supplement this neurobiology and behavior course to fulfill the seven additional credits. Students must consult their adviser for courses that may be applied toward the seven additional credits that are not listed in the Biological Sciences course offerings. BIO G 498 may not be used to fulfill the requirements of this program of study.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 for only three credits must still take the 1 credit discussion section in BIONB 221 and 222. To arrange this, the student should consult the professors in charge of the two courses. In the event that a student cannot take the discussion sections, he or she should contact the department Director of Undergraduate Studies to determine what course(s) to use to address the deficiency.

11) Nutrition: NS 331, Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least nine credits of additional coursework in the biological aspects of nutrition, such as NS 315, Obesity and the Regulation of Body Weight; NS 332, Methods in Nutritional Sciences; NS 347, Human Growth and Development NS 451, Mineral Nutrition and Chronic Disease; NS 441, Nutrition and Disease; NS 455, Nobel Prizes in Biomedical Research, NS 475, Molecular Nutrition and Development, NS 602, Lipids; NS 604, The Vitamins; and NS 614, Topics in Maternal and Child Nutrition. Some courses require NS 115 Nutrition and Health: Concepts and Controversies, which may be used as part of the additional nine credits.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count towards the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will count toward the 100 hours required in A&S if those credits fulfill major requirements.

12) Plant Biology: Students choose one area of study from the following two options:

Option (a) Botany: Students are required to take Introductory Botany (BIOPL 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits to round out their botanical training: BIOPL 242 and 244, Plant Function and Growth, Lectures and Laboratory; BIOPL 245, Taxonomy of Vascular Plants; BIOPL 247, Ethnobotany; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 345, Plant Anatomy; BIOPL 444, Plant Cell Biology; BIOPL 445, Photosynthesis; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOPL 463 and 464, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOEE 466 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) Plant Biotechnology: Students are required to take BIOPL 343 and 344, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits from the following list: BIOPL 241, Introductory Botany; BIOPL 242 and 244, Plant Function and Growth, Lectures and Laboratory; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 444, Plant Cell Biology; BIOPL 648, Plant Biochemistry; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

(3) Systematics and Biotic Diversity: A minimum of credits from the following two groups, including at least seven credits from group (a), and three from group (b), and at least two laboratory courses (marked with *) BIO G 499, Undergraduate Research in Biology, with approval of the adviser, can be used in fulfillment of up to four credits in group (a), and can count as one laboratory course if it has a laboratory component of two or more credits.

(a) *BIOEE 274, The Vertebrates: Structure, Function, and Evolution; *BIOEE 371, Human Paleontology; *BIOEE 374, The Vertebrates: Form, Function, and Evolution; *BIOEE 471, Mammalogy; *BIOEE 472, Herpetology; *BIOEE 475, Ornithology; *BIOEE 476, Biology of Fishes; BIOPL 290, General Microbiology, Lectures; *BIOPL 291, General Microbiology, Laboratory; BIOPL 415, Bacterial Diversity, Lectures, *BIOPL 241, Introductory Botany; *BIOPL 243, Taxonomy of Cultivated Plants, *BIOPL 247, Ethnobotany; *BIOPL 248, Taxonomy of Vascular Plants; BIOPL 343, The Healing Forest; BIOPL 645, Families of Tropical Flowering Plants, Lectures, *BIOPL 646, Families of Tropical Flowering Plants; *ENTOM 212, Insect Biology; *ENTOM 215, Spider Biology; Life on a Silken Thread, *ENTOM 322, Insect Morphology; *ENTOM 331, Introductory Insect Systematics; *ENTOM 471, Freshwater Invertebrate Biology; *ENTOM 631, Systematics and Evolutionary Biology; PL PA 309, Introductory Mycology; PL PA 319, Field Mycology.

(b) BIOEE 464, Macroevolution; *BIOEE 479, Paleobiology; *BIOPL 440, Phylogenetic Systematics; BIOPL 447, Molecular Systematics; *BIOPL 448, Plant Evolution and the Fossil Record; *BIOPL 453, Historical Biogeography; BIOPL 442, Current Topics in Ethnobotany.

14) Independent Option: Students who want to undertake a course of study not covered by the existing programs of study may petition the Biological Sciences Curriculum Committee. Information on independent option and Curriculum Committee petition forms are available in the Office of Undergraduate Biology, 216 Stimson Hall.

Independent Research and Honors Program

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in participating in research should contact faculty members with compatible research interests. Faculty members may consider the students' previous academic accomplishments, interests and goals, and the availability of space and equipment when agreeing to supervise a student in his or her laboratory. Students conducting research may enroll for credit in Biological Sciences BIO G 499, Undergraduate Research in Biology. This course is done in 216 Stimson Hall. The student's research project must have significant biological content in order to be considered for BIO G 499 credit. Students may not earn credit for research conducted outside of Cornell. Up to three credits of research may be used to complete the program of studies in general biology, genetics and development, systematics and biotic diversity, as well as four
credits of research in neurobiology and behavior. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall and at www.bio.cornell.edu.

The Honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office of Undergraduate Biology, 216 Stimson Hall, and must be submitted in October of the senior year to the Honors Program Committee by the announced deadline. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have a cumulative grade-point average of at least 3.0. In addition, students must have at least a 3.0 cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member in Biological Sciences to supervise their research. An honors candidate usually enrolls for credit in BIO G 499, Undergraduate Research in Biology, under the direction of the faculty member acting as honors supervisor, although the Honors Program does not require enrollment for credit. Students accepted into the Honors program are required to participate in honors research seminars during both semesters of their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.00 Cornell cumulative and science grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student’s final grade-point average is a factor in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer here at Cornell engaged in full-time research on their honors project. Students interested in staying for the summer also are encouraged to apply to the Cornell Hughes Scholars Program.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic adviser during their sophomore year to carefully plan their academic schedule to meet the requirements of the Honors program.

Application forms, requirements, deadline dates for the Honors Program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall.

**CURRICULUM COMMITTEE**

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

**INDEX OF COURSES**

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOBM; Ecology and Evolutionary Biology, BIOEE; Genetics and Development, BIOGD; Microbiology, BIOMI; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOSM.

Note: Biological sciences ("BIO") courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

GENERAL COURSES (BIO G)

Three introductory biology course sequences are taught during the academic year: BIO G 101-104, BIO G 105-106, and BIO G 109-110; and one during the eight-week summer session: BIO G 107-108. BIO G 101-104, 105-106, and 107-108 are intended for biological sciences majors and other students needing eight credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meet the prerequisites for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. BIO G 109-110 is a course sequence intended for nonmajors, and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology for majors" as a prerequisite. Students can earn a maximum of eight credits in introductory biology (including advanced placement credits).

BIO G 101-102 Biological Sciences, Lectures
101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional, with permission of instructor. Lect., M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 26 and Nov. 5; spring, Feb. 20 and Apr. 1. T. G. Owens, C. Walcott.

Designed both for students who intend to specialize in biological sciences and for those who wish to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory, and discussions of plant and animal systems are integrated. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

BIO G 103-104 Biological Sciences, Laboratory
103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lab, M W T W R 1:25-4:25, M or W 7:30-10:30 p.m., or T R or S 8-11. One 3-hour lab each week and a weekly lec for disc, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff.

BIO G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include genetics, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first week, dissection of a doubly-pithed frog is included. Pithing is done by the instructor. Dissection of several invertebrates occurs during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

BIO G 105-106 Introductory Biology
105, fall, 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. May not be taken for credit after BIO G 101-104 or 109-110. No admittance after first week of classes. Lect., T. G. Owens, additional staff. Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects in the spring semester are genetics, development, ecology, evolution, behavior, and the diversity of organisms (accompanied by preserved and anesthetized invertebrate dissection). Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of predissected specimens, students who object to dissections should take BIO G 101-104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

BIO G 107-108 General Biology
Summer (8-week session); 107, weeks 1-4; 108, weeks 5-8. 4 credits each. Prerequisite: one year of college or permission of instructor. BIO G 101, 103, 105, or 107 is a
prerequisite for 108. Fee, $25 for weeks 1–4; $15 for weeks 5–8. Lecs, M–R 9–12; labs, M–T–R 3:30–4:30, F 9–12. Staff. Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organism system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of general, developmental biology, populations, ecology, and evolution, in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of field studies. BIO G 107–108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school. For those students object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

**BIO G 109–110 Biological Principles**

109, fall; 110, spring. 3 credits each term. Limited to 600 students. Both BIO G 109 and 110, taken in either order, are required to fulfill the distribution requirement in the colleges of Agriculture and Life Sciences and Human Ecology. Either course fulfills the College of Arts and Sciences distribution requirement; however, both are recommended since they constitute a survey. Students with transfer credit must consult with the course instructors for appropriate course placement. Due to overenrollment in course BIO G 109 may not be taken after BIO G 102 or BIO G 106, and BIO G 110 may not be taken after BIO G 101 or BIO G 105. BIO G 109–110 may not be used as an introductory course for the major in biological sciences or as introductory biology for premedical requirements. Note that this course satisfies the prerequisite for many, but not all second- and third-level courses in biology. Letter grade only. Students do not choose lab sections during course enrollment; lab assignments are made during the first day of classes. Evening prelims: fall, Sept. 26 and Nov. 5; spring, Feb. 20 and Apr. 5. Lecs, fall: T 11:15—12:15, W 9:05; lab meets alternate M–T–R 2:45–4:30 or T 10:10–12:35 or W 7:30—10:30. H. Greene, D. Winkler, C. Eberhard and staff.

Students who do not plan to major in biology may take this broad introductory course. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Broad goals of the course include an understanding of the potential benefits and limitations of science, the complexity and workings of the natural world, and the internal machinery of life—how our bodies and those of other animals and plants function. Fall semester covers biological diversity, genetics, evolution, ecology, behavior, and conservation biology; spring semester covers human physiology, plant development, genetic engineering, infectious disease, and human health. Laboratory sections enable small groups of students to meet with course staff and are used for problem-solving experiments, demonstrations, and discussions. There are dissections of preserved vertebrate, invertebrate, and plant materials; for those students who object to dissection, alternative materials are available for study and there is no grade penalty for omitting dissection or observation of animals. Testing, for students choosing to be tested, will involve identification of important structures in real organisms.

**BIO G 170 Evolution of the Earth and Life (also EAS 102)**

Spring. 3 credits. S–U grades optional. Lecs, T R 9:05; lab, T W or R 2:00–4:25; field trips during lab. J. L. Gisn. Course topics include: earth systems and their evolution, earth history's astrochemical context; plate tectonics, continental drift, and their implications for climate and life, coevolution of life and the atmosphere; and precedents for ongoing global change. The course also covers dinosaurs, mass extinctions, and human ancestry. Laboratories include work on reconstructing geological history and mapping ancient geography. Fossil-collecting on field trips.

**BIO G 200 Special Studies in Biology**

Fall, spring, or summer. 1–3 credits. Prerequisites: written permission from the Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S–U grades optional, with permission of instructor. Hours TBA. Staff. A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100- or 100-level courses and may not be used in fulfillment of college distribution requirements except by permission from the Office of Undergraduate Biology.

**BIO G 202 The Diversity of Life**

Fall. 3 credits. S–U grades optional. Lecs, M W F 2:30. Not offered 2002–2003. J. I. Davis, J. J. Doyle. The main focus of this course is on the diversity of living and extinct species. This diversity is examined from an evolutionary perspective using various principles employed in the discovery of species and in the analysis of relationships among them. Interactions between humans and other species are examined during the latter portion of the semester.

**BIO G 209 Introduction to Natural Science Illustration**

Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S–U grades optional. Lecs and labs. T 6:30–9:30 p.m. B. S. King. An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

**BIO G 305 Basic Immunology Lectures (also VETMI 315)**

Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S–U grades optional, with permission of instructor. Lecs, T R 8:30–9:55. J. A. Marsh. A survey of immunology, with emphasis on the biological functions of the immune response.

**BIO G 400 Undergraduate Seminar in Biology**

Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings). May be repeated for credit. S–U grades optional. Staff. From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the departments of Ecology and Systematics, Genetics and Development, or Plant Biology. For students interested in Biochemistry, Physiology, or Neurobiology, please see descriptions under the appropriate section.

**BIO G 401 Introduction to Scanning Electron Microscopy**

Fall or spring, weeks 1–8. 1 credit. Limited to 8 students (fall), 12 students (spring). S–U grades optional. Fee may be charged. Lec, M 10:10; T R 9:05–10:35 or T W or R 1:25–4:25. M. V. Parthasarathy. An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the finer biological architecture. In addition to preparing the specimens, students use the scanning electron microscope to study and obtain micrographs of features that interest them.

**BIO G 403 Transmission Electron Microscopy for Biologists**

Fall. 1, 3 or 4 credits (4 credits if student takes both sections). Limited to 12 students. Prerequisites: BIOAP 313, BIOPOL 345 or 443. S–U grades optional. Two sections: Sec 01, 1 credit, weeks 1–4; sec 02, 3 credits, weeks 5–12. Students must register for one or both sections. Fee may be charged. Lec, T 11:15; labs, M W or T R 1:25–4:25. M. V. Parthasarathy. Section 01, 1 credit, weeks 1–4, covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 3 credits, weeks 5–12, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials this section studies chemical fixatives, cryofixations, ultrathin sections, immunoglobulin localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

**BIO G 408 Presentation Skills for Biologists**

Spring. 1 credit. Prerequisites: previous research experience. Preference given to students accepted into the Honors Program. L. Southard and G. Hess. This course covers oral and written communication skills used in presenting research to other scientists. Topics covered include organization of scientific papers, presentation tips for research seminars, and preparation of visual aids using Power Point. All students present a 10-minute seminar on their research and evaluate other presentations.
This course provides students with the teaching plans appropriate for high school science. Students concentrate on experiences in teaching high school students. This first part of the course consists of lectures, discussion, and laboratory experiments, which familiarize the students with the scientific content of the course. Students then work in teams with high school teachers to develop their presentations. The final part of the course includes practice presentations and teaching at regional high schools.

BIO G 431 Frontiers in Biophysics
Fall. 1/2 credit. S-U grades only. Lec TBA. G. Feigenson and staff. A day of lectures on Saturday, Sept. 14, 9:00-4:00, Racker Room, Biotechnology Bldg, giving an overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates who are considering a career in biophysics and for graduate students who are interested in biophysics research opportunities at Cornell.

BIO G 450 Light and Video Microscopy for Biologists
Spring. 3 credits. Limited to 12 students. Prerequisite: one year introductory biology and permission of instructor. Lec, T R 1:25-2:30; lab, R 2:30-4:30. R. O. Wayne. Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living cells.

BIO G 498 Teaching Experience
Fall or spring. 1-4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent. Arts students may not count this course toward graduation. They may, however, upon petition one time only to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility, but not eligibility for graduating with distinction. S-U grades optional, with permission of instructor. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experiences include BIO G 205, 206, BIOAP 311, 313, 319; BIOMB 330, 331; BIOEE 274, 475; BIOGD 281; and BIOMI 291, 292.

BIO G 499 Undergraduate Research in Biology
Fall or spring. Variable credit. Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor. Prerequisite: written permission of staff membe who supervises the work and assigns the grade. Students must register in the Office of Undergraduate Biology in 216 Sinumson Hall. Each student must submit an independent study statement describing the proposed research project during course registration. Applications are available in the college offices and in 216 Sinumson Hall. Faculty member in Biological Sciences may act as a supervisor. Supervisors outside of Cornell are not acceptable. S-U grades optional. Staff. Practice in planning, conducting, and reporting independent laboratory and library research programs. Up to three credits of research may be used to complete the Programs of Study in general biology, genetics and development, and systematics and biotic diversity, and four credits of research in neurobiology and behavior.

BIO G 662 Nanobiotechnology (also A & E P 663)
Spring. 3 credits. Letter grade only. C. Batt and H. Craighead. For course description see A & E P 663.

BIO G 705 Advanced Immunology Lectures (also VETMI 705)

BIO G 706 Immunology of Infectious Diseases (also VETMI 719)
Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor. Lec, R 10:10-12:05. Offered alternate years. Coordinator: J. Denkers. This graduate level course focuses on molecular and cellular mechanisms underlying immunity to infectious diseases caused by viral, bacterial, protozoan, and helminth pathogens. Topics include immune response initiation, antigen presentation pathways, Th1 and Th2 cytokines in protection and pathology, mechanisms of cytolsis; immune evasion strategies; vaccines. Lectures are based upon recent advances in the field and are accompanied by relevant readings from the current literature.

ANIMAL PHYSIOLOGY (BIOAP)

BIOAP 212 Human Physiology for Non-Biology Majors
Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any program of study in the biological sciences major. Lecs, M W F 1:25; disc, M W or F 2:15. M. D. Baustian.

Introduction to the principles of physiology governing the function of the human body. Emphasis is placed on reproduction, pregnancy and development, and immunology and the defense of the organism against disease. Major organ systems are surveyed to illustrate how physiology relates to the function of living systems, and how this knowledge has shaped the management of health and disease. The contribution of information based sciences of genetics, molecular biology, and the emerging biotechnologies to the study of human physiology is covered.

BIOAP 214 Biological Basis of Sex Differences (also B & SOC 214 and WOMNS 214)
Spring. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lecs, T R 1:25-2:40. Offered alternate years. Offered in 2003. J. E. Fortune. The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction, where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

BIOAP 311 Introductory Animal Physiology, Lectures (also VETPH 346)
Fall. 3 credits. Prerequisites: one year of introductory biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor. Evening lectures. Lecs, M W F 11:15. E. R. Loew. A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOAP 312 Farm Animal Behavior (also ANSC 305)
Spring. 2 credits. Prerequisites: one year of introductory biology, and introductory animal physiology (ANSC 100 and 150 or equivalent is sufficient or BIOAP 311); at least 1 animal production course or equivalent experience is recommended. S-U grades optional. Lecs, T R 11:15. E. A. Oleniacz, K. A. Haight. The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, feeding, of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.
BIOAP 458 Mammalian Physiology
Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Students not taking this prerequisite must obtain written permission of instructor to enroll. (Fall and spring semesters. See Note 11 for prerequisites. Lab in T8 014 Vet Research Tower before the first class. MWF 10:10. K. W. Beyenbach.)

The course offers in-depth treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and a working knowledge of physiology. Selected topics include: basic functional elements of biological systems; recurrent themes in physiology; design of multicellular animals; mammalian fluid compartments; homeostasis; membrane and epithelial transport; electro-physiology; cardiovascular physiology; gastrointestinal physiology; renal physiology; and acid/base physiology. The lectures incorporate clinical correlations whenever appropriate. Occasional guest lecturers talk about work and careers in basic research and/or clinical medicine. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

BIOAP 475 Mechanisms Underlying Mammalian Developmental Defects (also NS 475)
Spring. 3 credits. Prerequisites: BIOBM 350, 351-352, or 353 (may be taken concurrently). MWF 9:05; lab, R 2:00. D. Noden and P. Stover. For description, see NS 475.

BIOAP 619 Lipids (also NS 602)
Fall. 2 credits. Lec, T R 11:15. A. Bensadoun.

Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catabolism; molecular biology, function and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

BIOAP 710-718 Special Topics in Physiology
Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional. Prerequisite: instructor. Lectures, laboratories, discussions, seminars on specialized topics.

BIOAP 711 Readings in Applied Animal Behavior
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. S-U grades optional. Lab in T8 014 Vet Research Tower before the first class. MWF 10:10. K. A. Houpt.

BIOAP 713 The Physiology of Digestive Behavior: Food and Water Intake
Fall. 1 credit. Prerequisite: introductory biology. T. R. Houpt.

A series of 1 to 1.5 hour weekly sessions in which the physiological mechanisms of hunger and thirst, primarily in mammals, are considered by the group. There is a mix of background readings, individual reports, and general discussion.

BIOAP 714 Cardiac Electrophysiology
Fall. 1 credit. Offered alternate years. R. Gilmour.

Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasis on the dynamic aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOAP 715 Stress Physiology: To Be Discussed as Part of Animal Welfare
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent required. Offered alternate years. Next offered fall 2002. K. A. Houpt. The emphasis is on physiological assessment of stress.

BIOAP 719 Graduate Research in Animal Physiology (also VETPH 628)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. S-U grades optional. Hours TBA. Staff. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOAP 720 Animal Physiology and Anatomy Seminar
Spring and fall. 1 credit each semester. Prerequisite: admission to the graduate Field of Physiology. This seminar course is designed to provide graduate students in the Field of Physiology with training to become professional scientists. Students who participate are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester and in one special session devoted to a particular topic, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

BIOAP 517 Current Concepts in Reproductive Biology

A team-taught survey course in reproductive physiology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function), female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproduc­
tive technology. Student participation in the form of discussions and/or presentations.

BIOAP 811 Advanced Physiological Methods I
Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: J. Ray. This is a workshop for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of faculty members in the Field of Physiology to acquaint graduate students with the latest techniques/methods in biomedical/physiologi­cal/genomic research. Three modules are offered each semester by arrangement with the course coordinator.

BIOAP 431 Histology: The Biology of the Tissues
Spring. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOBM 330 or 331 or equivalent; and previous enrollment in BIOAP 311. S-U grades optional, with permission of instructor. Lec, M W 1:25; labs, M W 2:30-4:25. S. Suarez, L. Mizer.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphology at the cell and tissue level. Emphasis on integration of structure, function, and behavior in cells and tissues is emphasized.

BIOAP 427 Fundamentals of Endocrinology (also AN SC 427)
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lec, M W F 9:05. P. A. Johnson. For description, see AN SC 427.
**BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY 161**

**BIOAP 812 Advanced Physiological Methods II**
Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: J. Ray. This is a course for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of faculty members in the Field of Physiology to acquaint graduate students with the latest techniques/methods in biomedical/physiological research. Three modules are offered each semester by arrangement with the course coordinator.

**Related Courses in Other Departments**
Adaptations of Marine Organisms (Biological Sciences [BIOGSM] 413)
Advanced Work in Animal Parasitology (Veterinary Microbiology 737)
Animal Development (Veterinary Anatomy 507)
Animal Reproduction and Development (Animal Science 300)
Developmental Biology (Biological Sciences [BIOGD] 386)
Embryology (Biological Sciences [BIOGD] 389)
Fundamentals of Endocrinology (Animal Science 427)
Insect Morphology (Entomology 322)
Integration and Coordination of Energy Metabolism (Biological Sciences [BIOBM] 330 and Nutritional Sciences 636)
Neuromuscular Anatomy (Veterinary Anatomy 504)
Sensory Function (Biological Sciences [BIOBN] 492)
Teaching Experience (Biological Sciences [BIO G] 498)
Undergraduate Research in Biology (Biological Sciences [BIO G] 499)

**BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)**

**BIOBM 132 Orientation Lectures in Molecular Biology and Genetics**
(Also BIOGD 132)
Spring. weeks 1-3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lect. S 10:10, for first three S of semester. Staff. Discussions by six professors about their research and promising new areas for research in the future.

**BIOBM 232 Milestones in Molecular Biology and Genetics**
Spring. 3 credits. Limited to freshmen and sophomores. Prerequisites: advanced placement biology or college-level introductory biology. Letter grade. Lecs. M W 9:05; disc. F 9:05. J. M. Lopez. Lectures cover seminal genetic, biochemical, and cellular and molecular biological experiments that were recognized by Nobel prizes. Discussion focuses on current scientific consequences of these seminal findings, together with their societal and/or economic ramifications.

**BIOBM 233 Introduction to Biomolecular Structure (Also CHEM 233)**
Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207-208 or equivalents. Lecs. T R 2:30-3:20. Next offered fall 2003. S. E. Ealiick. This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship between the structure and function of biologically important molecules is explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.

**BIOBM 321 Numerical Methods in Computational Molecular Biology (See COM S 321)**
Fall. 3 credits. Prerequisites: at least 1 course in calculus, such as MATH 106, 111, or 191 and a course in linear algebra, such as MATH 211. 217. No particular course in programming is required, but the student should have some familiarity with iteration, arrays, and procedures.

For course description see COM S 321.

**BIOBM 330-332 Principles of Biochemistry**
Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year, and lectures (333) during the summer. Individualized instruction is offered to a maximum of 250 students each semester. Lectures are given fall semester (331), spring semester (332), and summer (333).

**BIOBM 330 Principles of Biochemistry, Individualized Instruction**
Fall or spring. 4 credits. Prerequisites: one year of introductory biochemistry for majors and one year of general chemistry and CHEM 257 or 357-358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Concurrent registration in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 335, 332, or 333. S-U grade optional for graduate students. Hours TBA. Evening prelims: fall, Oct. 3 and Nov. 5; spring, Feb. 20 and Apr. 1. J. E. Blankenship, P. C. Hinkle, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

**BIOBM 331 Principles of Biochemistry: Proteins and Metabolism**
Fall. 3 credits. Prerequisites: one year of introductory biochemistry for majors, one year of general chemistry, and CHEM 257 or 357-358 (CHEM 257 or 357 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor. Evening prelim: Oct. 24. Lect. M W F 10:10. G. W. Feigenson. The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

**BIOBM 332 Principles of Biochemistry: Molecular Biology**
Spring. 2 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional, with permission of instructor. Lecs. T R 12:20. B. K. Yee.

A comprehensive course in molecular biology that covers the structure and properties of DNA, RNA replication and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

**BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology**
Summer. (6-week session). 4 credits. Prerequisites: one year of introductory biology for majors, one year of general chemistry, and CHEM 257, or 357-358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 351, or 332. Lecs. M-F 10:00-11:15. S. Ely or R. J. Stivers. Topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

**BIOBM 334 Computer Graphics and Molecular Biology**
Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330. If space permits, students who have completed BIOBM 331 or 333 and have either taken or are concurrently taking BIOBM 332 will be permitted to register during the first week of classes. Hours TBA. J. E. Blankenship, P. C. Hinkle, and staff.

Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

**BIOBM 407 Nature of Sensing and Response: Signal Transduction in Biological Systems (Also PLPA 407)**
Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIOGD 281. S-U grades optional. Lecs. T R 10:10-11:25. T. P. Delaney.

The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems are explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant, and animal systems for environmental sensing, control of development, and responses during disease. Discussion also examines the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed by mutation and disease.

**BIOBM 432 Survey of Cell Biology**
Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent.
A seminar course focusing on topics such as: drugs that extend the life of AIDS patients; The facts as well as concepts and logics regulation of cell division cycle and signal topic are evaluated critically during six or Research articles are analyzed and discussed related to cell proliferation in eukaryotes. Selected papers from the literature on a given BIOBM 437 Eukaryotic Cell Proliferation system, DNA and edible vaccines, transgenic of genomes, drug discovery based upon metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of infectious agents and environmental toxins. Examples of diseases are selected to emphasize various aspects of genetics, molecular biology, cell biology, physiology, immunology, and endocrinology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, are presented. A portion of each class period will be devoted to discussion and practice questions.

BIOBM 435-436 Undergraduate Biochemistry Seminar 435, Fall; 436, spring, 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisites: BIOBM 330, 333, or 331 and 332 or written permission of instructor. S-U grades only. Seminar time TBA. Organizational meeting first W of each semester. Fall: J. M. Calvo and S. Ely; spring: D. Wilson. Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

BIOBM 437 Eukaryotic Cell Proliferation (also TOX 437) Fall. Variable credits. Students may take lectures for 2 credits, or take both lectures and discussions for 3 credits. Enrollment for discussion section is limited to 20 students, with preference given to graduate students. Prerequisite: BIOG 101-102 or BIOG 105-106 and BIOBM 330 or BIOBM 331-332. Recommended: BIOG 281 and BIOG 432. S-U grades optional. Lec, T 12:20-1:10. Disc, TBA. R. H. Chen.

The course covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion section.

A seminar course focusing on topics such as: drugs that extend the life of AIDS patients; applications of human embryonic stem cell technology; genetically engineering plants for resistance to insects; bringing erythropoietin to market; mining genetic variation within isolated human populations; and benefits from stimulating and blocking angiogenesis. Some of the material is covered in greater depth in BIOBM 437, BIOG 483; and BIOBM 632, 636, and 639.

BIOBM 439 Molecular Basis of Human Disease (also BIOG 439) Fall. 3 credits. Prerequisites: BIOBM 330 or 331-332 and genetics (e.g., BIOG 281) or permission from instructor. Recommended: cell biology (e.g., BIOG 432 or BIOAP 431) and physiology (e.g., BIOAP 311 or BIOAP 458). S-U grades optional. Lec, T 10:10-11:25. W. L. Kraus.

This course examines how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena and environmental agents lead to disease. The material focuses on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics are selected from hormone insensitivity syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of infectious agents and environmental toxins. Examples of diseases are selected to emphasize various aspects of genetics, molecular biology, cell biology, physiology, immunology, and endocrinology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, are presented. A portion of each class period will be devoted to discussion and practice questions.

BIOBM 440-443 Laboratories in Molecular Biology, Biochemistry, Cell Biology and Molecular Neurobiology Laboratory instruction in these areas is organized as a set of 2 credit modules, each module is taught for half a semester during the academic year and some modules are taught during the summer. Students usually sign up for two courses for a total of 4 credits, limited space is available for students taking only one course for 2 credits. Which courses are offered in each semester depends on scheduling constraints and student preference. Enrollment limited, with preference given to undergraduates having Biochemistry or Molecular and Cell Biology Programs of Study and to graduate students with a minor in the Field of Biochemistry, Molecular, and Cell Biology. Prerequisites: BIOBM 330, or 333, or 331 and previous or concurrent enrollment in 332, or 332 and previous or concurrent enrollment in 331, and permission of instructor. Form to apply for admission to this course is found on the web [http://132.236.135.25/signup.html]. Submit applications for all fall semester courses beginning February 15, and for spring semester courses beginning September 15. Confirmation of enrollment status will be sent by e-mail during the week preceding CourseEnroll Fall and Spring. Labs, M W 12:20-4:25 (disc, F 11:15 or 1:25) or T 9:05-4:25 (disc, R 11:15) or R 9:05-4:25 (disc, T 1:25). Summer (3-week session): M-F 10-5:30.

BIOBM 440 Experimental Molecular Biology 2 credits. Hours TBA. S. Ely or H. T. Nivison. Experiments may include cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

BIOBM 441 Experimental Proteins and Enzymology 2 credits. Hours TBA. S. Ely or H. T. Nivison. Experiments may include purification of enzymes by salt fractionation, ion exchange chromatography, affinity chromatography, determination of kinetic parameters for an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

BIOBM 442 Experimental Cell Biology Spring only. 2 credits. Hours TBA. Staff. Experiments include culture of animal cells, purification and analysis of cellular components, immunofluorescence and electron microscopy, and in vitro assays.

BIOBM 443 Experimental Molecular Neurobiology (also BIOBM 430) Spring. Next offered spring 2003. Hours TBA. D. Detchter. Experiments include PCR, cloning of DNA fragments, DNA purification, restriction digests, bacterial transformation, and DNA sequencing. Experiments emphasize how molecular techniques can be applied to studying neurological problems.

BIOBM 450 Lab Projects in Molecular Biology and Biochemistry Spring. 3 credits. Enrollment limited to 10 students. Prerequisites: 4 credits from any of the following lab courses; BIOBM 440, 441, 442, or 443 plus permission of instructor. Letter grade only. Lab, R 1:25-4:25 plus at least 3 additional lab hours by individual arrangement with the instructor. Disc, F 2:30. S. Ely. Students work individually on projects of their choice pertaining to a common theme: Skills developed include literature and database searching, project and experimental design, keeping a legal notebook, weekly communication of results, and an oral presentation. Experimental techniques may include site-directed mutagenesis, whole-genome expression systems, molecular evolution of a compound, and exploration of the human genome.

BIOBM 631 Protein Structure and Function Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 and organic chemistry. Recommended: general chemistry. S-U grades optional. Lec, M W F 9:05-11:15, W. L. Kraus.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY

BIOBM 632 Membranes and Bioenergetics
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Lect., T R 11:15. Offered alternate years. Not offered 2003. P. C. Hinkle.
Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.

BIOBM 633 Biosynthesis of Macromolecules

BIOBM 636 Advanced Cell Biology
Spring. 2 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, and 432, or their equivalents. Lect., T R 9:05-9:55. A. P. Bretscher. This course aims to provide an integrated view of eukaryotic cell organization as elucidated using biochemical, molecular, genetic, and cell biological approaches. Major topics include the cytoskeleton, membrane traffic and cell polarity. Together with BIOBM 437, 632, and 639 this course provides broad coverage of the cell biology subiect area.

BIOBM 639 The Nucleus
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332, or their equivalent. Recommended: BIOGD 281. Lec, T R 10:10. J. T. Lis. Lectures on topics of eucaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the structure and movement of chromosomes, and nuclear export and import. This course covers the structure and function of the nucleus at the molecular and cell biological levels, and together with BIOBM 437, 652 and 656, provides broad coverage of the cell biology subject area.

BIOBM 641 Laboratory in Plant Molecular Biology (also BIOLP 641)
Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 333 or equivalent, and permission of instructor. S-U grades with permission of instructor. Lab, T 9:05-4:30. J. B. Nasrallah, M. R. Hanson. Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lecture time is required to complete assignments.

BIOBM 652 Section 05 Molecular Biology of Plant Organelles (also BIOLP 652.5)
1 credit. Lecs, M W F 10:10 (12 lecs) Feb. 17-Mar. 14. M. R. Hanson, D. B. Stern. An introduction to the molecular biology of plant mitochondria and plastids. Topics include the organization, evolution, and expression of organelle genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organelle proteins. Special topics include mitochondrially-encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleus-organelle interactions.

BIOBM 653 (Section 04) Molecular Aspects of Plant Development I (also BIOLP 653.4)
1 credit. Lecs, M W F 10:10 (12 lecs) Nov. 1-Dec. 2. B. J. H. Nasrallah. This module focuses on the molecular genetics of plant development. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOLP 652. Sec 02 (Molecular Aspects of Plant Development II).

BIOBM 730 Protein NMR Spectroscopy (also VETPR 730)
Spring. 2 credits. Prerequisites: CHEM 389 and 390 or CHEM 287 and 288 or permission of instructor. Lab, T 9:05-9:55. Offered every other year. Lec, TBA. L. K. Nicholson, R. F. Oswald. The student acquires the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignment, structure determination, and dynamics characterization is studied.

BIOBM 732-737 Current Topics in Biochemistry
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. S-U grades only. Hours TBA.
Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

BIOBM 738 Macromolecular Crystallography (also CHEM 788)
Spring. 3 credits. Prerequisite: permission of instructor. Lecs, M W F 10:10. Offered alternate years. S. E. Ealick. Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the three-dimensional structures of macromolecules.

BIOBM 751 Ethical Issues and Professional Responsibilities
Spring. 1 credit. Limited to graduate students beyond first year. S-U grades only. Sem, F 4:00. Staff. Lectures on current research in biochemistry, presented by distinguished visitors and staff members. Lectures are open to everyone, but registration is limited to graduate students in Biochemistry, Molecular and Cell Biology.

BIOBM 761 Topics in Cancer Cell Biology (also VETMM 761)
Spring. Series of 1 credit graduate sections that reflect the "cancer expertise" of the Cornell faculty. (Course Director: Dr. B. U. Pauli). For description, see VETMM 761.

BIOBM 830 Biochemistry Seminar
Fall or spring. No credit. Sem, F 4-00. Staff. Lectures on current research in biochemistry, presented by distinguished visitors and staff members. Lectures are open to everyone, but registration is limited to graduate students in Biochemistry, Molecular and Cell Biology.

BIOBM 831 Advanced Biochemical Methods I
Fall. 6 credits. Required of, and limited to, first year graduate students in the Field of Biochemistry. Molecular and Cell Biology. S-U grades only. Labs and discussions 12 hours each week TBA. Organizational meeting first R of semester 10:10. V. M. Vogt and T. Hufnaker. The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half of the course comprises research in the laboratory of a professor chosen by the student (See BIOBM 852). Students must enroll separately for each half.

BIOBM 832 Advanced Biochemical Methods II
Spring. 6 credits. Required of, and limited to, first year graduate students in the Field of Biochemistry. Molecular and Cell Biology. S-U grades only. Lab TBA. Staff. Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the Director of Graduate Studies and the research adviser.

BIOBM 833 Research Seminar in Biochemistry
Fall or spring. 1 credit each term. May be repeated for credit. Required of and limited to, second, third, and fourth-year graduate students majoring in the field of biochemistry, molecular and cell biology. S-U grades only. Sem, M 12:20-1:30. T. C. Huffaker. Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOBM 836 Methods and Logic in Biochemistry, Molecular and Cell Biology, Part I
Spring. 1 credit. Limited to first-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Sem and disc TBA. G. P. Hess. A seminar course with critical discussion by students of original research papers. A variety of topics in biochemistry, molecular and cell biology are covered.

BIOBM 838 Methods and Logic in Biochemistry, Molecular and Cell Biology, Part II
Spring. 2 credits. Limited to second year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Monday, 9-11. D. Shalloway. An interactive seminar to develop general skills needed to support a career in scientific research experimental design, writing
BIOLOGICAL SCIENCES - 2002-2003

Scientific papers and grants, oral presentation, basic statistical and computational methods, managing a research laboratory, etc. Student projects include preparation and presentation of a mock research grant proposal.

ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)

BIOEE 154 The Sea: An Introduction to Oceanography, Lectures (also EAS 154)
Spring. 3 credits. The optional one-credit laboratory for this course is offered as BIOEE/EAS 155. S-U grades optional. Lect, T R 11:40-12:55, C. H. Greene, W. M. White.
A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: seafloor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate change, ocean ecology, and coastal processes.

BIOEE 155 The Sea: An Introduction to Oceanography, Laboratory (also EAS 155)
Spring. 1 credit. Prerequisite: concurrent enrollment in BIOEE/EAS 154. S-U grades optional. Lab, M 2:40-4:25 or W 7:30-9:55 p.m., or W 7:30-9:55 p.m. C. H. Greene, W. M. White.
Laboratory course covering topics presented in BIOEE/EAS 154.

BIOEE 207 Evolution (also HIST 287 and S&TS 287)
Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 278. Does not meet the evolutionary biology requirement for the biological sciences major. S-U grades optional. Fall, Lect, T R 10:10; disc, 1 hour each week. TBA. Summer (6-week session): Lect and disc, M W 6:00-9:00 p.m. W. B. Provine.
Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology, and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIOEE 261 Ecology and the Environment
Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lect, M W F 11:15, disc, W or R 1:25, 2:30, or 3:35; A. S. Flecker, J. P. Sparks.
We explore the interactions between the environment and organisms as individuals, populations, communities, and ecosystems. The emphasis is on basic ecological principles and processes that are generally useful in understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines. Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and function, biodiversity, biogeochemistry, and productivity. Human influences on ecosystems, human-created ecosystems (agricultural and urban ecosystems), and sustainable practices are covered.

BIOEE 263 Field Ecology
Fall. 3 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOEE 261. Lect, R 1:25; lab, F 12:20-4:25; 1 weekend field trip to the Hudson Valley; R. B. Root.
Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and carnivores on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

BIOEE 264 Birds in Biology
This course explores exciting new insights in biology using detailed examples drawn from bird studies. Subject matter is suitable for non-majors, but of interest to majors as well. Topics are drawn from a variety of biological disciplines. These include: avian behavior ecology (mating systems, territorial behavior, song); population ecology (migration, population limitation, micro-evolution, competition); evolutionary biology (trade-offs in life histories, optimal clutch size, and conservation biology (habitat fragmentation, inbreeding, acid rain). Lectures are interspersed with discussion of selected papers.

BIOEE 267 Introduction to Conservation Biology
Fall. 3 credits. May not be taken for credit after NTRES 450. Intended for both science and non-science majors. Completion of BIOEE 267 is not required for NTRES 450. S-U grades optional. Lects, M W 9:05; disc, F 9:05 or R 2:30; 1 Saturday field trip. Offered alternate years. Not offered 2002-2003; next offered fall 2003. A. S. Flecker, J. W. Fitzpatrick.
An exploration of biological concepts related to the earth's biodiversity, introducing ecological and evolutionary principles important for understanding major conservation problems. Topics include patterns of species and ecosystem diversity, causes of extinction, genetic risks of small populations, design of nature preserves, strategies for protecting endangered species, ecosystem restoration, and the value of biodiversity.

BIOEE 274 The Vertebrates: Structure, Function, and Evolution
An introductory course in vertebrate organismal biology which explores the structure and function of vertebrates with an emphasis on vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

BIOEE 275 Human Biology and Evolution (also ANTH 275 and NS 275)
Fall. 3 credits. S-U grades optional, with permission of either instructor. Lects, M W F 10:10, disc, M 10:10 or TBA. Lects every W and F; occasional lectures on M. Offered alternate years. K. A. R. Kennedy, J. D. Haas.
An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behaviors. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

BIOEE 278 Evolutionary Biology
Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per semester, limited to 20 students per section each semester.) Limited to 300 students. Prerequisite: 1 year of introductory biology or permission of instructor. S-U grades optional. Evenning prelims: fall, Sept. 26 and Oct. 31; spring, Feb. 27 and Apr. 1. Lects, T R 9:05; disc, 1 hour each week. TBA. Fall, I. Lovette; spring, M. Shulman.
The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the four-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.
This course is an introductory survey of the biology of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn basic characteristics and phenomena important to understanding neotropical ecosystems, gain firsthand knowledge of the resources in tropical biology available at Cornell, and to learn how to organize and execute a meaningful seminar presentation.

BIOEE 452 Herbivores and Plants: Chemical Ecology and Coevolution (also ENTOM 452)
Spring. 3 credits. Prerequisites: one year of introductory biology, BIOEE 261, or permission of instructor. S-U grades optional. Field trips, additional lectures, or laboratory demonstrations may be held in place of F lecture. Lecs, M W F 11:15. Offered alternate years. P. P. Feeny.

Topics include: significance of plant chemistry in mediating interactions between plants and herbivores; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack, and implications for human food and agriculture.

BIOEE 453 Speciation
Fall. 3 credits. Limited to 40 students. Prerequisites: BIOEE 278 and BIOGD 281 or equivalents, or permission of instructor. Lecs, T R 10:10-11:25. Offered alternate years. R. G. Harrison.

An advanced course in evolutionary biology focusing on the pattern and process of speciation and the nature and origin of intrinsic barriers to gene exchange. Topics covered in lectures include species concepts, rates of speciation, the origin of such barriers, genetic architecture of speculation, rates of speculation. Emphasis will be on developing a rigorous conceptual framework for discussing speciation and on detailed analysis of a series of case histories.

BIOEE 455 Insect Ecology (also ENTOM 455)
Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent and ENTOM 212 or knowledge of another taxon. S-U grades optional. Lecs, M W F 11:15. Offered alternate years. Not offered 2002-2003. R. B. Root.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, evolution impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

BIOEE 456 Stream Ecology (also ENTOM 456 and NTRES 456)

For description, see ENTOM 456.

BIOEE 457 Limnology: Ecology of Lakes, Lectures
Fall. 3 credits. Prerequisite: BIOEE 261 or written permission of instructor. Recommended: introductory chemistry. Letter grade, S-U by permission only. Lecs, M W F 10:10-11:15. Offered alternate years. N. G. Hairston, Jr.

Limnology is the study of fresh waters and other inland, nonmarine environments. This course focuses on lakes and ponds, which are discussed as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical properties of the environment impact organisms in important ways and organisms, likewise, influence physics and chemistry. As a result, lakes provide excellent systems for understanding the links between physical (thermal and mixing), chemical (dissolved elements and compounds), and organismal dynamics. Lakes are exciting environments for aquaculture on their own and, and for gaining perspective on ecological and evolutionary processes in general.

BIOEE 459 Limnology: Ecology of Lakes, Laboratory
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOEE 457. Letter grade, S-U by permission only. Lab, T W R 1:25-4:25, 1 weekend field trip. Fee, $12 (for food on field trip). Offered alternate years. N. G. Hairston, Jr., staff.

Lakes and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Exercises focus on understanding the freshwater environment, on experimentation, and on understanding ecological processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.

BIOEE 460 Theoretical Ecology
Spring. 4 credits. Enrollment limited. Prerequisites: completion of the Biological Sciences mathematics requirement or equivalent, and either the first half of another semester of mathematics, statistics or modeling (e.g., BEE 250, BEE 367, NTRES 305, NTRES 340, NTRES 410, BIONB 422) or permission of instructor. S-U grades optional. Lecs, T R 1:25-2:40, lab, M 2:00-4:25. Offered alternate years. S. P. Ellner.

An introduction to the models used to construct ecological theory and analyze data on ecological dynamics, and to the mathematical and computer methods used to analyze these models. Applications from individual decision-making through multispecies and spatial dynamics introduce the main themes in theoretical ecology: optimization, dynamics, and the links between process and pattern. The lab includes instruction in computer programming and review of mathematical methods.

BIOEE 462 Marine Ecology (also EAS 462)
Spring. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Lecs and disc, M W F 10:10. Offered alternate years. C. D. Harvell.

Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of
ple multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

BIOEE 463 Plant Ecology and Population Biology, Lectures
Fall. 3 credits. Prerequisite: BIOEE 261 or 278 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOEE 465. Lecs, M W F 11:15. Offered alternate years. M. A. Geber, P. L. Marks. This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are explored. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

BIOEE 464 Macroevolution
Spring. 3 credits. Limited to 25 students. Prerequisite: BIOEE 278 or permission of instructor. Grad students interested in taking this course are strongly encouraged to preregister. S-U grades optional, with permission of instructor. Lecs, T R 10:10-11:25; disc, 1 hour each week TBA. Offered alternate years. Not offered 2002-2003. A. R. McCune. An advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction, the origin of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involve data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.

BIOEE 465 Plant Ecology and Population Biology, Laboratory
Fall. 1 credit. Prerequisite: concurrent enrollment in BIOEE 465. Lab, F 12:05-5:00. Offered alternate years. M. A. Geber, P. L. Marks. Field and laboratory exercises are designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

BIOEE 466 Physiological Plant Ecology, Lectures
Spring. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Lect, M W F 9:00-9:50; optional disc; TBA. Offered alternate years. J. P. Sparks. A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore: physiological adaptation; limiting factors, resource acquisition and allocation, photosynthesis, carbon, and energy balance; water use and water relations, nutrient relations, linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and physiology at the population, community, and ecosystem levels. Readings draw from the primary literature and textbooks.

BIOEE 467 Seminar in the History of Biology (also HIST 415, B&SOC 447, and S&T 447)
Summer (6-week session). 4 credits. Limited to 18 students. S-U grades optional. W. B. Provine. Specific topic changes each year.

BIOEE 468 Physiological Plant Ecology, Laboratory
Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOEE 466. Lab, W 12:25-4:25, plus additional lab hours TBA. Offered alternate years. J. P. Sparks. A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of three hours/week in additional lab time for this course.

BIOEE 469 Food, Agriculture, and Society (also B&SOC 469 and S&T 469)
Spring. 3 credits. Limited to 20 students. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Lecs, T R 12:25-4:40. Not offered 2002-2003. A. G. Power. A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

BIOEE 470 Mammalogy
Fall. 4 credits. Recommended: BIOEE 274. S-U grades optional, with permission of instructor. Carpooling to the Vertebrate Collections at Cornell Business and Technology Park is necessary several times during the seminar. Fees, $15. Lecs, M W F 12:20; lab, M T or W 1:25-4:25, 1 weekend field trip required. Offered alternate years. Not offered 2002-2003. Staff. Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with an emphasis on the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

BIOEE 471 Ornithology
Fall. 4 credits. Recommended: BIOEE 274. S-U grades optional, with permission of instructor. Carpooling to the Laboratory of Ornithology is necessary. Fees, $15. Lecs and labs, T R 12:20-4:25; occasional field trips and special projects. Offered alternate years. Not offered 2002-2003. D. W. Winkler. Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, study of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

BIOEE 472 Herpetology
Spring. 4 credits. Limited to 35 students. Recommended: BIOEE 274. S-U grades optional, with permission of instructor. Fees, $30. Lecs, T R 12:20; labs, T R 12:25-4:25; occasional field trips and special projects. Offered alternate years. H. W. Greene. Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory exercises include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

BIOEE 473 Ecology of Agricultural Systems (also CSS 473)
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. During the first six weeks of class, the Thursday meetings may run later because of field trips. Lecs and disc, T R 2:30-3:45. Offered alternate years. Not offered 2002-2003. A. G. Power, E. C. M. Fernandes. Analysis of the ecological processes operating in agricultural systems. An emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

BIOEE 474 Forensic Anthropology and Human Biology (also ANTHR 474)
Spring. 5 credits. Limited to 16 students. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Recommended: permission of instructor by preregistering in E235 Corson. Independent research project required. Lecs and labs, T R 10:10-12:05; additional hours TBA. Offered alternate years. K. A. Kennedy. Forensic anthropology within the forensic sciences is covered in a broad survey of laboratory and field methods for students with interest in this applied area of biological anthropology. Emphasis is upon human skeletal biology, pathology, age and sex determination, and relevant techniques for the archaeologist and forensic anthropologist.

BIOEE 475 Ornithology
Spring. 4 credits. Limited to 35 students. Prerequisite: permission of instructor by preregistering in E235 Corson. Recommended: BIOEE 274. S-U grades optional, with permission of instructor. Carpooling to the Laboratory of Ornithology is necessary. Fees, $15. Lecs and labs, T R 12:20-4:25; occasional field trips and special projects. Offered alternate years. Not offered 2002-2003. D. W. Winkler. Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, study of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.
Lecs and field trips TBA. Estimated costs: TBA. Staff.

This course provides students with opportunities to learn field techniques and new biotypes by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

Section 01: Life Histories of Marine and Freshwater Invertebrates
Spring. 2 credits. Prerequisite: undergraduates must have previous experience or course work with marine or freshwater invertebrates. Extended field trips over winter break. Fee, TBA (to cover transportation and housing). Offered alternate years. C. D. Harvell, N. G. Hairston, Jr. Field trips to the Yucatan Coast of Mexico. Students employ experimental approaches to study the ecology of invertebrate life histories.

Section 02: Graduate Field Course in Ecology
Spring. 3 credits. Restricted to graduate students. Fee will be required to help cover food and lodging for trip to Florida. Offered alternate years. Not offered 2002–2003. P. L. Marks, R. B. Root. The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cactus ranches, cypress swamps, everglades, and coral reefs.

BIOEE 661 Environmental Policy (also ALS 661 and B & SOC 461)
Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, R 2:30–4:30. D. Pimentel. This course focuses on complex environmental issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*. Thus far, every study has been published.

BIOEE 665 Limnology Seminar

BIOEE 668 Principles of Biogeochemistry

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.
Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

**BIOEE 899 M.S. Thesis Research**
Fall or spring. 1-15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology. S-U grades optional. E&EB field faculty.

Thesis research conducted by an M.S. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

**BIOEE 999 Ph.D. Dissertation Research**
Fall or spring. 1-15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology as a Ph.D. student. S-U grades optional. E&EB field faculty.

Dissertation research conducted by a Ph.D. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

**GENETICS AND DEVELOPMENT (BIOGD)**

**BIOGD 132 Orientation Lectures in Molecular Biology and Genetics**
(also BIOBM 331)

Spring, weeks 1-3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lect. S 10:10, for first three S of semester. Staff.

Discussions by six professors about their research and promising new areas for research in the future.

**BIOGD 184 Understanding Genetics**

Spring. 3 credits. May not be taken for credit after BIOGD 281 or 282. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements for any program of study in the biological sciences major. S-U grades optional. Lect. M W F 2:30. Offered alternate years. T. D. Fox.

An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that is providing insight into all aspects of biology and practical tools which increasingly affect our lives. This course shows how major conclusions about inheritance have been derived from the experimental evidence, drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand genetic diseases and the identification of individuals (DNA fingerprinting). Other topics to be covered include the origin of mutations, use of genetic methods to alter the properties of organisms and the influence of inheritance on behavior.

**BIOGD 281 Genetics**

Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology. No admittance after first week of classes. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Lecs, T R 10:10-12:05, lab, T or W or R or F 2:35-4:25. Problem-solving sessions strongly recommended, T or W 8:30-9:45 (additional section by arrangement). T. D. Fox, M. L. Goldberg, J. R. Machtontyre.

A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions cover gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and extra-chromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.

**BIOGD 282 Human Genetics**

Spring. 2 or 3 credits if taken after BIOGD 281. Each discussion limited to 20 students. Prerequisite: 1 year of introductory biology or equivalent; permission of instructor required for students who have taken BIOGD 281. S-U grades optional. Lecs. M W 10:10 (Lecs, also F 10:10 first 4 weeks only); disc, R 10:10 or F 10:10 or 11:15. Staff.

A course designed for nonmajors. Lecturers provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

**BIOGD 385 Developmental Biology**

Fall. 3 credits. Prerequisite: BIOGD 281. Lecs. M W F 11:15. K. J. Kemphues.

An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

**BIOGD 389 Embryology**

Spring. 3 credits. Preference given to seniors. Prerequisites: 1 year of introductory biology and a knowledge of mammalian adult anatomy. Lecs, TBA; labs, TBA. Staff.

A course in the embryonic development of terrestrial vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for veterinary medical studies.

**BIOGD 394 Circadian Rhythms**
(also ENTOM 394 and BIONB 394)

Fall. 2 credits. Prerequisite: ENTOM 212, or BIOGD 281, or BIONB 221 or 222, or permission of instructor. S-U grades optional. Lee, W 7:30-9:10 p.m. Offered alternate years. J. Ewer.

For description, see ENTOM 394.

**BIOGD 439 Molecular Basis of Human Disease**
(also BIOBM 439)

Fall. 3 credits. Prerequisites: BIOBM 330 or BIOBM 331-332 and genetics (e.g., BIOGD 281) or permission from instructor. Recommended: cell biology (e.g., BIOBM 432 or BION 316) and physiology (e.g., BION 311 or BIO 458). S-U grades optional. Lecs, T R 10:10-11:25. W. L. Kraus.

This course will examine how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena, and environmental agents lead to human diseases. The material will focus on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics will be selected from hormone insensitivity syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of infectious agents and environmental toxins. Examples of diseases will be selected to emphasize various aspects of genetics, molecular biology, cell biology, physiology, immunology, and endocrinology that have been presented in previous courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, will be presented. A portion of each class period will be devoted to discussion and practice questions.

**BIOGD 450 Vertebrate Development**

This course is designed to examine the development of characteristics that make vertebrates unique. The course starts with an introduction to recent evolutionary and molecular approaches to understanding the rise of vertebrate structures. The development of vertebrate structures, such as neural crest, specialized sense organs, and limbs, is examined in detail with emphasis on the cellular and molecular events controlling their development.

**BIOGD 480 Seminar in Developmental Biology**

Fall or spring. 1 or 2 credits. Will be offered fall 2002. May be repeated for credit. Limited to juniors and seniors. Prerequisite: BIOGD 281. S-U grades only. Seminar TBA. Staff.
BIOGD 481 Population Genetics
Fall. 4 credits. Prerequisite: BIOGD 281, BIOGE 278, or equivalents. Lecs, M W F 10:10-11:05. M. F. Wolfner. Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation is in different geographic regions of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 482 Human Genetics and Society
Fall. 4 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying genetic molecular biology. Prerequisites: BIOGD 281 or BIOMM 330 or 331 or 332, and permission of instructor. S-U grades optional. T R 2:30-4:25. R. A. Calvo. Presentation of some of the science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Among the topics considered are assisted reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, human cloning, and therapy for genetic disorders. Students lead many discussions. There is a major writing component to the course.

BIOGD 483 Advanced Developmental Biology
Spring. 3 credits. Prerequisites: BIOGD 281, BIOMM 332 or 330 or 333, and BIOGD 385 or permission of instructor. Lecs, T R 2:30-4:00. Offered alternate years. M. F. Wolfiner.

BIOGD 484 Molecular Evolution
Spring. 3 credits. Prerequisites: BIOGD 281 and organic chemistry. Lecs, M W 8:40-9:55. Offered alternate years. R. J. Macnab. An analysis of evolutionary changes in genes and their protein products. Theories on the evolution of the genetic code, the construction of phylogenetic trees from biochemical data and the role of gene duplications in evolution are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes, including the evolution of satellite DNA sequences and transposable elements.

BIOGD 485 Bacterial Genetics (also BIOMI 485)
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOMM 330 or 331 and 332 or 333. Lecs, W 7:30-9:25 p.m. Staff. For course description, see BIOMI 485.

BIOGD 486 Advanced Eukaryotic Genetics
Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 281, BIOMM 330 or 333 or 331 and S-U grades optional. Lecs, T 12:20-2:15 and R 12:20-3:10. R. 12:25-1:15 or F 11:15-12:05. E. E. Alani. The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Students are presented within the context of a well-studied field, such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, and oxygen resistance in plants, and human genetics.

BIOGD 600 Development of Sensory Systems
Spring. 2 credits. Prerequisites: introduction to biology, genetics, development, and neurobiology, or permission of instructor. S-U or letter grades. Offered alternate years. K. Whitlock. This course explores the unique and shared mechanisms used in sensory system development of both vertebrates and invertebrates. The first class of the course provides a general introduction to the development of sensory systems in vertebrates and invertebrates. Following classes involve the reading of current and classic papers in sensory system development. Students choose a topic and articles from a list provided by the instructor. Students are responsible for an oral presentation and short paper.

BIOGD 682 Fertilization and the Early Embryo
Spring. 2 credits. Prerequisites: BIOGD 281, BIOMM 332 or 330 or 333, and BIOGD 385 or permission of instructor. Lecs, R 2:30-4:25. Offered alternate years. May be repeated for credit.

BIOGD 684 Advanced Topics in Population Genetics
Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. T 2:30-4:25. Offered alternate years. C. F. Aquadro. An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

BIOGD 685 Advanced Bacterial Genetics (BIOMI 485)
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOMM 330 or 331 and 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec, W 7:30-9:25, disc, R 10:10-11:00. Staff. For course description, see BIOMI 485.

BIOGD 687 Developmental Genetics
Fall or spring. 2 credits. Any student may be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics, written permission of instructor required for undergraduates. Limited to 20 students. S-U or letter grades. Offered alternate years. Next offered fall 2003. K. J. Kemphues. Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in fruitflies, nematodes, mice, and fish. Possible topics include animal models. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics, written permission of instructor required for undergraduates. Limited to 20 students. S-U grades optional, with permission of instructor. Seminar TBA. Staff.

BIOGD 781 Problems in Genetics and Development
Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc TBA. Staff. An introduction to the research literature in selected areas through weekly problem sets and discussions.

BIOGD 782-783 Current Genetics/Development Topics
Spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced. Hours TBA. Staff.

BIOGD 786 Research Seminars in Genetics and Development
Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Sem. TBA. Staff. Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis.
A course in microbiology designed to
study microorganisms with emphasis on
bacteria. Topics include microbial cell structure and
function, physiology, metabolism, genetics,
diversity, and ecology. Applied aspects of
microbiology are also covered such as
biotechnology, the role of microorganisms in
environmental processes, and medical
microbiology.

**BIOMI 291 General Microbiology Laboratory**

Fall or spring, 2 credits. Summer (6-week session), 2 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290. Lec, M W 12:20-1:25; or T R 10:10-12:05. C. M. Rehkugler.

A study of the basic principles and techniques of laboratory practice in microbiology. The fundamentals necessary for further work in the subject.

**BIOMI 292 General Microbiology Discussion**

Spring, 1 credit. Prerequisite: concurrent or previous enrollment in BIOMI 290. S-U grades only. Sem, TBA. C. M. Rehkugler.

An introduction to the basic animal parasites,
physiology, ecology, genetics, and practical
immunity to bacteria and fungi; and principles
of antimicrobial therapy and drug resistance.
A companion seminar addresses the current
and classic literature related to microbial
pathophysiology on the cellular and molecular
level.

**BIOMI 311 General Parasitology**

An introduction to the basic animal parasites,
stressking systematics, taxonomy, general
biology, ecological interactions, and behavior of non-medically important groups. The
course introduces the major animal parasites,
protozoan, nematode, platyhelminth,
acanthocephalan, annelid, and arthropod.

**BIOMI 391 Advanced Microbiology Laboratory**

A laboratory course that illustrates basic
cell structure and function. Students are encouraged to take this
course during their third year of study.

**BIOMI 394 Applied and Food Microbiology**

Fall, 2-3 credits. Prerequisites: BIOMI 290, M W F 12:20-1:30. C. A. Batt.

Microorganisms play a central role in a variety
of applications. Topics include microbial cell structure and
function, physiology, metabolism, genetics,
diversity, and ecology. Applied aspects of
microbiology are also covered such as
biotechnology, the role of microorganisms in
environmental processes, and medical
microbiology.

**BIOMI 397 Environmental Microbiology**

Fall, 3 credits. Prerequisites: BIOME 261 or BIOMI 290 or CSS 399. W. C. Ghirose, E. L. Madsen.

The biological properties, evolution, and
behavior of microorganisms in natural systems
are discussed in relation to past and present
environmental conditions on Earth and other
surviving planets. The functional role of microor-
ganisms in ecologically and environmentally
significant processes is also considered through
discussion of specific topics such as
nutrient and toxic elemental cycles, transformation of pollutant
chemicals, wastewater treatment,
environmental biotechnology, and astrobiology.

**BIOMI 404 Pathogenic Bacteriology and Mycology**

Spring, 2 or 3 credits (3 credits with lecture and seminar with permission of instructor for undergraduates). Prerequisites: BIOMI 290 and 291. Strongly recommended: BIO G 305. Lecs, M W 10:10. Recommended: alternate odd years. C. M. Rehkugler.

This course is in medical microbiology,
presenting the major groups of bacterial and
yctic pathogens important to human and
veterinary medicine. The emphasis of this
course is infection and disease pathogenesis.
Topics include disease causality; interactions
of host, pathogen and environment, including immunity
to bacterial and fungal diseases; and principles
of antimicrobial therapy and drug resistance.
A companion seminar addresses the current
and classic literature related to microbial
pathophysiology on the cellular and molecular
level.

**BIOMI 408 Viruses and Disease I**

Spring, 2 credits. Prerequisites: BIOMI 290, 291, BIOC G 305, and permission of instructor. Recommended: BIOMI 281. Lecs, M W 1:30. Offered alternate odd years. J. Casey.

The course covers basic concepts in virology with
emphasis on virus-host interactions, strategies
for gene regulation, and mecha-
nisms of pathogenecity. Selected viral
infections that result in immune dysfunction
and neoplasia are highlighted in the context
of approaches to prevent or reduce the severity
of disease.

**BIOMI 409 Viruses and Disease II**

Fall, 2 credits. Prerequisites: BIOMI 290 and 291. Recommended prerequisites: BIOMI 408, BIOMI 330-332, BIOMI 432. Lecs, T R 2:30-4:20. Offered alternate even
years. G. Whitaker.

This course is complementary to BIOMI 408,
Viruses and Disease I, but is complete in its
own right. As such, completion of BIOMI 408
is not a requirement. The structure and
classification of viruses, virus entry, genome
replication and assembly are studied with
particular emphasis on virus-host cell
interactions. Vaccination, chemotherapy and
evolution of viruses are also discussed.

**BIOMI 414 Bacterial Diversity**

Spring, 3 credits. Prerequisites: BIOMI 290, and 291, BIOMI 330 or 331 or 333 recommended. Lecs, M W 11:15. Offered alternate odd years. S. H. Zinder.

A consideration of the diversity of microorgan-
isms, their role in human history and
behavior of microorganisms in natural systems
are discussed in relation to past and present
environmental conditions on Earth and other
surviving planets. The functional role of microor-
ganisms in ecologically and environmentally
significant processes is also considered through
discussion of specific topics such as
nutrient and toxic elemental cycles, transformation of pollutant
chemicals, wastewater treatment,
environmental biotechnology, and astrobiology.

**BIOMI 877 Seminar in Genetics and Development**

Fall and spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only. Sem, TBA. Staff.

A comprehensive overview of the biology of the microorganisms covered are the basic nature of microorgan-
isms, their evolution on earth, their composi-
tion and growth, their role in the ecology of
Earth and in the life of non-medically important groups. The biological properties, evolution, and
behavior of microorganisms in natural systems
are discussed in relation to past and present
environmental conditions on Earth and other
surviving planets. The functional role of microor-
ganisms in ecologically and environmentally
significant processes is also considered through
discussion of specific topics such as
nutrient and toxic elemental cycles, transformation of pollutant
chemicals, wastewater treatment,
environmental biotechnology, and astrobiology.
determining bacterial phylogeny, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

**[BIOMI 416 Bacterial Physiology]**
Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331, or their equivalents. Lecs, M W F 11:00. Offered alternate even years. J. P. Shapleigh.
The focus of the course is on physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

**[BIOMI 417 Medical Parasitology (also VETMI 431)]**
Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Lecs, T R 3:35-4:25. D. Bowman.
A systematic study of anthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

**[BIOMI 418 Microbial Ecology]**
Spring. 3 credits. Prerequisites: BIOMI 290 and 291, or BIOMI 398 and instructor’s permission, and BIOMI 330 or 331 and 332. Lecs, M W F 10:10–11:00. E. R. Angert.
Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course introduces current biochemical and macromolecular sequence-based methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

**[BIOMI 420 Microbial Genomics]**
Spring. 2 credits. Prerequisites: BIOMI 290, BIO G 281, BIOMI 330, or equivalent. Lecs, T R 10:10–11:00. Offered alternate odd years. J. P. Shapleigh and J. D. Helman.
Genomic information is revolutionizing biology. We discuss the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

**[BIOMI 485 Bacterial Genetics (also BIOGD 485)]**
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOMI 330 or 331 and 332 or 333. Lecs, W 7:30–9:25 p.m. Staff.
Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants, genetic exchange, recombination and mapping, complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis.

**[BIOMI 610 Introduction to Chemical and Environmental Toxicology (also TOX 610)]**
Fall. 3 credits. Prerequisite: graduate standing in the field or consent of the instructor. Letter grades. Lecs, M W F 11:15–12:05. A. Hay.
Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Special attention is given to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

**[BIOMI 652 (Section 02) Molecular Plant-Microbe Interactions (also BIOPL 652, Sec 02, PL PA 664)]**
Spring. 1 credit. Prerequisites: BIOGD 281, BIOMI 330 or 331 or 333, and BIOMI 653 (section 01) or their equivalents. S-U grades optional. Lecs, M W F 12:20 (12 lecs) Jan. 21-Feb. 15. Offered alternate even years. Not offered 2002–2003. S. C. Winans.
For course description, see BIOPL 652, Sec 02.

**[BIOMI 690 Prokaryotic Biology]**
Fall and spring. 4 weeks/8 lectures. 1 credit/section to be offered. T R 10:15–11:30.
Section 1—Microbial Structure and Function
Fall. J. P. Shapleigh.
Discussion of those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

Section 2—Microbial Genetics
Fall. J. D. Helman.
Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, recombination, repair, and mutagenesis.

Section 3—Microbial Physiology/Diversity
Fall. S. H. Zinder.
The major energy conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea are reviewed. Topics include phylogenetic analysis fermentation, respiration, photosynthesis, and pathways of carbon and nitrogen fixation, and evolution of the three domains of life.

Section 4—Microbial Pathogenesis
Spring. S. C. Winants.
An introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production of extracellular toxins, horizontal transfer of pathogenic determinants, and the roles of both specific and nonspecific host defenses. Examples will include bacterial pathogens of both animals and plants.

Section 5—Environmental Microbiology
Spring. E. L. Madsen.
A core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. The crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere will be discussed.

**[BIOMI 791 Advanced Topics in Microbiology]**
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Sec 01 Bacterial Genetics, T 4:00–5:00, S. C. Winans; Sec 02 Environmental Microbiology, W 4:00–5:00, E. R. Angert. Reading and presentation by graduate students in current literature in selected areas of modern microbiology.

**[BIOMI 795–796 Current Topics in Microbiology]**
Fall, 795; spring, 796. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lecs TBA. Staff.
Lectures and seminars on special topics in microbiology.

**[BIOMI 797 Scientific Communication Skills]**
Fall and spring. 1 credit each semester. F 2:30–3:20. Staff.
The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with the opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Taken by students in the Graduate Field of Microbiology during their first two semesters, a third semester is optional.

**[BIOMI 798 Graduate Research Seminar in Microbiology]**
Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. F 1:25–2:15. Staff.
All graduate students in the Field of Microbiology are required to attend BIOMI 798 and are required to present a seminar concerning their research at least once each year.

**[BIOMI 799 Microbiology Seminar]**
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Sem R 4–5. Staff.

**Related Courses in Other Departments**

- Immunology of Infectious Diseases and Tumors (Biological Sciences [BIO G] 706 and Veterinary Microbiology 719)
**NEUROBIOLOGY AND BEHAVIOR (BIONB)**

[BIONB 111 Brain Mind and Behavior (also PSYCH 111 and COGST 111)](Spring. 3 credits. Intended for freshmen and sophomores in the humanities and social sciences; junior non-biology majors by permission only. Letter grades only. Lecs. M W F 9:05. Not offered 2002-2003. E. Adkins Regan and R. H. Hoy. See COGST 111 for description.)

[BIONB 221 Neurobiology and Behavior I: Introduction to Behavior](Fall. 3, 4, or 5 credits (4 credits with one discussion per week; 5 credits with two discussions per week and participation in the Writing in the Majors program). 4- or 5-credit option required of students in the neurobiology and behavior program of study. Each 4-credit discussion section is limited to 20 students, with preference given to students studying neurobiology and behavior. Enrollment in the 5-credit option is limited to 12 students. Students may not preregister for the 5-credit option; interested students complete an application form on the first day of class. Not open to freshmen. Prerequisite: 1 year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lecs. M W F 12:20, disc. TBA. H. K. Reeve and staff. A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.)

[BIONB 221 Neurobiology and Behavior I: Introduction to Behavior](Summer. 3 or 4 credits (4 credits with one discussion per week). Prerequisite: 1 year of introductory college biology. S-U grades optional. Course fee: none. Six week session. M-F: 4:00-5:15 p.m. Staff. A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.)

[BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology](Spring. 3 or 4 credits (4 credits with discussions per week; 4-credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: 1 year of introductory biology for majors and 1 year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lecs. M W F 12:20, disc. TBA. A. Bass and staff. A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neurotransmitters, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.)

[BIONB 322 Hormones and Behavior (also PSYCH 322)](Fall. 3 credits; 2 lectures plus a section in which students read and discuss original papers in the literature, oral presentation, and write a term paper. Limited to juniors and seniors. Prerequisite (1 of the following): PSYCH 223, or BIONB 221, or BIONB 222, or one year of introductory biology plus a course in psychology. Letter grades only. Lec. M W F 11:15, E. Adkins Regan. See PSYCH 322 for description.)

[BIONB 323 Methods in Animal Behavior](Fall. 4 credits. Prerequisites: BIONB 221, a statistics course, and permission of instructor. Must submit an application available in 563 Mead Hall. Lecture and writing projects. S. Vehrencamp and J. Bradbury. Covers methods for observing and quantifying behavioral interactions and communication signals. Lectures and a series of exercises and experiments designed to introduce students to commonly used field and laboratory methods. Emphasis is on experimental design and basic statistical techniques. Lab work with live insects included. Additional lab time often needed to complete experiments.)

[BIONB 324 Biopsychology Laboratory (also PSYCH 324)](Fall. 4 credits. Limited to 20 upperclass students. Prerequisites: laboratory experience in biology or psychology, BIONB 221 and 222 or PSYCH 123 and 222, and permission of instructor. Labs, T R 1:25-4:25, T. DeVogod. See PSYCH 324 for description.)

[BIONB 325 Neurodiseases—Molecular Aspects](Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOLG 281, BIOLM 330, or 331; co-registration in one of the two is acceptable. S-U grades optional. Lecs. T R 9:05; disc. T 1:25, 2:30, or 3:35. T. R. Podolski. The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodiseases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example, Alzheimer's, Huntington's, Prion diseases, schizophrenia, depression, disorders affecting ion channels, and muscular dystrophies. Emphasis is placed on how these studies provide a useful approach to studying mammalian nervous system by exposing the functions of genes that would be difficult to identify in other ways.)

[BIONB 326 The Visual System](Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311, or permission of instructor. S-U grades optional. Lecs. M W F 10:10; disc. 1 hour each week. Offered alternate years. Not offered 2002-2003. H. C. Howland. The visual systems of vertebrates are discussed in breadth and depth as well as some aspects of invertebrate vision. Topics covered include the optics and anatomy of eyes, retinal neurophysiology, structure and function of higher visual centers, ocular motility and ocular and visual system development.)

[BIONB 327 Evolutionary Perspectives on Human Behavior](Fall. 3 credits. Prerequisites: BIONB 221 and permission of instructor required. Letter grades only. T R 2:55-4:10. S. T. Emlen. A Socratically taught, discussion-based course dealing with evolutionary perspectives on human behavior. Topics include genes and behavior, the evolutionary environment of adaptation, the evolutionary function of emotions, human mating system, parenting strategies, and cooperation and conflict within family-based societies. All class members read and discuss primary papers and recent books. Each student is responsible for leading multiple discussions, for writing an original paper, and for peer-reviewing papers of other class members.)

[BIONB 328 Biopsychology of Learning and Memory (also PSYCH 332)](Spring. 3 credits. Prerequisites: 1 year of biology and either a course in biopsychology or BIONB 222. S-U grades optional. Lecs. M W F 11:15. T. DeVogod. See PSYCH 332 for description.)

[BIONB 330 Ecology of Animal Behavior (also BIOSM 330)](Summer. 4 credits. Prerequisite: 1 year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. See BIOSM 329 for description.)

[BIONB 330 Introduction to Computational Neuroscience (also PSYCH 330 and COGST 330)](Fall. 3 credits. Limited to 25 students. Prerequisites: BIONB 222 or permission of instructor. S-U grades optional. Lecs. T R 2:55-4:10. Offered alternate years. C. Linster. This course covers the basic ideas and techniques involved in computational neuroscience. The course surveys diverse topics including: neural dynamics of small networks of cells, neural coding, learning in neural networks and in brain structures, memory models of the hippocampus, sensory coding, and others.)
[BIONB 392 Drugs and the Brain]
Spring. 4 credits. Prerequisites: BIONB 222 or equivalent course in neurobiology with permission of instructor. A knowledge of biochemistry is useful but not required. S-U grades optional. T R 10:10-11:25, disc TBA. Offered alternate years. Not offered 2002-2003. R. Harris-Warrick.

An introduction to neuropharmacology, with an emphasis on the neural mechanisms of psychoactive drugs. Topics include a brief introduction to neuropharmacology and a discussion of the major neurotransmitter families. The course covers the major psychoactive drugs, including cocaine, heroin, psychedelics, marijuana and alcohol, as well as pharmaceuticals for the treatment of anxiety, schizophrenia and depression. The course includes a term paper in the form of a grant proposal to study a current problem in neuropharmacology.

[BIONB 394 Circadian Rhythms (also BIOGD 394 and ENTOM 394)]
Fall. 2 credits. Prerequisite: ENTOM 212, or BIOGD 281, or BIONB 221 or 222, or permission of instructor. S-U grades optional. T R 7:30—9:30 P.M. Offered alternate years. Not offered 2002-2003. J. Ewer.

For description, see ENTOM 394.

[BIONB 396 Introduction to Sensory Systems (also PSYCH 396 and 696)]
Spring. 4 credits. Limited to 25 students. Prerequisites: an introductory course in biology or biopsychology, plus a second course in behavior, biopsychology, cognitive science, neuroscience, or perception. Students are expected to have knowledge of elementary physics, chemistry. S-U grades optional. Lect, M W F 10:10. Offered alternate years. Not offered 2002-2003. B. P. Halpem.

See PSYCH 396 for description.

[BIONB 420 Topics in Neurobiology and Behavior]
Fall for spring. Variable credit. May be repeated for credit. Primarily for under­graduates. S-U grades optional. TBA. Staff. Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. Topics, instructors, and time of organization are listed in the catalog supplement issued at the beginning of the semester.

[BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431 and 631)]
Fall. 3 or 4 credits. The 4-credit option involves a term paper or creation of a relevant web site. Limited to 25 students. Prerequisites: an introductory course in biology or psychology, plus a second course in perception or neurobiology or cognitive science or biopsychology. T R 10:10-11:25. B. P. Halpem.

For description see PSYCH 431.

[BIONB 422 Modeling Behavioral Evolution]
Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, 1 year of calculus, 1 course in probability or statistics, and permission of instructor (Office: W309 MuDl Hall; phone: 254-4352). This course is open to advanced undergraduates and graduate students. S-U grades optional. Lect, T R 2:55-4:10; computer lab, 1 class period per week TBA. Offered alternate years. Not offered 2002-2003. H. K. Reeve.

This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Popula­tion-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by applica­tion to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. A special emphasis is placed on using the latest evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

[BIONB 424 Neuroethology (also PSYCH 424)]
Spring. 4 credits. Prerequisites: BIONB 221 or 222, or 1 year of introductory biology for majors or permission of instructor. S-U grades optional. M W F 11:15; disc, 1 hour each week TBA. Offered alternate years. Not offered 2002-2003. C. D. Hopkins.

Neuroethologists take a comparative and evolutionary approach to study the nervous system. They ask, how do brains of animals compare and how did they come about through the process of evolution? How are neural circuits adapted to species-typical behavior? What is the hope and interest in the study of a large diversity of animals, compared to a specialized look at just a few mammalian species? Can we hope to understand how animals with specialized behaviors have specialized nervous systems? What is the sensory world of a real animal and how does it vary from species to species? These and other questions derive this introductory survey of neuroethology including: exotic senses; amazing motor programs; surprising integration.

[BIONB 425 Molecular Neurophysiology]
Spring. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional. Lect, T R 2:55-4:10. Offered alternate years. D. McCobb.

Course focuses on ion channels, the primary proteins generating cellular electrical signals function in nerve cells and other excitable cells (e.g., muscle, heart, glands). The latest electrophysiological and molecular genetic experiments are reviewed. Diversity of electrophysiological and structural parameters is considered in the contexts of behavior and behavioral plasticity (learning), neural development, and channel evolution. Course format includes written and oral presentations, reviewing scientific literature in selected areas, and proposing new experiments.

[BIONB 426 Animal Communication]
Spring. 4 credits. Prerequisites: BIONB 221. Letter grade only. T R 2:55—4:10; disc, 1 hour each week TBA. Offered alternate years. Not offered 2002-2003. J. Bradbury; S. Vehrencamp.

An integrated approach to animal communica­tion, organized into three parts: 1) the physics and physiology of producing, transmitting, and receiving signals; 2) optimal strategies for encoding information, using information to make decisions, and designing signals; and 3) the behavioral ecology of signal evolution.

[BIONB 427 Animal Social Behavior]
Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOEE 261 or 278, and advice of instructor. S-U grades optional, with permission of instructor. Lect and disc, M W 2:55-4:10. Offered alternate years. Not offered 2002-2003. T. D. Seeley.

An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, and conflict and cooperation in animal societies.

[BIONB 429 Offalction and Taste: Structure and Function (also PSYCH 429)]
Spring. 3 or 4 credits (4 credits with term paper or research project, which can be used instead of study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: a 300-level course in biopsychology or equivalent. Lect, T R 9:05. Offered alternate years. Not offered 2002-2003. B. P. Halpem.

See PSYCH 429 for description.

[BIONB 430 Experimental Molecular Neurobiology (also BIOM 443)]
Spring. 2 credits variable. Limited to 12 students. Prerequisites: co-meeting with BIOM 430 lab. Mandatory registration via web page: www.mbg.cornell.edu/ courses.html. Letter grade only. Disc, 1 hour each week on day other than lab day. Lab T or R all day, or M and W afternoons, to be coordinated with other BIOM 430 sections. Offered alternate years. D. L. Deitcher.

See BIOM 443 for description.

[BIONB 440 Electronics in Neurobiology]

The course emphasizes understanding of the electrical functioning of the nervous system and enables students to build instrumentation to study the nervous system. It is taught by mathematical analysis, simulation, and construction of circuit examples drawn from practical neurobiological instrumentation problems and the electronic basis of neurons.

[BIONB 441 Computers in Neurobiology]
Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites: a calculus course. S-U grades optional. Lect, T R 8:40-9:55; lab, W 1:25-4:25. Offered alternate years. B. R. Land.

This course is an introduction to computer instrumentation techniques and data reduc­tion. It gives a basic understanding of the techniques used for coupling a biological experiment to a computer. It includes techniques to convert raw data to scientific visualization. Some computer modeling examples drawn from practical neurobiolog­ical problems are done.
BIONB 470 Biophysical Methods (also A&EP 470 and VETPR 470) Spring. 3 credits. Prerequisite: basic knowledge of algebra. Some knowledge of physics and mathematics is expected, but strong efforts are made to give an intuitive understanding of the mathematics and physics involved. Some knowledge of physical chemistry, molecular biol and cell biology or neurobiology will be helpful. Depending on individual background, all students will find certain aspects easy and other aspects demanding. Offered every semester. Lees, T R 8:40-9:55. 18 credits. See A&EP 470 for description.

BIONB 491 Principles of Neurophysiology Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students with permission of instructor. Lects, M W 10:10; lab, M or T 12:20-4:25; additional hours TBA. B. R. Johnson.

A laboratory-oriented course designed to teach the theory and techniques of modern cellular and molecular neurophysiology, including computer acquisition and analysis of laboratory results. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. Invertebrate preparations are used as model systems. (See course web site: http://www.nbb.cornell.edu/neurobio/bionb491/bionb491.html)

BIONB 492 Sensory Function (also PSYCH 492 and 692) Spring. 4 credits. Limited to 25 students. Prerequisite: BIONB 214, a course in biophysics, or BIONB 222, or BIOAP 311, or equivalent. Students are expected to have knowledge of elementary physics, chemistry, and behavior. S-U grades optional. M W 10:10. Offered alternate years. H. C. Howland, B. P. Halpern.

See PSYCH 492 for description.

BIONB 493 Developmental Neurobiology Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Lects, M W 2:55-4:10. Offered alternate years. R. Booker.

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

BIONB 494 Brain Evolution and Behavior Spring. 3 credits. Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 222 or equivalent. S-U grades optional. Lects, T R TBA. Offered alternate years. A. H. Bass.

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.

BIONB 495 Molecular and Genetic Approaches to Neuroscience Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: BIONB 222 or permission of instructor. S-U grades only. Lects, T R 2:55-4:10. Offered alternate years. D. Deitcher.

Focus of the course is on how different molecular and genetic approaches have led to major advances in our understanding. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated channels, potassium channels, seven membrane spanning receptors, development of the neuromuscular junction, nerve transmitter release, second messengers, and learning and memory.

[BIONB 496 Bioacoustic Signals in Animals and Man Spring. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: 1 year of introductory biology, and PSYCH 101–102 or permission of instructor. S-U grades optional. Lects, M W 9:05; lab TBA. Offered alternate years. Not offered 2002–2003. C. W. Clark.

Humans and animals live in a world of sound. Mechanisms for sound production and perception are extremely varied. Acoustic signals mediate social interactions, and are used to scan the environment for food and to aid in navigation. For many species acoustic signaling plays a critical role in predator detection and avoidance. This course teaches students about animal acoustic signaling by introducing them to various animal acoustic systems. The course presents the physical properties of sound, physiological mechanisms for sound production and hearing, and the behavioral contexts in which sounds are used. Acoustic techniques are provided in the laboratory where students learn how to record, synthesize, and analyze sounds with the aid of recorded and Mac and/or PC computers running customized software. Labs are designed around the lecture material and provide practical "real-world" exercises designed to stimulate discovery of fundamental principles in lectures. Class research projects on a selected topic in bioacoustics are required. Engineering students with interests in music, audio analysis, and digital signal processing are encouraged.

See COGST 531 for description.

[BIONB 623 Chemical Communication (also CHEM 622) Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: 1 year of introductory biology, and PSYCH 361 or equivalent, course work in biochemistry, and CHEM 358 or equivalent. S-U grades optional. Lects, M W 10:10; disc, F 10:10. Offered alternate years. Not offered 2002–2003. T. Eisner, J. Mennwaldi, W. L. Roelofs, and guest lecturers.

The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.]

BIONB 720 Seminar in Advanced Topics in Neurobiology and Behavior Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem TBA. Offered alternate years. Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Department of Neurobiology and Behavior.

BIONB 721 Introductory Graduate Survey in Neurobiology and Behavior Fall. 2 credits. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only. Lects and discs, TBA. B. P. Halpern.

Lectures, readings, and discussion introduce first-year graduate students to the research activities of the faculty in the Graduate Field of Neurobiology and Behavior. Class meets weekly for two hours. Students also prepare a research proposal on a potential topic for their thesis research (in the format of an NSF or NIH grant). This proposal is prepared in consultation with one or more relevant faculty members.

Related Courses in Other Departments

PLANT BIOLOGY (BIOPL) [BIOPL 240 Green World/Blue Planet Spring. 3 credits. S-U grades optional. Lects, T R 1:25–2:40. Not offered 2002–2003. K. J. Niklas, E. R. Torgerson, T. G. Owens. The course focuses on undergraduate students to understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of...
crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

**BIOPL 241 Introductory Botany**

Fall. 3 credits. Lec, T R 9:05; lab, M T W or R 1:25-4:25, or M W 7:30-10:30 p.m. K. J. Niklas.

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weekends of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

**BIOPL 242 Plant Function and Growth**

Spring. 3 credits. S-U grades optional. Prerequisite: one semester or two quarters of college chemistry. Concurrent enrollment in BIOPL 244 is required.

This course serves as a prerequisite to the study of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory emphasizes plant identification and its presentation of an overview of vascular plant diversity, with particular attention to the flowering plants.

**BIOPL 243 Taxonomy of Cultivated Plants (also HORT 243)**

Fall. 4 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lecs, M W F 10:10 labs, M or W 2:00-4:25. Offered alternate years. M. A. Luckow.

A study of the identification of cultivated plants, their systematic relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

**BIOPL 244 Plant Function and Growth, Laboratory**

Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

**BIOPL 245 Plant Biology**

Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas which are available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

**BIOPL 247 Ethnobotany**

A consideration of the principles, methods, and issues of ethnobotany. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and modern societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.

**BIOPL 248 Taxonomy of Vascular Plants**

An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

**BIOPL 340 Methods in Biological and Biochemical Prospecting**

Spring. 2 credits. Prerequisite: Intro Biology (BIOG 101-104) required. Completion or concurrent enrollment in organic chemistry, recommended. TBA. Offered alternate years. F. Rodriguez.

Student participants learn theory and methodologies in ethnobotany, chemical ecology and zoopharmacognosy as they apply in a multidisciplinary fashion to chemical prospecting. The use of techniques in the chemistry of natural products and biological assays in the discovery of chemicals and their role in nature is described. Classical examples of drug development, from quinine to taxol, in the course of chemical prospecting are discussed. An overall medicinal purpose in chemoprospecting is emphasized, with mention of specific worldwide spread of diseases pressing for new drugs.

**BIOPL 342 Plant Physiology, Lectures**

Spring. 3 credits. Prerequisites: 1 year of introductory biology and either concurrent enrollment in BIOPL 344 or written permission of instructor. May not be taken for credit after BIOPL 342 unless written permission is obtained from instructor. Lecs, T R 10:10-11:25. T. G. Owens.

An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

**BIOPL 343 Molecular Biology and Genetic Engineering of Plants**

Spring. 2 credits. Prerequisite: 1 year general biology or permission of instructor. S-U grades optional. Lecs, T R 11:15. M. E. Nasrallah.

An introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. The course emphasizes genetic transformation methodologies, gene manipulation, and strategies for increasing productivity. The course is directed towards undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

**BIOPL 344 Plant Physiology, Laboratory**

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 342. May not be taken for credit after BIOPL 344. Similar to BIOPL 244 but at a more advanced level. Lab, R 1:25-4:25; disc, R 12:20. T. Silva.

Experiments exemplify concepts covered in BIOPL 342 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

**BIOPL 345 Plant Anatomy**

Fall. 4 credits. Limited to 15 students. Prerequisite: 1 year of introductory biology or a semester of botany. Lecs, M W 9:05; labs, M W 2:00-4:25. Offered alternate years. Not offered 2002-2003. Staff.

A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

**BIOPL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants**

Spring. 2 credits. Limited to 24 students. Prerequisite: BIOPL 343 or permission of instructor. Concurrent enrollment is BIOPL 343 is encouraged. S-U grades optional. Lab, W 12:25-4:25. M. E. Nasrallah. A companion to BIOPL 343 with laboratory activities that focus on the practice of plant biotechnology. Students will transfer genes to plants by a variety of methods, and will analyze their expression in the host genome by use of reporter gene assays, and by the preparation and analysis of nucleic acids.

**BIOPL 348 The Healing Forest**

Spring. 2 credits. Prerequisite: Biochemistry and Genetic Engineering of Plants.

Studies of indigenous and lay societies deal with controversial issues. Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.
Mountain, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, human health, bioprospecting, compensation for indigenous knowledge, and sustainable development.

**BIOPL 359 Biologics of Grasses**
Spring; 2 credits. Prerequisite: 1 year of introductory biology or a course in plant systematics or permission of instructor. S-U grades optional. Lecs, W 9:05, lab, W 1:25—4:25. Offered alternate years. J. Davis.
Systematics and related aspects of the biology of the graminoid plant families (grasses, sedges, and rushes), with the principal emphasis on grasses. Major topics include phylogenetics, taxonomy, physiology, reproductive biology, speciation, and biogeography. The roles of graminoid plants in natural and human-disturbed environments are discussed, as are the origins of cultivated species.

**BIOPL 404 Crop Evolution, Domestication and Diversity (also PL BR 404)**
Spring; 2 credits. S-U letter. Prerequisites: Genetics 281 or Plant Breeding 225 or permission of the instructor. Lecs, T R 9:05. S. Kresovich. See PL BR 404, for description.

**BIOPL 440 Phylogenetic Systematics**
Spring; 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lecs. T R 10:10; labs, T R 2:00—4:25. Offered alternate years. K. C. Nixon.
Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

**BIOPL 442 Current Topics in Ethnobotany**
Fall; 2 or 4 credits (4 credits with an independent research component and term paper). Prerequisites: BIOPL 247, 348, or permission of instructor. Lecs/disc, T R 2:30—4:25. Offered alternate years. D. M. Bates.
Exploration of the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnoecology, and the role of plants and animals in human lives, in subsistence and exchange, and in thought.

**BIOPL 443 Topics and Research Methods in Systematics**
Fall or spring; 1—2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. Staff. A series of one-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

**BIOPL 444 Plant Cell Biology**
Fall; 4 credits. Limited to 24 students. Prerequisites: 1 year of introductory biology or permission of instructor. Lecs, M W F 9:05, lab, M or W 1:25—4:25. R. O. Wayne.
Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

**BIOPL 445 Photosynthesis**
Fall; 3 credits. Prerequisite: 1 year of college calculus and mathematics. Recommended: 1 year of college physics and plant physiology. Lecs, M W F 10:10. Offered alternate years. T. G. Owens.
An introduction to the processes of photosynthesis in plants, algae and bacteria. An interdisciplinary approach is emphasized incorporating biochemical, biophysical, physiological and molecular perspectives. The course covers the range of processes involved in photosynthesis with light harvesting and primary photochemistry through electron transport and inorganic carbon fixation. Emphasis is placed on the regulation of photosynthesis from the cellular to the whole-plant level.

**BIOPL 447 Molecular Systematics**
Fall; 3 credits. Prerequisites: BIOE 278 or BIOGD 281 or BIOBM 330, or BIOBM 332, or written permission of instructor. Lecs, T R 8:30—9:55. Offered alternate years. Not offered 2002–2003. J. J. Doyle.
The theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organelar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

**BIOPL 448 Plant Evolution and the Fossil Record**
Spring; 3 credits. Prerequisite: BIOPL 447 or permission of instructor. Lecs, T R 9:05; lab, R 12:20—2:15. Offered alternate years. K. J. Niklas, W. L. Crepet.
An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecological settings, and evolutionary theory as it relates to plants.

**BIOPL 449 Green Signals and Triggers—The Plant Hormones (also HORT 449)**
A study of plant hormones and how they regulate plant growth and development. Topics covered include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

**BIOPL 452 Systematics of Tropical Plants**
The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context in lectures, discussions, and laboratory, with the aim of providing basic points of recognition for, and an understanding of diversity and relationships in these families.

**BIOPL 453 Principles and Practice of Historical Biogeography (also ENTRM 453)**
A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Geological and paleontological aspects of biogeography are presented, and large-scale biographic patterns discussed. Laboratories focus on computer applications and discussion of controversial issues.

**BIOPL 454 Systematics of Tropical Plants: Field Laboratory**
Spring break; 1 credit. Limited to 15 students. Prerequisite: concurrent enrollment in BIOPL 452 or permission of instructor. Letter grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered every three years. Not offered 2002–2003. K. C. Nixon.
An intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification combined with laboratory analysis of available materials in a "whole-biology” context.

**BIOPL 456 Biomechanics of Plants (also BEE 456)**
Fall; 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U or letter grade only. For more details, contact the K. J. Niklas and K. Van Wijk.
This course focuses on biomechanics of plant-specific processes, with the aim to obtain an integrative overview of plant biomechanics. Examples include processes such as cell wall biochemistry, pigment biosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics-based experimental tools, such as proteomics and metabolomics are discussed.

**BIOPL 641 Laboratory in Plant Molecular Biology (also BIOBM 641)**
Fall; 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 350 or 351 or equivalent or permission of instructor. Lecs, M W F 9:05. J. Rose, K. Van Wijk.
This course focuses on biochemistry of plant-specific processes, with the aim to obtain an integrative understanding of plant biochemistry. Examples include processes such as cell wall biochemistry, pigment biosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics-based experimental tools, such as proteomics and metabolomics are discussed.
Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

BIOPL 642 Plant Mineral Nutrition (also BIO 652) P. J. Davies.
Spring. 3 credits. Prerequisite: BIOPL 342 or equivalent. Lecs, M W F 10:10-11:10 (9 lecs). Offered alternate years. L. V. Kochian, R. M. Welch. A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include: uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

[BIOPL 644 Regulatory Factors in Plant Growth and Development] Fall. 1-2 credits (1 credit per section). Prerequisites: BIOPL 242 or 342 or equivalent, or permission of instructor. Two modules, which can be taken together or in isolation. These are compatible with BIOPL 652-03 and BIOPL 652-04 (Molecular Aspects of Plant Development II and I respectively). S-U grades optional. Offered alternate years. Not offered 2002-2003.

Section 01 Plant Hormones 1 credit. Lecs M W F 9:05 (12 lecs).
P. J. Davies.
Plant Hormones: their role in plant growth and development, analysis, biosynthesis and mode of action, including signal transduction, examined from a physiological, biochemical and molecular point of view. The course covers auxin, gibberellin, cytokinin, ethylene, abscisic acid, brassinosteroids, and other compounds as appropriate.

Section 02 Phytochrome and Photomorphogenesis 1 credit. Lecs M W F 9:05 (12 lecs).
P. J. Davies.
A study of the regulation of plant growth and development by light as perceived through the pigments phytochrome and cryptochrome. This will include the biochemistry and molecular biology of phytochrome and the way in which phytochrome modulates plant growth, including molecular and genetic analysis of its effects, and the mechanisms by which it acts. The role of phytochrome in detecting and modulating growth in natural and agricultural environments is covered.

BIOPL 647 Seminar in Systematic Botany Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional. Sem, M 10:10-11:30 (9 lecs). Bailey Hortorium staff. Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

BIOPL 649 Physiology of Ion and Water Transport in Plants Fall. 1-3 credits (1 credit per section). Prerequisite: BIOPL 342 or equivalent, or permission of instructor. Three modules that may be taken independently, although section 01 is recommended before taking section 02. Offered alternate years. Not offered 2002-2003. R. M. Spanwick.

Section 01 Basic Principles of Ion Transport and Electrophysiology 1 credit. Lecs T R 10:10-11:30 (9 lecs). The topic of this section is the biophysical basis of ion transport across cell membranes, including membrane structure, ion fluxes and their measurement, the thermodynamic criterion for active transport, and the relationship between ion transport and the electrical properties of cell membrane. Topics include: transport of the major ions in plant cells and whole plants, properties of proton ATPases and their relationship to the transport of ions, sugars, and amino acids at the plasma membrane and tonoplast; ion channels in plant cell membranes, intercellular ion transport via plasmodesmata; and long-distance ion transport in higher plants.

Section 03 Water Transport in Plants 1 credit. Lecs T R 10:10-11:30 (9 lecs). Topics include: water relations of plant cells and tissues using various potential terminology; permeability of plant cells to water and the role of aquaporins; and transport of water through whole plants, including transpiration, stomatal physiology and the effects of water stress.

BIOPL 652 Plant Molecular Biology II Spring. 1-2 credits (1 credit per section). Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional. A series of four-week modules on specialized topics. Coordinator: J. B. Nasrallah.

Section 01 Molecular Plant-Pathogen Interactions (also PL PA 662) 1 credit. Lecs M W F 10:10 (12 lecs) Jan. 20-24 Apr. 18. P. J. Doyle. Topics include: the interactions of Agrobacteria and Rhizobium with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of Agrobacterium to produce transgenic plants. Topics on Rhizobium-plant interactions include regulation of nitrogenase activity and expression, organization and function of the symb plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

Course focuses on the interactions of Agrobacteria and Rhizobium with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of Agrobacterium to produce transgenic plants. Topics on Rhizobium-plant interactions include regulation of nitrogenase activity and expression, organization and function of the symb plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

Section 03 Molecular Aspects of Plant Development II 1 credit. S-U grades optional. Lecs, M W F 10:10 (12 lecs) Mar. 24-Apr. 18. T. Brutnell. The molecular genetics of plant development. This module focuses on vegetative development and includes topics such as the development of the shoot, root, and vascular tissue, and the operation of the vegetative shoot apical meristem. The module is a companion to BIOPL 653, Sec 04 (Plant Development I).

Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.

An in-depth examination of the molecular biology of plant mitochondria and plastids. Topics include the organization, evolution, and expression of organelle genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organelle proteins. Special topics include mitochondrionally-encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleus-organellar interactions.

This course introduces proteomics and its application in Plant Biology, with special emphasis toward the chloroplast proteome. The course covers protein separation techniques where relevant for proteomics, the basics and application of mass spectrometry for identification and characterization of proteins and peptides, as well as bioinformatics tools relevant for proteomics. In addition the course deals with the proteome of the chloroplast/plastid and focuses on protein targeting, assembly, and degradation.

This course examines the structure and function of plant cell walls, exploring their dynamic nature and fundamental contribution to numerous aspects of plant growth and development. Topics include: wall biosynthesis, wall structure and composition, regulation of cell expansion and differentiation, defense against pathogens and signaling, the apoplast as a metabolically active sub-cellular compartment, and analytical techniques: from biochemistry to proteomics.
BIOP 653 Plant Molecular Biology I
Fall. 1-5 credits (1 credit per section).
Prerequisites: BIOGD 281 and BIOMB 330 or 332, or their equivalents. Recommended: BIOMB 551. S-U grades optional.
Coordinator: J. B. Nasrallah.
A series of four-week modules on specialized topics.

Section 01 Concepts and Techniques in Plant Molecular Biology (also PLPA 663.01)
This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues related to plant biotechnology are discussed.

Section 02 Plant Biotechnology (also PLR 653.2 and PLPA 663.2)
This course covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

Section 03 Plant Genome Organization and Function (also PLR 653.3)
1 credit. Lecs, M W F 10:10 (12 lecs) Oct. 2-Oct. 30. Offered alternate years.
S. D. Tanksley.
This section covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

Section 04 Molecular Aspects of Plant Development I (also BIOMB 653.1)
This module focuses on the molecular genetics of plant development. Current approaches to elucidation of the molecular signals and pathways that lead to the establishment and the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOP 652, Sec 02 (Molecular Aspects of Plant Development II).

Section 05 Molecular Breeding and Genetic Diversity (also PLR 653.5)
Application of DNA markers to the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

Section 06 Molecular Aspects of Plant Development II (also BIOMB 653.4)
This module focuses on the molecular genetics of plant development. Current approaches to elucidation of the molecular signals and pathways that lead to the establishment and the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOP 652, Sec 02 (Molecular Aspects of Plant Development II).
the ecology and evolution biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1) BIOEE 154, The Sea: An Introduction to Oceanography,
2) BIOSM 364, Field Marine Science, BIOSM 375 Field Marine Biology and Ecology, and/or at least one 400-level BIOSM field course at the Shoals Marine Laboratory,
3) BIOEE 462, Marine Ecology.

Undergraduate Specialization in Ocean Sciences

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1) BIOEE 373 Biology of the Marine Invertebrates
2) BIOEE 457 Limnology
3) BIOEE 462 Marine Ecology
4) BIOEE 478 Ecosystem Biology
5) BIOEE 490 Topics in Marine Biology
6) BIOSM 303 Ecology of Marine Fishes
7) BIOSM 308 Marine Microbial Ecology
8) BIOSM 309 Climates and Ecosystems
9) BIOSM 329 Ecology of Animal Behavior
10) BIOSM 364 Field Marine Science
11) BIOSM 365 Underwater Research
12) BIOSM 374 Field Ornithology
13) BIOSM 375 Field Marine Biology and Geology
14) BIOSM 413 Research in Marine Biology
15) BIOSM 418 Tropical Marine Science
16) BIOSM 449 Seaweeds, plankton and Seagrass
17) BIOSM 376 Marine Invertebrate Zoology (note: not the same as BIOEE 373)
18) BIOSM 477 Marine Vertebrates
19) EAS 375 Sedimentology and Stratigraphy
20) EAS 455 Geochemistry
21) EAS 475 Special Topics in Oceanography
22) EAS 479 Paleobiology
23) NTRES 306 Coastal and Oceanic Law and Policy
24) NTRES 417 Wetland Resources

Sea Semester

BIOSM 366 SEA: Introduction to Oceanography
BIOSM 367 SEA: Introduction to Maritime Studies
BIOSM 368 SEA: Introduction to Nautical Science
BIOSM 369 SEA: Practical Oceanography I
BIOSM 370 SEA: Practical Oceanography II

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience. These courses must be taken concurrently. Special program run by the Sea Education Association. Contact Marine Programs Office (607-255-3717) for more details.

SHOALS MARINE LABORATORY (BIOSM)

G14 Stimson Hall, 255-3717

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the Laboratory's 47-foot research vessel, John M. Kingsbury or the 36-foot research vessel John B. Heister. Field experience is an integral component of all courses, using Appledore's extensive intertidal and subtidal zones, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, there are numerous guest lecturers including engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office. (Not all of these courses are offered each semester, consult the SML catalog for current offerings.)

BIOSM 160 The Oceanography of the Gulf of Maine

Summer. 4 credits. Limited to 24 students. A special 2-week course offered aboard a SEA vessel and at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, contact the SML office, G14 Stimson Hall or the Sea Education Association office at P.O. Box 6, Woods Hole, MA, 02543. Daily 1ec's, labs, and fieldwork for 2 weeks. SML faculty.

An exciting opportunity to explore the offshore and nearshore areas of the Gulf of Maine for pre-college and first-year non-science majors. Students spend 10 days aboard the Sea Education Association's sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.

BIOSM 161 Introduction to Marine Science

Summer. 4 credits. S-U grades optional. A special 2-week course offered in cooperation with Rider University at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. Apply directly to Rider University, College of Continuing Studies. Contact Dr. Richard Alexander for application and information at: Alexander@enigma.rider.edu, (609) 895-5422. Offered alternate years.

This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth sciences, chemistry, and physics are included. Specific topics include: beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; oceanography's geology and ecology of kelp beds and urchin barrens.

BIOSM 204 Biological Illustration

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

BIOSM 303 Ecology of Marine Fishes

Summer. 4 credits. Prerequisite: 1 year of college-level biology. SCUBA certification recommended, not required. S-U grades optional. A special 2-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily 1ec's and fieldwork for 2 weeks. SML staff.
This course presents principles, models, and methods for analysis of dynamics of fish populations and communities, and analysis of current research emphasizing theory and its potential uses in fisheries management. Lab and field activities emphasize collection and analysis of data from the Gulf of Maine and adjacent estuarine habitats.

**BIOSM 308 Marine Microbial Ecology**
Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special 2-week course offered at Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. SML staff.

This course examines the fundamental role of marine microbial communities in the function of the biosphere. Lectures survey bacterial, protozoan, and micrometazoan assemblages from Arctic to deep sea vent communities. Laboratory exercises cover several principal techniques of field microbial ecology and explore the rich marine microbial environment surrounding the Isles of Shoals.

**BIOSM 309 Climates and Ecosystems**
Summer. 4 credits. Prerequisite: 1 year of college-level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

**BIOSM 329 Ecology of Animal Behavior**
(also BIOB 329)
Summer. 4 credits. Prerequisite: 1 year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

**BIOSM 363 Marine Biology for Teachers**
Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. SML staff.

An introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. The course focuses on field work designed to observe and study many breeding species, typically taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, behavioral observations, and creating field notebook.

**BIOSM 375 Field Marine Biology and Ecology (FMBE)**
Summer. 6 credits. Prerequisites: 1 full year of college level biology. S-U grades optional. A 4-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off 4 weeks. SML faculty.

Designed for students seeking an introduction to the marine sciences and marine ecology. FMBE emphasizes field work in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone, and physiological adaptations of marine organisms. Students may not take FMBE after taking BIOSM 364.

**BIOSM 376 Marine Invertebrate Zoology**
Summer. 6 credits. Prerequisite: 1 year of introductory biology and permission of instructors. Students may not take BIOSM 376 after taking BIOSM 375. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. Offered alternate years. SML faculty.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. Emphasis is placed on the evolution of form and function, and the ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. Appledore Island's unique location provides an excellent venue for the study of freshly collected and in situ representatives of most of the major phyla.

**BIOSM 402 Marine Pollution**
Summer. 4 credits. Prerequisites: 1 year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered alternate years. SML faculty.

An introduction to marine pollutants, their sources and control/treatment, the effects of marine pollution upon coastal ecosystems, and federal and state regulatory programs. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and biofilm.
An introduction to the physiological ecology phenomena. The process of scientific development, life histories, physiology, and including determination of temperature, light, including aspects of anatomy, morphology, and lipids as nutrients in the sea; acclimation of intertidal and shallow subtidal organisms, the physical, chemical, and biotic environment ecology, students participate in a coral reef in the marine environment; respiration in Maine. Topics covered include photosynthesis and animals, with emphasis on selected algal and functional morphology of marine plants and microbes; carbohydrates, proteins, and functional morphology of marine animals; diving physiology; and beginning graduate students. The course is comprised of four principal parts, each taught by a separate team of instructors at two different locations: Part 1 (nine days) will be conducted at Shoals Marine Laboratory and aboard the R/V Kingsbury in waters surrounding the Isles of Shoals; Part 2 will be devoted to the theory and measurement of seawater optical properties, emphasizing the dependency of apparent optical property on chlorophyll and dissolved organic matter content; Part 3 will be conducted at the Science of Earth Systems' computer laboratory on the Cornell campus. Part 2 will cover satellite remote sensing of the apparent optical properties of seawater with an emphasis on processing SeaWiFS data using SeaDAS software and IDL programming language. Part 3 addresses satellite remote sensing of physical oceanographic processes that influence ecosystem dynamics with an emphasis on AVHRR-derived sea-surface temperature and SS/M-1 derived ocean winds. Part 4 is devoted to independent projects; student will attempt to integrate SeaWiFS, AVHRR, and SS/M-1 data in order to address questions of biological-physical interactions.

BIOSM 477 Marine Vertebrates
Summer. 6 credits. Prerequisites: course in vertebrate biology, S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portland, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and the current literature. Topics covered include: systematics of fishes of the Gulf of Maine; elastomorphich and conodont taxonomy. An introduction to vertebrate distribution; evolution and systematics of marine mammals; diving physiology; and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

BIOSM 499 Research in Biology
Summer. Credits variable (2 credits/7 days on site). For more details and an application, consult the SML office, G14 Stimson Hall.

Section A: Independent Biological Research
Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

Research Experiences for Undergraduates (REU)
0 credit. The National Science Foundation (NSF) Research Experiences for Undergraduates (REU) program provides support for undergraduates to pursue supervised, independent research projects at the Shoals Marine Laboratory. Nine students will be selected from a competitive, national pool to participate in the eight-week summer program. For more information and an application form, please contact the SML office, G14 Stimson Hall, or view SML's web site at: www.sml.cornell.edu

ARKEO 319 Archaeology Underwater
Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research; also open to non-divers. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portland, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 1 week. Offered alternate years. SML faculty.

An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but cannot out divers or sufficiently experienced in scuba.

EAS 213 Marine and Coastal Geology
Summer. 2 credits. Prerequisite: an introductory course in oceanography or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portland, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 1 week. SML faculty.

This course examines the geology of the Isles of Shoals from Paleozoic intrusion, deformation and metamorphism to recent glaciation, sea-level change and wave erosion. Students learn basic surveying and mapping techniques using a Brunton compass, toposheet/stadia rod, autolevel and GPS. Field efforts focus on creating a series of thematic maps depicting island characteristics such as topography, bedrock geology and structure, vegetation, and land use patterns.
BIOLICAL SCIENCES - 2002-2003

NTRES 306 Coastal and Oceanic Law and Policy
Summer. 4 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs and disc for 1 week. SML faculty.

Intended for people interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, area protection, coastal impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

NTRES 417 Wetland Resources
Summer. 2 credits. Prerequisite: 1 year of college-level biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall.

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

BIOEE 373 Biology of the Marine Invertebrates
Fall (but taken in the previous summer at the Shoals Marine Laboratory (SML). 4 credits. Limited to 30 students. Prerequisite: 1 year of introductory biology for majors. Students may not take BIOEE 373 after taking BIOSM 366.

An introduction to the biology and evolution of the major invertebrate phylia, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. By being taught at the Shoals Marine Laboratory, students are exposed to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions provide an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

BIOSM 366-372 SEA Semester
In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, MA, receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the SSV Robert C. Seamans or the SSV Corwith Cramer. Enrollment is open to both men and women judged capable of benefiting from SEA semester; a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees; tuition for the entire 17-credit SEA Semester, approximately $17,000, which includes room and board at SEA.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

Shore Component (six weeks)
BIOSM 366 SEA Introduction to Oceanography I
3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368.

A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

BIOSM 367 SEA Introduction to Maritime Studies
3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368.

An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

BIOSM 368 SEA Introduction to Nautical Science
3 credits. Prerequisites: concurrent enrollment in BIOSM 366 and 367.

An introduction to the technologies of operation at sea, including the use of charts, maps, and basic aspects of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail. Students develop projects from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

Coast Component (six weeks)
Coast Component includes 369, 370 and 372 take place aboard the SSV Robert C. Seamans, a 134-foot steel auxiliary-powered brigantine schooner built in 2001, or the SSV Corwith Cramer, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of 34. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to 24 students round out the complement.

BIOSM 369 SEA Practical Oceanography I
4 credits. Prerequisite: BIOSM 366.

Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment. In the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

BIOSM 370 SEA Practical Oceanography II
4 credits. Prerequisites: BIOSM 368 and 369.

Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

BIOSM 372 SEA Practical Oceanography III
Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368.

Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment. In the methodologies involved in the collection, analysis, and reduction of oceanographic data; and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

FACULTY ROSTER

New York State College of Agriculture and Life Sciences
Adler, Kraig K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Alam, Eric E., Ph.D., Harvard U. Assoc. Prof., Molecular Biology
Anand, John M., Ph.D., New York U. Prof., Emeritus, Molecular Biology and Genetics
Anderson, Joseph M., U. of California at Los Angeles. Prof., Plant Biology
Appel, David M., Ph.D., U. of California at Los Angeles. Prof., Plant Biology
Beyenbach, Klaus W., Ph.D., Washington State U. Prof., Physiology/Veterinary Physiology
Budd, Peter J., Ph.D., U. of Illinois. Prof., Emeritus, Molecular Biology and Genetics
Cade, Thomas J., Ph.D., U. of California at Los Angeles. Prof., Emeritus, Ecology and Evolutionary Biology
Cabeza, Joseph M., Ph.D., Washington State U. Prof., Plant Biology
Calvo, Joseph M., Ph.D., Washington State U. William T. Keeton Professor in Biological Sciences, Molecular Biology and Genetics
McClure, Polley A., Prof., Information Technologies/Ecology and Evolutionary Biology
McCouch, Susan R., Assoc. Prof., Plant Breeding/Plant Biology
Pimentel, David, Prof. Emeritus, Entomology/Ecology and Evolutionary Biology
Rossman, Michael J., Adjunct Prof., Purdue U./Molecular Biology and Genetics
Stein, David B., Adjunct Prof., Boyce Thompson Institute/Plant Biology
Tanksley, Stephen, Prof., Plant Breeding/Liberty Hyde Bailey Prof., Plant Biology
Thompson, John F., Adjunct Prof., USDA Science and Education Administration/Plant Biology
Vehrencamp, Sandra, Ph.D., Cornell U. Prof., Neurobiology and Behavior/Library of Natural Sounds
Wheel, Helen D., Prof., Entomology/Plant Biology (Bailey Hortorum)

College of Arts and Sciences
Adkins-Regan, Elizabeth, Ph.D., U. of Pennsylvania Prof., Neurobiology and Behavior/Psychology
Aquadro, Charles F., Ph.D., U. of Georgia. Prof., Molecular Biology and Genetics/Ecology and Evolutionary Biology
Bass, Andrew H., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Blackler, Anthony W., Ph.D., U. of London. (England). Prof., Molecular Biology and Genetics
Boorer, Ronald, Ph.D., Princeton U. Assoc. Prof., Neurobiology and Behavior
Bretscher, Anthony P., Ph.D., Leeds U. (England). Prof., Molecular Biology and Genetics
Brown, William J., Ph.D., U. of Texas Health Science Center at Dallas. Prof., Molecular Biology and Genetics
Capranica, Robert R., S.C.D., Massachusetts Inst. of Technology. Prof. Emeritus, Neurobiology and Behavior
Chen, Rey-Huei, Ph.D., Harvard U. Asst. Prof., Neurobiology and Behavior
Deitcher, David, Ph.D., Harvard Med. School. Asst. Prof., Neurobiology and Behavior
Elner, Stephen F., Ph.D., Cornell U. Prof., Ecology and Evolutionary Biology
Feigenson, Gerald W., Ph.D., California Inst. of Technology. Prof., Molecular Biology and Genetics
Finlay, Barbara, Ph.D., Massachusetts Inst. of Tech. Prof., Neurobiology and Behavior/Psychology
Geber, Monica A., Ph.D., U. of Utah. Assoc. Prof., Ecology and Evolutionary Biology
Gibson, Quinn H., Ph.D./D.Sc., Queen's U. (Northern Ireland). Greater Philadelphia Professor Emeritus in Biological Sciences, Molecular Biology and Genetics
Greene, Harry W., Ph.D., U. of Tennessee. Prof., Ecology and Evolutionary Biology
Hajime, Kentaro, Ph.D., U. of Washington. Frank H. T. Rhodes Professor of Environmental Science, Ecology and Evolutionary Biology
Halpern, Bruce P., Ph.D., Brown U. Prof., Neurobiology and Behavior/Psychology
Heppel, Leon A., Ph.D., U. of California at Berkeley. Prof. Emeritus, Molecular Biology and Genetics
Hess, George P., Ph.D., U. of California at Berkeley. Prof., Molecular Biology and Genetics
Hinkle, Peter C., Ph.D., New York U. Prof., Molecular Biology and Genetics
Howland, Howard C., Ph.D., Cornell U. Prof., Neurobiology and Behavior/Biomedical Sciences
Hoy, Ronald C., Ph.D., Stanford U. Prof., Neurobiology and Behavior
Huffaker, Tim C., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Molecular Biology and Genetics
Kennedy, Kenneth A. R., Ph.D., U. of California at Berkeley. Prof., Ecology and Evolutionary Biology
Leonard, Samuel L., Ph.D., U. of Wisconsin. Prof. Emeritus, Molecular Biology and Genetics
Limster, Christine P., Ph.D., Marie Curie U. Asst. Prof., Neurobiology and Behavior
McGobb, David, Ph.D., U. of Iowa. Asst. Prof., Neurobiology and Behavior
MacDonald, June M. Fessenden, Ph.D., Tufts U. Assoc. Prof. Emeritus, Molecular Biology and Genetics/Program on Science, Technology, and Society
McFarland, William N., Ph.D., U. of California at Los Angeles. Prof. Emeritus, Ecology and Evolutionary Biology
Nicholson, Linda F., Florida State U. Asst. Prof., Molecular Biology and Genetics
Podleski, Thomas R., Ph.D., Columbia U. Prof., Emeritus, Neurobiology and Behavior
Power, Alison G., Ph.D., U. of Washington. Prof., Ecology and Evolutionary Biology/Science and Technology Studies
Provine, William B., Ph.D., U. of Chicago. Charles A. Alexander Professor of Biological Sciences, Ecology and Evolutionary Biology/History
Seeley, Thomas D., Ph.D., Harvard U. Prof., Neurobiology and Behavior
Sherman, Paul W., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Sparks, Jed P., Ph.D., Washington State U. Asst. Prof., Ecology and Evolutionary Biology
Turekian, Robert, Ph.D., Carleton U. (Canada). Prof., Plant Biology
Wallace, Bruce, Ph.D., Columbia U. Prof., Emeritus, Molecular Biology and Genetics
Whitlock, Kathleen E., Ph.D., U. Washington Seattle. Asst. Prof., Molecular Biology and Genetics
Wilson, David B., Ph.D., Stanford U. Prof., Biochemistry, Molecular Biology and Genetics
Wolfner, Mariana F., Ph.D., Stanford U. Prof., Molecular Biology and Genetics

Other Teaching Personnel
Eberhard, Carolyn, Ph.D., Boston U. Sr. Lecturer, Plant Biology
Johnson, Bruce R., Ph.D., Boston U. Sr. Lecturer, Neurobiology and Behavior

Joint Appointees
Levin, Simon A., Adjunct Prof., Princeton U. Ecology and Evolutionary Biology
Likens, Gene E., Adjunct Prof., Institute of Ecosystem Studies/Ecology and Evolutionary Biology

College of Veterinary Medicine
Gasteigier, Edgar L., Ph.D., U. of Minnesota. Prof., Emeritus, Physiology/Veterinary Physiology
Kotlikoff, Michael I., Ph.D., U. California at Davis. Prof., Veterinary Physiology/Physiology
Tapper, Daniel N., Ph.D., Cornell U. Prof. Emeritus, Physiology/Veterinary Physiology
Wasserman, Robert H., Ph.D., Cornell U. James Law Prof. Emeritus, Physiology/Veterinary Physiology/Nutritional Sciences

Other Teaching Personnel
Concannon, Patrick W., Ph.D., Cornell U. Sr. Res. Assoc. Emeritus, Veterinary Physiology/Physiology

Joint Appointees
Fortune, Joanne E., Ph.D., Cornell U. Prof., Veterinary Physiology/Physiology
Gilmour, Robert F., Ph.D., SUNY Upstate Medical Center. Assoc. Prof., Veterinary Physiology/Physiology
Haupt, Katherine A., Prof., Veterinary Physiology/Physiology
Haupt, T. Richard, Prof., Veterinary Physiology/Physiology
Nathanielz, Peter W., James Law Prof., Veterinary Physiology/Physiology
Roberts, David, Ph.D., Glasgow U. (Scotland) Prof., Veterinary Physiology/Physiology
Wootton, John F., Prof., Veterinary Physiology/Physiology

College of Engineering
Joint Appointees
Cisne, John L., Assoc. Prof., Geological Sciences/Biological Sciences
Webb, Watt W., Prof., Applied and Engineering Physics/Biological Sciences

Biological Sciences
Joint Appointees
Snedeker, Suzanne M., Asst. Prof., Center for the Environment/Biological Sciences

Division of Nutritional Sciences
Joint Appointees
Arion, William J., Prof., Nutritional Sciences/Molecular Biology and Genetics
Bensaoud, Andre, Prof., Nutritional Sciences/Physiology
Kazarinoff, Michael N., Assoc. Prof., Nutritional Sciences/Molecular Biology and Genetics
Wright, Lemuel D., Ph.D., Oregon State Coll. Prof. Emeritus, Nutritional Sciences/Molecular Biology and Genetics

*Joint appointment with the College of Arts and Sciences.
†Joint appointment with the College of Veterinary Medicine.
‡Joint appointment with the College of Agriculture and Life Sciences.
§Joint appointment with the College of Engineering.
FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr., Engineering Quadrangle. Facilities for the School of Applied and Engineering and Physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for the Department of Biological and Environmental Engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research. Cornell programs and centers of special interest in engineering include the following:

Center for Applied Mathematics: A cross-disciplinary center that administers a graduate program.

Center for Nanoscale Systems in Information Technologies: A National Science Foundation Nanoscience and Technology Center whose mission is to explore new methods for creating nanoscale devices for use in information technologies. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle.

Center for Radiophysics and Space Research: An interdisciplinary unit that facilitates research in astronomy and the space sciences.

Center for Theory and Simulation in Science and Engineering: A supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Cornell High Energy Synchrotron Source (CHESS): A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanofabrication Facility (part of the National Science Foundation funded National Nanofabrication Users Network): A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.

Cornell Waste Management Institute: A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents: An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.

W. M. Keck Foundation in Nanobiotechnology: Facilities of this program include tools for nanoscale diagnostics of biomaterials.

Laboratory of Plasma Studies: A center for research in plasma physics.

Cornell Center for Materials Research: An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment for materials research.

National Astronomy and Ionosphere Center: A cross-disciplinary unit that sponsors courses in the science, technology, and society.

Program on Science, Technology, and Society: A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.

The programs listed on this page are sponsored by College of Engineering units and several are industry affiliated.

DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the "Announcement of the Graduate School" and the special announcement "Graduate Study in Engineering and Applied Science." The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY

Bachelor of Science (B.S.) degrees are offered in the following areas:

- Biological Engineering
- Chemical Engineering
- Civil Engineering
- College Program
- Computer Science
- Electrical and Computer Engineering
- Engineering Physics
- Earth and Atmospheric Sciences
- Materials Science and Engineering
- Mechanical Engineering
- Operations Research and Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. Subsequently most students enter field programs, which are described separately for each academic area. Criteria for entrance into the field programs are described in the section titled "Affiliation with a Field Program." Alternatively students may enter the College Program (described below), which permits them to pursue a course of study adapted to individual interests.
Students interested in bioengineering may arrange a suitable curriculum through the bioengineering option, the bioengineering minor, the bioengineering minor or the College Program. Students interested in supplementing their field program with formal study in another traditional area of engineering may wish to consider one of the engineering minors offered by the college. Information about both the bioengineering option and engineering minors is available in Engineering Advising, 167 Olin Hall. Students interested in environmental engineering and science may pursue the environmental option offered by the School of Civil and Environmental Engineering and the Department of Biological and Environmental Engineering, or the science of earth systems (SES) option offered by the Department of Earth and Atmospheric Sciences.

Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. Students must meet the Common Curriculum as explained below. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 2002-2003 edition of The Engineering Undergraduate Handbook.)

Course Category | Credits
--- | ---
1) Mathematics | 16
2) Physics (depending on field) | 8-12
3) Chemistry (depending on field) | 4-8
4) First-Year writing seminar* | 6
5) Computer programming† | 4
6) Engineering distribution (3 courses) | 
   a. One Introduction to Engineering (ENGRI) | 3
   b. Two other engineering distribution courses (ENGRD) | 6
7) Liberal studies distribution (6 courses min.) | 18 (min.)
8) Approved electives | 6
9) Field program | 
   a. Field required courses 30 cr. min. | 
   b. Field approved electives | 9
   c. Courses outside the field | 9

*One writing-intensive technical course or a course in technical or scientific writing must also be taken; this course may simultaneously satisfy some other requirement.

†One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement, such as an engineering distribution course, an approved elective, or a field program course.

From 125 to 135 credits are required for graduation; the specific number of required credits vary depending on which field program is chosen (see field curricula for specific field requirements). Two terms of physical education must be taken in the freshman year and students must demonstrate proficiency in swimming to satisfy a university requirement.

Mathematics

The normal program in mathematics includes MATH 191 (or 190), 192, 293, and 294. Every student must attain a grade of at least C- in MATH 191 (or 190), 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Failure to achieve at least a C- the second time around will generally result in withdrawal from the engineering program. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 112, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in MATH 191 or equivalent before taking PHYS 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in MATH 192 before taking PHYS 213, or C- in MATH 293 before taking PHYS 214). Students in the field of BEE, CHEM, CEE, COM S, EAS, (geoscience and SES options), or OR&E may substitute CHEM 208 for PHYS 214.

Chemistry

CHEM 211 or 207 is required for all students. CHEM 211 is a course designed for students who do not intend any further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213, and 214) may postpone CHEM 211 until the sophomore year.

In general, students intending to affiliate with the following departments and schools usually take CHEM 211: Applied and Engineering Physics, Computer Science, Electrical and Computer Engineering, Materials Science and Engineering, Mechanical and Aerospace Engineering, and Operations Research and Industrial Engineering. Students considering Chemical Engineering must take CHEM 207 in the fall of the freshman year, to be followed by CHEM 208 in the spring term. All students considering the environmental option in Civil Engineering, the science of earth systems option in Earth and Atmospheric Sciences, or a health-related career such as medicine, should take the CHEM 207-208 sequence.

First-Year Writing Seminars

Each semester of their freshman year, students choose a First-Year Writing Seminar from among more than one hundred courses offered by over thirty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Technical Writing

The ability to communicate is essential to successful professional practice. In addition to taking two first-year writing seminars, engineering students must have a significant amount of instruction and practice in technical or scientific writing. They can fulfill the college's technical-writing requirement by a) enrolling in an Engineering Communications course (e.g., ENGRC 335 or ENGRC 350), b) enrolling in selected courses in the Department of Communication (COMM 260, 263, or 352), or in an approved writing-intensive engineering course. The third option includes the following writing intensive courses:

- BEE 489
- BEE 493 (with coregistration in BEE 450 or BEE 475)
- ENGRD/A&EP 264
- CHEME 432
- M&AE 427
- MS&E 403-404
- MS&E 405-406

For information on fulfilling the technical-writing requirement by doing a writing-intensive Co-op, contact Engineering Professional Programs, 201 Carpenter Hall, or the Engineering Communications Program, 465 Hollister Hall.

Computing

In either the first or second term of their freshman year, students normally take COM S 101, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are BEE 453, BEE 475, ENGRD/COM S 211, ENGRD/COM S 322, ENGRD/CEE 241, ENGRD/A&EP 264, ECE 423, M&A 470, M&A 479, M&A 423, M&A 575, and M&A 578. The recommended choice for students intending to enter the field program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 211, 322, or 241; in Civil Engineering, ENGRD 241; in Computer Science, ENGRD 211; in Electrical and Computer Engineering, ENGRD 211; in Mechanical Engineering, M&A 470, M&A 479, M&A 575, or M&A 578; and in Operations Research and Engineering, ENGRD 211.

Engineering Distribution

Three engineering distribution courses (nine credits) are required. One course must be an Introduction to Engineering Course (designated by ENGR) to be taken by the student during their freshman year. The Introduction to Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction
to Engineering. Course listing for current course offerings.

The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1) **Scientific computing**
- ENGRD 211, Computers and Programming
- ENGRD 241, Engineering Computation
- ENGRD 321, Numerical Methods in Computational Molecular Biology
- ENGRD 322, Introduction to Scientific Computation

2) **Materials science**
- ENGRD 261, Introduction to Mechanical Properties of Materials

3) **Mechanics**
- ENGRD 202, Mechanics of Solids
- ENGRD 203, Dynamics

Students in the field program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

4) **Probability and statistics**
- ENGRD 270, Basic Engineering Probability and Statistics

Students in the field program in Electrical and Computer Engineering may substitute ECE 310 with ENGRD 270. Students in the field program in Engineering Physics may substitute ECE 310 or MATH 471 for ENGRD 270. Students in the field programs in Civil Engineering and Biological Engineering may substitute CEE 304 for ENGRD 270.

5) **Electrical sciences**
- ENGRD 210, Introduction to Circuits for Electrical and Computer Engineers
- ENGRD 230, Introduction to Digital Systems
- ENGRD 264, Computer-Instrumentation Design

6) **Thermodynamics and energy balances**
- ENGRD 219, Mass and Energy Balances
- ENGRD 221, Thermodynamics

7) **Earth and life sciences**
- ENGRD 201, Introduction to the Physics and Chemistry of the Earth
- ENGRD 250, Engineering Applications in Biological Systems

8) **Biology and chemistry**
- BIO 101 and 103, Biological Sciences, Lecture and Laboratory
- BIO 105, Introductory Biology
- BIO 107, General Biology (summer only)
- CHEM 389, Physical Chemistry

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

- **Biological and Environmental Engineering:** ENGRD 202
- **Chemical and Biomolecular Engineering:** ENGRD 219
- **Civil Engineering:** ENGRD 202
- **Computer Science:** ENGRD 211 (co-enrollment in COM S 212 strongly recommended)

---

**Electrical and Computer Engineering:** ENGRD 290

**Earth and Atmospheric Sciences:** ENGRD 201

**Materials Science and Engineering:** ENGRD 261

**Mechanical Engineering:** ENGRD 202

**Operations Research and Engineering:** ENGRD 270

---

**Liberal Studies Distribution**

A minimum of six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories: (a) humanities or history, (b) social sciences, (c) foreign languages, and (d) expressive arts. (No First-Year Writing Seminar may be used to meet the liberal studies requirement.)

- At least two courses must be chosen from category (a).
- At least two courses in either category (a), (b), or (d) must be from the same field of study and in the same category. One of these courses must be at or above the 200-level or both courses can be at the 100 level only if one is the prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact Engineering Advising.

**a) Humanities or History**

American Studies 101, 201, 202

Architecture 131, 132, 181, 182, 382

Art 317, 318

Africana Studies 202, 204, 205, 211, 280, 285, 304, 310, 361, 370, 381, 404, 422, 425, 431, 432, 435, 455, 475, 483

Anthropology 290, 451, 452, 453, 455

Archaeology (courses in Old World Archaeology and 493)

Asian Studies (courses in Asian art, literature, religion, or cultural history)

Biology and Society 205, 206

Classics (all courses except 285, 356, 360, 361, and language courses)

Collective Bargaining, Labor Law, and Labor History 100, 101, 384, 385, 386, 482, 488

Communication 426

Comparative Literature (all courses)

Economics 323, 324, 325, 326, 417

Engineering ENGRG 198, 250, 298, 360

English (all courses except ENGL 285 and writing courses, whose numbers end in the 80s; e.g., 288, 289, 382, etc.)

French Literature (all courses)

German Literature (all courses)

History (all courses)

History of Art (all courses except ART H 200)

Industrial and Labor Relations 451

International and Comparative Labor Relations 430

Italian Literature (all courses)

Jewish Studies 274, 351, 352

Labor Economics 448

Linguistics 109

Music (only introductory, music theory, music history, and digital music courses)

Natural Resources 407

Near Eastern Studies (courses listed under history, civilization, or literature)

Philosophy (all courses except courses in logic and PHIL 383)

Religious Studies 101

Russian Literature (all courses)

Science and Technology Studies 201, 205, 206, 233, 250, 281, 282, 283, 287, 292, 355, 360, 433, 444, 447, 525, 687, 711

Spanish Literature (all courses)

Theater Arts (only courses in Theater Studies, film analysis, and history)

**b) Social Sciences**

Agricultural Economics (ARME) 100, 250, 430, 431, 432, 450, 451, 464

Anthropology (all courses except 101 and courses in Biological and Ecological Anthropology)

Archeology (all courses except those in Methodology and Technology)

Architecture 342

Asian American Studies 110

Asian Studies (courses in Asian anthropology, economics, government, linguistics, or sociology)

Biology and Society 201, 301, 406, 407

City and Regional Planning 100, 101, 314, 361, 382, 404, 442

Communication 116, 120, 240, 410, 420

Design and Environmental Analysis 150, 250

Economics (all courses except 315, 317, 318, 319, 320, 321, 326. Engineering students should generally take ECON 301-302 and not 101-102, unless they have had no calculus.)

Education 210, 212, 271, 311, 317, 322, 360, 413, 477

Government (all courses)

Human Development and Family Studies (all courses)

International and Comparative Labor Relations (all courses)

Labor Economics (all courses except 345 and 448)

Linguistics (all courses)

Natural Resources 350, 400

Organizational Behavior (all courses)

Policy Analysis and Management (all courses except 305, 323, 326, 371, 424, 425, 606, and 607)

Rural Sociology (all courses)

Sociology (all courses)

Textiles and Apparel 245

c) Foreign Language

This category includes all foreign language (non-literature) courses; if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to six advanced placement credits equal to two courses according to these rules.

d) Expressive Arts

Africana Studies 303, 425, 430

Art (studio courses)

Biological Sciences 208, 209

Communications (all courses except 116, 120, 314, 410, 416, 420, 426, 465)

Design and Environmental Analysis 101, 102

Engineering (all Engineering Communications courses, which are designated ENGR/C)

English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)

Floriculture (courses in Freehand Drawing and Scientific Illustration)

Industrial and Labor Relations 452

Music (courses in musical performance, musical organizations and ensembles; three one-credit courses equals one course)

Science and Technology Studies 352

Theater Arts (all courses except those listed in category (a) above)

Electives

- Approved electives—six credits required (approved by the academic adviser)

Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:

1. One Introduction to Engineering course (ENGR).
2. Engineering distribution courses.
3. Courses stressing written or oral communication.
4. Upper-level engineering courses.
5. Advanced courses in mathematics.
6. Rigorous courses in the biological and physical sciences.
7. Courses in business, economics, or language (when they serve the student's educational and academic objectives).

8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)

- Field approved electives—nine credits (approved by engineering field program faculty and field faculty advisers)

Students should refer to the field program curricula for descriptions of courses that meet this category.

- To ensure breadth of engineering studies, field programs will also include nine credits of courses outside the field.

Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed in the "Science and Technology Studies" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Student Success Center

From the time students enter the college as freshmen until they are affiliated with a major field (normally prior to the second semester of the sophomore year), they are under the administration of Engineering Advising, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising, Engineering Minority and Women's Program's Programs, and Learning Initiatives for Future Engineers (LIFE) comprise the Student Success Center. The Center serves as the primary resource center for undergraduate students in the college, offering general advising and counseling, tutoring, instructional support and networking opportunities.

Elective Course Requirements

By the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:

- MATH 191 (or 190) and MATH 192

- Two of the following: CHEM 211, 207, 208, PHYS 112, 213, 214*

- COM S 100

- Two First-Year Writing Seminars

- One Introduction to Engineering course (ENGR designation)

- Two Physical Education courses

*Students with an interest in pre-med (or other health-related careers), Chemical Engineering, the environmental option in Civil Engineering, or the science of earth systems option in Earth and Atmospheric Sciences should enroll in the CHEM 207-208 sequence during their freshman year.

Affiliation with a Field Program

Students must apply for affiliation with a field program during the first term of their sophomore year. Although earlier affiliation may be granted at the discretion of the field. This is done by visiting the undergraduate field consultant's office in the field of their choice and completing the Application for Field Affiliation form. To affiliate with a field program, students must (1) have a 2.0 cumulative grade point average and (2) have satisfied the field's course and grade requirements as specified below.

(Please note that fields may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

<table>
<thead>
<tr>
<th>Field Program</th>
<th>Courses and Minimum Grade Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biological and Environmental Engineering</td>
<td>No more than one grade below C- in mathematics and science courses and BEE 151 or equivalent</td>
</tr>
<tr>
<td>Chemical and Biomolecular Engineering</td>
<td>No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses</td>
</tr>
<tr>
<td>Civil Engineering</td>
<td>A 2.0 GPA in all engineering and science courses and a grade of C- or better in ENGR'D 202 (for students in the environmental option who do not take ENGR'D 202 prior to affiliation, a grade of C- or better in CHEM 208 is required)</td>
</tr>
<tr>
<td>Computer Science</td>
<td>Completion of MATH 293, COM S 211, 212, and 280; a grade of C or better in Com S 211, 212, and 280, with the overall average of all COM S courses above COM S 100 being 2.7 or better</td>
</tr>
</tbody>
</table>

A grade of C or better in all required math courses beyond introductory calculus (i.e. MATH 190, 191, or 193), with the overall average of these courses being 2.7 or better. Courses used in the affiliation GPA computations may be repeated if the original course grade was below a C. The most recent grade will be used for all repeated courses. Qualifying courses must be taken at Cornell.

NOTE: for complete affiliation requirements, visit www.cs.cornell.edu/ugrad

Electrical & Computer Engineering

Be in good academic standing in the College of Engineering. Must have completed with a grade of C- or better in MATH 293, PHYS 213, and either ENGR'D/EC 210 (4 credits) or ENGR'D 230

Must have an average GPA of at least 2.5 in the following courses if completed: MATH 192, 293, 294, PHYS 213, ENGR'D 211, 230, ECE/ENGR'D 210 (4 credits)
Advanced Engineering Analysis I
Engineering Probability and
Basic Engineering Probability and
Introduction to Probability and
Engineering Computation

Operations
Research &
Engineering

SPECIAL PROGRAMS

Dual Degree Option

A special academic option, intended for
superior students, is the dual degree program, in
which both a Bachelor of Science and
either a Bachelor of Arts or Bachelor of Fine
Arts degree can be earned in about five years.
Students registered in the College of Engineer­
ing, the College of Arts and Sciences, or the
College of Architecture, Art, and Planning may
apply and, after acceptance of their applica­
tion, begin the dual degree program in their
second or third year. Those interested should
contact the appropriate coordinators of dual
degree programs at the following locations: 55
Goldwin Smith Hall (for Arts and Sciences),
135 East Sibley (for Architecture, Art, and
Planning); and the Director of Engineering
Advising, 167 Olin Hall.

Double Major in Engineering

The Double Major option, which makes it
possible to develop expertise in two allied
fields of engineering, generally requires at
least one semester beyond the usual four
years. Students affiliate with one field
following normal procedures and then petition
to enter a second field before the end of their
junior year. All the requirements of both fields
must be satisfied. Further information is
available from Engineering Advising, 167 Olin
Hall, and the individual field consultant
offices.

College Program

Individually arranged courses of study under
the College Program are possible for those
students whose educational objectives cannot
be met by one of the regular field programs.
Often the desired curriculum is in an
interdisciplinary area. Each program is
developed by the student in consultation with
faculty advisers and must be approved by the
College Program Committee, which is
responsible for supervising the student's work.
Students should apply to enter the College
Program during the sophomore year. A

The College of Engineering currently offers
minors in the following areas (offering
departments are indicated in parentheses):

Applied Mathematics (T&AM)
Biological Engineering (BEE)
Biomedical Engineering (T&AM)
Civil Infrastructure (CEE)
Computer Science (COM S)
Electrical and Computer Engineering (ECE)
Engineering Management (CEE)
Engineering Statistics (OR&IE)
Environmental Engineering (BEE/CEE)
Geological Sciences (EAS)
Information Science (COM S)
Materials Science and Engineering (MS&E)
Mechanical Engineering (M&AE)
Operations Research and Management Science
(OR&IE)

Additional information on specific minors can
be found in the departmental sections of this
publication, The Engineering Undergraduate
Handbook, the undergraduate field office of
the department offering the minor, and the
Student Success Center.

Minor in Applied Mathematics

To complete the minor, the student must take
at least six (6) courses beyond MATH 294, to
be chosen as follows:

a) No more than 1 course may be chosen
from any one of the groups 1, 2, 3 or 4.
b) At least 3 courses must be chosen from
groups 5 and 6.
c) No more than one 200-level course may
be chosen.
d) No more than one course may be chosen
which is offered by the student's Major
Department.

1. Analysis

TAM 310 Advanced Engineering Analysis I
MATH 311 Introduction to Analysis
MATH 420 Differential Equations and
Dynamical Systems
AEP 321 Mathematical Physics I

2. Computational methods

CS 322 Introduction to Scientific
Computation
CEE 241 Engineering Computation
ORIE 320 Optimization I

3. Probability and Statistics

ORIE 270 Basic Engineering Probability and
Statistics
ORIE 360 Engineering Probability and
Statistics II
EE 310 Introduction to Probability and
Random Signals
CEE 304 Uncertainty Analysis in Engineer­
ing
4. Applications
AEP 333 Mechanics of Particles and Solid Bodies
ChemE 323 Fluid Mechanics
CEE 331 Fluid Mechanics
CEE 371 Structural Behavior
EE 425 Digital Signal Processing
MAE 323 Intro to Fluid Mechanics
MSF 303 Thermodynamics of Condensed Systems

5. Advanced Courses
Only one of the following three may be chosen:
TAM 311 Advanced Engineering Analysis II
MATH 422 Applied Complex Analysis
AEP 322 Mathematical Physics II

Only one of the following two may be chosen:
EE 411 Random signals
ORIE 361 Introductory Engineering

Stochastic Processes I

Only one of the following two may be chosen:
CS 381 Introduction to Theory of
Computing
CS 481 Introduction to Theory of
Computing
CS 482 Introduction to the Design of
Algorithms

ORIE 321 Optimization I
ORIE 431 Discrete Models
ORIE 435 Introduction to Game Theory
ORIE 462 Introductory Engineering
Stochastic Processes II
EE 522 Nonlinear systems

6. Math Courses
Any 300+ level course offered by the Mathematics Department in algebra,
analytic, probability/statistics, geometry or logic, with the following exceptions:

i) MATH 311 or MATH 420, if any course from group 1 is chosen.

ii) MATH 422, if TAM 311 or AEP 322 are chosen from group 5.

Academic Standards: A letter grade of C or better for each course in the minor.

Required Courses
COM S/ENGRD 211 Computers and Programming
COM S 321 Numerical Methods in Computational Biology
or COM S/ENGRD 322 Introduction to Scientific Computing
or COM S 421 Numerical Analysis

The Bioengineering Option and the Biological Engineering and Biomedical Engineering Minors

Students wishing to apply the concepts and methods of the engineering, computational and physical sciences to living systems or health issues may pursue one of three courses of study:

1. the bioengineering option, requiring completion of four bioengineering courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). The student will receive official notation on their transcript. Further information is available in Engineering Advising, 167 Olin Hall.

2. the biological engineering minor, requiring six courses (18 credit hours minimum) including BEE 350, two analysis courses, two application courses and one basic science course. This minor provides the student an opportunity to further their understanding of living systems and the basic transport processes that occur in these systems. Further information is available from the BEE Program Coordinator, 207 Riley-Robb Hall.

3. the biomedical minor, requiring six courses (18 credit hours minimum) from at least four of five different groups—Introductory Biology, Advanced Biology, Molecular and Cellular BME, BME Analysis of Physiological Systems, BME Applications. Further information is available from the Biomedical Engineering Program coordinator, 270 Olin Hall.

International Programs

All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today's engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in Engineering Advising, 167 Olin Hall. Students who seek advice on obtaining an international co-op work experience should visit the Engineering Cooperative Education and Career Services office, 201 Carpenter Hall.

Engineering Communications Program

The Engineering Communications Program (ECP) provides instruction in the written, oral, and visual presentation of technical and scientific information. Engineering Communications (ENGRG 390) and Communications for Engineering Managers (ENGRG 335) are three-credit seminars that give students a thorough introduction to these areas. These courses use material from the engineering and business curriculums, and major assignments are based on actual events and professional situations. Topics covered may include effective teamwork, organizational and ethical issues, and communicating technical information to both technical and non-technical audiences. Classes have lively discussion, and the limited size of sections ensures close attention to individual students' work. Occasionally, instructors offer special courses or independent studies. The three-credit ECP courses fulfill the college's technical-writing requirement (see Requirements for Graduation). Among its other activities, the ECP works with engineering faculty to integrate communications instruction into writing-intensive technical courses. ECP instructors may give workshops and lectures on relevant communications topics, as well as help to develop assignments, instructional materials, and assessment strategies for written work and oral presentation. The goal of writing-intensive efforts is to strengthen students' understanding of engineering course material while increasing their ability to communicate what they know.

When possible, the ECP gives presentations to student groups on effective writing, oral communication, and teamwork, and it has been involved in innovative educational projects, e.g., Peer Teaching in Engineering. ENGRG 470, a core course in the learning initiative in physics, mathematics, chemistry, and engineering design. The program awards several annual prizes for outstanding writing, oral presentation, and teamwork. For further information, contact the ECP, 465 Hollister Hall.

Engineering Cooperative Education Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Education Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

To be eligible, a student must have been enrolled at Cornell for four semesters prior to working, with a cumulative GPA of 2.7 or higher. (Students in Computer Science and Biological and Environmental Engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of participating employers and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin the first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same employer the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Cooperative Education and Career Services office, 201 Carpenter Hall.

M.Eng. Programs

One-year Master of Engineering (M.Eng.) programs are offered in 14 fields. These programs are discussed in this announcement.
in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. Prospective students should access the Master of Engineering web site (www.engineering.cornell.edu/grad) for program specifics. The M.Eng. degree fields and their academic departments under which they are administered are listed below.

M.Eng. (Aerospace): Mechanical and Aerospace Engineering
M.Eng. (Agricultural and Biological): Biological and Environmental Engineering
M.Eng. (Chemical): Chemical and Biomolecular Engineering
M.Eng. (Civil & Environmental): Civil and Environmental Engineering
M.Eng. (Computer Science): Computer Science
M.Eng. (Electrical): Electrical and Computer Engineering
M.Eng. (Engineering Physics): Applied and Engineering Physics
M.Eng. (Geology): Earth and Atmospheric Sciences
M.Eng. (Materials): Materials Science and Engineering
M.Eng. (Mechanical): Mechanical and Aerospace Engineering
M.Eng. (Nuclear): Nuclear Science and Engineering
M.Eng. (ORIE): Operations Research and Industrial Engineering
M.Eng. (Systems): Systems Engineering

Admission:
Requirements for admission vary by field and prospective students should contact the appropriate field. In general, the standard M.Eng. application requirements include:
• Statement of Purpose
• Complete transcripts from each college or university you have attended
• At least two letters of recommendation
• Graduate Record Examinations (GRE) scores—may not be required by all fields.

Many fields wave the GRE requirement and one of the letters of recommendation for students with Cornell Engineering BS degrees. Students should check with the appropriate field office for specific program requirements. A list of M.Eng. field links and general admission information is posted on the web www.engr.cornell.edu/grad/meng/app.html.

The following M.Eng. Options are offered:
• The Bioengineering Option
• The Bioengineering Options
• The Manufacturing Option
• The Engineering Management Option
• The Systems Engineering Option
Each option is available to M.Eng. students in specific fields. The Master of Engineering Options web page www.engr.cornell.edu/grad/meng/options.html lists specific details including availability and contact information.

Cooperative Programs with the Johnson Graduate School of Management:
The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering training with a business degree.
The Knight Scholarship Program offers three options or categories of financial support:
• The Alumni Knight Scholarship Option
• The Undergraduate Knight Scholarship Option
• The Six-Year Knight Scholarship Option

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional careers. Participation in the Knight Scholarship program requires admission by each respective academic program (M.Eng., MBA) as well as an application to participate in the Knight Scholarship Program. Refer to the Knight Scholarship web site (www.engr.cornell.edu/grad/knight) for program specifics or contact the Office of Research, Graduate Studies, and Professional Education, 146 Olin Hall.

Early Admission Program:
Superior Cornell Students who will have between one and eight credits remaining in their last undergraduate semester may petition the appropriate field representative for early admission to the M.Eng. program.

Program Options:
Cornell's Master of Engineering Program allows students to supplement their field curriculum with a program option. Students who choose a program option enroll in courses that satisfy elective requirements.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit
The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:
1) They may enroll in a more advanced course in the same subject right away.
2) They may substitute an elective course from a different area.
3) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams
The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 (or 190), 192, 293, and 294 are required.
First-term math (MATH 191). AP credit may be earned by:
• a score of 3, 4, or 5 on the CEEB BC exam, or
• a score of 5 on the CEEB AB exam, or
• a passing score on the Cornell departmental exam for first-term math.
First-year math (through MATH 192). AP credit may be earned by:
• a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112 and 213 are required.
PHYS 112. AP credit may be earned by:
• a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
• a score of 5 on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
• a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 may not enroll in PHYS 213 unless concurrently enrolled in MATH 293.
PHYS 213. Students receiving a 5 on the Electricity and Magnetism portion of the CEEB exam may choose to accept AP credit for PHYS 213 or placement in PHYS 217 with no AP credit for PHYS 213. For advice or more information contact the departmental representative at 607 255-6016.

Chemistry: CHEM 207 or CHEM 211 is required.
CHEM 207 or CHEM 211. AP credits may be earned by:
• a score of 5 on the CEEB AP exam, or
• a passing score on the Cornell departmental exam for Chemistry.

Note: Students who are successful in obtaining AP credit for CHEM 207 and who are considering majors in Chemical Engineering or Materials Science and Engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. You may want to discuss this option with your faculty adviser.
Computing: COM S 100 is required. AP credit may be earned by:
- a score of 5 on the CEEB A or a score of 4 or 5 on the AB exam; or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
- eight credits will be offered to students who receive a 5 on the CEEB AP exam;
- six credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

First-Year Writing Seminar: Two First-Year Writing Seminars (for a total of six credits) are required.
- AP credit for one First-Year Writing Seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam will be offered three credits which may be applied toward the Humanities/History category (a) of the Liberal Studies distribution requirement. Students who earn a score of 4 on the AP English Language and Composition exam will be offered three credits which may be applied toward the Expressive Arts (d) category of the Liberal Studies distribution requirement.

Liberal Studies Distribution: Six courses beyond two First-Year Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the students to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty advisor.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Marks</th>

</tbody>
</table>

Note: Advanced Placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any area without a documented examination.
2. All AP examinations are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent direct to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week; permission to take these tests after the start of fall-term classes must be requested in a written petition to the College's Committee on Academic Standards, Petitions, and Credit (ASAPC).

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from Engineering Advising, 167 Olin Hall.

Transfer Credit for First-Year and Continuing Students

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, students must complete and submit a Transfer Credit Form (one form for each request), accompanied by a course description. (Transfer Credit Forms are available from Engineering Advising or the Registrar's Office and should be submitted prior to enrollment.) An official transcript from the offering institution (bearing the institutional seal and registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.

- To apply for transfer credit to satisfy requirements in mathematics, science, engineering courses, or First-Year Writing Seminar, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course may require course materials, textbooks used, etc., in addition to the course description before approving the course.

- Departmental approval is not required to apply for transfer credit which satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASAPC) in the Engineering Advising Office.

- Cornell does not award credit for courses in which a student has earned a grade of less than C; schools and departments may stipulate a higher minimum grade.

- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement.
Transfer credit for Transfer Students

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit is determined by the fields.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing vary somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means varies from field to field. Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from mathematics, science, and/or engineering
2. A C- or better in the mathematics course
3. A semester average of 2.0 or higher
4. No F, U, or INC grades

Requirements for second-semester freshman and first-semester sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 14 credits passed in courses that are corequisites for the first semester
2. A C- or better in the mathematics course
3. A semester average of 2.0 or higher
4. No F, U, or INC grades

Academic Progress

The total number of credits required for graduation range from 123 to 135, depending on the field program. Therefore, an average semester credit load ranges from approximately 15 to 17 credits.

Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in MATH 191 (or 190), 192, 293, and 294. Those who fail to meet this standard are allowed to repeat a course once in the following semester. Failure to achieve at least a C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced mathematics courses often have mathematics prerequisites, and having to repeat the prerequisite course may delay progress in the physics and mathematics curriculum.

Dean's List

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor are determined by the dean of the college. For 2002-2003, the requirement is a semester average of 3.4 or higher (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may earn Dean's List status retroactively if they meet these criteria after making up incomplete grades. Students with an earned Dean's List status receive certificates from the Engineering Registrar's Office, and the honor is noted on the transcript.

Graduating with Distinction and Honors Program

Graduating with Distinction

Meritorious students graduating with a Bachelor of Science degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude.

- Cum laude will be awarded to all engineering students with an overall GPA >= 3.5. Cum laude will also be awarded to all engineering students who received a semester GPA >= 3.5 in each of the last four semesters of attendance at Cornell, in each of which at least 12 letter graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for pro-rated tuition in their final semester will be awarded cum laude if they received a semester GPA >= 3.5 in their last semester and meet the conditions above in the prior four semesters.
- Magna cum laude will be awarded to all engineering students with an overall GPA >= 3.75 (based on all credits taken at Cornell).
- Summa cum laude will be awarded to all engineering students with an overall GPA >= 4.0 (based on all credits taken at Cornell).

Field Honors Program

To be eligible for field honors, a student must enter a program with and maintain a cumulative GPA of >= 3.5. If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of "With Honors." For more specific information, see the field program outline in this catalog.

S-U Grades

Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of C- or better in a course will receive a grade of S; those earning less than C- receive a grade of U. (Any course in which a U grade is received does not count toward graduation requirements.)

Engineering students may choose to receive an S-U grade option under the following conditions:
- The course in question must be offered with an S-U option.
- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed Add/Drop Form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option.

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are on a voluntary leave of absence are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad Office, 474 Uris Hall. They should be planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.
Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division Office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with Engineering Advising.

Students who wish to transfer into the College of Engineering can apply at Engineering Advising—application forms are available in 167 Olin Hall. Students who would enter the college as second-semester sophomores or later must be accepted by a field program as part of the admission process. Students who would enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of field affiliation but must be sponsored by a field program.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in Engineering Advising, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows.

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through Engineering Advising; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a field and while not in good standing may be given a "conditional leave" status. This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence are not generally granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are ineligible for leaves of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved by the student's field program; a formal transfer petition is required. (See previous section, "Transfer Credit," for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester the in which student plans to return.

Medical Leave: Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are granted for at least six months and up to five years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required Leave: A required leave of absence is imposed in cases where the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in several core courses. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are only offered in the fall or the spring semester. Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year).

Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary Withdrawal: Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their field office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations. Any student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intra-university transfer process should be followed.

If students who have withdrawn subsequently wish to return, they must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major field.

Required Withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action only withdraws them from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

ENGINEERING Cooperative Education and Career Services

This office assists engineering students (freshmen through Ph.D.) in career development and job search issues, and administers the Engineering Cooperative Education Program (see separate entry under the Engineering Special Programs section). Individual advising and group seminars are available, and more than 300 national employers typically visit the office annually to recruit technical students and graduates; additional job opportunities are posted electronically. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities; however, students seeking co-op opportunities must meet specific requirements. Further information on all services is available from the Engineering Cooperative Education and Career Services Office, 201 Carpenter Hall (255-5006), and on the web at www.career.cornell.edu and www.engr.cornell.edu/coop.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

Bachelor of Science Curriculum

Biological and Environmental Engineering (BEE) addresses issues such as those facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering program in the Department of Biological and Environmental Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a Bachelor of
Science degree and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Two concentrations in Biological and Environmental Engineering are offered: biological engineering and environmental engineering. Students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in the department in areas that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal.

Students strengthen their programs by selecting additional courses in the College of Engineering. They may complete minors of a second engineering major. Students planning for medical school also take additional lab-based courses in biology, biochemistry and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills and all students complete a capstone design project. Many undergraduate students participate in honors programs, undergraduate teaching and research, independent study, assistantships, graduate assistantships, design teams, Engineering Coop, and study abroad. Students completing the BEE major should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate and professional programs in engineering, science, medicine, law, and other fields. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us, and within us. The natural world is a complex and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is educating the next generation of engineers to meet these challenges.

The department of Biological and Environmental Engineering is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world. For further details see the department’s undergraduate programs publication, available at the BEES Student Services Office, 207 Riley Robb Hall, or contact the field’s advising coordinator, Professor Jim Bartsch at student services office, 207 Riley Robb. Each applicant to the BEE honors program must have an BEE faculty adviser to supervise the honors program. Written approval of the faculty member who will direct the research is required.

Option in Environmental Engineering

The Environmental Engineering Option provides BEE students the opportunity to follow a structured environmental engineering curriculum. The curriculum was developed and approved jointly by the faculty of BEE and Civil and Environmental Engineering (CEE). The Environmental Engineering Option in BEE and CEE share a common core of courses. Students complete a prescribed program of courses within the framework of the BEE curriculum.

Chemistry/microbiology: Students must take at least two semesters of chemistry (CHEM 211/257 or CHEM 207/208). They must also satisfy the BEE organic chemistry requirement, either by taking organic chemistry as one of the two required chemistry courses (i.e., CHEM 257) or by taking CEE 451. The microbiology requirement of the Environmental Engineering option can also be met by taking CEE 451.

Biological and Environmental Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to engineering students who, in addition to having completed the requirements for a bachelor’s degree, have satisfactorily completed the honors program in the Department of Biological and Environmental Engineering and have been recommended for the degree by the honors committee of the department. An honor’s program student must enter with and maintain a cumulative GPA ≥ 3.5.

Content

An BEE honors program shall consist of at least nine credits beyond the 123 credit minimum required for graduation in BEE. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

- A significant research experience or honors project under the direct supervision of an BEE faculty member using BEE 499. Undergraduate Research. A written senior honors thesis must be submitted as part of this component.
- A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (e.g., BEE 151 or 250) under BEE 498, Undergraduate Teaching.
- Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, mathematics, biology, chemistry and physics at the 400+ and graduate level.

Note: no research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Applicants are available in the BEE Student Services office, 207 Riley Robb. Each applicant to the BEE honors program must have an BEE faculty adviser to supervise the honors program. Written approval of the faculty member who will direct the research is required.

Environmental Engineering: CEE 453 or 461

Laboratory Experience in Environmental Engineering: BEE 473 or 475: Watershed Analysis

Fluid Mechanics: CEE 331

Probability and Statistics: CEE 304

Environmental Engineering: CEE 351

Environmental Quality Engineering: CEE 453

Laboratory Experience in Environmental Engineering: BEE 473 or 475: Watershed Engineering or Environmental Systems Analysis

*Basis accredited curriculum. Specializations (options or pre-professional study) may be accommodated by selection of alternative or additional courses in the indicated area(s). For further information, please contact the BEE Student Services Office, 207 Riley Robb Hall or contact the field’s advising coordinator, Professor Jim Bartsch at jab35@cornell.edu.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING 195
Inquiries regarding this option should be addressed to the student’s adviser or to Jim Bartsch, Undergraduate Advising Coordinator at jab35@cornell.edu.

**Minor in Biological Engineering**

**Eligibility**

Engineering undergraduates affiliated with the following fields are eligible to participate in the Biological Engineering minor: A&EP, CEE, CHEM, COM S, EAS, ECE, M&AE, MS&E, and ORIE. (Students may participate in either the Bioengineering Option or the Biological Engineering minor, but not both.)

Note: Students should meet with the BEE Program Coordinator as soon as they decide to pursue the minor. Then they will receive an BEE faculty adviser, who will assist them in completing the minor program.

Biological Engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The Biological Engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular and system levels.

**Requirements**

To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), which meet the following requirements:

- **Required course:** BEE 350, Biological & Environmental Transport Processes
- **I. Analysis:** Require two (2) from the following courses:
  - MS&E 304 (3) Kinetics, Diffusion, and Phase Transformations
  - CHEM 313 (3) Chemical Engineering Thermodynamics
  - CHEM 300 (3) Reaction Kinetics and Reactor Design
  - CEE 437 (3) Experimental Methods in Fluid Dynamics
  - BEE 685 (4) Biological Engineering Analysis

- **II. Application:** Require two (2) from the following courses:
  - BEE 450 (4) Biostationary
  - BEE 453 (3) Computer-Aided Engineering Applications to Biomedical and Food Processes
  - BEE 454 (3) Physiological Engineering
  - BEE 458 (3) Biotechnology: Principles and Application
  - BEE 655 (3) Thermodynamics and Its Applications
  - BEE 658 (3) Biosensors and Bioanalytical Techniques
  - CHEM 643 (3) Introduction to Bioprocess Engineering

- **III. Basic Sciences:** One (1) from the following courses:
  - BIOBM 233 (3) Introduction to Biomolecular Structure
  - BIOI 290 (3) General Microbiology
  - BIOBM 330-333 Principles of Biochemistry (2-4)
  - BIOBM 434 (3) Applications of Molecular Biology
  - BION 470 (3) Biophysical Methods

**Academic Standards:** A letter grade of C- or better for each course in the minor.

**Minor in Environmental Engineering**

(Offered in cooperation with the School of Civil and Environmental Engineering)

**Eligibility**

Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEM, COM S, EAS, ECE, M&AE, MS&E, ORIE. A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation’s resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues. The requirements for the environmental engineering minor are outlined below. For further details consult the Biological and Environmental Engineering Undergraduate Programs Office, 207 Riley-Robb Hall, or the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

**Requirements**

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows.

Students must select courses from the following group listings, with at least one course from each group.

**Group A. Environmental Engineering Processes:**

<table>
<thead>
<tr>
<th>Course</th>

**Academic Standards:** A letter grade of C- or better for each course in the minor.
The Engineering Physics program fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman Introduction to Engineering course), ENGRD/A&EP 264, Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Design (junior/senior course), A&EP 363, Electronic Circuits (a sophomore/junior course); PHYS 410, Advanced Experimental Physics; and A&EP 436, Computational Engineering Physics (a senior computer laboratory).

Undergraduates who plan to enter the field program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take PHYS 112 or PHYS 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the computing applications or technical writing requirement with the engineering distribution course ENGRD 264. Engineering physics students need to take only two engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 363 in the spring semester of the sophomore year. Students with one semester of advanced placement in math, who have received a grade of A- or better in MATH 192, may wish to explore accelerating their mathematics requirements so as to enter A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.

In addition to the requirements of the Engineering Common Curriculum,* the upperclass course requirements of the field program are as follows.

<table>
<thead>
<tr>

</tbody>
</table>

Six field-approved electives (18–23 credits), of which five must be technical. The technical electives are expected to be upper-level courses (300 or above). Total field credits=58 credit hours minimum.

The Engineering Common Curriculum allows students to take only four courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering students with strong preparation are encouraged to consider taking an additional course during one or both semesters of the freshman year so that they may have additional flexibility in developing a strong, individualized educational program in their latter years, and for allowing options such as a semester or year abroad or early graduation.

Two of the four credits of PHYS 410 required for the BS degree in Engineering Physics can be satisfied by successfully completing A&EP/PHYS 330. The remaining two credits of PHYS 410 can then be satisfied by taking PHYS 400 for two credits, provided that the experiments completed in PHYS 400 do not overlap with those in A&EP/PHYS 330. (A list of experiments that are not appropriate will be prepared by A&EP faculty and made available in the A&EP office.) If a student chooses this option, A&EP/PHYS 350 may also count as a technical elective, provided the remaining three technical electives are four credits each.

A scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

Choosing elective courses. A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major, the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program that is in accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to broaden their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students on other undergraduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Bruce Kusse.

Electives need not be all formal course work; qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP or PHYS). This may include the study or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics Program requires that a minimum of a (B-) or better be attained in
each physics and mathematics courses taken by a student before entering the Engineering Physics program unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.5.

Engineering Physics Honors Program

Eligibility
The Bachelor of Science degree with honors will be conferred upon those students who, while completing the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA≥ 3.5.

Content
The student must
1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.
2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

Timing
All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures
Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is necessary for successful completion of the honors requirement.

Master of Engineering (Engineering Physics) Degree Program
The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanostructure science and technology, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nanostructure science and technology. Core courses in this specialty include the microcharacterization of materials (A&EP 661) and the microprocessing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, nanostructure technology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent. The proposed design project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is necessary for successful completion of the honors requirement.

*The electives in semester seven and eight comprise six credits of field approved electives, and six credits of advanced CHEMEE electives. Advanced CHEMEE electives include any CHEMEE course 400+ level, except CHEMEE 490, 491, 492, 520, and 572.

**Advanced science electives include BIOM 290, General Microbiology Lectures; BIOBM 330, 331, 332, and 333, Principles of Biochemistry; CEE 654, Aquatic Chemistry; CHEMEE 480, Chemical Processing of Electronic Materials; CHEMEE 481, Biomedical Engineering; CHEMEE 640, Polymeric Materials; CHEMEE 643, Introduction to Bioprocess Engineering; FOOD 417, Food Chemistry I; MS&E 200, Atomic and Molecular Structure of Matter; MS&E 305, Electronic Structure of Matter; MS&E 306, Electrical, Optical, and Magnetic Properties of Materials; MS&E 541, Microprocessing of Materials; MS&E 531, Introduction to Ceramics; MS&E 521, Properties of Solid Polymers; T&M 310, Advanced Engineering Analysis I; any A&E/P course numbered 333 or above; any PHYS course numbered 301 or above; any PHYS course numbered 300 or above.

**Master of Engineering (Chemical) Degree Program**

The professional master's degree, M.Eng (Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include:

1) two courses in advanced chemical engineering fundamentals chosen from CHEMEE 711, 713, 731, 732, and 751

2) two courses in applied chemical engineering science chosen from CHEMEE 480, 520, 564, 596, 640, 643, 656, and 661

3) a minimum of three credits of a design project, CHEMEE 565

Dean's certificate programs in Bioengineering, Engineering Management, Energy Engineering, and Manufacturing are available. A program offered jointly with the Food Science Department is also available, leading to both the Master of Engineering and the Master of Professional Studies degrees.

**CIVIL AND ENVIRONMENTAL ENGINEERING**

**Requirements for Admission to the Field**

Students planning to enter the field program in Civil and Environmental Engineering are required to complete the following courses before or during the first semester of the sophomore year with a grade of C- or better for the civil option, ENGRD 202, Mechanics of Solids; for the environmental option, either ENGRD 202, Mechanics of Solids or CHEM 208, General Chemistry. In addition, the field requires a cumulative grade point average of at least 2.0 both overall and in engineering and sciences courses.

**Recommended Engineering Distribution Courses**

Students in the environmental option are required to take ENGRD 202 (Mechanics of Solids), as an engineering distribution course. The second engineering distribution may be selected according to their interests, and the following engineering distribution courses are recommended: ENGRD 201 Introduction to the Physics and Chemistry of the Earth, ENGRD 219 Mass and Energy Balances, ENGRD 221 Thermodynamics, ENGRD 250 Engineering Applications in Biological Systems, BIO G 101 and 103 Biological Sciences Lecture and Laboratory, BIO G 105 Introduction to Biology, BIO G 107 General Biology, or CHEM 389 Physical Chemistry.

Recommended engineering distribution courses for students planning to enter the civil engineering option are:

ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in structural engineering or civil engineering materials;

ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering;

ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;

ENGRD 211, Computers and Programming, for students interested in transportation;

ENGRD 241, Engineering Computation,* for all students.

**Field Program:**

**Civil Engineering Option**

For the field program in Civil Engineering, students may elect to substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

**Core Courses**

ENGRD 203, Dynamics

ENGRD 241, Engineering Computation*

CEE 304, Uncertainty Analysis in Engineering*

CEE 323, Engineering Economics and Management

CEE 331, Fluid Mechanics

CEE 341, Introduction to Geotechnical Engineering and Analysis

CEE 351, Environmental Quality Engineering**

CEE 361, Introduction to Transportation Engineering**

CEE 371, Modeling of Structural Systems
Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRD or approved communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.

†ENGRD 241 can be used to satisfy both the computer application requirement and a field program requirement. If a student elects to use this course as a second distribution course, the student must take an additional field-approved elective to fulfill the core course requirements.

‡ENGRD 270 may be accepted (by petition) as a substitute for CEE 304 in the field program, but only if ENGRD 270 is taken before entry into the field, or in some special cases where co-op or study abroad programs necessitate such a substitution.

Students may substitute any Field-Approved Elective for either CEE 351 or CEE 361, if they complete either CEE 356 or CEE 472 and also complete CEE 473. However, this substitute course then counts as a Core Course only and not as one of the required five CEE Design courses and Field Approved electives.

Environmental Engineering Option
These option requirements apply to all students in the Classes of 2002 and later. For the field program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum:

**Core Courses**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>

Additional requirements include one field-approved elective and three design electives from an approved list of courses that is available in the CEE Undergraduate Program office. In addition, students must complete one technical communications course from among the courses designated ENGRD or approved communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective.

The requirement for students prior to the class of 2002 is two field-approved electives and no requirement for a core course in introductory biology.

§Students planning graduate level study in environmental engineering may take BIOM 290 Introduction to Microbiology in place of CEE 451. These students should also take CHEM 257 or CHEM 357 Introduction to Organic Chemistry as an approved elective.

Civil and Environmental Engineering Honors Program

**Eligibility**

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the faculty of the school. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5.

**Content**

A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Senior Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering (i.e., ENGRG 470: Peer Teaching in Engineering or CEE 401: Undergraduate Teaching in CEE (1–3 credits per/semester).

3. Advanced or graduate courses at the 500-level or above. The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

**Timing**

All interested students must apply no later than the beginning of the first semester of their senior year, but are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

**Procedures**

Each applicant to the CEE honors program must have a faculty adviser or faculty mentor to supervise the student's individual program. (This need not be the student's faculty adviser.) The application to the program shall be a letter from the student describing the specific proposed honors program and include the explicit approval of the faculty adviser and the honors adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

---

**Engineering Minor Programs**

The School of Civil and Environmental Engineering currently offers three engineering minor programs: civil infrastructure, engineering management, and environmental engineering (offered in cooperation with the Department of Biological and Environmental Engineering). Descriptions and requirements for each program follow:

**Minor in Civil Infrastructure**

**Eligibility**

Engineering undergraduates affiliated with the following fields are eligible to participate in the civil infrastructure minor: BEE, A&KEP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&E.

The minor in civil infrastructure is intended to introduce engineering undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development maintenance and operation of the built environment which is vital for any modern economy. The requirements for the civil infrastructure minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

**Requirements**

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Course: ENGRD 202 Mechanics of Solids

II. Additional Courses: choose any 5 (groupings are for information only)*

*Other CEE courses approved by petition in advance.
Minor in Engineering Management

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering management minor: A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

The requirements for the engineering management minor are outlined below. For further details, consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Courses (3):

CEE 304† Uncertainty Analysis in Engineering
or ENGRD 270 Basic Engineering Probability and Statistics
or ECE 310 Introduction to Probability and Random Signals
CEE 323 Engineering Economics and Management
OR&IE 350 Financial and Managerial Accounting

II. Additional Courses—choose any 3°

CEE 490 Management Practice in Project Engineering
CEE 506 Civil and Environmental Systems
CEE 593 Engineering Management Methods I: Data, Information, and Modeling
CEE 594 Engineering Management Methods II: Managing Uncertain Systems
CEE 595 Construction Planning and Operations
CEE 597 Risk Analysis and Management
CEE 598 Introduction to Decision Analysis
NBA 401 Entrepreneurship for Scientists and Engineers
or MAE/ENGRL 461 Entrepreneurship for Engineers
or BEE 489 Engineering Entrepreneurship, Management and Ethics

*Other courses approved by petition in advance.
†RAM 310 may not be substituted for CEE 304.

Academic Standards: A letter grade of C or better for each course in the minor.

Minor in Environmental Engineering

(Offered in cooperation with the Department of Biological and Environmental Engineering)

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

The requirements for the environmental engineering minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall, or the Biological and Environmental Engineering Undergraduate Programs Office, 207 Riley-Robb Hall.

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

Students must select courses from the following group listings, with at least one course from each group.

Group A. Environmental Engineering Processes:

CEE 351 Environmental Quality Engineering
CEE 352 Water Supply Engineering
CEE 451 Microbiology for Environmental Engineering
CEE 453 Laboratory Research in Environmental Engineering
BEE 476 Solid Waste Engineering
BEE 478 Ecological Engineering
CEE 644 Environmental Applications of Geotechnical Engineering
BEE 651 Bioremediation
CEE 653 Water Chemistry for Environmental Engineering
CEE 655 Pollutant Transport and Transformation in the Environment
CEE 658 Sludge Treatment, Utilization and Disposal
CEE 654 Aquatic Chemistry

Group B. Environmental Systems:

ENGRI 115/CSEE 115* Solving Environmental Problems for Urban Regions (May count only if taken before the student's junior year.)
BEE 475 Environmental Systems Analysis
CEE 529 Water and Environmental Resources Problems and Policies
CEE 597 Risk Analysis and Management
CEE 623 Environmental Quality Systems Engineering
BEE 678 Nonpoint Source Models

Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanic:

CEE 331 Fluid Mechanics (CHEME 323 or M&AE 323 may be substituted for CEE 331)
CEE 332 Hydraulic Engineering
BEE 471 Hydrology and the Environment
CEE 431/BEE 471 Geohydrology
CEE 432 Hydrology
CEE 435 Coastal Engineering
CEE 436 Case Studies in Environmental Fluid Mechanics
CEE 437 Experimental Methods in Fluid Dynamics
BEE 473 Watershed Engineering
BEE 474 Drainage and Irrigation Systems
CEE 631 Flow and Contaminant Transport Modeling in Groundwater
CEE 633 Flow in Porous Media and Groundwater
CEE 655 Transport, Mixing, and Transformation in the Environment
BEE 671 Analysis of the Flow of Water and Chemicals in Soils
BEE 672 Drainage

Academic Standards: A letter grade of C- or better in each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Master of Engineering (Civil) Degree Program

The M.Eng. (Civil) degree program is a 30-credit (usually 10-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional (design-option) or managerial (management-option) practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, with some options indicating an intensive, full-time session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.
For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 590) and a two-course design project (CEE 501 and 502).

2) Specialization in a major concentration area—three to five courses in either environmental engineering, environmental fluid mechanics/hydraulics, geotechnical engineering, structural engineering, transportation management, or water resources and environmental systems engineering.

3) Technical electives.

4) Study in a related area or areas.

Courses taken as technical electives or in the related subject area(s) may consist of graduate or advanced courses in fields related to the major concentration area, either inside or outside of the school.

For the M.Eng. (Civil) program in the environmental management option, the requirements are:

1) Five courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).

2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.

3) One course in individual and/or organizational behavior from a recommended list.

4) Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering for details.

COMPUTER SCIENCE

Bachelor of Science Curriculum

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

For the most current and accurate details, visit our web site at www.cs.cornell.edu/ugrad

The Major

Computer Science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- four semesters of calculus (MATH 191–192, 293–294) or 111–112 (or 112–221–222)
- two semesters of introductory computer programming (COM S 100 and ENGRD 211)
- a one-credit project (COM S 212)
- a seven-course computer science core (COM S 280, 312, 314, 321 or 322 or 421, 381, 414, and 482)
- two 400+ computer science electives, totaling at least six credits
- a computer science project course (COM S 413, 415, 418, 433, 473, 501, 514, 519, or 664)
- a mathematical elective course (ENGRD 270, MATH 300+, TRAM 310, etc.)
- two 300+ courses (field approved electives) that are technical in nature and total at least six credits
- a three-course specialization in a topical area other than computer science. These courses must be numbered 500-level or greater.

Note: All of the field electives described above must be courses of three or more credit hours, with the exception of the COM S project course, which is two credits or more.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or medicine. With the adviser, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of liberal education.

Computer Science Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:

- qualified for latin honors in the College of Engineering (basically, a cumulative GPA ≥ 3.5)
- at least eight credits of COM S course work at or above the 500-level (graded courses only; no seminars or two-credit project courses)
- at least six credits of COM S 490 (independent research) spread over two semesters, with a grade of A- or better each term.

See the COM S undergraduate web site for more information on eligibility: www.cs.cornell.edu/ugrad

Content

Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math or field approved electives, or the specialization.

Timing

Honors' determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: <ugrad@cs.cornell.edu>. The subject line for this message should read "HONORS TRACK." Related questions may be addressed to the ugrad e-mail alias, or candidates can call or stop by 303 Upson Hall, 255-0982.

Preparation

Arrangements for doing COM S 490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their advisers and/or browse the department's web page at www.cs.cornell.edu for specific leads on research opportunities. The Department of Computer Science reserves the right to make changes to the honors program requirements at any time. Generally speaking, all members of the same graduating class will be subject to the same honors criteria.

Minor in Computer Science

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Computer Science minor: A&EP, BEE, CEE, CHEM, EAS, ECE, M&A, MSE, and OR&E.

This minor is for students who anticipate that computer science will play a prominent role in their academic and professional career.

Requirements

To complete the minor, the student must take at least six (6) courses (18 credits minimum) chosen as follows:

I. Required Courses,

COM S / ENGRD 211 Computers and Programming

COM S 321 Numerical Methods in Computational Biology

or COM S / ENGRD 322 Introduction to Scientific Computing

or COM S 421 Numerical Analysis

COM S / ECE Computer Organization

II. Additional Courses

Three (3) COM S courses numbered 280 or higher (excluding seminars and COM S 490). Academic Standards: A letter grade of C or better for each course in the minor. S-U courses not allowed.

Note: Computing courses offered by other departments cannot be applied toward the Computer Science minor, with the exception of ECE 314. It is expected that all qualifying courses will be taken at Cornell for a letter grade. No substitutions allowed.

Engineering Minor in Information Science

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Minor in Information Science: A&EP, BEE, CEE, CHEM, COM S, EAS, ECE, M&A, MSE, and OR&E.
Information Science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines the economic, legal, political and social context. The minor has been designed to ensure that students have substantial grounding in all three of these areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing data occurring in the real world.

Requirements

To complete the minor the student must take at least six (6) courses (18 credit minimum) chosen as follows:

- One statistics course
- Two courses from the information systems area (primarily computer science)
- One course from the human-centered systems area (human computer interaction and cognitive science)
- One course from the social systems area (social, economic, political and legal issues)
- One additional course from either the human-centered systems or the social systems areas

Statistics
- ENGRD 270 Basic Engineering Probability and Statistics
- CEE 304 Uncertainty Analysis in Engineering

Information Systems
- COM S 230 Intermediate Web Design
- COM S 330 Applied Database Systems
- COM S 430 Information Discovery
- COM S 432 Introduction to Database Systems
- COM S 474 Introduction to Natural Language Processing
- COM S 478 Machine Learning
- COM S 502 Architecture of Web Information Systems and Digital Libraries
- COM S 515 Public Policy and Security
- ECE 562 Fundamental Information Theory
- COM S 572 Seminar on Scholarly Information Architecture

Human-centered Systems
- PSYCH 214 Cognitive Psychology (also COGST 214)
- PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also COGST 342)
- PSYCH 347 Psychology of Visual Communications
- PSYCH 413 Information Processing: Conscious and Unconscious
- COM S 439 Designing for Human-Computer Interaction
- COM S 440 Computer Mediated Communication

Social Systems
- STS 250 Technology in Society (also ENGR 250, HIST 250 and ECE 250)
- STS 298 Inventing an Information Society (also ENGR 298 and ECE 298)
- STS 387 The Automatic Lifestyle: Consumer Culture & Technology
- STS 411 Knowledge, Technology, and Property
- ORIE 480 Information Technology
- COMM 428 Communication Law
- LAW 410 Limits on and Protection of Creative Works - Copyright Law and Its Close Neighbors

A grade of C or better is required for each course in the minor.

Master of Engineering (Computer Science) Degree Program

The M.Eng. program in computer science is a one-year program that can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program in computer science includes several upper-division and graduate courses and a faculty-supervised project. The course and project requirements are flexible and allow students to build up a program that closely matches their interests. In particular, slightly under half the courses may be taken outside the computer science department (for example, many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have at least one credit and no more than eight credits remaining to complete their undergraduate degree program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. "early admit" program.

For more information about the M.Eng. program in computer science and the early admission option for Cornell seniors, please consult our web page at www.cs.cornell.edu/grad/eng.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to R.S., M.Eng. (Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

Bachelor of Science Curriculum

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is also a powerful planet, with geologic hazards such as earthquakes, hurricanes, and volcanic eruptions that alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important for both future policymakers and ordinary citizens. Because the human need to understand the earth is so pervasive, we provide our students with tracks covering the spectrum of modern earth sciences.

The Department of Earth and Atmospheric Sciences offers an undergraduate engineering program which permits students to pursue one of three options leading to a B.S. degree in geological sciences: the geoscience option, the atmospheric science option, and the science of earth systems (SES) option. The geoscience option emphasizes the structure, composition, and evolution of our planet; the atmospheric science option covers the planetary processes producing weather and climate; and the SES option is concerned with processes on and near the earth’s surface where the interactions of water, life, rock, and air produce our planetary environment. An engineering minor is available in one or a combination of these programs.

Atmospheric Science Option

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes, and acquire skill and experience in the analysis, interpretation, and
forecasting of meteorological events. The atmospheric science option satisfies both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist, which also qualifies graduates for positions in private-sector forecasting and environmental consulting firms. The option also provides excellent preparation for graduate work in atmospheric sciences and related fields.

Students following the atmospheric science option are required to take ENGRD 270 as an engineering distribution course. The field program includes required introductory courses in atmospheric science (EAS 131) and EAS 250 (Instrumentation and Observations). Many of the upper division field courses require EAS 341 (Atmospheric Thermodynamics and Hydrostatics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 331 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology II). These courses will count as field-required and at least one field-approved elective must be EAS 491-492 (Undergraduate Research, two credits each) plus at least one credit of EAS 491 or 492 using geophysical techniques from EAS 437; (c) EAS 491–492 (Undergraduate Research, two credits each) with a significant component of field work; or (d) an approved field course taught by another college or university (four-credit minimum).

A selection of field-approved electives may provide specializations in geophysics, geochemistry (including petrology and mineralogy), geobiology (paleontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses. Students who want a more general background or want to remain uncommitted with regard to speciality may choose at least two of their field-approved electives from the field. The field-approved electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300-level or above. Students may request substitution of EAS 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.

In addition to course work, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the earth's surface, instruments for highly precise isotope and element analyses, and extensive libraries of earthquake records, satellite images, and exploration seismic records. High-pressure, high-temperature mineral physics research uses the diamond anvil cell and the Cornell High Energy Synchrotron Source (CHESS). Undergraduates have served as field assistants for faculty members and graduate students in Argentina, Brazil, China, Columbia, the Aleutian Islands, Scotland, Switzerland, Tibet, and Barbados. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

Science of Earth Systems (SES) Option

The science of earth systems (SES) option provides an integrated view of Earth processes critical to the understanding of our environment. This scientific understanding is the primary foundation used to determine to what degree human societies can modify or adapt to future change. The SES option is for students interested in careers and/or graduate study in any of the earth system sciences or a future in environmental law, environmental engineering, science teaching, or environmental public policy. The SES option enables students in the College of Engineering to take part in the multi-disciplinary, intercollege program in the Science of Earth Systems. Collaborations with other departments provide breadth and depth to the program.

The SES option emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the Earth system including the lithosphere, biosphere, hydrosphere, and atmosphere. Students are required to take a second semester of chemistry, two semesters of introductory biology, and ENGRD 201 (Physics and Chemistry of the Earth) as one of the engineering distribution courses. The option requires a set of three core courses, normally taken in the junior or senior years, which provide breadth and integration. An additional set of five intermediate to advanced courses are selected to provide depth and a degree of specialization. These courses permit the student to specialize in such areas as climate dynamics, biogeochemistry, ocean sciences, environmental geosciences, ecological systems, hydrological sciences, and soil sciences.

The field requirements for the SES option are summarized as follows. CHEM 208 and ENGRD 201/EAS 201 are required. The field program includes BIO G 101/103–102/104 (or BIO G 109–110), BIOES 261, the three SES core courses listed below, five additional courses selected with the advisor's approval to provide specialization in one or a combination of the areas covered by SES, and an additional field-approved elective. Two of the specialization courses will count as field-required courses, and three as field-approved electives. At least three of the field-approved electives must be non-EAS courses. The three SES core courses are:

- EAS 302 Evolution of the Earth System—Spring. 4 credits
- EAS 321 Biogeochemistry (also NTRSES 321)—Fall. 4 credits
- EAS 331 Climate Dynamics (also ASTRO 331)—Fall. 4 credits

Areas of specialization include (but are not limited to) the following:

- Biogeochemistry
- Climate dynamics
- Ecological systems
- Environmental biophysics
- Environmental geology
- Hydrological sciences
- Soil science
- Ocean sciences

In addition to faculty in or associated with the Department of Earth and Atmospheric Sciences, faculty currently associated with the SES program include the following:

- W. Brutsaert (CEE); L. Hedin (EEB);
- R. Howarth (EEB, EAS); J.-Y. Parlange (BEE);
- J. Yavitt (NTRSES).

Earth and Atmospheric Science Honors Program

Eligibility

The Bachelor of Science degree (in geological sciences) with honors will be granted to students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in Earth and Atmospheric Sciences and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.5.

Content

In addition to the minimum requirements, a student must
I. Choose one or two of these three courses:

- ENGRD 230, Introduction to Digital Logic Design
- ECE 301, Signals and System I
- ECE 303, Electromagnetic Fields and Waves

II. Choose at least two courses from the following list of core courses:

- ECE 210, Introduction to Circuits for Electrical and Computer Engineers
- ECE 301, Signals and System I
- ECE 303, Electromagnetic Fields and Waves
- ECE 314, Computer Organization
- ECE 315, Introduction to Microelectronics

Field Approved Electives (32-credit minimum in the following categories)

- Advanced Electrical and Computer Engineering Electives (7 lecture courses) 20 minimum
- Outside ECE Electives (3 courses) 9 minimum
- Total minimum field credits 52

Electrical and Computer Engineering offers an undergraduate field program which leads to a B.S. degree in electrical and computer engineering. The curriculum provides a foundation which reflects the broad scope of this engineering discipline.

Concentrations include computer engineering and digital systems; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric and space physics; and semiconductor devices and applications.

Bachelor of Science Curriculum

The Department of Electrical and Computer Engineering offers an undergraduate field program which leads to a B.S. degree in electrical and computer engineering. The curriculum provides a foundation which reflects the broad scope of this engineering discipline.

Electrical and Computer Engineering Field Program

Students planning to enter the field program in Electrical and Computer Engineering must take ENGRD 230 as an engineering distribution course. The fall of the sophomore year is the preferred term for ENGRD 230 for students without advanced standing in mathematics. Electrical and Computer Engineering students with an interest in computer engineering are encouraged to take ENGRD 211 as an engineering distribution course prior to entry into the field program. In addition, the field program normally begins in the spring of the sophomore year, as shown below. All of these courses (except ECE 210 and ENGRD 230) are taught only once each academic year, either spring or fall, as indicated in the course descriptions.

Course  Credits

Field Required Courses

ENGRD 230, Introduction to Digital Logic Design  4
ECE 301, Signals and System I  4
ECE 303, Electromagnetic Fields and Waves  4
ECE 314, Computer Organization  4
ECE 315, Introduction to Microelectronics  4
1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C- may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical and computer engineering course.
3. Students must complete satisfactorily ECE 210, MATH 294, and PHYS 214 by the end of the sophomore year in the field program of Electrical and Computer Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the Electrical and Computer Engineering Handbook and the college handbook to remain active participants.

Electrical and Computer Engineering Honors Program

Eligibility, Entry, and Continuation
A student must apply to enter the ECE Honors Program and may do so as early as the beginning of the fifth semester or as late as the end of the sixth semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped from the honors program by College of Engineering regulations. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.

Honors Seminar
Any student in the honors program is required to take (or to have taken) an honors seminar during his or her junior year. The Honors Seminar is a two-credit semester course (offered spring only) consisting of a weekly series of introductory research lectures by Electrical and Computer Engineering faculty members. Each honors seminar enrollee will be required to write a number of short papers on topics covered in the lecture series. Many Electrical and Computer Engineering faculty members will give a lecture or short series of lectures as part of the Honors Seminar. Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program must receive letter grades for the Honors Seminar.

Honors Project
Any student in the honors program is required to accumulate at least three credit hours from a senior year honors project consisting either of design, ENGRG 470, or directed reading. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects require explicitly a written submission summarizing and concluding the project.

Additional Coursework
Any student in the honors program is required to take at least four credit hours of advanced (senior level) ECE coursework that has at least a 3.00-level prerequisite. These credit hours are in addition to any credit hours required as part of the ECE field program. The program described above requires honors program participants to amass at least nine credit hours over and above the 128 credit hours required for a B.S. degree; thus an honors degree requires a minimum of 137 credit hours.

Minor in Electrical and Computer Engineering

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to pursue the Electrical and Computer Engineering minor: BEE, A&EE, CEE, CHEME, COM S, EAS, M&E, MSE*, OR&IE. (*MSE students planning to pursue this minor must receive prior written approval from both MSE and ECE, via petition.)

The School of Electrical and Computer Engineering offers a minor to students who wish to complement their major field by obtaining a background in electrical and computer engineering. The minor offers the opportunity to study analog and digital circuits, signals and systems, electromagnetic fields, and additionally specialize at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, or space engineering.

The requirements for the Electrical and Computer Engineering minor are outlined below. For further details consult the Electrical and Computer Engineering Undergraduate Programs Office, 222 Phillips Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Courses:
   ECE/ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers (4 credits)
   ENGRD 230 Introduction to Digital Logic Design
II. Two of the following:
   ECE 301 Signals and Systems I
   ECE 303 Electromagnetic Fields and Waves
   ECE 315 Introduction to Microelectronics
III. One other ECE course at the 500 level or above (5 credit minimum)
IV. One other ECE course at the 400 level or above (3 credit minimum)

Academic Standards: A letter grade of C- or better for each course to be counted in the minor and a cumulative GPA of 2.3 or better for all courses in the minor.

Master of Engineering (Electrical) Degree Program
The M.Eng. (Electrical) degree program prepares students either for professional work in electrical and computer engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng degree differs from the Master of Science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including a minimum of four courses in electrical and computer engineering. An electrical and computer engineering design project is also required and may account for three to eight credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the eight-credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Cornell undergraduate students with advanced standing frequently take one or more graduate-level courses prior to graduation and may actually begin accumulating credit toward the Master of Electrical and Computer Engineering program in their last semester of undergraduate work. Application of credits taken while an undergraduate at Cornell must be approved in advance of the last semester of undergraduate work.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical and Computer Engineering Program web site at www.ece.cornell.edu/meng/index.html.

MATERIALS SCIENCE AND ENGINEERING

Bachelor of Science Curriculum
Students majoring in materials science and engineering are required to take ENGRD 261, or ENGRD 262, before affiliating with the field. It is strongly recommended that these courses be taken as an engineering distribution during the sophomore year. The field program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

In the field, students are required to complete a series of electives to develop both breadth and specialization in sub-areas of the field including, for example, solid state, metallic materials, ceramic materials, polymeric materials, electronic materials, biomaterials, or computational materials science. These requirements are satisfied through courses in a series of technical electives in the junior and senior years, selected from multiple engineering and science departments. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The requirements for a Bachelor of Science degree in materials science and engineering are:

1. Completion of the common engineering curriculum including liberal studies electives
2. ENGRD 261, Mechanical Properties of Materials: From Nanodevices to Superstructures OR ENGRD 262, Electronic Material for the Information Age
3. Completion of 12 required field courses:
   - ENGRD 202: Mechanics of Solids
   - MS&E 204: Materials Chemistry
   - MS&E 206: Atomic and Molecular Structure of Matter
   - MS&E 302: Mechanical Properties of Materials, Processing, and Design
   - MS&E 303: Thermodynamics of Condensed Systems
   - MS&E 304: Kinetics, Diffusion, and Phase Transformations
   - MS&E 305: Electronic Structure of Matter
   - MS&E 306: Electronic, Optical and Magnetic Properties of Materials
   - MS&E 307: Materials Design Concepts I
   - MS&E 403/405: Senior Materials Lab I or Senior Thesis I
   - MS&E 404/406: Senior Materials Lab II or Senior Thesis II
   - MS&E 407: Materials Design Concepts II

4. Depth in one specialization developed through three technical electives
5. Breadth developed through two technical electives in different specialization areas
6. One of the depth or breadth electives must be taken from outside MS&E
7. One additional outside technical elective

To continue in good standing in the Field of Materials Science and Engineering, students must:
1. Maintain a 2.0 term average for all semesters.
2. Maintain an average of 2.3, with no grade below C, in the department's core curriculum.
3. Complete ENGRD 261 or ENGRD 262 with a minimum of C prior to affiliation.

The department's core curriculum consists of ENGRD 261 or ENGRD 262 the 12 required field courses, and the five technical electives constituting the depth and breadth requirements.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. Curricula leading to the double-major degree must be approved by both of the departments involved and students are urged to plan such curricula as early as possible to avoid scheduling conflicts.

Materials Science and Engineering Honors Program

Eligibility
The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in materials science and engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with, and maintain, a cumulative GPA above 3.5.

Content
The requirements for an honors degree in materials science and engineering are:

1. Students must complete at least nine credits beyond the minimum required for graduation in materials science and engineering. This increases the minimum number of credits for graduation with honors to 137. These additional courses must be technical in nature, i.e., in engineering, mathematics, chemistry, and physics at the 400- and graduate-level, with selected courses at the 300-level. All courses satisfying this requirement must be approved by the upper class adviser.
2. Senior honors thesis (MS&E 405/406) with a grade of at least A.

Note: Undergraduates typically enter the honors program at the beginning of their senior year (seventh semester) and thus must have a cumulative GPA equal to or greater than 3.5 at that point.

Timing
All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member to work on a senior honors thesis during the second semester of their junior year. A student must be in the program for at least two semesters prior to graduation.

Procedures
Each application to the materials science and engineering honors program must have a faculty advisor to supervise the honors program. Written approval of the faculty member who will direct the research is required. After the student's grade-point average is verified, the student will be officially enrolled in the honors program.

Minor in Materials Science and Engineering

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the materials science and engineering minor: BEE, A&EP, CEE, CHEM, COM S, EAS, ECE, M&AE, OR&IE.

Material properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides engineers in related fields with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

The requirements for the materials science and engineering minor are outlined below. For further details, consult the Materials Science and Engineering Undergraduate Program Office, 210 Bard Hall.

Requirements
To complete the minor, students must take at least six courses (minimum of 18 credits), chosen as follows:
1. ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures OR ENGRD 262, Electronic Materials for the Information Age
2. Two of:
   - MS&E 204: Materials Chemistry
   - MS&E 206: Atomic and Molecular Structure of Matter
   - MS&E 302: Mechanical Properties of Materials, Processing, and Design
   - MS&E 303: Thermodynamics of Condensed Systems
   - MS&E 304: Kinetics, Diffusion, and Phase Transformations
   - MS&E 305: Electronic Structure of Matter
   - MS&E 306: Electronic, Optical, and Magnetic Properties of Materials

3. Three electives chosen from:

Any MS&E course at the 300-level or above.

Selected courses in materials sciences and engineering (at the 300-level or above) from A&EP, CHEM, CEE, ECE, M&AE, PHYS, and CHEM, as approved by the MS&E undergraduate coordinator. 

Academic Standards: A letter grade of C or better for each course in the minor.

Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This program consists of 30 credits, including course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One three-credit technical elective must include advanced mathematics (modeling, computer application, or computer modeling), beyond the MS&E undergraduate requirements.

MECHANICAL AND AEROSPACE ENGINEERING

Members of the faculty of the graduate Fields of Aerospace Engineering and Mechanical Engineering are listed in the Announcement of the Graduate School.
Bachelor of Science Curriculum in Mechanical Engineering

The upperclass field program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

Engineering of fluids, energy, and heat-transfer systems is concerned with the efficient conversion of energy in electric power generation and aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and with the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering; heat, energy, and power engineering, and thermo-fluid sciences.

The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomore students who plan to enter the Mechanical Engineering program take ENGRD 202 (also T&M 202) as an engineering distribution course. They also are encouraged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of broad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students should delay ENGRD 221 until the first semester of the junior year. The Sibley School supports students with unusual requirements, but any delays or substitutions must be discussed with and receive approval from the student's advisor.

The course requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:

1. Completion of the Common Curriculum. During the first two upperclass years this will typically mean earning credit for five humanities or social science courses.

2. Completion of the field requirements, which consist of eleven required courses (beyond ENGRD 202 already mentioned), and five field approved elective courses.

The eleven required courses are:

- M&AE 212, Mechanical Properties and Processing of Engineering Materials
- M&AE 221, Thermodynamics
- M&AE 225, Mechanical Design and Synthesis
- T&M 203, Dynamics
- ECE 210, Introduction to Circuits for Electrical and Computer Engineers
- M&AE 323, Introductory Fluid Mechanics
- M&AE 324, Heat Transfer
- M&AE 325, Mechanical Design and Analysis
- M&AE 326, System Dynamics
- M&AE 427, Fluids/Heat Transfer Laboratory
- M&AE 428, Engineering Design

Electives

Students should use the flexibility provided by the field approved electives, approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

Field Approved Electives

The upper-level program includes five field approved electives. Using these five courses, the student must satisfy the following requirements:

- At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student. Typically these are two courses chosen from an appropriate subset of the school’s approved offering. However, students may petition for approval of two related courses to form a custom concentration.

The standard concentrations are:

- Fluids/Aerospace Engineering, M&AE 305, 306, 423, 506, 507
- Thermal Systems Engineering, M&AE 423, 449, 453, 506, 543
- Materials Processing, M&AE 412, 514
- Mechanical Systems, M&AE 412, 417, 470, 478, 479, 525, 505
- Biomachinery, M&AE 463, 464, 565

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year. Typically this list includes M&AE 401, 412, 426, 440, 470, 479, 486, 491 and 525.

- Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be an upper level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after MATH 204. The course must include some material on statistics. Currently, the approved courses are T&M 310, ORIE 270, and CEE 304.

One of the field approved electives can be viewed as a technical elective and may be an approved design elective, a course in engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizational behavior are not accepted. Advisers may approve such courses as approved electives.

Approved Electives

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

The faculty recommendation on humanities/social sciences electives is that students build a program that includes studies in:

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

An additional graduation requirement of the field program is proof of elementary competence in computer-aided design and technical drawing. The demonstration of competence is expected before completion of the first four weeks of M&AE 225, Mechanical Synthesis. This proof may be given in a number of ways, including satisfactory completion of:

- a. A course with computer-aided design with technical drawing in high school or in a community college,
- b. ENGRG 102, Drawing and Engineering Design,
- c. another computer-aided design and technical drawing course at Cornell, or
- d. a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 423, M&AE 453, M&AE 470 and M&AE 479.

The technical writing requirement of the Common Curriculum is satisfied by M&AE 427.

Introduction to Circuits for Electrical and Computer Engineers (ECE 210) may be replaced or supplemented by Electronic Circuits (PHYS 360).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

More detailed materials describing the Mechanical Engineering Program can be...
Minor in Mechanical Engineering

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the mechanical engineering minor: BEE, A&EP, CHEM, CEE, COM S, EAS, ECE, M&AE, OR&IE.

Requirements

To complete the minor, the student must choose at least six courses (minimum of 18 credits) from among the following: M&AE courses at the 200-level or above, ENGRD 202, Mechanics of Solids; ENGRD 203, Dynamics.

Rules for selecting courses:

1. The selection of courses must satisfy the following three requirements:
   a) At least two courses must be numbered above 300.
   b) At least one course must be either (1) numbered above 500 or (2) numbered above 326 and have as its prerequisite ENGRD 202, ENGRD 203, or an M&AE course.
   c) Each course must be worth at least three credits.

2. Substitutions of courses other than M&AE (or ENGRD 202 and 203) will not be accepted as part of the M&AE minor. However, some instructors of M&AE courses will accept non-M&AE courses as substitute prerequisites for their courses, or may choose to waive prerequisites in some circumstances. Students should check with the course instructor.

Academic Standards: A letter grade of C- or better for each course in the minor.

Examples of typical minor programs are as follows:

Typical focus in Fluids/Thermal Systems:

The following four courses:
ENGRD 202 Mechanics of Solids
ENGRD 203 Dynamics
ENGRD 221 Thermodynamics
M&AE 323 Introductory Fluid Mechanics

Plus two of the following, of which at least one course must satisfy requirement 1b:
M&AE 305 Introduction to Aeronautics
M&AE 524 Heat Transfer
M&AE 423 Intermediate Fluid Dynamics
M&AE 427 Fluids/Heat Transfer Laboratory
M&AE 449 Combustion Engines
M&AE 490 Special Investigations in Mechanical and Aerospace Engineering
M&AE 491 Design Projects in Mechanical and Aerospace Engineering
M&AE 506 Aerospace Propulsion Systems
M&AE 507 Dynamics of Flight Vehicles
M&AE 543 Combustion Processes

Typical focus in Mechanical Systems/Design:

The following two courses:
ENGRD 202 Mechanics of Solids
ENGRD 203 Dynamics

One or more of the following:
M&AE 212 Mechanical Properties and Processing of Engineering Materials
M&AE 225 Mechanical Design and Synthesis
M&AE 325 Mechanical Design and Analysis
M&AE 326 System Dynamics

The remainder from this list, of which at least one course must satisfy requirement 1b:
M&AE 306 Spacecraft Engineering
M&AE 386/486 Automotive Engineering
M&AE 412 Smash and Crash: Mechanics of Large Deformations
M&AE 417 Introduction to Robotics: Dynamics, Control, Design
M&AE 464 Design for Manufacture
M&AE 478 Feedback Control Systems
M&AE 490 Special Investigations in Mechanical and Aerospace Engineering
M&AE 491 Design Projects in Mechanical and Aerospace Engineering
M&AE 514 Design for Manufacture and Assembly
M&AE 565 Biomechanical Systems—Analysis and Design
M&AE 571 Applied Dynamics

Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as M&AE 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Aerospace) Degree Program

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. Any subsequent changes must also be approved by the committee. An individual student's curriculum includes a four- to eight-credit design course, a minimum of 12 credits in mechanical engineering and a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have an aerospace engineering design focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of six credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

Master of Engineering (Mechanical) Degree Program

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomedical engineering, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. Any subsequent changes must also be approved by the committee. An individual student's curriculum includes a four- to eight-credit design course, a minimum of 12 credits in mechanical engineering and a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

All courses that constitute the major concentration must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of six
Students enrolled in the M.Eng. (Mechanical) program may take courses that also satisfy the requirements of the manufacturing, energy, or electronic packaging option programs leading to special departmental certificates in those areas.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include: K. J. Cady, D. A. Hammer, W. R. Kay, and K. Unlü.

Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, computer science, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Center for Nuclear Sciences are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses, or equivalents, are included in the 30-credit program:

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

Bachelor of Science Curriculum in Operations Research and Engineering

The program is designed to provide a broad education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. The program prepares students for a wide range of careers including operations research, industrial engineering, entrepreneurship, information technology, operations management, consulting, financial engineering, financial services, and management.

The foundation of the B.S. curriculum is the development of basic skills in calculus, statistics, probability, mathematical programming, and computer science. Required courses in manufacturing systems and simulation build on these skills and provide engineering design experiences. The curriculum culminates in a major engineering design experience in one of two required OR&E electives, OR&E 416 or 480.

Because of the wide range of career goals among our students, the B.S. program is designed with a minimum of required courses and a large number of required electives. Students should consult with their field advisers to select electives that best meet their future goals.

The program is accredited as a "nontraditional" program by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). The faculty have not sought accreditation of the B.S. curriculum as a program in industrial engineering. Industrial engineering curricula, while excellent for preparing industrial engineers, do not have the flexibility that the wide range of our students requires. Nonetheless, by proper selection of field electives, graduates of the B.S. program can and do become highly successful and competent industrial engineers. (Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.)

A student who intends to enter the field program in Operations Research and Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&E field program and the typical terms in which they are taken are as follows:

<table>
<thead>
<tr>
<th>Term 2, 3, or 4</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 211, Computers &amp; Programming</td>
<td>3 credits</td>
</tr>
</tbody>
</table>

Term 5

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;E 320, Optimization I</td>
<td>4 credits</td>
</tr>
<tr>
<td>OR&amp;E 350, Financial and Managerial Accounting</td>
<td>4 credits</td>
</tr>
<tr>
<td>OR&amp;E 360, Engineering Probability and Statistics</td>
<td>4 credits</td>
</tr>
<tr>
<td>Humanities/Social Sciences elective</td>
<td>3 credits</td>
</tr>
<tr>
<td>Field-approved elective</td>
<td>3 credits</td>
</tr>
</tbody>
</table>

Term 6

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;E 310, Industrial Systems Analysis 4 (may be taken in term 4)</td>
<td>4 credits</td>
</tr>
<tr>
<td>OR&amp;E 321, Optimization II</td>
<td>4 credits</td>
</tr>
<tr>
<td>OR&amp;E 351, Introductory Engineering Stochastic Processes</td>
<td>4 credits</td>
</tr>
<tr>
<td>Behavioral science (organizational behavior)</td>
<td>3 credits</td>
</tr>
<tr>

<td>3 credits</td>
</tr>
</tbody>
</table>

The behavioral science requirement can be satisfied by any one of several courses, including the John F. Kennedy School of Management (JGS) course, NCC 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, ILROB 170, 171, and 320, and ADM 115.
The basic senior-year program, from which individualized programs are developed, consists of the following courses:

**Minimum**

**credits**

**OR&E 580, Simulation Modeling and Analysis**

4

Either **OR&E 416 or OR&E 480** (program design requirement)

4

Three upperclass OR&E electives as described below

9

Two field-approved electives (at least 3 credits must be outside OR&E)

6

Two Humanities/Social Sciences electives

6

Two approved electives

6

Available OR&E electives are as follows:

Manufacturing and distribution systems: OR&E 414, 416, 451, 480, 481, 518, 524, 525, and 562 and JGSM MBA 641

Optimization methods: OR&E 431, 432, 434, 435, and 436

Applied probability and statistics: OR&E 462, 474, 476 (2 credits), 561, 563, 575 (2 credits), 576 (2 credits) and 577

Scholastic requirements for the field are: a passing grade in every course; a grade of C- or better in each of ENGRD 211 and 270, OR&E 310, 320, 321, 350, 360, 361 and 580; an overall average of at least 2.0 for each term the student is enrolled in the school; an average of 2.0 or better for OR&E field courses; satisfactory progress toward the completion of the degree requirements. The student’s performance is reviewed at the conclusion of each term.

**Operations Research and Engineering Honors Program**

**Eligibility**

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the degree requirements, have satisfactorily completed the honors program in Operations Research and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of at least 3.5.

**Content**

An OR&E honors program shall consist of at least nine credits beyond the minimum required for graduation in OR&E, so that no part of the honors program can also be used to satisfy graduation requirements. The nine credits shall be from one or more of the following with at least four hours in the first category.

1. Advanced courses in OR&E at the 500-level or above.
2. A significant research experience or honors project under the direct supervision of an OR&E faculty member using OR&E 499: OR&E Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&E using OR&E 490: Teaching in OR&E, or ENGRG 470: Undergraduate Engineering Teaching.

**Timing**

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the honors program for at least two semesters before graduation.

**Procedures**

Each application to the OR&E honors program must have a faculty adviser to supervise the honors program. The honors adviser need not be the student’s faculty adviser. The application to the program shall be a letter from the student describing the specific proposed honors program and including the explicit approval of the honors adviser. Each program must be approved by the associate director, and any changes to the student’s program must also be approved by the associate director of undergraduate studies.

**Engineering Minor Programs**

The School of Operations Research and Industrial Engineering currently offers three engineering minor programs: engineering statistics, industrial systems and information technology, and operations research and management science. (A student may not receive credit for more than one minor offered by the School of Operations Research and Industrial Engineering.) Descriptions and requirements for each program follow:

**Minor in Engineering Statistics**

**Eligibility**

Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering statistics minor: BEE, A&EP, CEE, CHM, EAS, ECE, M&E, MS&E. This minor requires the student to develop expertise in engineering statistics. The goal of the program is to provide the student with a firm understanding of statistical principles and engineering applications, and the ability to apply this knowledge in real-world situations. The requirements for the engineering statistics minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

**Requirements**

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Courses

1. **ENGRG 270** Basic Engineering Probability & Statistics
2. **OR&E 360 or ECE 310** Basic Engineering Probability & Statistics II or Introduction to Probability & Random Signals
3. Four courses (11 credits minimum) taken from the following list:
   - OR&E 361 or ECE 411 Introductory Engineering Stochastic Processes I or Random Signals in Communications/Signal Processing
   - OR&E 476 Applied Linear Statistical Models
   - OR&E 576 Regression
   - OR&E 563 Applied Time Series Analysis
   - OR&E 565 Applied Financial Engineering
   - OR&E 575 Experimental Design
   - OR&E 577 Quality Control
   - OR&E 580 Simulation Modeling and Analysis
   - MATH 472 or BTRY 409 Basic Probability or Theory of Statistics
   - BTRY 602 Statistical Methods II
   - BTRY 603 or ILRST 411 Statistical Methods III or Statistical Analysis of Qualitative Data
   - ILRST 310 Statistical Sampling
   - ILRST 314 Graphical Methods for Data Analysis
   - ILRST 410 Techniques of Multivariate Analysis

**Other course options approved by petition in advance. The student should be aware that some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.**

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

**Minor in Industrial Systems and Information Technology**

**Eligibility**

Engineering undergraduates affiliated with the following fields are eligible to participate in the industrial systems and information technology minor: BEE, A&EP, CEE, CHM, COM S, EAS, ECE, M&E, MS&E. The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

The requirements for the industrial systems and information technology minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

**Requirements**

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. At least three of the following:
   - **ENGRG 270** Basic Engineering Probability & Statistics
Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Minor in Operations Research and Management Science

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the operations research and management science minor: BEE, A&EP, CEE, CHEMEE, COM S, EAS, ECE, M&E, MS&E.

The field of operations research and management science (OR/MS) aims to provide rational bases for decision making by seeking to understand and model complex situations and to use this understanding to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools for OR/MS, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is that the student should obtain a broad knowledge of these fundamentals, rather than to train the student in a particular application domain. This way the student can adjust their advanced courses and pursue either methodological or application oriented areas of greatest interest and relevance to the overall educational goals of their program.

The requirements for the operations research and management science minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 200 Rhodes Hall.

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Choose three courses from the following list:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&IE 320 Optimization I
   - OR&IE 321 Optimization II
   - OR&IE 360 Engineering Probability and Statistics II
   - OR&IE 361 Introduction Engineering Stochastic Processes I
   - OR&IE 580 Simulation Modeling and Analysis

 II. These courses are to be supplemented with additional OR&IE courses at the 300 level or higher, so that entire program includes at least six courses and at least 18 credits. For example, taking the remaining three options on this list would suffice.

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Master of Engineering (OR&IE) Degree Program

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project on a real problem. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems in manufacturing, information, finance, and nonprofit organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is intended for those University students: graduates of the undergraduate field of engineering who wish to expand their knowledge of the field, Cornell undergraduates in other math-based fields who want to broaden their exposure to OR&IE, and qualified non-Cornellians with strong backgrounds from other programs in the United States and abroad.

To ensure completion of the program in two semesters, the entering student should have completed courses in probability and statistics and in computer science, as well as four semesters of mathematics, through differential equations, linear algebra, and multivariate calculus.

Program requirements include a core of OR&IE courses plus technical electives chosen from a broad array of offerings. The choice of a particular elective sequence plus a specific project course results in completion of one of several options within the program. These include the applied operations research option, the manufacturing option, the financial engineering option, the information technology concentration, and the Semester in Manufacturing.

These options are offered jointly with various other Cornell departments and schools and they provide the opportunity to interact on projects and in class with specialists in other engineering fields and in business. Many students select the applied operations research option, offered only by OR&IE, which has project teams made up entirely of OR&IE M.Eng. students and which offers the broadest choice of elective courses. Students interested in an option other than the applied operations research option should obtain further information from the following: manufacturing option, Center for Manufacturing Enterprise, 101 Frank H. T. Rhodes Hall, 607–255–7757; financial engineering option and information technology option, 201 Frank H. T. Rhodes Hall, 607–255–9128; Semester in Manufacturing option, 304 Sage Hall, 607–255–4691; systems engineering option, 101 Frank H. T. Rhodes Hall, 607–255–7757. For students lacking an undergraduate degree in Operations Research, the financial engineering option may entail additional prerequisites or more than two semesters.

I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Engineering.

Fall term

For both of the above pro forma schedules, at least 12 credit hours of the specified electives must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. For scheduling reasons, some options may require an additional summer, depending on the student's preparations.

A minimum of 30 credit hours are required to complete this program. Additional program requirements exist and are described in the Master of Engineering Handbook, which is available in Room 201, Frank H. T. Rhodes Hall and on the web at www.orie.cornell.edu.

The project requirement can be met in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, and service organizations such as hospitals.
THEORETICAL AND APPLIED MECHANICS

Undergraduate Study
The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

College Program in Engineering Science
A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Minor in Applied Mathematics
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the Applied Mathematics minor: BEE, A&EP, CHEM, COM S, EAS, ECE, M&AE, MS&E, OR&IE. Contact persons: Richard Rand, 207 Kimball Hall, 255-7145, rhr2@cornell.edu and Tim Healey, 211 Kimball Hall, 255-3738, thj10@cornell.edu

Requirements
To complete the minor, the student must take at least six courses beyond MATH 294, to be chosen as follows:

a) No more than one (1) course may be chosen from any one of the groups 1, 2, 3, or 4.

b) At least three (3) courses must be chosen from groups 5 and 6.

c) No more than one (1) 200-level course may be chosen.

d) No more than one (1) course may be chosen which is offered by the student's major department.

1. Analysis
T&AM 310 Advanced Engineering Analysis I
MATH 311 Introduction to Analysis
MATH 420 Differential Equations and Dynamical Systems
A&EP 321 Mathematical Physics I

2. Computational Methods
COM S/ENGRD 322 Introduction to Scientific Computation
BEE 449 Computational Tools for Engineers
CEE/ENGRD 241 Engineering Computation
OR&IE 320 Optimization I

3. Probability and Statistics
OR&IE/ENGRD 270 Basic Engineering Probability and Statistics
OR&IE 360 Engineering Probability and Statistics II

ECE 310 Introduction to Probability and Random Signals
CEE 304 Uncertainty Analysis in Engineering

4. Applications
A&EP 333 Mechanics of Particles and Solid Bodies
CHEM 323 Fluid Mechanics
CEE 331 Fluid Mechanics
CEE 371 Structural Behavior
ECE 425 Digital Signal Processing
MS&E 303 Thermodynamics of Condensed Systems
M&AE 323 Introductory Fluid Mechanics

5. Advanced Courses
—Only one of the following three may be chosen:
T&AM 311 Advanced Engineering Analysis II
MATH 422 Applied Complex Analysis
A&EP 322 Mathematical Physics II

—Only one of the following two may be chosen:
ECE 411 Random Signals in Communications and Signal Processing
OR&IE 361 Introductory Engineering Stochastic Processes I

—Only one of the following two may be chosen:
COM S 381 Introduction to Theory of Computing
COM S 481 Introduction to Theory of Computing
COM S 482 Introduction to the Design of Algorithms
OR&IE 321 Optimization II
OR&IE 431 Discrete Models
OR&IE 435 Introduction to Game Theory
OR&IE 462 Introductory Engineering Stochastic Processes II
ECE 522 Nonlinear Systems: Analysis, Stability, Control, and Applications

6. Math Courses—Any 300+ level course offered by the Mathematics Department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:

1) MATH 311 or MATH 420, if any course from group 1 is chosen

2) MATH 422, if T&AM 311, or A&EP 322 are chosen from group 5

Academic Standards: A letter grade of C or better for each course in the minor.
Minor in Biomedical Engineering

Currently undergoing revision. Contact Engineering Advising or Professor Michael Shuler, Director of Bioengineering Program.

Eligibility

All undergraduates in the College of Engineering are eligible to participate in the biomedical engineering minor, unless they are also pursuing the bioengineering option. (Students may participate in either the Bioengineering Option OR the Biomedical Engineering minor, but not both.)

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits) from the five groups listed below, with at least one course from each group. At least four of the six courses must be from outside the student's major. In addition to the six courses for a minimum of 18 credits, all students must take ENGRG 501, Bioengineering Seminar (1 credit).

Required Course: ENGRG 501, Bioengineering Seminar (1 credit)

I. Biomedical and Biomechanics

- BEE 365 (3) Properties of Biological Materials
- MS&E 265 (3) or TXA 439 (2) Biomedical Materials and Their Synthetic Replacements
- MS&E 463 (3) Neuromuscular Biomechanics
- M&A &E 464 (3) Orthopaedic Tissue Mechanics
- M&A &E 565 (3) Biomechanical Systems - Analysis and Design
- M&A &E 669 (3) Mechanics of Bone
- ENGRG 606.3 (1) Biomechanics of Musculoskeletal Systems

II. Biomedical Systems

- BEE 453 (3) Computer-Aided Engineering: Applications to Biomedical and Food Processes
- CHEM 481 (3) Biomedical Engineering
- BEE 454 (3) Physiological Engineering
- ENGRG 605.1 (1) Cellular Dynamics and Cancer
- ENGRG 605.2 (1) Physiological Systems
- CHEM 401 (3) Molecular Principles of Biomedical Engineering

III. Instrumentation

- BEE 450 (4) Bioinstrumentation
- BEE 458 (4) Introduction to Biotechnology
- ECE 432 (3) MicroElectro Mechanical Systems (MEMS)
- ECE 511 (3) Bioelectric Signal Analysis and Processing
- ENGRG 606.2 (1) Biomedical Instrumentation and Diagnosis

BEE 659/BEE 459 (4) Biosensors and Bioanalytical Techniques

IV. Molecular and Cell Biology

- BIOGD 281 (5) Genetics
- BIOGD 282 (2-3) Human Genetics

V. Physiology

- BIOAP 212 (3) Human Physiology
- BIOAP 311 (3) Introductory Animal Physiology
- BIOAP 313 (4) Histology: The Biology of the Tissues
- BIOGD 389 (3) Embryology
- BIOND 222 (3-4) Neurobiology and Behavior II: Introduction to Neurobiology
- AN SC 427 (3) Fundamentals of Endocrinology
- M&A &E 463 (3) Neuromuscular Biomechanics

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Note: ENGRG 605-606 and M&A &E 664 are graduate courses with limited enrollment. First preference will be given to graduate students.

Master of Engineering (Engineering Mechanics) Degree Program

This program emphasizes fundamentals in engineering science and applied mathematics. In this way the student is prepared to handle a wide variety of multi-disciplinary problems. The program is designed for engineering students and students from the physical and mathematical sciences.

The degree program requires satisfactory completion of 30 credits of coursework, including at least 12 credits that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in Theoretical & Applied Mechanics (T&AM). Up to 10 credits will be awarded for an M.Eng. project. The balance of the required 30 credits can be obtained as electives from T&AM or from other departments in the engineering, physical or mathematical sciences. As a consequence, the student has great flexibility in choosing a course of study tailored to his or her interests.

Projects may be chosen from the current interests of the faculty, including: nonlinear dynamics and chaos (with applications to problems in physics, engineering and biology), solid mechanics (fracture mechanics, nonlinear elasticity, shape-memory alloys, composite materials, ultrasonics and acoustics), fluid mechanics (granular materials), space mechanics (evolution of the solar system, planetary rings).

The Department of Theoretical and Applied Mechanics has several laboratories equipped with numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

ENGINEERING COMMON COURSES

Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program, develop writing and oral-presentation skills needed by engineers.

ENGRG 301 Writing in Engineering TBA. 1 credit. Prerequisite: permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective.

Some “writing-intensive” engineering classes may require students to enroll in this supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen understanding of the course content while enhancing communications skills. May be taken more than once, with different engineering courses. This course may be taken only in conjunction with, and when required for, particular “writing-intensive” engineering classes.

ENGRG 334 Independent Study in Engineering Communications TBA. Variable credits (1-5).

Students work closely with a Communications Program instructor to pursue an aspect of professional communications in more depth.
than is possible in the ECP's regular courses. Possible projects: technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and others. Interested students should contact the Engineering Communications Program, 465 Hollister Hall.

ENGRC 335 Communications For Engineering Managers
TBA. 3 credits. Limited to 20 students per section. Prerequisite: two first-year writing seminars. This seminar focuses on communications in organizational contexts common to engineering graduates. Topics include internal and external communications; balancing visual and verbal elements in documents and presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and collaborative assignments. They learn how to organize technical and managerial information, articulate and support ideas, and address technical and non-technical audiences. Fulfills the college's technical-writing requirement.

ENGRC 350 Engineering Communications
Fall, spring, summer. TBA. 3 credits. Prerequisite: two first-year writing seminars. Limited to 20 students per section. The ability to communicate well is a factor in being hired, as well as being promoted; the higher an engineer rises, the more writing and presentation he/she does. Engineers write various types of documents, give oral presentations, and design visuals for both. ENGRC 350 helps students learn how to accomplish these important tasks. It draws on material from professional contexts, particularly engineering settings. Students learn how to communicate specialized information to different audiences (e.g., technical and non-technical, colleagues and clients, peers and supervisors), work in teams, and address organizational and ethical issues. Diverse assessments of different lengths. Course material generates lively discussion, and the limited class size ensures close attention to each student's work. Fulfills the college’s technical-writing requirement.

Engineering Distribution Courses
Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

ENGRD 201 Introduction to the Physics and Chemistry of the Earth (also EAS 201)
Fall. 3 credits. Prerequisites: PHYS 112 or 207L. M. Cattle. This course covers the formation of the solar system: accretion and evolution of the earth; the rock cycle; radioactive isotopes and the geological time scale; plate tectonics, rock and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, contaminant transport; and the carbon cycle: chemical cycles, CO₂ (weathering), rock cycle, controls on global temperature (CO₂ or ocean currents), oil and mineral resources.

ENGRD 202 Mechanics of Solids (also T&M 202)
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor. Covers: principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials: axial force, shearing force, bending moment, plane stress, Mohr’s circle; bending and torsion of bars, and buckling and plastic behavior.

ENGRD 203 Dynamics (also T&M 203)
Fall, spring. 3 credits. Prerequisite: T&M 202, coregistration in MATH 294, or permission of instructor. Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

ENGRD 210 Introduction To Circuits For Electrical and Computer Engineers (also ECE 210)
Fall, spring. 3 or 4 credits. Corequisites: MATH 293 and PHYS 213. ECE majors must take the lab. Non-ECE majors can take 3 credits, lecture only, without the lab. Fall, J. C. Belina, C. E. Seyler; spring, M. C. Kelley, P. M. Kintner. This is a first course in electrical circuits and electronics that establishes the fundamental properties of circuits with application to modern electronics. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are closely coupled with the lectures and there is a final design project.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big “O” notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

ENGRD 219 Mass and Energy Balances (also CHEM E 219)
Fall. 3 credits. Corequisite: physical chemistry or permission of instructor. K. H. Lee. Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems.

ENGRD 221 Thermodynamics (also M&AEE 221)
Fall, spring, summer. TBA. 3 credits. Prerequisites: MATH 192 and PHYS 112. The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, vapor and gas power systems, refrigeration, and heat pump systems. Thermodynamic relations for simple, compressible substances. Combustion and chemical equilibrium. Examples and problems are related to contemporary aspects of power generation and broader environmental issues.

ENGRD 230 Introduction to Digital Logic Design
Fall, spring. 4 credits. Prerequisite: COM S 100. W. E. Speight. Introduction to the design and implementation of digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machines, and arithmetic and digital converters. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

ENGRD 241 Engineering Computation (also CEE 241)
Fall. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294 (Completion of MATH 294 is suggested.) J. F. Abel, W. D. Philpot. Introduction to numerical methods, numerical mathematics, and parallel computing. Development of programming and graphics proficiency with MATLAB and spreadsheets. Numerical analysis topics considered are: accuracy, precision, Taylor-series approximations, interpolation, differentiation and integration, and ordinary and partial differential equations. Introduction to finite difference and finite element methods. Applications are drawn from different areas of engineering.

ENGRD 250 Engineering Applications In Biomedical Systems (also BEE 250)
Fall. 3 credits. Corequisite: MATH 293. Recommended for the sophomore year. B. A. Ahner. Case studies of engineering problems in agricultural, biological, and environmental systems, including bioremediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures
Fall. 3 credits. S. P. Baker. The mechanical properties of materials (strength, stiffness, toughness, ductility, and so on) and their physical origins are examined. The relationship of the elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials is explored. Effects of time and temperature on materials properties are discussed. The emphasis of this course is on considerations for design and optimum performance of materials and engineered objects.

ENGRD 262 Electronic Materials for the Information Age (also MSE 262)
Fall. 3 credits. Prerequisite: MATH 192: corequisite PHYS 112. Permission of instructor. G. Malilias. The course examines the electrical and optical properties of materials. Topics covered include the mechanism of electrical conduction in metals, semiconductors and insulators,
the tuning of electrical properties in semiconductors, the transport of charge across metal/ semiconductor and semiconductor/semiconductor junctions, and the interaction of materials with light. Applications in electro-photography, solar cells, electronics, and display technologies are discussed.

ENGRD 264 Computer- Instrumentation Design (also A&E/EP 264)
Fall, spring. 3 credits. Prerequisites: COM S 100. 1 lec, 1 lab.
This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments are performed using a PC (Pentium III, 450 MHZ CPU) running Windows 98. The experiments and devices to be investigated include: input and output ports, analog to digital converters (ADC), digital to analog converters (DAC), thermistors, optical sensors, digital temperature control, nonlinear least squares curve fitting of experimental data, thermal diffusion, and quality control. A second goal of this course is to develop effective written communication skills in the context of science and engineering. A number of rhetorical principles are presented that can produce clarity in communication without oversimplifying scientific issues. Students prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 270 Basic Engineering Probability and Statistics
Fall, spring, summer. 3 credits. Pre- or corequisite: MATH 293, D. Dalthorp.
This course gives students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are included. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

ENGRD 321 Numerical Methods in Computational Molecular Biology (also BIOBM 321 and COM S 321)
Fall. 3 credits. Prerequisites: at least one course economics MATH 106, 111, or 191 and a course in linear algebra such as MATH 221 or 294 or BTRY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures. Staff.
An introduction to numerical computing using Matlab organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, linear equation solving, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization are also treated. The goal of the course is to develop a practical computational expertise with Matlab and to build mathematical intuition for the problems of molecular biology. COM S majors may use only one of the following towards their degree: COM S 321, 322, or 421.

ENGRD 322 Introduction to Scientific Computation (also COM S 322)
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or 294).
An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are covered. Special lectures cover parallel computation.

Courses of General Interest
Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminars or tutorial type courses.

ENGRG 102 Drawing and Engineering Design (also M&AE 102)
Fall, spring. 1 credit. S-U grades only. Four week course. Offered three times in fall and at least one time in spring. Introducing computer-aided design and basic techniques of mechanical drawing. For students intending to affiliate with M&AE, this course must be completed by the third term, or by the fourth week of M&AE 225.

ENGRG 150 Engineering Seminar
Fall. 1 credit. First-year students only. S-U grades only.
Engineering freshmen meet weekly with their faculty advisers to discuss a range of engineering topics. Discussions may include the engineering curriculum and student programs, what different types of engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

ENGRG 198 Introduction to the Electronic Revolution (also ECE 198)
Summer only. 3 credits. Cannot be taken in addition to ENGRG 298.
This course is an introductory survey of the development of information technologies in the United States from the 1830s to the present. Students focus on the themes of the social process of invention, the federal government's role in promoting and regulating technological change, and the relationship between technological and social change in regard to the history of the telegraph, telephone, radio, television, computers, and the Internet. The themes of gender and technology and the relationship between science and technology are addressed throughout the course. Laboratory demonstrations of current research in information technology at Cornell are given in some afternoon sessions.

ENGRG 250 Technology in Society (also ECE 250, HIST 250, S&T S 250)
Fall. 3 credits. A humanities elective for engineering students. R. R. Kline.
This course provides a history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's regulation of technology, the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 298 Inventing an Information Society (also ECE 298, S&T S 292, and HIST 292)
Spring. 3 credits. Approved for humanities distribution. Cannot be taken for credit after ENGRG 198/ECE 198. R. R. Kline.
Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 323 Engineering Economics and Management (also CEE 323)
Spring, usually offered in summer for Engineering Co-op Program. 3 credits.
Primarily for juniors and seniors. Students must register under CEE 323. D. P. Loucks.
Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of market management and how to make economic comparisons among competing engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 461 Entrepreneurship For Engineers (also M&AE 461, OR&IE 452)
Fall. 3 credits. Enrollment open to upperclass engineers; others with permission of instructor.
For description, see M&AE 461.

ENGRG 501 Bioengineering Seminar
Fall, spring. 1 credit. For juniors, seniors, and graduate students only. Staff.
Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions. Sessions may occasionally be held outside of scheduled times.

ENGRG 605 Fundamentals of Biomedical Engineering I (also CHEME 605)
Fall. 1–4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor.
S-U grades optional for students not majoring in or minoring in biomedical engineering. Coordinator: M. L. Shuler.
A series of four-week modules on specialized topics.

605.1 Cellular Dynamics and Cancer 1 credit.
Meets first third of term. D. Luo and staff.

605.2 Physiological Systems 1 credit.
Meets second third of term. Staff.
Emphasis is on development of physiologically-based pharmacokinetic models for drug delivery and on models of cardiovascular system, particularly blood flow.
605.3 Biomaterials
1 credit. Meets final third of term.
C. C. Chu and staff.
The main objective of the biomaterials module is to provide students with an effective background in a wide range of biomaterials that include polymers, metals/aliydes, and ceramics and that are currently used in human body repair. After completion of this module, students have the basic and some in-depth knowledge of what biomaterials are made of, how biomaterials contribute to the saving of human lives, the criteria of materials for biomedical use, biocompatibility, failure modes of biomaterials, the current R&D activities in biomaterials, challenges that biomaterials are facing, and future direction of R&D in biomaterials.

605.4 Biomedical Engineering Project
1 credit. Meets final third of term. Must contact instructor before Friday of the third week of September. M. L. Shuler. Students work in teams on a design problem of their choice related to development of a biomedical device or procedure. Each team prepares a written report.

ENGRG 606 Fundamentals of Biomedical Engineering II (also CHEME 606)
Spring. 1-4 credits. Prerequisites: graduate standing in engineering or science, PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler. A series of one and two-credit modules on specialized topics.

606.1 Biomedical Instrumentation and Diagnosis
1 credit. Lec. Meets first third of the term.
This course gives a perspective on the use of advanced instrumentation for the diagnosis and treatment of disease and the investigation of fundamental biological processes. The basic theory and application of different microscopic and spectroscopic methods, imaging tomographies, and micro-electromechanical devices to biological systems are explored.

606.2 Artificial Organs and Tissue Engineering
1 credit. Prerequisite: ENGRG 605, Section 03 (Biomaterials). Meets second third of term.
Staff.
An introduction to the use of cells, biological molecules, and synthetic materials as the basis for building artificial organs and encouraging tissue regeneration. The section discusses the physiological and engineering issues underlying the use of synthetic, extracorporeal systems (e.g., membrane-based dialysis devices), composite implantable materials (e.g., drug-delivery systems and nerve regeneration guides), and hybrid cell/polymer implantable systems (e.g., engineered tissues).

606.3 Biomechanics of Musculoskeletal Systems
2 credits. Meets final third of term.
D. L. Bartel, C. E. Farnum. Integrated lecture/laboratory experience. The anatomy and function of the canine hindlimb are explored in dissection laboratories and through demonstration of a non-invasive technique, computed tomography. Methods of approximating functional joint loads are discussed, and physical testing is demonstrated. A computer model of the stifle (knee) joint is created by combining knowledge of the anatomy and the mechanical environment.

Introduction to Engineering Courses
Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGR 110 The Laser and Its Applications in Science, Technology, and Medicine (also A&AE 110)
Fall, spring. 3 credits. T. M. Duncan. The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

ENGR 111 Nanotechnology
Fall. 3 credits. E. Garmulis. Nanotechnology has been enabling the information revolution, but in the development of even-faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGR 112 Introduction to Chemical Engineering (also CHEM 112)
Fall. 3 credits. Limited to freshmen. T. M. Duncan. Covers design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockhustating, and (re)definition of the design goal, in the context of contemporary chemical engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 113 Solving Environmental Problems for Urban Regions (also CEE 113)
Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. L. Weber-Shirk. Learn how to design reservoirs to provide water during droughts, aqueducts to transport water, water treatment plants to prevent waterborne diseases, and landfills to minimize contamination of the environment. Take field trips, build a miniature water treatment plant, and explore new technologies for making safe drinking water.

ENGR 115 Engineering Applications of Operations Research
Fall, spring. 3 credits. Enrollment not open to OR&IE upper-class majors. An introduction to the problems and methods of Operations Research. Students in Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems arise, and several standard solution techniques. In the computational laboratory, students encounter problem simulations and use some standard commercial software packages.

ENGR 116 Modern Structural Systems and Materials (also CEE 116)
Fall. 3 credits. R. Davidson. An introduction to the process of design, starting with assessing needs, defining performance, and evaluating materials. Discussions and exercises demonstrate how loads are carried not only through large structures, but also how those loads are carried through the micro-structure inside engineering materials. Students are introduced to the physics of structural behavior in bridges, dams, amusement park rides, Broadway and Las Vegas stage sets, and orbital structures. Here on earth students examine how loads like wind and gravity get from the structure to the ground, and how loads like earthquakes get from the ground to the structure. Materials range from traditional wood, metal, soil, rock, and concrete, to modern plastics and fiber composites.

ENGR 117 Introduction to Mechanical Engineering (also M&AE 117)
Fall or spring, to be determined. 3 credits. Two lectures and one lab per week. An introduction to the wide range of topics of current interest in mechanical engineering.

ENGR 118 Design Integration: A Portable CD Player (also M&AE 118 and T&M 118)
Spring. 3 credits. W. Sackse. This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGR 119 Biomaterials for the Skeletal System (also M&AE 119)
Fall. 3 credits. D. T. Grubb. Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics covered include strength, corrosion, toxicity, wear, and bio-compatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

[ENGR 120 Introduction to Biomedical Engineering (also CHEM 120)
Fall. 3 credits. Not offered 2002-2003. Introduction to the fundamental science and engineering that spawned the biotechnology revolution—technologies of cell cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the development of biotechnical processes, from discovery to clinical use, include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

ENGR 121 Fusion, Fusion, and Radiation (also A&AE 121 and NS&E 121)
Spring. 3 credits. S-U grades optional for students outside the College of Engineering. K. B. Cadz. Laboratory course on the physical nature and biological effects of nuclear radiation; benefits and hazards of nuclear
energy; light-water reactors, breeder reactors, and fusion reactors; and uses of nuclear radiation in research. Laboratory demonstration involves nuclear reactor; detection of nuclear radiation; activation analysis using gamma-ray spectroscopy; neutron radiography; and pulsed power generators for fusion research.

**ENGRI 122 Earthquake! (also EAS 122)**
Spring. 3 credits. L. D. Brown.
The science of natural hazards and strategic resources is explored. This course covers techniques for locating and characterizing earthquakes, and assessing the damage they cause; methods of using sound waves to image the earth’s interior to search for strategic materials; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

**ENGRI 124 Designing Materials for the Computer (also MSE & E 124)**
Spring. 3 credits. 3 lectures.
Introduces the fundamentals, processes and properties of the semiconductors, polymers, ceramics, and metals used in the microelectronics industry to form integrated circuits, electronic devices, and displays. This course examines lithographic processing, metallization, diffusion, ion implantation, oxidation, and other processes used in fabricating electronic devices and their packages. The technology of displays is discussed including liquid crystal displays and light emitting devices.

**ENGRI 126 Introduction to Telecommunications**
Fall. 3 credits. S. B. Wicker, staff.
This course introduces the technologies that underlie wired and wireless telecommunication systems. The course begins with an introduction to telephony and the public switched telephone network. Moderns and cellular telephony are then introduced, along with ISDN and BISDN. The course concludes with an introduction to ATM and TCP/IP. The course includes both lectures and laboratory demonstrations. Students have the opportunity to design communication systems, and to determine their performance through simulations.

**ENGRI 127 Introduction to Entrepreneurship and Enterprise Engineering (also M & AE 127)**
Spring. 3 credits. Open to all Cornell students regardless of major. No prerequisites.
This course provides a solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed. This course is considered an "Introduction to Engineering" course by the College of Engineering, and satisfies the curricular requirements for such a course. The course is intended for freshmen and is taught from this perspective and at that level.

**ENGRI 172 Computation, Information, and Intelligence (also COM S 172)**
Fall. 3 credits. Prerequisites: some knowledge of calculus to derive an introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, computer-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets are assigned for students who have completed the equivalent of COM S 100.

**ENGRI 185 Art, Archaeology, and Analysis (also ARKED 285, ART 372, ARTH 200, EAS 200, and PHYS 200)**
Spring. 3 credits. R. Kay.
An interdepartmental course on the use of techniques of science and engineering in cultural research. Includes applications of physical and physiological principles to the study of archaeological artifacts and works of art. Also covers historical and technical aspects of artistic creation. Students learn analyses by modern methods to reduce geographical origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for Engineering.

**ENGRI 221 Fission, Fusion, and Radiation Analysis (also ARKED 121)**
Spring. 3 credits. S. G. Reddy.
A practical laboratory course in basic and advanced topics in nuclear physics and reactor analysis. The course covers the physical processes used to describe nuclear systems, with an emphasis on current research, and are discussed.

**ENGRI 224 Computer-Instrumentation Design (also ENGRD 224)**
Fall, spring. 3 credits. Prerequisites: COM S 100, 1 lab.
For description, see ENGRD 264.

**A&EP 221 Mathematical Physics I**
Fall, summer. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in the physical sciences.

**A&EP 222 Mathematical Physics II**
Spring. 3 credits. Prerequisite: A&EP 221. Second of the 2-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.

**Maple Supplement to Mathematical Physics 231 and 321**
The course gives a broad based introduction to Maple in applications to problems of mathematical physics similar to those covered in A&EP 321 and 322. We use Maple to solve differential equations—both linear and nonlinear. We make extensive use of plotting capabilities of Maple. Additionally, we cover matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. We also give an introduction to LaTeX.

**A&EP 330 Modern Experimental Optics (see also PHYS 330)**
Fall. 4 credits. Enrollment limited. Prerequisites: PHYS 214 or equivalent. E. Bodenschatz.
A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

**A&EP 333 Mechanics of Particles and Solid Bodies**
Fall, summer. 4 credits. Prerequisites: PHYS 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor.
This course covers: Newton’s mechanics, components of the motion of rigid bodies; small vibrations of multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts,
and applications. (On the level of Classical Dynamics, by Marion and Thornton).

A&EP 355 Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor.
Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace’s equation in various geometries, electric and magnetic multipole expansions, and magnetic materials; energy in fields, quasistatics, and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356 Intermediate Electrodynamics
Spring, 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor.
Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis is on physical concepts and developing ability to design/analyze micro-wave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics
Spring, 4 credits. Prerequisites: A&EP 333 or PHYS 318; coregistration in A&EP 322 or equivalent and in A&EP 356 or PHYS 320.
A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)
Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1 lab, 2 lectures. Fall: E. Kirkland; spring: J. Alexander.
Analyze, design, build and experimentally test circuits used in scientific and engineering instruments (with discrete components and integrated circuits). Analog circuit topics include resistors, capacitors, operational amplifiers, operational amplifiers with feedback, oscillators, comparators, filters, diodes and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 403 Introduction to Nuclear Science and Engineering (also ECE 403, M&E 456, and NS&E 403)
Fall. 3 credits. Prerequisite: PHYS 214 and MATH 254.
For description see NS&E 403.

A&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory 3-semester physics and sequence plus 1 year of junior-level mathematics. Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introductions to systems of interacting particles. At the level of Thermal Physics, by Kittel and Kroemer, and Statistical Physics, by Bosser.

A&EP 434 Continuum Physics
Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.

A&EP 436 Computational Engineering Physics
Spring, 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; coregistration in 361 permitted.
Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) is introduced and applied to engineering physics problems that cannot be solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440 Quantum and Nonlinear Optics
An introduction to the fundamentals of the interaction of laser light with matter. Topics include: the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical bistability, propagation of ultrashort pulses, solitons, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and simulated scattering, and ultra-intense laser-matter interactions.

A&EP 450 Introductory Solid State Physics (also PHYS 454)
Fall, 4 credits. Prerequisite: some exposure to quantum mechanics at the level of PHYS 443, A&EP 361, or CHEM 793 is highly desirable but not absolutely required.
An introduction to the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulation of the dynamics of electrons and ions in solids. Optical properties; magnetism, and superconductivity are covered as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as size effects. At the level of Introduction to Solid State Physics by Kittel, or Solid State Physics by Ashcroft and Mermin.

A&EP 470 Biophysical Methods (also BIOMS 470)
Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level; some knowledge of cellular biology helpful but not required. Letter grades only.
An overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level. Topics include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ECE 494, M&A 459, and NS&E 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students. Offered on demand. For description, see NS&E 484.

A&EP 490 Independent Study in Engineering Physics
Fall, spring. Credit TBA Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software development, theoretical design and analysis. Details TBA with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 (or equivalent).
Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the basic fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 606 Introduction to Plasma Physics (also ECE 581)
Fall. 4 credits. Prerequisites: ECE 303 or equivalent. First-year graduate-level course; open to exceptional seniors. For description, see ECE 581.

A&EP 607 Advanced Plasma Physics (also ECE 582)
Spring. 4 credits. Prerequisites: ECE 581 and A&EP 606. Offered on demand. For description, see ECE 582.
A&EP 633 Nuclear Reactor Engineering (also NS&E 633)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady. For description, see NS&E 633.
A&EP 661 Microcharacterization
Fall. 3 credits. Prerequisites: introductory 3-semester physics sequence or an introductory course in modern physics. At the senior or graduate level. The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterization is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.
A&EP 662 Micro/Nano-fabrication and Processing
Spring. 3 credits. An introduction to the fundamentals of micro and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.
A&EP 663 Nanobiotechnology (also BIO G 663 and M&AE 563)
Spring. 3 credits. Letter grade only. C. Batt and H. Craighead. Upper level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course is held twice weekly. T R with 75-minute classes. All lectures are teleconferenced to our NBTC associate institutes.
A&EP 711 Principles of Diffraction (also MSE 671)
Spring. 3 credits. Letter grades only. J. D. Brock. This course is a graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics that are covered in the course include: elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.
A&EP 751 M ENG Project
Fall, spring. 6-12 credits TBA. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.
A&EP 753 Special Topics Seminar in Applied Physics
Fall. 1 credit. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

BIOE 151 Introduction to Computing
Fall. 4 credits. Prerequisite: MATH 191 or equivalent (coregistration permissible). Each lab and recitation section limited to 22 students.
BIOE 152 Computer Applications for Engineers
Spring. 3 credits. Prerequisites: BIOE 151 or equivalent, MATH 191. Course is comprised of three one-credit modules: (1) MATLAB, (2) spreadsheets, and (3) presentation graphics.
BIOE 200 The BIOE Experience
Spring. 1 credit.
BIOE 250 Engineering Applications in Biological Systems (also ENGRD 250)
Fall. 3 credits. Corequisite: MATH 293. Recommended for the sophomore year. For description, see ENGRD 250.
BIOE 251 Sustainable Development: A Web-Based Course
Spring. 3 credits. Prerequisite: sophomore standing and above. S-U grades optional.
BIOE 301 Energy Systems
Spring. 3 credits. Prerequisite: college physics.
BIOE 350 Biological and Environmental Transport Processes
Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (coregistration permissible).
BIOE 365 Properties of Biological Materials
Spring. 3 credits. Prerequisites: ENGRD 202 (coregistration permissible).

BEE 371 Hydrology and the Environment
Spring. 3 credits. Prerequisite: 1 course in calculus.
BEE 411 Biomass Processing: Modelling and Analysis
Spring. 3 credits. Prerequisites: BEE 250, BEE 350 (or any course in heat and mass transport), BIOC 331, BIOC 332, or BIOC 290.
BEE 425 Science and Technology of Environmental Management
Fall. 3 credits. Open to seniors and graduate students only. Letter grades only.
BEE 427 Water Sampling and Measurement
Fall. 3 credits. Prerequisites: soils and/or fluids or hydrology courses and MATH 191.
BEE 435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: minimum junior standing.
BEE 436 Aquaculture Using Recirculating Water Reuse Technology
Spring. 1 credit. Prerequisite: BEE 435 (coregistration permissible).
BEE 450 Biinstrumentation
Spring. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming, and use of spreadsheets.
BEE 453 Computer-Aided Engineering: Applications to Biomedical Processes (also M&AE 453)
Spring. 3 credits. Prerequisite: heat and mass transfer (BEE 350 or equivalent).
BEE 454 Physiological Engineering
Fall. 3 credits. Corequisite: fluid mechanics.
BEE 456 Biomechanics of Plants (also BIO PL 456)
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of any introductory sequence in biology, and 1 year of calculus, or permission of instructor. S-U grades optional.
BEE 458 Introduction to Biotechnology
Fall. 4 credits. Prerequisites: BEE 350 (coregistration permissible), biochemistry, microbiology, fluid mechanics, or permission of instructor.
BEE 459 Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisites: biochemistry or permission of instructor. For description, see CEE 431.
BEE 471 Geohydrology (also CEE 431 and GEO/LAS 445)
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. For description, see CEE 431.
BEE 473 Watershed Engineering
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology.
BEE 474 Drainage and Irrigation Design
Spring. 3 credits. Prerequisites: fluid mechanics or hydrology.
BEE 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: MATLAB and 2 years of calculus.
BEE 476 Solid Waste Engineering  
Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry.

BEE 478 Ecological Engineering  
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent.

BEE 481 LRFD-Based Engineering of Wood Structures (also CEE 481)  
Spring. 3 credits. Prerequisites: ENGRD 202.

BEE 489 Engineering Entrepreneurship, Management and Ethics  
Spring. 3 credits. Prerequisites: ENGRD 270 or CEE 304 or equivalent, junior standing.

BEE 493 Technical Writing for Engineers  
Fall. 1 credit. Prerequisites: BEE 473.

BEE 494 Special Topics in Biological and Environmental Engineering  
Fall, spring. 1–4 credits. S-U grades optional.

BEE 495 BEE Honors Research  
Fall, spring. 1–6 credits. Prerequisites: enrollment in the BEE Honors Research Program.

BEE 496 Capstone Design in Biological and Environmental Engineering  
Fall, spring. 1–3 credits. Prerequisite: senior standing in engineering program or permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 497 Individual Study in Biological and Environmental Engineering  
Fall, spring. 1–4 credits. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. S-U grades optional. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 498 Undergraduate Teaching  
Fall, spring. 1–4 credits. Prerequisite: written permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 499 Undergraduate Research  
Fall, spring. 1–3 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 551/552 Agricultural and Biological Engineering Design Project  
Fall, 551; spring, 552. 3–6 credits. Prerequisite: admission to the M.Eng. (Agricultural and Biological) degree program.

BEE 651 Bioremediation: Engineering Organisms to Clean Up the Environment  
Spring. 3 credits. Prerequisites: BIOMI 290 or BIOMI 398 or BIOMI 331 or permission of instructor.

BEE 652 Instrumentation: Sensors and Transducers  
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of instructor.

BEE 655 Thermodynamics and Its Applications  
Spring. 3 credits. Prerequisite: MATH 293 or equivalent.

BEE 658 Biosensors and Bioanalytical Techniques  
Spring. 4 credits. Prerequisites: biochemistry and permission of instructor.

BEE 671 Analysis of the Flow of Water and Chemicals in Soils  
Fall. 3 credits. Prerequisites: 4 calculus courses and fluid mechanics.

BEE 672 Drainage  
Spring. 4 credits. Prerequisites: BEE 471 or BEE 473. S-U grades optional.

BEE 673 Sustainable Development Seminar (also NBA 573)  
Spring. 1–3 credits. Prerequisite: upper division undergraduate and graduate students or permission of instructor.

BEE 678 Nonpoint Source Models  
Spring. 3 credits. Prerequisites: computer programming and calculus.

BEE 685 Biological Engineering Analysis  
Spring. 4 credits. Prerequisite: TRAM 310 or permission of instructor.

BEE 694 Graduate Special Topics in Agricultural and Biological Engineering  
Fall, spring. 1–4 credits. S-U grades optional.

BEE 697 Graduate Individual Study in Agriculture and Biological Engineering  
Fall, spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional.

BEE 700 General Seminar  
Fall. 1 credit. S-U grades only.

BEE 750 Orientation to Graduate Study  
Fall. 1 credit. S-U grades only. Limited to newly joining graduate students.

BEE 754 Watershed Management  
Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructor.

BEE 771 Soil and Water Engineering Seminar  
Fall, spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional.

BEE 781 Structures and Related Topics Seminar  
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

BEE 785 Biological Engineering Seminar  
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

BEE 800 Master's-Level Thesis Research  
Fall, spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades only.

BEE 900 Doctoral-Level Thesis Research  
Fall, spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades only.

CHEMICAL ENGINEERING

CHEM 112 Introduction to Chemical Engineering (also ENGR 112)  
Fall. 3 credits. Limited to freshmen. T. M. Duncan.

This is a course in the Introduction to Engineering series. For description, see ENGR 112.

CHEM 120 Introduction to Biomedical Engineering (also ENGR 120)  

This is a course in the Introduction to Engineering series. For description, see ENGR 120.

CHEM 219 Mass and Energy Balances (also ENGR 219)  
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. K. H. Lee.

For description, see ENGR 219.

CHEM 301 Nonresident Lectures  
Spring. 1 credit. M. Ackley.

Lecturers from industry and from selected departments of the university provide information to assist students in their postgraduate plans.

CHEM 313 Chemical Engineering Thermodynamics  
Fall. 4 credits. Corequisite: physical chemistry. F. A. Escobedo.

A study of the first and second laws and their consequences for chemical systems. Thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

CHEM 323 Fluid Mechanics  
Fall. 3 credits. Prerequisites: CHEM 219 and engineering mathematics sequence. W. L. Ollincht.

CHEM 324 Heat and Mass Transfer  
Spring. 3 credits. Prerequisite: CHEM 323. C. Cohen.

CHEM 332 Analysis of Separation Processes  
Spring. 3 credits. Prerequisites: CHEM 313 and 323. Y. L. Joo.

Analysis of separation processes involving phase equilibria and mass transfer. Covers: phase equilibria; binary and multicomponent distillation; liquid-liquid extraction; gas absorption, absorption, membrane separations.

CHEM 372 Introduction to Process Dynamics and Control  
Spring. 1 credit. Prerequisites: CHEM 313 and 323. D. L. Kord.

Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

CHEM 390 Reaction Kinetics and Reactor Design  
Spring. 3 credits. Prerequisites: CHEM 313 and 323. J. R. Engstrom.

A study of chemical reaction kinetics and principles of reactor design for chemical processes.
CHEME 391 Physical Chemistry II (also CHEM 340) Spring. 3 credits. Limited to engineering students. T. M. Duncan. For description, see CHEM 391.

CHEME 401 Molecular Principles of Biomedical Engineering Fall. 3 credits. K. H. Lee. Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Cytoskeletal and motor proteins and their relationship to nano-and micro-machines and nanobiotechnology. Existing and emerging technologies and instrumentation critical to molecular-level analysis in Biomedical Engineering.

CHEME 432 Chemical Engineering Laboratory Fall. 4 credits. Prerequisites: CHEME 323, 324, 332, and 390. K. E. Ackley and staff. Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEME 462 Chemical Process Design Spring. 4 credits. Prerequisite: CHEME 432. K. E. Ackley and staff. A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEME 470 Process Control Strategies Spring. 3 credits. A. M. Center. Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

CHEME 472 Feedback Control Systems (also ECE 471 and M & AE 470) Fall. 4 credits. Prerequisites: CHEME 372, ECE 301, M & AE 326, or permission of instructor. A. B. Anton and R. D'Andrea. For description, see M & AE 478.

CHEME 480 Chemical Processing of Electronic Materials Spring. 3 credits. A. B. Anton. Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermodynamics of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

CHEME 481 Biomedical Engineering Spring. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor. W. L. Olbricht. Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHEME 484 Microchemical and Microfluidic Systems Fall. 3 credits. Prerequisite: CHEME 390 or permission of instructor. J. R. Engstrom. Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies. Group design project, including computational fluid dynamics (CFD) calculations, drafting an invention disclosure/patent application.

CHEME 490 Undergraduate Projects in Chemical Engineering Fall, spring. Variable credit. Research or studies on special problems in chemical engineering.

CHEME 491 Undergraduate Teaching in Chemical Engineering Fall. 1 credit. T. M. Duncan and M. Ackley. Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

CHEME 520 Chemical, Polymer, Biomedical, and Electronic Materials Processing Fall, spring. 1-6 credits (1 credit per section). 520.1 An Overview of Chemical Processing Spring. 1 credit. Meets first third of term. Limited to non-chemical engineers. T. M. Duncan. An introduction to chemical engineering design and analysis-mathematical modeling, graphical methods and dynamic scaling. Open to nonchemical engineers only.

520.2 Introduction to Biomedical Engineering Spring. 1 credit. Meets first third of term. W. L. Olbricht. Meets concurrently with CHEME 481.

520.4 Introduction to Polymer Processing Spring. 1 credit. Meets final second of term. L. A. Archer. Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

520.5 Chemical Engineering Processing Units and Equipment Spring. 1 credit. Meets first third of term. K. E. Ackley and A. M. Center. A hands-on survey of standard chemical processing equipment-structure and operation—with emphasis on trouble-shooting techniques.

520.6 Introduction to Petroleum Refining Fall. 1 credit. Meets second third of term. A. M. Center. The technical and business aspects of petroleum refining. Applications of chemical engineering principles for practical solutions to business needs.

CHEME 562 Managing Chemical Process Design Spring. 1 or 2 credits. Prerequisite: CHEME 390 or equivalent. Offered alternate years; not offered 2002-2003. Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEME 565 Design Project Spring. 3 credits. Prerequisite: CHEME 390 or equivalent. Required for students in the M.Eng. (Chemical) program. Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEME 572 Managing Business Development Solutions Fall, spring. Variable credit. Limited to graduate students. Non-thesis research or studies on special problems in chemical engineering.

CHEME 590 Special Projects in Chemical Engineering Fall. 3 credits. Prerequisites: graduate standing; undergraduates must have permission of instructor. A. M. Center. A case study approach introduces the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHEME 599 Special Projects in Chemical Engineering Fall, spring. Variable credit. Limited to graduate students. Non-thesis research or studies on special problems in chemical engineering.

[CHEME 596 Systems on a Chip Fall. 3 credits. Not offered 2002. P. Clancy. Fundamentals of electronic chip fabrication processes for systems on a chip, the complexities of building devices on dissimilar substrates (e.g., Si on plastics), the creation of organic optoelectronic devices, and functional design integration issues. Applications to lab on a chip systems. Group design project required.]
CHEM 605 Fundamentals in Biomedical Engineering I (also ENGRG 605)
Fall. 1-4 credits (1 credit per section). Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed BEE 454, CHEM 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.
For description, see ENGRG 605.

CHEM 606 Fundamentals of Biomedical Engineering II (also ENGRG 606)
Spring. 1-4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler.
A series of one and two-credit modules on specialized topics.

CHEM 640 Polymeric Materials
Fall. 3 credits. C. Cohen.
Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

CHEM 643 Bioprocess Engineering
Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler.
A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHEM 644 Aerosols and Colloids
Fall. 3 credits. D. Koch.
Dynamics of micro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include the formation and growth of particles, their transport, theoretical and phase behaviors, and their role in technologies including paints, foods, health-care products, drug delivery, composite materials, and air pollution control.

CHEM 656 Separations Using Membranes or Porous Solids
Spring. 3 credits. Prerequisites: CHEM 324 and 332. Offered alternate years; not offered 2002-2003.
Diffusion of small molecules in gases, liquids, and solids. Membrane separation processes including gas separation, pervaporation, reverse osmosis, and ultrafiltration. Purification of gases and liquids by adsorption, ion exchange, and chromatography.

CHEM 661 Air Pollution Control
Spring. 3 credits. P. H. Stern.

CHEM 675 Synthetic Polymer Chemistry (also M&E 622 and CHEM 671)
Fall. 4 credits. Prerequisites: CHEM 359-360 or equivalent or permission of instructor.
For description, see CHEM 671.

CHEM 711 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEM 313 or equivalent. Closed postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering. Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

CHEM 713 Chemical Kinetics and Dynamics
Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. F. Escobedo.
Topics include: microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEM 731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEM 323 and 324 or equivalent.
Topics include: derivation of the equations of motion for Newtonian fluids; low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics; boundary layer theory; and convective and conductive heat transfer.

CHEM 732 Diffusion and Mass Transfer
Spring. 2 credits. Prerequisite: CHEM 731 or equivalent. L. A. Archer.
Conservation equations in multiphase systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHEM 741 Selected Topics in Biochemical Engineering
Fall, spring. 1 credit (may be repeated for credit). Prerequisite: permission of instructor. K. H. Lee, and M. L. Shuler.
Discussion of current topics and research in biochemical engineering for graduate students.

CHEM 745 Physical Polymer Science I
Fall. 3 credits. Corequisite: CHEM 711 or equivalent. Offered alternate years; not offered 2002-2003. C. Cohen.

CHEM 751 Mathematical Methods of Chemical Engineering Analysis
Fall. 4 credits. D. L. Koch.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

CHEM 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHEM 751 or equivalent. Offered alternate years; not offered 2002-2003. P. H. Steen.
Topics covered include: elements of stability and bifurcation theory; branch-following techniques; stability of discrete and continuous systems; and application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.

CIVIL AND ENVIRONMENTAL ENGINEERING 223

CIVIL AND ENVIRONMENTAL ENGINEERING

CIVIL AND ENVIRONMENTAL ENGINEERING
Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Systems Engineering and Information Technology. Within each mission area are several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General
CEE 113 Solving Environmental Problems for Urban Regions (also ENGRG 113) (F,3cr.)
CEE 116 Modern Structural Systems and Materials (also ENGRG 116) (F,3cr.)
CEE 241 Engineering Computation (also ENGRG 241) (F,5,3cr.)

ORIE 597 Systems Engineering Project
Fall. R grade only; spring, 3 credits. For M.Eng. students.
For M.Eng. Students enrolled in the Systems Engineering Option. A substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. (The following projects are pre-approved: FSAE, HEV, Robocup, Brain.) A formal report is required.

ORIE 598 Master of Engineering Manufacturing Project
Fall. R grade only; spring, 5 credits. For M.Eng. students.
Project course for M.Eng. students enrolled in the Manufacturing Option coordinated by the Center for Manufacturing Enterprise.

ORIE 599 Project
Fall. R grade only; spring, 5 credits. For M.Eng. students.
Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

[ORIE 625 Scheduling Theory]
Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

[ORIE 626 Advanced Production and Inventory Planning]
Spring. 3 credits. R. Roundy.
Introduction to a variety of production and inventory control planning problems, the development of mathematical models corresponding to these problems, and a study of approaches for finding solutions.

ORIE 630 Mathematical Programming I
Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra. J. Renegar.
A rigorous treatment of the theory and computational techniques of linear programming and its extensions, including: formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas’ Lemma; and exploiting special structure in the simplex method. and computational implementation.

ORIE 631 Mathematical Programming II
Spring. 4 credits. Prerequisites: ORIE 630. M. Todd.
A continuation of ORIE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

ORIE 632 Nonlinear Programming
Fall. 3 credits. Prerequisite: ORIE 630. M. Todd.
Necessary and sufficient conditions for unconstrained and constrained optimz. Topics include the duality theory, computational methods for problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).

[ORIE 633 Graph Theory and Network Flows]
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2002–2003.
Topics covered include: directed and undirected graphs, bipartite graphs, hamilton cycles and Euler tours, connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.

ORIE 634 Combinatorial Optimization
Spring. 3 credits. R. Bland.
Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

[ORIE 635 Interior-Point Methods for Mathematical Programming]
Spring. 3 credits. Prerequisites: MATH 411 and ORIE 630, or permission of instructor. Not offered 2002–2003.
Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discussion of the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms, and various ways of combining them. Emphasis on recent mathematical theory and the most modern viewpoints.

ORIE 636 Integer Programming
Fall. 3 credits. Prerequisite: ORIE 650. L. Trotter.
Topics covered include: discrete optimization, linear programming in which the variables must assume integer values, theory, algorithms, and applications; and cutting-plane and enumerative methods with additional topics drawn from recent research in this area.

[ORIE 637 Semidefinite Programming]
Course covers: linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and slow relaxations; combinatorial optimization problems; duality; computational methods, particularly interior-point algorithms.

[ORIE 639 Polyhedral Convexity]
A comprehensive introduction to the geometry and combinatorics of polyhedral convex sets. Also, linear inequalities, supporting and separating hyperplanes, polarity, convex hulls, facets, and vertices; face lattices; convex cones and polytopes; minkowski sums; gale transforms; simplicial and polyhedral subdivision; and applications to linear programming, combinatorial optimization, and computational geometry.

ORIE 650 Applied Stochastic Processes
Fall. 4 credits. Prerequisite: a 1-semester calculus-based probability course. S. Henderson.
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include: Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

ORIE 651 Probability
Spring. 4 credits. Prerequisite: real analysis at the level of MATH 413 and a previous 1-semester course in calculus-based probability. Staff.
Course covers: sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

ORIE 662 Advanced Stochastic Processes
Fall. 3 credits. Corequisite: ORIE 650 or equivalent. B. Turnbull.
Topics include: review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F. Introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

ORIE 670 Statistical Principles
Spring. 4 credits. Corequisite: ORIE 650 or equivalent. R. B. Tweed. Topics include: review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F. Introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

ORIE 671 Intermediate Applied Statistics
Course topics include: statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.

ORIE 674 Statistical Learning Theory for Data Mining
Fall. 3 credits. Prerequisites: Probability at the level of ORIE 651, and statistical at the level of ORIE 670. W. Jiang. This course will provide a thorough grounding in probabilistic and computational methods for statistical data mining. We intend to cover a subset of the following topics from supervised and unsupervised data mining. The framework of learning. Performance measures and model selection. Methodology, theoretical properties and computing algorithms used in parametric and nonparametric methods for regression and classification. Frequentist and Bayesian methods.
THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

T&AM 118 Design Integration: A Portable CD (also ENGR 110 and MS&E 118)
Spring. 3 credits.
This is a course in the Introduction to Engineering series. For description, see ENGR 118.

T&AM 202 Mechanics of Solids (also ENGR 202)
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.
For description, see ENGRD 202.

T&AM 203 Dynamics (also ENGRD 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor.
For description, see ENGRD 203.

Engineering Mathematics

T&AM 190 Calculus for Engineers (also MATH 190)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms.
For description, see MATH 190.

T&AM 191 Calculus for Engineers (also MATH 191)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)
Fall, spring, or summer. 4 credits. Prerequisite: MATH/T&AM 191.
For description, see MATH 192.

T&AM 293 Engineering Mathematics (also MATH 293)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus a knowledge of computer programming or that taught in COM S 100.
For description, see MATH 293.

T&AM 294 Engineering Mathematics (also MATH 294)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293.
For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent.
Course covers: initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers: special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

T&AM 311/511 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310).

Mathematical modeling of physical and biological systems. Examples range from molecular diffusion, bacteria swimmers, chemotaxis, and physiological flows, to bird flight. The mathematics necessary to understand these phenomena is discussed in depth. They include probability theory, PDEs, stability analysis, complex variable analysis, and numerical analysis. Students from all fields are encouraged to take the course.

T&AM 610 Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310-311) but open to exceptional undergraduates with permission of instructor.
Emphasis is on applications. Course covers: linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

T&AM 611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.
Emphasis is on applications. Course covers: partial differential equations, transform techniques, tensor analysis, calculus of variations.

T&AM 612 Methods of Applied Mathematics III
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.
Course topics include: integral transform, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations. Problems are drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

T&AM 613 Methods of Applied Mathematics IV
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods) and asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Also covers regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include: normal forms, center manifolds, Lapunov-Schmidt reductors, and Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

[T&AM 614 Methods of Applied Math V
Spring. 3 credits. Prerequisites: T&AM 610 and T&AM 311 or equivalent. Not offered 2002-2003.]

T&AM 617 Advanced Mathematical Modeling
Spring. 3 credits. Offered alternate years.

Continuum Mechanics

T&AM 455 Introduction to Composite Materials (also CEE 475, M&AE 455 and MS&E 555)
Spring. 4 credits.
Course topics include: introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials.
micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates including computer software for design; and manufacturing methods and applications for composites. There is a group component to the design and manufacturing paper required, and a group laboratory on laminated component fabrication.

T&AM 591 Master of Engineering Design Project I
Fall. 3-6 credits. M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 592 Master of Engineering Design Project II
Spring. 5-15 credits. M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 655 Composite Materials (also M&AE 655 and MSE 655)
Spring. 4 credits. Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homeworks through additional lectures. Additional material includes: shear-lag models of stress transfer around arrays of fiber breaks including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; and compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I
Fall. 4 credits. Rigorous introduction to solid mechanics emphasizing: linear elasticity; tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elasto-statics; and boundary-value problems, e.g. plates, St. Venant's solutions.

T&AM 664 Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663, or equivalent. Preparation for advanced courses in solid mechanics. Topics include: singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, airy stress functions, linear viscoelasticity, cracks and dislocations; classical plasticity, thermoelasticity, and three-dimensional elasticity.

T&AM 666 Finite Element Analysis (also M&AE 680 and CEE 772)
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent. For description, see M&AE 680.

T&AM 751 Continuum Mechanics and Thermodynamics
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Course topics include: kinematics; conservation laws; thermal inequality; constitutive relations; frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752 Nonlinear Elasticity
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Offered alternate years. Review of governing equations. Topics include: linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear string and rod theories; phase transformations and crystal defects.

T&AM 753 Fracture
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Offered alternate years. Course covers: fundamentals of linear elastic fracture mechanics: K, small-scale yielding, solutions of elastic crack problems, energy concepts, J-integral. Also covers: nonlinear, rate-independent, small-deformation, fracture mechanics: plastic fracture, J-integral, small-scale yielding, fields for stationary and growing cracks; failure mechanisms of polymers, ceramics, composites, and metals: void growth, load-interruption fibers, crazing, fracture testing; fatigue fracture; computation of stress intensity factors; and plate theory and fracture.

T&AM 757 Inelasticity
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 2002-2003. Course covers: plasticity: dislocation slip systems; early experimental observations; general principles; limit analysis; and solution of boundary-value problems, plastic waves, one- and three-dimensional. Also covers viscoelasticity: general principles, solution of boundary-value problems.

T&AM 759 Boundary Element Methods
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 2002-2003. Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary contour methods, sensitivity analysis.

Dynamics and Space Mechanics

T&AM 570 Intermediate Dynamics
Fall. 3 credits. Course topics include: Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work; Lagrangian mechanics. Hamilton's principle; small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies; and gyroscopes.

T&AM 578 Nonlinear Dynamics and Chaos
Fall. 3 credits. Prerequisite: MATH/T&AM 293 or equivalent. Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics covered: bifurcations; phase plane; nonlinear oscillators; and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 671 Hamiltonian Dynamics
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years. Course topics include: review of Lagrangian mechanics, Kane's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-dimensions-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theorem; KAM theory; and Melnikov's method.

T&AM 672 Celestial Mechanics (also ASTRO 579)
Spring. 3 credits. Offered alternate years. Course topics include: description of orbits, 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems; oscillating orbital elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; and secular perturbations, resonances, mechanics of planetary rings.

T&AM 673 Mechanics of the Solar System (also ASTRO 571)
Spring. 3 credits. Prerequisite: an advanced undergraduate course in dynamics. Offered alternate years; not offered 2002-2003. Course topics include: gravitational potentials, planetary gravity fields; free and forced rotations; Chandler wobble, polar wander, and damping of nutation; equilibrium tidal theory, tidal heating; orbital evolution of natural satellites, resonances, spin-orbit coupling, Cassini states; long-term variations in planetary orbits; dust dynamics; dynamics of ring systems; and physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.

T&AM 675 Nonlinear Vibrations
Spring. 3 credits. Prerequisite: T&AM 578 or equivalent. Offered alternate years. Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology. Additional topics may include Hopf bifurcation, Invariant manifolds, coupled oscillators, vibrations in continuous media, normal forms, and exploitation of symmetry.

T&AM 678 Complex Systems

T&AM 776 Applied Dynamical Systems (also MATH 717)
For description, see MATH 717.
Special Courses, Projects, and Thesis Research

T&AM 491-492 Project in Engineering Science
Fall, 491; spring, 492. 1-4 credits, as arranged. Projects for undergraduates under the guidance of a faculty member.

T&AM 796-800 Topics in Theoretical and Applied Mechanics
Fall, spring. 1-3 credits, as arranged. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890 Master's Degree Research in Theoretical and Applied Mechanics
Fall, spring. 1-15 credits, as arranged. S-U grades optional. Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&AM 990 Doctoral Research in Theoretical and Applied Mechanics
Fall, spring. 1-15 credits, as arranged. S-U grades optional. Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER

Abele, John F., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Biological and Environmental Engineering
Albright, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Allmendinger, Richard, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Biological and Environmental Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Asst. Prof., Chemical and Biomolecular Engineering
Apel, Alyssa B., Ph.D., Johns Hopkins U. Clare Boothe Luce Assistant Professor of Electrical and Computer Engineering
Arch, Lynden A., Ph.D., Stanford U. Assoc. Prof., Chemical and Biomolecular Engineering
Arms, William, Ph.D., U. of Sussex. Prof., Computer Science
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
Atheya, Krishna B., Ph.D., Stanford U. Prof., Operations Research and Industrial Engineering
Aubin, Richard A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Babcock, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical and Computer Engineering
Barazangi, Muawia, Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences
Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Biological and Environmental Engineering
Batterman, Boris W., Ph.D., Massachusetts Inst. of Technology. Walter S. Carpenter, Jr Professorship in Engineering, Applied and Engineering Physics
Berger, Toby, Ph.D., Harvard U. Irwin and Joan Jacobs Professor of Engineering, Electrical and Computer Engineering
Billington, Sarah, Ph.D., U. of Texas at Austin. Asst. Prof., Civil and Environmental Engineering
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Earth and Atmospheric Sciences
Birnbaum, Kenneth P., Ph.D., U. of California at Berkeley. Prof., Computer Science
Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blakely, John M., Ph.D., Glasgow U. (Scotland). Herbert Fisk Johnson Professor of Engineering, Materials Science and Engineering
Blond, Robert G., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Bojanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering
Booker, John F., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Brock, Joel D., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
Brutsaert, Wilfried H., Ph.D., U. of California at Davis. William L. Lewis Prof. of Engineering, Civil and Environmental Engineering
Buhman, Robert A., Ph.D., Cornell U. John Edson Sweet Professor of Engineering, Applied and Engineering Physics
Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Astronomy and Theoretical and Applied Mechanics
Burscher, Martin Ph.D., U. of Colorado at Boulder. Asst. Prof., Electrical and Computer Engineering
Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics; Nuclear Science and Engineering
Callister, John R., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Campbell, Mark F., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Mechanical and Aerospace Engineering
Cardie, Claire T., Ph.D., U. of Massachusetts at Amherst. Assoc. Prof., Computer Science
Caruana, Richard, Ph.D., Carnegie Mellon U. Asst. Prof., Computer Science
Carr, Paul, Ph.D., Virginia Polytechnic Inst. Visiting Prof., Civil and Environmental Engineering
Castillo-Chavez, Carlos, Ph.D., U. of Wisconsin at Madison. Prof., Theoretical and Applied Mechanics
Cattaneo, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical and Computer Engineering
Cisne, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences
Clark, Paulette, Ph.D., Oxford U. (England). Prof., Chemical and Biomolecular Engineering
Cohen, Claude, Ph.D., Princeton U. Prof., Chemical and Biomolecular Engineering
Coleman, Thomas F., Ph.D., U. of Waterloo. Prof., Computer Science
Collins, Lance R., Ph.D., U. of Pennsylvania. Prof., Mechanical and Aerospace Engineering
Colucci, Stephen J., Ph.D., SUNY. Assoc. Prof., Earth and Atmospheric Sciences
Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
Conway, Harry D., Ph.D., London U. Emeritus, Theoretical and Applied Mechanics
Cook, Kerry H., Ph.D., North Carolina State U. Assoc. Prof., Earth and Atmospheric Sciences
Cook, J. Robert, Ph.D., North Carolina State U. Prof., Biological and Environmental Engineering
Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics
Cowen, E. A., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
Craighead, Harold G., Ph.D., Cornell U. Charles W. Lake Jr., Prof. of Engineering, Applied and Engineering Physics
D'Andrea, Rafaeli, Ph.D., California Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
Datta, Ashish K., Ph.D., U. of Florida. Prof., Biological and Environmental Engineering
Davidson, Rachel A., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
Dawson, Paul R., Ph.D., Colorado State U. Prof., Mechanical and Aerospace Engineering
Delchamps, David F., Ph.D., Harvard U. Assoc. Prof., Electrical and Computer Engineering
Demers, Alan, Ph.D., Princeton U. Prof., Computer Science
Derby, Louis, Ph.D., Harvard U. Asst. Prof., Earth and Atmospheric Sciences
Dick, Richard J., Ph.D., U. of Illinois. Joseph P. Riley Professor of Engineering, Civil and Environmental Engineering
Dieckmann, Rudiger, Ph.D., U. Hannover. Assoc. Prof., Materials Science and Engineering
Duncan, T. Michael, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
Eastman, Lester F., Ph.D., Cornell U. Given Foundation Professor of Engineering, Electrical and Computer Engineering
Elber, Ron, Ph.D., Hebrew U. (Israel). Prof., Computer Science
Engstrom, James R., Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
Escobedo, Fernando A., Ph.D., U. of Wisconsin at Madison. Asst. Prof., Chemical and Biomolecular Engineering
Fan, K-Y Daisy, Ph.D., Cornell U. Assoc. Prof., Computer Science
Farley, Donald T., Ph.D., Cornell U. J. Preston Levis Professor of Engineering, Electrical and Computer Engineering
Fisher, Elizabeth M., Ph.D., U. of California at Berkeley. Assoc. Prof., Mechanical and Aerospace Engineering
Fleischmann, Hans J., Ph.D., Technische Hoch., Munchen (Germany). Prof., Applied and Engineering Physics
Friedman, Eric, Ph.D., Berkeley. Assoc. Prof., Operations Research and Industrial Engineering
Garcia, Ephraim, Ph.D., SUNY Buffalo. Assoc. Prof., Mechanical and Aerospace Engineering
Gebremedhin, Kifle G., Ph.D., U. of Wisconsin. Prof., Biological and Environmental Engineering
George, Albert R., Ph.D., Princeton U. John F. Carr Prof. of Mechanical Engineering, Mechanical and Aerospace Engineering
Gehlke, Johannes, Ph.D., U. of Wisconsin at Madison. Asst. Prof., Computer Science
George, Albert R., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
Gossett, James T., Ph.D., Johns Hopkins U. Prof., Operations Research and Industrial Engineering
Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Prof., Operations Research and Industrial Engineering
Jenkins, James T., Ph.D., Stanford U. Prof., Walter S. Carpenter, Jr., Professor of Engineering, Theoretical and Applied Mechanics
Jewell, William J., Ph.D., Stanford U. Prof., Biological and Environmental Engineering
Joachims, Thorsten, Ph.D., U. of Dortmund. Asst. Prof., Computer Science
Johnson, C. Richard, Jr., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
Kan, Edwin C., Ph.D., U. of Illinois at Champagne. Assoc. Prof., Electrical and Computer Engineering
Kay, Robert W., Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences
Kelley, Michael C., Ph.D., U. of California at Berkeley. James A. Friend family Distinguished Prof., Electrical and Computer Engineering
Kinner, Paul A., Ph.D., U. of Minnesota. Prof., Electrical and Computer Engineering
Kleinberg, Jon M., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
Kline, Ronald R., Ph.D., U. of Wisconsin. Prof., Electrical and Computer Engineering (History of Technology)
Koch, Donald L., Ph.D., Massachusetts Inst. of Technology. Marjorie I. Hart '50 Professor of Engineering, Chemical and Biomedical Engineering
Kornegay, Kevin T., Ph.D., U. of California at Berkeley. Assoc. Prof., Electrical and Computer Engineering
Kolen, J. Peter, Ph.D., Helsinki U. of Technology (Finland). Prof., Electrical and Computer Engineering
Kurlin, Fred H., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Kusse, Bruce R., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Lal, Amil, Ph.D., U. of California at Berkeley. Asst. Prof., Electrical and Computer Engineering
Lee, Kelvin, Ph.D., California Inst. of Technology. Prof., Chemical and Biomedical Engineering
Lee, Lillian, Ph.D., Harvard U. Asst. Prof., Computer Science
Leibovich, Sidney, Ph.D., Cornell U. Samuel B. Eckert Prof. of Mechanical and Aerospace Engineering
Li, Che-Yu, Ph.D., Cornell U. Francis Norwood Bard Professor, Materials Science and Engineering
Lion, Leonard W., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
Lipson, Michael, Ph.D., Stanford U. (Insel) Asst. Prof., Electrical and Computer Engineering
Lipson, Hod, Ph.D., Technion Israel Institute of Technology. Asst. Prof., Mechanical and Aerospace Engineering
Liu, Philip L.F., Sc.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
Loucks, Daniel P., Cornell U. Prof., Civil and Environmental Engineering
Louge, Michel Y., Ph.D., Stanford U. Prof., Mechanical and Aerospace Engineering
Lovelace, Richard V. E., Ph.D., Cornell U. Prof., Applied and Engineering Physics

O'Rourke, Thomas D., Ph.D., U. of Illinois. Thomas R. Briggs Professor of Engineering, Civil and Environmental Engineering
Papailia, Katerina D., Ph.D., U. of California at Berkeley. Asst. Prof., Civil and Environmental Engineering
Parks, Thomas W., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Parlange, Jean-Yves, Ph.D., Brown U. Prof., Biological and Environmental Engineering
Pekoz, Teoman, Ph.D., Cornell U. Prof., Civil and Environmental Engineering
Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee and usually has the primary responsibility for directing the student’s thesis or dissertation research.

Requirements for Admission

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test, or other specific examinations, for those fields that require these examinations.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be:

1) a minimum Test of English as a Foreign Language (TOEFL) score of 550 on the paper-based test or 213 on the computer-based test (higher for some fields);
2) evidence of two or more years study in, or a degree from, a college or university in a country where both the language of instruction and the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, NJ 08541, U.S.A.

Applications for fall admission to the Graduate School should be received by the deadline of the field to which one applies. The earliest deadline is December 1. Many fields, however, have different deadlines. Applicants should consult the Graduate School's application booklet for the specific closing date for each field.

Inquiries regarding admission should be addressed to the specific graduate field office or to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, N.Y. 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for fellowships and teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the Graduate School Catalog. Both may be viewed on the Web at www.gradschool.cornell.edu/. An interactive application is available through this site, and application forms may be downloaded and printed directly from the Web. The application may be received through the mail by contacting either the individual graduate field office or the Graduate School, Caldwell Hall, Cornell University, Ithaca, NY 14853-2602.

Note: Programs leading to the degrees of Doctor of Law (J.D.), Master of Laws (LL.M.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School.

Information on those programs can be obtained from the Law School, the Weill Medical College of Cornell University (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.
The School of Hotel Administration's Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 23,000 books, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including NEXIS, Dow Jones, ABI/INFORM, and The International Hospitality and Tourism Database, an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the local community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 300 students each semester with preference given to students in the hotel school.

SUGGESTED COURSE PROGRAMS

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in management, human resources, financial management, food and beverage operations, marketing, tourism, property asset management, communications, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in room 174 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1. completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;
2. completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits, as set forth in the table on the following page;
3. qualification in one language other than English. This requirement may be met by any one of the following: (1) three years of high school study of one foreign language; (2) score of 560 on Cornell Placement Test; (3) pass language 121 and 122 (eight credits) or the equivalent, and attain a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or (4) pass 123 or the equivalent;
4. completion of two units of practice credit prior to the last two years of residence, as defined on the following page;
5. completion of the university requirement in physical education.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for "O"-level courses, such as Educ 005.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least 75 credits at Cornell University, of which a minimum of 60 must be in courses offered by the Hotel School, and nine must be in distributive electives taken outside the Hotel School. Thus, a maximum of 45 hours in transfer credit may be allowed from other accredited colleges or universities as follows:

<table>
<thead>
<tr>
<th>Core</th>
<th>18</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hotel Electives</td>
<td>0</td>
</tr>
<tr>
<td>Distributive Electives</td>
<td>9</td>
</tr>
<tr>
<td>Free Electives</td>
<td>18</td>
</tr>
</tbody>
</table>

In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Others generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be
required in its place. The communication courses (HA 165 and HA 365) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Hotel elective courses may not transfer.

Distributive electives ensure that Hotel students are exposed to other courses at Cornell, and, thus, only nine credits may transfer. The remaining nine must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided that at least three credits are taken (at Cornell or transferred from elsewhere) in each area. A maximum of six credits, but no more than four per semester, of distributive electives may be taken on an S-U basis. For more information on the distribution requirement, see the handout available in the student services office, room 178 Statler Hall.

Eighteen credits in free electives may transfer.

Concentration

While completing the hotel elective courses, undergraduates in the school may select a concentration.

When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section, and also under the section Advanced Placement for Freshmen.

Independent Study

Students may conduct independent study projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H ADM 499 or 699 for more details.

Practice-Credit Requirement

As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last two semesters. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the school’s Career Services Office, room 255 Statler Hall.

Management-Intern Program

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management-intern program. Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493 and 494 for more details. More information about the management intern program also is available in the Career Services Office, 255 Statler Hall.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study. Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student’s total educational experience. Students in recent years have studied in Italy, France, England, Australia, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school’s director of student services so that all petition and credit-evaluation procedures are followed.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school’s student handbook (available in room 174 Statler Hall).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. A maximum of four credits each term may be taken on a “satisfactory-unsatisfactory” (S-U) basis. Students should be aware that a satisfactory grade equals “C+” or above and an unsatisfactory grade equals “D+” or lower.

Students whose term averages are at least 3.5 and who take at least 12 credits of letter grades with no unsatisfactory or incomplete credits are honored by being placed on the Dean’s List.

Typical Course Sequences

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each term, to include the following:

<table>
<thead>
<tr>
<th>Required courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>H ADM 105, Introduction to Lodging</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 115, Organizational Behavior and Interpersonal Skills</td>

### GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, consult the school's graduate catalog (available in room 172 Statler Hall); contact the school's graduate services office at 255-7245, or see the university's Announcement from the Graduate School.

### H ADM 741, Creating and Managing for Service Excellence

Spring. 3 credits. Prerequisite: H ADM 315 or equivalent. Limited to 30 undergraduate students. Elective. T. Simons.

### H ADM 793, Industry Mentorship Program

Spring. 0 credits. Prerequisite: H ADM 794, Management Development.

### H ADM 794, Management Development

Spring. 0 credits. Prerequisite: H ADM 793, Industry Mentorship Program.

### Course Schedule Information

For up-to-date information about course scheduling, any questions about course availability, or registration, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

### ORGANIZATIONAL MANAGEMENT, COMMUNICATION, AND LAW

#### Management and Organizational Behavior

**H ADM 110 (formerly 102) Distinguished Lectures in Hospitality Management**  
Fall. 1 credit. Elective. Dean David Butler.  
The Dean's Distinguished Lecture Series is a longstanding Hotel School tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

**H ADM 115 Organizational Behavior and Interpersonal Skills**  
Fall, spring. 3 credits. Required. F. Berger, T. Hinkin.  
Focuses on managing people in the workplace. Students develop theoretical lenses for understanding people and organizations, and practical tools for accomplishing personal and organizational goals. Topics include: individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Students learn through the case method, self-assessments, experiential exercises, readings, discussions, papers, and group activities.

**H ADM 411 Negotiations in the Hospitality Industry**  
Spring. 3 credits. Prerequisite: H ADM 315 or equivalent. Limited to 30 undergraduate students. Elective. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play exercises, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

**H ADM 412 Managing Organizational Change**  
Spring. 3 credits. Prerequisite: H ADM 211 or equivalent elective. C. Lundberg.  
Organizations are continually being influenced by internal and external factors that represent the need and opportunity to change. Organizational and member success is often dependent on changing in a timely and appropriate manner. In general, organizations have shown an astonishing inability to change themselves, even when change is clearly required. Consequently, organizations need more people who know about change and how to accomplish it. This course covers ways to facilitate and manage change in organizations. Topics include: change processes, organizational diagnosis, action planning, and consultancy.

**H ADM 413 (formerly 404) Entrepreneurship**  
Fall, spring. 3 credits. Prerequisite: H ADM 321 or equivalent. Limited to 40 seniors and graduate students (juniors by permission of instructor). Elective. Faculty.  
The focus of this course is how to start a new business (not franchising or buying an existing business). Central topics include: the entrepreneur and the decisions made in planning, financing, developing, and operating that business. Specifically we cover how to conceptualize an idea, how to evaluate and articulate the plan, and how to sell the plan to investors, customers, partners and employees. This is a case study course with guest appearances by entrepreneurs and venture capitalists. A semester-long project requires student teams to serve as consultants to business that have requested assistance.

**H ADM 414 (formerly 405) Quality Planning In The Hospitality Industry**  
Spring. 3 credits. Prerequisites: all required Hotel undergraduate courses at the 100, 200, and 300 level, limited to 25 seniors and graduate students. Elective. T. Hinkin.  
Covers the analysis of work processes and examines organizations from three perspectives: the external customer, the internal customer, and management. This course is designed to provide students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes. Students learn to use the tools of quality management including cost of quality, flowcharting, statistical process control, and collecting, organizing, and presenting data. A major component of the course is HOT S, an interactive hotel simulation that is conducted as a group activity. This is a seminar course, requiring active participation in discussion of readings and case analysis.
with respect to management and management effectively in other cultures. The conceptual knowledge and skills needed to manage other countries. Objectives include: develop­ing awareness of the pervasive and hidden situations and issues which often confront managers working in foreign countries; and developing an appreciation for the impact of personal behavior.

H ADM 614 Leadership and Small Group Processes
Fall. 3 credits. Limited to 25 Hotel seniors and graduate students. Elective. T. Simons. This course, therefore, carefully considers the link between a specific HRM activity and substantive issues/functional areas within hospitality organizations. The course is organized around the traditional management functions of planning, organizing, coordinating, and controlling. The course focuses on manager and member behavior in organizations. Ideas and models about persons, interpersonal relationships, small groups, and organizations provide the basis for understanding effective organizational behavior. Learning occurs primarily through readings, class discussions, and self-reflective teamwork.

Human Resources Management

H ADM 611 (formerly 100) Principles of Management
Fall, spring. 3 credits. Limited to non-Hotel students. Elective. Faculty.

H ADM 210 The Management of Human Resources
Fall, spring. 3 credits. Limited to 40 non-Hotel students. Not open to freshmen. Elective. Faculty.

Second week—Service Organization Design
The earliest use of formal, purposive organizations, the questions of how to best organize activities and resources have intrigued and puzzled managers. Familiar, traditional structures, for example, those organized by functions, products, or territories, seem to work less and less well. The contemporary management challenge is to design and use more responsive, flexible organizations—especially in the service sector. Since organization design and managerial systems are the major means for achieving collective purposes as well as accounting for much of the variation in organizational behavior, being able to understand the consequences of alternative organizational designs and systems is requisite for effective management. This course, therefore, carefully explores the components, processes, and issues associated with and probabilistic design options. We operate as a seminar with several application classes.

H ADM 611 Human Resource Management
Spring. 3 credits. Open to MMH students only, except by permission of the instructor in advance of pre-enrollment. MMH Requirement. B. Tracey.

This course addresses the human resource business strategies that enable companies to develop and conduct a culture audit in a business. The seminar format is intended to encourage class discussion, case analysis, and field experience.
attract, develop and retain high quality employees. Attention is given to topics such as selection, compensation, performance appraisal, and career management and the focus is on considering the return on the human resource investment in each of the areas covered. Students learn human resource issues and methodologies and have the opportunity to apply their knowledge and skills in a semester-long group project.

H ADM 810 (formerly 801) Seminar in Hospitality and Service Inquiry
Fall. 3 credits. Elective. C. Lundberg. Introduces academic graduate students to the major alternative ways of conceptualizing and designing research, acquiring and interpreting data, and disseminating findings. The implications and consequences of one's choices and tradeoffs among the alternative philosophical, ideological, and pragmatic perspectives and approaches of doing inquiry are emphasized.

Managerial Communication

H ADM 165 Managerial Communication I
Fall, spring. 3 credits. Note: students required to take this course generally may not delay it. If extenuating circumstances exist, the student must petition to drop the course by the end of the first week of classes. This course must be taken within the first two semesters in the school, including any semesters in the Internal Transfer Division. Add/drop and section exchange must be approved by the chairperson. Priority given to hotel students. Limited to 16 students per lecture. Required. D. Jameson, C. Snow, R. Steinacher. An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

H ADM 364 Advanced Business Writing
Fall, spring. 3 credits. Priority given to hotel students. Prerequisite: junior, senior, or graduate standing, or written permission of the instructor. Hotel undergraduates must have completed the H ADM 165 requirement or had it waived. Non-Hotel undergraduates must have completed their college's writing requirement. Limited to 20 students per lecture. Elective. Faculty. This course focuses on communicating challenging messages in business contexts. Writing assignments emphasize delivering persuasive messages, working with tone and style, and developing different types of documents in professional contexts. Different kinds of assignments are offered from semester to semester. Assignments often include business letters and memos written for various contexts, procedures and policy statements, promotional materials, negative messages, and analytical reports requiring research.

H ADM 365 Managerial Communication II
Fall, spring. 3 credits. Priority given to hotel students. Prerequisites: Hotel undergraduates must have completed H ADM 165 and H ADM 115. Limited to 22 juniors and seniors per lecture. Note: Students registered for this course may not drop it; however, students may be allowed to drop before the first class meets if the area has a wait list and the vacancy can be filled. Students may drop between the first and second class if they check first with the course chair listed above and can find a replacement for their place in the course. Students may not drop after the second class unless they petition and present a case for extenuating circumstances. These cases are rare. Required. N. Dahl. A broad study of communication in a management context. This course emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of persuasive communication that allow managers to influence professional audiences. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-on-one, working in groups, and formally developing and presenting ideas to larger audiences.

H ADM 462 Communication and the Multicultural Organization
Fall, spring. 3 credits. Priority given to hotel students. Elective. S. Bryson. Covers the influence of culture, perception, and gender on communication in multicultural organizations, including both international businesses and domestic businesses with diverse workforces. Focus is on human interaction at work, with special emphasis on the hospitality industry. Topics include values and beliefs that underlie communication, how race and gender affect language use, cultural differences in nonverbal communication, and ethnocentrism and stereotyping. Focus is on intercultural adjustment, cultural variables that affect service communication, persuasion in different cultures, and the ethics of communication in international business. Concepts are applied to practical management situations.

H ADM 463 Persuasive Communication in Organizations
Spring. 3 credits. Prerequisites: H ADM 165 and H ADM 365 for Hotel undergraduates or permission of instructor. Elective. N. Dahl. Prepares students to communicate effectively in a variety of complex persuasive contexts that they are likely to encounter in organizational settings. The principles of persuasion are thoroughly examined as they apply to a range of managerial communication tasks. The relationship between written and oral communication are addressed as each contributes to accomplishing both task and relationship goals within the larger organizational environment. Through studying the principles of persuasion, analyzing case studies in the hospitality industry, and applying persuasive strategies in simulated workplace settings, students become better able to analyze and solve communication situations from a managerial perspective and to develop and deliver both written and oral persuasive messages.

H ADM 661 Organizational Communication for Managers
Spring. 3 credits. Priority given to Hotel students. Elective. D. Jameson. Organizational communication focusing on the complex interactions that occur when people communicate in hospitality and other work organizations. Using business cases and examples, students examine the role of political, sociological, ethical, and psychological dimensions of business communication, analyze communication problems and barriers, and design organizational strategies to communicate effectively, whether one-on-one, in small groups, to larger audiences. Class activities and assignments help students perfect their abilities to write and to give oral presentations in professional and managerial contexts.

H ADM 761 MMH Managerial Communication
Year-long. Variable. Open to hotel students only, except by written permission of the instructor in advance of pre-enrollment. Elective. D. Jameson, C. Snow. Instruction in communication and leadership skills helps students enrolled in the Master of Management in Hospitality program reach their individual professional development goals, enrich their education, perform well on course assignments, and meet the program benchmarks in managerial writing, presentation speaking, and group process and leadership.

Law

H ADM 385 Business Law I
Fall. spring. 3 credits. Open to non-Hotel and Hotel juniors, seniors, and graduate students. Elective. P. Wagner. Provides students with a presentation of three substantive areas of business law: contracts, intellectual property, and business organizations. Students read judicial opinions, learn to identify issues, and analyze the issues by applying legal principles.

H ADM 386 (formerly 357) Insurance and Risk Management
Fall, spring. 3 credits. Prerequisite: an introductory accounting or business course. Elective. A. Klausner. A comprehensive look at risk management within a general business and institutional environment. The course reviews insurance and non-insurance solutions to controlling loss, the general legal environment within which risk management processes work, and the integration of crisis management into the overall corporate risk management plan. Risk management is a systematic process for dealing with loss exposures from accidental or unintended events such as fire, personal injury, and lawsuits.

H ADM 387 Business and Hospitality Law
Fall, spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. D. Sherwyn. Provides students with an integrated presentation of employment discrimination, tort, and contract concepts as they apply to the legal aspects of hospitality management. The course examines relevant federal and state cases and statutes. The overall objective is to enable students to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions in the workplace.
in the Statler Hotel is a required course activity.

[H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience
Fall. 3 credits. Prerequisites: H ADM 165 and H ADM 305 or permission of instructor. Limited to 20 Hotel students with written approval of the instructors. Elective. Requires field trip at a cost of approximately $350. Not offered Fall 2002. Trains students to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic/reviewer is discussed in depth. Students have the opportunity to examine and enhance his/her critical writing skills, as the course requires each student to complete approximately ten restaurant reviews. A class "editorial board" chooses reviews to be distributed to the School of Hotel Administration students, faculty, and staff via a class newsletter.]

[H ADM 333 Current Issues in Food Safety and Sanitation
Spring. 2 credits. Elective. T. O'Connor. A study of current issues in food safety sanitation procedures, and regulations which affect managerial decisions in food service and hospitality operations including: risk assessment and hazard analysis, legal responsibilities related to food, the food handler, equipment and facilities; food-borne illness and other public health concerns; and certification and training. Students apply this knowledge through food service inspections with the N.Y. Health Department and self-inspections at the Statler Hotel. Preparation for the NRA Applied Foodservice Certification exam is offered with this course. Certification exam is optional.

[H ADM 334 Wine and Food Pairing Principles and Promotion
Spring. 2 credits. Elective. T. O'Connor. A study of current issues in wine safety sanitation procedures, and regulations which affect managerial decisions in food service and hospitality operations including: risk assessment and hazard analysis, legal responsibilities related to food, the food handler, equipment and facilities; food-borne illness and other public health concerns; and certification and training. Students apply this knowledge through food service inspections with the N.Y. Health Department and self-inspections at the Statler Hotel. Preparation for the NRA Applied Foodservice Certification exam is offered with this course. Certification exam is optional.

[H ADM 339 Wine in Culture and History—I
Fall. 2 credits. Note: students may not add the course after the second lecture. Elective. A. Nash. Regions: Germany, Italy, and Champagne. Provides students a cultural and historical perspective on wine and its place in society. Through lectures, videos, guided discussions, and readings, students examine the history, people, culture, and production of wine in the world's great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies.

[H ADM 430 Introduction to Wines
Fall. 3 credits. Prerequisites: H ADM 305 or permission of the instructor. Limited to 20 Hotel juniors, seniors, and graduate students. Elective. A. Nash. Designed to introduce students to the different types of wine and wine service. Students learn about the different types of wine, how to taste and evaluate wine, and how to serve wine. The course includes a field trip to a local winery and a wine tasting event.

students are exempt from the 21-year-old age requirement under Section 65 of New York State law. Preregistered students who do not attend the first class and fail to notify the secretary in 274 Statler of their absence before the first class are automatically dropped from the instructor's records. Because of the high demand for this course and because a product is consumed, the absolute drop deadline in the fall is Friday, September 13, 2002, and the drop deadline in the spring is Friday, January 31, 2003. Course fee of $30.00 includes the cost of a wine glass kit. No auditing allowed. Elective. S. Matuszkis. A. Nash.

An introduction to the major wine-producing regions of the world, and what the consumer needs to know to purchase wine at retail and appreciate the wine's qualities. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wine, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

[H ADM 432 Contemporary Healthy Foods
Fall. 3 credits. Prerequisites: H ADM 305 or equivalent. Limited to 20 Hotel juniors, seniors, and graduate students, or by permission of the instructor. One field trip is required (cost $50). Elective. M. Tabaci. Designed to build a greater awareness and understanding among students of the foodservice professionals of the origins and manifestations of today's health conscious and educated food service patron. The course addresses the marriage of nutrition and the imaginative, flavorful cuisine demanded by today's consumer. Emphasis is on the use of fresh produce, lean meats, and lack of fabricated diet foods. Creativity and nutrient density of foods served are very important aspects of the curriculum. Students will be introduced to current trends in dessert menus as well as profitability considerations. Lab work concentrates on techniques necessary to produce a high-quality, profitable dessert menu.

[H ADM 435 Selection, Procurement, and Supply Management
Fall. 3 credits. Students may enroll in Lecture 1 or Lecture 2 or both. Lec. 1—First seven weeks of the semester—selection, procurement, and supply management I. Limited to 20 Hotel juniors, seniors, and graduate students, others by permission. Drop deadline is September 5, 2002. This course deals with contemporary management issues related to the procurement activities of the hospitality industry. The course focuses on the food industry and the hospitality industry. Students learn the role the distributor plays in the movement of food and supplies.

HOSPITALITY FACILITIES AND OPERATIONS

Food and Beverage Management

H ADM 436 Culinary Theory and Practice
Fall. 3 credits. Prerequisite: H ADM 106. Required. Note: preregistered students who do not attend the first lab may be dropped from the instructor's record. R. Spies, R. White, T. O'Connor. Designed to introduce students to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety. Students prepare recipes, menus, and production schedules. Students develop the ability to recognize properly prepared foods through preparing, tasting, and evaluating foods. They also plan menus, develop recipes, and produce them in a final project. Completion of work experience
from the producer to the hospitality operator, and how the creation of distributor partnerships serves to improve efficiency and reduce costs. Topics covered include: distribution channels and intermediaries in the supply chain, food distributor financial statement analysis, evaluation and selection of suppliers, developing buying strategies, purchase timing and inventory management, the emerging role of the internet and e-procurement service providers.

Lec. 2—Second seven weeks of the semester—Selection, Procurement, and Supply Management in the hospitality industry: beef, veal, lamb, pork, poultry, game, and seafood. The course focuses on the selection decisions that will be faced when managing the procurement of these products in a foodservice operation. Topics covered include: composition and structure, government inspection and grading activities, product identification, factors affecting palatability and safety, yield tests, cost analysis of fabrication, and sensory evaluation.

H ADM 436 Beverage Management Spring. 2 credits. Prerequisites: H ADM 430. Co-registration is not allowed. Limited only to 25 Hotel juniors, seniors, and graduate students. Elective. S. Mutchkoski, A. Nash. Designed for students who intend to pursue food and beverage management as a career. The course deals specifically with the management of beverage operations. Lectures cover: dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development, purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lectures highlight industry trends and outlooks.

H ADM 438 Seminar in Culture and Cuisine Fall. 3 credits. Prerequisites: H ADM 165 and H ADM 290/230 or permission of the instructor. Limited to 20 students. Elective. R. Spies. This seminar explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines enabling students to make competitive and dinner choices among foodways of different cultures. Possible incorporation of each cuisine into restaurant menus is discussed as well. Each student is involved in doing research reports, oral presentations, and developing and naming the preparation of menus.

H ADM 439 Wine in Culture and History—II Spring. 2 credits. Elective. Note: students may not add the course after the second lecture. A. Nash. Requirements: Borderlands, Burghundy, and California. Provides students a cultural and historical perspective on wine and its place in society. Through lectures, videos, guided discussions, and readings students examine the history, people, culture, and production of wine in the world's great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies.

H ADM 530 Anheuser Busch Seminar in Quality Brewing and Fine Beer Fall. 2 credits. Prerequisite: H ADM 430. Offered only the second seven weeks of the semester only. Elective. G. Pezzotti. Designed for upper-level students who intend to pursue food and beverage careers. The course serves to advance one's knowledge about beers in terms of managing such products in a restaurant setting or other foodservice outlet. Lecture topics include the brewing process, sensory aspects of beer, international beer types and styles, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls and third party liability issues. There is one required field trip.

H ADM 634 (formerly 644) Food and Beverage Marketing Strategy Spring. 3 credits. Prerequisite: completion of at least one marketing course. Limited to graduate students (seniors by permission). Elective. T. Kelly. Teaches students how to apply marketing, sales, and merchandising techniques to the commercial food and beverage industry. The course addresses: developing a market segmentation based upon understanding the needs and wants of potential target markets; translating needs and wants into a viable foodservice concept strategy; ground marketing strategies used to maintain and increase sales and marketshare. Course recitation work and analysis involve substantial use of the Consumer Report on Eating Share Trends (CREST) database as provided to Cornell through a special agreement with National Purchase Diary Group, Inc. (NPD).

Operations

H ADM 105 Introduction to Lodging Fall, spring. 3 credits. Limited to Hotel and ITD students only. Required. R. McCarthy. Designed to provide students with a comprehensive, fundamental understanding of how hotels are managed from the room perspective. Through practical hands-on experiences, students are exposed to operational line-level positions in the rooms division including: housekeeping, reservations, front desk, PBX, and bellstand. Lectures will begin with an overview of the lodging industry and focus on the managerial aspects of the rooms division. Topics covered include: revenue management, forecasting, budgeting, measuring performance, transient versus group displacement, pricing and inventory management, service quality, ethics, and technology. During the course of the laboratory portion of the course students apply what they have learned in class while operating their own virtual 250 room hotel using the CHESS computer simulation. Guest lecturers provide students with insight to various career opportunities in the operations or rooms related areas.

H ADM 106 (formerly 136) Introduction to Food Service Operations Fall, spring. 4 credits. Limited to 30 Hotel students per section. Required. D. Reynolds, A. SUSkind. An introduction to the principles of food and beverage management, beginning with an overview of the food service industry at large. Attention is focused on major industry segments, business practices and trends. Subsequently, detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, and controls and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout. Completion of a work experience in the Statler Hotel is a required course activity.

H ADM 301 (formerly 371) Hospitality Quantitative Analysis Fall, spring. 3 credits. Limited to 60 Hotel students per lecture. Limited to 20 students per section. Required. G. Thompson. Introduces statistical and operations research methods appropriate for the hospitality industry. The goal of the class is to provide students with the skills and understanding necessary for decision making using quantitative data. Students use computer spreadsheet software extensively. The requirement of the course is an ability to communicate the results of the analyses in a clear manner. Topics include: probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, project management.

H ADM 303 Club Management Fall, spring. 2 credits. Not open to freshmen. Second 7 weeks in the fall limited to 35 Hotel juniors and seniors who must have completed H ADM 105 or equivalent. First 7 weeks in the spring open enrollment. The deadline to drop a seven-week course is the mid-point of the course. Elective. R. James. The study of private membership clubs and the leadership role in club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry and other not-for-profit organizations. Topical coverage includes: tournaments, facility, and membership management; legal, financial, and legislative issues; human relations and financial consideration; and marketing, pricing policies, and quality standards.

H ADM 305 (formerly 335) Restaurant Management Fall, spring. 4 credits. Prerequisites: H ADM 105 and H ADM 230. Limited to 24 Hotel students per lab. Approximate cost of lab manual, certification for alcohol service, utensils for front and back of house is $85.00. Required. D. D'Aprix, S. Gould. A restaurant management course combining lectures with a restaurant operations lab. The lab portion of the class offers students the unique opportunity to operate and manage a full-service restaurant in the Statler Hotel. Lecture topics include operational issues, customer satisfaction, restaurant trends and challenges, financial accountability, service issues, and management development. Various aspects of production and service are experienced, discussed, and demonstrated. The lab is based upon an extensive hands-on managerial involvement, including the development of a business plan and post-analysis of the operation. Students become familiar with all aspects of a restaurant operation.
well as proper application of food and beverage management principles.
The analysis considers consumer reaction as background and work with the class in the course of the semester, the class, working in groups, is responsible for the marketing, organizational structure, operational configuration, and utilizing student-developed case studies, to build on their food and beverage and hotel management with particular focus on off-premise and on-premise catering for social and business functions, and the management of large scale events such as sporting events, artistic performances, and product launches. Topics include: organizational structure, legal aspects of catering and special events management, product and service development, marketing and sales, catering function and special event planning and execution, staff recruitment and training, post event analysis, financial success of catering, and special events businesses.

H ADM 407 Seminar in Hotel Operations
Fall. 3 credits. Limited to 30 juniors and seniors. The estimated cost of the field trip is $250. Elective. M. McCarthy.

In this seminar-style class student develop their leadership abilities through a series of hands-on projects for the Statler and Waldorf-Astoria hotels. Students gain experience by identifying problems and challenges of a project, creating a plan, and carrying out the leadership responsibilities that will result in others successfully implementing their recommendations. Drawing on their specific knowledge and skills, in all the academic disciplines, students take a broader perspective on the hotel as a business organization. They investigate the combination of human and technical forces that make a hospitality business successful. The course is focused on reconciling the real or apparent conflicts between theory, as learned in the students' college courses, and practice, as observed in actual hotel operations. Upon completion of the course, students will be able to evaluate issues and formulate cogent strategies for managing hotel operations.

H ADM 413 (formerly 437) Specialty Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Prerequisites: H ADM 305 or H ADM 702 with permission of the instructor. Limited to 20 hotel juniors, seniors, and graduate students with permission of the instructor. Elective. G. Pezzotti.

Designed for students focusing in food and beverage preparation. Students considering a career in the hotel or restaurant food and beverage environment or those who anticipate interacting with these culinary trends will find the course especially beneficial. Over the course of the semester, the class, working in groups, is responsible for the marketing, organizational planning, production, service, financial analysis, and accounting relative to three guest chef specialty production nights. The chef will be asked to recommend the evening's menu reflecting his/her culinary background and work with the class in producing the meal for the Cornell community using the Hotel facility. A final project is required analyzing the degree of service experienced by each guest chef event. The analysis, consumer reaction as well as proper application of food and beverage management principles.
Virgin Atlantic have become synonymous with competitive advantages by airline carriers. In superior service in today's erratic economic service excellence in a service economy. The fact, names such as Singapore Airlines and service and on board services are used as upon the industry will be investigated. Airline in the airlines industry. The impact of 9/11 SkyChefs will be featured, in addition to Singapore Airlines, US Airways. Delta, sion. Guest speakers from American Airlines, Singapore Airlines, US Airways, Delta, Continental Airlines, Virgin Atlantic, and SkyChefs will be featured. In addition to service strategies both on the ground and in the air, students will study the challenge of serving meals on international flights. Strategies, planning, and forecasting by these executives will be examined. Case studies based upon National and International airline business will be an integral part of the course. A field trip to an airline's hub city enables students to observe first hand the industry and its and its personnel in action.

H ADM 701 (formerly 771) Quantitative Methods
Fall. 3 credits. Open to MMH students only, except by written permission of the instructor in advance of preenrollment. MMH Requirement. S. Kimes. Covers statistical and operations research techniques introduction to the inferences to the hospitality industry. Topics covered include descriptive statistics, probability, sampling, correlation and regression, forecasting, and yield management. The emphasis is on hands-on application to hospitality problems.

H ADM 702 (formerly 731) Food and Beverage Management
Spring. 3 credits. Open to MMH students only, except by written permission of the instructor in advance of preenrollment. MMH Requirement. S. Kimes. Covers statistical and operations research techniques introduction to the inferences to the hospitality industry. Topics covered include descriptive statistics, probability, sampling, correlation and regression, forecasting, and yield management. The emphasis is on hands-on application to hospitality problems.

H ADM 255 Hospitality Development and Planning
Fall, spring. 3 credits. Limited to 20 per section. Limited to sophomores, juniors, and seniors. Required. S. Robson. An introduction to the laws and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include the project development sequence, conceptual and space planning criteria, construction management, and the interpretation of architectural design and consultant drawings. The emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 351 Hospitality Facilities Design
Fall. 4 credits. Prerequisites: H ADM 255 or H ADM 751, or permission of instructor. Limited to 12 students per section. Elective. R. Penner. A lecture/studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. A final project deals with the design or analysis of a major lodging facility.

H ADM 352 Hotel Planning and Interior Design
Spring. 3 credits. Prerequisites: H ADM 351 or permission of instructor. Limited to 18 students. Elective. R. Penner. A project course in which student teams develop operational criteria and a complete interior design presentation for a new hotel or major renovation. The early semester includes a number of short design exercises. A field trip to a northeastern city (week four or five) introduces students to the hotel and its requirements. During the rest of the term, the teams replan the hotel public areas and guestrooms, develop conceptual designs, establish preliminary budgets, and assemble presentation boards to describe the design.

H ADM 353 Foodservice Facilities Design
Spring. 3 credits. Prerequisites: H ADM 251 and H ADM 305 (coregistration or other commercial food production experience is acceptable) or permission of the instructor. Limited to 12 students in each section. Elective. S. Robson. An introduction to the basic concepts of foodservice facilities design and planning with an emphasis on restaurants. Students determine space allocations for the front and back of house areas, develop production work flow in the preparation and service areas, and select equipment using standards for production capacity, quality of construction, and the ease of maintenance. All documentation is produced on CAD, which is taught as part of the weekly studio. Students also use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 354 Computer-Aided Design
Fall, spring. 2 credits. Attendance at first class meeting is mandatory! Some computer experience is highly recommended. Prerequisite: H ADM 351 or equivalent studio experience. Limited to 24 students in each lecture. Elective. S. Curtis. Develops an understanding of the features, limitations, and considerations associated with the operation of computer-based CAD systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids and other characteristics of CAD. Students spend time learning the program in the school's computing center and develop a complete graphic presentation. Emphasis is placed on the use and operation of CAD systems in a commercial document production environment.

H ADM 355 Hospitality Facilities Operations
Fall. 3 credits. Prerequisite: H ADM 255. Limited to 18 students per section. Elective. R. Penner. An overview of the operation of hospitality facilities, including operating costs for various types of hospitality businesses and strategies for maintaining profitability. The responsibilities of the management and operations department will be investigated. The renovation needs of hospitality facilities are examined and key management aspects of renovation considered.

H ADM 356 Security and Loss Prevention Management
Spring. 3 credits. Limited to sophomores, juniors, seniors, and graduate students. Elective. D. Sipanuk. A comprehensive look at risk management within the hospitality industry. The course addresses issues of loss control for hospitality firms. Using a risk management conceptual framework, issues in fire protection, customer and workplace safety, OSHA, and customer and corporate security are analyzed.

H ADM 452 Sustainable Development and the Global Hospitality Industry
Fall. 3 credits. Limited to seniors and graduate students. An overnight field trip is a required course activity. Cost for lodging and transportation estimated at $100, meals are additional. Elective. D. Sipanuk. A multi-dimensional course introducing the global sustainability and environmental movements, their impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings are drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to introduce a variety of viewpoints regarding issues of contemporary interest to society and the hospitality industry. Discussion of these issues is a key component of the course.

H ADM 454 Advanced Computer-Aided Design and 3D Visualization
Spring. 3 credits. Prerequisite: H ADM 354 or equivalent introductory AutoCAD course. Limited 24 students. Elective. S. Curtis. Computer-Aided Design has grown beyond its traditional use as a tool to draft draw and documents. This course gives students an understanding of the more advanced capabilities of AutoCAD as they apply to 3D surface and solid modeling. This course also explores the use of 3D Studio VIZ, a 3D modeling and animation program from AutoDesk, in creating 3D models that can be used to produce photo-realistic renderings and animations. Course material is learned by completing weekly project assignments and a final project.
Takes a managerial approach to hospitality facilities addressing issues of owning and operating cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. This year there will be a particular emphasis on environmental issues such as indoor air quality, waste management, and emerging removal. Extensive use of the World Wide Web is anticipated.

**H ADM 457 Hotel Development**
Fall. 3 credits. Limited to juniors with permission, seniors and graduate students.

Overnight field trip required. Cost for lodging and transportation estimated at $100. Fees are additional. Elective. D. Stapanuk

Focuses on the management structure and systems, laws and regulations, and industry practices that most influence the successful development of hospitality real estate, including lodging and eating facilities. Topics include: market studies, franchise requirements, governmental approvals, design construction contracts, the construction process, scheduling, budgeting, and emerging issues and opportunities. Guest speakers present case studies of actual development projects.

**H ADM 751 Properties Development and Planning**
Spring. 3 credits. Open to MMH students only, except by written permission of the instructor in advance of preregistration. Limited 30 students per section. MMH Requirement. M. Redlin.

Provides an overview of project development, hotel planning, and the construction process including the role of the development team, feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, construction management, contracts, and scheduling. Student teams prepare in conjunction with other (MMH) core courses the program documentation for a new hotel or one undergoing major rehabilitation.

**H ADM 141 (formerly 191) Microeconomics for the Service Industry**
Fall, spring. 3 credits. Limited to 60 Hotel students per lecture. Required. B. Carroll.

Introduces the basic principles of microeconomics and teaches students how they apply to managers of enterprises associated with the hospitality industry. Special emphasis is placed on methods of market segmentation in the service industries, analyzing economic incentives for price discrimination, and the nature of competition in various segments of the service industry.

**H ADM 241 Marketing Principles**
Fall, spring. 4 credits. Limited to non-Hotel students. Elective. Not offered fall 2002.

Faculty

This introductory course provides a basic understanding of consumer purchase decision-making, product planning, distribution, promotion, and pricing. Actual companies and their current marketing strategies are examined to better understand these fundamental tenets of marketing and how they contribute to the success of strategic planning. Students who take H ADM 241 participate in the lecture and the section activities.

**H ADM 243 Marketing Management for the Hospitality Industry**
Fall, spring. 3 credits. Limited to 60 Hotel students per lecture, not open to freshmen. Required. Elective. M. Sigauw.

Helps students acquire the knowledge and skills necessary to get and keep profitable customers in today's competitive business environment. The class covers topics such as product quality, branding, pricing, personal selling, advertising, sales promotions, market segmentation, target marketing, product positioning, and marketing research. Applications of the material to the hospitality industry are stressed through class exercises, assignments, and essay exams.

**H ADM 340 (formerly 306) Franchising in the Hospitality Industry**
Fall. 2 credits. Not open to freshmen. Offered during the second seven weeks of the semester. Elective. M. Noden.

Deals with relationships between the franchisor and franchisee, advantages and disadvantages of franchising, structure of and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. There are also guest speakers from the franchising industry.

**H ADM 343 Marketing Research**
Fall. 3 credits. Prerequisites: introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Limited to 32 students. Elective. W. Neu.

Provides students with a strong foundation for conducting future marketing research and interacting with providers of marketing information. The process used to plan for, collect, analyze, and use information to aid in marketing decision making is explained. Topics include marketing research and research problems, research designs, information types and sources, methods of data collection, survey design, sampling, data collection and analysis, and presentation of findings. Topics covered through a variety of readings, discussions, and individual and group exercises. In addition, students work in small teams to conduct a marketing research project.

**H ADM 344 Tourism I**
Fall. 2 credits. Not open to freshmen. Offered during the second seven weeks of the semester. Elective. M. Noden.

An introductory course in the study of tourism. The origins and evolution of contemporary tourism are carefully examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass volume tourist demand on destination development are explored through the use of selected limited case studies and the franchising industry. Highlight the economic operations and effects of tourism in both the public and private sectors.

**H ADM 345 Hospitality Sales**
Spring. 3 credits. Prerequisite: H ADM 243, H ADM 421, or written permission of instructor. Limited to 24 students. Elective. M. Sigauw.

An in-depth study of the promotional tool of personal selling, with an emphasis on identifying and meeting the needs of the customer. Course material encourages the use of intuition, judgment, logic, problem-solving methodology, and other tools as part of the overall sales mix. The class sessions involve lectures, role plays, videos, presentations, and guest lectures.

**H ADM 347 Consumer Behavior**
Spring. 3 credits. Prerequisite: introductory principles of marketing or marketing management course. Limited to 45 juniors and seniors. Elective. M. Lynn.

Helps students become better at understanding, predicting and influencing consumer behavior. This course examines, motivation, perception, learning, decision making, persuasion, compliance, geodemographics, and psychographics. Applications of the material to hospitality marketing issues such as guest frequency programs, menu design, advertising and personal selling and promotion strategy are stressed through class exercises, term papers, and essay exams.

**H ADM 441 (formerly 401) Strategic Management**
Fall. spring. 3 credits. Prerequisites: H ADM 105, H ADM 115, H ADM 211, and H ADM 321. Elective. W. Neu.

Because of the group project nature of the course, the absolute drop deadline for all students is September 6, 2002. Required. Faculty

This is a senior management, broadly based and encompassing course that integrates almost all functional areas including: marketing, human resources, finance, rooms operation, accounting, economics, and asset management. The issues of strategic management necessitate total enterprise, rather than competitive perspectives. Strategic skills involve judging how relevant factors affect the business organization. The course introduces a number of models, methods, and techniques used to develop strategic thought, to generate action plans, and to assess changes. These introductions and the course project stress the need for continuous review of environmental opportunities to maximize the well being of all stakeholders.

**H ADM 442 Strategic Marketing**
Fall. 3 credits. Prerequisite: a previous marketing course. Limited to seniors. Elective. Not offered fall 2002.

Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles are learned through lectures, discussion, case studies, and development of a strategic marketing report.

**H ADM 444 Tourism II**
Spring. 3 credits. Prerequisite: H ADM 243, or equivalent, or written permission of instructor. Limited to juniors, seniors, and graduate students. Elective. M. Noden.

An advanced course in the study of tourism. Emphasis is placed upon the development of the tourism industrial bases and the development and financing of superstructure and infrastructure. Students are expected to engage in a wide range of discussion and analysis of the effects of tourism upon various environments, in social and economic terms. Case studies of various tourism-generating
This is a university-wide course that investigates the innovation process and how to develop and manage new products. Innovative firms are studied via case analyses, and a framework for effective change management is devised by the end of the semester. Emphasis is placed on examining how businesses and industries can build profitable organizations through a process of rethinking, re-evaluating, and discarding existing practices. The class operates as a seminar with several hands-on experiences in innovation.

H ADM 445 Services Marketing
Fall. 3 credits. Prerequisite: a previous marketing course or permission of the instructor. Limited to 40 students. Elective. Not offered fall 2002. Helps students preparing for management positions develop an understanding of services marketing and the marketing principles applicable to the hospitality industry. Marketing strategies of service firms are evaluated. These include hotels, restaurants, travel agencies, consulting firms, and airlines. New marketing approaches uniquely applicable to services are considered as well as the reformulation of traditional marketing principles from consumers and industrial goods marketing. Class sessions consist of lectures, case discussions, exercises, and guest speakers.

H ADM 446 Marketing Planning for Hotels
Spring. 3 credits. Prerequisites: H ADM 243, H ADM 741 or equivalent. Elective. Not offered spring 2003. Effective property level marketing management is critical for organizations operating in a competitive business environment. Students learn about the key variables in property level management and their proper application in developing a marketing plan including: marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies, and measurement of results. The course uses text material, cases, relevant articles, lectures, and key speakers. Upon completion of the course, students are able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.

H ADM 447 Channels of Distribution in Tourism
Spring. 3 credits. Prerequisite: H ADM 243. Juniors and seniors. only. Elective. M. Noden. Examines the major elements of the structure, arrangement, management, and control of the channels of distribution in the tourism industries. Emerging trends in electronic distribution are explored. Organizational structures of distributive consortia, and their effectiveness in service distribution, are examined. Students are expected to engage in a significant amount of exploratory reading in a wide range of media which address distribution in the tourism industries. Occasional guest lectures are presented by industry experts in tourism distribution.

H ADM 448 Marketing Communications
Spring. 3 credits. Prerequisite: a previous marketing course. Seniors only. Elective. Faculty. Provides students with a managerial understanding of the effective use of a variety of marketing communication media, including: advertising, sales promotion, and public relations. Applications to the hospitality industry are emphasized.

H ADM 449 (formerly 410) Innovation and Dynamic Management (also AEM 328)
Spring. 3 credits. Limited to juniors and seniors. This course is cross-listed as AEM 328 for non-Hotel students. Elective. C. Enz.

H ADM 450 (formerly 692) Industry Challenges and Trends
Fall, spring. 3 credits. Limited to 15 seniors and graduate students. Not offered 2002-2003. Elective. Faculty. A seminar approach is used to discuss readings and case studies selected to illustrate current challenges and future trends such as globalization and consolidation in the hospitality industry. The view is futuristic and primarily from that of a multi-unit/corporate perspective. An in-depth analysis of a few specific companies is included using case studies and guest lecturers as appropriate. Student teams research new topics and make presentations and final reports.

H ADM 461 Marketing Decision Models for Service Firms
Fall. 3 credits. Prerequisites: a principles of marketing or marketing management course and introductory course in quantitative methods for management. Limited to 20 seniors and graduate students. Elective. Not offered fall 2002. Faculty. Introduces the student to advanced data analysis models and methods used for decision making in hospitality marketing.

H ADM 462 Strategic Marketing
Fall. 3 credits. Prerequisites: a previous marketing course and permission of instructor. Limited to graduate students. Elective. Not offered fall 2002. Faculty. Focuses on theoretical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles are learned through lectures, discussion, case studies, and development of a strategic marketing report.

H ADM 463 Marketing Research
Spring. 3 credits. Prerequisites: introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. Not offered spring 2003. Prepares future managers to conduct marketing research and effectively employ the services of marketing research firms. The process used to plan for, collect, analyze, and use information to aid in marketing decision making is explored. Topics include marketing management and research problems, research designs, information types and sources, methods of data collection, survey design, sampling, data collection and analysis, and presentation of findings. Topics are covered through a variety of individual and group exercises. In addition, students work in small teams to conduct a marketing research project.

H ADM 465 Services Marketing
Spring. 3 credits. Prerequisite: a previous marketing course or approval of the instructor. Limited to graduate students. Elective. Faculty. Helps students preparing for ownership or management positions develop an understanding of services marketing and the marketing principles applicable across the entire service sector. Marketing strategies of service firms from various service industries are evaluated. These include hotels, banks, restaurants, health care providers, travel agencies, consultants, and airlines. New marketing approaches uniquely applicable to services are considered as well as the reformulation of traditional marketing principles from consumers and industrial goods marketing. Class sessions consist of lectures, case discussions, exercises, and guest speakers.

H ADM 466 Marketing Planning for Hotels
Fall. 3 credits. Prerequisites: H ADM 243, H ADM 741 or equivalent. Limited to graduate students. Elective. Not offered fall 2002. Faculty. Effective property level marketing management is critical for organizations operating in a competitive business environment. Students learn about the key variables in property level management and their proper application in developing a marketing plan. These variables include marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies, and measurement of results. The course uses text material, cases, relevant articles, lectures, and key speakers. Upon completion of the course students should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.

H ADM 467 Consumer Behavior
Fall, spring. 3 credits. Prerequisite: introductory principles of marketing or marketing management course. Elective. Not offered 2002-2003. Faculty. Helps students become better at understanding, predicting, and influencing consumer behavior. This class covers topics such as motivation, perception, learning, decision making, persuasion, compliance, geographic demographics, and psychographics. Applications of the material include marketing issues such as guest frequency programs, menu design, advertising, personal selling, and promotion strategy are stressed through class exercises, a term paper, and essay exams.

H ADM 740 (formerly 701) Competitive Strategies for the Hospitality Industry
Fall. 3 credits. Open to MMH students only, except by written permission of the instructor in advance of pre-enrollment. MMH Requirement. Faculty. The integration and application of management concepts, theories, and practices to business situations. Students analyze current problems, formulate strategies, and implement policies.

H ADM 741 Marketing Management
Spring. 3 credits. Limited to first year MMH students. MMH Requirement. M. Noden. Deals with the management of the marketing function in hospitality enterprises. The primary objectives of the course are to introduce students to the basic concepts and principles underlying marketing decision making, and to provide the skills needed to analyze and understand complex marketing situations in order to plan and implement marketing programs.

H ADM 125 Finance
Fall, spring, 3 credits. Limited to under-graduate non-Hotel students only. Elective.
S. Gibson.
Prerequisites: H ADM 121 or H ADM 721, or equivalent. Required. C. Gadarowski.
Focuses on the design, implementation, and control of management accounting and financial management systems. Students are introduced to a variety of techniques for improving the design and implementation of management accounting and financial management systems. Topics include: budgeting, variance analysis, cost behaviour, and capital budgeting. Students are required to apply this knowledge to a simulated investment portfolio (the Investment Management Game) during the course of the semester.

H ADM 221 Managerial Accounting
Fall, 3 credits. Prerequisites: H ADM 121 and H ADM 174, or equivalents. Required.
C. Gadarowski.
Focuses on the use of accounting information for management decision making and control. Topics include product costing, budgeting, management decision making, and control systems. There is one common exam at the end of the semester.

H ADM 222 Finance
Spring, 3 credits. Prerequisites: H ADM 121, H ADM 221, or equivalents, or permission of instructor. Limited to Hotel students, others by permission. Required.
S. Gibson.
Provides students with accounting cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and short-term and long-term financial decision-making. Topics include: current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.

H ADM 321 Hospitality Financial Management
Fall, spring, 3 credits. Prerequisites: H ADM 121, H ADM 221, and H ADM 222, or equivalent of instructor. Each section limited to 54 Hotel students. Required.
A. N. Geller.
Integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretative and analytical skills of each to hospitality industry situations. Course topics provide an understanding of: the analysis and interpretation of financial statements and operating reports, the budgeting and forecasting process, the application of C-V-P and other decision models to hospitality operations, operating agreements, capital investment analysis, financial feasibility, project and general financing, valuation techniques, and measuring value for important stakeholders.

H ADM 322 Principles of Investment Management
Fall, spring, 3 credits. Limited to students outside the School of Hotel Administration. Students with background in economics, quantitative analysis, and computers are advised to consider H ADM 424 Security Analysis and Portfolio Management. Elective. C. Gadarowski.
Covers basic institutional and analytical aspects of investment and asset management. Topics include: investment markets. To that end, students are required to apply concepts and tools to managing a simulated investment portfolio (the Investment Management Game) during the course of the semester.

H ADM 323 Hospitality Real Estate Finance
Spring, 3 credits. Prerequisite: H ADM 321 or equivalent. Limited to juniors and seniors (graduate students must enroll in H ADM 621). Elective. D. Quan.
Focuses on real estate financing for hospitality-oriented projects. The following topics are addressed: methods of measuring rates of return, feasibility and appraisal processes, equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible and seller-financed mortgages, forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel franchising. Presentations of hospitality industry real estate practitioners tie course material to current industry practices.

H ADM 324 International Financial Management
Fall, spring, 3 credits. Prerequisites: H ADM 121, H ADM 221 and H ADM 222 or equivalents, Micro and Macroeconomics. Elective. Not offered fall 2002. Faculty.
Focuses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. The major areas of coverage are: the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

H ADM 326 Corporate Finance
Fall, 3 credits. Prerequisite: H ADM 321.
Limited to juniors and seniors. Elective.
S. Gibson.
Course provides in-depth analysis of corporate financial management including financing alternatives and capital structure decisions, cash management and working capital management, capital budgeting decisions, risk analysis, valuations of real options, and Economic Value Added analysis. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. The course emphasizes analytical methods through case studies and a semester project.

H ADM 421 Internal Control in Hospitality Operations
Spring, 3 credits. Prerequisites: H ADM 321, H ADM 727, or equivalent. Limited to 30 students. Elective. A. N. Geller.
Deals primarily with operations. Generally, hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. Specifically, the design and distribution of production, accounting, information systems, and supervisory tasks are studied in a manner that ensures effective internal control and verifiable audit trails. The course includes hands-on case studies of actual frauds perpetrated in hotel and restaurant operations.

H ADM 422 Taxation and Management Decisions
Fall. 3 credits. Limited to 50 juniors, seniors, and graduate students. Elective.
S. Gibson.
An introduction to tax advantages and disadvantages of various organizational structures, including: corporations, partnerships, subchapter "S" corporations, financial information reporting to authorities and to shareholders and how this reporting differs; use of depreciation methods to achieve tax reductions; and syndication techniques and role the tax laws play in promoting private investments and development.

H ADM 423 Financial Management Policy
Building on the course prerequisites, this class further develops a theoretical and applied understanding of corporate finance. The goal is to gain insights into methods by which financial managers can create value for their stakeholders. Among the specific topics studied are equity valuation techniques, capital structure and corporate strategy, the effect of financing decisions on operating assets and managerial incentives, bankruptcy costs and financial stakeholder conflicts, the information conveyed by financial decisions, and real options.

H ADM 424 Security Analysis and Portfolio Management
Fall, spring, 3 credits. Prerequisites: macro and micro economics, introductory course in statistics and/or quantitative analysis, and knowledge of computers beyond word processing. Limited to juniors, seniors, and graduate students. Elective.
G. Gadarowski.
Provides an introduction to securities analysis and portfolio management but with an emphasis on the analysis of individual securities. As a basis, the course covers the various securities analysis, portfolio management, portfolio theory, and analysis of expected return based on risk. Next, the course covers the valuation of individual equity and debt securities. Throughout the semester-long term project, students are required to apply concepts and tools covered in the course to develop an investment recommendation on a publicly traded security. Recent developments in investments research are covered and current financial databases are used for practical applications of the models and techniques presented in the course in developing this recommendation.

H ADM 525 Securitization and Structured Financial Products
Fall. 3 credits. Prerequisites: H ADM 222 or H ADM 721, and H ADM 427 (or by permission of the instructor). Limited to 40 seniors and graduate students. Elective.
D. Quan.
Deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). The course is intended for those who wish to acquire a working knowledge in the analysis of such securities (such as collateralized mortgage obligations, commercial MBS, auto loan, and credit card backed securities) and an understanding of the securitization process. The course's subject matter necessitates a highly analytic and quantitative approach and
students are required to have a strong background in finance and economics. If you have any questions about your preparation or background, please see the instructor.

H ADM 526 Hotel Management Contracts
Spring. 1 credit. First seven weeks of the semester. Elective. J. Eyster. Management contracts are a major but controversial expansion vehicle for hotel operating companies. Controversy and conflict arise unless the three parties involved—owner, operator, and lender—adequately align their interests during contract negotiations and develop flexible relationships during the life of the contract. This course analyzes how each party assesses a proposed project from its own perspective; how equity and debt vehicles are structured to finance the project; how project return tradeoffs are priced in a dynamic capital market and how the firm’s cost of capital and capital structure are linked with shareholder wealth maximization. Cases are used to illustrate theory, and industry guest speakers conduct occasional seminars.

H ADM 624 Reporting and Analysis of Financial Statements
Fall, spring. 3 credits. Limited to 60 juniors, seniors and graduate students. Elective. P. Sinha. Designed to provide understanding of the basic accounting model, the underlying concepts for income measurement, and the accounting rules for the valuation of assets, liabilities and owners’ equity. Emphasis is placed on understanding the economic substance of business transactions and the implication of using alternate accounting rules on the resulting numbers, especially in assessing the “earnings quality”. Focus is from an outsider’s view of the company, and students should be able to evaluate and interpret the published financial information, specifically in the context of valuation, debt and compensation contracts, and credit assessment.

H ADM 721 Financial Economics
Fall. 3 credits. Open to MMH students only, except by written permission of the instructor in advance of pre-enrollment. MMH Requirement. S. Carvell. Integrates corporate finance with the framework of value maximization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

H ADM 722 Hospitality Financial Management
Spring. 3 credits. Open to MMH students only, except by written permission of the instructor in advance of pre-enrollment. MMH Requirement. G. Potter. Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems, financial analysis, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

Real Estate Development
H ADM 320 (formerly 350) Real Estate Management
Fall. 2 credits. Offered during the first seven weeks of the semester. Elective. J. deRoos. This introductory course is designed for students interested in learning the principles of property management for residential and commercial real estate. The lectures provide an overview of the different aspects of property management (leasing and management contracts (including landlord/tenant issues), accounting and finance, staffing, and building operations. Case studies focus on the dynamics of operating real estate assets.

H ADM 420 (formerly 450) Principles of Real Estate
Fall. 3 credits. Offered during summer session most years as H ADM 420/620. Prerequisite: H ADM 222 or equivalent. Limited to 50 juniors and seniors. Open to graduate students and permission. Elective. P. Chinloy. This survey course approaches real estate from four perspectives: investment, market, mortgage finance, and legal. Understanding these perspectives enables students to make better investment and financing decisions, to use real-estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real-estate investment, finance, and development.

H ADM 428 (formerly 458) Hospitality Real Estate Spring. 3 credits. Prerequisite: H ADM 323 or H ADM 420, or permission of instructor. Limited to 40 seniors or grad students. Elective. Not offered spring 2003. Expands the students’ understanding of the role of real estate in the hospitality business and, specifically, corporations. The course is designed for those who plan careers in the hospitality industry, but may be of interest to others. The objectives of the course are to develop an appreciation of real estate as a factor in the production of income of hospitality businesses; to develop an appreciation of real estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of valuing real estate, the approaches to valuation and contemporary hospitality valuation issues.

H ADM 429 (formerly 459) International Hospitality Development Spring. 3 credits. Limited to 30 seniors and graduate students. Elective. R. Penner. A seminar course covering the strategic development of international hospitality projects. Topics include corporate expansion strategies, the international development process, viewpoints of public and private stakeholders, and such development challenges as technology, infrastructure, environmental concerns, and public policy issues. Senior corporate guest lecturers will present and discuss new projects in such locations as Hawaii, Mexico, western and eastern Europe, Southeast Asia, and Latin America, and they will contrast these opportunities with development in the U.S.

H ADM 520 (formerly 550) Principles of Timeshare Development and Operations
Fall. 2 credits. Offered during the second seven weeks of the semester. Elective. J. deRoos. Provides an introduction to the rapidly growing timeshare and vacation ownership industry. Students learn how the four major business disciplines of financial management, real estate development, marketing, and sales and resort operations are specifically applied to the industry. The course makes use of guest speakers to supplement lecture and lab material. A course project and case studies give students the opportunity to study the nuances and challenges of the business.
H ADM 620 (formerly 651) Principles of Real Estate
Fall, 3 credits. Offered during summer session most years as H ADM 420/620. Prerequisite: H ADM 721 or equivalent. Limited to graduate students. Elective. P. Chinloy.

This survey course approaches real estate from four perspectives: investment, market, mortgage finance, and legal. Understanding these perspectives enables students to make better investment and financing decisions, to use real estate resources wisely, to understand public policy decisions, and to be prepared for additional courses in real estate investment, finance, and development. This course includes much of the material in the H ADM 490 plus special topic sessions that feature guest speakers from industry, faculty from other colleges, and case studies.

H ADM 628 (formerly 658) Real Estate Finance and Investments
Spring, 3 credits. Prerequisites: H ADM 323 or H ADM 621, H ADM 450 or H ADM 651. Limited to 40 graduate students. Elective. O. G. Norkus.

Promotes sound real estate investment and finance decision-making, use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through applications of an extended version of the after-tax discounted cash flow model, and other valuation models including option pricing models and regression models. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are extensively covered. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

OTHER

H ADM 290 (formerly 230) Introduction to Culinary Arts
Fall, spring. 2 credits. Limited to 28 non-Hotel students. priority is given to seniors and graduate students. There is a course fee of $75, which includes the cost of a uniform and uniform cleaning. Next: preregistered students who do not attend the first class are automatically dropped from the instructor's record. The absolute drop deadline for this course is by Wednesday of the second week of classes. Students on the waitlist will be selected through a lottery system. All lottery participants must attend the first week's session most years as H ADM 290/230. Fall, spring. Variable prerequisite: written permission. Limited to Hotel juniors and seniors. Cost is estimated at $200. Elective. G. Norkus.

Student elected board members of Hotel Ezra Cornell receive free elective credit for their participation in the planning, organizing, staffing, directing and controlling of H.E.C. '78 to be held on April 19-21, 1978. Next year's board will continue to implement the business plan that has been developed by the board of directors of H.E.C. '77. To establish Hotel Ezra Cornell as the premier forum to deliver a unique hospitality learning experience to industry leaders and students in an interactive setting.

Executive board positions are limited to students in good standing with a minimum cumulative G.P.A. of 3.0. Assistant board positions are limited to students in good standing with a minimum cumulative G.P.A. of 2.5. Eligibility requirements for specific board positions can be obtained in the Student Services Office, Room 178A. Eligible students who are considering a board position for H.E.C. '79 should pre-enroll for the course and speak with the instructor. Final enrollment in H ADM 491 will be determined by the election process upon the conclusion of H.E.C. in April of this year. A field trip to New York City during "The Hotel Show." in November is required course activity.

Through lectures, class discussions, research, community service work, and a field placement practicum, students explore the economic, social and political issues of our country's concern with housing and feeding disenfranchised and homeless people. Students study the history of homelessness and the strategies to prevent or alleviate the problem through public policy, housing programs, food assistance programs, and job training initiatives. This is a service learning course centered around community work experience. There are three options for involvement in this course. Students must choose one of the following. a.) 4 credits: whereby students work in pairs or small groups with a local area agency that provides services for homeless or disadvantaged people. They analyze the agency's mission and goals, identify manageable challenges, and formulate an approach in the form of product or service that is useful to the agency. This field practicum comprises approximately 60 credits of work during this semester, half of which will be spent working at the agency and its clients. b.) 4 credits: whereby students participate in an alternative spring break in an agency(ies) in Washington DC or New York City. Students work five full days in an agency that works with the homeless, and disenfranchised people such as homeless shelters, community kitchens, or battered women's housing units. Housing and transportation are arranged. This option may cost students up to $100. Students interested in this option must see the instructor at pre-registration time. c.) 3 credits: whereby students do community work in the Ithaca area with an agency that serves homeless, hungry, incarcerated, or disenfranchised people. Students work on a regular weekly basis for a minimum of 30 credits during this semester.

H ADM 491 Hotel Ezra Cornell (H.E.C.)
Fall, spring. Prerequisite: permission. Limited to Hotel juniors and seniors. Cost is estimated at $200. Elective. G. Norkus.

Executive board positions are limited to students in good standing with a minimum cumulative G.P.A. of 3.0. Assistant board positions are limited to students in good standing with a minimum cumulative G.P.A. of 2.5. Eligibility requirements for specific board positions can be obtained in the Student Services Office, Room 178A. Eligible students who are considering a board position for H.E.C. '79 should pre-enroll for the course and speak with the instructor. Final enrollment in H ADM 491 will be determined by the election process upon the conclusion of H.E.C. in April of this year. A field trip to New York City during "The Hotel Show." in November is required course activity.

H ADM 493 Management Intern Program
Fall, spring. 6 credits. Prerequisites: students are expected to have completed the following courses: H ADM 105 or 115, 211, 121, 221, 222, 106 or 236, 243, 255, 165, and 174. In addition, completion of the following courses is strongly recommended: H ADM 321, 305, 355, and 365. Additional course work may be required for applicants considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be in place prior to acceptance into the course. Elective. R. Chase.

Limited to juniors and seniors in the Hotel School with approval of the Management Intern Program faculty committee. The application process begins the semester before the planned internship. At the beginning of each semester, an MIP information meeting is presented. Students accepted to MIP enroll in both H ADM 493 and 494. Students enrolled in H ADM 493 will be in free electives as well as practical experience in the hospitality field. Six performance evaluations are used to determine this grade. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Further information is available in the Career Services Office, 255 Statler Hall.

H ADM 494 Management Intern Program II—Academic
Fall, spring. 6 credits. Elective. R. Chase.

Limited to juniors and seniors in the Hotel School with approval of the Management Intern Program faculty committee. The application process begins the semester before the planned internship. At the beginning of each semester, an MIP information meeting is presented. Students accepted to MIP enroll in both H ADM 493 and 494. Students enrolled in H ADM 494 receive academic credit in free electives for submission of a goals and objectives statement, four management reports, six journals, which focus on insights gained through analysis of events occurring in the workplace, and four Hospitality Management Checklist summaries. Upon return to campus, each intern completes a debriefing and an oral presentation to fulfill the academic requirements. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Further information is available in the Career Services Office, 255 Statler Hall.

H ADM 495 Implementing Strategies for Tying Wellness Practices to Company Profit
Fall, 3 credits. Limited to juniors, seniors, and graduate students. Elective. M. Tabacchi.

There is increasing evidence linking job induced stress to overall health and happiness or lack thereof. Adding to workplace stress are the needs of its diverse and changing population. These stresses affect the financial health of the corporation, as well as the psychological and physical health of the individual. The purpose of this course is to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity which can increase the corporation's competitive edge. The emerging fields of complementary and alternative medicines are explored as preventive and cost effective methods of improving workers' health. Business models
for encouraging workplace wellness, systems for implementation, reward and accountability of managers and corporate officers are introduced in this course. Only a few corporations overtly reward managers and concomitant enhanced performance and productivity of their employees.

H ADM 498 Undergraduate Independent Study
Fall, spring. Variable credits. Elective. Faculty. Can only be taken if conducting two independent studies in one semester.

H ADM 499 Undergraduate Independent Study
Fall, spring. Variable credits. Elective. Faculty. Students have the option of conducting an independent study project in any academic area. The number of credits for which students may register are arranged on an individual basis. Note that students commit themselves to a certain number of credits of independent academic work per week per credit hour if they choose to do an independent study project, and the work must be performed in the term for which the student is enrolled in the independent study. The usual add/drop policy applies, and retroactive credit for work commenced after an academic term has ended is not allowed. Projects are conducted under the direction of a faculty member, and regular, frequent consultations are mandatory. Also, a written report must be produced and made available to all faculty members and students of the school after its submission to the supervising faculty member. Credit for independent study projects may not count toward the Hotel elective requirement, but, rather, toward free electives. Students cannot earn academic credit for independent study when the equivalent material is offered in a regular course, and credit is not earned for teaching a course. Students should consider all aspects of their situation before committing themselves to an independent study project.

H ADM 690 Honors Monograph Faculty
Year long. 4 credits. Elective. Limited to professional master's students who either have a minimum GPA of 3.7 or are in the top 10% of the students in the year group in their first-year professional master's courses; have given evidence of being a good writer by meeting all components of the written communication benchmark; and who have obtained the approval of a brief topic proposal from the potential advisor.

This is a special integrative course for students who write well and desire to explore in depth the topic of mutual interest to them and a faculty advisor of their choice. The approval of a second reader is required for completion of the course. Special recognition of students who complete the course will be made at graduation. Applications are available in the Graduate Office, 172 Statler.

H ADM 698 Graduate Independent Research
Fall, spring. Elective. Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required prior to course enrollment. Permission forms can be obtained in the Hotel School Graduate Office, Room 172.

H ADM 783 Industry Mentorship Program
Fall. 0 credits. MMH Requirement. Faculty.

H ADM 794 Management Development
Year long. 0 credits. MMH Requirement. D. Jameson.
All first-year students in the Master of Management in Hospitality program must enroll in H ADM 794 both semesters. This requirement includes participation in the MMH Assessment Center, program benchmarking, team project, and other activities, related to students' professional development. Satisfactory completion of the second semester of H ADM 794 documents achievement of all program benchmarks.

H ADM 795 Cornell Graduate Hospitality Management Project
Year long. 0 credits. MMH Requirement. M. Redlin.
The five MMH core courses in the spring semester are focused on the completion of an integrated and interdisciplinary project for an industry client. Under this course number, the project, the faculty, and the MMH students accumulate information necessary for the completion of the project and the presentation of the results to the industry client. Although the course is listed as year long, the students and faculty access the information primarily in the spring semester.

H ADM 890 M.S. Thesis Research
Fall, spring. Required. Faculty.

H ADM 990 Ph.D. Thesis Research
Fall, spring. Required. Faculty.

FACULTY ROSTER
Alvarez, Roy, M.Ed., Auburn U. Senior Lecturer
Chase, Robert M., M.B.A., Cornell U. Prof. Clark, Preston, M.S., Syracuse U. Lecturer Cullen, Thomas, Ph.D., Cornell U. Prof. and Assoc. Dean for Industry and International Affairs.
Curts, Steven, B.L.A., Syracuse U. Lecturer Dahl, Nicholas, M.A., Oregon State U. Lecturer D'Aprex, David, B.A., Union College. Lecturer deRoo, Jan A., Ph.D., Cornell U. Hospitality Valuation Services Professor of Hotel Finance and Real Estate.
Dev, Chetkan S., Ph.D., Virginia Polytechnic. Assoc. Prof.
Dittrum, David A., Ph.D., Ohio State U. Herbert E. Westfall Professor of Accounting
Enz, Cathy A., Ph.D., Ohio State U. Prof. and Lewis G. Schaeneman, Jr. Professor of Innovation and Dynamic Management and Executive Director, Center for Hospitality Research.
Geller, A. Neal, Ph.D., Syracuse U. Robert A. Beck Prof. of Hospitality Financial Management.
Gibson, G. Scott, Ph.D., Boston College. Asst. Prof.
Kimes, Sheryl E., Ph.D., U. of Texas. Prof. and Richard J. and Monene Bradley Director of Graduate Studies.
Kwownik, Robert, Ph.D., Temple Univ. Asst. Prof.
Lang, Barbara, B.S., Cornell U. Lecturer Lundberg, Craig C., Ph.D., Cornell U. Blanchard Professor of Human-Resources Management.
Lynn, Wm. Michael, Ph.D., Ohio State U. Assoc. Prof.
McCarty, Reneta, B.S., Cornell U. Lecturer Mutkoski, Stephen A., Ph.D., Cornell U. Banfi Vintners Professor of Wine Education and Management.
O'Connor, Therese A., M.S., Elmira College. Senior Lecturer.
Penner, Richard H., M.S., Cornell U. Prof.
Pezzotti, Giuseppe G., B.M.S., Cornell U. Senior Lecturer.
Piccoli, Gabriele, Ph.D., Louisiana State U. Assoc. Prof.
Quan, Daniel W. C., Ph.D., UC at Berkeley. Assoc. Prof.
Redlin, Michael H., Ph.D., Cornell U. Prof.
Reynolds, Dennis, Ph.D., Cornell U. Asst. Prof.
Robson, Stephani, M.S., Cornell U. Lecturer Sherwyn, David J.D., Cornell U. Asst. Prof.
Siguaw, Judy, D.B.A., Louisiana Technical U. Assoc. Prof.
Simons, Troy L., Ph.D., Northwestern U. Assoc. Prof.
Sinha, Praveen, Ph.D., Carnegie Mellon U. Assoc. Prof.
Snow, Craig, Ph.D., Purdue U. Senior Lecturer Spies, Rupert, Studienassessor, Senior Lecturer Steinacher, Richard, Ph.D., Florida State U. Senior Lecturer.
Subora, Michael, Ph.D., Cornell U. Assoc. Prof.
Susskind, Alex, Ph.D., Michigan State U. Asst. Prof.
Tabacchi, Mary H., Ph.D., Purdue U. Assoc. Prof.
Tracey, J. Bruce, Ph.D., SUNY Albany. Assoc. Prof.
Wagner, Erica, Ph.D., London School of Economics and Political Science. Asst. Prof.
Walsh, Kate, Ph.D., Boston College. Asst. Prof.
The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those 24 years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Admission, Student, and Career Services (172 MVR) can provide information of interest to mature students. Mature students are permitted to enroll for as few as six credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight terms. To find out about qualifying for prorated tuition, mature students must see the registrar before registration each semester.

Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with a bachelor’s degree who are preparing for graduate study or jobs and careers in human ecology-related fields, or those who have interrupted their education and are considering completing degree programs. Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is classified as a special student may be counted toward the requirements of the bachelor’s degree. Those interested in becoming special students should make appointments to discuss admissions procedures in the Office of Admission (170 MVR, 255–5471).
Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs (B20 Day Hall, 255-4987). All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor. At the time of registration, Empire State College students must provide the extramural division with a completed copy of Empire State College’s notification of cross-registration (form number, SA-22, F-031) to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

Transfer students

Students who enter the College of Human Ecology after the first semester of their freshman year are considered transfer students. An internal transfer student is one who transfers to Human Ecology from one of the other colleges at Cornell University. An external transfer student is one who transfers to Human Ecology from an institution outside of Cornell University. Internal transfer students should take special care to learn the policies of Human Ecology because each college at Cornell operates under a different set of rules. Staff in the Office of the College Registrar (145 MVR, 255-2235) and in the Office of Admission, Student, and Career Services (172 MVR, 255-5471) are available to answer students’ questions. External transfer students may transfer a maximum of 60 credits to the college after admission. Both internal and external transfer students should contact the Office of the College Registrar to discuss how the transfer credits will apply to the various degree programs.

Options

The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER). The Facility Planning and Management Program at Cornell is an “IFMA Recognized Program.” This means that it meets the standards for recognition of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two semesters to complete the program.

Option I: Interior Design

This option prepares students for professional careers in interior design. The program emphasizes a systematic design process in which innovative solutions are based on research derived knowledge of human behavior, values, and attitudes. Students develop an understanding of design theory and methods, design history, behaviorally based programming, and post-occupancy evaluation. They learn about design communication, building systems, furnishings, materials, and professional practice. The program is accredited by FIDER. Students may utilize their elective courses to develop a concentration in areas such as design history, historic preservation, hotel and restaurant design, theater design, digital media, design for aging, and design sustainability.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

Option II: Facility Planning and Management

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, healthcare institutions, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Option III: Human Factors and Ergonomics

Human factors and ergonomics focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior and product designers, and facility managers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, life-style, social class, and stage-in-life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other practice areas as well as in the facility management and product design division of private companies. Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising

All DEA majors are matched with a faculty adviser during their first semester by the director of undergraduate studies, William Sims, in E214 Martha Van Rensselaer Hall. Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students plan their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the
schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that they meet graduation requirements for their major and college.

Ownership and Exhibition of Student Work
All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The Human Biology, Health, and Society (HBHS) Program permits you to combine your interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. Majors select the issues they want to explore in depth from the Human Ecology courses that address health and the broad range of factors that influence human well-being. Examples of issues you can explore include: behavior and biology; metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division’s programs.

HUMAN DEVELOPMENT

Human Development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. A wide range of issues are included in the study of human development, including biological, cognitive, and emotional development; the role of family, neighborhood, workplace, and culture in development; and the influence that developing humans have on their environment. The Human Development major provides an excellent foundation for many careers, such as medicine (particularly family medicine, pediatrics, and psychiatry), clinical psychology and other mental health professions, law, business (especially human resources), child and family advocacy, and education (from preschool and elementary school teaching to school administration). The major prepares students for academic careers as professors in human development, psychology, or sociology departments. Learning about human development also helps students understand more clearly their own development and the development of those around them.

The faculty of the Department of Human Development comes from several disciplines, including developmental and clinical psychology, sociology, and history. The diversity of faculty expertise results in a wide-ranging view of human development. The research of the department's faculty is extensive. It includes basic research on issues such as the neurobiology of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, and the effects of early environments on children’s cognitive development. It also includes applied research useful for the creation of public policy, such as studies of the causes and consequences of child maltreatment and studies of the effectiveness of reading programs for Headstart preschoolers, apprenticeship programs for high school students, and support programs for older adults moving into retirement communities.

Curriculum

Human Development is the most flexible major in the College of Human Ecology. While all students learn the fundamentals of human development, each student can focus on one or more areas of particular interest. The flexibility of the major also allows students ample opportunity to meet the requirements for admission to many professional schools, including medical, dental, law, and business schools.

Requirements specified by the College of Human Ecology make up part of each student’s curriculum, and include classes in the social and natural sciences, human development, writing, and communication. In addition, there are requirements for the Human Development major. Students in this major can choose up to 14 elective courses from the broad range of offerings across the Cornell campus.

Special Opportunities

Beyond formal coursework, students have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of them. These opportunities include the following:

Field Placements. Human Development majors can arrange internships with Urban Semester in New York City, Cornell-in-Washington, and Cornell Abroad programs and in local agencies. These have included hospitals, psychiatric hospitals, juvenile detention centers, retirement homes, and the department’s on-campus Early Childhood Program. Students have also participated in projects with the Tompkins County Office of Aging, the Tompkins County Youth Bureau, and the Law Guardian’s Office of Tompkins County.

Faculty Research. Many students work as research assistants on faculty projects. Students use research techniques ranging from laboratory procedures to family observations to large surveys. They assist in studying data collection, and data analysis. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. Recent projects have included the study of parent-infant interactions, the transition of high school students into the world of work, and the study of recent trends in the composition of American families.

Independent Research. Under faculty supervision, some advanced students complete a research project in an area of personal interest by designing a study and collecting and analyzing data. Recent thesis topics have included marital quality in Asian and interracial couples, development in families that adopt school-age children, and connections between speed of visual processing in infants and later scores on intelligence tests.

Undergraduate Teaching Assistant.

Advanced students can serve as undergraduate teaching assistants. This requires close work with the professor teaching the course as well as with students taking the course.

Teaching Certification. A cooperative education program exists between Human Development and Wells College. This program requires careful planning and course scheduling. It enables students to graduate with a Cornell Bachelor of Science and New York State Certification to teach nursery school through sixth grade. This certification is honored by most other states.

The program requires a minimum of a three-semester commitment. Cornell HD students take four courses at Wells College and student teach their last semester there. Although there is van transportation between Cornell and Wells College, it is important for students to have access to a car, especially while student teaching. Students will be registered at Cornell during the entire undergraduate program and usually maintain Ithaca housing. Wells College courses count as Cornell courses and are used as electives, but do not get included in a student’s GPA. The one-semester student teaching experience is typically based in the Ithaca area, though not necessarily within the City of Ithaca.

This program is open to HD majors only. You must have at least a 3.0 Cornell cumulative GPA upon application, and must maintain a 3.0 GPA to qualify for student teaching and to complete the program. For more information, contact Judith Ross-Bernstein in G56 MVR at 255-0826.

NUTRITIONAL SCIENCES

A major of Nutritional Sciences (NS) focuses on the complex interrelationships among food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand questions such as: How are nutrients used by the body? What factors influence human food choices? What nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for professional membership in The American Dietetic Association, which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the section of this catalog that describes the division’s programs.

Special Opportunities

Dietetics and Clinical Nutrition

Interested students should complete the academic requirements for The American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and economics are added to
the core curriculum (specific requirements). Evaluation of academic credentials for active membership and registration in ADA should be completed before graduation. Students should initiate the evaluation process while at Cornell so that deficiencies can be identified and documented.

Advisors in the dietetics program can also help students plan to meet the experience or supervised practice component required for active membership and/or eligibility to take the Registration Examination to be certified as a registered dietitian (R.D.). For additional information about meeting ADA requirements, contact Gail Canterbury, Dietetics Program Administrative Assistant, 335 MVR.

Exercise Science Minor

Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in fitness measurements, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs Office (309 MVR, 255-4140).

POLICY ANALYSIS AND MANAGEMENT

The Policy Analysis and Management (PAM) major produces graduates skilled in policy analysis, program planning, and evaluation and possessing management skills applicable in the public, nonprofit, and private sectors. In addition, the Policy Analysis and Management graduate will have concentrated knowledge in one of three areas: family/social welfare, consumer, and public policy. Graduates are well-qualified for a wide variety of public, nonprofit, and private sector employment emphasizing either program analysis and evaluation or management. The major also attracts large numbers of pre-law students, pre-MBA students, and students intending to pursue graduate education in public affairs and policy analysis programs. The potential exists to pursue a five-year program resulting in a BS and a Master of Health Administration.

The PAM major combines theoretical underpinnings from economics, sociology, psychology, and government to critique and analyze our society's values, laws, policies, and programs. It also gives students the knowledge to build management skills for use in public, nonprofit, and for-profit settings. Ideas of social justice, equity, and efficiency will be studied conceptually with strategic planning, human resources, supervision, and organizational development. Research methods, statistics, and planning and evaluation concepts will be learned and used to direct and implement program planning, policy analysis, program evaluation, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills to a particular concentration—social welfare/family, health, or consumer policy. Social welfare/family policy and management includes a panoply of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption, neglect, and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Health programs and policies include such politically sensitive programs and issues as health care access, Medicare, Medicaid, long-term care, health maintenance organizations, public health issues, and substance abuse policies. Consumer programs and policies include the regulation and laws governing advertising, product safety, food and drug safety, nutrition policies, the regulation of credit, insurance, telecommunications, mortgage, housing, and public utility markets and also deal with issues such as the invasion of privacy, Internet security, and children's television. A specific focus in the consumer concentration is the role of marketing and its relationship to consumer well-being and consumer behavior.

In addition to college requirements, all PAM majors are expected to take core courses: Introduction to Management, Introduction to Policy Analysis, Research Methods, Multivariate Statistics, Intermediate Microeconomics, and Public Finance. Students will also be expected to develop a concentration of three courses in either social welfare/family, health, or consumer policy. These concentrations may emphasize either policy analysis or management skills. Finally, PAM majors are encouraged to participate in experiential learning such as Cornell in Washington, the Capital Semester, or Urban Semester. Please check with the undergraduate advising coordinator, Professor Alan Mathios, for further details.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, composites, biomaterials, residential and contract interiors, geotechnical and other applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The undergraduate curriculum focuses on the development of design skills, an understanding of the properties of textile materials, knowledge of marketing, and the use of technology in the industry.

Practical problem-solving skills are developed in the department's studios and laboratories. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the director of undergraduate studies, Anita Racine (316 MVR). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin working with their advisers early to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the director of undergraduate studies. Although advisers must provide the PIN number to lock in courses during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for his/her major and college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid and equipment returned by the last week of classes.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and properties of fabrics to solve aesthetic and functional apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Most transfer students will need at least one extra semester to fulfill the requirements of the major.

Option I: Apparel Design

The study of apparel design includes both aesthetic and functional considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

Option II: Apparel/Textile Management

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, product development, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines.

Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as
the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

**Career Opportunities**
Graduates of programs in the Department of Textile and Apparel have found challenging employment in the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of design, management, new product development, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

**INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY**
Biology and Society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy. It is also designed for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including courses in the fields of mathematics, biology, humanities, and social sciences. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in human development and the environment, health, or social policy and human services. The other basic requirements of the college are also met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the Director of Undergraduate Studies in MVR 205.

**INDIVIDUAL CURRICULUM**
A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator, Patti Papapietro, Office of Admission, Student and Career Services (172 MVR).

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made after the freshman year and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, the individual curriculum coordinator will provide direction in formally developing a program of study. Although the coordinator must approve the course enrollment schedule during course enrollment each term, it is a student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her adviser and the program coordinator before the program change.

**SPECIAL OPPORTUNITIES**
Several programs allow students to receive academic credit for fieldwork and internship experience. Study in absentia, college-wide certificate programs, and joint programs with other schools and colleges at Cornell. Students may petition the college registrar to have concentrations that are formally recognized elsewhere within the university noted on their transcripts when accompanied by appropriate documentation from the program.

**Study Abroad**
Each year nearly 100 Human Ecology students spend a semester or more off campus in places spanning the globe, such as Australia and Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study abroad opportunities are available through Cornell Abroad, U.S. college-sponsored programs abroad, and individual applications at foreign universities. All study abroad students must meet college study abroad requirements and remain registered at Cornell during the overseas study. Credits earned count towards the 60 credits required for graduation. Study abroad credits do not count toward the maximum number of endowed credits that Human Ecology students are permitted to earn. Typically, students considering study abroad begin their planning at least by September or October of their sophomore year.

To start:
- Carefully consider what it is you hope to get out of a study abroad experience (academically and culturally). The Cornell Abroad Center (474 Uris Hall) houses the largest on-campus collection of materials on programs around the world. The Human Ecology Career Development Center (159 MVR) has additional materials.
- Pick up an application from the Office of the Registrar (145 MVR).
- Meet with the college's study abroad adviser (172 MVR). The adviser, with the college registrar, will help you complete the application, plan for your semester off campus, and secure the necessary signatures.
- Submit your application to the Office of the Registrar. Deadlines are early February for study abroad the following full term, and early September for study abroad the following spring term. Please note that some programs fill up quickly and applications to these most popular programs should be submitted several months before these deadlines.

**Independent Research**
Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that approximately half of the college's undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member's research group, completing an independent study research project, or carrying out an honors program project.

For further information, contact individual faculty members or the director of undergraduate studies (DUS) in your department.

**Honors Programs**
Students interested in college honors programs that lead to the degree "bachelor of science with honors" usually apply to the appropriate honors committee no later than the end of their sophomore year. Generally, a minimum grade point average of 3.5 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and defend it in an oral examination.

In addition to the college honors program, special programs are offered by the Department of Human Development and the Division of Nutritional Sciences. If you are interested in the honors program, it is important to contact the director of undergraduate studies (DUS) in your department or division for information and guidelines.

**Field Study and Internships**
Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research methods, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the Director of Undergraduate Studies for major specific information. The Career Development Center (159 MVR) can also provide resources and assistance in finding internships and other experiential opportunities.
Gerontology

designed to develop an understanding of and related to aging, the College of Human
Bronfenbrenner Life Course Center, offers the option of completing an undergraduate
for students interested in pursuing study in gerontology enriches
sociology, economics, and design.

Experiential learning opportunities are strongly recommended as a complement to classroom work. With faculty sponsorship, students can participate in experiences in the Ithaca area, the Urban Semester in New York City, Cornell-in-Washington, the Capitol Semester, or in a placement arranged more individually.

Both Cornell and Ithaca College offer courses that incorporate a service-learning component into their curriculum. Cornell's course, "Housing for the Elderly," (PAM 375) has placements in local agencies (e.g., Office of Aging, Housing Authority, Ithacare) where students gain valuable experience with the different ways communities make it possible for adults to remain independent.

This course and others at Ithaca College are sponsored by the Ithaca Partnership for Service Learning in Elder Care. They offer a variety of options for combining volunteer service with classroom experiences. Opportunities for undergraduates to become involved in research projects, such as the Pathways to Life Quality Study, a new Cornell University/Ithaca College longitudinal study of residential changes and adjustments in the later years are also available. In addition, senior students can apply to work as a teaching assistant for a gerontology course.

Departments and programs have designated academic advisers for the gerontology concentration who will help students plan the sequences of courses and electives needed to complete both a major and the gerontology concentration. Because many gerontology courses have prerequisites, early and careful planning is essential.

Specific program requirements may be obtained in the Office of the College Registrar (145 MVR, 255-2255) or from Donna Dempster-McClain, Bronfenbrenner Life Course Center (G20 MVR, 255-5557).

General Concentration

Students may develop a concentration in additional fields taught at Cornell by taking 12 credits in an approved area. Computer science, Africana Women's Studies, communications, or business are just a few examples of concentrations that are possible.

THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Multicultural Issues in Urban Affairs

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. Students choose either fall or spring semester and enroll in three classes focusing on the opportunities and barriers that a multicultural society faces in addressing issues of professional, community, or public policy settings and concerns (15-credit residential program). They also intern three times each day in week-long internships of their choosing. One day each week, students carry on community service in an inner city school (pre-k to high school). One day each week, students participate in site visits. Seminars are incorporated into these activities. All students reside in the Olin Hall dormitory of the Weill Medical College of Cornell University.

The two-week Winter Session course (two credits) enables students to carry out community service through a reflective practice and problem-solving curriculum. In the eight-week summer semester (one to two credits), students carry out internships in placements of their choosing, including a new summer medical program. Students work with the program staff to locate internship placements. For information, contact the Urban Semester Program staff (159 MVR Hall, 607-255-1846) or the Urban Semester Program in New York City at (212) 746-2273.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

Health and Medicine

— New York Presbyterian Hospital/New York Weill Cornell Center, Queens Medical Center for Women and Children, South Bronx Health Center for Children and Families, Memorial Sloan Kettering Hospital, Hospital for Special Surgery, Montefiore Hospital, Lower Manhattan Hospital, Our Lady of Mercy Hospital

Private and Public Law

— NOW Legal Defense and Education Fund, Agenda for Children Tomorrow, Skadden Arps, Slate, Meagher, & Flom, Lawyers for Children, DA’s Office, Legal Aid Society, AALDEF, Committee Against Anti-Asian Violence, Center for Immigrant Rights, NAACPPLDEF, Dorsey & Whitney

Government and community agencies

— Cornell University Cooperative Extension, Senator Charles Schumer’s office, NYC Housing Authority, Dept. of Aging, Women’s Action Alliance, NYC Commission on the Status of Women, NYC Dept. of Consumer Affairs, The Center for Puerto Rican Studies, Manhattan Borough President’s office, Central Park Wildlife Center, Attorney General’s office, The Parks Department

Wall Street firms and other private businesses

The Urban Semester Program

Comprise a full semester of Cornell credit with a three-day-a-week paid internship of $3,000. Students intern directly for New York State legislators in Albany to explore their interests in greater depth, doing research projects, meeting with lobbyists and constituents, writing reports for legislation and publication, and working on legislative hearings. This is great experience for future law school, and employment. It is available for the spring semester only with preference given to juniors. Visit the Career Development Center (159 MVR) for more information and applications.

Capital Semester

Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation’s capital. For more information, visit the program office (471 Hollister Hall).

Courses at Ithaca College and Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells College. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells. New York residents are referred to the Cornell Cooperative Extension (207 MVR) for more information. Students are allowed to register for one course per term and a maximum of 12 credits in four years.

Exceptions will be granted to Cornell students enrolled in methods or practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise...
science through a specially arranged program with Ithaca College.

Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit, but not as Human Ecology credit. Students are accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (145 MVR, 255-2235).

Double-Registration Programs

Five-Year BS/MPS in Health Care Administration

Undergraduates from HBHS and PAM are eligible to apply to the Sloan Program in their junior year for a five-year BS/MPS degree. During their senior year, students will take first-year Sloan courses which will be counted twice to satisfy both undergraduate as well as graduate requirements. Also during this year, students will complete a graduate school application and take the GRE or GMAT test. At the end of their senior year, students will graduate with a B.S. degree. If the students' grades and test scores are competitive, they will be notified during the spring semester of their senior year that they have been formally accepted into the Sloan Program.

Those students accepted will participate in a health care administration residency during the summer after earning their BS. The following year they will complete the second year of required Sloan courses and earn a Masters in Professional Studies with Cornell certifying completion of requirements in a degree in health administration.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduates must present outstanding qualifications and strong professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions (Myron Taylor Hall, 255-5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year away from Human Ecology, they need to plan ahead to ensure that graduation requirements for the BS degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Faculty Advisers

Students who choose to major in a particular department are assigned an adviser whose special interests match their need. Students may change advisers as their own interests change by working with the director of undergraduate studies (DUS).

Faculty advisers are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. Although advisers must provide the adviser key number (PIN) during course enrollment each term, it is the student's responsibility to make sure that his or her program meets graduation requirements for the major and the college.

Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors.

Office of Admission, Student, and Career Services

The Office of Admission, Student, and Career Services (ASCIS) (172 MVR) is a center for student orientation activities, academic, personal, and career advisement. The office provides mentorship through a network of faculty and upper-class students to all members of the college community. Conse- quently, the college focuses particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college collaborates with university and New York State programs to assure Human Ecology students have access to the vast array of services available here.

The professional staff of Human Ecology's Office of Admission, Student, and Career Services includes the director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/COSEP; academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

The Human Ecology Partnership Program provides mentorship through a network of faculty and upper-class students to all incoming students of color, particularly during their first year. In addition, this office serves as a liaison to the Office of Minority Educational Affairs (COSEP), State Programs (EOP), and the Learning Strategies Center. Students are also encouraged to visit the college's Career Development Center to enhance personal career exploration and decision making.

Selected programs include the following:

- BBMTA (Black Biomedical and Technical Association): A university organization that provides enrichment activities for minority students.
- Minority Programs:
  - The College of Human Ecology at Cornell University believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus.
  - Additionally, the college collaborates with university and New York State programs to assure Human Ecology students have access to the vast array of services available here.
  - The professional staff of Human Ecology's Office of Admission, Student, and Career Services includes the director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms.
  - Services for current students include EOP/COSEP; academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.
  - The Human Ecology Partnership Program provides mentorship through a network of faculty and upper-class students to all incoming students of color, particularly during their first year. In addition, this office serves as a liaison to the Office of Minority Educational Affairs (COSEP), State Programs (EOP), and the Learning Strategies Center. Students are also encouraged to visit the college's Career Development Center to enhance personal career exploration and decision making.
  - Selected programs include the following:
    - BBMTA (Black Biomedical and Technical Association): A university organization that provides enrichment activities for minority students.
students interested in pursuing medical careers. For more information, contact Janice Turner (55 Goldwin Smith, 255-5004).

ASC (Association for Students of Color). With the motto "Yesterday's vision, today's reality, and tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement for students of color.

The goals of the ASC are to increase communication between students of color, administration, and faculty, to assist in increasing enrollment of students of color in Human Ecology, and assist in increasing the retention of students of color in Human Ecology and in their selected majors.

ASC's four committees are recruitment and retention, student relations, career development, and peer advising. For more information contact Verdense Lee (172 MVR, 255-2532).

Human Ecology Peer Partnership Program helps incoming students of color transition to the college and university. Small groups of freshmen, usually about six to eight students, are paired with faculty and upperclassmen. They meet weekly for discussions, guidance, and explorations of the Cornell campus and the Ithaca community. For more information, contact Verdense Lee (172 MVR, 255-2532). Gary Evans in the Department of Environmental Analysis (E306 MVR, 255-4775), or Lorraine Maxwell in the Department of Design and Environmental Analysis (E310 MVR, 255-1958).

CSTEP. The Collegiate Science and Technology Entry Program is the New York State program of enrichment activities and programs for pre-med and pre-law New York State residents. Services are targeted at populations who are historically underrepresented in scientific, technical, health-related, or licensed professions and/or who are economically disadvantaged and who demonstrate interest in, and potential for, a CSTEP-targeted profession. For more information, contact Verdense Lee (172 MVR, 255-2532).

Multicultural Education
Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

African Studies and Research Center
American Indian Program
Asian American Studies Program
East Asia Program
Gender and Global Change
Institute for European Studies
Languages and Linguistics
Latin American Studies Program
Latino Studies Program
Peace Studies Program
Program for Contemporary Near Eastern Studies

Program in Jewish Studies
Religious Studies
South Asia Program
Southeast Asia Program
Women's Studies Program

International Students
The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255-5243) provides a broad range of services to international students. All international students should maintain contact with the ISSO. Counselors in ASCS are also available for assistance. International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

Career Planning, Graduate and Professional School, and Job Search Services
Counseling. The Office of Admission, Student, and Career Services (ASCS, 172 MVR, 255-2532) provides career counselors and resources in the Career Development Center to help students assess possible career outcomes and access educational and extracurricular programs and resources to prepare for those careers. Assistance is available through one-on-one advising or group programming. The office works with the Cornell Career Services (103 Barnes Hall, 255-5221) to facilitate access to larger, university-wide programs.

The Career Development Center (CDC, 159 MVR, 255-2532) is a starting point for students looking for career information. Selected resources about career planning and job search techniques, general directories to begin job or graduate school searches, and information for alumni networking are housed here. Also available are Cornell Career Services handouts and registration forms, graduate and professional school testing booklets and registration packets, study abroad, and Urban Semester program materials. Computer terminals provide access to web-based information regarding internship and employment opportunities, as well as graduate/professional schools.

The CDC is open most weekdays during class hours and closes at 4:00 P.M. on Fridays. Student career assistants are available during these hours to provide résumé and cover letter critiques, conduct mock interviews on video, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

Former Urban Semester Program participants comprise a portion of the CDC student staff and are available daily to answer questions about the program and its application process. Selected services are listed below. They will help you to investigate your interests, skills, and values as they relate to career options, provide you with useful information and tips for a successful summer or full-time job search, and provide access to employment opportunities. In addition, please refer to the college's career services web site: www.human.cornell.edu/student.

Prelaw or Premed. Students who consider themselves prelaw or premed are encouraged to join a student group affiliated with ASCS. Those interested in a law career can join PLUS (PreLaw Undergraduate Society) where information on applying to law school, preparing for the LSAT, and examining career opportunities in law is provided. Students interested in pursuing a health-related career are welcome to join PATCH (Pre-professional Association Towards Careers in Health) which serves as a link to the university health careers network and provides guidance as students prepare for the MCAT, apply to medical school, and explore the various specialties of medicine.

Extern Program. Spend one day to one week over winter break shadowing an alum in a career field of your choice. Observe day-to-day activities, discuss specific jobs and careers, and sometimes obtain limited hands-on experience. This service is available to sophomores, juniors, and seniors.

Internship and Employer Files. The CDC keeps files of more than 300 internships and hundreds of potential employers for student review.

Student Jobs and Internships. This is an electronic listing of information about internship and career-related summer and academic year employment that is exclusive to Cornellians.

Alumni Career Presentations. Alumni from the college come back to campus throughout the year to discuss their postgraduate or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet. Students have access to Human Ecology alumni who can provide information on their careers and offer suggestions on a job search in their particular field or location. Students can query alumni on a host of variables and review selected alumni résumés to learn more about specific careers.

Job Search Workshops. The college hosts approximately 12 workshops every semester. These workshops are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to conduct an effective job search, write a résumé and cover letter, and interview successfully.

Jobtrak. Exclusively for Cornell students, Jobtrak provides a listing of job opportunities available. Most are full-time jobs, although some summer opportunities are listed. Search by career field, geographic location, or both.

On-campus Recruiting. This service provides access to on-campus interviews with employers interested specifically in Cornell students. Interviews occur primarily in banking and financial services, retail sales and management, and consulting, along with a few nonprofit organizations. All activity regarding on-campus recruiting is handled through Interactive, our web-based listing of employers.

New York Recruiting Consortium. Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium happens in New York City over winter break. It offers interviews for full-time employment with employers involved in banking and financial services, retail sales-management, advertising, law, and consulting.
NFP in New York City and NFP in Washington, D.C. Speak with representatives from dozens of New York City or Washington, D.C. not-for-profit public service agencies about work or internship opportunities in health, education, advocacy, government, and more (occurs only during the spring semester).

Communications Consortium: Interview with organizations in advertising, public relations, film and radio, and print media. National organizations come to Syracuse, New York to meet with you for individual appointments. During the spring semester, a job fair occurs the evening before.

GRADUATION REQUIREMENTS AND POLICIES

It is important for students to track their graduation progress by comparing their current transcript with an appropriate curriculum sheet. Unofficial transcripts and curriculum sheets are available in the Human Ecology Registrar’s Office (145 MVR Hall).

Cornell Credit Requirements

- To graduate, a student must earn a minimum of 120 academic credits. An unlimited number of credits may be taken in Cornell’s statutory colleges.
- Of the 120 credits required to graduate, at least 60 credits must be earned at Cornell University.

Human Ecology Credit Requirements

- The college divides the 120 minimum required academic credits into four general categories. (Refer to curriculum sheets for your major for specific details on course selection. These sheets are available in the Office of the Registrar (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) as well as on the college website at www.human.cornell.edu)
  - a) Category I—College distribution requirements
     - Natural sciences
     - Social sciences
     - First-Year Writing Seminars
     - Humanities
     - Quantitative and analytical courses (math and statistics)
  - b) Category II—Requirements for a major
  - c) Category III—Electives (see definition below)
  - d) Category IV—Physical education
- Students must complete a minimum of 40 Human Ecology credits in Category II.
- Within Category II, students must earn nine credits in Human Ecology departments outside the major.
- These Human Ecology courses outside the major may not include HE 101, HE 102, or any 403 course. Any non-major 403 course will count as elective credit and not towards the required 40 credits. A maximum of three credits of special studies outside the major (100, 401, and 402), or any internship credit may be applied to this requirement. A maximum of five credits of HE 470, HE 480, HE 490 may be used. Seven credits of PM 392 may be used in this category.
- Human Ecology courses used to satisfy distribution requirements in Category I:
  1) WILL NOT count towards the 40-credit minimum in Category II
  2) Will count the nine-credit requirement for course work outside the major.
- Elective credits can be earned in the endowed and statutory divisions of Cornell.

Endowed Colleges
- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

Statutory Colleges
- College of Agriculture and Life Sciences
- College of Human Ecology
- School of Industrial Relations
- College of Veterinary Medicine
- Students are allowed 21 credits of endowed courses as electives or in their major; they may take more than 21, but will then be billed at the endowed rate of tuition for the extra credits.
- To the extent possible, courses taken in the endowed colleges will be counted to meet distribution requirements in Category I. More than 40 endowed credits taken in Category I, however, will count against the 21 allowed endowed elective credits.
- Endowed credits earned in Category II (even if the endowed courses are required for the major) and Category III will be counted against the 21.
- Required credits listed in the requirements charts for Categories I and II are the minimums; credits taken in excess of those minimums count toward the additional credits required in Category III to make a total of 120 credits (exclusive of physical education). An unlimited number of credits may be taken in the statutory colleges of Cornell. Students may choose to take additional statutory credits and graduate with more than 120 credits.
- Elective credits in Category III earned in Cornell’s endowed divisions during the third semester or a hold will be placed on the student’s record. First-year Writing Seminars must be taken at Cornell and will not be approved for in-absentia study.

Requirements for Majors

- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter.

Grade Point Average

- Students must earn a minimum cumulative grade point average of 1.7 (C-) or better to graduate.
- To be eligible for the Dean’s List, students must have a semester GPA of 3.7 with no F or U grades. At least 12 credits of letter grades are required.

S-U Grade Options

- The S-U grading option may NOT be used for courses in Category I or required courses in Category II unless it is the only grade option offered for those courses. S-U MAY be used for the nine credits of Human Ecology coursework outside of one’s major and for electives in Category III.
- Students may apply no more than 12 credits of S-U towards graduation. If a required course is only offered S-U, it will not count towards this limit. Also, Honors Research 499 taken S-U does not count. Students may take more S-U’s if they choose, but the additional credit cannot be applied towards graduation.

First-year Writing Seminars

All freshmen must complete the First-year Writing Seminars during their first two semesters. Those who do not fulfill this requirement will be referred to the Committee on Academic Status (CAS) and will be required to complete the writing requirement during the third semester or a hold will be placed on the student’s record. First-year Writing Seminars must be taken at Cornell and will not be approved for in-absentia study.

Special Studies

- Students may use only 12 credits of 400, 401, 402, or 403 courses toward graduation.
Additional credits of 400, 401, 402, or 403 courses can be taken but will not be applied towards graduation.

“00” Courses

“00” courses do not count towards graduation requirements but do count towards full-time semester status.

Wells, Ithaca College, and Study Abroad Credits

Any credits earned with the Wells or Ithaca College exchange program are considered Cornell credits for the purpose of fulfilling the 60 Cornell credit graduation requirement. They can not be used for Human Ecology credit. Study Abroad courses may also count as Cornell credit.

Physical Education

- Students must earn two credits of physical education within their first two semesters. These two credits do not count as part of the 60 Cornell credits or as part of the 120 total credits required for a degree, or towards full-time status. Students who matriculate at Cornell with 12 or more credits must complete only one credit of physical education. Students who transfer more than 25 credits (excluding AP credits) are required to take physical education at Cornell, regardless of whether they took physical education at their previous college.

- Students must pass the university’s swim test. Students who transfer more than 25 credits (excluding AP credits) are exempt. Refer to page 13 of this book for specifics.

Advanced Placement Credit

Students can earn advanced placement credit from one of the following:

1. The requisite score on a departmental examination at Cornell (usually given during orientation week) or on a College Entrance Examination Board (CEEB) achievement test. The requisite scores for the CEEB exams are determined by the relevant department at Cornell, vary by subject, and are listed in the beginning of this book (pages 6 and 7).

2. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

3. Credit from the international baccalaureate is evaluated individually.

Note: Cornell does not accept credit for courses sponsored by colleges but taught in high schools to high school students. This is true even if the college provides a transcript of such work. Students who have taken such courses may, however, take the appropriate CEEB test to qualify for credit as in paragraph 1 above. For information and limitations on Advanced Placement credit, see pages 6 and 7 of this book.

Foreign Language Study and Placement

Students who study a foreign language before coming to Cornell and who want to continue must take the CEEB test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Human Ecology students who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Many study abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study. For more detailed information, see Advanced Placement Credits.

Extramural Credit

Extramural credit is administered by the Office of Continuing Education and Summer Sessions (B20 Day Hall, 255-4987). Extramural credit is charged by the credit hour at the endowed tuition rate. Students may count only 15 credits of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell.

An exception to this rule is credit earned in the Ithaca College or Wells College exchange. Students enrolled in these programs simultaneously maintain their status as students registered in the College of Human Ecology.

Humanities

Only certain classes will count for Category I.D. Humanities. To determine eligibility the college uses the following definition: "The humanities include the study of literature, history (including art and design history), philosophy, religion, and archaeology. Critical, historical, and theoretical studies of the arts and design are considered humanities. Languages and creative or performing arts such as the writing of fiction or poetry, painting, sculpting, designing, composing or performing music, acting, directing, and dance are not considered humanities." Additionally, social science courses such as sociology, government, anthropology, and psychology are not considered humanities.

Specifically, courses in the following list will count as humanities:

- Africana Studies (literature and history)
- Archaeology
- Asian American Studies
- Asian and Eastern Studies (literature and history)
- Classics (literature and history)
- Comparative Literature
- English (literature only)
- History
- History of Art/History of Architecture
- LA 282
- Music and Theatre Arts (theory, literature, and history only)
- Natural Resources 407, 411
- Philosophy

Religious Studies

Rural Sociology 100, 175, 318, 442

Registration and Course Enrollment

Registration Requirements

University registration is the official recognition of a student’s relationship with the university and is the basic authorization for a student’s access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements; settle all financial accounts including current semester tuition; satisfy New York State health requirements; and have no holds from the college, the office of the Judicial Administrator, Gannett Health Center, or the Bursar.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises.

Verification of Registration

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Should students need such verification, request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology Registrar’s Office (145 MVR).
The normal course load in the college ranges will meet with faculty advisers during the student may take each semester. Nonetheless, schedules upon their arrival to campus, and Incoming students will receive tentative dates are advertised publicly and available on the University Registrar's web site

Late University Registration
A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due. According to university policy, all students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's Office will charge a late fee. Students who fail to register by the third week of the term may be withdrawn from the university. Should withdrawn students wish to return, they must reapply through the admissions committee.

Proration of Tuition
Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar or counselors for more information.) Students of mature status may carry 6 to 11 credits without petitioning, but must request that their tuition be prorated. Prorated tuition will only be considered for requests of 10 credits or fewer. All requests should be made to the college registrar by the first week of classes and no later than the third week of the term.

Course Enrollment

Initiating the process
Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and available on the University Registrar's web site (www.sws.cornell.edu/our). CourseEnroll takes place electronically, using software available through Just the Facts. During this time, each student must meet with his or her faculty adviser to discuss academic plans and to obtain the PIN code required for finalizing course requests. A student may enter and hold courses prior to entering their PIN. Once the PIN number is entered, however, the schedule is locked and it is not possible to change until the add/drop period of the next term. Information is readily available in this book and in the Course and Time Rooster for each semester. Both of these publications can be accessed on the web through CUNo.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisers during the orientation period.

Course Loads
The normal course load in the college ranges from 12 to 18 credits, although there is no limit to the number of statutory credits a student may take each semester. Nonetheless, students should avoid planning excessive workloads; the time required to keep abreast of courses tends to increase as the semester progresses. Classes cannot be withdrawn from after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education) to maintain full-time status. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Admission, Student, and Career Services (172 MVR).

Late Course Enrollment
Students who do not complete course enrollment during the CoursEnroll period usually must wait until the beginning of the next semester's add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 145 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and other data. Errors must be corrected immediately. Procedures for correcting enrollment errors as well as for making any other changes are described below under Course Enrollment Changes.

Course Enrollment Changes
It is to the student's advantage to make any necessary course enrollment changes as early in the term as possible. Adding new classes early makes it easier for the student to keep up with class work. Dropping a class early makes room in the class for other students who may need it for their academic programs.

Ideally, students evaluate their class workload carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements. Some procedures required for course enrollment are also required for course enrollment changes. For example, students must obtain the instructor's permission for a course requiring it, and must complete the same forms for special studies courses. Aside from the procedures listed below for course enrollment changes, all drop/add forms for nutritional science majors must be signed by a faculty adviser.

Deadlines for Add/Drop and Grade Option Changes

- During the first three weeks of the term, courses may be added, dropped, or the grade option changed.

- From the fourth through the seventh week of the term, courses may be dropped. Grade option changes cannot be made at this point regardless of instructor's permission.

- From the fourth week of the term, instructors have the right to consider students' requests for course changes on an individual basis. Should students fail to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.

- After the seventh week of the term, any requests for course changes must be made through the petition process.

- After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript, even if repeated in a later term.

Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Procedures for Add/Drop and Grade Option Changes
To make course changes during the add/drop period, a student must take the following five steps:

2. Complete the form and take it to the appropriate office for a signature: for Human Ecology courses, the forms should be taken to the Human Ecology Registrar's Office; for courses outside the college, the forms should be taken to the appropriate departmental office of the college. (Students in the Division of Nutritional Sciences must have their adviser's signature on all add/drop forms.)

3. Make sure their name is added to the list of enrolled students for a course being added, or removed from the class list for a course being dropped. Ask the person recording the change to sign the form.

4. Submit all signed forms to the Human Ecology Registrar's Office, including the forms for out-of-college courses. Changes are not completed until the signed forms are filed in that office. Students who do not drop a course they no longer attend are in danger of receiving an F in the course.

5. Receive carbon copies of each course change form at the time it is submitted. It is important for students to keep these copies to verify any changes.

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section, Petition Process.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.
Time and Place for Add/Drop and Grade Option Changes

All students may adjust their schedules and grading options during the first three weeks of each semester. The university also holds a course exchange day before fall classes begin where students have the opportunity to change their class enrollment in centralized locations. The Human Ecology Course Exchange is located in the MVR auditorium. For course exchange location for other colleges check the registration website each semester.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in this book. Undergraduates must obtain permission of the instructor to take any graduate course. Students must request the instructor's permission during the CourseEnroll period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjadan Hall) before enrolling in the course. Students who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in Sage Hall.

Course Enrollment while Studying Abroad

Students who plan to study abroad have several options available to enroll for their courses. They can consult with their faculty adviser before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access the Cornell University Course Roster and the Course and Time Roster for the upcoming term. The roster is available on the web in approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty adviser for approval. If approval is granted, the faculty adviser can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the Course and Time Roster to arrive via airmail from the Cornell Abroad Office. The student can then e-mail, fax, or mail the course requests to their faculty adviser and ask the faculty adviser to submit the course requests to the college registrar. The Course and Time Roster becomes available only the day that pre-enrollment begins; thus, students who depend on receiving the mailed copy will experience some delay in submitting their course requests.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is over-enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in this book. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

Course Wait List

The Human Ecology Registrar's Office maintains waiting lists for selected courses to accommodate students who want to enroll in courses that have been filled. Course instructors may refer students to the criteria to fill their classes from waiting lists. Waiting lists are maintained only for the first three weeks of each semester.

Limited Enrollment Classes

Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

Special Studies Courses

Each department in the College of Human Ecology (DEA, HD, DNS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain coursework.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. Juniors and seniors normally take those courses, and a faculty member in the department in which the course is offered supervises work on an individual basis. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

To register for a special studies course, a student obtains a special studies form from the departmental office where they plan to take the course. The student discusses the proposed course with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor and department chair before submitting the form to the Office of the College Registrar (145 MVR). The student must also submit a course registration form (add/drop form) to the Office of the College Registrar. Special studies forms are available in 145 MVR or in departmental offices. Add/drop forms are only available in 145 MVR.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or person designated by the faculty member). To earn one credit, a student must have the equivalent of three to four hours of contact time per week for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course. A student can only use 12 credits of 400, 401, 402, or 403 courses towards graduation and only three 400, 401, or 402 credits can be used to satisfy the nine-credit-outside-the-major requirement.

To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Changes in status

General Petition Process

The petition process permits students to request exceptions to college regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations. In most cases, extenuating circumstances are needed for a petition to be approved if it involves waiving a deadline. These situations beyond a student's control, such as a documented medical emergency.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the Course Enrollment Changes section above for some of the important deadlines. If unsure of a deadline, check with a counselor in the Office of Admission, Student, and Career Services (172 MVR) or with the Office of Registrar's staff (145 MVR). A general petition may be needed to carry fewer than 12 credits, withdraw from a class after the seventh week deadline, add a course after the third week deadline, change a grade option after the third week deadline, be exempt from one or more of the college's graduation requirements, substitute a required course in one's major with another course, or stay an additional semester to complete the graduation requirements.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar.

If a student decides to submit a general petition, the form is available in the Office of the Registrar (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) or on the website at www.human.cornell.edu/student/forms/. After completing the form and obtaining the required signatures, the student must turn the form in to the Office of the Registrar. Once a decision is made, a letter is placed in the Registrar's Office mail folder indicating approval or denial of the petition.

Students may appeal the college registrar's decision to the Committee on Academic Status. Students who elect to appeal have the option of appearing in person before the committee to state their case. A member of the counseling staff can guide a student through this process.

In Absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. In absentia study can be done during any term; fall, winter, spring, or summer. (First-Year Writing Seminars cannot be taken in absentia).

To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until the Committee on Academic Status has returned them to good standing. In some cases, students may petition for in absentia credit after the work
The rules regarding study in absentia apply to Ecology. Credit for in absentia study will be granted only if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology. The in absentia petition form is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15 credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work, approval by the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The Department will recommend the number of credits the student should receive and the student may take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the Human Ecology Registrar’s Office at 145 MVR Hall. Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted only for those courses with grades of C- or better. In absentia courses appear on the Cornell University transcript, but the grades are not calculated in the student’s GPA.

A student who holds a Regents’ or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology. The rules regarding study in absentia apply to all students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence
A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by making a written request to the Office of Admission, Student, and Career Services. Note that in absentia study status and leave of absence status are mutually exclusive. Students on leave must notify the college registrar in MVR 145, in writing, of their intention to return to campus prior to the beginning of the semester. Those whose leave period has expired will be withdrawn from the college after the seventh week of the semester they were due back. Students considering a leave of absence should discuss their plans with a counselor in the Office of Admission, Student, and Career Services. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology Registrar’s Office (145 MVR). On or after the seventh day of instruction begins will be charged a percentage of the semester tuition. (Refer to Bursar Information in this book for a billing schedule.)

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters’ leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness. A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester. If the petition for leave is approved the student’s courses will remain on the transcript with “W.”

The academic records of all students who have been awarded a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing. Under certain documented medical circumstances a student may be granted a medical leave of absence. Medical leaves are initiated by the student with Gannett Health Center. If Gannett Health Center recommends a medical leave for the student, the college registrar may grant the leave. A medical leave is for an indeterminate period of time not to exceed five years. Students who are granted a medical leave of absence are encouraged to maintain contact with a counselor in the Office of Admission, Student, and Career Services (255-2532) to arrange their return to campus. The counselor will advise the student on procedures to obtain a recommendation from Gannett Health Center to the college registrar for the student’s return. The student should plan sufficiently in advance to assure time for Gannett Health Center and the college registrar to consider their request.

Withdrawal
A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Admission, Student, and Career Services and filing a written notice of withdrawal in the Human Ecology Registrar’s Office. A student considering such an action is urged to discuss plans with a counselor in the Office of Admission, Student, and Career Services (172 MVR). In some instances a student may be given a withdrawal by the college registrar. Students who leave the college without an approved leave of absence, or do not return after the leave has expired will be given a withdrawal after the seventh week of the term in which they fail to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

GRADATIONS AND EXAMINATIONS
Grade Definitions and Equivalents
The official university grading system uses a system of letter grades ranging from A+ to D- with F denoting failure. An INC grade is given for incomplete work and R is given at the end of the first semester of a two-semester class. If a student is given permission to withdraw from a class after the seventh week of the term W is automatically assigned. Students can view their grades on Just the Facts after the seventh week of the semester. See the “Grading Guidelines” section in this book for more information on the official university grading policies.

To compute a semester grade point average, first add up the products (credits hours X quality point equivalents) and divide by the total credits hours taken. Grades of INC, R, S, SX, U, UX, and W should not be included in any GPA calculations. A grade of F has no quality points, but the credits are counted thereby lowering the average. A cumulative GPA is just the sum of all semester products divided by all credits taken. For further help on calculating a grade point average ask at the Office of the College Registrar (145 MVR).

These are the quality point equivalents:
A+ = 4.3
A = 4.0
A- = 3.7
B+ = 3.3
B = 3.0
B- = 2.7
C+ = 2.3
C+ = 2.0
C+ = 1.7
D+ = 1.3
D = 1.0
D- = 0.7
F = 0.0
S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in this book. Courses listed as SX-UX are only available on an S-U basis and may not be taken for a letter grade. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better; for work below that level, a U must be given. No grade point assignment is given to S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on time but when a student is attempting to qualify for the Dean's List must take at least 12 credits of A-F grades. See the section, Awards and Honors for more details about the Dean's List.

No more than 12 S-U credits will count towards a student's 120-credit graduation requirement. A student may take more than one S-U course in any one semester. S-U courses may be taken only as electives or in the nine credits required in the college outside the major unless the requirements for a specific major indicate otherwise. Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement. If a required course is only offered S-U, it will not count toward the 12-credit or four-course limit. To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit during course enrollment, or file an add/drop form in the Human Ecology Registrar's Office before the end of the third week of the term. Forms are available in the Human Ecology Registrar's Office. After the third week of the term, students cannot change grade options.

Note: students considering medical school or law school should discuss selecting any S-U option with the college's pre-med/pre-law adviser, Paula Jacobs (172 MVR).

Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course in a timely fashion. To the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.

A grade of Incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work. If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called explanation for reporting a final grade of F or incomplete, which must be signed by both the instructor and the student, needs to be submitted to the instructor to the Human Ecology Registrar's Office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that the instructor with whom a course is being completed leaves campus without leaving a record of the work completed in the course. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Human Ecology Registrar's Office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology Registrar's Office to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student's official transcript with an asterisk and the final grade received for the semester in which the student completed the work. A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Human Ecology Registrar's Office before the end of the third week of the term. Forms are available in the Human Ecology Registrar's Office. After the third week of the term, students cannot change grade options.

Grade Disputes

Students who find themselves in disagreement with instructor over grades have several options:

1. Meet with the instructor and try to resolve the dispute.
2. Meet with the chair of the department in which the instructor has their appointment.
3. Meet the associate dean for undergraduate studies of the college in which the course was taught.
4. Meet with the university ombudsman (118 Stimson Hall, 255-4321).

A student may also seek advice from their faculty advisor or with a counselor in the Office of Admission, Student, and Career Services (172 MVR).

Repeating Courses

Students are allowed to register a second time for a course they have already passed or have received an "F." If a student has previously passed a course they are taking a second time, the second registration will not count towards their degree requirements and the grade received will not be included in their cumulative GPA.

If a student enrolls in a course in which they previously received an F, the credits from the second registration will count towards their graduation requirements and the grade will be included in their cumulative GPA. The F will also remain on the record and will be included in the GPA.

Examinations

Both the preliminary and final examination schedules are printed every semester in the Course and Time Roster. The current exam information is also available on the university website at www.cornell.edu/Academic/ Academic.html#Class.

Final Examinations

The following is quoted from the Cornell University Faculty Handbook, 1990, pages 66-67:

"The University Faculty long ago established, and has never reversed, the policy that each course should require a final examination or some equivalent exercise (for example, a term paper, projects reports, oral presentation, or conference) to be conducted or due during the period set aside for final examinations.

"Although not specifically prohibited, it is University policy to discourage more than two examinations for a student in one twenty-four hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a makeup for other valid reasons, i.e., illness, death in the family, etc.

Legislation of the University Faculty governing study period and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Registrar's Office without prior written permission of the Dean of the Faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the Dean of the Faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time that the examination was originally scheduled. The faculty member requesting such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the Registrar's Office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.
Students have a right to examine their corrected exams, papers, and the like, in order to be able to question their grading. They do not, however, have an absolute right to the return thereof. Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester preferably until the end of the following term, to afford students such right of review."

Preliminary Examinations

The following is quoted from the Cornell University Faculty Handbook (1990), pages 65-66:

"Preliminary examinations are those given at intermediate times during a course. It is common to have three of these in a term to encourage review and integration of major segments of the course, to provide students with feedback on how well or poorly they are progressing, and to contribute to the overall basis for a subsequent final grade.

The most convenient times and places for "prelims" are the normal class times and classrooms. But many courses, particularly large ones with multiple sections, choose to examine all the sections together at one time and to design an examination that takes more than one class period to complete. In such cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

To eliminate direct conflicts, departments offering large multisession courses with evening prelims send representatives annually to meet with the dean of the University Faculty to lay out the evening prelim schedule a year in advance. Instructors of smaller courses work out their own evening prelim schedules, consulting their students to find a time when all can attend. Room assignments are obtained by the faculty member through the contact person in his or her college or the Central Reservations Coordinator.

The policy governing evening examinations is as follows:

1. Evening examinations may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M. without prior permission from the Office of the University Faculty.
   a. Such prior permission is not, however, required for examinations or make-up examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is acceptable to the students involved and that an alternate examination time is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

2. Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays and Thursdays or at a time prior to 7:30 P.M. will be granted only on the following conditions:
   a. Conditions such as the nature of the examination, room availability, large number of conflicts, etc., justify such scheduling.

b. An alternate time to take the exam must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

3. If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule shall have a priority, and the course not on the schedule must provide an alternate time to take the examination for those students faced with the conflict.

4. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved must consult and agree on how to resolve the conflict. Both instructors must approach this resolution process with a willingness to provide an alternative or earlier examination.

5. Note that courses using evening examinations are strongly urged to indicate this in the course description listed in Courses and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed."

ACADEMIC STANDING

Criteria for Good Standing

The College of Human Ecology has established a set of minimum academic standards which all students must meet or exceed each semester. These standards are as follows:

1. A student must maintain a semester and cumulative grade point average of 1.7 or higher.

2. A student must successfully complete at least 12 credits per semester, excluding physical education courses.

3. Freshmen and sophomore students must complete at least one human ecology course each semester. (ECON 101 and ECON 102 are considered Human Ecology courses).

4. A student must be making "satisfactory progress" toward a bachelor's degree.

5. Place the student on a Severe Warning status.

6. Place the student on a Severe Warning with Danger of Being Dropped status, implying that if the student does not show considerable improvement during the semester the committee will likely drop the student at the end.

7. Suspend the student for one or more terms during which the student may not register at Cornell (except in extramural status with CAS approval).

8. Permanently withdraw the student from the college and Cornell University.

Students who have been suspended or withdrawn have the right to appeal the decision in front of the committee during the appeals meeting. Students who have been placed on warning due to incomplete or missing grades may request their status be updated to good standing once they have cleaned up their records. These requests should be made with a general petition and submitted to the Office of the Registrar.

All students with a status will automatically be reviewed at the end of the subsequent semester. In most cases, students put on a warning, severe warning, or severe warning with danger of being dropped status will be informed of conditions that they are expected to fulfill in order to return to good standing. In general these conditions are that a student must earn a minimum GPA of 2.0, complete 12 credits, and not have any incomplete, missing, "F", or "U" grades on their semester record.

If a student who has been previously suspended wishes to return to the college he/she must submit a plan of study to the committee before being rejoined.

Students who have been withdrawn by CAS may request reconsideration and ask to be readmitted by the committee. Such students have three years from the date they were withdrawn to make this request. After three years, a former student must apply for readmission through the Office of Admission. A student who has been withdrawn by CAS should discuss their situation with a counselor in the Office of Admission, Student, and Career Services (T72 MVR). They should also talk with others who may be able to help them—faculty advisers, instructors, or a member of the medical staff. A students may also write directly to the committee (via the committee chair, whose name can be obtained from the college registrar) and present new or previously unknown information. Any information given to the committee is held in the strictest confidence.

Academic Integrity

Academic integrity is a critical issue for all students and professors in the academic community. The University Code of Academic Integrity states that (1) a student assumes responsibility for the content and integrity of the academic work he or she submits, such as papers, examinations, or reports and (2) a student shall be guilty of violating the code and subject to proceedings under it if he or she:

a. Knowingly represents the work of others as his or her own.

b. Uses or obtains unauthorized assistance in any academic work.
c. Gives fraudulent assistance to another student.
d. Fabricates data in support of laboratory or fieldwork.
e. Forges a signature to certify completion of a course assignment.
f. Uses an assignment for more than one course without the permission of the instructor involved.
g. Uses computer hardware and/or software to abuse privacy, ownership, or user rights of others.
h. In any manner violates the principle of absolute integrity.

The Academic Integrity Hearing Board, which consists of a chairperson, three faculty members, and three students, hears appeals from students who have breached the code. It also deals with cases brought directly to it by members of the faculty.

Academic Records

Students may obtain their Cornell academic record in several ways. The Cornell transcript, which is the official record of the courses, credits, and grades that a student has earned can be ordered with no charge at the Office of the University Registrar (B7 Day Hall). For more information call (607) 255-4232. Students who merely want an unofficial working copy of their transcript can request a copy of their record card from the Office of the College Registrar (145 MVR). Students may also access their grades and course schedules electronically using a working copy of their transcript can request a copy of their record card from the Office of the College Registrar (145 MVR). Students may also access their grades and course schedules electronically using a working copy of their transcript. The college also maintains a record card for each student from the Office of the Dean of Students (401 Willard Straight Hall).

Access to Records

The Family Educational Rights and Privacy Act of 1974 assures students of privacy of their records. The law also assures students' access to their records. Information concerning a student's relationship with the university is considered restricted and may be released only at the student's specific written request. Restricted information includes the courses elected, grades earned, class rank, academic and disciplinary actions by appropriate faculty, student, or administrative committees; and financial arrangements between the student and the university. Letters of recommendation are restricted information unless the student has specifically waived right of access.

Students who want additional information on access to their records may contact the Office of the College Registrar (145 MVR) or the Office of the University Registrar (B7 Day Hall). An inventory of those student records maintained by Cornell University offices in Ithaca, their location, and cognizant officer are available in the Office of the Dean of Students (401 Willard Straight Hall).

For specific information, refer to the university's policy, "Access to Student Information," at the following web address: www.univco.cornell.edu/policy/ASLi.html, or talk with the college registrar in the Office of the College Registrar (145 MVR).

ACADEMIC HONORS AND AWARDS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Honors

Dean's List. Excellence in academic achievement is recognized each semester by placement on the Dean's List. The names of students who have completed satisfactorily at least 12 credits of letter grades and who have a semester grade point average of 3.7 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of 3.25 or better. Transfer students are eligible after completing one year in this institution with a B average. Current members of Kappa Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduating students nominated by faculty members may be elected. The president of Kappa Omicron Nu has the honor of serving as First Degree Marshall for the college during May commencement.

Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact Bowie Armitage (172 MVR) during their sophomore year or the first semester of their junior year. Most honors candidates have a minimum grade point average of 3.3 and have demonstrated potential for honors-level research. To graduate with honors a student must take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and successfully defend it in front of a committee.

Bachelor of Science with Distinction recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class, based on the last 60 credits earned at Cornell. The graduating class includes students who will complete requirements for Bachelor of Science degrees in January or May of the same academic year or the prior August. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, Phi Kappa Phi, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines. To be eligible for membership students must rank in the top 10 percent of the senior class, or, in the top 5 percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

Gamma Sigma Delta is an honor society of the faculty in the colleges of Human Ecology, Agriculture and Life Sciences, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life based on "agriculture and the related sciences." The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, students must be in the upper 15 percent of their major. Five juniors with the highest grade point average in their college are also nominated.

Awards

The Elsie Van Buren Rice Award in Oral Communication is awarded for original oral communication projects related to the college's mission by undergraduate students in the College of Human Ecology. The contest is held each year in February and awards prizes totaling $1,500.

The Flora Rose Prize is given biennially to a Cornell junior or senior whom, in the words of the donor, "shall demonstrate the greatest promise for contributing to the growth and self-fulfillment of human relations." The recipient will receive a cash prize of $500.

The Florence Halpern Award is named for the noted psychologist, Dr. Florence Halpern, in recognition of her lifelong interest in "innovative human service, which better the quality of life." The award is presented to a undergraduate in the College of Human Ecology who has demonstrated, through supervised field work or community service, creativity in the search for solutions to human problems. The award carries a $500 cash prize.

COLLEGE COMMITTEES AND ORGANIZATIONS

Student Groups and Organizations

Following are brief descriptions of some of the organizations that offer valuable experiences to human ecology students. Further information about many other student activities on campus may be obtained from the Office of the Dean of Students (401 Willard Straight Hall).

The American Council on Consumer Interests (ACCI) offers a student membership for those interested in consumer economics. Contact the department of Consumer Economics and Housing for further information.
The Cornell Design League was formed to give students interested in apparel a chance to express their creativity outside of the classroom by producing a fashion show every spring. It has become concerned with all aspects of design related to presentation. Consequently, it also provides a creative outlet for those interested in graphics, photography, illustration, or theater production. Although many of its designers are part of the Department of Textiles and Apparel, the Design League welcomes people of all majors and schools.

Students have opportunities to work throughout the community in a variety of service capacities. They volunteer in day care centers, youth programs, health-related agencies, services for elderly people and people with disabilities, as well as nutrition programs, arts organizations, and Ithaca schools. For further information, contact the Public Service Center (200 Barnes Hall). Call 255-1148 for information about volunteer work or 255-1107 for information about work-study arrangements.

Human Ecology Ambassadors is a group of undergraduates who assist the Office of Admission, Student, and Career Services by participating in group conferences with prospective students to provide information from a student’s perspective, assisting with recruitment and yield activities for potential students, conducting high school visitations, assisting with on-campus open-house programs for high school students and potential transfer students, helping with prospective students and alumni phonathons. For information, contact the Office of Admission, Student, and Career Services by MVR (255-2532) for more information. The mission of the Human Ecology Voices is to build unity among students, faculty, and staff in the College of Human Ecology. Membership consists of all representatives of all other Human Ecology student organizations and other interested students. Patti Papapietro serves as Voicess adviser from the Office of Academic, Student, and Career Services (172 MVR, 255-2572).

The Human Ecology Mature Students Association is an organization of students who are 24 years of age or older at the time of matriculation. Many mature students need to balance family, work, and other concerns with their academic efforts. The Mature Students Association strives to help by providing a forum for resource exchange and referral, support, socializing, and special projects depending upon expressed interest. These goals are pursued through seminars and informational meetings, the mature students listserve, supplementary orientation activities, liaison with other university offices, and the encouragement of informal networking. Contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR, 255-2572) for more information.

Students interested in the relationship between the physical environment and human behavior may join the Human-Environment Relations Students Association (HERSA). For more information, contact the Department of Design and Environmental Analysis.

The International Facility Managers Association (IFMA) also has a student chapter. Membership information is available from the Department of Design and Environmental Analysis.

The Association for Students of Color (ASC) unites human ecology minority students to provide a supportive foundation for their enrollment, retention, graduation, and career placement. ASC members work toward these goals by:
- participating in admissions hosting programs and conducting high school visitations.
- sponsoring presentations on career and graduate school outcomes of a human ecology education.
- providing volunteer services to the Cornell and Ithaca communities.
- attending regular meetings and hosting annual fall and spring forums.

Contact Verdene Lee in the Office of Admission, Student, and Career Services (172 MVR, 255-2532) for more information.

The PreLaw Undergraduate Society (PLUS) is sponsored by Human Ecology and welcomes members from the Cornell community. Meetings provide information and support for students considering careers in law. Programs include information on applications and admissions, law school applications, LSAT preparations, tour of the Cornell Law School and information panels with current law students, and Mock Trial and internships opportunities. Guest speakers include practicing attorneys, law faculty, and current law school. Contact the Office of Admission, Student, and Career Services, 172 MVR (255-2532) for more information.

The Preprofessional Association Toward Careers in Health (PATCH) provides support, advising, and up-to-date information about students pursuing careers in health care. Programs include academic advising, guest speakers from allopathic and alternative medicine, information on medical school admissions, exposure to complementary healthcare careers, MCAT preparation tips, information on research and internship opportunities, and a visit to a local medical school. This student-run organization is sponsored by Human Ecology and is open to the Cornell community. Contact the Office of Admission, Student, and Career Services, 172 MVR (255-2532) for more information.

The Orientation Committee consists of students and advisers interested in planning and implementing programs to acquaint new students with the College of Human Ecology. The community begins at the beginning of each semester and is always eager for new members. For information, contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

Membership in the Sloan Student Association is open to students interested in health care and related fields. Contact the president of the association (N222 MVR, 255-8013) for more information.

The Students for Gerontology (SGF) is composed of students from a wide variety of majors who are interested in career and internships opportunities that contribute to the well-being of our aging population. Programs sponsored by this organization focus on developing linkages with community organizations and other student gerontology groups. SGF meets monthly. Contact Donna Dempster-McClain, faculty adviser, Bronfenbrenner Life Center, 259 MVR, 255-5557, for further information.

The Undergraduate Nutrition Organization (UNO) promotes nutritional well-being through education, communication, and research. Members of the student chapter organize programs such as Food and Nutrition Day in March, host on-campus speakers in nutrition and health-related fields, and publish NutriNews, a campus-wide nutrition newsletter. The student chapter is open to all students interested in nutrition education. For further information contact Gail Canterbury (302 MVR, 255-5473).

Committees and Councils

Several official organizations exist within the college to deal with matters of policy and to provide leadership in college planning. Most include elected student and faculty representatives; the actions of these various groups affect all students directly or indirectly.

The Educational Policies Committee (EPC) has two student members, one graduate and one undergraduate, who vote along with the faculty members on all matters relating to college academic policy. Recommendations are submitted to this committee regarding revisions in degree requirements, new curriculum changes, and new course approval.

Students also have the opportunity to serve on the Admissions Policy Subcommittee, and the Academic Integrity Hearing Board.

The Selection Committee for the Chancellor's Award for Excellence in Teaching or Professional Service handles the nomination and selection process for this prestigious yearly award. The committee consists of three teaching faculty members, one professional staff member, and three undergraduate members.

The Human Ecology Alumni Association Board of Directors includes two student board members—one junior and one senior. One student is selected each spring to begin a two-year term as student representative. The two students co-chair the board's Student Activities Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The Committee on Academic Status does not include student representatives, but has a faculty representative from each department. This committee is responsible for upholding the academic standards of the college and takes action when appropriate. The committee also hears appeals regarding student petitions and requests to be readmitted.
The objective of this course is to enable students to increase critical reading and writing abilities. Theory and research are associated with a wide range of reading, writing, and learning skills. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

HE 101 College Achievement Seminar 6-week summer session. 2 credits. Enrollment limited to required of pre-freshman Summer Program students. Letter or S-U grades.

The objective of this course is to improve the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

THE URBAN SEMESTER PROGRAM IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses, HE 470, HE 480 and HE 490. Students learn through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, identify and acquire professional skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and be agents of change.

Several majors in the college require internships or encourage field study. Check with the Director of Undergraduate Studies of each major for more information. The Career Development Center in 150 MVR and counselors in the Office of Admission, Student, and Career Services in 172 MVR can help you find internships and provide more information on departmental opportunities and enrolling in Cornell in New York City.

HE 470 Multicultural Practice
Fall and spring semesters. Students interview in internship activities three days each week. During small group seminars, students reflect on their internship experiences, focusing on multicultural issues, professional practice, and organizational culture.

HE 480 Multicultural Issues in Urban Affairs
Fall and spring. This course is a study of multicultural issues in urban affairs. It occurs as students enhance their academic foundations and their career development. Using a historical perspective, students examine issues of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and peaceful society. Reading focuses on inner-city children and youth under a variety of multicultural-influenced conditions and contexts. Costs include travel and from sites by public transportation at about $3.00-6.00 each week.

HE 490 Communities in Multicultural Practice
Fall and spring. This course provides students with an understanding of community building processes and enables them to interact with children, youth, and their families in school settings. For a full day once each week, students work in inner-city schools with teachers, staff, and children, providing community service. Student learning is focused on how to increase children’s learning capacities and expand their horizons by teaching them to envision success. Students focus on the assets that inner city children bring to their school environment and learn how to mentor them. They help teach skills, knowledge, values, behaviors, and perspectives that school children must develop in order to enter the working world. Costs include public transportation costs and from the various sites, about $3.00-6.00 each week.

HE 490 Communities in Multicultural Practice
Fall and spring. This course provides students with an understanding of community building processes and enables them to interact with children, youth, and their families in school settings. For a full day once each week, students work in inner-city schools with teachers, staff, and children, providing community service. Student learning is focused on how to increase children’s learning capacities and expand their horizons by teaching them to envision success. Students focus on the assets that inner city children bring to their school environment and learn how to mentor them. They help teach skills, knowledge, values, behaviors, and perspectives that school children must develop in order to enter the working world. Costs include public transportation costs and from the various sites, about $3.00-6.00 each week.

HE 406 Fieldwork in Diversity and Professional Practice
Spring and fall. Students must enroll concurrently in the three courses, HE 470, HE 480 and HE 490. Students participate in an ongoing community service and mutual learning: The South Bronx-Banana Kelly/Cornell University Project in Community Building Winter Session.

Over the course of two intensive study weeks, students participate in an ongoing community service project in the South Bronx with children of the Banana Kelly Community. In carrying out community service, students participate with the director of the Cornell in New York City Program. Since the 1995 intersession, students have mentored children in an after-school program through projects that have documented the community with photographs, models, and stories. Each intersession, seven students mentor 15 ninth graders from Banana Kelly High School.

In 1998, Cornell students and children produced three-dimensional models of their imagined community in future years and a book of essays and photographs.
DEA 102 Design Studio II
Spring. 5 credits. Limited to Option I DEA majors only. By or higher in DEA 101 required to register for this course. Option I majors must take DEA 102 and 115 concurrently. Approximate cost of materials, $200; shop fee, $10. T R 1:25-4:25. P. Eshelman.
A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

DEA 111 Making a Difference: By Design
Students from any academic area may examine how design affects their daily lives and future professions. This course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, science, and other areas who have made a difference using design as a tool for positive social change. Utilizing a micro to macro framework, students explore the impact of design from the person to the planet. Additional topics include: nurturing innovation, visual literacy, design criticism, design and culture, semiotics, proactive/reflective decision making, and ecological issues. Note: this course has evening exams.

DEA 115 Design Graphics
Spring. Option I DEA majors only. Prerequisite: DEA 101; must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $100; technology fee $10. M W F 9:05-11:00. K. Gibson.
A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

DEA 150 Introduction to Human-Environment Relations
This course analyzes environment and human behavior. We examine the interface of social and environmental sciences with application for the design and management of built and natural habitats. Topics include environmental effects on health, well-being, moods, aesthetics, performance, interpersonal relationships, and organizational effectiveness as well as the ecological consequences of human attitudes and behaviors. Visit our web site at instruct1.cit.cornell.edu/courses/dea150. Note: this course has evening exams.

DEA 201 Design Studio III
Fall. 4 credits. Limited to Option I DEA students. Prerequisites: DEA 101,102, and 115 (minimum grades of B-) Recommended: DEA 111 and 150. Coregistration in DEA 251 is required. Minimum cost of materials, $150; lab fee, $40; optional field trip, approximately $120. M W F 1:25-4:25. J. Jennings.
This is the third semester in the studio sequence of eight semesters. The theme and objectives focus on design as critical thinking, introducing means by which students can think, draw, write, and build their way critically through design. Taken concurrently with DEA 251, the course applies historical and theoretical knowledge to design projects. The course also includes a collaborative project with a professional student from another design discipline.

DEA 202 Design Studio IV
Spring. 4 credits. Each section limited to Option I DEA students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 204. Minimum cost of materials, $120; dizaro machine fee, $8; field trip fee. T R 12:20-4:25. P. Eshelman.
Interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to a selected set of interior design problems of limited complexity. Each problem of three to five weeks duration is structured to emphasize different aspects of the design process.

DEA 203 Digital Communications
Digital information technologies for designers of the built environment. Students explore the issues in relation to text and image and form and content through a series of weekly projects. They work towards the development of a professional web-based portfolio of self-promotional materials. The primary course objective is to reinforce principles of visual communication while learning the rudiments of vector, raster, and html graphic software. Visit http://instruct1.cit.cornell.edu/courses/dea203.

DEA 204 Introduction to Building Technology
Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and planning interiors and systems of furniture. Offered to DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 150 and written permission of instructor. Field trip fee $65. T R 2:55-4:10. G. Evans.
A combination seminar and lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

DEA 250 The Environment and Social Behavior
A combination seminar and lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

DEA 251 History and Theory of the Interior
Fall. 3 credits. Limited to 65. Priority given to DEA majors. M W F 9:05-9:55. J. Jennings.
An historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the twentieth century and include cultural patterns, spatial ideas, dialectics, design elements, and theorists. Reading, discussion, analytical exercises, essays, examinations, and a field trip will be included. Visit http://instruct1.cit.cornell.edu/courses/dea251/.

DEA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 301 Design Studio V
Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, three to five weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

DEA 302 Design Studio VI
Spring. 5 credits. Prerequisites: DEA 301 and 303 or permission of instructor. Corequisite: DEA 305. Minimum cost of materials, $150; shop fee, $10. M W F 2:30-4:25. K. Gibson.
Intermediate-level interior design studio with an introduction to computer applications. Emphasis on using the microcomputer as a design tool in the process of creating and planning interior spaces. Focus on continued development of design skills and problem solving in relation to a selection of problem types.

DEA 303 Introduction to Furnishings, Materials, and Finishes
Fall. 2 credits. W 2:30-4:25. R. Gilmore.
Basic understanding of furniture types and systems; interior products and equipment such as work stations; window, wall, and floor coverings; ceiling and lighting systems; and materials and finishes. Emphasis is placed on criteria for selection of furnishings, materials, and finishes for typical interior design and facility management problems.

DEA 304 Introduction to Professional Practice of Interior Design
Spring. 1 credit. W 2:30-4:25. A. Basinger.
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documentation such as working drawings and specifications, supervision of construction and installation, and cost estimation.
DEA 305 Construction Documents and Detailing  
Spring. 2 credits. Prerequisites: DEA 301 and DEA 303. Corequisites: DEA 302.  
Comprehensive study of drafting, detailing, schedules, and specifications. Emphasis on drawing conventions, symbols, dimensioning, detailing of interior elements, terminology, construction methods, and materials.

DEA 325 Human Factors: Ergonomics-Anthropometrics  
Fall. 3 credits. Recommended: DEA 150. T R 8:40-9:55. A. Hedge.  
Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Course includes practical exercises and field project work.

DEA 350 Human Factors: The Ambient Environment  
An introduction to human-factor considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

DEA 400-401-402-403 Special Studies for Undergraduates  
Fall or spring. Credits to be arranged. S-U grades optional. Departmental interest is required. For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multipage description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department head and filed at course registration or within the change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisers and the instructor should register for one of the following subdivisions of independent study.

DEA 400 Directed Readings  
For study that predominantly involves library research and independent reading.

DEA 401 Empirical Research  
For study that predominantly involves data collection and analysis or laboratory or studio projects.

DEA 402 Supervised Fieldwork  
For study that involves both responsibility participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 403 Teaching Apprenticeship  
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in DEA 305. Field trips $50. T R 12:20-4:25. R. Gilmore.  
Comprehensive study of drafting, detailing, schedules, and specifications. Emphasis on drawing conventions, symbols, dimensioning, detailing of interior elements, terminology, construction methods, and materials.

DEA 407 Design Studio VII  
Advanced interior design studio organized around a series of interior design problems over three to five weeks in duration. Focus is on development of design skills and competence in solving a selected set of generic interior design problem types.

DEA 408 Design Studio VIII  
Design problem-solving experiences involving completion of advanced interior design problems. Problems are broken into five phases: programming, schematic design and evaluation, design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 422 Ecological Literacy and Design  
(also ARCH 464.02)  
Spring. 3 credits. Letter grade only. Field trips approximately $25. T R 10:10-12:05. J. Elliott.  
This is a lecture/seminar course for students interested in learning about the effects of designing the built environment on the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit http://instruct1.cit.cornell.edu/courses/dea422/.

DEA 423 Restaurant Design Charrette  
Spring. 1 credit. Limited to 18. Permission of instructor. Letter grade only. Minimum materials costs $50. 4 class meetings on Friday evening (Week 1) 6-10 p.m.; one complete weekend (Week 2) F 6-10 p.m., S 9:00 a.m.-10:00 p.m. and Sunday 10:00 a.m.-8:00 p.m. R. Gilmore, S. Robson.  
This intensive weekend long course pushes the boundaries of current restaurant design by developing a concept plan for an innovative restaurant in a non-traditional setting. Students will work in teams to develop design solutions and prepare design presentations for review by course instructors and visiting design professionals.

DEA 430 Furniture as a Social Art  
Spring. 3 credits. Limited to 15. Permission of instructor. Cost of building materials $150. Students must also sign up for 2 hours of DEA shop time each week for 1 week of model building. M W 9:05-11:00. P. Eshelman.  
This course examines furniture as a design process that emphasizes support of human behavior. Information about specific social issues including health care, aging, child care, and education is the starting point for assignments. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

DEA 451 Introduction to Facility Planning and Management  
Topics include strategic space planning, space standards, office automation, project management, energy conservation, environmental protection, and regulatory issues. Visit http://instruct1.cit.cornell.edu/courses/dea451_059/.

DEA 453 Planning and Managing the Workplace  
Fall. 3 credits. Prerequisite: limited to juniors and seniors. Purchase of course packet required. T. 7:30-10:30 p.m. Not offered fall 2002. F. Becker.  
Intended for students interested in the planning, design, and management of facilities for complex organizations. The purpose of the course is to explore how characteristics of the workplace, including building, design, furniture, and equipment, and policies governing their use and allocation, affect individual and organizational effectiveness. Special topics, such as the human implications of new information technologies and work at home, are also covered. Visit http://instruct1.cit.cornell.edu/courses/dea453_053/.

DEA 454 Facility Planning and Management II Studio  
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. The course covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered. Visit http://courseinfo.cit.cornell.edu/courses/dea454_654/.

DEA 455 Research Methods in Human-Environment Relations  
Fall. 3 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W 1:25-2:15. N. Wells.  
The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collating tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.
DEA 459 Programming Methods in Design
Fall. 3 credits. Letter grade only. Minimum cost of materials $100. T R 10:10-11:25. W. Sims.
Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristics. Selection of appropriate methods to suit problems and creation of new methods or techniques are emphasized. Visit http://instruct1.cit.cornell.edu/courses/dea/459/650.

DEA 470 Applied Ergonomic Methods
Spring. 3 credits. Prerequisite: DEA 325. T R 2:55-4:10. A. Hedge.
This course covers ergonomics methods and techniques and their application to the design of modern work environments. Emphasis is placed on understanding key concepts. Coverage includes conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems. This course is the undergraduate section of DEA 670, which shares the same lectures but meets for an additional hour. DEA 670 has additional readings and projects.

DEA 472 Environments for Elderly: Housing and Design for an Aging Population
Through seminars, lectures, field trips, and service learning opportunities, students examine the relationship between older adults and the physical environment. Students gain understanding of the relevance of design characteristics on the well-being of older people; an appreciation of late-life social, cognitive and physiological changes; as well as familiarity with a variety of housing options for late life.

DEA 499 Senior Honors Thesis
Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only.
This is an opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis advisor on a topic of interest.

DEA 600-603 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Department faculty.
Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

600: Special Problems. For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.
601: Directed Readings. For study that predominantly involves collection and analysis of research data.
602: Graduate Empirical Research. For study that predominantly involves field experiences in community settings.

603: Graduate Practicum. For study that predominantly involves field experiences in community settings.

DEA 645 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice
Spring. 3 credits. Limited to 15 graduate and advanced undergraduate students.
Prerequisite for undergraduates: permission of instructor. T 4:30-7:30. S. Danko.
Focuses on thinking processes and techniques that support creative problem solving. Theories of creative behavior and critical thinking are examined. The course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. The primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

DEA 648 Advanced Applications in Computer Graphics
Fall. 3 credits. Limited to 18 graduate and advanced undergraduate students.
Prerequisites for undergraduates: DEA 302 or permission of instructor. Minimum cost of materials $150. Lab fee $35. T R 9:05-12:05. K. Gibson.
Advanced use of computer technology to create and analyze interior environments. Emphasis is on the use of 3-D modeling, animation, photorealistic rendering, and emerging technologies to investigate dynamic design issues.

DEA 650 Programming Methods in Design
Fall. 4 credits. T R 10:10-11:25. W. Sims.
A course intended for graduate students who want a more thorough introduction to environmental programming methods and their application to the design of complex organizations than is provided by DEA 455. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 459 for more detail.

DEA 651 Human Factors: Ergonomics-Anthropometrics
Fall. 4 credits. Recommended: DEA 150 and a 3-credit statistics course. T R 8:40-9:55. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors than DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 350 for more detail.

DEA 652 Human Factors: The Ambient Environment
Fall. 4 credits. Prerequisite: DEA 150 and a 3-credit statistics course. T R 8:40-9:55. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors than DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 350 for more detail.

DEA 653 Planning and Managing the Workplace
Spring. 4 credits. Letter grades only. Purchase of course packet required. T 7:30-10:30 p.m. Not offered fall 2002. F. Becker.
Intended for graduate students who want a more thorough grounding in the planning, design, and management of facilities for complex organizations than is provided by DEA 453. Each student is required to attend DEA 453 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 453 for more detail.

DEA 654 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459/650 or permission of instructor. Letter grades only. Minimum cost of materials, $200. For graduate students in facility planning and management. T R 1:25-4:25. W. Sims.
For description, see DEA 454.

DEA 656 Research Methods in Human-Environment Relations
Fall. 4 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W F 1:25-2:15. N. Wells.
Intended for graduate students who want a more thorough understanding of the use of research to study the relationship between physical environment and human behavior than is provided by DEA 455. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 455 for more detail.

DEA 659 Introduction to Facility Planning and Management
Fall. 1 credit. For graduate students interested in careers in facility planning and management. Letter grades only. Not offered 2002. F. Becker, W. Sims.
Series of seminars led by Cornell facility members and other professionals directly involved in facility planning and management. Topics include strategic and tactical facility planning, space standards, project management, computer and facilities management, facility maintenance and operations, energy conservation, and building systems. Visit http://instruct1.cit.cornell.edu/courses/dea/453_659j.

DEA 660 The Environment and Social Behavior
Fall. 4 credits. Prerequisite: DEA 150 and permission of instructor. Field trip fee $65. T R 2:55-4:10. G. Evans.
Intended for graduate students who want a more thorough understanding of the influence of environmental form on social behavior than is provided by DEA 250. Each student is required to attend DEA 250 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. See DEA 250 for more detail.

DEA 668 Design Theory Seminar
Spring. 3 credits. Enrollment limited to 25 students. T R 10:10-11:40. J. Jennings.
Directed toward advanced undergraduate and graduate students with interest in the theory of design. The purpose is to provide an understanding of major theoretical ideas underlying design movements of the twentieth century. Explores these ideas through
HUMAN DEVELOPMENT

J. Eckenrode, chair; S. Cornelius, director of graduate studies. J. Haugaard, director of graduate studies; J. Brumberg, director of HD freshmen. TBA. HD

HD 115 Human Development
Fall or summer. 3 credits. S-U grades optional. M W F 11:15-12:20.
E. Temple.

What do we know about the biology of the mind? As long ago as the 1600's, when the philosopher Descartes speculated on how the mind and body interact, humans have been fascinated by how the chunk of tissue we call the brain can give rise to all the complexity that is human behavior. This course is an introduction to the biology underlying human behavior. After studying basic concepts in neurobiology and neuroanatomy, the course covers a variety of topics including how the brain reacts to drugs and hormones, and what brain mechanisms underlie seeing, hearing, thinking, talking, feeling emotions and desires, and dreaming. We try to understand what is and is not (ab)normal function (and the biological mechanisms underlying the human experience). We discuss the biology of clinical disorders throughout. This course gives the background necessary for other courses in HD that focus on the biological mechanisms of human development and serves as a prerequisite for many of them.

HD 230 Cognitive Development
Spring. 3 credits. Letter grades only.

This course surveys current theory and research on various aspects of cognitive development across the lifespan, with emphasis on infancy and early childhood. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills. Students will develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to critically assess developmental research. The class is structured in a combination of lecture, seminar, and fieldwork.

HD 233 Children and the Law
Fall. 3 credits. Prerequisites: HD 115 and an introductory statistics course. TBA. Not offered 2002-2003. S. Ceci.

This course examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena. It attempts to integrate theories, research, and methodology from several areas of psychology including, developmental, cognitive, social, and clinical. This course also attempts to examine the theory, scientific, ethical, and legal issues that scientists can (and should) be used to solve applied issues. The topic of children and the law provides an opportunity to meet all these requirements. Rapid changes involving child witnesses in our legal system have forced social scientists to bring their work into the courtroom. At the same time, bringing this fray into the legal system has changed the course of research and thinking about certain aspects of child development and cognition: it has encouraged researchers to tackle new issues and to develop innovative experimental paradigms. Selected topics to be covered include: memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, its biological and social bases, and the legal implications of these bases. For several actual cases involving child witnesses will be presented to illustrate the application of scientific data to the legal system. Because of the heavy use of case materials, video and textual coverage of actual trials, it is expected that students will devote more than the usual number of hours to this course.

An examination of childhood and adolescence in various historical contexts: Puritan New England, slave plantations, evangelical revivals, the Western frontier, Victorian families, reform schools, early high schools and colleges, the sexual revolution of the 1960s, and more recent social and cultural changes affecting families. Students will evaluate continuities and changes in the lives of American children as well as changing scientific ideas about children. Students have an opportunity to reflect on and write about their own childhood and adolescence. This course is designed to give students a humanities perspective on approaches to childhood.

HD 242 Participation with Groups of Young Children
Fall or spring. 4 credits. Limited to 20 students (limit depends on availability of placements and of supervision). Prerequisites: HD 115 and permission of instructor. S-U grades optional. W 1:25-3:30. J. Ross-Bernstein.

This course is designed to integrate developmental theories with supervised experience in child care centers, the intention being to enhance the student's abilities to understand and to relate effectively to young children. This class involves participation, observation, reflection, reading, writing, and sharing of viewpoints. Placements are in local nursery schools, day care centers, Head Start programs, and kindergartens.

This course provides an introduction to social scientific research on family roles and functions in American society. Topics include the history of the family, family change over
HUMAN ECOLOGY - 2002-2003

This course analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics to be covered include: (1) an introduction to the field of gerontology, its history, theories, and research methods; (2) a brief overview of the psychological and sociological changes that accompany aging; (3) an analysis of the contexts (such as family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class; and (4) the influences of society on the aging individual. Guest speakers will provide an introduction to various careers in the field of gerontology.

HD 253 Gender and the Life Course (also WOMNS 253)
Fall. 3 credits. S-U grades optional. TBA. Not offered 2002-2003. Staff.
We will examine the complex interplay between gender and age as well as the social construction of the life course. Students explore the relationship between social change and individual lives, observing the significance of two key institutions—work and family—in shaping basic life choices and their consequences throughout the life course. Implications of key life trajectories and transitions for individual lives and for social policy will also be discussed.

HD 258 History of Women in the Professions, 1800 to the Present (also WOMNS 238 and HIST 230, AM ST 253)
Spring. 3 credits. Letter grades only. Human ecology students must register for HD 258. Limited to 50 students. Permission of instructor required. M W 8:40-9:55. J. Bridges. Covers the historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, and the sciences. Lectures, reading, and discussions aim to identify the cultural patterns that fostered the conception of gender-specific work and the particular historical circumstances that created these different work opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.

HD 260 Introduction to Personality (also PSYCH 275)
Spring. 3 credits. Limited to 600 students. Strongly recommended: HD 250 or equivalent to be determined by instructor. S-U grades optional. T R 10:10-11:25. Not offered 2002-2003. D. Dempster-McClain. This course analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics to be covered include: (1) an introduction to the field of gerontology, its history, theories, and research methods; (2) a brief overview of the psychological and sociological changes that accompany aging; (3) an analysis of the contexts (such as family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class; and (4) the influences of society on the aging individual. Guest speakers will provide an introduction to various careers in the field of gerontology.

HD 266 Emotional Functions of the Brain
Spring. 3 credits. Prerequisite: HD 220. Letter grades only. M 10:10-12:35. Not offered 2002-2003. R. Depue. Much of our social behavior, and what we refer to as personality, is related to phylogenetically-old emotional systems that help us to adapt to critical stimuli in the environment. These systems are structured and organized within the brain, but they are also capable of being modified by our everyday experiences. After an overview of the gross neuroanatomy of the primate brain is presented, the focus of the course centers on those brain regions that are organized around the integration of processes related to emotion and motivation. First, general features of the brain in relation to emotional evaluation and expression processes are discussed, and then the brain organization related to several specific types of emotional systems is presented, including incentive-reward motivation, social bonding, fear versus anxiety and aggressive aggression. Emotion, memory, and conscious awareness of emotional feelings are also discussed. Neurobiological modulation of emotional processes by neurotransmitters and neuromodulators of wide distribution in the brain are detailed as well. The neuroanatomy for understanding the nature of individual differences in much of our social and emotional behavior as explored in HD 266.

HD 282 Community Outreach (also PSYCH 282)
Fall and spring. 2 credits. Letter grades only. Prerequisites: HD 115 or PSYCH 101. Students may not concurrently register with HD 327 or HD 328 or PSYCH 327 or PSYCH 328. T R 10:10-11:25. Not offered 2002-2003. H. Segal. This course provides students with information and perspectives needed to do volunteer fieldwork with human and social service programs in the community. To gain a practical understanding of what mental health professionals do in the workplace, students examine problems that emerge in fieldwork settings, which raise ethical, methodological, theoretical, and practical issues in the observation or treatment of clients or patients. They are also introduced more generally to the field of Community Psychology, its history, theory, and applications. Although students are not required to volunteer at a local agency, instructors assist students in finding sites that may provide appropriate learning opportunities.

HD 284 Gender and Sexual Minorities (also WOMNS 285)
Fall. 3 credits. S-U grades only. Prerequisite: one social science course. M 7:30-10:10 p.m. R. Savin-Williams. This course introduces students to theories, empirical scholarship, public policies, and current controversies with lesbian, gay, bisexual, transgender, sexually questioning, and other sexual minority populations. The major focus is on social constructions of identities, lifestyles, and communities with additional emphasis on ethnic, racial, gender, and class issues. Videos supplement the readings and lectures.

HD 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Permission required. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the coordinator of undergraduate education, is filed at course registration or during the change-of-registration period.

HD 313 Problematic Behavior in Adolescence (also PSYCH 313)
Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101. M W 2:55-4:10. Not offered 2002-2003. J. Haugard. This course explores several problematic behaviors of adolescence, including depression, drug abuse, eating disorders, and delinquency. Various psychological, sociological, and biological explanations for the behaviors are presented. Appropriate research is reviewed, treatment and prevention strategies are explored. Lectures are supplemented by several novels and movies that focus on troubled adolescents.

HD 327 Field Practicum I (also PSYCH 327)
Fall. 3 credits. Enrollment limited to 30 students. Students must commit to taking HD 328 in the spring semester. Prerequisites: HD 370 or PSYCH 325 and permission of instructor. Letter grades only. M W 8:40-9:55. H. Segal. This course provides three components, which form an intensive undergraduate field practicum. Students spend three to six hours a week at local mental health agencies, schools, or nursing facilities working directly with children, adolescents, or adults; supervision is provided by host agency staff. Cornell faculty provide additional weekly educational supervision for each student. Seminar meetings cover issues of adult and developmental psychopathology, clinical technique, case studies, and current research issues. Students write two short papers, two final take-home exams, and present an account of their field experience in class.

HD 328 Field Practicum II (also PSYCH 328)
Spring. 3 credits. Enrollment limited to 30 students. Prerequisites: HD 327 or PSYCH 327 taken the previous term, PSYCH 325 or HD 370 and permission of instructor. Letter grades only. M W 8:40-9:55. H. Segal. This course continues the field practicum experience from HD 327. Students spend
three to six hours a week at local mental health agencies, schools, or nursing facilities working directly with children, adolescents or adults; supervision is provided by host agency staff. Seminar meetings cover issues of adult and family psychopathology, clinical technique, case studies, and current research issues. Students write two short papers, two final take-home exams, and present an account of their field experience in class.

**HD 344 Infant Behavior and Development**

Fall. 3 credits. Prerequisites: HD 115, a biology course, and a statistics course. Not open to freshmen. M W F 1:25-2:15.

S. Robertson.

Behavior and development from conception through the first two years of life is examined in traditional areas (e.g., perception, cognition, sociomotorial theory, language, motor function). The fundamental interconnectedness of these aspects of development is strongly emphasized, as is their relation to the biology of fetal and infant development. Topics with implications for general theories of development are emphasized (e.g., the functional significance of early behavior, the nature of continuity and change, and the role of the environment in development). Conditions which put infants at risk for poor development (e.g., prematurity birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights) are also considered. An emphasis on research methodology in the study of early behavior and development is maintained throughout the course.

**HD 348 Advanced Participation with Children**

J. Ross-Bernstein.

An advanced, supervised field-based course, designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess their supervising teachers and the instructor; to keep a journal; and to plan, carry out, and evaluate weekly activities for children within their placement. Conference groups and readings focus on the contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the class. Participation is in settings that serve typical and/or special needs children from three to eight years of age and provide education, care, or special-purpose interventions for them.

**HD 353 Risk and Opportunity Factors in Childhood and Adolescence**

Spring. 6 credits. Enrollment limited to 100 students. Prerequisites: HD 115 and HD 250. S-U grades optional. M 7:30–10:00.

J. Garbarino.

This course explores the meaning of risk and opportunity in the lives of children and youth. It begins with understanding risk accumulation and resilience as they relate to social policy, professional practice, and community development. The concept of "social toxicity" is a central theme of the course. Assignments include writing research-based editorials and participating in a simulated public policy debate.

**HD 359 American Families in Historical Perspective (also WOMNS 357, HIST 359, AM ST 359)**

Fall. 3 credits. Prerequisite: HD 250 or one 200-level social science or history course. S-U grades optional. Human ecology majors must register for HD 359. Not offered 2002–2003 J. Brumberg.

This course provides an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.

**HD 362 Human Bonding**

Fall. 3 credits. Limited to 600 students. Recommended: introductory course in psychology or human development. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

**HD 364 Advanced Participation with Children**

S. Robertson.

The fundamental interconnectedness of these aspects of development is strongly emphasized, as is their relation to the biology of fetal and infant development. Topics with implications for general theories of development are emphasized (e.g., the functional significance of early behavior, the nature of continuity and change, and the role of the environment in development). Conditions which put infants at risk for poor development (e.g., prematurity birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights) are also considered. An emphasis on research methodology in the study of early behavior and development is maintained throughout the course.

**HD 346 The Role and Meaning of Play**

Fall. 2 credits. Limited to 30 juniors and seniors. Prerequisite: HD 115. M 7:30–9:25.

J. Ross-Bernstein.

The aim of this course is to examine the play of children and its meaning through seven. Through seminar discussions, workshops, films, and individualized research students explore the meaning and validity of play in the lives of young children, the different ways children play and the value of each, and the effect of the environment in enhancing and supporting play.

**HD 347 Human Growth and Development: Biological and Behavioral Interactions (also B&SOC 347 and NS 347)**

Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and HD 115 or PSYCH 101. Limited to 150 students. M W F 1:25–2:15. Offered alternate years. S. Robertson and J. Haas.

This course is concerned with the interrelationships of physical and psychological growth and development in humans during infancy. Intrinsic and extrinsic causes of variations in growth, including various forms of simulation, are considered. In addition, the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development are considered. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

**HD 348 Advanced Participation with Children**

C. Hazan.

Covers the science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.

**HD 366 Psychobiology of Temperament and Personality**

Fall. 3 credits. Letter grades only. Prerequisite: HD 266. M 7:30–10:00.

R. Depue.

This course is for students who have an interest in the neurobiology of behavior, in general, and in temperament in particular. The course material is presented within an evolutionary biology perspective, where the development of neurobehavioral systems as a means of adapting to critical stimuli is explored as the basis of emotional traits in humans. The nature of temperament, and personality is explored from psychometric, social, genetic, and biological points of view. There is a focus on the general role played by the biogenic amines (dopamine, norepinephrine, and serotonin), corticotropic hormone and opiates in determining individual differences in temperament and personality. Implications for modeling several forms of personality disorders and psychopathology are also discussed. Finally, the manner in which environmental influences across the life span may be coded in the brain and influence the development of personality is explored.

**HD 368 Children's Development in Different Cultures**

Spring. 3 credits. Limited to sophomores, juniors, and seniors. Prerequisites: any one course in psychology or human development. M W 2:55–4:10.

J. Greene.

This course examines the influence of ecological, cultural, and ethnic factors on the social and cognitive development of children in different cultures. Particular attention is given to research methodologies that guide us in making comparisons about parent-child development across cultures. Topics include family origin and understanding, parenting, and role development, child-family interaction, patterns of kinship, and economic and health issues.

**HD 370 Adult Psychopathology (also PSYCH 325)**

Spring. 3 credits. Prerequisites: HD 115 or PSYCH 101 and one college-level statistics course. M W 2:55–4:10.

J. Garbarino.

A research-based introduction to the biologi­cal, psychological, and social (including cultural and historical) aspects of adult psychopathology. The major mental illnesses are covered, including but not limited to, schizophrenia, mood disorders, anxiety disorders, and personality disorders. Childhood disorders are not covered.

**HD 382 Research Methods in Human Development**

M. Casasola.

The course reviews different methodological approaches in the study of human development. In particular, students learn about the research designs as well as different methods of data collection and analysis, with a focus on those methods used by the faculty in the HD department. Through lectures, discussions, assignments, computer use, and presentations, students gain a strong understanding of the strengths and limitations of experimental, quasi-experimental, survey, and qualitative research designs.
HD 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged (1-4). Permission required. S-U grades optional. For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multipage description of the study they want to undertake, on a form available from the department office in NG14. This form must be signed by the instructor directing the study and the student’s faculty adviser and submitted to NG14 MVR. The Office of Undergraduate Education. After the form is approved, the student takes the form to the College Registrar’s Office. 1+5 MVR, along with an add/drop slip. To ensure review before the close of the periods, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should consider for one of the following subdivisions of independent study.

400: Directed Readings. Permission required. For study that predominantly involves library research and independent study.

401: Empirical Research. Permission required. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

402: Supervised Fieldwork. Permission required. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

403: Teaching Apprenticeship. Enrollment limited to juniors and seniors with a minimum 3.0 GPA. Prerequisites: either HD 115, or PSYCH 101, and two intermediate level HD courses, or equivalent courses in psychology or sociology. Students must have taken the course and received a grade of B+ or higher. Permission required. For study that includes assisting faculty with instruction.

[HD 417 Female Adolescence in Historical Perspective (also WOMNS 438, HIST 458, AM ST 417)]
Spring. 3 credits. Limited to 25 students. Prerequisites: HD 216 and at least one 300-level history or women’s studies or American studies course. Permission of instructor required. Juniors and seniors only. T 1:25-4:25. Not offered 2002-2003.

A reading, writing, and discussion course that attempts to answer a basic historical question that has consequences for both contemporary developmental theory and social policy: how have girls and adolescents in the United States changed in the past 200 years? The focus is on the ways in which gender, class, ethnicity, and popular culture shape adolescent experience. Although the required readings are primarily historical in nature, students are encouraged to think about the interaction of biology, psychology, and culture. Students are required to do a primary source research paper.

[HD 418 Psychology of Aging]
Fall. 3 credits. Enrollment limited to 25 students. Prerequisites: HD 215, 250, and 251 or permission of instructor. Letter grades only. Offered alternate years. T R 2:55-4:10. Not offered 2002-2003.

S. Cornelius.

This seminar addresses major issues and controversies in the field of aging. It is designed for upper-level students who wish to pursue an in-depth analysis of concepts such as “successful” aging and wisdom, as well as controversies surrounding issues of generational equity and the right to die. Although theoretical issues originate from a psychological viewpoint, interdisciplinary perspectives are considered and incorporated in both readings and discussions. The seminar is designed for advanced undergraduates who have completed an introductory course in adulthood and aging and wish to pursue such issues in more depth. Class time is primarily devoted to discussion of assigned readings.

HD 419 Midlife Development
Fall. 3 credits. Enrollment limited to 25 students. Letter grades only. Prerequisites: HD 218, 250 and 251 or permission of instructor. T R 1:25-2:40. Offered alternate years. S. Cornelius.

This course examines the burgeoning research literature on adult development during midlife. The focus of the course is on research and theory examining psychological changes in middle adulthood such as relativistic and dialectical thinking, personality, identity, and sense of control. It also considers the social and physical changes that occur at this time of life especially regarding issues such as empty nest anxieties, divorce, career transitions, menopause, and cardiovascular disease. The course is conducted in a seminar format for upper-level undergraduates. Oral presentations, class participation, and an integrative paper is required.

HD 433 Developmental Cognitive Neuroscience (HD/COGST/PSYCH/LING 436)
Spring. 3 credits. Prerequisites: one neurobiology class such as HD 220 OR one cognitive psychology/development class. S-U grades optional. T R 1:25-4:00.

E. Temple.

What are the brain mechanisms underlying human behavior and cognition? How do those underlying brain mechanisms develop? These are the questions that developmental cognitive neuroscience tries to address and those we explore in this course. The course covers methods used in the field (including brain imaging techniques), recent findings on the development of brain mechanisms underlying human behaviors such as language, attention, and memory, as well as the brain mechanisms that may underlie various developmental disorders such as, developmental dyslexia, autism, and attention deficit (hyperactive) disorder (ADHD). The format includes lecture, discussion, and reading of primary research literature.

HD 436 Language Development (also COGST 436, PSYCH 436 and LING 436)
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HD 633/LING 700, a supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, neurobiology, or linguistics. S-U grades optional. A supplemental lab course is available (HD 437, COGST 450, PSYCH 437, LING 450). T R 2:55-4:10. B. Lust.

This course surveys issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of “Universal Grammar” and the biological foundations of language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

HD 437 Lab Course: Language Development (also COGST 450, PSYCH 437 and LING 450)
Spring. 2 credits. Prerequisites: HD/COGST/PSYCH/LING 436 or equivalent. T R 1:25-2:40. B. Lust.

This laboratory course is an optional supplement to the survey course, Language Development (HD 436). The lab course will provide students with a hands on introduction to scientific research, including design and methods in the area of first language acquisition.

HD 438 Thinking and Reasoning
Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101. T R 1:25-2:40. B. Koslowski.

The course examines problem solving and transfer, pre-causal thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and nonrational reasoning. Two general issues run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

HD 439 Cognitive Development: Infancy through Adolescence

B. Koslowski.

The course is an overview of current and classic issues and research in cognitive development. Central topics include both "hard cognition" (e.g., information processing and neuropsychological functioning) and "soft cognition" (e.g., problem solving, concepts, and categories) are covered. Selected topics are linked to methodological issues and to important social issues such as cross-cultural cognitive development and putative racial and social class differences.

HD 440 Internship in Educational Settings for Children
Fall or spring. 8-12 credits. Prerequisites: HD 115, 242 and 348. Recommended: HD 346. Permission of instructor required. S-U grades optional. J. Ross-Bernstein.

Opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages 2 to 10 and their families. Internships occur in varied settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent
meetings. Supervision by head teacher and instructor. Students are expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

This is an advanced course designed to explore the functioning of families. The first part of the course examines family system theory and how it relates to our understanding of all families. Four types of families are then examined: two nontraditional families (e.g., adoptive families) and two troubled families (e.g., families with a chronically ill child.)

This seminar takes an interdisciplinary approach to address the central role of culture in human development. It draws on diverse theoretical perspectives, including psychology, anthropology, education, ethnography, and linguistics, to understand human difference, experience, and complexity. It takes empirical reflections upon major developmental topics such as cultural aspects of physical growth and development; culture and cognition; culture and language; culture, self, and personality; cultural construction of emotion; culture issues of sex and gender; and cultural differences in pathology. 

[HD 456 Families and Social Policy] Spring. 3 credits. Prerequisite: one course in the area of the family or in sociology. S-U grades optional. TBA. Staff. An examination of the intended and unintended family consequences of governmental policies, using case studies in areas such as social security and adoption. The policy implications of changes in the structure and composition of families are also considered.

[HD 457 Health and Social Behavior (also SOC 457)] Fall. 3 credits. Prerequisites: a course in statistics and one of the following: HD 250, Sociology 101, Sociology 251, or Rural Sociology 101. Letter grades only. T R. Offered alternate years. Not offered 2002–2003. E. Wethington.

This course critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health. The lectures focus on social stress, social support, and socioeconomic status; all of which are associated with variations in physical health, mental health, and health maintenance behaviors. Students are expected to read widely from current literature in medical sociology, health psychology, public health, and epidemiology.

This course examines parent-child relationships in African-American families. Topics include historical influences on contemporary patterns of family functioning, the social context of societal forces on African American families' socialization practices, and the influence of parental child rearing beliefs, strategies, and practices on African American children's development. Particular attention is given to the relevance of mainstream theoretical formulations of African American's parental and familial functioning.

[HD 459 Disease in American Culture and Society (also AM ST 430)] Fall. 4 credits. Limited to 15 students. Prerequisites: HD 241, or HD 258, or HD 359, or HD 417. Permission of instructor required. Not offered 2002–2003. J. Brumburg.

How a society defines, explains, treats, and tries to prevent disease reveals a great deal about its basic ideals, values, and institutions. Diseases are not simple biological "facts," but the product of a complex amalgam of biological and social forces. This course uses the history of specific diseases to examine: (1) the ways in which the social and cultural environment shapes the experience of illness; (2) the ideas that Americans have held about why some people get sick and others do not; (3) how those ideas reflect larger cultural as well as scientific trends; (4) the ways in which power relations are involved in defining and responding to the threat of disease; (5) and the impact that disease has had on American society. A short response paper must be written for each session. An additional historiographical essay or research paper will be prearranged with the instructor.

[HD 464 Adolescent Sexuality (also WOM 266)] Spring. 3 credits. Instructor permission required. T R 10:10–11:25. R. Savin-Williams.

This course covers topics selected by students regarding theoretical, research, and applied issues on adolescent sexuality. In the second half of the course, students lead a class that focuses on a research topic of their choosing. The success of the course depends on students feeling personally engaged and committed to the course content. Students are expected to participate fully in the class discussions. Because of the multidisciplinary nature of the course, students from a variety of backgrounds in academic disciplines, gender, sexual orientation, ethnicity, race, class, and religious affiliation will be in the course.

This is an advanced seminar that reviews research related to the nature and consequences of stressful experiences in childhood and adolescence, particularly those arising in the family. Topics covered represent common stressors in the lives of children (e.g. divorce of parents), which have potentially damaging consequences for the development (e.g. child abuse). Topics in which faculty at Cornell have conducted significant research (e.g. children's memory for stressful events) are also covered. In addition to considering the negative affects of development, we also consider issues of individual differences in stress reactivity, including the concepts of coping and resilience. These topics lead naturally into discussions of practice and policy.

[HD 471 Child Development and Psychopathology (also PSYCH 476)] Fall. 3 credits. Prerequisites: HD 115 or PSYCH 101. Recommended: a basic course in psychopathology. Letter grades only. M W 2:55–4:10 J. Haugaard.

This class explores the development and process of mental, emotional, and behavioral disorders in childhood and adolescence, focusing on etiology, treatment, prevention, and intervention. Topics include: (1) the classification of mental disorders; (2) biological, psychological, and sociological theories regarding the development and maintenance of mental disorders; (3) prevalence and etiology of childhood mental disorders, and (4) therapeutic and preventative interventions. If there is sufficient enrollment, an optional discussion section will be available to those students who would like an opportunity to discuss readings and lecture material in greater depth.

In this course we examine American child care and early education policies and programs, broadly defined, in the context of policies and programs in Africa, Asia, Europe, and Latin America. Comparison and analysis are guided by several complementary conceptual frameworks. Particular attention is given to relativism and universalism as applied to developmental and educational principles and concepts. Students will analyze the child care policies and programs of other countries, work in teams to analyze a contemporary policy issue, and apply course content to an issue of their choice in a final paper.

[HD 498 Senior Honors Seminar] Fall and spring. 1 credit. Required for and limited to, seniors in the HD honors program. S-U grades only. M 12:20–1:10. S. Cornelius.

This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

[HD 499 Senior Honors Thesis] Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional. Department faculty.

[HD 206, 306, 406 Topics in Human Development] 2–4 credits. S-U grades optional. These topics vary each time the course is offered and are taught by advanced graduate students in the field of human development. Descriptions are available at the time of course registration. These courses do not fulfill any requirements for the major; they must be taken as electives.

Topics Courses
Fall or spring. 2–4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor may be required. This series of courses provides an opportunity for undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the
generations, changes in family "values" across time, the rise of divorce and single motherhood, family diversity, and the genesis of deviance and psychological disorder.

HD 660 Seminar in Social Development
Spring. 3 credits. Letter grades only. TBA. K. Greene.
This seminar examines literature relevant to early childhood determinants and developmental processes of personality and social behavior. Current research, theories, and methodological issues are addressed. Special emphasis is placed on possible interrelations between the quality of relationships with parents and with peers, and on the meaning of risk, vulnerability, and resilience in children's lives.

[HD 670 Experimental Psychopathology
Spring. 3 credits. Prerequisite: an undergraduate course in abnormal psychology or psychopathology; a course in multivariate statistics; and substantive course work in neurobiology or related biological science. TBA. Not offered 2002-2003. Staff. Overview of current theories and empirical research on functional and organically based psychological disorders. Topic areas covered include autism, schizophrenia, anxiety disorders, affective disorders, and personality disorders. Focus is on the developmental and etiology of psychopathology.

Topical Seminars
Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.

HD 618 Seminar in Adolescence and Adult Development
Topics include peer relationships, parent-child relationships, self-esteem, youth and history, work, and moral development.

HD 633 Seminar on Language Development
Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

HD 635 Seminar in Cognitive Development
Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

HD 645 Seminar on Infancy
Focuses on selected topics in the developmental psychology and psychobiology of infancy (including fetal development). Special topics vary and depend in part on student interests.

HD 646 Seminar in Early-Childhood Development and Education
Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

HD 655 Seminar in Family Studies and the Life Course
Topics include the sociology of marital status, the single-parent family, work-family linkages, women and work, and families and social change.

HD 665 Seminar in Personality and Social Development
Focuses on selected issues related to personality and social development. The issues selected vary each year according to current importance in the field and student interests.

HD 675 Seminar in Developmental Psychopathology
Topics include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

HD 685 Seminar in Research Methods
This course focuses on quantitative and qualitative research methods frequently used in developmental psychology or life course studies, such as surveys, questionnaires, observations, and interviews.

HD 690 Seminar in Ecology of Human Development
Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

Individualized Special Instruction
HD 700-806 Special Studies for Graduate Students
Fall or spring. Credits and hours to be arranged. Credits 1-15 (3 hours work per week per credit). S-U grades at discretion of instructor. Independent advanced work by graduate students recommended by their Special Committee chair with permission of the instructor.

HD 700 Directed Readings
For study that predominantly involves library research and independent study.

HD 701 Empirical Research
For study that predominantly involves collection and analysis of research data.

HD 702 Practicum
For study that predominantly involves field experience in community settings.

HD 703 Teaching Assistantship
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

HD 704 Research Assistantship
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

HD 705 Extension Assistantship
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

HD 706 Supervised Teaching
4 credits. For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

HD 806 Teaching Practicum
4 credits. For advanced graduate students to independently develop and teach an undergraduate topics course under the supervision of a faculty member.
The public sector now spends nearly 2 out of 5 dollars generated as income in the U.S. The course introduces students to descriptive and inferential statistics. Topics include hypothesis testing, measuring variables, and simple statistical analysis. This course uses economic analysis to study the interaction of the market, the corporation, and government regulators.

PAM 200 Intermediate Microeconomics
Fall or spring. 4 credits. Prerequisites: ECON 101 or equivalent. J. Cawley, R. Geddes, A. Mathios, W. Rosen. Topics include supply and demand, consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics, public goods, and risk. A section is mandatory.

PAM 202 Introduction to Statistics
Fall and spring. 4 credits. K. Joyner, R. Swisher. This course is intended for students who desire to learn basic statistical methods. It is recommended for students who expect to take PAM 200 Intermediate Microeconomics or any course that requires statistical analysis. PAM majors should take this course no later than their junior year.

PAM 220 Introduction to Management: Principles and Differences Among Sectors
Fall. 3 credits. D. Tobias. This course is a basic introduction to management and related concepts of management, planning, organizing, controlling, leadership, and special topics within five major management contexts including individual/personal, groups/families, firms, not-for-profit organizations, and governments/communities.

PAM 230 Introduction to Policy Analysis
Fall or spring. 3 credits. R. Avery, J. Gemer. Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public policy arena. Students are introduced to the functions and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy-making process. The course focuses on public policy analysis in the consumer, health, and family/social welfare areas and also includes an introduction to the technical skills required to undertake policy analysis.

PAM 280 Race, Power, and Privilege in the United States
Spring. 3 credits. D. Barr, J. Turner. For description, see ASARC 280.

PAM 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar's Office. This form, signed by the instructor directing the study and the head of the department, should be filed at course registration during the change-of-registration period.

PAM 303 Ecology and Epidemiology of Health
Spring. 3 credits. S-U grades optional. Limited to 50 students. E. Rodriguez. Ecological and epidemiological approaches to the problems which restrict human health within the physical, social, and mental environment. The course introduces epidemiological methods and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Application of epidemiology to health care will be discussed.

PAM 310 Introduction to Multivariate Analysis
Fall or spring. 4 credits. Prerequisites: PAM 210, AEM 210 or ILRST 210 or equivalent. J. Schulz. The course introduces basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed. Students are required to specify, estimate, and report the results of an empirical model. Section meets once a week.

PAM 320 Intermediate Policy Management

PAM 323 Consumer Markets

PAM 334 Corporations, Shareholders, and Policy
Fall. 3 credits. Prerequisites: ECON 101. R. Geddes. This course uses economic analysis to study the interaction of the corporation, and the law and how these interactions affect the well being of shareholders and consumers. The costs and benefits of the corporate form.
of organization are examined. The legal institutions defining the corporation, such as limited liability and shareholder voting, are analyzed along with regulations governing these institutions. A particular focus is mechanisms that control the behavior of managers. Those mechanisms include hostile takeovers, insider trading, outside directors on the board, the role of large investors, and executive compensation plans. Additional topics include government ownership of corporations and non-profit enterprises.

PAM 340 The Economics of Consumer Policy
Spring. 4 credits. Prerequisites: PAM 200 or permission of instructor. S. Tennyson. This course is designed to familiarize students with the basic approaches to consumer policy and the economic analysis of consumer policy issues. The course is structured around the major forms of government intervention in consumer markets, and examines a wide variety of economic and social regulations from the economic perspective. Students are required to write a term paper analyzing a consumer policy issue of their choosing.

PAM 341 Economics of Consumer Law and Protection
Fall. 3 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. A. Parrot. Economic analysis of the roles played both by the courts and by federal and state regulatory agencies in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, product liability, accident law and antitrust law, and the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

PAM 346 Economics of Social Security (also ECON 447)
Spring. 3 credits. Prerequisite: PAM 200 or permission of instructor. S-U grades optional. R. Burkhauser. This course provides students with an economic perspective on social security policies. The readings illustrate the use of economic analysis to predict the behavioral effects and income distributional consequences of policy. The course primarily focuses on the Old-Age, Survivors, and Disability Insurance Program. But other programs such as, the Supplemental Security Income, and mandates, such as the Americans with Disabilities Act, that affect the aged and those with disabilities are discussed.

PAM 350 Contemporary Issues in Women's Health
Fall. 3 credits. A. Parrot. This course explores the development of women's health as an area of study in medicine and the historical and cultural treatment of women's health problems. Health care research and the exclusion of women from research trials and protocols are also addressed. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and women's roles in medical research are also discussed in depth. Students may take the course for a fourth credit, which requires attending a discussion section every other week and observing seven facilities (i.e., birthing center, and ultrasound center, wellness center, hospital labor and delivery unit, LaMaze class, women's self-defense class, etc.) that provide a variety of women's health care.

PAM 371 Demography and Family Policy
Fall. 3 credits. K. Joyner. This course examines from a demographic perspective family policies that concern children and adults. Toward this end, this course considers the interactions between family policies and demographic behavior. It also addresses the effects of family policies and demographic behavior on the well-being of children. Although this course focuses on the United States, it considers U.S. trends and the impact against the backdrop of changes in other industrialized countries.

PAM 380 Human Sexuality
Spring. 3 credits. Limited to 500 students. Prerequisite: an introductory course in human development and family studies, psychology, or sociology (or equivalent social science courses). Recommended: one course in biology. A. Parrot. The aim of this course is to provide students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. The course focuses on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and problems. Future trends in sexuality are addressed.

PAM 383 Social Welfare as a Social Institution
Fall. 3-4 credits. S-U grades optional. J. Allen. A philosophical and historical introduction to social welfare policy, programs and services, this course examines the social, political, and economic contexts within which social welfare has evolved in this country. It discusses the ideological, the social, and the political processes through which public policy is formed, the significance of social and economic disparities, social justice, and the ways in which policies are translated into social welfare programs. The importance of a global perspective is emphasized.

PAM 392 New York State Government Affairs
Spring semester only. 12 credits, letter grade and instructor permission only. Preference is given to juniors and seniors. PAM 220 or a course in government strongly recommended. Staff. Students participate in the New York State Assembly Intern Program that includes a seminar and other course work on legislative processes, political party dynamics, and policy analysis and management. Students also participate in a spring-semester one-week New York State Assembly internship requiring research on legislation, support for legislative initiatives and pubic hearings, and work on constituent and interest group issues.

PAM 400-401-402 Special Studies for Undergraduates
Fall and spring. Credits to be arranged. S-U grades optional. Prerequisite: students must have taken the course (or equivalent) in which they will undertake on a form available from the department field office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration with an add/drop slip in 145 MVR, College Registrar's Office. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

PAM 400: Directed Readings. For study that predominantly involves library research and independent reading.

PAM 401: Empirical Research. For study that predominantly involves data collection and analysis.

PAM 402: Supervised Fieldwork. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

PAM 403 Teaching Apprenticeship
Prerequisite: students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

PAM 420 Management Information Systems for the Public Sector
Spring. 3 credits. L. O'Neill. This course focuses on managing information systems in the public and nonprofit sector. It is designed to help managers understand the management of technology and to develop the computer literacy that is required of today's managers. It consists of three modules: technology, planning and management, and public/nonprofit applications such as those related to family and social welfare, health care, and consumer policy.

PAM 423 Risk Management and Policy
Spring. 3 credits. Prerequisite: ECON 101 and a course in statistics. Enrollment limited to 80. S. Tennyson. The objective of this course is to provide students with a broad understanding of risk management problems and solutions, a greater appreciation of the importance of risk and risk regulation in our society, and increased comprehension of the complexities of making decisions about risk. Topics covered include alternative ways to define and measure risk, the importance of risk-tradeoffs, and models of decision making under risk. With this background, alternative approaches to risk management are considered, including insurance, noninsurance financing alternatives, and loss control. The impact on risk management of the legal liability system and government programs, laws and policies are also considered.

PAM 427 Complementary Alternative Medicine
Fall. 3 credits. Prerequisites: a health course and intro biology or permission of instructor. Not offered 2002-2003. A. Parrot. This course particularly helps pre-medical students, health administration students, and health economics students understand the relationship between alternative medicine and western allopathic medicine. The course
covers health and wellness, treatments for specific health conditions, differing philosophies of health care, financing health services, and cross-cultural approaches to these topics.

PAM 435 The U.S. Health Care System
Fall or spring. 3 credits. R. Battistella, Norder. This course provides an introduction to the health care delivery systems in the United States, and covers the inter-relatedness of health services, the financing of health care, and the key stakeholders in health care delivery including regulators, providers, health plans, employers, and consumers. The course describes the history and organization of health care, behavioral models of utilization, issues of health care reform, and current trends. The course provides an overview of the key elements of the field including ambulatory care services, mental health services, hospitals and clinicians, insurers, the role of public health organizations, and the politics of health care in the United States.

PAM 437 Economics of Health Policy
Spring. 3 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. K. Simon. Uses the economic tools of policy analysis to understand the health care system and critically evaluate current policy debates. In the past decade, some of the most controversial policies considered by state and federal governments have involved issues that have been studied by health economists and health services researchers. PAM 437 uses the United States as its main institutional framework, but also pays attention to health care topics of international concern, particularly through the group projects in the second half of the semester.

PAM 440 Critical Perspectives
Fall. 3 credits. J. Allen. This course presents an overview of different perspectives on U.S. social policies and programs with an emphasis on health, welfare, family, and consumer issues. Historical, political, social science and personal perspectives are contrasted. Students are gain knowledge about the social policy and program topics presented in the course, critically analyzing them using conceptual frameworks presented in class, and evaluate policy debates by applying these insights.

PAM 444 Violence Against Women: Policy Implications and Global Perspectives
Spring. 3 credits. A. Parrot. Violence is committed against women worldwide at an alarming rate. This course focuses on the historical and current reasons for and impact of violence against women both domestically and internationally. The impact of legislative, public, social, or religious policies on the incidence of violence is considered. Violence against women is committed to protect women’s virginity, because women are viewed as property, for political reasons, as hate crimes, and in the name of culture, religion, and tradition. The types of violence discussed in this course include: rape, child sexual abuse, homicides, battering, hate crimes, gay bashing, kidnapping, ethnic cleansing, war crimes, forced prostitution, female genital mutilation, honor killings, public beating, lashing, stoning, torture, female infanticide, trafficking of women, female genital mutilation, honor killings, public beating, lashing, stoning, torture, female infanticide, trafficking of women, acid attacks, and sati (self-immolation). Each student is required to evaluate the impact of one current policy and critique the potential value of one pending policy relating to violence against women.

PAM 454 Contemporary Issues in Human Sexuality and Research

PAM 473 Social Policy
Spring. 3 credits. Prerequisites: GOVT 111 or SOC (R SOC) 105 or permission of the instructor. S-U grades optional. J. Allen. An examination of the policy-making process and the significance of national policies as they affect the distribution of resources and services. Several analytic frameworks are used for evaluating social programs and service delivery systems. Implications for change and the significance of current competing policy priorities at the national, state and local levels are discussed. Students observe and analyze a policy-making board.

PAM 499 Honors Program
Fall or spring. The honors program provides students with the opportunity to undertake basic or applied research which will be preparation of a thesis representing original work of publishable quality. The program is intended for students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. PAM majors doing an honors program may take PAM 499 for up to 15 credits. See Professor Alan Mathios for more details.

PAM 547 Microeconomics for Management and Policy
Spring. 4 credits. S-U grades optional. D. Kenkel. This course introduces microeconomic theory and its application to decision making in the management and by policy arenas. Special emphasis is placed on the economic environment of health care organizations and the problems faced by managers in this environment.

PAM 552 Health Care Services: Consumer and Ethical Perspectives
Fall. 3–4 credits. Limited to 30 students, undergraduates with permission of instructor. 4-credit option, may be used as Biology and Society Senior Seminar option. A. Parrot.

The course focuses on consumer and ethical issues faced by the health care field today. Broad topics to be discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege role in health care, services for the medically indigent and elderly, practitioner burnout and training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, prenatal and abortion research, right to die, and baby and granny Doe cases.

PAM 554 Legal Aspects of Health Care
Spring. 3 credits. Prerequisites: PAM 557 or permission of instructor. Taught in alternate years. H. Allen.

This course introduces principles of the law that are specifically applicable to health service delivery. Topics considered include: the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients’ personal property; collection of bills; medical staff privileges; and confidential communications.

PAM 556 Managed Care
Fall. 3 credits. Prerequisite: PAM 557 or permission of instructor. Not offered 2002–2003. J. Kuder. Managed Care models (HMOs, PPOs, and POSs, etc.) now dominate health insurance/financing in the United States and influence every aspect of health care delivery. This course explores the development of Managed Care as an insurance device, a care delivery system, and a public policy product. We study the unique problems that managed care firms face in the market, the problems they present for others, and the options for resolving these issues. The perspective for looking at managed care shifts throughout the course and includes managed care management, health care providers (largely hospitals and physicians), patients, and public policy. Recent evaluations and developments in management and policy are emphasized.

PAM 557 Health Care Organization
Fall. 3 credits. Limited to 30 students. Priority given to Sloan students or permission of the instructor. R. Battistella. The course provides the graduate level to the organization of health providers in the United States, the interrelationships of health services and the major sources and methods of paying for care. The course describes how health services are structured in the United States and how these different services interrelate along the continuum of care. The course describes and analyzes organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Innovations by the public and private sectors in the delivery and reimbursement of health care are also presented.

PAM 558 Field Studies in Health Administration and Planning
Fall or spring. 1–4 credits. Staff.

Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practices and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 559 Epidemiology, Clinical Medicine, and Management Interface Issues
Spring. 3 credits. E. Rodriguez.

From an empirical and analytical framework this course explores the relationships between epidemiology, clinical medicine, and management. The course reviews the epidemiology, policy issues, and treatment of selected diagnoses accounting for a significant percentage of utilization and cost of health
care services. In addition, students have an opportunity to explore issues of resource allocation and continuous quality improvement. The format for the class is lecture, discussion, and case analysis.

**PAM 565 Managing Health and Human Service Organizations I**
Fall, 1 credit. D. Tobias.
This is the first segment of a six-credit sequence addressing the management and leadership of health and human service organizations. Different perspectives are examined, from that of the first-line supervision to that of the CEO. This course begins with a study of the basics of management—communications, motivation, change management, leadership, human resources, organizational design issues, and labor relations. It then looks at the development of technical skills in the areas of problem solving, decision making, productivity measurement, resource allocation, and performance measurement. The course is taught with an applied focus and utilizes a case study approach.

**PAM 566 Strategic Management and Organizational Design of Health Care Systems**
3 credits. Prerequisite: PAM 565. Staff.
This is the second segment of a six-credit sequence in the management and leadership of health and human service organizations. This course concentrates on strategic issues, marketing, organizational culture issues, development of mission, the management of professionals, and studies the importance of roles, structure, and inter- and intra-organizational relationships within these organizations. The course is taught via a case study approach.

**PAM 567 Health and Welfare Policy**
Fall, 3 credits. J. Schultz.
This course addresses major health policy issues and the processes that influence them. It focuses primarily on the United States, with some coverage of health policy in other countries. Topics discussed include: Medicare, Medicaid, the uninsured, public health, the effect of welfare policy on health care, managed care development and regulation, state and federal health care reform, and many others. The course analyzes the politics of health policy in terms of legislative and executive processes, the forces involved including economic, social, ethical, and political factors, and key players in health policy, such as special interest groups, lobbyists, public agencies, the press, elected officials, and legislative staff.

**PAM 568 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems**
Spring, 3 credits. Prerequisite: PAM 557. R. Battistella.
Alternatives for the organization and delivery of long-term care services are examined within the context of public-financing constraints. Progressive long-term care is viewed as a continuum encompassing medical and social services positioned to optimize independent living. Relevant experience from other highly developed countries is presented. Visiting speakers from the public and private sectors are featured. Field trips provide additional insights into the many challenges and opportunities of long-term care policy and management.

**PAM 569 Regression Analysis and Managerial Forecasting**
Fall, 3 credits. Prerequisite: at least one statistics course. L. O'Neill.
This course teaches various statistical methods for managerial decision making, with a particular emphasis on regression and forecasting. Other topics include: ANOVA, correlation, contingency tables, and statistical process control. Applications to health care organizations are emphasized.

**PAM 570 Health Care Accounting**
Fall, 4 credits. N. Roufael.
This is a core course for students in Sloan Graduate Program, Master in Health Care Administration. The course introduces the basic concepts of financial and managerial accounting with emphasis on health care applications. The course explains the measurement system of business operations, business valuation, financial reporting, budgeting, cost allocation, service and product costing, and special reports for managerial use. Ethical and international issues are integrated throughout the course materials with real world applications. At the conclusion of the course, students should be able to read, understand, and analyze the annual financial reports of an organization. Collaborative learning, cases, discussions, readings, research, presentation, speakers, problem solving, videotapes, and lectures are used as teaching pedagogy.

**PAM 580 Special Problems for Graduate Students**
Fall and spring. Credits to be arranged. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

**PAM 601 Policy Analysis and Management**
Fall, 3 credits. R. Swisher.
This course introduces students to the policy process model, of goal setting and problem formulation, identification of policy alternatives, cost-benefit analysis and policy selection, implementation, monitoring, and feedback. At each stage, we read and discuss theoretical contributions from across the social sciences and political philosophy, that help to contextualize and "socially embed" this mainstream, micro-economics driven model. Such contributions include: notions of bounded-rationality, satisficing, incrementalism, and muddling-through from organization behavior, heuristics and biases from social psychology; theories of justice from political philosophy; habits and other pragmatic logics from anthropology; and concepts such as bureaucracy, power, status, symbolic interaction, and social learning from sociology and psychology.

**PAM 602 Measurement and Validity in Policy Analysis and Management**
Spring, 3 credits. E. Rodriguez.
This course provides an introduction to the theoretical foundations of validity in applied social research, basic probabilistic and nonprobabilistic sampling methods, survey research methods (including questionnaires, interviews, and scaling), and other practical inquiry methods are required for valid inferences.
Focuses on quantitative methods of policy analysis and program evaluation, with an emphasis on those programs and policies that are related to health, family, and consumer issues. The first part of the course covers experimental design and methods of making causal inferences from non-experimental data. The second part of the course covers benefit-cost analysis, explicitly incorporating both equity and efficiency considerations. Throughout the course attention is paid to the role of economic modeling in program evaluation, including the role of structural theoretical models and general equilibrium analysis.

PAM 604 Qualitative and Mixed-Method Approaches to Policy Analysis and Management

This course introduces qualitative traditions of social inquiry and their roles in policy analysis and management. The course also addresses visions of and strategies for mixing different inquiry traditions and approaches in applied policy analysis and management.

PAM 605 Economics of Household Behavior

Fall. 3 credits. Prerequisite: PAM 604 or ECON 609–610 or consent of instructor. S-U grades optional. E. Peters.

This course examines household decision making in both single agent and multiple agent (e.g., game theoretic or bargaining) frameworks. The first half of the course focuses on: (1) fertility; (2) household production; (3) and time allocation models of behavior—decisions that are usually modeled in a single-agent framework. The second half of the course considers marriage markets, (2) family formation and dissolution, (3) bargaining models of resource allocation within the household; (4) and intergenerational transfers across households. The ideas and methodologies are then applied using multiple agent models such as contract theory, game theory, and household bargaining. Empirical applications of the theoretical models are presented for both developed and developing countries.

Implications for family policies such as child care subsidies, divorce laws, family planning, government subsidies to education, and social security are also discussed. Much of the material covered by this course could also be found in economic demography and economics of the family courses.

PAM 606 Demographic Techniques (also R SOC 608)

Fall. 3 credits. S-U grades optional. Staff.

This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort versus period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

PAM 608 Economics of Consumer Demand (also AE 6170)

Fall. 3 credits. Prerequisite: PAM 200, ECON 313, or concurrent enrollment in one of the 2, and 2 semesters of calculus. S-U grades optional. C. Ranney.

A graduate level introduction to theory and empirical research on consumer demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. Becker and Lancaster models of demand are introduced.

PAM 611 Social Demography

Fall. 3 credits. Prerequisites: STTBRY 601, SOC 505, or equivalent. K. Joyner.

This course considers demographic behavior from a sociological perspective. Topics include fertility, cohabitation, marriage, divorce, inequality, immigration, and health. Close attention is paid to the effects of social policies on demographic behavior. To a lesser extent, this course addresses the effects of social policies on demographic behavior on individual well-being. Although a background in demographic methods is not required, some of the assigned articles are based on these methods.

PAM 616 Strategies for Policy and Program Evaluation

Fall. 3 credits. Prerequisites: PAM 612 and 613 or 617 or equivalent. Not offered 2002–2003. W. Trochim.

PAM 632 The Intergovernmental System: Analysis of Current Policy Issues

Fall. 3 credits. Open to seniors who have had a course in American government and to graduate students. J. Ziegler.

This course considers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Particular attention is paid to how certain policy and human service issues are played out at the federal, state, and local levels of government, and to the formulation of federal and state budget policy.

Public administration theory is considered. Students work in teams on a policy/administrative research project and report to the class.

PAM 639 Graduate Microeconomics for Policy Analysis

Spring. 3 credits. Prerequisites: Principles of Economics, Calculus. Priority given to Ph.D. students, undergraduates welcome with permission of the instructor. J. Cawley.

The goal of this course is to train graduate students in the use of the tools of microeconomics in order to prepare them to conduct high quality research in the social sciences. The comprehensive course covers microeconomic theory and its application to public policy analysis. Topics addressed include consumer decision-making, the theory of the firm, general equilibrium, welfare economics, monopolies and oligopolies, strategy, and market imperfections.

PAM 710 Advanced Seminar in Program Evaluation

PAM 742 Applied Econometrics II (also ILRLE 742)

Spring. 4 credits. S-U or letter grades. J. Butler.

Course covers statistical methods for models in which the dependent variable is not continuous. Covers: models for dichotomous response (including probit and logit); polytomous response (including ordered response and multinomial logit); various types of censoring and truncation (e.g. the response variable is only observed when it is greater than a threshold), and sample selection issues. Course includes an introduction to duration analysis. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model.

PAM 760 Challenges and Trends in the Health Services Industry

Fall and spring. 1 credit. S-U grades only. Staff.

The goal of the course is to provide students with information and exposure to current and emerging issues in the health services industry. Topics may include such matters as: financial management of health care facilities, human resource management, information systems, cost effective clinical decision making, quality measurement and outcomes, public health, and entrepreneurship in the health services industry.

PAM 799 MPS Problem Solving Project

Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge of independent advanced work. S-U grades optional.

PAM 899 Master's Thesis and Research

Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

PAM 999 Doctoral Thesis and Research

Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

TEXTILES AND APPAREL 311

A. Lemley, chair; C. C. Chu, director of graduate studies; A. Racine, director; undergraduate studies; S. Ashdown, C. Coffman, G. Manow, V. D. Lewis, S. Loker, A. Netravali, S. K. Obendorf.

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

TXA 114 Introduction to Computer-Aided Design

Fall and summer. 3 credits. Priority given to TXA students. Not open to those who have taken or are currently enrolled in DEA 115 and 203. Minimum cost of materials $60; lab fee $15. S-U grades optional. Fall, T or R 1:25–4:25. A. Racine.

A studio course that explores the potential of microcomputers. The AutoCAD software program is used as a design tool for generating a wide variety of visual images. Basic Photoshop software commands are introduced to enhance AutoCAD drawings. Daily hands-on demonstrations and studio
work. Students develop two-dimensional designs based on historical, cultural, and museum sources for portfolios and display.

**TXA 117 Drawing the Clothed Figure**
Spring. 3 credits. Enrollment limited to 21 students. Prerequisite: A basic drawing course. Priority given to apparel design students. Letter grades only. Minimum cost of supplies $125.00. Lab fee: $30. T R 1:10-1:30 V. D. Lewis. The goal of this course is to improve a student's capacity to communicate apparel design ideas visually by drawing clothing on the human body. Emphasis is placed on development of techniques used to express the human body, materials, and clothing designs quickly and clearly in working sketches and to present clothing designs in finished renderings.

**TXA 125 Art, Design, and Visual Thinking**
Fall. 3 credits. S-U grades optional. Lecs M W F 9:05-9:55. Staff. An introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an Internet-based electronic textbook, lectures emphasize processes of visual expression seen in works of art and design. Social, cultural, and historic interpretations of visual expression are discussed.

**TXA 135 Fibers, Fabrics, and Finishes**

**TXA 145 Introduction to Apparel Design**
Spring. 4 credits. Limited to 36 students with 18 students per lab section; priority given to TXA students, and students transferring into TXA; not open to seniors outside of TXA. Letter grades only. Apparel design majors should take course during the first year. Minimum cost of materials, $140. Lecs T 1:25-4:25 and lab F 10:10-12:05 or rec L 1:25-4:25 and lab F 12:20-2:15. A. Racine. Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in children's apparel. Students develop an understanding of the techniques needed to produce apparel from sketches, including patternmaking and garment assembly.

**TXA 225 Color and Surface Design of Textiles**
Fall. 4 credits. Limited to 20 students. Recommended: TXA 114 and TXA 135. Minimum cost of other materials, $100; lab fee, $75. Preference given to TXA majors. T R 1:25-4:25. C. Jirousek. Studio experience in the surface design of textiles combined with exercises in color theory. Textile Surface Design uses techniques such as block printing, shibori, batik, silk painting, silk screen, and stitchery to produce a portfolio of textile designs. Studio work is augmented by lectures on pattern and color theory illustrated by slides and textile examples.

**TXA 237 Structural Fabric Design**
Fall. 3 credits. S-U grades optional. Prerequisite: TXA 135. Recommended: college algebra. Lecs M W F 9:05-9:55. Staff. This course covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

**TXA 264 Draping**
Fall. 4 credits. Limited to 30 students; 15 in each lab. Prerequisite: TXA 125 and TXA 145; one drawing course recommended. Minimum cost of materials, $125; lab fee, $30. Lecs O M 1:25-4:10; lab O W 1:25-4:25; lab O P 10:10-1:10. S. Ashdown. This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. The principles and processes of draping, advanced flat pattern making, and fitting are studied through projects. Drawing exercises focus on the communication of three-dimensional garments in two-dimensional sketches. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

**TXA 269 Style, Fashion, and the Apparel Industry**
Spring (first 7 weeks of semester). 2 credits. Limited to 40 students. Recommended: TXA 125 and TXA 135. Not open to freshmen. S-U grades optional. Lecs M W 2:30-4:25. A. Racine. An introduction to the business of fashion, with a focus on changes in the U.S. apparel industry and fashion from the nineteenth century to the present day due to social forces, technological developments, and shifting demographics. The Cornell Costume Collection is used for discussion. Students write a term paper on issues relating to the fashion industry.

**TXA 275 Photoshop for Portfolio Presentations in Textiles and Apparel**
Spring (first 7 weeks of semester). 2 credits. Limited to 25 students. Prerequisite: TXA 114, TXA 217, or TXA 225. Course fee covering CAD lab color printing. $15.00. T R 1:25-4:25. C. Jirousek. This course explores the use of Adobe Photoshop as a tool for portfolio development in textile and apparel design. Building on studio work produced in other courses, students learn the basics of Photoshop and create a design line for a formal portfolio that involves textile design applied to either apparel or home furnishings use.

**TXA 300 Special Studies for Undergraduates**
Fall or spring. Credit to be arranged. Staff. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students interested in the description of the study they want to undertake on a form available from the College Registrar's Office. The form is filled, signed by both the instructor directing the study and the department chair, and filed at course registration or during the change-of-registration period.

**TXA 331 Apparel Production and Management**
Spring. 3 credits. Enrollment limited to 40 students. Prerequisites: ECON 101 and 102 and an upper-division course in either apparel or textiles. T R 2:55-4:10. S. Loker. This course presents an introduction to the global textile and apparel industry, particularly the technical and economic aspects of apparel production. It includes analysis of specific apparel manufacturing and management issues such as inventory control, Quick Response, mass customization, production and information technology, labor, and logistics.

**TXA 332 Designers as Entrepreneurs**
Spring. 1 credit. Enrollment limited to 20 students. Prerequisite: any design course. S-U grade optional. W 12:20-1:10 S. Loker. This course presents issues that are critical to designers who are entrepreneurs, such as product development and maintenance; sourcing materials, assembly, and other services; copyright, trademark, and patents; branding and licensing, mass customization; distribution options including e-commerce; and social responsibility in business. The course draws extensively on guest speakers and case studies.

**TXA 335 Fiber Science**
Spring. 3 credits. Limited to 20 students. Prerequisites: college chemistry and physics. Lecs T R 1:25-2:15. Lab T 2:30-4:25. A. Netravali. This course covers fibers commonly used in various engineering, medical, and apparel applications. Topics include the nature of polymer molecules, the chemical structure of organic fibers, inorganic fibers, microstructure of fibers, fiber dimensions, environmental effects, and mechanical, optical, thermal, and fractional properties of fibers. The following fiber uses are discussed: composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, and others.

**TXA 336 Fundamentals of Color and Dyeing**
Fall–Winter. 2 credits. Limited to 25 students. Prerequisite: TXA 135 and TXA 145. Letter grades only. Minimum cost of materials, $125; lab fee, $10. Lecs M W F; lab M. Not offered 2002–2003. C. C. Chu. Color is extremely important and useful in daily life. This course emphasizes theories and scientific principles of color, providing a framework for the use of color in design, marketing, or research. How colorants are used to dye fabrics is addressed. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge is useful to nontextile majors. Guest lecturers from the industry address the practical aspects of color in business.

**TXA 346 Apparel Design Process and Pattern Development**
Spring. 4 credits. Enrollment limited to 30. Prerequisite: TXA 135 and TXA 145. Letter grades only. Minimum cost of materials, $125; lab fee, $10. M W F 1:25-4:25. V. D. Lewis. This course provides an exposition of the methods used by a creative fashion designer. The course aims to develop each student's personal handwriting as a designer. This is done by uniting a provocative design issue with the requirement of functionality. In
satisfying their ideas students discuss, adapt, and experiment with garment design techniques for new and original effect. On completion of the course students should be in possession of a portfolio consisting of at least 15 finished pieces of work which include development sheets, illustrations, design drawings, work sheets, and photographs of finished garments, and a sketchbook which documents their ideas through the course.

TXA 368 Computer-Aided Apparel Design
Fall. 3 credits. Prerequisite: TXA 114, TXA 145. Pre or co-requisite: TXA 264. Minimum cost of materials, $60. M W 10:10-12:05. A. Racine.
A team-based studio course in which a finished line of apparel is completed with patterns, sketches, flat drawings, and cost sheets created on the computer. This is an appropriate product development course for management students who have taken TXA 114 and TXA 145.

TXA 400-401-402-403 Special Independent Studies for Undergraduates
Fall, summer, or spring. Credits to be arranged. S-U grades optional. Staff. For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of TXA 400-403 otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiphase description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration along with an add/drop slip in 145 MVR, College Registrar Office. To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

TXA 400: Directed Readings.
For study that predominantly involves library research and independent reading.

TXA 401: Empirical Research.
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

TXA 402: Supervised Fieldwork
S-U only. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

TXA 403: Teaching Apprenticeships.
Fall or spring. 2-4 credits. Prerequisites: student must have upperclass standing, have demonstrated a high level of performance in the subject to be taught and in the overall academic program, and have permission of the instructor and the department chair. S-U grades optional. Staff.
Through supervised experiences in apparel design, students examine the influence of manufacturing technology and cost on apparel products. Garments are developed to various stages from sketches to finished samples. Sketching exercises explore the relationship between technical drawing and illustration. Some portfolio development included.

TXA 406 Apparel Design: Product Development
Fall. 3 credits. Prerequisites: minimum of 2 drawing or art courses, TXA 264, TXA 308, and TXA 225 or permission of instructor. Minimum cost of materials, $250; lab fee, $10. T R 10:10-12:05. S. Ashdown.
Through supervised exercises in apparel design, students examine the influence of manufacturing technology and cost on apparel products. Garments are developed to various stages from sketches to finished samples. Sketching exercises explore the relationship between technical drawing and illustration. Some portfolio development included.

TXA 470 Fashion Presentation: Portfolio Development
Fall. 3 credits. Prerequisites: TXA 117, TXA 264, and TXA 406. Pre- or co-requisite: TXA 468. Enrollment limited to 20. T R 2:30-4:25. V. D. Lewis.
The purpose of this course is to provide students with an understanding of presentation methods currently used by fashion designers, runway illustrative journalists, forecasting artists and fashion editorial illustrators. Skills in fashion illustration, image manipulation and photography are developed. To satisfy personal philosophies of fashion, students discover and adopt current presentation techniques with new and original effects. Students create fashion presentation boards, worksheets, and organize portfolios for inspection by industry professionals. (Course may include an optional field trip to New York City.)

TXA 499 Honors Thesis Research
Fall and spring. 1-6 credits (maximum 6 credits for graduation). S-U grades optional. Prerequisite: TXA students who have been admitted to college honors program. Staff.
Independent research leading to the honors thesis. College honors program guidelines are to be followed.

TXA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

TXA 620 Physical Properties of Fiber-Forming Polymers and Fibers
Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years. T R 2:30-3:45. A. Netravali.
Formation and properties of fiber-forming polymers, rubbery, glassy, and crystalline states and their interconnection. Fiber structure, relationship between chemical structure and physical properties of manufactured and natural fibers, mechanical, thermal, and viscoelastic properties of fibers and testing methods will be discussed.

TXA 626 The Chemistry of Textile Finishes and Dyeing
Spring. 3 credits. Prerequisite: TXA 135 or equivalent and organic chemistry, or permission of instructor. Offered alternate years. M W F 10:10-11:00. C. C. Chu.
Chemical aspects of textiles with emphasis on finishes and dyeing are discussed. Industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, water repellency are studied. The emphasis is on the correlation of the observed effect with chemical structure, end-use influences, interaction with fabric and fibers, sources, and synthetic routes. The environmental effect of these textile chemicals and current federal regulation is briefly discussed.

TXA 637 Research Seminars in Apparel Design
Fall and spring. 1 credit. S-U only; repeat course each semester is encouraged for all apparel design graduate students. Available to advanced undergraduate students with permission of individual instructor. Apparel Design faculty.

TXA 639 Mechanics of Fibrous Assemblies
Fall. 3 credits. Prerequisite: solid mechanics or permission of instructor. Offered alternate years. M W F. Not offered 2002-2003. Staff.
ADMINISTRATION
Edward J. Lawler, dean
Robert Smith, associate dean, academic affairs
Ann Martin, associate dean, extension and public affairs
Gordon Law, librarian
Allan Lentini, director, administrative services
Martin Wells, director, research
Christopher Haley, director, external relations
John Bunge, graduate faculty representative
Tove Hammer, editor, Industrial and Labor Relations Review

THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 750 undergraduates and approximately 150 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries. Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of entering classes, and minority students comprise about 25 percent of new freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES

More than 150 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 216 Ives Hall, Ithaca, NY 14853–3901.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies

This department offers specialization in human resource studies. Human Resources focuses on employer-employee relationships and deals with such topics as human-resource planning, staffing, computer applications to personnel, personnel information systems, training, management development, performance appraisal, compensation administration, organization development, and the sociological environment of human resource management. The study of human resource policy focuses on government efforts to enhance the population's ability to be employed. Although primarily concerned with governmental measures that influence the supply of labor (for example, training, education, health, mobility, and immigration), the subject area also includes policies in private industry that relate to the demands for labor.

International and Comparative Labor Relations

International and Comparative Labor Relations is concerned with industrial and labor relations systems and labor markets in other parts of the world. Countries include those in Western Europe, as well as in Asia, Latin America, and South America.

Labor Economics

Labor Economics deals with labor markets: that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include the following: analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

By studying individuals, groups, single organizations, and associations or organizations, persons in the field of organizational behavior understand human behavior within organizations as well as the actions of the organizations themselves. At the individual level of analysis, courses consider motivation, leadership, attitudes, personality, group processes, organizational change, and worker participation. At the organizational level, courses examine occupations, deviance in the workplace, conflict, power, organizational design, public policy regarding organizations, and industrial conflict. The department also offers courses on research methods in organizational research and general survey courses in both psychological and sociological research.

Social Statistics

Economic and social statistics includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy from Cornell.
Office of Student Services
Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty and faculty committees to administer degree programs for the school and many of the school’s support services. The office’s responsibilities include the admitting and orienting of new students, maintaining students’ personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

Counseling and Advising
New students are provided advising on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school’s academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be raised with counselors in the Office of Student Services.

Minority Programs
Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The purpose of these programs is to provide access to a Cornell education for capable students who otherwise might not secure the admissions consideration, financial assistance, or supportive services necessary for their success at the university. The associate director for minority education in the Office of Student Services provides academic and personal counseling to all ILR minority students. ILR offers a variety of support services to enhance academic achievement.

STUDY OPTIONS
Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

One such option is the five-year ILR master’s degree. With early planning, some students may earn the M.S. degree in the fifth year. Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problems solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see “Special Academic Programs,” below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today’s problems and involve fieldwork in the Ithaca area and elsewhere in New York State.

The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study in Absentia
Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee.

Leave of Absence or Withdrawal
If a student desires to withdraw or to take a leave of absence from the university, an interview should be scheduled with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

REQUIREMENTS FOR GRADUATION
To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student must successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies.

Freshman Year
Fall Semester
Freshman Writing Seminar 3
Introductory Microeconomics (ECON 101) 3
History of American Labor: Nineteenth Century (ILRCB 100) 3
Introduction to Micro Organizational Behavior and Analysis: The Social Psychology of the Workplace (ILROB 170) 3
ILR Colloquium (ILRID 150) 1
Elective 3

Total: 15

Spring Semester
Freshman Writing Seminar 3
Introductory Macroeconomics 102 3
History of American Labor: Twentieth Century (ILRCB 101) 3
Introduction to Macro Organizational Behavior and Analysis (ILROB 171) 3
Elective 3

Total: 15

Sophomore Year
Fall Semester
Statistics I (ILRST 210) 3
Development of Economic Institutions (ILRLE 140) 3
Labor and Employment Law (ILRCB 201) 3
Human Resource Management (ILHR 200) Fall 3
Elective 3

Total: 15

Spring Semester
Statistics II (ILRST 211) 3
Economics of Wages and Employment (ILRLE 240) 3
Distribution: Cultural Perspectives 3
Distribution: Western Intellectual Tradition 3
Elective 3

Total: 15

Junior and Senior Years
Economic Security (ILRLE 340) 3
Collective Bargaining (ILRCB 300) 3
Distribution: International and Comparative Labor (ILRIC) 3
Distribution: Upper Division Writing 3
Distribution: Science and Technology 3
ILR and General Electives—30 credits (one course must be ILRIC)

Minimum of 12 credits of ILR course work including 495 (Honors), 499 (Independent Study) and approved list of courses from the IE Department.

Maximum of 12 credits from foreign languages, advanced math or other non-ILR courses as approved by ILR departments.

Maximum of 9 credits for one semester abroad or 15 credits for a full year.

Maximum of 9 credits for Internships (497: 3 credits; 498: 6 credits S-U).

General Electives—34 credit hours of which up to 22 hours may be freely elected in the university’s endowed divisions.

Required Courses
(49 credits)
The curriculum prescribes the courses and subjects listed in the table above; some are illustrative.

Elective Courses
(71 credits)
From the courses offered by the school, students must select a minimum of 30 credits of ILR elective courses. No more than nine of these credits may be satisfied by ILR 497-498, Internships, or one semester of Study Abroad.

Undergraduates are required to select one intensive writing course for (a minimum of three credits) from a list of designated courses.

The remaining 34 credits may be selected from the courses of any other college at Cornell, but a student who takes more than 34 credits in the endowed colleges (the College of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management; the College of Engineering; and the School of Hotel Administration) must pay for each credit taken in excess of 34, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.

The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.
ILR Math Requirement
A student who took AP calculus in high school and scored a 3 or better on the AB exam or score of BC exam, has fulfilled the ILR math requirement. If AP calculus wasn't completed, or if the scores noted above were not achieved, you will be expected to take and pass the ILR Math Assessment before registering for required courses in Statistics and Labor Economics. The Math Assessment is based on materials covered in New York State Regents Exams for Courses 2 and 3. (Calculus is not covered in those courses.)

The ILR Math Assessment will be scheduled in August, January, and May. Those who do not pass in the first attempt will be expected to register in an appropriate math course and pass the assessment before the beginning of their third semester in the school. Any student who cannot meet the requirement by the beginning of the third semester will be enrolled for a terminal term and will be expected to leave the school thereafter.

Transfer students will be expected to meet the same standards in math: either present the score required by Cornell University for AP calculus (AB or BC) credit, or pass the ILR Math Assessment before being permitted to register in ILRST 210 or ILRLE 240 with a terminal semester possible after failing the assessment given at the beginning of a third semester as an ILR student.

SCHEDULING AND ATTENDANCE

Schedule Changes
Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance
It is each student's responsibility to attend all scheduled classes unless excuses have been approved by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1) participation in authorized university activities such as athletic events, dramatic productions, or debates;
2) medical problems supported by a record of clinic or infirmary treatment;
3) serious illness or death in the immediate family;
4) other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of the expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

ACADEMIC STANDING AND GRADES

ACADEMIC STANDARDS AND GRADES

Academic Integrity
In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1) knowingly representing the work of others as one's own;
2) using or obtaining unauthorized assistance in any academic work;
3) fabricating data in laboratory or field work;
4) giving fraudulent assistance to others;
5) fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

Dean's List
A Dean's List is compiled for each of the four undergraduate classes each term on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1) achievement of a term average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for seniors and juniors of 3.6 or better;
2) a minimum course load for the term of 12 letter-graded credits;
3) completion of all courses registered for at the beginning of the term;
4) satisfaction of all good-standing requirements.

Academic Standing
Good standing requires that all of the following criteria be met at the end of each term:

1) an average of C- (1.7) for the semester's work, including a minimum of eight completed and letter-graded credits;
2) no failing grades in any course, including physical education;
3) a cumulative average of C- (1.7) for all completed terms.

If at the end of any term a student fails to maintain good standing or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be denied permission to register for the next term.

Involuntary Separation from the School for Academic Reasons
A student may be denied permission to reregister at the end of any term when he or she has failed:

1) to establish good standing after a semester on warning;
2) to maintain an average of 1.7 in any term after a previous record of warning;
3) to achieve good standing after being on warning any two previous semesters;
4) two or more classes in one term or has a term average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

S-U Grading Policy
An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1) the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2) students are limited to registering in two S-U courses a term;
3) S-U registration is limited to four credits for each course;
4) students registering for S-U grades must be in good standing;
5) students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete
A grade of incomplete is assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school's policy allows a maximum of two full terms of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.
SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish concentrated study in an area of specialization in the school for a Master of Science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Internships

The Credit Internship Program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor problem solving. A number of selected students spend a term of their junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research under direction of ILR faculty members and seminars drawing on fieldwork experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Student Services.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for three credits in each term) to research, write, and then defend the thesis.

Study Abroad

Cornell students with strong academic records and the necessary preparation in required and elective courses are encouraged to consider study abroad. The university currently has contact with universities in more than 40 countries that permit undergraduates to register for courses while maintaining Cornell registration and financial aid for a semester or a year. Information about those opportunities may be requested from Cornell Abroad, 474 Uris Hall. Some study abroad programs require the development of language proficiency and preparation in appropriate courses at Cornell. Students should consult the Office of Student Services and Cornell Abroad in the freshman and sophomore years to be sure that they comply with the academic and procedural requirements for study abroad.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

ILRCB 100 Introduction to U.S. Labor History: Nineteenth Century

Fall. 3 credits. J. Cowie, C. Daniel, J. DeVault, N. Salvatore.

This first semester of a two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States through the end of the nineteenth century.

ILRCB 101 Introduction to U.S. Labor History: The Twentieth Century

Spring. 3 credits. Prerequisite: ILRCB 100. J. Cowie, C. Daniel, J. DeVault, N. Salvatore.

This second semester of a two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States from the end of the nineteenth century up to the present.

ILRCB 201 Labor and Employment Law

Fall and one section in spring. 3 credits. M. Gold, J. Gross, R. Lieberwitz, K. Stone.

A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," occupational safety and health, and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 300 Collective Bargaining (200)

Fall and spring. 3 credits. M. Cook, H. Katz, S. Kunuvilla, L. Turner.

A comprehensive introduction to industrial relations and collective bargaining in the United States, the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict, the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILRCB 301 Labor Union Administration

Fall. 3 credits. Staff.

Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations, the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the many different sections of internal union government; the ways in which unions are set up to handle collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions that began in the sixties and continues today. All of these involve a study of union constitutions and other primary documents, in addition to secondary readings. Attention is given to relevant legislation, current problems of unions, and the eternal problems of attaining union democracy.

ILRCB 302 Strangers and Citizens: Immigration and Labor in U.S. History

Fall or spring. 3 credits. I. DeVault.

This course explores immigrant workers' experiences in the nineteenth and twentieth centuries from different perspectives. Students examine what it meant to the immigrants themselves to arrive as strangers in the United States while also examining the ways in which pre-existing American groups defined these immigrants as "strangers." Similarly, students look at U.S. citizens in their roles as greeters of immigrants, detractors of immigrants, and as models for the aspirations of immigrants. Throughout the course our main examples come from the industrial and union realms.

ILRCB 303 Working-Class America in Mass Media and Popular Culture

Spring. 3 credits. J. Cowie.

Examines a variety of representations of working people found in commercial popular culture throughout the 20th century as a means to explore the ways in which history, memory, and politics are shaped through popular discourse. Uses sources as diverse as popular music, Hollywood movies, the mainstream press, and television sitcoms to understand the ideological and political influences on our pre-conceptions of workers, and how those forces influence our notions of authenticity, the historical experience, and the politics of social class.

ILRCB 304 Seminar in American Labor and Social History

Fall or spring. 4 credits. Permission of instructor. C. Daniel, J. DeVault, N. Salvatore.

An undergraduate seminar whose topic changes depending on semester and instructor.

ILRCB 305 Introduction to Labor Arbitration and Alternative Dispute Resolution

Fall. 3 credits. J. Gross.

An introductory survey that focuses on the U.S. labor arbitration process in private and public sectors (legal issues, discipline and discharge, contract language interpretation, remedies, and procedures), and on alternative dispute resolution systems in the United States and other countries. Student participation in class discussion is expected and assignments include an original research paper.

ILRCB 306 Recent History of American Workers: From the 60s through the 90s

Fall. 3 credits. J. Cowie.

Focuses on the social history of American workers and the role of organized labor in American life since the 1960s. Course themes often center on the complexities of social class in the United States. Topics covered include: the transformation of liberalism, the civil rights and black power movements, the Vietnam War, the rise and fall of the New Left, industrial restructuring, the decline of organized labor, the rise of industrial relations, the decline of organized labor, the rise of neoconservatism, changes in civic identity, and sources of cultural conflict. Course ends with an examination of globalization, changes in the major political parties, the future of work, and prospects for social change.
This course explores women's participation in role of cross-class alliances of women in with male-dominated union movements. The issues addressed include women workers' relations in the nineteenth and twentieth centuries. The course examines how U.S. unions represent their members in different industries and different collective bargaining environments. Topics include: union representative/steward rights and responsibilities, contract enforcement structures and practice, access to information, new work systems, hours of work and scheduling, contingent staffing arrangements, workplace discrimination, health and safety, promotional opportunities, down-sizing, leadership development, membership involvement and commitment, community organizing, coalition building, and donnees of collective bargaining. Students practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.

ILRCB 405 Negotiation and Dispute Resolution
Fall and spring 3 credits. Prerequisites: background in economics and the social sciences, or permission of instructor. D. Lipsky, R. Seeger. Deals with four related topics: (1) nature of conflict particularly between organizations, (2) negotiation, with a focus on process, practice, and procedures; (3) third party dispute resolution, with a focus on mediation and arbitration; and (4) alternative dispute resolution (ADR), with a focus on its current use in the private sector and the implications for our system of justice. This is a generic dispute resolution course, that is, we do not focus on labor relations or any particular type of disputes, but deal with many different kinds of disputes. Examples and cases are used to illustrate general principles. Few if any of these cases and examples are drawn from labor relations; illustrative material in the course is based on exercises in areas such as product liability, environmental regulation, commercial relations, and personal injury disputes.

ILRCB 407 Contemporary Trade Union Movement
Spring 3 credits. Prerequisites: undergraduates, ILRCB 100, 101, graduate students, ILRCB 502. R. Seeger, R. Hurd. An examination of the modern trade union movement issues, union organizing, union political, power, collective bargaining processes, and organizing efforts. The course covers structural, functional, and strategic aspects of contemporary unions. Students engage in a union movement that is a part of the ILR faculty, in a special area of labor relations. Students practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.
ILRCB 501 Labor and Employment Law
Fall. 3 credits. Open only to graduate students. L. Compa, M. Gold, R. Lieberwitz, K. Stone.
A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, free agency, and student democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 502 History of Industrial Relations in the United States since 1665
Spring. 3 credits. Open only to graduate students. C. Daniel, I. DeVault, N. Salvatore.
This introductory course emphasizes historical developments in the twentieth century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflicts, working-class life styles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 504 The U.S. Industrial Relations System
Fall and spring. 4 credits. Offered only in New York City for the M.P.S. Program Staff.
Examines the development, operation, and outcomes of the U.S. industrial relations system in a comparative context. Specifically, the course contrasts the American experience with industrial relations institutions and outcomes with the experience of several other countries in Europe and Asia. Students look at the process of union formation, the practice of collective bargaining at different levels, the methods of dispute resolution, and the legal regime germane to industrial relations. The course also focuses on both processes and outcomes of different country systems, focusing on the degree of collaboration or conflict, wages, benefits, workers' rights, and the relationship between government and industrial relations. Finally, the role played by industrial relations and human resource policy in economic and social development in these nations is addressed.

ILRCB 602 Arbitration
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: undergraduates, ILRCB 201, 300; graduate students, ILRCB 500 and 501. J. Gross, M. Leibowitz, R. Lieberwitz.
A study of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 603 The Economics of Collective Bargaining in Sports
Fall or spring. 3 credits. L. Kahn.
Surveys economic and industrial issues in the sports industry. Topics include: salary determination, including free agency, salary caps, salary arbitration, competitive balance and financial health of sports leagues; anti-trust issues in sports; labor disputes, union history; and contract administration issues in sports leagues; discrimination in sports; and performance incentives.

ILRCB 604 Theories of Equality and Their Application in the Workplace
Fall or spring. 3 credits. R. Lieberwitz.
An examination of the various aspects of equality in the workplace, focusing on issues of race, gender, and national origin, and the ways in which societal discrimination on these bases is institutionalized in the workplace. Theories attempting to define "equality" and "specific workplace issues are studied, including the means for achieving equality at the workplace. The course entails a high level of student participation in class discussions, and assignments include a research paper.

ILRCB 605 Readings in the History of Industrial Relations in the United States
Fall. 3 credits. Limited to seniors and graduate students. C. Daniel, N. Salvatore.
An intensive seminar covering original printed sources and scholarly accounts for different periods in American history.

ILRCB 606 Theories of Industrial Relations Systems
Fall or spring. 3 credits. Limited to seniors and graduate students. Prerequisites: seniors. ILRCB 100, 101, 300; graduate students, ILRCB 500. H. Katz.
This course traces the evolution of theory and research on industrial relations. Topics include: theories of the labor movement; institutional models and evidence regarding what unions do; the origins of internal labor markets and their relationship with unionization; models of strikes; empirical assessments of arbitration; research on union decline; and empirical evidence of the impacts of new technology.

ILRCB 607 Values in Law, Economics, and Industrial Relations
Fall and spring. 3 credits. Limited to 21 students. Prerequisites: ILRCB 201, 300, 500, 501. J. Gross.
An examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom and student research projects use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as: discrimination, law, economics, and the state; power, conflict, and protest; and rights and justice.

ILRCB 608 Special Topics in Collective Bargaining, Labor Law and Labor History
Fall. 3 credits. Prerequisites: ILRCB 201 or 501 or permission of instructor. M. Leibowitz.
Lec 03—An advanced labor law course which builds on the foundation of the study of labor law in the required labor and employment law course. The course is an in-depth study of labor law, with particular focus on the National Labor Relations Act, including issues of organizing across different occupational groups, collective bargaining, strikes, picketing, and contract enforcement. The course also includes a study of legal issues of union democracy and other labor and employment law issues.

ILRCB 608 Collective Bargaining Simulation
Fall. 3 credits. Open only to juniors, seniors, and graduate students. Limited to 14 students. One evening extended simulation. R. Lieberwitz.
Lec 04—After a brief introduction to negotiations techniques, participants take part in a simulated negotiation, set in a hypothetical company and union environment (for 2001 in the chemicals industry), for a moderately sized bargaining unit, either as members of a management or a union team. The course stresses the process of negotiations over their outcome. Negotiation problems are highly realistic, with attention given to dynamic legal, economic, political, and communication concerns. Participants plan for negotiations, cost proposals, negotiate contract language, and bargain wages, benefits, and other economic items, in the context of a company and union with an established contract, history, policies, and culture (which are supplied by the course leaders). Students are required to read, "Game, Set, Match—Winning the Negotiations Game," but the primary thrust is on using practical methods for managing the negotiation process. This is a participation based hands-on course.

Students wishing to merely observe should not take this program. There is a group planning paper requiring feedback. This program is recommended for graduate and undergraduate students who have taken or who are taking collective bargaining and labor law. Participants are required to adhere to high standards for "completed staff work."

ILRCB 609 Introduction to Labor Research
Spring. 3 credits. Limited to 20. K. Bronfenbrenner.
