**Cornell University Calendar**

### Fall Semester
- Residence halls open
- New undergraduate student registration
- New student orientation begins
- New graduate student registration
- Course add/drop begins*
- Instruction begins
- Physical education classes begin
- Fall break: instruction suspended
- Instruction resumes
- Pre-course enrollment for spring
- First-Year Family Weekend
- Homecoming
- Thanksgiving recess: instruction suspended, 1:10 p.m.
- Instruction resumes
- First-Year Family Weekend
- Pre-course enrollment for spring
- Thanksgiving recess: instruction suspended, 1:10 p.m.
- Instruction resumes
- Final examinations begin
- Final examinations end
- Residence halls close

### Winter Session Period Begins
- Three-week classes begin
- Winter session period ends

### Spring Semester
- Residence halls open
- Course add/drop begins*
- Instruction begins
- Physical education classes begin
- Spring break: instruction suspended
- Instruction resumes
- Pre-course enrollment for fall
- Instruction ends
- Study period
- Final examinations begin
- Final examinations end
- Residence halls close (students who are graduating may stay through Commencement Day)
- Senior Week
- Commencement

### Summer Session
- Three-week session classes begin
- Eight-week session classes begin
- Six-week session classes begin

*Implementation of online add/drop may affect these dates.

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

*This catalog was produced by Communication and Marketing Services at Cornell University.*

INTRODUCTION

Courses of Study (cuinfo.cornell.edu/Academic/Courses/), a catalogue of Cornell University’s many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Additionally, a student handbook, distributed to all incoming students, describes life at Cornell. The Policy Notebook (www.univco.cornell.edu/policy/library.html), also distributed to each new student, summarizes pertinent university policies, including the campus Code of Conduct and the Code of Academic Integrity. Students should consult with their college’s advising office for specific information on their college’s academic policies and procedures, degree programs, and requirements.

All these publications are also available for viewing on CUINFO, the university’s electronic information system, and in print at the various university libraries, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 607-255-5241.

College of Veterinary Medicine, Admissions Office, Cornell University, Schuman Hall, Ithaca, NY 14853-6401, 607-255-7000.

Medical College and Graduate School of Medical Sciences, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-1067/212-746-6565.

CUINFO ON THE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell’s electronic information source, and in the Course and Time Roster and the Course and Room Roster, published each semester by the Office of the University Registrar. You may access CUINFO through the web. The URL is: www.cornell.edu. Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND COURSE PREFIXES

The course levels have been assigned as follows:

100-level course—introductory course, no prerequisites, open to all qualified students

200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites

300-level course—upper-division course, open to juniors and seniors, prerequisites

400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent

500-level course—professional level (e.g., management, law, veterinary medicine)

600-level course—graduate-level course, open to upper-division students

700-level course—graduate-level course

800-level course—master’s level, thesis, research

900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences

Architecture, Art, and Planning

Arts and Sciences

Engineering

Hotel Administration

Human Ecology

Industrial and Labor Relations

Nutritional Sciences

Officer Education

Group 2: Graduate professional divisions

Law

Management

Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell’s accreditation can be found at dpb.cornell.edu/irp/accreditation.htm.

Requests to review additional documentation supporting Cornell’s accreditation should be addressed to Michael Matier, Director, Institutional Research and Planning, Cornell University, 440 Day Hall, Ithaca, NY 14853-2801, mmw5@cornell.edu.

Advanced Placement

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their course of study.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

a. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, NJ. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 7–9.

b. Acceptable performance on a Cornell department exam (offered only in some subjects, usually during orientation).

c. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.

d. International credentials from “A” level or IB Examinations (see charts below).

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described in paragraph a or b above.

The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject, recommends AP credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell and applying it to degree requirements rests with each individual college (consult the relevant college sections of Courses of Study). Students need not accept advanced placement, although forfeiting the advantage of moving quickly into advanced courses affects one’s overall education. If they take the Cornell course they have placed out of, they relinquish the advanced placement credit.
Advanced placement examinations. Entering first-year students should have their scores from CEEB Advanced Placement Examinations sent to their college or school registrar's office (see list below).

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during Orientation Week. A schedule of these examinations appears in the orientation booklet mailed in late summer to entering students. The departments that award advanced placement and credit on the basis of departmental examinations are shown on pages 7-11. Students need to register for those examinations in the relevant department.

Transfer of credit. Entering first-year students who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list below).

Written inquiries. Students can address questions to departments, schools, or college offices by adding Ithaca, New York 14853 to the addresses given in the following sections.

CREDIT AND PLACEMENT

The tables below summarize how credit and placement are determined for most subjects. Supplementary information for some subjects follows immediately.

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zubal, 183 Goldwin Smith Hall, for German.
**International Credentials**

The policies currently in effect for General Certificate of Education (GCE) "A" Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table below. Students may submit results of the French Baccalauréat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

**SUPPLEMENTARY INFORMATION**

**Chemistry and Chemical Biology**

The Department of Chemistry and Chemical Biology offers two eight-credit sequences that satisfy prerequisites for further work in the department: Chemistry 207-208 and Chemistry 215-216. Chemistry 215-216 is the sequence intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced placement examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in the Chemistry and Chemical Biology Instructional Office, 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in 760A S.T. Olin Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 215-216 and should consult the CHEM 215 instructor or department staff.

**Computer Science**

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the A exam, or a score of 6 or 7 on the IB exam will receive four advanced placement credits and may take COM S 211. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn four credits by suitable performance on a departmental examination to be given during Orientation Week. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

4 additional credits for PHYS 213 are granted for a combination of grades of A or B and a minimum of 8 advanced placement or advanced standing credits in mathematics. Students planning to major in physics are encouraged to enroll in PHYS 116. If students take 116, they do not receive 4 credits for 112. If students take 217, they do not receive credit for 213.
English
Separate from AP credit for a high score on the CEEB AP test, students who receive scores of 700 or better on the CEEB SAT II examination in English composition, 700 or better on the CEEB SAT II examination in literature, or 4 or 5 on either CEEB Advanced Placement Examination in literature, or 4 on AP English are eligible to enroll, space permitting, in the following English first-year writing seminars: 270, 271, 272.

Mathematics and Statistics
The Cornell calculus sequences discussed below are described under "Basic Sequences" in the placement of Mathematics section of this catalogue.

The non-engineering freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (Calculus AB or Calculus BC) during their senior year.

Students who have been awarded advanced placement credit for calculus or statistics may not also receive academic credit for similar courses taken at Cornell. In particular, students who have been awarded AP credit for one semester of calculus (four academic credits) may not also receive academic credit for any first-semester calculus course (MATH 106, 111, 121, 190, 191). Students who have been awarded AP credit for two semesters of calculus (eight academic credits) may not also receive academic credit for any first-semester calculus course (MATH 106, 111, 121, 190, 191) nor for any second-semester calculus course (MATH 112, 122, 192). Arts and Sciences students receive a maximum of eight credits for AP Math AB and BC combined. Finally, students who have been awarded AP credit for statistics (three academic credits) may not also receive academic credit for any of the introductory statistics courses, BTRY 100, IBLST 210, or MATH 171.

The following rules apply to students in all colleges and programs except the College of Engineering and the Biological and Environmental Engineering (BEE) program in the College of Agriculture and Life Sciences. Rules applicable to students in these engineering programs are provided near the end of this section.

Students with a score of 4 or 5 on the BC examination may take any of the following third-semester courses, MATH 221, 223, or 213. Students with these scores who wish to take courses in the engineering calculus sequence and who have had no multivariable calculus may give up their AP credit for the second semester and take the second-semester engineering calculus course, MATH 192. On the other hand, students with scores of 4 or 5 on the BC examination who can also demonstrate sufficient mastery of introductory multivariable calculus (which is covered in MATH 192 but not on the BC examination) on the College of Engineering placement exam may take either of the second-year engineering calculus courses, MATH 293 or 294. Students with a 3 on the BC examination or a 3, 4, or 5 on the AB examination, may take any of the second-semester calculus courses (MATH 112, 122, or 192); however, students in the latter category who take MATH 192 may have to make up some material on techniques and applications of integration. For purposes of advanced placement and credit, AB subscores on the BC examination are equivalent to the same scores on the AB examination. Students who receive the borderline passing score of 3 on the AB examination or an AB subscore of 3 on the BC examination and who wish to continue with calculus are strongly advised to take MATH 112 rather than the more demanding courses 122 or 192. Advanced placement credit will be awarded appropriately; however, no credit will be granted for a score of 1 or 2 on the AB examination, nor for a score of 1 or 2 on the BC examination, unless the AB subscore on that examination is at least 3.

A placement examination in mathematics for non-engineering students is offered at Cornell only during Orientation Week and should be taken by:

1) Students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination; or
2) Students who believe that their placement is incorrect.

The exam covers the material of the AP calculus program. Students are strongly urged to take this departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any case, and the grade on this test does not become a part of the student's record. No advance registration for the departmental examination is necessary.

The College of Engineering and the Biological and Environmental Engineering (BEE) program in the College of Agriculture and Life Sciences will give credit for MATH 191 (four credits), and permission to take MATH 192, for a score of 3, 4, or 5 on the BC examination, or the score of 5 on the AB examination, or for a satisfactory score on the Engineering Mathematics Placement Examination. Credit for MATH 191 and 192 (eight credits), and permission to place MATH 225 or 294, will be given to students in the Engineering College or BEE program who achieve a satisfactory score on the Engineering Mathematics Placement Examination.

Modern Foreign Languages
Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests and Advanced Placement Credit" under "Foreign Languages" in the Arts and Sciences section of this catalogue. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during Orientation Week if they plan to continue course work.

Advanced standing credit may be earned as follows:

1) Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, earn three credits, and are eligible to take the Cornell Advanced Standing Examination (CASE).

2) Students who achieve a minimum score of 65 on the Cornell language placement test given during Orientation Week are eligible to take the Cornell Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of three credits.

3) For formal language work at an accredited college, credit will be considered by the relevant department on submission of a syllabus and transcript. Sometimes an exam score or the CASE is also required.

4) Native speakers of languages other than English may, if an examination by the appropriate department is available, be granted a maximum of three credits for proficiency equivalent to that required in English for a first-year writing seminar.

Music
Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music; that is, credit cannot be earned on the basis of the AP, IB, or other examinations from outside Cornell, nor on the basis of course work done elsewhere. Outstanding performance on the departmental examination will earn students three credits and placement directly into MUSIC 152 (Tonal Theory II). In rare instances students may place into MUSIC 251 based on this examination. Students who place in MUSIC 251 may earn six credits. The placement examination is normally administered on the Sunday during fall Orientation Week. For more information about the examination, see the departmental website.

Physics
Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (which may be taken during Orientation Week or at other times, as arranged). For information about the departmental examination, students should consult the chairperson of the department at 101 Clark Hall, or the department chair, 109 Clark Hall. Physics B: Students earning a score of 4 or 5 may receive eight credits for noncalculus-based PHYS 101 and 102. Those earning a score of 5 in Physics B and a score of 4 or 5 in Calculus BC may choose to accept four credits in calculus-based PHYS 112 or 207 instead of eight credits in PHYS 101 and 102. Those earning a score of 3 will receive four credits in PHYS 101.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive four credits for PHYS 112 or 207, or placement into PHYS 116, a more analytic first-semester course, with no AP credit.
University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must
- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, University Health Services, or the Bursar.

Individuals must become registered students by the end of the third week of the semester or they will be subject to a financial penalty. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partly through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. Courses may be added, dropped, or changed online through Just the Facts. Permission only courses and courses with specific add/drop procedures will be handled using a manual add/drop form. The form is completed by the student and signed by both the student's adviser and a department representative of the department offering the course. The completed and signed form must be returned to the student's college office to be processed.

Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

*Consult the college office for special considerations and requirements.

AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.

A student may withdraw from the university at the student's discretion. In addition, a college may withdraw a student who fails to return to the end of a period of authorized leave.

Medical leaves are granted and processed through University Health Services.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Sponsorship is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

#### Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $65 application fee when submitting an application for admission. The Graduate and Law School application fee is $65. Application to the Johnson Graduate School of Management costs $200.

#### Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. All students refer to the "Proration Schedule for Withdrawals and Leaves of Absence" below.

#### Student Health Insurance

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage. The Student Health Insurance Plan is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and population-specific material for undergraduates, graduate students, and professional students is mailed to each student in July. Undergraduates, graduate students, and professional students each have separate deadlines and guidelines. Please be sure to check the July mailing for complete details.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating mid-year may be eligible to purchase a five-month plan. Students enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).
### CLASS ATTENDANCE, MEETING TIMES, AND EXAMINATIONS

**CLASS ATTENDANCE AND ABSENCES**

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

**Absences because of religious beliefs.** In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

### Class Meeting Times

**Monday/Wednesday**

<table>
<thead>
<tr>
<th>Start Times</th>
<th>End Times</th>
</tr>
</thead>
<tbody>
<tr>
<td>08:00 A.M.</td>
<td>08:50 A.M.</td>

<td>04:25 P.M.</td>
</tr>
</tbody>
</table>

No classes or laboratory exercises are to be held between the hours of 4:25 P.M. and 7:30 P.M. Monday through Thursday, after 4:25 P.M. on Friday, after 12:20 P.M. on Saturday, and all day Sunday. Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 P.M. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 P.M. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theatrical, employment, etc.). Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

---

**FINAL EXAMINATIONS**

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the **Course and Time Roster** and the **Course and Room Roster**, both of which are published through the Office of the University Registrar each semester and on the web at www.cornell.edu/academic/class.html.

**General Rules Governing Final Examinations**

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by a comparable examination (or the equivalent) in the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period preparing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

**The university policies governing study period and final examinations are:**

a) Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.

b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any
one day. It is urged that members of the faculty consider student requests for a
make-up examination, particularly if their course is the largest of the three involved
and thus has the strongest likelihood of offering a make-up for other valid
reasons, i.e., illness, death in the family, etc.
c) Students have a right to examine their
corrected exams, papers, etc., to be able
to question their grading. (Note that
students have no absolute right to the
return thereof.) Exams, papers, etc., as
well as grading records, should be
retained for a reasonable time after the
end of the semester, preferably till the
end of the following term, to afford stu-
dents such right of review.

EVENING PRELIMINARY
EXAMINATIONS

The most convenient times and places for
"prelims" are the normal class times and class-
rooms. In cases where the only alternative is
to hold evening preliminary examinations,
they may be scheduled only on Tuesday and
Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination
must be provided for those students who
have academic, athletic, or employment con-
icts at the time scheduled.

Note that instructors holding evening exami-
nations are strongly urged to indicate this in
the course descriptions listed in Courses of
Study and must notify students of the dates of
such examinations as early as possible in the
semester, preferably when the course outline
is distributed. For more information on the
policy governing evening examinations, con-
tact the office of the dean of the faculty, 315
Day Hall.

Grading Guidelines

The official university grading system is
composed of letter grades with pluses and
minuses. Passing grades range from A+ to D-;
F is failing. INC denotes a grade of
incomplete, and R is the grade given at the
end of the first semester of a year-long course.
The grades of INC and R do not have quality-
point equivalents attached. These are the quality-point equivalents:

\[
\begin{align*}
A+ &= 4.3 \\
A &= 4.0 \\
A- &= 3.7 \\
B+ &= 3.3 \\
B &= 3.0 \\
B- &= 2.7 \\
C+ &= 2.3 \\
C &= 2.0 \\
C- &= 1.7 \\
D+ &= 1.3 \\
D &= 1.0 \\
D- &= 0.7 \\
F &= 0.0
\end{align*}
\]

This is how a term average is computed:

\[
\text{Quality} = \frac{\text{Credit Points}}{\text{Total Credits}}
\]

To arrive at the term average, add the products (credits x quality points) and divide
by the number of credits taken. Here, 42
divided by 16 equals 2.63.

The cumulative average (an average of grades
from two or more terms) equals the sum of
the products of all the grades at Cornell
divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the Faculty Council of
Representatives passed the following legislation:

"Resolved, that:

a. the S-U system have symbol equivalents
which are uniform within the university:
"S" means C- or above; "U" means D+, D,
D-, or failure.

b. S-U options be chosen by the student
during the first three weeks of the term.

c. the Announcements and/or supplementary
course registration materials describing
each course include a description of the
course grading options, particularly if the
course is graded with an exclusive S-U.

Any change in grading options must be
announced by the instructor within the first
weeks of the term.

d. course requirements (required reading,
term paper, etc.) be the same for students
electing S-U grades as for those electing
letter grades."

The rules for the S-U option are further
defined by each of the academic units. They
are as follows:

Agriculture and Life Sciences. (a) Must have
100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those
courses so designated in the course catalog
after approval by the Educational Policy
Committee. (c) Freshmen may not exercise the
S-U option. (d) Only one optional S-U course
is allowed per semester.

Architecture, Art, and Planning. (a) All
courses specifically required for a degree
excluded. Various departments may designate
specific required courses where S-U will be
permitted. (b) In a course designated as S or
U, the entire class is so graded. The instructor
must announce this decision within the first
weeks of class. (c) Where the option for
S or U exists, both student and instructor must
agree on the option. This agreement must be
made by the end of the third week of classes
on the appropriate form in the college office.
Once agreed upon, this grade option will be
used for the final grade.

Arts and Sciences. (a) Courses that count
toward satisfaction of major requirements
should not be taken for an S or U grade
unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80
of the 120 hours required for the A.B. degree
must be in courses for which the student has
received letter grades.

Engineering. (a) May take one Humanities
and Social Sciences, Approved, or Free
Elective per term after completing first
semester. (b) This option may be elected
during Pre-Course Enrollment or with the
written permission of the instructor and
adviser on an add drop form in the first 3
weeks of classes. (c) Decision is irrevocable
after first three weeks of term.

Graduate School. (a) Seminars and Thesis
Research courses are usually graded S-U, and
should be registered accordingly or a grade
error results at semester's end. Other courses
may be registered as S-U only if offered as an
S-U option.

Hotel. (a) Maximum of four free-elective credit
hours per term. (b) Exceptions are by petition only.

Human Ecology. (a) Not part of student's
major. (b) May be used in the 19 hours
required outside the major in Human Ecology
courses. (c) Not part of hours required in
humanities, natural sciences, and social
sciences. (d) A department may approve S-U
grading in specific courses if approved by
Educational Policies Committee. (e) Freshmen
enrolled in ENGL 137 and 138, which are only
offered for S-U credit, are permitted to apply
to these courses to the freshman seminar
requirements. (f) Total of 12 credits in S-U
courses (not counting PE) may be counted
towards degree requirements during a
student's college career.

Industrial and Labor Relations. (a) This option
may be elected, if available in I&LR electives,
or in out-of-college electives but not including
directed studies. (b) Degree requirements
include a minimum of 105 lettergrade (A+ to
D-) credits. (c) Student must also be in good
academic standing. (d) A "U" is considered
the equivalent of an "F" in determining a
student's academic status. (e) Limited to two
courses per term, not to exceed four hours in
any one course.

Internal Transfer. (a) S-U grades permitted
only when it is the only option or (b) when
specifically approved by an admissions officer
in the school or college to which the student
plans to transfer.

Veterinary Medicine. (a) There is one
foundation course in the undergraduate
curriculum that is offered on an S-U basis
only. All other required core courses must be
taken for a letter grade. (b) Elective courses
for veterinary students may be offered on an
S-U basis at the option of the professor.

INCOMPLETE

The grade of incomplete is appropriate only
when both basic conditions are met:

1) the student has a substantial equity at a
passing level in the course with respect to
work completed, and

2) the student has been prevented by cir-
cumstances beyond the student's control,
such as illness or family emergency, from
completing all of the course requirements
on time.

A grade of incomplete may not be given
merely because a student fails to complete all
course requirements on time. It is not an
option that may be elected at the student's
own discretion.

While it is the student's responsibility to
initiate a request for a grade of incomplete,
reasons for requesting one must be acceptable
to the instructor, who establishes specific
make-up requirements. The instructor has the
option of setting a shorter time limit than that
allowed by the student's college for
completing the course work. Several colleges
require that a statement signed by the instruc-
tor be on file indicating the reason for the
grade of incomplete and the restriction, if any.
It is the responsibility of the student to see
that all grades of incomplete are made up
within the deadline and that the grade has
been properly recorded with the student's
college registrar.

CHANGES IN GRADES
Changes in a grade may be made only if the
instructor made an error in assigning the
original grade.

OFFICIAL TRANSCRIPTS
An official transcript is one that bears the
official signature of the university registrar,
sent in a sealed envelope directly from the
Office of the University Registrar to another
institution or agency as directed by the stu-
dent. Transcripts can be obtained through the
Office of the University Registrar, B7 Day Hall.

University
Requirements for
Graduation
The university has only two requirements for
graduation that must be fulfilled: the swim test
and physical education courses. A student's
college determines degree requirements such as
residency, number of credits, distribution of
credits, and grade averages. See the individual
requirements listed by each college or school
or contact the college registrar's office.

PHYSICAL EDUCATION
Classes
All undergraduate students must complete two
terms of work in physical education unless
exempted from this requirement for medical
or other special reasons or by virtue of
advanced standing on admission. For transfer
students the requirement is reduced by the
number of terms satisfactorily completed, not
necessarily including physical education, in a
college of recognized standing before entering
Cornell.
Credit in physical education may be earned
by participating in courses offered by the
Department of Athletics and Physical
Education, participating on an intercollegiate
athletic team as a competitor or manager, or
performing in the marching band.
Physical education is a requirement of the first
two terms at Cornell. Students must register
for it in each term, except those in which
postponements are granted, until the
requirement is satisfied.
Temporary postponements may be granted on
the basis of physical disability, schedule
conflicts, or excessive work load (employment
exceeding 20 hours a week). The Gannett
Health Center can provide certifications based
on health, and the financial aid office can
provide certifications of employment. Students
should see the director or assistant director of
Physical Education to establish postponements
or waiver of the requirement. Questionable or
unusual cases may be resolved by petition to
the Faculty Advisory Committee on Athletics
and Physical Education.

Swim Test
The University Faculty Committee on Physical
Education has established a basic swimming
and water safety competency requirement for
all entering freshman undergraduate students.
Normally, the test is given for women in the
Helen Newman pool and for men in the
Teagle pool as part of their orientation
process. The test consists of a feet-first entry
into the deep end of the pool and a
continuous 75-yard swim using front, back,
and optional strokes. Any student who cannot
pass the swim test is required to include the
course Basic Swimming and Water Safety in
his or her program of physical education
before electives can be chosen. Students will
receive a grade of incomplete in Physical
Education until they have passed the swim
test or fulfilled the requirement by satisfactory
attendance in two terms of Basic Swimming
and Water Safety. Students unable to meet the
swim requirement because of medical,
psychological, or religious reasons must
petition the University Faculty Committee on
Physical Education for a waiver of the
requirement. When a waiver is granted by the
Faculty Committee on Physical Education, an
alternate requirement is imposed. The
alternate requirement substitutes a course in
either Advanced First Aid (Emergency
Response) or Wellness and Fitness for the
original swimming requirement.

STUDENT RESPONSIBILITIES
Students are responsible for meeting all
requirements for the courses in which they
are enrolled, as defined by the faculty
members teaching the courses. It is also the stu-
dent's responsibility to be aware of the specif-
cr major, degree, distribution, college, and
graduation requirements for completing his or
her chosen program of studies. Students
should know how far they have progressed in
meeting those requirements at every stage of
their academic career.

Student Records Policy
Under the Family Educational Rights and
Privacy Act of 1974 (FERPA), Cornell
University is required to advise students of
their rights concerning their education
records. Education records include records
directly related to a student and maintained
by an educational institution or party acting
on its behalf. The law gives students the right
to
a) inspect and review their education
records;
b) challenge contents of education records;
c) a hearing if the challenge is unsatisfactory;
d) include an explanatory statement in the
education records if the outcome of the
hearing is unsatisfactory;
e) prevent disclosure of personally
identifiable information;
f) secure a copy of the institutional policy
which includes the location of all
education records**; and

g) file complaints with the Department of
Education concerning institutional failure
to comply with the act.

*Directory information is a category of
personally identifiable information that
includes name, home address, local address,
local telephone listing, dates of attendance at
Cornell, major field of study and college
attended, previous educational agency or
institution attended, participation in officially
recognized activities (in athletics, the weight
and height of members of athletic teams),
degrees earned, and awards. Directory
information may be released unless the
student indicates otherwise at the time of
registration. Students who wish no release of
their directory information must inform the
privacy office of the university registrar in writing
within 10 days of the date of official university
registration. Students may rescind their no
release request at any time in writing to the
office of the university registrar.

**"Cornell University Policy on Access to and
Release of Student Education Records" is
available on the web at URL:
www.univcornoell.edu/policy/ASL.html.
Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the Code of Academic Integrity and Acknowledging the Work of Others is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy is published in the Policy Notebook, available free of charge from the office of the dean of students.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board for all university projects that use humans as research subjects, assuring compliance to federal regulations protecting human subjects in research at universities. A human subject is defined by federal regulations as “a living individual about whom an investigator obtains data through intervention or interaction with the individual, or identifiable private information.” Projects affected by regulation include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. All proposals involving human subjects in any category, including those initiated by students, must be submitted to the University Committee on Human Subjects for review before the research projects begin. The guidelines for the use of human subjects in research are available at www.osp.cornell.edu/Compliance/UCHS/home/UCHS.htm. Inquiries and communications about the guidelines should be directed to the committee’s coordinator, 123 Day Hall (255-5138).

USE OF ANIMALS FOR COURSES

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC).

Guidelines for Faculty and Students with Respect to the Use of Animals in Instruction

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.

2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in Courses of Study should alert students to this fact.

3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.

4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.

5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor of the course.

6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.

7. When students object on ethical or other valid grounds to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives for learning the same material.

8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the chair of the Institutional Animal Care and Use Committee (IACUC) at 253-3735 or by e-mail at iacuc@cornell.edu.

9. Faculty should instruct students in the responsible use of animals. For more information see www.univco.cornell.edu/policy/CURA.html.

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832)

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Andrew D. White Professors-at-Large engage in a variety of activities including public lectures, ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. They serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2004

Bal, Mieke, cultural analyst
Cleese, John, writer and actor
Macdonald, David W., mammalogist and behavioral ecologist
Silajdzic, Haris, political leader, historian of the Middle East

Term Ending in 2005

Jemison, Mae, astronaut
McDonough, William, architect
O’Brien, Stephen J., genetist
Schechter, Richard, director of performance studies

Term Ending in 2006

Goldsworthy, Andy, sculptor
Sacks, Oliver, physician and writer

Term Ending in 2007

Pretty, Jules, sustainable agriculture ecologist
Short, Roger, reproductive physiologist

Term Ending in 2008

Hodlczkl, Bert, zoologist
Subrahmanyan, Sanjay, economic historian

Term Ending in 2009

Behrends, Okko, legal historian
Butler, Judith, cultural theorist
Venter, Craig, geneticist

FRANK H. T. RHODES CLASS OF '56 UNIVERSITY PROFESSORSHIP

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of '56 University Professorship in honor of Cornell's ninth president (1977-1995). The purpose of the Rhodes Class of '56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of '56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of '56 Professors visit the campus for a minimum of two weeks to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Term Ending in 2003

Nye, Bill, science guy
Reno, Janet, attorney

Term Ending in 2005

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES
170 Uris Hall (255–6370)

The Mario Einaudi Center for International Studies, established in 1961 to encourage and support comparative and interdisciplinary research on international subjects, is one of the largest and most diverse centers of its kind in the United States. Currently, it includes four U.S. Department of Education Title VI National Resource Centers and 16 other area, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center's programs with well over 300 graduate students involved directly in its international programs. Undergraduate students may choose concentrations in International Relations, Latin American Studies, Modern European Studies, East Asian Studies, South Asian Studies, or Southeast Asian Studies. (See also Africana Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

Cornell's international programs are poised to anticipate and respond to changing global circumstances and perspectives. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development, economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot activities that bring faculty and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty and students. Together with the Peace Studies Program, the center hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty in discussion of key world events.

The center promotes graduate students' overseas field research through an annual competition for travel grants and assistance with other fellowship programs. The Fulbright fellowship program, administered by the center, is available to graduating seniors as well as graduate students. Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system with 2,500,000 volumes related to international and comparative studies. CENTER FOR THE STUDY OF INEQUALITY

Office: 563 Uris Hall
Phone: 607–255–8674
Fax: 607–255–8672
Email: inequality@cornell.edu
URL: www.inequality.cornell.edu

The Center for the Study of Inequality (CSI) fosters basic and applied research on social, economic, and cultural inequalities and the processes by which such inequalities change and persist. The study of inequality lies at the heart of current debates about welfare reform, affirmative action, the "glass ceiling," globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways. The mission of CSI is to support research and teaching relevant to issues of inequality, to disseminate research findings coming out of this research, and to otherwise facilitate the study of inequality in the United States and throughout the world.

Symposia and Lecture Series

The CSI regularly sponsors symposia, workshops, and lecture series that draw attention to the most pressing problems and controversies in the field. The current schedule of symposia and lecture series is listed on the center's web site (www.inequality.cornell.edu).

Research Support

For faculty affiliates of CSI, small seed grants for inequality-related research are available, especially for research that has the potential to attract external funding. The CSI also runs a small grant program that supports graduate and undergraduate research on poverty or inequality. The application deadline for all grants is May 1, 2003 (for further details, see www.inequality.cornell.edu/support/index.shtml).

Internships

The CSI serves as a clearinghouse for student internships that are relevant to the study of inequality. For a full listing of possible internships, please consult the center's web site at www.inequality.cornell.edu/inequality.cornell.edu/publications/index.shtml.

Dissemination

The working paper series on the center web site assists in disseminating research findings, opinion pieces, and related scholarship from some of the top scholars of inequality in the world. This series can be found at www.inequality.cornell.edu/publications/index.shtml.

Awards

The CSI presents a Distinguished Book Award and Distinguished Paper Award for publications that significantly advance our understanding of inequality. The recipients are invited each year to Cornell University to present their research (see www.inequality.cornell.edu/publications/awards.shtml).
Undergraduate Concentration
The inequality concentration allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. The concentration is organized into tracks examining such topics as globalization and inequality, social policy, the ethics of inequality, poverty and economic development, social movements, education and inequality, race and ethnicity in comparative perspective, the family and inequality, and literature, postmodernism, and inequality. The concentration is open to students enrolled in any of the seven Cornell undergraduate colleges. If the requirements of the concentration are met, a special transcript (see www.inequality.cornell.edu/ academics/undergraduate.shtml for further information).

For more information about CSI, please contact Jessica Henning, executive adminis-trator of CSI (254-8674 or inequality@cornell.edu).

COGNITIVE STUDIES
282 Uris Hall (255-6431) (cogst@cornell.edu)
www.cogstud.cornell.edu
Cognitive Studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of Cognitive Studies is primarily represented by faculty in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Electrical and Computer Engineering, Human Development, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, Science and Technology Studies, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs
An undergraduate concentration in Cognitive Studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see “Cognitive Studies Program” in the College of Arts and Sciences section. Contact Linda LeVan (255-6431 or cogst@cornell.edu)

Graduate Programs
Cornell offers a graduate field minor in Cognitive Studies. Cornell’s unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as Philosophy, Computer Science, Linguistics, Psychology, or Neurobiology and Behavior on common committees. For further information on the graduate field of Cognitive Studies, contact Shimon Edelman, director of graduate studies (255-6365, se37@cornell.edu), or Linda LeVan, executive staff assistant, 282 Uris Hall, Office of Cognitive Studies (255-6431, cogst@cornell.edu).

Courses
Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog in the Cognitive Studies Program section under Arts and Sciences.

CORNELL ABROAD
300 Caldwell Hall 607/255-6224, fax 607/255-8700, e-mail: CUAboard@cornell.edu, web: www. einaudi.cornell.edu/cuabroad study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff services the planning and application process.

LOCATIONS ABROAD
Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in more than forty countries. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA
Botswana, Cameroon, Ghana, Kenya, Madagascar, Tanzania, Uganda: School for International Training;
Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);
Kenya: Wildlife Management (School for Field Studies);
South Africa: Universities of Cape Town and Natal

ASIA
China: Chinese University of Hong Kong; *Cornell FALCON for the spring semester or full year at the Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing and Fudan Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Beijing
India: School for International Training; St. Stephen's College; Delhi (through Brown or Rutgers Universities);
Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);
Japan: *Kyoto Center for Japanese Studies; various university programs, IES Tokyo;
Korea: Yonsei University;
Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;
Thailand: Khon Kaen University (CIEE);
Vietnam: University of Hanoi (CIEE);

AUSTRALIA AND NEW ZEALAND
Australia: Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training; Sydney Internship (Boston University);
New Zealand: Otago and Lincoln Universities in New Zealand;

EUROPE
Denmark: *Denmark's International Study Program (DIS);
France: *EDUCO (Cornell, Duke, and Emory in Paris) at Universite de Paris VII, Paris IV, Paris I, Institut d'Etudes Politiques de Paris ("Sciences Po"); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University); IES Dijon Business Program
Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg;
Greece: College Year in Athens;
Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork;
Italy: *Cornell College of Art, Architecture, and Planning Program in Rome; Arcadia University in Florence at the Accademia Italiana; Bologna Cooperative Studies Program; Boston University Program in Padova; IES Milan; Intercollegiate Center for Classical Studies in Rome; Syracuse University program in Florence;
Netherlands: University of Amsterdam; Leiden University;
Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian);
**General Information - 2003-2004**

Spain: *Cornell-Michigan-Penn program at the University of Seville; various language and culture programs;*

Sweden: *Swedish Child Care and Family Policy Practicum at the University of Göteborg; The Swedish Program at the University of Stockholm;*

United Kingdom: *Direct enrollment at: the University of Birmingham, University of Bristol, Cambridge University, City University, University of East Anglia; University of Edinburgh; University of St. Andrews, University of Sussex; University of Warwick, University of York; University of London: King's College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science, and the School of Oriental and African Studies, as well as other universities of choice.*

Externally sponsored programs in the UK include the British American Drama Academy, the Arcadia University, Boston, and the University internships, the Marymount College Program at the London College of Fashion, and the Hansard Parliamentary Internship Programme.

Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell-Brown-Penn UK Centre in London.

**Latin America, Central America, and the Caribbean**

Argentina and Chile: various university-based study abroad programs, through the Cooperating Programs in the Americas (COPA) of Butler University and the University of Illinois; Belize, Brazil, Chile, Ecuador: School for International Training; Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Program; tropical biology; School for Field Study; Cuba: the University of Havana through COPA, School for International Training; Ecuador and Jamaica: Partnership for Service Learning; Honduras: Escuela Agrícola Panamericana (Zamorano); Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California; MIDDLE EAST AND NORTH AFRICA

Egypt: American University in Cairo; Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University; Jordan: University of Jordan (CIEE); Lebanon: American University of Beirut; Morocco: School for International Training

**Other Locations**

Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Czech Republic, Dominican Republic, Finland, the Philippines, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere.

**Who Studies Abroad**

Students from all seven undergraduate colleges and from all major fields study abroad; they are expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

**When Students Study Abroad and for How Long**

Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional time for study abroad, although many semester-long programs are available, academic year programs are highly recommended.

**Application Process**

Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, talk with staff, and attend information meetings. The Cornell Abroad web site is an excellent resource for program offerings and links to universities and programs worldwide, as well as for downloadable applications and comprehensive information on all aspects of study abroad. Students meet with the study abroad advisers in their college so that they will meet college degree requirements. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty adviser and the college study abroad adviser. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering, and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The application deadline for study abroad in the fall 2004 semester and the 2004-2005 academic year is February 15, 2004, for all programs except Oxford and Cambridge, for which the deadlines apply to all universities for the full year in 2004-2005 is November 1, 2003. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

**Registration, Credit Transfer, and Grades**

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution or program overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell American grading system, nor are they averaged into the Cornell grade point average.

**Foreign Language Requirements**

Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent, of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Indonesia, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language course work are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisers about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.

**Housing Arrangements**

Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

**Costs**

Students studying abroad in Cornell programs pay a uniform Cornell Abroad tuition per semester, which covers tuition, housing during term (except in UK universities), orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation insurance. It may include other
Security Abroad and Related Issues
The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad should in no way interpret or evaluate events for students abroad. Cornell Abroad does not recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student safety and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions’ policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded, will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs have policies to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad
Cornell Abroad (300 Caldwell Hall; Richard Gauillon Ph.D., director; Beatrice B. Szewczyk Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site, which incorporates linkages to universities, programs, and resources worldwide as well as a database of cost estimates. In the early weeks of every semester, faculty, students, and staff discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web site (www.ciuadi.cornell.edu/cuabroad). The director and associate director are available at Cornell Abroad for walk-in advising.

College Study Abroad Advisers
Agriculture and Life Sciences: Bonnie Shelley, 140 Roberts Hall; Architecture, Art, and Planning: Jayne Wonder, Bi-1 W. Sibley, Arts and Sciences: Dean Pat Wasilow, 55 Goldwin Smith Hall; Engineering: Dan Maloney Hall; 167 Olin Hall; Hotel Administration: Cheryl Farrell, 174B Statler Hall; Human Ecology: Paul Fisher, 172 Martha Van Rensselaer; Industrial and Labor Relations: Kevin Harris, 101 Ives Hall.

Cornell in Washington Program
http://ciw.cornell.edu
M101 McGraw Hall (255-4090)
Cornell in Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to provide students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation’s political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington’s rich collection of libraries, museums, theaters, and art galleries offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition. The Cornell in Washington program offers two study options: (1) studies in public policy; and (2) studies in the American experience. Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students are on the upper floors.

The Cornell in Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship.

Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

Tuition
Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing
Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels, and bedding) and reasonably priced by both Washington and Cornell standards. Students are assigned to each efficiency and to three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of $150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the center, and street parking is not available.

Applications
Application forms are available from the Cornell in Washington program office at M101 McGraw Hall. Students may also apply on line at ciw.cornell.edu. Applications should be submitted the semester prior to participation.

Information
The Cornell in Washington program web site is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell in Washington program office at M101 McGraw Hall, (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 465-2184.
**Complementary Degrees**

CIPA students may elect to combine their MPA study program with a complementary degree study, such as a JD from the Cornell Law School, an MBA from the Graduate School of Management, an MM from the Hotel School, or an MRP from the field of City and Regional Planning.

**Accurated Master's Program**

An accelerated program for Cornell undergraduates allows students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the MPA in just one year beyond their undergraduate studies.

**Foundation Courses**

Foundation course work is intended to give students the basic analytical and conceptual capabilities for pursuing specialized studies in their chosen concentration. Students take three courses in each of the following areas:

- Quantitative Analysis
- Administration, Politics, and Public Policy
- Economics and Public Finance

**Concentration Areas**

Concentration course work enables students to focus on a specific area of public affairs. Five graduate-level courses are required in the area of the student’s chosen study concentration. These courses are intended to support the student’s thesis work and are to be selected in consultation with the student’s thesis adviser. CIPA offers eight concentration options:

- International Development Studies
- Social Policy
- Finance and Fiscal Policy
- Government, Politics, and Policy Studies
- Human Rights and Social Justice
- Science and Technology Policy
- Social Policy
- Public and Non-Profit Management

**Thesis**

Each fellow writes a thesis integrating conceptual tools, theories, and analytical techniques by applying them to a problem in his or her concentration. The culmination of study in the MPA program, the thesis is intended to be both critical and creative, reflecting the student’s ability to identify and analyze important public policy questions and generate practical solutions.

**Residence Requirement**

Students are required to spend four semesters of study in residence to complete the MPA. Those who enroll in the Cornell Accelerated Master’s Program can earn the equivalent of two semesters in residence during their senior year.

**Internships**

Students are engaged in public affairs work related to their respective areas of concentration during the summer between their first and second year of graduate study. The objective is to gain pragmatic professional experience to complement formal academic study. The following opportunities are available to CIPA fellows at the local, state, national, and international levels.

**Local**

CIPA fellows have been placed in internships throughout the city of Ithaca and Tompkins County. CIPA fellows have worked in the mayor’s office, Ithaca Youth Bureau, Tompkins County Office for the Aging, County Workforce Development Board, Board of Representatives, Department of Planning, and Department of Health.

**State**

The New York State Assembly Graduate Internship program provides research and policy development experiences for qualified graduate students. It affords CIPA fellows a unique professional learning experience and the opportunity to develop their understanding of the legislative process at the state level.

**National**

The Cornell In Washington Program blends practical work experience, Cornell courses, and exposure to one of the world’s great capital cities. It provides the opportunity to investigate and explore public policy from the perspective of institutions in the public, private, and non-profit sectors.

**International**

Many of our CIPA fellows are placed in summer or semester internships with the United Nations either in New York City or abroad in locations such as Nairobi and Bangkok. Through Cornell’s Rome Program, students have the opportunity to be placed in the United Nations and the World Bank in Rome. The Cornell-Nepal Study Program offers students a chance to observe, first-hand, changes in a developing country.

**Student Organization**

Fellows organize and manage a variety of professional development activities that provide opportunities to share their work experience and to meet distinguished faculty and practitioners in the field of public policy from around the world. Students schedule and coordinate the weekly Colloquium Program, they produce a debate-format television show (Point of View) that airs twice a week during the school year, and they publish a journal of student policy research (The Current). Students in the Cornell Public Affairs Society (CPAS) and Women in Public Policy (WPP) guide these endeavors. They are elected in November and serve for one calendar year.

Each year, during spring break, CIPA students travel to Washington, D.C., where they attend a session of Congress and meet with government representatives and officials in organizations such as the World Bank and the U.S. Agency for International Development.

CIPA fellows have a range of on-campus policy-related conferences to choose from each semester. These conferences are sponsored by various public policy-affiliated programs at Cornell. CIPA fellows also attend national conferences of organizations such as APPAM (Association for Public Policy Analysis and Management) and NASPAA (National Association of Schools of Public Affairs and Administration).
Admission
The CIPA program seeks a diverse pool of applicants who have studied in a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in policy-making or implementation are strongly encouraged to apply.

Admission to CIPA is selective. Decisions are based on an evaluation of the applicant’s overall academic record, GRE scores, and potential for public policy leadership as evidenced by professional work, community, extracurricular, or other relevant experience; a written statement of purpose; and letters of recommendation.

CIPA has a policy of rolling admission. For an application or for more information, contact the Cornell Institute for Public Affairs, 473 Hollister Hall (phone: 607-255-8018; fax: 607-255-9240; e-mail: cipa@cornell.edu; website: www.cipa.cornell.edu).

Financial Aid
CIPA offers a variety of funding options. Although the institute is unable to provide full fellowships for any individual student, fellows often win support from Fulbright, Truman, or World Bank fellowships. In addition, CIPA offers numerous assistantship and employment opportunities for graduate students. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers. Decisions concerning CIPA funding are made in March, so those wishing to be considered should complete the application by March 1.

CORNELL PLANTATIONS
One Plantations Road (255–5320)
URL www.plantations.cornell.edu
A place of exceptional diversity and learning opportunities, Cornell Plantations comprises the university’s botanical garden, arboretum, and natural areas. Its 3,000+ acres include the woodlands and gardens on and around campus, as well as specialized gardens and a 150-acre arboretum that features a field flower meadow and trees and shrubs hardly in central New York State. Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell’s academic programs and research in disciplines such as ecology and evolutionary biology, landscape, ornamental horticulture, and bioengineering. While many of Cornell Plantations’ resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, bogs, ponds, swamp, wet and dry forests, vernal ponds, and meadows. Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations.

Cornell Plantations also offers relaxation, rejuvenation, and inspiration. The vast open spaces provide room to breathe, while the intimate garden spaces offer escape from the busy campus. Visitors always discover surprises and learn something new in the gardens, which feature herbs, flowers, vegetables, international crops, rock garden plants, peonies, poisonous plants, ground covers, rhododendrons, wildflowers, and a winter garden.

Students are encouraged to volunteer as photographers, tour guides, computer assistants, gardeners, and writers for our magazine and newsletter. A number of student internships are also offered each summer. Maps, information, publications, and class brochures (for noncredit classes and workshops) are available at the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Noncredit courses in horticulture, landscape design, botanical arts, and natural history are offered throughout the year. An on-campus seminar series (HORT 480) is offered each fall; a three-credit Public Garden Management course (HORT 485) is offered every other spring semester, and a Master of Professional Studies program offers fully funded fellowships in Public Garden Management.

PROGRAM ON ETHICS & PUBLIC LIFE
240 Goldwin Smith Hall (255–8515)
The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we grapple with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics & Public Life (EPL) is Cornell’s initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies").

EPL Core Courses
PHIL 145 Contemporary Moral Issues
PHIL 151 Philosophy of Sport
PHIL 241 Ethics
PHIL 245 Ethics and Health Care
PHIL 341 Ethical Theory
PHIL 344 History of Ethics: Ancient and Medieval
PHIL 345 History of Ethics: Modern
PHIL 346 Modern Political Philosophy
PHIL 447 Contemporary Ethical Theory
Michele M. Moody-Adams, Wyn and William Y. Hutchinson Professor of Ethics & Public Life, and Professor of Philosophy; Burke Hendrix, Assistant Professor of Government and Assistant Professor of Ethics & Public Life; Henry Shue, Professor of Ethics & Public Life and Professor of Philosophy; Tom Berry, Visiting Assistant Professor of Ethics & Public Life.

PROGRAM IN REAL ESTATE
114 West Sibley Hall (255–7110)
The two-year Master of Professional Studies in Real Estate (MPS/RE) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate exists at Cornell University to serve as the integrating organizational unit for financial management and administration of academic and industry-related real estate activities on and off campus. The Field of Real Estate is a committee of faculty members from several different colleges that is directly involved in the design, delivery, and administration of the real estate curriculum.

INTERDISCIPLINARY CENTERS, PROGRAMS, AND STUDIES
The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also contribute an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn a master's degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, the real estate development process, real estate finance and investments, managerial finance, residential development, real estate law, construction planning and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration, and there is a leadership and management distribution requirement. Many concentrations are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate marketing and market analysis, or international real estate concentrations). Students complete real-world, semester-long project workshops during their second and final semesters.

Admissions
Applicants to the Program in Real Estate must have completed a bachelor's degree with a good academic record. Applicants must submit a résumé plus two letters of recommendation either from faculty familiar with the applicant's academic work, or if appropriate, professional recommendations based on work experience. Competitive scores for the GMAT are required. International students, for whom English is a second language, will need to achieve a minimum TOEFL score of 250 (computer based) or 600 (paper based). There is no work experience required for admission; however, it is strongly preferred that applicants have at least some work experience; three to five years has been typical. For more information, contact C. Bradley Olson, Director of the Program in Real Estate, or the Graduate Field Assistant, at 607-255-7110, or e-mail real_estate@cornell.edu.

SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR
During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate work leading to the M.S. and/or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, geology/geophysics, biogeochemistry, hydrology, oceanography).
- Employment in environmentally oriented careers in both the private and public sector at the B.S. or B.A. level.
- Advanced degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences and the College of Arts and Sciences. In the College of Engineering, the SES curriculum may be completed by choosing the SES option in the Department of Earth and Atmospheric Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences but relies on the collaboration of several departments across the university.

The SES Curriculum
The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

1. Basic Math and Sciences
   a. MATH 111 and 112, or MATH 191 and 192, or MATH 190 and 192
   b. PHYS 207 and 208, or PHYS 112 and 213 if PHYS 214 will also be taken (see below)
   c. CHEM 207 and 208
   d. BIO 101/103 and 102/104 (or 105–106) or BIO 109 and 110
   e. THREE ADDITIONAL 3-credit courses in basic science and math, generally 100- and 200-level classes. One or both of the following may be included in the selection:
      - EAS 201 Physics and Chemistry of the Earth
      - BIOEE 261 Ecology and the Environment

Other examples are MATH 293, MATH 294, MATH 213, biochemistry, organic chemistry, PHYS 214, and introductory statistics. With the exception of an introductory statistics course, the additional basic courses should require at least one of the classes listed in a-d above as a prerequisite.

2. Science of Earth Systems Core Courses
   - EAS 302 Evolution of the Earth System
   - EAS 331/ASTRO 331 Climate Dynamics
   - EAS 321/NTRES 321 Introduction to Biogeochemistry

3. Concentration Courses
   Four intermediate to advanced-level courses (300-level and up) that build on the core courses and have prerequisites among the "Basic Math and Sciences" courses listed in 1. These classes build depth and provide the student with a specific expertise in some facet of earth system science. Possible areas of concentration include, but are not limited to, Climate Dynamics, Biogeochemistry, Ecological Systems, Environmental Geology, Ocean Sciences, Environmental Biophysics, Hydrological Systems, and Soil Science.

For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Science, khc6@cornell.edu, and visit the web site: www.geo.cornell.edu/ses.

DEPARTMENT OF STATISTICAL SCIENCE
301 Malott Hall (255-8065)

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Students interested in graduate study in statistics and probability can apply to the Graduate Field of Statistics or to one of the other graduate fields of study that offer related coursework. Students in the Field of Statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study, students should contact the Director of Graduate Studies, 301 Malott Hall.

The department also offers an undergraduate program through Biological Statistics and Computational Biology (BSCB) in the College of Agriculture and Life Sciences and an Engineering Statistics minor in the College of Engineering. Undergraduate majors and certificate programs are currently under development for other colleges. For information, contact the Undergraduate Coordinator (301 Malott Hall, 255-8166). Statistics courses offered by the departments listed below will fill distribution requirements in many of the colleges.
A free consulting service is offered through BSCB in the College of Agriculture and Life Sciences. Statistical computing consulting is available through the Office of Statistical Consulting, B21 Savage Hall, 255–1926.

The department is organized into four units: Biological Statistics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural statistics, biostatistics, economic and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

Course Designations

The following course identifiers are used to designate the courses offered by the separate units: Biological Statistics and Computational Biology (CALS), STBTRY, Engineering Statistics Unit (ENGR), STENGR, Mathematical Statistics Unit (ARTS), STMATH, Social Statistics Unit (ILR and ARTS), STSOC. To enroll in one of the courses, see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

Department of Statistical Science

ST 501–502 Applied Statistical Analysis

This is the two-semester core course for students in the Master of Professional Studies (M.P.S.) degree program in applied statistics in the Department of Statistical Science. Enrollment is limited to students enrolled in the M.P.S. program. The course consists of a series of modules on various topics in applied statistics. Some modules will include guest lectures from practitioners. Parallel with the course, students complete a year-long, in-depth data analysis project.

ST 501 Applied Statistical Analysis

Letter only. Topics include, but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

ST 502 Applied Statistical Analysis

Letter only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

[ST 578 Statistical Methods for Reliability Survival Data] Prerequisites: OR 270 or equivalent, plus some senior elective-level course in applied statistics such as regression, data mining, or time series. This course provides an introduction to probabilistic and statistical methodology for the analysis of life-length data. Because of the presence of such features as censoring, skewed distributions, and time-varying covariates, special statistical techniques are required. Topics include: life distributions, life tables, truncation and censoring, Kaplan-Meier estimate, accelerated life tests, Weibull and lognormal regression models, Cox proportional hazards model, regression diagnostics, system reliability, repairable systems reliability, repeated events. Use of statistical computing packages, such as SAS and Splus, is stressed to perform data analyses, although no previous experience is assumed.

600 Statistics Seminar

Fall and spring. 1 credit. S-U only. Prerequisite or corequisite: BTRY 409 or permission of instructor.

Biological Statistics Unit

STBTRY 301 Statistical Methods I (enroll in BTRY 301)
STBTRY 302 Statistical Methods II (enroll in BTRY 302)
STBTRY 400 Biometry Seminar (enroll in BTRY 400)
STBTRY 408 Theory of Probability (enroll in BTRY 408)
STBTRY 409 Theory of Statistics (enroll in BTRY 409)
STBTRY 482 Statistical Genomics (enroll in BTRY 482)
STBTRY 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)
STBTRY 495 Statistical Consulting (enroll in BTRY 495)
STBTRY 497 Undergraduate Individual Study in Biometry and Statistics (enroll in BTRY 497)
STBTRY 498 Undergraduate Supervised Teaching (enroll in BTRY 498)
STBTRY 499 Undergraduate Research (enroll in BTRY 499)
STBTRY 600 Statistics Seminar (enroll in BTRY 600)
STBTRY 601 Statistical Methods I (enroll in BTRY 601)
STBTRY 602 Statistical Methods II (enroll in BTRY 602)
STBTRY 603 Statistical Methods III (enroll in BTRY 603)
STBTRY 604 Statistical Methods IV: Applied Design (enroll in BTRY 604)
STBTRY 652 Computer-Intensive Statistical Inference
STBTRY 672 Topics in Environmental Statistics (BTRY 672)
STBTRY 682 Statistical Genomics (enroll in BTRY 682)
STBTRY 694 Graduate Special Topics in Biometry and Statistics (enroll in BTRY 694)
STBTRY 697 Individual Graduate Study in Biometry and Statistics (enroll in BTRY 697)
STBTRY 717 Linear and Generalized Linear Models (enroll in BTRY 717)
STBTRY 795 Statistical Consulting (enroll in BTRY 795)
STBTRY 798 Graduate Supervised Teaching (enroll in BTRY 798)

Engineering Statistics Unit

STENGR 310 Introduction to Probability and Random Signals (enroll in ECE 310)
STENGR 360 Engineering Probability and Statistics I (enroll in OR&IE 360)
STENGR 361 Introductory Engineering Stochastic Processes I (enroll in OR&IE 361)
STENGR 411 Random Signals in Communications and Signal Processing (enroll in ECE 411)
STENGR 436 A Mathematical Examination of Fair Representation (enroll in OR&IE 436)
STENGR 461 Stochastic Calculus for Applications (enroll in OR&IE 461)
STENGR 467 Telecommunication Systems I (enroll in ECE 467)
STENGR 473 Empirical Research Methods in Financial Engineering (enroll in OR&IE 473)
STENGR 474 Statistical Data Mining (enroll in OR&IE 474)
STENGR 476 Applied Linear Statistical Models (enroll in OR&IE 476)
STENGR 512 Fundamental Information Theory (enroll in ECE 562)

[STENGR 517 Artificial Neural Networks (enroll in ECE 577)]
[STENGR 523 Introductory Engineering Stochastic Processes I (enroll in OR&IE 523)]
[STENGR 560 Engineering Probability and Statistics II (enroll in OR&IE 560)]
[STENGR 561 Queueing Theory and Its Applications (enroll in OR&IE 561)]
[STENGR 577 Quality Control (enroll in OR&IE 577)]
STENGR 580 Simulation Modeling and Analysis (enroll in OR&IE 580)
STENGR 650 Applied Stochastic Processes (enroll in OR&IE 650)
STENGR 651 Probability (enroll in OR&IE 651)
STENGR 662 Advanced Stochastic Processes—Martingale Theory (enroll in OR&IE 662)
[STENGR 665 Storage Data Communication Models (enroll in OR&IE 665)]
STENGR 670 Statistical Principles (enroll in OR&IE 670)
STENGR 671 Intermediate Applied Statistics (enroll in OR&IE 671)
STENGR 674 Statistical Learning Theory for Data Mining (enroll in OR&IE 674)
STENGR 677 Sequential Methods in Statistics (enroll in OR&IE 677)
STENGR 680 Simulation (enroll in OR&IE 680)
STENGR 768 Selected Topics in Applied Probability (enroll in OR&IE 768)
STENGR 769 Selected Topics in Applied Probability (enroll in OR&IE 769)
STENGR 778 Selected Topics in Applied Statistics (enroll in OR&IE 778)

Mathematical Statistics and Probability Unit

STMATH 171 Statistical Theory and Application in the Real World (enroll in MATH 171)
STMATH 311 Introduction to Analysis (enroll in MATH 311)
STMATH 471 Basic Probability (enroll in MATH 471)
STMATH 472 Statistics (enroll in MATH 472)
STMATH 621 Measure Theory and Lebesgue Integration (enroll in MATH 621)
STMATH 671–672 Probability Theory (enroll in MATH 671–672)
STMATH 674 Introduction to Mathematical Statistics (enroll in MATH 674)
STMATH 771–772 Seminar in Probability and Statistics (enroll in MATH 771–772)
STMATH 774 Asymptotic Statistics (enroll in MATH 774)
STMATH 777–778 Stochastic Processes (enroll in MATH 777–778)

Social Statistics Unit

STSOC 210 Statistical Reasoning I (enroll in ILRST 210)
STSOC 211 Statistical Reasoning II (enroll in ILRST 211)
STSOC 310 Statistical Sampling (enroll in ILRST 310)
STSOC 311 Practical Matrix Algebra (enroll in ILRST 311)
STSOC 312 Applied Regression Methods (enroll in ILRST 312)
STSOC 313 Design and Analysis of Experiments (enroll in ILRST 313)
ENVIRONMENTAL TOXICOLOGY

The graduate field of Environmental Toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry; and a minor concentration of risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

Courses
Courses in environmental toxicology are cosponsored by the university’s academic departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 213 Rice Hall, telephone: 255-8008, e-mail: envtox@cornell.edu, web: www.cfe.cornell.edu/icet/

STSOC 314 Graphical Methods for Data Analysis (enroll in ILRST 314)
STSOC 315 Statistical Analysis of Legal Data (enroll in ILRST 315)
STSOC 319 Introduction to Statistics and Probability (enroll in ECON 319)
STSOC 320 Introduction to Econometrics II (enroll in ECON 320)
STSOC 321 Applied Econometrics II (enroll in ECON 321)
STSOC 411 Statistical Analysis of Qualitative Data (enroll in ILRST 411)
STSOC 510 Statistical Methods for the Social Sciences I (enroll in ILRST 510)
STSOC 511 Statistical Methods for the Social Sciences II (enroll in ILRST 511)
STSOC 610 Seminar in Modern Data Analysis (enroll in ILRST 610)
STSOC 611 Statistical Consulting (enroll in ILRST 611)
STSOC 612 Statistical Classification Methods (enroll in ILRST 612)
STSOC 613 Bayesian and Conditional Inference (enroll in ILRST 613)
STSOC 614 Structural Equations with Latent Variables (enroll in ILRST 614)
STSOC 615 Expert Systems and Probabilistic Network Models (enroll in ILRST 615)
STSOC 619 Special Topics in Social Statistics (enroll in ILRST 619)
STSOC 620 Econometrics II (enroll in ECON 620)
STSOC 699 Econometrics I (enroll in ECON 699)
STSOC 711 Robust Regression Diagnostics (enroll in ILRST 711)
STSOC 712 Theory of Sampling (enroll in ILRST 712)
STSOC 713 Counting Processes with Statistical Applications (enroll in ILRST 713)
STSOC 714 Topics in Modern Statistical Distribution Theory (enroll in ILRST 714)
STSOC 715 Likelihood Inference (enroll in ILRST 715)
STSOC 716 Statistical Consulting (enroll in ILRST 716)
STSOC 717 The Analysis of Discrete Data (enroll in ILRST 717)
STSOC 721 Time Series Econometrics (enroll in ECON 721)
STSOC 722 Semi/Nonparametric Econometrics (enroll in ECON 722)
STSOC 730 Advanced Topics in Econometrics II (enroll in ECON 720)
STSOC 731 Time Series Econometrics (enroll in ECON 721)
STSOC 739 Advanced Topics in Economics I (enroll in ECON 719)
STSOC 799 Directed Studies (Graduate) (enroll in ILRST 799)

PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY

213 Rice Hall (255–8008)

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

Graduate Studies
The graduate field of Environmental Toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry; and a minor concentration of risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

Courses
Courses in environmental toxicology are cosponsored by the university’s academic departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 213 Rice Hall, telephone: 255–8008, e-mail: envtox@cornell.edu, web: www.cfe.cornell.edu/icet/.

TOX 899 Master’s Thesis and Research
TOX 999 Doctoral Thesis and Research
Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Cornell offers an accredited general undergraduate business degree program as well as world-renowned business-related programs in five other colleges and schools. Because the choices are so diverse, students are encouraged to read the offerings carefully to identify the program that best matches their business career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields associated with each of the undergraduate options.)

Applied economics and management. The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell's general undergraduate business degree, accredited by AACSB International—The Association to Advance Collegiate Schools of Business. AEM's undergraduate business program offers courses that prepare students for careers in finance, marketing, management, and business strategy. Students also may participate in AEM's specialized programs focusing on entrepreneurship, agribusiness, small business, and food industry management. Courses reflect the program's analytical, applied economics focus. (Web: aem.cornell.edu)

Arts and sciences. Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular are majors in economics, mathematics, sociology, and psychology. Economics focuses on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science, operations research, or economics to prepare for careers in areas such as actuarial science or finance. (Web: arts.cornell.edu)

Engineering. Many of today's business managers hold engineering degrees. Each of the College of Engineering's 10 major fields prepares students for business careers. Operations research and engineering is the most business-oriented engineering field, preparing graduates for careers such as investment banking and process engineering. Engineering students in any field can take a business-oriented minor in areas such as engineering management, industrial systems and information technology, and operations research and management science. An entrepreneurship in engineering option is also available. (Web: www.engineering.cornell.edu)

Hotel administration. The School of Hotel Administration, the world's leading hospitality management program, prepares students for management and entrepreneurial careers in businesses such as hotels, resorts, restaurants, amusement parks, sports arenas, cruise lines, and airlines. The school offers a rigorous business curriculum with courses in finance and real estate, hospitality facilities and operations, marketing, tourism, strategy, and information systems; and organizational management, coordination, and law. The school's 150-room conference hotel gives students the opportunity to apply what they learn in a real-world business. (Web: www.hotelschool.cornell.edu)

Human ecology. The College of Human Ecology offers three business-oriented majors. The apparel and textile management major prepares students for careers in the fashion industry, for example, as a retail executive or merchandiser buyer. Students majoring in facility planning and management study interior design, management, environmental psychology, and real estate to pursue careers as facility planners and consultants. The policy analysis and management major offers concentrations in health care, consumer economics, and family/social services, and its graduates pursue careers as nonprofit managers, consumer advocates, finance specialists, and marketing researchers. (Web: www.humec.cornell.edu)

Industrial and labor relations. The School of Industrial and Labor Relations (ILR) focuses on the "people" side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior, human resource management, labor law, labor economics, history, and statistics. Students can then develop special interests in management, dispute resolution, negotiation, employee relations, labor unions, collective bargaining, public policy, and international labor issues. Most ILR graduates begin careers in areas such as management, consulting, and public policy, but about one-third go directly to law school. (Web: www.ilr.cornell.edu)

Related Areas

Entrepreneurship and Personal Enterprise Program. This university-wide program is open to all Cornell students interested in eventually starting their own businesses or working for venture capital firms. A series of almost 50 linked entrepreneurship-related courses are offered by the above six colleges and schools as well as by the Johnson Graduate School of Management and the School of Veterinary Science. (Web: epe.cornell.edu)

International programs. Several additional programs allow business students to focus on a particular geographic area. Concentrations are offered in Latin American Studies, Modern European Studies, East Asian Studies, South Asian Studies, Southeast Asian Studies, and Africana Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an interdepartmental program in international agriculture.

COMBINED DEGREE PROGRAMS

Highly qualified undergraduates may co-register with the Johnson Graduate School of Management during their senior year, thereby earning their M.B.A. degree in less than the usual time. Students in all Cornell undergraduate colleges may explore this option. The College of Engineering allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the course work.

SELECTED BUSINESS AND MANAGEMENT COURSES

Accounting
AEM 221 Financial Accounting
AEM 323 Managerial Accounting
H ADM 125 Financial Accounting Principles
H ADM 422 Taxation and Management Decisions
ORIE 350 Financial and Managerial Accounting

Agribusiness Management
AEM 302 Farm Business Management
AEM 329 International Agribusiness Study Trip
AEM 346 Dairy Markets and Policy
AEM 403 Farm Management Study Trip
AEM 404 Advanced Agricultural Finance Seminar
AEM 405 Agricultural Finance
AEM 427 Agribusiness Strategy
AEM 431 Food and Agricultural Policies

Communications
COMM 201 Oral Communication
COMM 301 Business and Professional Speaking
COMM 401 Organizational Behavior and Communication
H ADM 165 Managerial Communication I
H ADM 364 Advanced Business Writing
H ADM 462 Communication and the Multicultural Organization
H ADM 463 Persuasive Communication in Organizations

Economics
AEM 200 Contemporary Controversies in the Global Economy
AEM 230 International Trade and Finance (also ECON 230)
ECON 101 Introductory Microeconomics
ECON 102 Introductory Macroeconomics
ECON 313 Intermediate Microeconomic Theory
ECON 331 Money and Credit
ECON 351 Industrial Organization

ILRST 310 Statistical Sampling
SOC 301 Evaluating Statistical Evidence

**PRELAW STUDY**

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic
reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as The Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, and physics, and all must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most pre-veterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admissions Information, obtained by writing to the Office of DVM Admissions, College of Veterinary Medicine, Cornell University, S2-009 Schuman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program, Cornell Career Services, 103 Barnes Hall, Ithaca, New York 14853-1601.
ADMINISTRATION
Susan A. Henry, dean
William E. Fry, senior associate dean
John M. Finamore, associate dean for financial affairs
Mary Lou Doyle, assistant dean for human resources
Michael P. Riley, assistant dean for public affairs
Donald R. Viands, associate dean and director of academic programs
Vacant, associate director of academic programs
Jeffrey J. Doyle, director of undergraduate biology
Daniel J. Decker, associate dean and director of the Cornell University Agricultural Experiment Station
Max J. Pfeffer, associate director of the Cornell University Agricultural Experiment Station
Helene R. Dillard, associate dean and director of cooperative extension
Edward D. Harwood, associate director of cooperative extension
Michael P. Hoffmann, associate director of cooperative extension
W. Ronnie Coffman, director of international programs
Norman T. Uphoff, director of Cornell International Institute for Food, Agriculture and Development
James E. Haldeman, associate director of international agriculture
Terry W. Tucker, associate director of international agriculture

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley
Registrar: Barbara Smith, Patricia Austic, Amy Paolangeli
Admissions: Robert Springall, Ann LaFave, Dana Brown
Career development: Amy Benedict-Augustine, Laurie Gillespie, Pamela Hampton
Minority programs: Catherine Thompson

Department Chairs
Applied economics and management: W. H. Lesser, Warren Hall
Animal science: A. W. Bell, Morrison Hall
Atmospheric science unit (part of earth and atmospheric sciences): S. J. Riha, Bradfield Hall
Biological and environmental engineering: M. F. Walter, Riley-Robb Hall
Biological statistics and computational biology: M. T. Wells, Ives Hall
Communication: J. B. Walthcr, Kennedy Hall
Crop and soil sciences: S. D. DeGloria, Emerson Hall
Ecology and evolutionary biology: N. G. Hairston, Conron Hall
Education: R. S. Caffarella, Kennedy Hall
Entomology: D. A. Rutz, Comstock Hall
Food science: J. H. Hotchkiss, Stotcking Hall
Horticultural science: M. F. Pritts, Plant Science Building
Landscape architecture: K. L. Gleason, Kennedy Hall
Microbiology: S. H. Zinder, Wing Hall
Molecular biology and genetics: T. D. Fox, Biotechnology Building
Natural resources: B. A. Knuth, Femow Hall
Neurobiology and behavior: R. M. Harris-Warrick, S. G. Mudd Hall
Plant breeding: W. R. Coffman, Emerson Hall
Plant pathology: R. Loria, Plant Science Building
Rural sociology: P. D. McMichael, Warren Hall
Statistical sciences: B. W. Turnbull, Mallott Hall

College Focus
The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills.

The college focuses on a broad-based education for its students, and on a problem-solving and basic research program. The program is geared to the discovery and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:

- Agriculture (production and marketing)
- Biological Sciences
- Community, Human, and Rural Resources
- Environment
- Food and Nutrition
- International

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, Cornell University Agricultural Experiment Station, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Minority Programs, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture [M.P.S. (Agr.)]: D. R. Viands, Roberts Hall
Agricultural and Biological Engineering: D. J. Aneshansley, Riley-Robb Hall
Agricultural Economics: D. R. Lee, Warren Hall
Animal Breeding: E. J. Pollak, Morrison Hall
Animal Science: R. L. Quaas, Morrison Hall
Atmospheric Sciences: D. S. Wilks, Bradfield Hall
Biochemistry, Molecular, and Cell Biology: W. J. Brown, Biotechnology Building
Biometry: M. Wells, Warren Hall
Communication: J. E. Shanahan, Kennedy Hall
Development Sociology: C. C. Geisler, Warren Hall
A faculty advising coordinator is listed for Biological Engineering: James Bartsch, 314 Van Rensselaer Hall and department representatives have a contact person and e-mail address:

- Microbiology: S. C. Winans, Wing Hall
- Horticulture: N. L. Bassuk, Plant Science Building
- Genetics and Development: K. J. Kempfues, Biotechnology Building
- Environmental Toxicology: A. Yen, Rice Hall
- Food Science and Technology: A. Yen, Rice Hall
- Food Science: Janice Brown, 107 Stocking Hall
- Animal Sciences: W. Bruce Currie, 434 Morrision Hall
- Biological Sciences: Jeffrey Doyle, 216 Stimson Hall; Bonnie Comella, 216 Stimson Hall
- Biology and Society: Douglas Gurak, 234 Warren Hall
- Biometry and Statistics: Steven Schwager, 424 Warren Hall
- Communication: Brian Earle, 328 Kennedy Hall
- Crop and Soil Sciences: Gary Pick, 505 Bradford Hall
- Earth and Atmospheric Sciences: Steven Colucci, 1116 Bradford Hall
- Education: George Posner, 416 Kennedy Hall
- Entomology: Bobbie Peckansky, 3134 Comstock Hall
- Food Science: Janice Brown, 204 Warren Hall
- Horticulture units (Floriculture, Pomology, Vegetable Crops, Horticulture): Ken Mudge, 20 Plant Science Building
- International Agriculture and Rural Development: Terry Tucker, 422 Mann Library
- Landscape Architecture: Peter Trowbridge, 440 Kennedy Hall
- Natural Resources: M. E. Krasny, Farnow Hall
- Neurobiology and Behavior: C. D. Hopkins, Seeley-Mudd Hall
- Nutrition: M. N. Kazarinoff, Martha Van Rensselaer Hall
- Physiology: M. S. Robertson, Vet Research Tower
- Plant Biology: J. B. Nasrallah, Plant Science Building
- Plant Breeding: E. D. Earle, Bradford Hall
- Plant Pathology: E. B. Nelson, Plant Science Building
- Plant Protection (M.P.S. Agr.): W. H. Reissig, Geneva Campus
- Soil and Crop Sciences: H. van Es, Bradford Hall
- Statistics: M. Wells, Malott Hall
- Zoology: J. W. Hermanson, Vet Research Tower

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 20 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major, but afterwards may pursue and graduate with two majors within the College of Agriculture and Life Sciences. Students need an adviser in each major. Course requirements for double majors may overlap. The Counseling and Advising office (140 Roberts Hall) and department representatives have a form for students to complete to officially recognize the double major. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major field.

Biological Engineering: James Bartsch, 314 Riley-Robb Hall

Animal Sciences: W. Bruce Currie, 434 Morrison Hall

Biological Sciences: Jeffrey Doyle, 216 Stimson Hall; Bonnie Comella, 216 Stimson Hall

Biology and Society: Douglas Gurak, 234 Warren Hall

Biometry and Statistics: Steven Schwager, 424 Warren Hall

Communication: Brian Earle, 328 Kennedy Hall

Crop and Soil Sciences: Gary Pick, 505 Bradford Hall

Earth and Atmospheric Sciences: Steven Colucci, 1116 Bradford Hall

Education: George Posner, 416 Kennedy Hall

Entomology: Bobbie Peckansky, 3134 Comstock Hall

Food Science: Janice Brown, 204 Warren Hall

Graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors offer minors. Minors available at the printing of this catalog are listed below with contact person and e-mail address:

- Animal Science: Dekoris Bevins dbg1@cornell.edu
- Atmospheric Science: Pam Vitale pmv2@cornell.edu
- Communication: Linda Van Buskirk lvp1@cornell.edu
- Food Science: Janice Brown jmbl4@cornell.edu
- Information Science: Geri Gay gkg1@cornell.edu
- Natural Resources: Marian Hovencamp mnh@cornell.edu
- Nutrition and Health: Elise West aauds@cornell.edu
- Soil Science: Gary Fick gw2f@cornell.edu

Summary of Basic College Requirements for Graduation

1. Credit Hours
   a. Minimum: 120

   Exception: Credit for tutorial courses (MATH 109, EDUC 005, and 00 level) increase the number of credits required for graduation by the number of credits in the course. The credits do count toward the minimum 12 credits for full-time status.
   b. Minimum at Cornell: 60, maximum transferred in (C- or higher): 60
   c. Minimum from College of Agriculture and Life Sciences: 55 (includes credit used in the distribution and appropriate transfer credit)
   d. Maximum from endowed colleges (Arts and Sciences; Architecture, Art, and Planning; Engineering; and Hotel School) without additional charge: 55 (includes credit used in the distribution AND failed courses)
   e. Minimum with letter grade: 100; minimum from College of Agriculture and Life Sciences: 60
   f. Minimum of 12 credits from another institution.
   g. Credit for physical education does not count toward the 120 credits or the minimum 12 credits for full-time status (see #6).

2. Residence
   a. Students are entitled to enroll eight full-time semesters (prorated for transfer students). A full-time semester requires a minimum of 12 credits per semester, not counting physical education. Tutorial courses (see #1A) are counted. No new student may enroll in the first semester for more than 18 credits in addition to physical education.
   b. A minimum of seven semesters is required. Transfer students are credited with one semester in residence for each 15 credits from another institution.
   c. Internal transfer students must be enrolled in CALS for at least two semesters, not including residency in Internal Transfer Division.
d. The final semester before graduation must be in residence at Cornell as a full-time student in good academic standing.

**Exception:** Students with eight or fewer credits remaining for graduation and with circumstances that prevent full-time study may petition for approval to complete remaining credits at another institution or part-time in CALS.

3. **Grade-Point Average (GPA)**

Cumulative GPA. 2.00 or above must be maintained. Includes only grades earned at Cornell after matriculating into the college.

For students matriculated prior to 8/01: Cumulative GPA. 1.70 or above must be maintained. Includes only grades earned at Cornell after matriculating into the college.

4. **Distribution**

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.

Credits received for independent study, field, teaching, research, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline, such as Education 005, will not be counted.

In 2002, the CALS Faculty Senate approved a proposal from the CALS Curriculum Committee to combine Groups A (Physical Sciences) and B (Biological Sciences) into one group to provide more flexibility for students to fulfill the physical and life sciences distribution requirement. This policy applies to both new and current students in CALS. Letter designations no longer will be used for the groups described below.

**Physical and Life Sciences.** 18 credits in at least three disciplines of which 6 credits must be of introductory biology and 3 credits in chemistry or physics.

- Biology Sciences (except BIOG 200 and 499) unless permission of the director of undergraduate biology is obtained: BIOG 209, BIOG 498, and BIOSM 204
- CHEM
- PHYS
- AN SC 100, 215, 221, 280, 300, 301
- AEM 210 (310 if taken before fall 1997)
- ASTRO
- BEE 454, 456, 458, 459
- BTRY
- CSS 190, 260, 311, 312, 314, 315, 317, 366, 415, 455, 473, 483

**Written and Oral Expression.** Nine credits of which at least six must be in written expression, selected from the following:

- Freshman Seminars: COMM 117, 260, 263, 350, 352, 365
6. Physical Education
   a. Pass a required swim test, administered during orientation.
   b. Two courses with a satisfactory grade (courses do not count toward 120 credits for graduation or the minimum 12 credits for full-time study).
   c. Students are expected to complete the physical education requirement in their first two semesters at Cornell.
   d. Transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college.

Faculty Advising
   a. Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study of courses appropriate to the degree programs offered by the college.
   b. Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CoursEnroll, under courses, classes, and exams on the Bear Access menu. Pre-enrollment by computer is not valid until the student’s individual code is entered. This code, or adviser key, is provided to the student by the faculty adviser after approval of the choice of courses.
   c. All academic plans, such as acceleration and graduate study, should be made in consultation with the student’s faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

Progress toward the Degree
   a. The progress of each student toward meeting the degree requirements is recorded each fall term in the college registrar’s office on a Summary of Record form.
   b. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.
   c. Application to graduate. In the first semester of their senior year, students must complete and submit an Application to Graduate to the college registrar’s office by the end of the eighth week of class. The adviser must first sign the application verifying that the student will be able to satisfy all major requirements. Students with two majors or a minor must obtain signatures for each major and/or minor. Students must meet with the college registrar, who signs the application after verifying that the college requirements will be fulfilled after successful completion of the student’s final semester. Note: It is the student’s responsibility to meet all graduation requirements. The student must resolve all problems, even if discovered late in the term, before the degree can be awarded.

Credit Earned While in High School
   Transfer credit will not be accepted for the Syracuse Project Advance Program and similar programs. If a student is enrolled in a college-university course during his/her high school years, transfer credit will be given only if certain criteria are met:
   1. Course must be a standard course taught by a post-secondary institution.
   2. High school must be a satellite location, one of several options available to all students taking the course.
   3. Course syllabus, text, examinations, and evaluation process must be the same for all students at all sites.
   4. Students must be enrolled for college credit and pay college tuition.
   5. Instructor must be a faculty member (includes adjuncts) at the offering college.

If one of these is not met, no transfer credit will be given. Written verification may be necessary.

CLEP Credit
   The College of Agriculture and Life Sciences awards CLEP (College-Level Examination Program) credit if a student achieves an acceptable score on the CLEP exam. Please contact the Registrar’s Office in 140 Roberts Hall for specific information about CLEP credit.

STUDENTS
   Undergraduate enrollment is approximately 3,015, with about 56 percent in the upper division. Each year about 850 students are graduated, while 635 freshmen and 250 new transfer students are enrolled. College faculty members serve as chairs of the Special Committees of roughly 1,014 graduate students.

Admission
   The CALS Admissions Office selects applicants who are academically well prepared and appear most likely to benefit from the college’s various curricula.
   While most students come from New York State, about 53 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are self-identified as members of minority ethnic groups.

   The CALS Admissions Office is in 177 Roberts Hall (607-255-2036, www.cals.cornell.edu/admissions/).

Transfer Students
   Approximately 20 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, agricultural and technical colleges, or four-year institutions. Many of them hold an associate degree. Detailed information on transfer admission is available from the CALS Admissions Office.

Intra-University Transfer
   A Cornell student in good standing may apply for an intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the CALS Admissions Office. The procedure involves filing a transfer request, meeting with a faculty member in the proposed area of study, and submitting a letter of interest in the new area.

   Consideration is given to students who have demonstrated an interest in their proposed field of study by taking appropriate prerequisite subjects and courses within the area of study. Academic achievement at the college is also considered. Students are not allowed to transfer during their freshman year. In certain cases, a student may be referred to the Internal Transfer Division (ITD) to study for one semester before entering the college. A second semester in ITD is considered only in unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students
   A limited number of non-degree candidates who want to take courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience, and a list of the courses in which they are interested. For more information and guidelines, students should contact the CALS Admissions Office.

Off-Campus Students
   Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell in Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

Off-Campus Courses
   Students in CALS must be registered for at least 12 credits of courses work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS.

   Two exceptions to enrollment elsewhere while being a full-time student at Cornell would be the joint enrollment agreements between Cornell and Ithaca College and Wells College. Other exceptions must be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The commit­tee may approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Cornell is not permitted.

Leave of Absence
   A student wishing a break from studies in a future semester, or those who find it necessary to leave the university before the end of a semester, should submit a written petition for a leave of absence. Such action is necessary to clear the record for the semester and if not
taken may adversely affect the student’s subsequent readmission to the university.

An approved leave is considered a voluntary interruption in study and holds the student’s place in the college without requiring reapplication to the university. Voluntary leaves are issued two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave, activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition for reinstatement must be approved by the Petitions Committee).

A database is maintained by the Counseling and Advising Office to assist participation in pre-course enrollment the semester before a student’s return. Information and petition forms are available in the Counseling and Advising Office. 140 Roberts Hall.

Withdrawal

A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

Graduation and Diplomas

Graduating seniors must complete the Application to Graduate (see the details in Part C of “Progress toward the Degree”). Diplomas are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field in May, graduates return to the Ag Quad to obtain their diplomas. For January and August graduates, diplomas are mailed.

ADVISING AND COUNSELING SERVICES

Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while in college. They believe that personal contact is the best way to provide information and advice on both academic and personal matters; they consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student’s academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college’s central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college’s honor society. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college policies and guidelines. Counseling is framed as appropriate to each student’s academic circumstances. The staff is available on a walk-in basis, as well as by appointment.

Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all minority students in the College of Agriculture and Life Sciences. This population is defined as encompassing all African American, Latin American, Asian American, and Native American people. In the past academic year this represented approximately 20 percent of the college’s undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP) and Prehealth Collegiate Science and Arts Program (CSTEP). EOP and CSTEP are state-supported programs intended to assist New York State students who meet economic and academic criteria set by the college, the State Programs Office, and the New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, Multicultural and Diversity Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, the Learning Strategies Center, and the State Programs Office. Other university connections regarding the concerns of the minority student population include the University Career Center and the Office of Financial Aid. The director and 7 to 10 peer advisers carry out the duties of Multicultural and Diversity Programs. Together, the staff acts as the major advocacy group as well as an informational and referral center. The director provides support for the Academic Human Diversity and Resources Committee. Its constituency includes students, faculty, and the general public.

Given the college’s policy on non-exclusionary programming, Multicultural and Diversity Programs is also responsible for some functions that serve the college’s entire population. Presently, that includes general college diversity activities and serving as the Prehealth Program adviser and liaison and providing ongoing support at all levels for the Office of Counseling and Advising.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni is a database of more than 300 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as resume writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 90 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine and the staff in 177 Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations in the college provide supplemental aid for students who are eligible for financial aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university’s Office of Financial Aid.

Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code:

1) Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.

2) Students are guilty of violating the code if they:
   - knowingly represent the work of others as their own
   - use or obtain unauthorized assistance in any academic work
   - give fraudulent assistance to another student
   - fabricate data in support of laboratory or field work
   - forge a signature to certify completion or approval
   - submit the same work for two different courses without advanced permission
   - knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids
   - in any other manner violate the principle of absolute integrity

3) Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.
ACADEMIC POLICIES AND PROCEDURES

4) Faculty members fulfill their responsibility to
• maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
• make clear the conditions under which examinations are to be given
• make clear the consequences of violating any aspects of the code
• provide opportunities for students to discuss the conduct of classes with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
• state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
• approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
• monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students’ submitted work must be their own and no one else’s

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

ACADEMIC POLICIES AND PROCEDURES

Records
The office of the college registrar maintains a complete academic record for each matriculated student. The registrar and associate registrar are available to consult with students regarding the assignment of credit toward meeting distribution and elective requirements as listed on the Summary of Record form.

Registration Procedures
All students must register with the university and check-in with this college at the beginning of each fall semester. Check-in materials are available in 140 Roberts Hall.

Course Enrollment Procedures
Students will receive course enrollment information from the university registrar. After planning a schedule of courses in consultation with their faculty adviser, students pre-enroll by computer, through CourseEnroll in “Just the Facts” located in the Bear Access menu. Pre-enrollment is not valid until the student enters the adviser key code, received from their faculty adviser, into the computer. The adviser key code changes each semester to ensure ongoing contact between student and faculty adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar’s Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar’s Office to ensure that proper registration will occur.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, the second time will be for no credit.

Students must not enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form to the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the R grade.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student using the on-line add/drop through “Just the Facts” or the official course drop and add form at the Registrar’s Office, 140 Roberts Hall. Approval of the faculty adviser is required to change course enrollment. Department or course instructor approval may be required on select courses.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the term, and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions (also see Petitions Procedures below). Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for “withdrawal”) is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than 12 credits.

Petitions Procedures
The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee
• reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements
• receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
• acts upon readmission requests from persons whose previous enrollment was terminated by the committee
• notifies the petitioner in writing of the action taken by the committee

A petition for exemption from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

A petition is usually prepared with the assistance of a student’s faculty adviser, whose signature is required. The adviser’s recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action. Petitions for withdrawing from a course are discussed above.

Academic Deficiency Policies
At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses so as to result, at the end of any semester, failure to attain one or more of the following:
• semester GPA of at least 2.0
• cumulative GPA of at least 2.0

Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for "withdrawal") is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than 12 credits.

Petitions Procedures
The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee
• reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements
• receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
• acts upon readmission requests from persons whose previous enrollment was terminated by the committee
• notifies the petitioner in writing of the action taken by the committee

A petition for exemption from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

A petition is usually prepared with the assistance of a student’s faculty adviser, whose signature is required. The adviser’s recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action. Petitions for withdrawing from a course are discussed above.

Academic Deficiency Policies
At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses so as to result, at the end of any semester, failure to attain one or more of the following:
• semester GPA of at least 2.0
• cumulative GPA of at least 2.0
ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways:

Dean's List. Each semester, students are recognized for academic excellence by inclusion in the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:

1. A minimum course load for the semester of 12 letter-graded credits;
2. Achievement of a semester GPA of at least 3.50; and
3. Achievement of an "S" grade, or a "C-" or better grade in each course (including physical education), with no Incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

Bachelor of Science with Honors. Students receiving a cumulative GPA of 4.0 or greater (based on the last four residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "summa cum laude." Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.0 (based on the last four residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "magna cum laude."

Students receiving a cumulative GPA of greater than or equal to 3.5 and less than 3.75 (based on the last four residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "cum laude."

Bachelor of Science with Distinction in Research. Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in the area of interest and have been recommended by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.

RESEARCH HONORS PROGRAM

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion of this program requires a thesis written in the style of a master's thesis or professional journal article in that area of research. Original honors research occasionally is published in a professional journal. Students are required to send an electronic version of their thesis title, abstract, student's name, and the research advisor's name to Ann Gantner, amg28@cornell.edu, by the end of the spring semester. During the summer of each year, the CALS Research Honors Abstracts is published as a compilation of abstracts of the honors theses. In addition to copies of the entire thesis requested by the program area, one copy is required by the Office of Academic Programs (140 Roberts Hall). This copy is made available in Mann Library.

The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the requirements for the B.S. degree, have satisfactorily completed the honors program in an area of major interest and have been recommended for the degree by the honors committee of that area. Research may be done under the appropriate program area: Animal Sciences, Biological Sciences, Biology and Society, Entomology, Landscape Studies, Natural Resources, Nutritional Sciences, Physical Sciences, Plant Sciences, and Social Sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area (below), students' questions may be directed toward the appropriate program area chair.

Consult "Undergraduate Research Opportunities" on the web (www.cals.cornell.edu/ud/undergrad_research/) for information about identifying a research topic, conferring with faculty, and undergraduate funding opportunities.

College Requirements

An undergraduate wishing to enroll in the honors program must complete at least 55 credits, at least 30 of those 55 at Cornell. Also, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must make written application to the CALS Registrar's Office no later than the end of the sixth week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year (or earlier if required by the program area). Earlier application deadlines to program area committees are noted in the sections below. For most of the program areas, an application form is available from the college registrar in 140 Roberts Hall. The application form also can be printed from the web at www.cals.cornell.edu/oap/registrar/res_oppor.htm. Applications for Biological Sciences students can be picked up at 200 Stimson Hall, and for Biology and Society students, at 275 Clark Hall.

Before the completed application is returned to the registrar, signatures of approval are required in the following order: faculty research mentor, academic adviser, and the research honors program area chair. After the college registrar verifies the student's GPA, the application form is submitted to the program. The student may, if appropriate, submit a budget and a modest request for funds (up to $500) to cover some of the costs incurred in doing the research. If approved, the funding will be transferred from an account in the CALS Office of Academic Programs to a departmental account of the student's research adviser to support the student's research. This funding is not to be used as a student salary. Additional funding opportunities are described on the Undergraduate Research Opportunities web site at www.cals.cornell.edu/oap/admin/undergrad_res_oppor.htm.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the research honors program must be accepted in one of the program areas approved by the faculty.
Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with “distinction in research.” At or near the completion of their research, students are required to give an oral presentation or poster session during any event at Cornell. Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research Board (CURB) Forum is another venue for presentations.

For more information, consult the web at www.cals.cornell.edu/oap/registrar/res_hon_main.htm

Animal Sciences

Faculty committee: W. B. Currie, chair; Y. R. Boisclair, S. M. Quirk, P. A. Johnson, R. E. Austic

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member’s commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 495, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results (see exceptions under particular program areas).
- Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student’s sponsor and the research committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

Biological Sciences

Students interested in the research honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See “Independent Research and Honors Program” in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Simeon Hall.

Biology & Society

Faculty committee: D. Pimentel, chair

The research honors program in biology & society is designed to provide independent research opportunities for academically talented undergraduate students in biology & society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in biology & society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a career.

Biology & society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the biology & society office, 275 Clark Hall. To qualify for the biology & society research honors project, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a biology & society faculty member willing to serve as his/her adviser. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome.

Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters and may take three to five credits per semester up to a maximum of eight credits in B&SOC 498 and 499, Honors Project I and II. More information on the honors program is available in the biology & society office, 275 Clark Hall (255-6047).

Important Deadlines

(NOTE: If the following dates fall on a weekend, the deadline is the preceding Friday).
- Last week of second semester of the junior year. Application for honors program submitted to 275 Clark Hall.
- April 15: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 29: Thesis defense accomplished.
- May 13: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

Entomology

Faculty committee: B. L. Peckarsky, chair

The Program

A research honors program in entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences.

The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

Prerequisites

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative GPA of at least 3.0 at the time of entry and maintain this GPA to graduate with distinction in research. The CALS registrar will verify GPAs of applicants before officially enrolling them in the Research Honors Program. Research honors students have the option of earning academic credit by enrolling in Independent Study (ENTOM 497) during any semester while working toward a research honors thesis. Credits are awarded only after satisfying requirements of ENTOM 497 should be discussed with the thesis adviser (see below). Note: Enrolling in independent study is not a requirement for graduating with distinction in research honors in entomology.

Sequence of Requirements

The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.
- Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student's academic adviser. The academic adviser will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Submit a completed application and proposal (approved by the honors project supervisor and the chair of the Entomology Research Honors Committee) no later than the end of the sixth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available and should be submitted to the CALS registrar, 140 Roberts Hall. These applications include an opportunity to request a modest
meeting deadlines and being prepared for presentations and other meetings.

Although honors research credits for spring semester junior year and both semesters senior year are designated a letter grade, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student's mentor. The designation of "distinction in research" on the diploma is awarded at the recommendation of the faculty advisor and other referees to the honors committee chair. An outline of activities for both years is given below.

The Landscape Studies Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

Junior year: Identify a potential research honors project sponsor and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year and be finalized by the end of the spring semester. Pre-register during the spring for the research honors program (LA 499).

Work with a faculty adviser to identify and formulate a research problem.

If the faculty adviser is not in the Department of Landscape Architecture, select a co-adviser from the department to ensure that the research is consistent with the field.

Submit a completed application and proposal (approved by the honors project supervisor and the chair of the research honors committee) no later than the end of the fourth week of the first semester of the senior year. Earlier submission is encouraged. These will be reviewed by ad hoc committee members, and successful thesis proposals will be submitted to the college honors committee by the sixth week.

Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.

Submit an outline of the thesis to the chair of the committee by the end of January for a May graduation.

April 15: Draft due to readers. Describe and summarize the work within the range of formats used in the master's thesis program or professional journals in design or research. This version will be reviewed by the faculty supervisor and two ad hoc reviewers, and the student will be able to incorporate the committee's comments and suggestions into the final version which will be due the last day of classes. Referees prepare a recommendation to the honor's director regarding the acceptability of the honors thesis.

Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student's senior year.

Students should be aware that this requires a considerable time commitment, and they are responsible for meeting deadlines and being prepared for presentations and other meetings.

Natural Resources
Faculty director: J. B. Yavitt

The research honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of applied ecology or resource policy and management. The subject matter and nature of the research experience may be quite varied. The guidance and supervision of a faculty member with substantial interest and expertise in the subject area is essential to the success of the project.

In addition to meeting requirements of the college, the student is expected to do the following:

- Register for the research honors program in the junior year or earlier.
- Work with a faculty adviser to identify and formulate a research problem.
- If the faculty adviser is not in the Department of Natural Resources, select a co-adviser from the department to ensure that the research is consistent with the field.
- Describe and summarize the work in the format of a conventional master's thesis or scientific paper ready for publication in a scientific or policy journal. Submit a copy of the first week of April (senior year) to the honor's director. This version will be reviewed by two ad hoc reviewers, and the student will be able to incorporate their comments and suggestions into the final version, which will be due the last day of classes. About half of the theses have been published.
- Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student's senior year.
- Students should be aware that this requires a considerable time commitment, and they are responsible for meeting deadlines and being prepared for presentations and other meetings.

Nutritional Sciences
Faculty committee: J. T. Brenna, C. Bisogni

The honors research program in the Division of Nutritional Sciences is a structured experience that involves (1) taking a course in research (NS 398), (2) conducting a research project through which the student becomes intellectually engaged in the whole research process, (3) completing a written thesis that reports the research, and (4) giving an oral presentation of the project at the Undergraduate Honors Symposium. Students must maintain a minimum grade-point average to graduate with honors in research.

The honors research program is an excellent opportunity for students who are highly interested in research and wish to commit substantial time and intellectual energy to a project that will span at least four semesters or more of their undergraduate experience. Honors students experience the excitement of designing a project to generate new knowledge on a topic that interests them and reporting the project findings. By working with faculty mentors and other researchers, they develop skills in research methods and data analysis. Students also learn that research projects are labor intensive and that writing research reports, such as the honors thesis, is
The research honors committee will review the report within one week and may accept or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

**Social Sciences**

Faculty committee: D. A. Scheufele

Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the college criteria described earlier, after evaluation of the student's written application, and on approval of a detailed thesis proposal. The application and proposal are submitted to the program area chair no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the junior year. The purpose of the proposal is two-fold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

- **Research Topic**: State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.

- **Research Questions/Empirical Hypotheses**: Specify the proposed questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.

- **Research Methods**: Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.

- **Expected Significance**: State what new knowledge or information is likely to be forthcoming and why it is important. State any practical applications expected as a result of the research.

Faculty advisers must be members of the graduate faculty. Exceptions may be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions may be granted persons who are members of the Social Science Honors Committee. Students should register for honors credit directed by the faculty research honors project adviser.

Distinction in research is awarded upon approval of the research honors thesis by the Social Science Research Honors Committee. The research should deal with a substantive issue in one of the fields in the social sciences. Both the results of the research and the
methodology (or the logical argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an observed phenomenon may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate field. Three copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work also must be submitted. The thesis will be independently reviewed and revisions may be required before the thesis is accepted. Final approval of the thesis requires a majority vote of the honors committee.

INTERCOLLEGE PROGRAMS

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty adviser as part of their undergraduate program. These courses count toward the endowed college credits (maximum 55 without additional tuition charge). Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

Students in the Engineering Program in Biological and Environmental Engineering (BEE) are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and jointly enrolled and the College of Engineering in the junior and senior years. All BEE engineering students pay the engineering college tuition during the senior year and graduate from the College of Engineering. The B.S. degree is awarded in cooperation with the College of Engineering. The curriculum is accredited by the Accreditation Board for Engineering and Technology.

The Department of Landscape Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate levels (MLA I), as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board, LAAB. The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

The Division of Nutritional Sciences is an intercollege unit affiliated with the College of Human Ecology, the College of Agriculture and Life Sciences. The nutrition, food, and agriculture major offers students in the College of Agriculture and Life Sciences the opportunity to focus their studies in human nutrition while obtaining a strong background in courses relating to agriculture and the life sciences. Students in the biological sciences major may complete the program of study in human nutrition. Courses offered by the Division of Nutritional Sciences support many undergraduate programs in the College of Agriculture and Life Sciences including animal science, biological sciences, communication, food science, international agriculture, plant sciences, and rural sociology. Nutritional sciences courses count toward the undergraduate degree requirement fees for courses in Agriculture and Life Sciences.

The American Indian Program (AIP) is a multidisciplinary program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students tackle such challenging topics as the sovereign rights of Indian nations and the contemporary relevance of Indian life in the modern environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present, and feature the perspectives of Native American people.

Research areas among faculty active in the program include American Indian education, social and economic development, agriculture, environmental issues, history, sociology, language, literature, and the arts and cultural preservation. Extension and outreach efforts within the program seek to develop solutions to problems identified by American Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs.

Agwō:ken, the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration is earned upon completion of five courses: American Indian Studies 100 (Indian America to 1890) and American Indian Studies 175 (Contemporary American Indian Issues), plus three other courses selected from the American Indian Studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies must obtain approval of concentration materials from the AIP office in 450 Caldwell. AIP also offers a graduate minor.

Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell's strengths across a broad range of earth and environmental sciences have been brought together to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

The major is available to students in the College of Agriculture and Life Sciences as well as students in the Colleges of Arts and Sciences and, as an option, Engineering. The SES major has its home in the Department of Earth and Atmospheric Sciences, which spans all three colleges, but relies on the collaboration of several departments across the university.

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences. Graduates of Cornell's SES program are well prepared for graduate studies in the earth and environmental sciences. The SES major also provides an excellent background for students wishing to pursue careers, with or without advanced study, in environmental law and policy, and environmental protection. SES is also a good major for students wishing to teach earth and environmental science at the high school level, perhaps in conjunction with Cornell's Teacher Education in Agriculture, Mathematics, and Science (TEAMS) program.

See the Science of Earth Systems listing in the section "Major Fields of Study" for complete information about the SES curriculum. For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Sciences, khc5@cornell.edu, and visit the website: www.geo.cornell.edu/SES/

The Comparative and Environmental Toxicology Program is an interdisciplinary, intercollege program with research, teaching, and Cooperative Extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 213 Rice Hall, or at www.cfe.cornell.edu/icet. See also the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.

The Cornell Institute for Resource Information Systems (CIRIS) is an interdisciplinary, intercollege unit affiliated with the Department of Crop and Soil Sciences. The mission of Cornell IRIS is to advance the development and use of spectral and spatial information science and technology to benefit the environment. The institute comprises three program areas: environmental resource inventory, remote sensing, and geographic information systems. A description of these programs and general information is available from the institute director, Cornell IRIS office, 302 Rice Hall.

OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.
Albany Programs
Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. Each program has an academic component as well. Check the individual folders in the internship files in the CALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the CALS Career Development Office, 177 Roberts Hall, in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least 12 credits must be carried to meet the residency requirement. The opportunity to academic credit for the internship, students enroll in ALS 400 for an S-U grade only.

Information and applications are available in the CALS Career Development Office, 177 Roberts Hall.

Cornell in Washington
The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Washington program offers two study options: (1) studies in public policy, and (2) studies in the American experience. Students take part in a public policy or humanities seminar, which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects under the supervision of Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 21, inquire at M101 McGraw Hall, 255–4000, or visit the Cornell in Washington web site at cwi.cornell.edu.

SEA Semester
The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs for individuals who wish to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, and the following six weeks are spent on either one of SEA’s two sailing vessels: the SSV Robert Seamans or the SSV Corwith Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall (607–255–3717) or visit SEA’s web site: www.sea.edu. CALS students should file an intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory (SML)
The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on the 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduates and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607–255–3717 or visit their web site: www.sml.cornell.edu.

Internships
Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to three credits per internship and not more than six credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge gained per internship and/or following the CALS guidelines for assigning credits. The six-credit allotment includes transfer credit and credit from other internships in other colleges at Cornell. The six-credit limit does not apply to secondary, post-secondary, and Cooperative Extension teaching internships in the Department of Education. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. Note that a maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate research. For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits assigned. In order to ensure a fair and manageable system to deal with internships, the College of Agricultural and Life Sciences has set forth guidelines to ensure minimum requirements for a student to receive internship credit.

- Credit will only be assigned or accepted in cases where a Cornell faculty member is directly involved in determining both the course content and in evaluating the student's work.
- The internship should be purposeful, provide opportunities for reflection, present a continual challenge to the student, and incorporate active learning, with the student an active participant in all stages of the experience from planning to evaluation.
- Before a student begins the internship, a learning contract needs to be written between the appropriate internship adviser on campus, the supervisor at the location, and the student. This contract should state the conditions of the work assignments, supervisor, learning goals, number of credits, and methods of evaluation of the work. A contract form can be obtained from the college Registrar's Office, or departments may have their own.

- Students should further develop the internship experience based on the college Experiential Learning Criteria, which can be obtained from the Registrar's Office in 140 Roberts Hall.
- Students need to keep their faculty internship adviser updated on the progress of the internship while away from campus.

Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work, and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workloads, and the relationship of the internship to the goals of the department. The specific terms of the contract should be recorded, using the Independent Study Research, Teaching, and Internship form, available in the Registrar's Office in 140 Roberts Hall.

A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university. One option is that you may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members, department offices, the CALS Career Development Office, 177 Roberts Hall, or Cornell Career Services, 103 Barnes Hall. Another option is to receive credit through a 499 course within a department by conducting your own research project under a faculty mentor. More than 500 students each year conduct research for credit. Upperclass students usually have the course background to engage in research, but freshmen and sophomores also may be equipped to do some types of research. Off-campus research experiences are also available for pay or as internships.

International Exchange Programs in the College of Agriculture and Life Sciences

Any student whose grade-point average is 2.75 or above and has completed one year of continuous study in CALS may apply to a CALS international student exchange program. These undergraduate exchange opportunities are for CALS students only. For more information on programs and application process see the CALS Study Abroad Adviser in 140 Roberts Hall or visit the web site www.cals.cornell.edu/oap/advising/international/index.html.

Students who are interested in international study but not in one of the CALS programs must apply through Cornell Abroad in 474 Uris Hall. Please refer to the Cornell Abroad section of Courses of Study.

MAJOR FIELDS OF STUDY

The college curriculum consists of 21 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts, as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet the minimum distribution requirements of the college.

Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science Department has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accessible by interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation.

Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the many opportunities within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a highly select group of students.

Students declaring a minor in animal science will arrange for a formal academic adviser in animal science at least three semesters before graduating. It is expected that the minor will be satisfied by completing at least 12 credit hours of animal science courses (at least six of which must be taken at Cornell), the makeup of which will be determined in consultation with the adviser. For example, it is recommended that students completing the minor will assemble courses (or demonstrate having the equivalent from elsewhere) including some basic and applied biology of animals (anatomy, physiology, nutrition, genetics) along with a selection of intermediate or advanced offerings from the animal science curriculum. Satisfactory completion of minor requirements will be verified by the minor adviser's signature on the Petition to Graduate.

For information contact Deloris Bevins in 149 Morrison, db1@cornell.edu.

Applied Economics and Management

The Department of Applied Economics and Management (AEM) offers undergraduate programs of study in three broad areas: Business, Agribusiness, and Applied Economics.

AEM is home to Cornell's undergraduate general business degree. Here students can immerse themselves in finance, marketing, management, and business strategy courses, as well as take specialized courses in entrepreneurship, food industry management, and agribusiness. This highly selective program is accredited by AACSB International, the accrediting body for general business degree programs.

AEM also includes undergraduate specializations that focus on the economics of agriculture and the environment. All AEM courses stress the application of analytical skills, critical thinking, and economic theory to real-world business and public-policy issues.

The six areas of specialization offered in AEM are:

- **Business**, one of the largest undergraduate majors at Cornell University, offers students a broad array of courses in the fields of finance, marketing, management, accounting, and entrepreneurship.

Food industry management is a specialized business program for students interested in management positions in the retailing, manufacturing, and distribution sectors of the food industry.

Agribusiness management students study general business and take courses tailored to agricultural businesses.

Farm business management and finance is for students interested in working for firms with ties to farming and agriculture, such as cooperatives, banks, horticultural businesses, and family farms.

Agricultural and applied economics is a broad-based specialization that focuses on such important national and international issues as the economics of policy, markets, production, international trade, and international development.

Environmental and resource economics students study the economics of water and air quality, waste management, rural-urban land use, the sustainability of natural resources, energy use, and global climate change.

AEM graduates are actively recruited by elite businesses for positions in finance, marketing, investment banking, and management consulting, as well as by federal and international agencies. Many graduates go on for advanced professional and academic degrees, often after several years in a challenging career position in business or government.

Atmospheric Science

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). There are three options for the B.S. in atmospheric science through the College of Agriculture and Life Sciences:

**Option A**

1. Mathematics, Computer Science, and Statistics:
   a. MATH 190/191, 192, 293; or MATH 111, 112, 213
   b. COM S 100 or EAS 150 or equivalent
   c. EAM (ARMS) 210 or equivalent
   d. MATH 294 (or MATH 221 and 222, without MATH 213) or EAS 435

2. Basic Physical Sciences:
   a. PHYS 207, 208, or PHYS 112, 213, 214
   b. CHEM 206, 207, or 211

3. Atmospheric Science:
   a. EAS 131, 250, 341, 342, 352, 447, 451
   b. At least two atmospheric science electives
**Option B**

1. Mathematics, Computer Science, and Statistics:
   - a. MATH 190/191, 192, 293, 294; or MATH 111, 112, 221, 222
   - b. COM S 100 or EAS 150 or equivalent
   - c. AEM 210 or equivalent
   - d. MATH 321, MATH 420, or T&AM 310

2. Basic Physical Sciences:
   - a. PHYS 112, 213, 214
   - b. CHEM 207 or 211

3. Atmospheric Science:
   - a. EAS 341, 342, 352, 451

**Option C**

1. Mathematics, Computer Science, and Statistics:
   - a. MATH 190/191, 192, 293; or MATH 111, 112, 213
   - b. COM S 100 or EAS 150 or equivalent
   - c. AEM 210 or equivalent

2. Basic Physical Sciences:
   - a. PHYS 207, 208
   - b. CHEM 206, 207, or 211

3. Atmospheric Science:
   - a. EAS 341, 342, 352, 451

4. Earth Sciences:
   - a. one semester of introductory astronomy
   - b. one semester of introductory geology
   - c. six additional semesters of earth science (astronomy, atmospheric science, geology)

Option A is intended to meet the needs of students whose primary interests are in forecasting and operational meteorology. Upon graduation, a student who has completed Option A will have satisfied both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist. They will also be well qualified for positions in private-sector forecasting, environmental consulting firms, and broadcast meteorology. In addition, Option A provides good preparation for graduate work in atmospheric science and closely related fields.

Option B is designed to focus on preparation for graduate study in atmospheric science as well as other sciences, and includes somewhat stronger coursework in mathematics and physics than does Option A. The minimum course work in Option B does not satisfy the National Weather Service requirements or American Meteorological Society guidelines for employment in operational meteorology, but may be more appropriate for students with academic or research career goals. It can also be an attractive option for students transferring into the program as juniors.

Option C is intended for students who wish to become secondary school earth science teachers. It provides good preparation for graduate study in earth science education, and includes the minimum course work required for secondary earth science teaching certification in New York. It does not satisfy the National Weather Service or American Meteorological Society guidelines for employment as an operational meteorologist.

A student may minor in atmospheric science by completing any four of the following EAS courses: 131, 250, 268, 331, 334, 341, 342, 352, 343, 447, 451, 456, 457, 470, 651, 652 or 666.

**Biological Sciences**

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Most of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology in 216 Stimson Hall provides student services that are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systems and biotic diversity. Students interested in the marine sciences should consult the Shoals Marine Laboratory Office, G14 Stimson Hall for academic and career advising. For more details about the biology curriculum see the section in this catalog on Biological Sciences or visit the office of Undergraduate Biology web site, www.bio.comell.edu.

**Biological and Environmental Engineering**

The Department of Biological and Environmental Engineering (BEE) addresses three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population, protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering program in the Department of Biological and Environmental Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a bachelor of science degree, which is awarded jointly by the College of Engineering and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET). All students in the jointly administered BEE major enroll in the College of Engineering and pay endowed tuition their last two semesters.

Two concentrations in Biological and Environmental Engineering are offered: biological engineering and environmental engineering. Students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in the department in areas that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal.

Students strengthen their programs by selecting additional courses in the College of Engineering. They may complete minors or a second engineering major. Students planning for medical school also take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills, and all students complete a capstone design project. Students in the engineering program may pursue minors and options in specialized areas as noted in the engineering section of this publication.

**Specific course requirements and other information for the Biological and Environmental Engineering joint program in the College of Engineering section of this publication.** Further information is available at the undergraduate program office, BEE Student Services, 207 Riley-Robb.

The department also offers two technology programs: Biological Engineering Technology and Environmental Engineering Technology. The technology programs emphasize applied and technical aspects of biological, environmental, physical and life sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies.

Many undergraduate students participate in honors programs, undergraduate teaching and research, internships, independent study, design teams, and study abroad. Students in the engineering program are also eligible to do Engineering Co-Op. Students completing the BEE major should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental...
Engineering is educating the next generation of engineers to meet these challenges.

Specific course requirements for the accredited engineering programs are found in the College of Engineering section of this book.

Specific course distribution requirements for the academic programs in Biological Engineering Technology and Environmental Engineering Technology include

A. Basic Subjects Credits
1. Calculus 8
2. Chemistry 7
3. Physics 8
4. Introductory biological sciences 6
5. Computer programming 4
6. Probability and statistics 3
7. Written and oral expression 9

B. Advanced and Applied Subjects
1. Five courses in the biological, environmental, or life sciences 15
2. Five engineering or technology courses at the 300 level or above; at least 9 credits in Biological and Environmental Engineering 15

C. Electives
Additional courses to complete College of Agriculture and Life Sciences requirements

D. Total (minimum) 120

For further details on the Biological and Environmental Engineering and Technology programs, see the BEE Undergraduate Program Handbook, available at 207 Riley-Robb Hall or online at www.bee.cornell.edu. Contact Professor Jim Hartsch at 255-2800, jab35@cornell.edu, or visit the department's web site for more information.

Biology & Society

The Biology & Society program area is designed for students who wish to combine the study of biology with exposure to perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions.

The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society field of study, see the section on biology & society under the College of Arts and Sciences in this publication or visit the web site at www.sts.cornell.edu.

Students who elect Biology & Society as their major field of study leave Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

Admissions

Students must have completed a year of college-level biology and must submit an application during their sophomore year. Students in the College of Agriculture and Life Sciences may be admitted directly into the field of study when they apply to the college, as with all students admitted prior to completing the biology prerequisite, the admission is provisional. It is the student's responsibility to assure that final acceptance is granted upon completion of the introductory biology sequence and the application form. Although only introductory biology is a prerequisite for acceptance, students will find it useful to have completed some of the other requirements (obtain course checklist in 306 Rockefeller Hall) by the end of their sophomore year. Students are considered on a case-by-case basis. Upper-division applicants should realize the difficulties of completing the Biology & Society requirements in less than two years. The application includes:

- A one- to two-page statement explaining your intellectual interests in biology & society and why it is consistent with your academic goals and interests.
- A selected theme.
- A tentative plan of courses fulfilling Biology & Society requirements; including courses you have taken and those you plan to take.
- A transcript of work taken at Cornell University, current as of the date of application.

The faculty admissions committee reviews applications twice a year, one each during the fall and spring semesters. A faculty adviser is assigned on admittance to the field. Approximately 50 faculty members from four colleges serve as advisers to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty and student advisers are available to discuss the Biology & Society requirements with you.

Requirements for the program are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall or on the web at www.sts.cornell.edu. Also refer to the section on Biology & Society under the College of Arts and Sciences in this publication.

Biology & Society Requirements:

- Introductory biology (101-104, 105-106, or 107-108 or a 5 in AP biology)
- College calculus (one course)
- Ethics (one course)
- Two social sciences/humanities foundation courses
- Three biology foundation courses
- One biology depth course
- Statistics (one course)
- Core course
- Five theme courses (a coherent group of five courses relevant to the student's special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of faculty is available in 306 Rockefeller Hall. Further information may be obtained by logging onto the departmental web site: www.sts.cornell.edu.

I. Basic Courses

(may not be used to fulfill major requirements)

A. First-Year Writing Seminars

Check the current FWS pamphlet for information.

B. S&TS 101 Science and Technology in the Public Arena

Fall. 3 credits. T. Gillespie. For description, see S&TS 101.

II. Foundation Courses

A. Ethics (select one)

B&SOC 205 Ethical Issues in Health and Medicine (also S&TS 205)

Fall. 4 credits. Limited to 150 students. S. Hilgarter. For description, see B&SOC 205 in Arts and Sciences.

B&SOC 206 Ethics and the Environment (also S&TS 206 and PHIL 246)

Spring. 4 credits. Limited to 100 students. N. Sethi. For description, see B&SOC 206 in Arts and Sciences.

B. Social Sciences/Humanities Foundation

(two courses, one from any two areas)

1. History of Science

S&TS 233 Agriculture, History, and Society: From Squanto to Biotechnology

Fall. 3 credits. M. Rossiter. For description, see S&TS 233.

S&TS 282 Science in Western Civilization (also HIST 282) #

Spring. 4 credits. P. Dear. For description, see HIST 282.

[S&TS 283 The Sciences in the Twentieth Century (also HIST 280)]

Fall. 4 credits. Staff. For description, see S&TS 283.

S&TS 287 Evolution (also BIOEE 207 and HIST 287)

Fall or summer. 3 credits. W. Provine. For description, see BIOEE 207.

S&TS 355 Computers: From Babbage to Gates

Spring. 4 credits. T. Gillespie. For description, see S&TS 355.
7. Plant Biology
BIOPL 241 Introductory Botany
Fall. 3 credits. K. J. Niklas.
For description, see BIOPL 241.

8. Physiology and Anatomy
BIOAP 311 Introductory Animal Physiology, Lectures (also VET MED 346)
Fall. 3 credits. E. Loew and staff.
For description and prerequisites, see BIOAP 311.

NS 341 Human Anatomy and Physiology
Spring. 4 credits. Permission only. Must preregister for lab in 309 MVR during CourseEnroll. V. Utermohlen.
For description and prerequisites, see NS 341.

D. Biology Foundation (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite:

E. Statistics (select one)
AEM 210 Introductory Statistics
Fall. 4 credits. C. van Es.
For description and prerequisites, see AEM (ARME) 210.

BTRY 301 Statistical Methods I
Fall. summer. 4 credits. Staff.
For description and prerequisites, see BTRY 301.

[CRP 223 Introduction to Statistical Reasoning for Urban and Regional Analysis
Fall. 3 credits. Staff.
For description, see CRP 223.]

ECON 319 Introduction to Statistics and Probability
Fall. 4 credits. Y. Hong.
For description and prerequisites, see ECON 319.

ILRST 210 Statistical Reasoning II
Fall, spring, summer. 3 credits.
P. Velleman, T. DiCiccio.
For description, see ILRST 210.

MATH 171 Statistical Theory and Application in the Real World
Fall, spring. 4 credits. Staff.
For description and prerequisites, see MATH 171.

PAM 210 Introduction to Statistics
Fall. spring. 4 credits. R. Swisher, K. Joyner.
For description, see PAM 210.

PSYCH 350 Statistics and Research Design
Fall. 4 credits. T. Gilovich.
For description, see PSYCH 350.

SOC 301 Evaluating Statistical Evidence (also R SOC 302)
Fall. 3 credits. M. Clarkberg.
For description, see SOC 301.

III. Core Courses

B&SOC 301 Life Sciences and Society (also S&TS 301)
Fall. 4 credits. Limited to 50 students.
M. Lynch.
For description and prerequisites, see B&SOC 301.

S&TS 286 Science and Human Nature (also PHIL 286)
Fall. 4 credits. R. Boyd.
For description, see PHIL 286.

V. Theme

A. Natural Sciences Issues/Biology Elective (two courses). Select from the following list of B&SOC approved Natural Sciences Issues courses or choose course(s) with introductory biology as a prerequisite.

B&SOC 214 Biological Basis of Sex Differences (also BIOAP 214 and FGSS 214)
Spring. 3 credits. J. Fortune.
For description, see BIOAP 214.

B&SOC 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and NS 347)
Spring. 3 credits. Offered alternate years.
For description and prerequisites, see HD 347.

[BIOEE 275 Human Biology and Evolution (also ANTHR 275 and NS 275)
Fall. 3 credits. J. Haas and K. Kennedy.
For description, see BIOEE 275.]

[BIOEE 474 Laboratory and Field Methods in Human Biology (also ANTHR 474)
Spring. 5 credits. K. Kennedy.
For description, see BIOEE 474.]

[BIOEE 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)
Fall. 3 credits. Offered alternate years.
K. Kennedy.
For description, see BIOEE 673.]

[BIOL 247 Ethnobiology
Fall. 3 credits. D. Bates.
For description, see BIOL 247.]

HD 266 Emotional Functions of the Brain
Fall. 3 credits. R. DePue.
For description and prerequisites, see HD 266.

HD 344 Infant Behavior and Development
Fall. 3 credits. Not open to freshmen.
S. Robertson.
For description and prerequisites, see HD 344.

HD 433 Developmental Cognitive Neuroscience
Spring. 3 credits. E. Temple.
For description, see HD 433.

[HD 436 Language Development (also LING 436, PSYCH 436, and COGST 436)
Spring. 4 credits. B. Lust.
For description, see HD 436.]

NS 222 Maternal and Child Nutrition
Fall. 3 credits. Limited to 20. C. Garza and P. Brannon.
For description and prerequisites, see NS 222.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. May be used to fulfill the Biology Depth requirement. C. McCormick.
For description and prerequisites, see NS 331.

NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361)
Fall. 3 credits. Limited to juniors and seniors only. B. Strupp.
For description and prerequisites, see NS 361.

NS 452 Molecular Epidemiology and Dietary Markers of Chronic Disease
Spring. 3 credits. P. Cassano.
For description and prerequisites, see NS 452.

NS 475 Mechanisms of Birth Defects
Spring. 3 credits. P. Stover.
For description and prerequisites, see NS 475.

NTRES 201 Environmental Conservation
Spring. 3 credits. T. Fahey.
For description, see NTRES 201.

PSYCH 326 Evolution of Human Behavior
Fall. 4 credits. R. Johnston.
For description and prerequisites, see PSYCH 326.

Examples of biology electives

AN SCI 300 Animal Reproduction and Development
Spring. 3 credits.
For description, see AN SCI 300.

HD 220 The Human Brain and Mind
Fall. 3 credits.
For description, see HD 220.

HD 366 Psychobiology of Temperament and Personality
Fall. 3 credits. R. DePue.
For description and prerequisites, see HD 366.

R. Humanities/Social Sciences Elective (two courses)

Courses listed earlier as social science/humanities foundation courses (2D) are particularly appropriate as social science/humanities electives. A single course, however, cannot be used to meet both requirements. Additional courses that are recommended as social science or humanities electives are:

Examples of humanities/social sciences electives

AEM 464 Economics of Agricultural Development
Spring. 3 credits. R. Christy.
For description, see AEM 464.

[ANTHR 211 Nature and Culture @
Spring. 3 credits. Staff.
For description, see ANTHR 211.]

B&SOC 314 Environmental Governance (also S&TS 314 and NTRES 314)
Spring. 3 credits. S. Wolf.
For description, see NTRES 314.

HD 457 Health and Social Behavior (also SOC 457)
Fall. 3 credits. E. Werhington.
For description, see HD 457.

NS 450 Public Health Nutrition
Spring. 3 credits. K. Rasmussen, D. Pelletier.
For description, see NS 450.

NTRES 407 Religion, Ethics, and the Environment
Fall. 4 credits. R. Baer.
For description, see NTRES 407.

PAM 303 Ecology and Epidemiology of Health
Spring. 3 credits. E. Rodriguez.
For description, see PAM 303.
[HD 419] Midlife Development
Spring. 3 credits. S. Cornelius.
For description, see HD 419.

HD 464 Adolescent Sexuality (also FGSS 467)
Spring. 3 credits. R. Savin-Williams.
For description, see HD 464.

HD 660 Social Development
Spring. 3 credits. Permission of the instructor required for undergraduates.
K. Greene.
For description, see HD 660.

NTRES 411 Seminar in Environmental Ethics
Fall. 3 credits. R. Bailer.
For description, see NTRES 411.

PAM 552 Health Care Services: Consumer and Ethical Perspectives
Fall. 3-4 credits. If using this course as a senior seminar, Biology & Society majors must take it for 4 credits. Enrollment limited: preference given to PAM students.
A. Parrot.
For description and prerequisites, see PAM 552.

PAM 556 Managed Care
Spring. 3 credits. For undergraduate seniors only by permission of instructor.
J. Kuder.
For description and prerequisites, see PAM 556.

PAM 559 Epidemiology, Clinical Medicine, and Management Interface Issues
Spring. 3 credits. E. Rodriguez.
For description, see PAM 559.

[R SOC 410] Population and Environment
Spring. 3 credits. Staff.
For description, see R SOC 410.

[R SOC 438 Population and Development (also SOC 437)]
Fall. 3 credits. Staff.
For description, see R SOC 438.

[R SOC 495 Population, Environment, and Development in Sub-Saharan Africa]
Fall. 3 credits. P. Eloumdou-Enygue.
For description, see R SOC 495.

[S&T S 411] Knowledge, Technology, and Property
Spring. 4 credits. S. Hilgartner.
For description and prerequisites, see S&T S 411.

[S&T S 438] Minds, Machines, and Intelligence (also COGST 438)
Spring. 4 credits. Staff.
For description and prerequisites, see S&T S 438.

[S&T S 446] Biomedical Ethics
Spring. 4 credits. Staff.
For description, see S&T S 446.

S&T S 466 Public Communication of Science and Technology (also COMM 466)
Fall. 4 credits. Limited to 15 students.
B. Levinstein.
For description and prerequisites, see COMM 466.

[S&T S 490] Integrity of Scientific Practice
Spring. 4 credits. S. Hilgartner.
For description, see S&T S 490.
GRICULTURE AND LIFE SCIENCE 2003-2004

more central role in science, technology, business, and public policy. Increasingly, government, industry, and special interest groups rely on communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information understandable and accessible to the general public, to interest groups, and to decision-makers in organizations. Effective information management requires a thorough understanding of the communication process.

Students who graduate from this department have excellent speaking, writing, and listening skills. Communication majors are taught:

- Communication processes, such as how communication influences attitudes, opinions, and behaviors.
- How communication systems work in our society.
- How to apply their understanding of communication to solving problems in science, government, industry, health, and education.

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice. Required freshman courses are:

**Fall Semester:**
- COMM 120 Contemporary Mass Communication

**Spring Semester:**
- COMM 116 Communication in Social Relationships
- COMM 117 Writing about Communication

This set of courses provides students with a basic understanding of communication and the communication process. These courses also provide a unique opportunity to link practical application (such as writing and critical analysis) with up-to-date research and knowledge about communication.

During the sophomore year, students take:

**Fall Semester:**
- COMM 201 Oral Communication
- COMM 282 Communication Industry Research

**Spring Semester:**
- COMM 230 Visual Communication

After completing the courses in the core curriculum, all majors take an additional 18 credits in communication. Students can choose to concentrate in one of three focus areas:

- Communication in the Life Sciences (studies of the impact of communication on environmental, health, science, and agricultural issues, and public perceptions of risk).
- Communication Planning and Evaluation (development of communication plans to solve problems for individuals or for organizations and evaluating the success of these plans).
- Communication and Information Technologies (principles of how we use communication technologies and how we are influenced by these technologies).

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has kept in mind the need for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may complete a minor program of study in communication or a minor program of study in information science or both. The minor in communication consists of four required courses (COMM 116, 120, 201, 230), one advanced presentation course (chosen from COMM 203, 260, 263, 301, 350, 352) and two elective courses totaling six credit hours at the 300-400 level, excluding COMM 496 and 498.

The minor program of study in information science is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the information systems component area (primarily computer science), two courses from the human-centered systems component area (human computer interaction and cognitive science), one course from the social systems component area (social, economic, political, and legal issues), and one additional course from any component area.

A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

**Crop and Soil Sciences**

The Department of Crop and Soil Sciences provides instruction in three specializations: agronomy, crop science, and soil science. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development Office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in these specializations.

Agronomy combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service, and farming. Graduate school is also possible after a well-planned program. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of their curriculum to meet specific interests and goals. Some students pursue a major in agronomy with a concentration in international agriculture. Agronomy is also offered as a specialization within the plant sciences major field of study.

**Crop science** is the application of basic biological and ecological science to the improvement and management of the world's main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional school beyond the bachelor's degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics. Crop science is also offered as a specialization within the plant sciences major field of study.

**Soil science** is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues facing modern agriculture and agriculture management related to soils. Students take 18 credits in soil science, including four credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as six credits of crop science to satisfy the major. Soil science is also offered as a specialization within the Science of Earth Systems major and will become a specialization in the Environmental Science major that is now being planned.

**Education**

Building on strong academic disciplines and grounding in sociopolitical, psychological, ethical, and theoretical bases of educational practice, the department has two foci to meet societal demands for both formal and informal educational challenges: Professional development of mathematics, science, and agriculture and for leaders in nonformal educational settings. Curriculum and Instruction, which includes the Cornell Teacher Education Program, and Adult and Extension Education. These programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through research, practice, and scholarship. Our undergraduate program leads to provisional certification in agricultural education. The latest information on program developments may be found on our web site, http://education.cornell.edu.

**Adult and Extension Education (AEE).** The College of Agriculture and Life Sciences has identified five "great challenges" to creating a livable world: environment, food, health, economy, and community. Responding to those challenges requires more than new knowledge and technology; it also requires sustained and expert practice in learning and education. The purpose of the AEE program is to facilitate learning in nonformal settings through participatory practices to link learning and education to the global challenge of facilitating sustainability.

The program prepares scholars and practitioners for adult and extension educational leadership and professional roles in domestic and international nonformal and community-based settings such as adult education, agricultural education, domestic extension and community development, and international agricultural education and development. As public universities focus a greater share of their research, teaching, and extension resources on critical environmental, economic, and social problems domestically and globally, the program provides opportunities for students to ask who benefits from such efforts and in what ways. Using a reflective practice approach to professional development, graduate preparation includes the study of ethical, political, empirical, and theoretical bases of educational endeavors; analyses of current and historical practices in adult education, extension, and international education; the integration of adult and extension practice with other disciplinary endeavors; and the practice of education in a global environment. Students may pursue the following graduate degrees in education: Master of Professional
The Cornell Teacher Education (CTE) program develops a solid mastery of their content areas and an understanding of the issues in education, and interact with and learn from each other. Each certification area contributes to the others in important ways. Understanding contemporary agriculture requires knowledge of the scientific bases for the changes in the way agriculture is practiced and is developing. Understanding science fully requires knowledge of how principles are applied in the world. Agriculture provides a salient field in which to apply science notions. Understanding the ways that mathematics is used to develop analytic systems, build arguments, and organize the world is essential to any modern scientific enterprise, whether basic or applied. Agriculture and science topics provide mathematics teachers practical examples they can use to help their future pupils develop understanding of abstract mathematical principles. CTE teachers are prepared as scholars of teaching and learning, able to help all their students achieve the scientific and quantitative literacy and ethical decision making needed for participation in a democracy.

Effective College Teaching Series. The Center for Learning and Teaching, under the auspices of the Department of Education, offers a series of courses, both credit and noncredit, for the improvement of teaching at Cornell, designed for Cornell faculty and graduate students who are either currently teaching or intending to teach. Contact the Center for Learning and Teaching, (607) 255-2959 or clt@cornell.edu for details.

Current offerings include:

EDUC 548 Effective College Teaching
Spring and one-week summer session. 1-3 credits. For faculty and graduate students who intend to pursue an academic career.

EDUC 578 ITADP Cross-Cultural Classroom Dynamics, Language and Teaching Practicum
Fall and spring. 2 credits. For international public education graduate students who have, or will have, teaching assistantships.

EDUC 579 ITADP Further Training for International Teaching Assistants
Fall and spring. A noncredit course offered for international teaching assistants who have completed EDUC 578, but who need or desire continued work in classroom instructional and communication skills.

Graduate Teaching Development Workshops
Offered early in each fall and spring semester, this day-long series offers an array of workshops in teaching effectiveness, from teacher-student interactions to developing a teaching portfolio. Noncredit, open to all Cornell faculty and graduate teaching assistants.

EDUC 620 Internship in Education
Fall and spring. 1 credit. For CALS graduate teaching assistants or CALS teaching personnel who wish to extend their work experience through reflective practice and consultation with an instructional support specialist. Prerequisite: the CALS Graduate Student Professional Development Workshop.

Entomology
The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology including integrated pest management, insect pathology, environmental assessment, veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes a common core of requirements allowing flexibility in electives selected by students in consultation with their advisers.

Educational Leadership
The Institute for Community College Development (ICCD), a partnership with the State University of New York (SUNY), Cornell University, and community colleges, is located in the School of Industrial and Labor Relations, Extension Division, and draws on faculty in the Department of Education with expertise in the personal and social competencies related to leadership. ICCD offers professional development for leaders in community colleges, a research program, and a course in leadership. Contact ICCD, (607) 255-2959 or iccd@cornell.edu, for more information.

Current Offerings Include:

Professional Development
The Administrative Leadership Program is designed for senior and mid-level administrators in academics, student affairs, and professional and foundation offices who are interested in current issues affecting community colleges and the way they operate their campuses. The three-day program is held during the summer at Cornell. The program includes opportunities for self-reflection and group problem-solving activities.

The Great Teachers Seminar and Successful Teaching Conference are designed for faculty interested in improving, learning about, and reflecting on their own theory and practice and on general principles of effective teaching and learning. The events are held in upstate New York in the spring and fall, respectively. Faculty from the Department of Education are frequent presenters.

The Presidents Leadership Conference is designed for current and future community college presidents who need information and ideas about leading a diverse, learning-centered campus that is connected to the local and global communities.

Research
ICCD’s research agenda is centered on leadership theory and practice, and on social and economic policies affecting education.

Education
EDUC 694 Analysis of Leadership Theories: Developing a Leadership Philosophy is a three-credit course offered in the fall term. It is designed for faculty and administrators in higher education, particularly in the community colleges.

Current Offerings Include:

EDUC 548 Effective College Teaching
Spring and one-week summer session. 1-3 credits. For faculty and graduate students who intend to pursue an academic career.

EDUC 578 ITADP Cross-Cultural Classroom Dynamics, Language and Teaching Practicum
Fall and spring. 2 credits. For international public education graduate students who have, or will have, teaching assistantships.

EDUC 579 ITADP Further Training for International Teaching Assistants
Fall and spring. A noncredit course offered for international teaching assistants who have completed EDUC 578, but who need or desire continued work in classroom instructional and communication skills.

Graduate Teaching Development Workshops
Offered early in each fall and spring semester, this day-long series offers an array of workshops in teaching effectiveness, from teacher-student interactions to developing a teaching portfolio. Noncredit, open to all Cornell faculty and graduate teaching assistants.

EDUC 620 Internship in Education
Fall and spring. 1 credit. For CALS graduate teaching assistants or CALS teaching personnel who wish to extend their work experience through reflective practice and consultation with an instructional support specialist. Prerequisite: the CALS Graduate Student Professional Development Workshop.
Specific requirements

Basic Sciences

One year of college mathematics, including at least one in calculus, may substitute statistics and biometry.

One semester of physics
CHEM 206–208 or 207–208 (General Chemistry)
CHEM 257 (Organic and Biological Chemistry)

General Biology

Introductory Biology
BIOGD 281 (Genetics) or Plant Breeding 225 (Plant Genetics)
BIOEE 278 (Evolutionary Biology)
A choice of one: BIOEE 261 (Ecology and the Environment) or BIOHM 350 or 351 (Principles of Biochemistry)

Entomology
ENTOM 212 (Insect Biology)
A choice of two:
ENTOM 322 (Insect Morphology)
ENTOM 331 (Insect Systematics)
ENTOM 483 (Insect Physiology)

Students must also enroll in at least two additional entomology courses offered at the 300–400 level on more specialized topics.

Food Science

The Food Science Program prepares students for careers in the food industry or research organizations and for graduate study in food science or related disciplines. Food scientists enjoy satisfying careers that help ensure the sustainable availability of a safe, nutritious, affordable, and high-quality food supply for people throughout New York State, the nation, and the world.

Students in the Food Science Program can choose from one of five specialization options in the major: (1) Basic Food Science; (2) Food Engineering; (3) Food Processing; (4) Food Operations and Management; or (5) Food Biotechnology. The first three options meet the current standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for IFT scholarships and awards. Students choose an option based on their individual interests and career goals.

The first two years of the undergraduate Food Science Program are intended to establish a solid background in the physical and biological sciences, math and statistics, and communication skills. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, introductory food science courses, and nutrition. The last two years emphasize the application of these basic sciences and technology to the manufacturing, sensory evaluation, storage, distribution, and safety of foods and food ingredients. Examples of food science core courses include Engineering Principles, Physical Principles of Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, and Food Microbiology, with many elective courses offered as well. Students choose electives to both satisfy college distribution requirements and their individual interests within the major and beyond.

Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member and/or complete an internship in a food company during their period of study. Several teaching faculty in the department also have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies recruit on campus for their internship programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates.

Enology and Viticulture

The College of Agriculture and Life Sciences announces its intent to introduce a curriculum in viticulture and enology within existing undergraduate B.S. degree programs in Plant Sciences and Food Science.

Students with primary interest in viticulture and secondary interest in enology (V/E) will enroll in the Plant Sciences degree program, with a concentration in Horticulture and a specialization in Viticulture. For these students, Plant Sciences will be their "major," and their required courses in enology (offered within the Food Science program) will constitute a "minor" in Food Science with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) will "major" in Food Science (with a concentration in enology) and a "minor" in Plant Sciences (with a concentration in Horticulture).

Students in either track will take many of the same courses during their two years and must satisfy the core degree-program requirements of their major and minor programs as well as the general requirements of the college. The curriculum will consist of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students will be expected to participate in internships at vineyards and/or wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major.

Prospective students should contact the undergraduate coordinators in either the Department of Plant Sciences (viticulture option) or Food Science (enology option) for specific course requirements.

International Agriculture and Rural Development

International Agriculture and Rural Development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward interna-

tional agriculture. The courses in International Agriculture and Rural Development are designed to acquaint students with the socio-economic factors in agricultural development, the physical and biological nature of tropical crops and animals, and the various world areas for which study programs exist.

In addition to the college distribution requirements, students in International Agriculture and Rural Development must take a minimum of 36 credits toward the major. A minimum of seven credits in International Agriculture (INTAG) and eight credits in a modern foreign language are required. Students are expected to complete an overseas field experience of a minimum of six weeks. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries.

Students are encouraged to take additional specialized courses in one of the other program areas of the college.

Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills, and attitudes that build "global competencies." The minor for CALS students not majoring in International Agriculture and Rural Development will recognize an international concentration of course work and experiences.

Requirements

Four courses with significant international content, as recommended by students' major departments (two should be from CALS).

One semester of the Global Seminar, INTAG 480

Four semesters of foreign language instruction, or demonstrated language competency equivalent to that achieved by the end of the fourth semester of instruction at Cornell.

An approved overseas experience (exchange, study abroad program, internship, or faculty-led short course).

For more information, contact the Academic Programs Coordinator in the International Programs Office, (607) 255-3037.

Landscape Architecture

Landscape Architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the
College of Agriculture and Life Sciences and a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape, site/landscape and art, or urban design.

In addition, an undergraduate concentration in the American Cultural Landscape is available for nonmajors.

Dual Degree Options
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad
The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third year graduates in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence: (Please note that each semester the studio classes require a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.)

Master of Landscape Architecture Advanced Degree Program. The two-year Master of Landscape Architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants must hold a bachelor's degree in landscape architecture or architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects the curriculum requires three advanced studios, two courses in plants and planning design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

Undergraduate Concentration for Nonmajors

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of four courses, two required and two electives. Students may petition to substitute one course in the electives list. Direct inquiries to professors H. Gottfried or S. Baumberger.

Required.

Visual Studies (choose one):
ART 121 Introduction to Painting (3 cr)
ART 141 Introduction to Sculpture (3 cr)
ART 151 Introduction to Drawing (3 cr)
ART 158 Conceptual Drawing (3 cr)
ART 159 Life and Still-Life (3 cr)
ART 161 Photography I (3 cr)
DEA 101 Design I: Fundamentals (3 cr)

LA 141 Grounding in Landscape Architecture (3 cr)

The Landscape

*LA 282 The American Landscape (3 cr)

Electives (choose two):
ARCH 300 American Architecture and Building I (3 cr)
ARCH 391 American Architecture and Building II (3 cr)
*LA 260 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years
*LA 261 Urban Archaeology (3 cr)
*LA 262 Laboratory in Landscape Archaeology
*LA 263 American Indians, Planners, and Public Policy (3 cr)
LANAR 525 History of American Landscape Architecture (3 cr)
LANAR 569 Archeology in Preservation Planning and Design (3 cr) offered alternative years
+Distribution elective

Natural Resources

As the number of humans living on the Earth surpasses six billion at the start of the twenty-first century, knowing how to conserve and manage well our Earth's remaining biological resources and natural environments takes on increasing importance and urgency. The undergraduate curriculum in natural resources provides students with the concepts and tools needed to understand the Earth's natural resources and ecological systems, and to participate in the development and management of the natural resources. The departmental program allows students flexibility to pursue a variety of paths to an integrated, broad-based understanding of relationships of organisms to their environments, and ways in which human actions affect, and are affected by, those relationships. Students are encouraged to understand the scientific, ethical, and societal basis for management and protection of natural resources and environments through the application of ecological principles and management. Many juniors and seniors choose to take one of several upper-division courses offered by the faculty to provide an in-depth understanding of key principles, concepts, and practices. They also have the opportunity to gain exposure to a wide variety of advanced courses offered by Natural Resources and other departments at Cornell, as well as to the University's many offerings that ground the student in a first-rate liberal arts education. Seniors are encouraged to take one of several upper-division courses in the department that provide an intensive experience in synthesis, integration, and critical thinking applied to current issues in the conservation and management of natural resources, ecological systems, or the environment. Many juniors and seniors also choose to conduct a research honors thesis.

Areas of Concentration

The concentration in Applied Ecology is designed as a foundation for those who wish to pursue careers or advanced study in science-based conservation or management of fish and wildlife populations and their habitats, conservation biology, control of invasive and overabundant species, wetland and landscape management, quantitative resource management, resource inventory and information management, global ecology, or applied ecology, and biogeochemistry of forests and wetlands. This concentration also may interest students seeking a biological based approach to environmental science or global studies. Students who select this concentration typically focus their course work in the areas of species biology and applied ecosystem ecology, including quantitative analysis of fish, wildlife, and plant populations, ecosystems, and landscapes. They complement their course work within the department with courses in other departments, such as Ecology and Evolutionary Biology, Microbiology, Geology, Crop and Soil Sciences, Atmospheric and Earth Sciences, Animal Sciences, and Plant Biology.

The concentration in Resource Policy and Management provides a foundation for students who wish to pursue careers or advanced study in the human dimensions or policy aspects of natural resource conservation and management. Students who select this
concentration typically focus on courses related to the development of environmental policy, management strategies for particular species or ecosystems, or programs in environmental communication and education. They complement their course work within the department with courses in other departments such as Government, Ecology and Evolutionary Biology, Communication, Applied Economics and Management, City and Regional Planning, and Policy Analysis and Management.

The concentration in Environmental Studies is intended for those who wish to obtain the broadest possible, yet rigorous, grounding in the wide range of subjects needed to understand interactions among human and the environment. The concentration's emphasis is on developing an ability to think critically about these interactions. As juniors and seniors, students who choose Environmental Studies design a cohesive sequence of five courses in the social sciences, natural sciences, and humanities related to environment. Together with their departmental adviser, they decide on an environmental theme that the student wishes to pursue. That theme should identify a specific set of interrelationships between humans and the environment that the student wishes to understand. For example, students could choose to explore themes such as evaluation of economic incentives for conservation or studying human views of the environment as expressed in literature or history. Many upper-division sequences of courses are acceptable if the student can formulate and defend a reasonable rationale for the choice of courses.

For details about the core curriculum in the Department of Natural Resources, consult our web site at www.dnr.cornell.edu. Information also is available in the department's Undergraduate Program Office in 12 Fernow Hall.

Research and Work Opportunities for Undergraduates

The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These opportunities include several field-based courses and access for research to the department's Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, and the Center Field Station on Oneida Lake near Syracuse. Many other courses take place in numerous natural areas near campus. Students also may choose to do independent research or work during the summer at Brook Brook Forest in New Hampshire or New York's Adirondack Park, or in many types of forest, aquatic, and wetland ecosystems in New York and beyond where departmental faculty members have ongoing research projects.

Part-time jobs in research and extension programs of several faculty members offer students many opportunities for career-related work experience. A research honors program is available for qualified students. In addition, the department offers an internship program for students and encourages students to seek relevant work experience to complement their academic studies.

Nutrition, Food, and Agriculture

Nutritional sciences draw upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships of human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115—Nutrition, Health and Society, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physiochemical Aspects of Foods, NS 531 Physiological and Biochemical Bases of Nutrition, and NS 352 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Savage-Kinzelberg Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in MVR is used by students for study and small group discussion. The center contains class能使, audio-visual aids, and supplementary books and periodicals for independent study and special projects.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607-255-2608, e-mail aadns@cornell.edu.

The minor in Nutrition and Health in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and public health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 115—Nutrition, Health, and Society—plus nine credits of 200-level or above didactic NS courses. Enrollment is limited to academically talented students. Please check www.nutrition.cornell.edu/undergrad/calsmin.html for details.

Plant Sciences

Plant Sciences is a multiprogram departmental program governed by faculty in the Departments of Crop and Soil Environmental Science, Plant Biology, Plant Breeding, and Plant Pathology. Students in the program share a common interest in learning in topics associated with plant growth and development in the broadest sense, and many have their sights set on careers in applied agricultural fields. In addition to the college distribution requirements, they must take at least one course in each of several areas including botany, plant physiology, ecology, taxonomy/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science for a total of 40 credits.

Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work usually choose a specialization within one of the five cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study in General Plant Science without declaring a specialization. Those students have fewer required courses but are still expected to develop a strong background in plant science.

More than one hundred courses that deal directly with some aspect of plant science are offered by the cooperating departments, and other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for undergraduate teaching and research experience, and qualified students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities.

Students who are planning to enter the work force immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant production or maintenance-related industry such as a lawn and tree care company, commercial greenhouse, nursery, orchard, vineyard or...
Prospective students should contact the undergraduate coordinators in either the Department of Plant Sciences (viticulture option) or Food Science (agribusiness option) for specific course requirements.

**Horticulture.** Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants in farms and gardens, parks and landscapes, and athletic and recreational facilities in the United States. Greenhouse and nursery plant production; and crops used for wines, herbs and spices, medicinal purposes, and coffee and teas. The knowledge and skills essential to growing, maintaining, process, and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health.

There are about 40 faculty members in horticulture—specializing in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally, and internationally.

Students choosing a concentration in Horticulture must complete the minimum 40 credits of core courses for the Plant Science major, plus the following courses:

- HORT 101-Horticultural Science and Systems Management (4 credits)
- HORT 400-Plant Propagation (3 credits)

Two HORT courses in plant production or management at the 400 level (6 credits).

One additional course of integrated pest management (plant pathology, entomology, weed science) beyond the 3-credit Plant Science core requirement (3 credits).

A dual concentration in Viticulture and Enology is also available. Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisers.

**Plant Biology** stresses a basic, rather than applied, understanding of how plants function, grow, and develop, as well as a study of their genome, evolution, and relationships to man. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In consultation with an adviser, each student plans a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology.

Students specializing in Plant Biology within the Plant Science major should take a minimum of four courses beyond the core of Plant Science courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnomedicine, and further courses in the function, growth, development, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within Plant Biology afford a flexible curriculum.

**Plant Genetics and Breeding** relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas in order to create crops that meet the needs of modern society. In addition to the core plant science courses, students should take PBGR 201, 403, 404, and BIO1 343. Other courses may be included after consultation with the adviser. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

**Plant Pathology** is the study of plant disease—its causes and how they are identified, the molecular basis for pathogen specificity and resistance, and pest management. For most students, a concentration in plant pathology is an undergraduate requirement for graduate study in plant pathology or another field of plant science. However, study in plant pathology also prepares students for careers as technical representatives with agribusiness firms, Cooperative Extension educators, integrated pest management practitioners, state or federal plant pest regulatory agents, and laboratory technicians. Suggested courses beyond the plant science core include organic chemistry and biochemistry, calculus, introductory plant pathology, plant disease diagnosis, mycology, entomology, and plant breeding.

**Plant Protection** is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a terminal program for students desiring local pest management careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

**Rural Sociology**

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. The Rural Sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and technological contexts, demographic structures and processes, and the institutional, legal, and grass roots social movements through which people seek change in these dimensions.

Courses offered by the department cover topics such as: the impact of changes in agricultural systems on rural development; community and regional development; environmental sociology; rural industrialization and labor markets; technology and social change; the implications of the genomic revolution for agriculture and communities; the linkages between population dynamics, the environment, and development; the political economy of globalization; women in development; and ethnic competition and stratification. Most courses provide background in both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international, or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

Majors in Rural Sociology are required to successfully complete seven core courses:
Science of Earth Systems (SES)

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the destruction of the ozone layer, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell's strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the twenty-first century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, and biogeochemistry. These classes emphasize the interconnectedness of the Earth system, and are taught by professors from different traditional disciplines. The selection of upper-level "concentration" courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Possible areas of concentration include climate dynamics, biogeochemistry, environmental geology, ocean sciences, environmental biophysics, hydrological system, and soil science.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geology/geophysics, oceanography, hydrology, ecology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of environmentally oriented careers in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

In addition, the emphasis on basic science makes the SES major excellent preparation for medical school.

The requirements for the major are as follows:

1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

- a. MATH 191 or 193, and MATH 192 (or MATH 111, 112)
- b. PHYS 207 and 208 (or PHYS 112, 213)
- c. CHEM 207 and 208
- d. BIOGD 101/103–102/104 (or 105–106) or BIOGD 109/110
- e. Three additional 3-4 credit courses in basic science and math, generally 100 and 200-level classes. At least one of the following courses must be included in the selection: GEOE 201 Physics and Chemistry of the Earth

BIOEE 261 Ecology and the Environment

Other examples are MATH 293 and MATH 294, biochemistry, organic chemistry, PHYS 214, and introductory statistics. With the exception of the introductory statistics course, the additional basic courses will require at least one of the classes listed above as a prerequisite.

2. Science of Earth Systems Core Courses

Three 4-credit courses that emphasize the interconnectedness of the Earth system are required. These classes are based on the most modern views of the planet as an inter-active and ever-changing system, and each class crosses the traditional boundaries of disciplinary science.

- EAS 302 Evolution of the Earth System
- EAS 331/ASTRO 331 Climate Dynamics
- EAS 321/NATRES 321 Biogeochemistry

3. Concentration Courses

These courses build depth and provide the student with a specific expertise in some facets of Earth system science. The concentration should be selected before the junior year in consultation with an SES adviser whose interests match those of the student.

For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Science, kkhc@cornell.edu, and visit the website: www.geo.cornell.edu/​ses/

Science of Natural and Environmental Systems

Environmental stewardship and sustainability are increasingly recognized as human and planetary imperatives. Graduates who understand how people both generate and can resolve environmental problems will contribute significantly to creating a sustain-able environment for their own and future generations. This new major in environmental science provides a broad-based, integrative program in the physical, biological, social, and economic sciences, as well as disciplinary strength in one or more subjects suitable for entry-level professional positions or post-baccalaureate studies.

The curriculum comprises an intensive foundation in the sciences; an environmental core with courses covering earth, biotic, social, and economic systems; and disciplinary and interdisciplinary programs of study. This major emphasizes inter- and multidisciplinary work, independent thinking and analysis, and development of competency in writing and speaking throughout the curriculum.
Foundation Courses

The foundation courses, listed here, can be used to fulfill many of the CALS distribution requirements. The purpose of this component of the program is to provide a strong foundation in the basic sciences and an introduction to the relationships between the biophysical and social sciences.

- two semesters of college-level biology
- two semesters of college-level calculus
- four semesters of college-level chemistry and physics (at least one semester of each)
- one semester of college-level statistics
- NTRES 201 Conservation Biology
- DEA 150 Introduction to Human-Environment Relationships

The freshman and sophomore years are designed to provide foundation courses and meet CALS requirements at the outset. The freshman year provides engagement with the environmental study through DEA 150 and NTRES 201, with major-specific sections for these two courses. Depending on student interest and available time, other courses in environmental study may be taken as electives early in the schedule.

Advanced Placement credit will be accommodated in the program through consultation with the student's faculty adviser.

Environmental Core

The environmental core consists of four courses. Its purpose is to provide a rigorous, integrated understanding of the environment, broadly defined. This core recognizes that knowledge of the environment encompasses physical and biological sciences, social sciences, and human behavior. DEA 150 will provide the required core understanding of human behavior related to environmental issues.

Core courses are to provide integration (among areas, disciplines, methodologies, topics, and issues); systems emphasis; basic, rigorous, core material; root competencies for understanding the environment; a framework for further advanced courses; and a new way of thinking that enables innovative solutions to difficult problems.

Earth Systems: CSS 365 Environmental Chemistry: Soil, Air, and Water
- Biotic Systems: BIOEE 261 Ecology and the Environment
- Economic Systems: AEM 250 Environmental and Resource Economics

Social Systems: R SOC 324 (STS 324, SOC 324) Environment and Society

Programs of Study

Programs of study that focus in one or more areas of environmental science are being established to provide disciplinary expertise sufficient for entry-level proficiency. Each student in the major will be required to take four courses at the 300-level or above in at least one program of study.

Programs of study will not replace or duplicate current majors. Rather, they will provide the basic core of knowledge essential for an introductory understanding of the area—the concepts, basic science, methodologies, and major applications. Proposed programs of study are:
- Environmental Biology
- Environmental Information Science
- Sustainable Development
- Agroecosystem Science
- Environmental Health

If established programs of study do not meet the student's interests and needs, the student may propose a program of study, in collaboration with a faculty mentor and subject to approval by the Faculty Program Committee.

Special Programs in Agriculture and Life Sciences

General Studies. The opportunity to develop an independent major in General Studies is available for students interested in pursuing a general education in Agriculture and Life Sciences. In consultation with a faculty advisor, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several disciplines.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, and the attitudes and the analytical ability that a general education fosters.

General Studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field.

Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspirations. A course of study for a special program must be planned and approved by a college faculty advisor. Information on the options and names of faculty advisors prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

INTERDEPARTMENTAL/INTERCOLLEGE COURSES

American Indian Studies

American Indian Studies is the instructional component of the American Indian Program. It is a multidisciplinary program offering course work that enhances students' understanding of the unique heritage of North American Indians and their relationships to other peoples in the United States and Canada. Students address such challenging topics as the sovereignty rights of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present and feature the perspectives of Native American peoples.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their majors defined elsewhere in the university. The concentration is earned upon completion of five courses: AIS 100 and AIS 175, plus three other courses selected from the AIS course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 450 Caldwell Hall.

AIP also offers a graduate minor. Students interested in choosing the minor should contact Professor Charles Geisler, Associate Director of Academic Development, American Indian Program, 255-1691.

AIS 100 Introduction to American Indian Studies
Fall. 3 credits. T R 1:25–2:40 plus sections. M. Tsosie.

Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Africa, Asia, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. The course begins with a survey of Indian America before Columbus and ends at Wounded Knee in 1890, the event that marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

AIS 175 Issues in Contemporary American Indian Society (also R SOC 175)

This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways American Indians pursued...
strategies to sway the process of social change. American Indian political, economic, and cultural issues are examined through history, literature, art, and film. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians in the twenty-first century are explored. Guest lecturers, including American Indian scholars and leaders, provide additional perspectives.

AIS 215 Beyond Tradition: Native American Art 1850-Present (also ART H 215)
Fall. 4 credits. T R 10:10-11:25. Limited to 60 students. K. Morris.
Explores both the formal and contextual aspects of Native American art, drawing on examples from the arts of the Far North, the Pacific Northwest coast, and the Great Plains. Lectures, slides, and readings will examine the myriad and complex pressures that have been brought to bear on these cultures over the past century and a half. Missionization, termination, the repeated interventions of the U.S. and Canadian governments, tourism, and the rise of the art market will be addressed, as will the nature of the artistic process and the changing role of the Native artist with respect to his/her community. Contemporary works, along with the writings of Native American historians, critics, and artists will be incorporated throughout the semester.

AIS 230 Cultures of Native North America (also ANTHR 230)
Fall. 3 or 4 credits. M W F 11:15-12:05. B. Lambert.
A survey of the principal Inuit and American Indian cultures from north of Mexico. Selected cultures are examined to bring out the distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

AIS 276 American Indian History 1500-1850 (also HIST 276)
4 credits. Staff.
A survey of North American history from the sixteenth to the mid-nineteenth century. Relations between Indian nations and with European colonies will be explored. Different cultural groups and cross-cultural encounters will be compared, with emphasis on resistance and adaptation to European colonialism. The formative years of U.S. Indian policy and the experiences of Indian people through the removal era will receive close attention.

AIS 277 American Indian History Since 1850 (also HIST 277)
4 credits. Staff.
A historical study of American Indians in the United States and Canada from the mid-nineteenth century to the present. The active and complex role played by Indian people in their responses to government policies and to socioeconomic changes will be emphasized. Challenges faced and initiatives taken by Indians will be traced from the early reservation years to the current era of self-determination. Cultural change and continuity within Indian communities will be closely examined.

AIS 311 Social Movements (also R SOC 311)
Spring. 3 credits. Prerequisites: R SOC 101 or an equivalent course or instructor. S-U grades optional. T R 1:25-2:40. A. Gonzales.
Social movements are collective efforts by relatively powerless groups of people to change society. Typically conceptualized as political activity outside the institutional framework, social movements are "politics by other means." This course examines the transnational dimensions of social movements to assess the implications of globalization for political mobilization and the ways that social movement actors engage global political processes to effect social change. Under what circumstances do movements emerge? How do global processes shape both domestic and transnational political mobilization? How do social movements internally organize and choose political tactics and strategies to achieve their goals? How have social movements changed history, identities, society, and politics? This course addresses these questions through an examination of indigenous movements in the United States, Canada, and Latin America.

AIS 361 Sociology of American Indians (also R SOC 361)
[AIS 367 American Indian Politics and Policy (also GOVT 357 and R SOC 367)]
[AIS 435/465 Indigenous Peoples and Globalization (also R SOC 435/465)]
Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with these pressures. Globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the NAFTA or the decentralization of social and political arrangements coupled with modernization or the expansion of communication technology and its impact on traditional knowledge systems, has had profound social, cultural, and economic impacts on indigenous peoples. At issue are the lands, resources, traditions, knowledge, intellectual and cultural property, and indigenous struggles for recognition and self-determination.

AIS 450 Practicum in American Indian Studies

AIS 470 Reel/Real Indians: Art and Indigenous Identities in the 20th Century (also ART H 470, AM ST 472)
Spring. 4 credits. Not open to freshmen or sophomores, except by permission of the instructor. R 2:30-4:25. K. Morris.
For much of the 20th century, American Indian identities were shaped, at least in the public imagination, by John Wayne films, Edward Curtis photographs, tourist propaganda, and advertising imagery. In the past few decades, however, Native American artists and filmmakers have wrested their own image from these externalizing codes of representation. While exploring this history, this course introduces students to the more important texts regarding the gaze and identity formation theory. Those writings are used as the theoretical lens through which the works of contemporary indigenous artists such as Jimmie Durham, Shelley Niro, James Luna, Gerald McMaster, and Hachivi Edgar Heap of Birds are viewed. The course offers a unique opportunity to explore issues of race, ethnicity, and gender as seen through indigenous eyes. Self-representation in a variety of visual media, including painting and photography, film, performance, and the digital arts, are considered.

AIS 486 American Indian Women's Literature (also ENGL 486)
Fall. 4 credits. R 10:10-12:05. L. Donaldson.
This course explores the development of women's literature in a number of different American Indian cultures. We attend to native paradigms of cultural production such as women's songmaking, weaving, basket-making, and storytelling, as well as the appropriation of European literary forms such as the novel. We read a diverse range of materials including novels, autobiography, poetry, drama, and short stories.

AIS 497 Independent Study
Fall or spring. 1-4 credits. Staff.
Topic and credit hours to be mutually arranged between faculty and student. The American Indian Program Office must approve Independent Study forms.

AIS 600 American Indian Studies (also R SOC 600)
4 credits. Staff.

Department of Statistical Science
The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found at the front of this catalog (see p. 24).

NONDEPARTMENTAL COURSES

ALS 101 Transition and Success to Cornell
Fall. 1 credit. Prerequisites: must be an entering student in CALS. Letter grade only. B. O. Earle and CALS Career Development Office.
Discussion-oriented course to enable all new CALS students to enjoy their experience at transition to Cornell. Lecture, discussion, guest speakers, student panels, and assignments that explore Cornell's history, academic opportunities, services, and organizations are used. Emphasis on role of Agriculture and Life Sciences in future of all related careers.

ALS 134 Emergency Medical Technician
Fall and spring. 3 credits each semester. Two-semester course. S-U grades optional. Prerequisite: none—but basic and advanced first aid recommended. Lec. M 1:30-5:00; lab, W 1:30-5:00.
D. A. Grossman, P. Rach, and A. Gantier.
E.M.T. is an intensive 140-hour course taught throughout the fall and spring semesters. Enrollment, therefore, occurs in the fall term only. Course includes training in C.P.R. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal
imobilization, medical antishock trousers, and defibrillation. Students will qualify for the New York State E.M.T. Certification Exam upon successful completion of the course. Please consult Course and Room Roster for the location of the lab and lecture classes.

ALS 135 Advanced Emergency Medical Technician, Critical Care
Fall and spring. 4 credits each term. Two-semester course. S-U grades optional. Prerequisite: must be currently certified as a New York Basic EMT, or have applied for reciprocity. Lec. T 1:25-4:25, lab. R 1:25-4:25, Sat 9:00-12:00. D. Grossman, P. Rach, D. Spaulding. Advanced Emergency Medical Training includes topics such as Emergency Pharmacology, Patient Assessment, Advanced Cardiac Life Support, Emergency Hypothermia Management and Basic Trauma Life Support. Classroom, lab, hospital, and field sessions are used to teach skills such as intubation, emergency IV access, electro-cardioversion and defibrillation, and patient assessment and pharmaceutical intervention. Extensive off-campus opportunities include field training and working with a faculty adviser and the Cornell infrastructure (generally campus life and/or facilities). Through class discussions, students learn how to make decisions at developing environmental programs in the future, both during and after college. The final written project report is also presented orally at a public forum. (Note: If students prefer to take one or two credits of independent research in a department in the College of Agriculture and Life Sciences, this can be arranged. Assistance in finding a faculty adviser is provided. This course may be taken more than once.)

ALS 480 Global Seminar: Environment and Sustainable Food Systems (also EDUC 480 and INTAG 480)
Spring. 3 credits. Open to juniors, seniors, and graduate students. Letter grade.

ALS 481 Global Conflict and Terrorism
Fall. 2 credits. Prerequisite: permission of instructor. Lec. M 7:30-9:30. J. Shanahan. Reviews and discusses issues concerning global development and its relationship to conflict and terrorism. Each class session focuses on a specific topic presented by either a faculty member or a guest speaker leading the discussion and actively engaging the students.

ALS 494 Special Topics in Agriculture and Life Sciences
Fall or spring. 4 credits maximum. S-U grades optional. This course may be taken more than once. The college teaches "trial" or temporary coursework every semester and are advertised by the college through the Cornell in Washington office, M101 McGraw Hall.

ALS 661 Environmental Policy (also B&SOC 461 and BIOEE 661)
Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem R 2:30-4:30. D. Pimentel. This course focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.

APPLIED ECONOMICS AND MANAGEMENT

Courses by Subject

Farm management, agricultural finance, and production economics: 302, 405, 404, 405, 605, 608, 708

Policy and international trade: 230, 335, 430, 431, 432, 433, 434, 630, 632, 633, 634, 730, 735

Environmental and resource economics: 250, 450, 451, 555, 652, 655, 750, 751

Economics of development: 464, 660, 667, 762, 765

Consumer economics: 670

General, contemporary issues, research, and other: 101, 200, 380, 494, 497, 498, 499, 490, 694, 698, 699, 700, 800, 900, 901

AEM 101 Introduction to Applied Economics and Management
Fall. 1 credit. Required of and limited to freshmen in Applied Economics and Management. S-U grades only. D. A. Grossman.
This freshman transition course explores the major courses of study available to AEM students, including a discussion of "hot topics", research, and career field. Numerous AEM faculty members are guest presenters. Students are introduced to campus resources such as the library system, study abroad opportunities, course planning, career planning, and learning strategies. Short written assignments and active group participation are required.

**AEM 200 Contemporary Controversies in the Global Economy**

Fall. 3 credits. Prerequisites: ECON 101 and COMM 201 completed or concurrent, ECON 102 and Freshman Writing Seminars recommended. Priority given to sophomores with prerequisites (or taking COMM 201 concurrently) and juniors in AEM. C. Barrett.

Aims to stimulate critical thinking and cogent writing and speaking about contemporary controversies such as technology and its impact in the international press and among key private and public sector decision-makers. Students read and discuss competing arguments about current issues such as patenting and pricing of pharmaceuticals, controls on commercial and humanitarian distribution of genetically modified foods in food aid, and immigration restrictions. Students write a series of short briefing papers and give regular oral briefs, which are evaluated for quality of communication and content.

**AEM 210 Introductory Statistics**

Fall. 3 credits. Prerequisite: EDUC 115 or equivalent level of algebra. 2 evening prelims. C. van Es.

An introduction to statistical methods. Topics covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

**AEM 220 Introduction to Business Management**

Spring. 3 credits. Enrollment limited to AEM majors and those in the process of transferring to the major. Preference given to other CALS majors. Additional enrollment as capacity permits, with permission of the instructor. 2 evening prelims. P. D. Perez.

This course provides an overview of management and business. Human resources, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as technology and its impact on operations, globalization, ethics, quality, and entrepreneurship. Guest speakers are an important part of the course.

**AEM 221 Financial Accounting**

Fall. 3 credits. Not open to freshmen. Priority given to CALS majors. 2 evening prelims and a comprehensive final, weekly homework assignments, and one project using an electronic spreadsheet.

S. F. Melendy.

A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement interpretation. Coverage of topics includes methods of recording inventory, receivables, depreciation, bonds, and equity.

**AEM 222 Business Management Case Analysis**

Spring. 1 credit. Prerequisites: concurrent enrollment in AEM 220. Required of and limited to AEM majors in AEM 220; others admitted by permission of instructor. D. J. Perosio.

The course offers students, working in teams, the opportunity for hands-on application of general business management concepts through discussion and analysis of a series of cases. All AEM majors registered in AEM 220 are required to take AEM 222. Additional students may be accommodated on a space-available basis with permission of the instructor. Case topics are closely coordinated with both the content and sequencing of material being presented in AEM 220.

**AEM 230 International Trade and Finance (also ECON 230)**

Spring. 3 credits. Prerequisites: ECON 101 or equivalent required; ECON 102 or equivalent recommended. 1 evening prelim. S-U grades optional. D. A. Grossman.

This course provides a one-semester introduction to international economics principles and issues. The course first surveys key topics such as the elements of comparative advantage, tariff and non-tariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets are discussed throughout. This course is designed as a less technical introduction to concepts developed at a more advanced level in ECON 490 and ECON 361-362.

**AEM 240 Marketing**

Fall. 3 credits. E. W. McLaughlin.

This course provides a broad introduction to the fundamentals of marketing. The components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services to people are explored. Industry guest lectures and current marketing applications from various companies are presented and analyzed. Concurrent enrollment in AEM 241 is required for AEM majors.

**AEM 241 Marketing Plan Development**

Fall. 1 credit. Prerequisites: concurrent enrollment in AEM 240. Required of and limited to AEM majors enrolled in AEM 240; others by permission of instructor. D. J. Perosio.

The course offers students, working in teams, the opportunity for an intense, hands-on application of business case scenarios. Students develop marketing plans through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local not-for-profit organization. All AEM majors registered in AEM 240 are required to take AEM 241. Additional students are accommodated on a space available basis with permission of the instructor. Assignments are closely coordinated with both the content and sequencing of material being presented in AEM 240.

**AEM 250 Environmental and Resource Economics**

Spring. 3 credits. S-U grades optional. G. L. Poe.

The objectives of this course are to introduce fundamental economic principles and the "economic approach" to policy issues, and to demonstrate how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Subjects include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. These tools are used to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and non-renewable resources, and global warming.

**AEM 302 Farm Business Management**

Fall. 4 credits. Not open to freshmen. This course is a prerequisite for AEM 405 and 427. On days farms are visited the section period is 1:25-3:00. Limit 35.

An intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

**AEM 320 Business Law I (also NBA 560)**

Fall and summer. 3 credits. Limited to juniors, seniors, and graduate students. 1 evening prelim. D. A. Grossman.

Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law pertaining to contracts, sales, agency, and property.

**AEM 321 Business Law II (also NBA 561)**

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a course in business law or permission of instructor. D. A. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course reviews selected topics in business law, such as employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

**AEM 322 Technology, Information, and Business Strategy**

Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leiponen.

This course explores the impact of new technologies on business processes and industries. We focus particularly on the effects of information and communication technologies (ICT). The objective is to understand the nature of information as an economic good, business opportunities and challenges created by ICT, and organizational constraints involved in exploiting these opportunities.

**AEM 323 Managerial Accounting**

Spring. 3 credits. Priority given to CALS majors. Prerequisite: AEM 221 or equivalent. 2 evening prelims, a third exam, weekly homework, and one project using an electronic spreadsheet.

S. F. Melendy.

An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing,
standard costing, cost behavior, cost allocation, budgeting, variance analysis, and accounting systems in the manufacturing environment. Use of electronic spreadsheets is required.

AEM 324 Finance Management
Fall. 4 credits. Priority given to CALS majors. Prerequisites: AEM 210, AEM 220, and AEM 221 or equivalents. 3 evening prelims. R. Curtis.

This course focuses on the mathematics of finance, the economics of managerial decisions, corporate financial policy, risk management, and capital budgeting. Topics include the time value of money, capital budgeting decisions, financing alternatives, the cost of capital, and the capital structure decision. Distribution policy, mergers and acquisitions and restructuring, options, forward and futures contracts, market efficiency, and market anomalies, strategies of successful investors, and personal finance.

AEM 325 Personal Enterprise and Small Business Management
Spring. 4 credits. Limited to juniors and seniors. Prerequisites: AEM 220 and 221 or permission of instructor. Absolutely no add or drop after second class meeting. Term project work will amount to approximately $100 per team. D. Streeter.

Course is focused on the activities involved in planning a small business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real world entrepreneurs who discuss the start-up process and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams of no fewer than three students.

AEM 326 Human Resource Management in Small Businesses
Fall. 3 credits. Limited to juniors and seniors. Prerequisites: AEM 220 or AEM 302 or equivalent. S-U grades optional. 1 evening prelim. Staff.

An introduction to the management of human resources in small businesses. The focus is on developing the capabilities of all small business personnel. Topics include people-oriented management, vision and mission, organizational change, coaching, performance evaluation, recruitment, selection, compensation, training, empowerment, team building, leadership, and conflict resolution. Student involvement and active learning experiences are emphasized.

AEM 327 Technological Change and Innovation Strategy
Fall. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leiponen.

This course explores innovation and technological change. We will study how technological change affects economies and industries, and how innovation of new products, processes, and services takes place in firms. The focus is on the creation, management, and exchange of knowledge within and across organizational boundaries.

AEM 328 Innovation and Dynamic Management (also H ADM 449)
Spring. 3 credits. Limited to juniors and seniors. Staff.

For description, see H ADM 449.

AEM 329 International Agribusiness Study Trip
Fall. 2 credits. Prerequisites: AEM 220 or AEM 302, and AEM 240. Open by application. Students must complete the spring semester before the course is offered. A co-payment of $800 is required for the field study. B. A. Gloy and L. W. Tauer.

Provides students interested in agribusiness management an exposure to the managerial practices essential to the success of agriculture, agribusiness, and food companies competing in the global marketplace. The course involves a two-week international field study trip that takes place after the final exam period of the spring semester before the course is offered. The course meets for a few sessions in advance of the field study trip. A paper analyzing an aspect of the field study is required. Applications for the field study are due prior to March 1 of the spring semester before the course is offered. Approximately 12 students are selected with preference given to sophomores and juniors in CALS.

AEM 335 International Technology Marketing of Biotechnology
Spring. 3 credits. Prerequisites: ECON 101 and BWM 320 or equivalents. S-U grades optional. W. H. Leiponen.

This class explores international technology marketing from an economics perspective using biotechnology as an example. Topics include technology theories, products, risk (health and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, patents, trade, and international conventions. The class is of interest to students of biotechnology, public policy, economics, and international technology marketing.

AEM 340 Futures and Options Trading
Spring. 3 credits. Limited to juniors and seniors. Priority given to CALS juniors and seniors, then out of college seniors. Prerequisites: ECON 101, EDUC 115, and AEM 210 or equivalent. S-U grades optional. Not open to spring 2004. Staff.

The focus of the course is on the use of futures and options as risk management tools. Commodities, exchange rate, and interest rate derivatives are covered from the perspective of the investor interested in the hedge. Financial and speculative speculation are provided some insights as well. Students participate in a simulated trading exercise in which they use price and market information and input from industry experts to manage a hedge position.

AEM 344 Consumer Behavior
Fall. 3 credits. Prerequisites: AEM 210 and AEM 240 or equivalents. Limited to 45 juniors and seniors. Priority given to CALS students. Not offered fall 2003. Staff.

This course introduces students to the psychological, sociological, and cultural theories of buyer behavior, with specific attention to consumer information processing and decision making. Class discussions, lectures, experiential exercises, and group projects are used to illustrate behavioral concepts and their application to marketing practice. The role of research in understanding and explaining consumer behavior is emphasized.

AEM 346 Dairy Markets and Policy
Spring. 2 credits. Limited to juniors and seniors. Prerequisites: ECON 101 or equivalent. S-U grades optional. A. Novakovic.

An introduction to dairy markets and policy. Major topics include: milk pricing, marketing channels, dairy trends and demographics, world trade for dairy products, and policy issues. Class participation is expected as topics and new ideas are explored.

AEM 380 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in AEM section of this catalog. Provides qualified students an opportunity to conduct original and independent research. Information available in AEM Undergrad Program Office in Warren Hall.

AEM 403 Farm Management Study Trip
Spring. 1 credit. Prerequisite: AEM 302. Open by application only. W. A. Knoebel.

This is a special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

AEM 404 Advanced Agricultural Finance Seminar
Spring. 3 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. E. L. LaDue.

A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall term, a two- to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring term.

AEM 405 Agricultural Finance
Spring. 4 credits. Prerequisite: AEM 302 or equivalent. E. L. LaDue.

The principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

AEM 410 Business Statistics
Spring. 3 credits. Prerequisite: preference given to AEM majors. AEM 210 or equivalent. 2 evening prelims. C. van Es.

This course focuses on techniques used to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. A brief introduction to nonparametric methods is also included. The course involves a research project designed to give experience in collecting and interpreting data.

AEM 411 Introduction to Econometrics
Fall. 3 credits. Prerequisite: AEM 210 and either ECON 313 or ECON 205, or equivalents. D. Just.
The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. As real-world problems are encountered in the use of multiple regression are discussed and simultaneous equation models, simulation, and forecasting techniques are introduced.

AEM 412 Introduction to Mathematical Programming
Fall. 3 credits. Prerequisite: ECON 313 or equivalent. C. Gomes.
This is a course in applied mathematical programming. Emphasis is on formulation and interpretation of solutions to mathematical models of problems in economics and business. Blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management are studied. Integer and nonlinear programming are introduced.

AEM 414 Behavioral Economics and Managerial Decisions
Fall. 3 credits. Prerequisites: ECON 313 or equivalent. C. Gomes.
Behavioral economics integrates psychology and economics by identifying systematic anomalies in decision-making. These are now recognized to be an important source of error in business decisions, and provide the foundation for both behavioral marketing and finance. The course compares rational choice theory with behavior both in lecture and through a series of economics experiments in which students face situations that are likely to lead to anomalies such as the winner's curse, status quo bias, hyperbolic discounting, bias in assessing risks, and so on. Students have the opportunity to evaluate their own decision-making.

AEM 415 Price Analysis (also ECON 415)
Fall. 3 credits. Prerequisites: ECON 210 or equivalent.
The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the econometric consequences of pricing decisions are included.

AEM 416 Consumer Demographics and Market Analysis (also R SOC 331)
Fall. 3 credits. Prerequisite: ECON 210 or equivalent. W. Brown.
For description, see R SOC 331.

AEM 417 Decision Models for Small and Large Businesses
Spring. 3 credits. Limited to juniors and seniors. Preference given to AEM majors. Prerequisites: AEM 210 or equivalent.
In weeks labs are held, there will be no Friday lecture. C. L. van Es.
The course focuses on economic and statistical models of decision analysis and their application in large and small business settings. The course demonstrates how use of models can improve the decision-making process by helping the decision maker understand the structure of the decision, incorporate subjective probabilities as a way to portray risk, measure outcomes in a way that is consistent with attitudes toward risk, and understand the value of information. The importance of sensitivity analysis is emphasized, as is the need to combine both quantitative and qualitative considerations in decision making. Cases are drawn from small business scenarios, the public policy arena, and corporate settings. Implementing decision models with computers is the focus of lab sessions.

[AE]M 419 Strategic Thinking
Fall. 3 credits. Prerequisite: intermediate microeconomics (PAM 200 or ECON 313).
The art of thinking strategically puts you at the center of your competition. This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The subjective nature of the course is to facilitate students' ability to think strategically on firm level issues (e.g. pricing, advertising wars, product differentiation, entry deterrence), and strategic policy interaction in international economic relations (e.g. trade wars, arms race).

AEM 420 Investments
Fall. 3 credits. Prerequisites: AEM 210 or equivalent and AEM 524. Recommended: ECON 313 and a calculus course.
Preference given to students in AEM S-U grades optional. H. Dauk.
This course covers theories and empirical data in the field of financial investments. Descriptions of investment institutions, markets, and instruments are also covered. Topics include: equilibrium models of security prices (CAPM, APT), fixed income markets, performance evaluation, efficient market hypothesis, and behavioral finance. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 421 Derivatives and Risk Management
Fall. 3 credits. Prerequisites: AEM 210 and AEM 324 or equivalents. Recommended: ECON 313 or equivalent and a calculus course.
This course covers the pricing of derivatives and how derivatives can be used for the purpose of risk management and speculation. While no prior knowledge of futures and options is necessary, familiarity with calculus and probability and statistics will be helpful. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 422 Estate Planning (also NBA 562)
Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only.
D. A. Grassman.
Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York state estate and gift taxes, and substitutes for probate procedures are covered.

AEM 423 Risk Management in Business
Fall. 3 credits. Prerequisites: AEM 210 and AEM 324 or equivalents. L. Tauer.
A comprehensive approach to risk management in the business firm. Discusses what risks exist in the business and whether the business or stakeholders should shoulder those risks. If the business eliminates or manages those risks, how can it best accomplish that task? Discusses the appropriate tools to engage in risk management effectively and how to implement those tools.

AEM 424 Management Strategy
Fall and spring. 3 credits. Limited to AEM seniors in Business. D. Simon.
This is a capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Issues are approached from the standpoint of the board of directors, chief executive officer, and business unit managers. What should be considered and how strategic decisions should be made are the focus of the course.

AEM 425 Small Business Management Workshop
Fall. 4 credits. Limited to seniors. Prerequisite: AEM 325 or MBA 300 and permission of instructor. Term project work will amount to approximately $100 per team. D. Streeter.
Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff at arranged times during the semester.

[AE]M 426 Cooperative Management and Strategies
Spring. 3 credits. Recommended: AEM 220 or equivalent. Estimated cost of field trip, $60. 2-day field trip required. Not offered spring 2004. B. L. Anderson.
Investigates the unique aspects of cooperative, membership, and not-for-profit organizations. Issues are approached from the point of view of management, the board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, and taxation as well as the unique nature of strategies, management, marketing, and social and ethical responsibilities. Priority focus is on operating cooperatives in agriculture, although alternative types of cooperative organizations are discussed, such as credit unions, insurance cooperatives, employment and ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

AEM 427 Agribusiness Strategy
Fall. 3 credits. Prerequisites: AEM 220 or AEM 302. B. A. Gloy.
The course is intended for students with an interest in agribusiness and is designed to integrate previous course work and enhance problem identification and solving skills. The focus is on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for
agribusiness firms. The course covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, organizational design and structure, and leadership for agribusiness firms. This course is designed as a capstone course for the agribusiness management specialization.

**AEM 428 Valuation of Capital Investment**

Spring. 3 credits. Prerequisites: AEM 210 and AEM 324 or equivalents. Preference given to students in AEM. D. T.-C. Ng.

This course is about the analysis of financial reports—for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given to credit analysis. Various valuation models are examined in detail and applied in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, growth, and valuation assumptions, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

**AEM 429 International Finance**

Spring. 3 credits. Prerequisites: AEM 210 and AEM 324. Preference given to students in AEM. S-U grades optional. D. T.-C. Ng.

The purpose of this course is to learn about issues in international financial management and international investment. The major issues that are discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

**AEM 430 International Trade Policy**

Spring. 3 credits. Prerequisites: ECON 101–102 or equivalents and intermediate microeconomics. Recommended: AEM 250. Optional section TBA. N. H. Chau.

This course covers the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are also emphasized.

**AEM 431 Food and Agricultural Policies**

Spring. 3 credits. Prerequisite: intermediate microeconomics. S-U grades optional. A. Novakovic.

The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

**AEM 432 Business and Governments in a Global Marketplace**

Fall. 3 credits. Prerequisite: intermediate microeconomics. C. K. Ranney.

The government agency and the individual business enterprise are two of the most powerful institutions in modern society. The aim of this course is to look at the economic interfaces between government and business. The shifting and evolving relationships between the two entities exert great influence on the changing performance of the economy and on the lives of citizens. These relationships range from cooperative to competitive, from friendly to hostile. It is an uneasy relationship, each side possessing basic powers and yet each having an important need for the other. In the United States, the result is a mixed economy in which the public and the private sectors interact in many ways. Government exercises a variety of important powers in dealing with the individual private enterprise, ranging from taxation to regulation. Business, in turn, relies on constitutional protections as well as on public support of its basic role in creating income, employment, and material standards of living. In a dynamic and increasingly globalized economy the business-government relationship is constantly changing and the line between public and private sectors frequently shifts. Future managers will be constantly called upon to relate to government-business interfaces.

**AEM 433 Devolution, Privatization, and the New Public Management**

Fall. 3 credits. Prerequisites: AEM 240 and PAM 200 or ECON 313. Limited to seniors and graduate students. R. D. Christy.

This course provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. The risk of entering foreign markets is appraised and assessment of the political, legal, cultural, and economic forces is conducted. Case studies of companies are analyzed and discussed.

**AEM 434 Food-Industry Strategy**

Fall. 4 credits. Limited to AEM juniors and seniors in Business or Food Industry Management and graduate students. Prerequisite: AEM 240 or 448 or permission of instructor. G. A. German.

A case study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case study solutions at the Tuesday afternoon section.

**AEM 446 Food Marketing Colloquium**

Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. D. J. Perosio.

AEM 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A number of field trips are taken. Students participate in research topics on various aspects of the food industry.

**AEM 447 Food Marketing Colloquium**

Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. D. J. Perosio.

AEM 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A number of field trips are taken. Students participate in research topics on various aspects of the food industry.

**AEM 448 Food Merchandising**

Spring. 3 credits. Limited to juniors and seniors. Prerequisite: AEM 240. D. J. Perosio.

Covers merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

**AEM 449 Global Marketing Strategy**

Spring. 3 credits. Prerequisite: a previous marketing course. Limited to juniors, seniors, and graduate students. J. M. Hägen.

This course examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing these strategies. The course includes case analysis and discussion.

**AEM 450 Resource Economics**

Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and a familiarity with EXCEL.

This course covers resource economics topics such as the determination of the price and supply of resource and its application to public policy. The main focus is on the principles of economic growth and growth policies, especially with respect to energy and environmental resources.

**AEM 451 Environmental Economics**

Spring. 3 credits. Prerequisites: ECON 313, and a familiarity with EXCEL.

This course examines the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasis is placed on the welfare economic approach for allocating public goods, with specific emphasis on market failures, externalities, benefit-cost analysis, and the use of nonmarket valuation techniques. Property rights/institutional perspectives and ecological economic concepts are also examined.

**AEM 452 Resource Economics**

Spring. 3 credits. Prerequisites: ECON 313, or intermediate microeconomics course, and calculus. Limited to undergraduate students. S-U grades optional. G. L. Poe.

This course examines the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasis is placed on the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of nonmarket valuation techniques. Property rights/institutional perspectives and ecological economic concepts are also examined.
AEM 464 Economics of Agricultural Development (also ECON 464)
Spring. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. R. D. Christy.
This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector are covered to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries are used to illustrate the basis for economic analysis.

AEM 494 Undergraduate Special Topics in Applied Economics and Management
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 497 Individual Study in Applied Economics and Management
Fall or spring. Variable credit. S-U grades optional.
Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). Staff.
Used for special projects designed by faculty members.

AEM 498 Supervised Teaching Experience
Fall or spring. 1-4 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). Staff.
Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

AEM 499 Undergraduate Research
Fall, spring, or summer. 1-4 credits.
Limited to students with GPAs of at least 2.7. Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). S-U grades optional. Staff.
Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM 555 Environmental Management and Policy
Fall. 3 credits. Prerequisite: ECON 101 and 102 or equivalents and calculus. L. D. Chapman.
This seminar introduces to familiarize students with the rapidly evolving state of the art in the analysis and management of environmental policy and practice in enterprise. Although focused on the private sector, some attention is given to public enterprises.

AEM 605 Agricultural Finance
Fall. 3 credits. Prerequisite: AEM 324 or 405 or equivalent. B. A. Gloy.
Advanced topics in agricultural finance. Topics include investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

AEM 608 Production Economics (also ECON 408)
Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents. L. W. Tauer.
The theory of production economics with emphasis on applications to agriculture and natural resources is studied. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions; tests of efficiency and productivity are discussed. Production response over time and under risk is introduced.

AEM 610 Econometrics I
Spring. 3 credits. Prerequisites: statistical methods at the level of ILRST 311 or ECON 619. Undergraduates must have permission of H. Darouk. This course, together with AEM 711, provides a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. AEM 610 covers linear regression models and the associated estimation and testing procedures. Models from demand and production theory are used as illustrations.

AEM 611 Global Modeling
Spring. 3 credits. Prerequisite: a course in graduate micro theory. T. D. Mount, R. N. Boisvert.
This course is taught over the Internet by Tom Hertel at Purdue University. It is designed to teach people how to use a global general equilibrium model (GTAP) for research on trade and environment policies. Weekly assignments start with the components of a single country model and end with a full global model. A final project and the assignments are the primary course requirements.

AEM 612 Applied Econometrics
Fall. 1 credit. Prerequisite: concurrent enrollment in AEM 411. D. Just.
Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. AEM 612 complements AEM 411, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Course work focuses on preparing students to conduct their own applied economic research.

AEM 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 430)
Spring. 4 credits. Prerequisites: AEM 608 or IAM 608, ECON 313, or equivalent intermediate micro theory incorporating calculus. H. de Gorter.
The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optimal. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

AEM 632 Open Economy Analysis: Theory and Applications
Spring. 3 credits. Prerequisites: ECON 313 and ECON 314. S-U grades optional.
This course explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economies. It brings together research methods pertinent to open economy microeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM 633 Devolution, Privatization, and the New Public Management (also CRP 612 and FGSS 611)
Fall. 3 credits. S-U grades optional.
M. E. Warner.
For description, see CRP 612.

AEM 634 Government Policy Workshop (also CRP 618 and FGSS 620)
Spring. 4 credits. S-U grades optional.
M. E. Warner.
For description, see CRP 618.

AEM 640 Analysis of Agricultural Markets (also ECON 440)
Fall. 3 credits. Prerequisites: AEM 411 and 415 or equivalents. Not taught fall 2003. H. M. Kaiser.
This course focuses on the unique features of agricultural commodity markets. Focus is placed on government and private institutions impacting these markets, as well as on models of price behavior including marketing margins and imperfect competition. Empirical tools to evaluate market characteristics are also covered.

AEM 641 Commodity Futures Markets (also ECON 441)
Spring, weeks 9-14 (starts Mar. 11). 2 credits. Prerequisites: AEM 411 and 415 or equivalents. Recommended: AEM 640. Staff.
This course is about markets for agricultural commodity futures contracts. Emphasis is placed on models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

AEM 651 Environmental and Resource Economics
Spring. 4 credits. Limited to graduate students. W. D. Schulze.
A review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and cost—including property value and wage hedonic approaches, travel cost models, and contingent valuation—are covered. Survey/data collection methods are described in detail. Innovative market mechanisms for resolving public good, common property, and externality problems are explored. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. Open to graduate students outside of economics. AEM 651 is a core course for the Environmental Management concentration/option.

[AEM 652 Land Economics Problems] Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. Staff. Special work on any subject in the field of land and resource economics.

[AEM 655 Electric Systems Engineering and Economics (also ECE 551)] Fall. 2 credits. Prerequisites: basic calculus and microeconomics. T. D. Mount and R. Thomas. For description, see ECE 551.

[AEM 660 Agroecosystems, Economic Development, and the Environment] Spring. 3 credits. Limited to graduate students. AEM 660 or an additional section will be arranged for economics majors. S-U grades optional. D. R. Lee. This course examines selected topics in agricultural and economic development, technology assessment, ecosystem management, and the environment, with a focus on developing countries. Topics covered include production, poverty, and environmental tradeoffs; sustainable technology development; trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences. This course is open to graduate students outside of economics.

[AEM 667 Topics in Economic Development (also ECON 770)] Fall. 3 credits. Prerequisite: basic first-year courses in ECON or AEM, or instructor’s permission. S-U grades optional. C. K. Ranney. This course is targeted to second-year graduate students. Topics covered vary from year to year but may include: poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

[AEM 670 Economics of Consumer Demand (also PAM 608)] Fall. 3 credits. Prerequisites: ECON 311 or 312 and 2 semesters of calculus. S-U grades optional. C. K. Ranney. A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be introduced.

[AEM 694 Graduate Special Topics in Applied Economics and Management] Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the beginning of the semester.

[AEM 698 Supervised Graduate Teaching Experience] Fall or spring. 1-4 credits. Total of 4 credits maximum during graduate program. Students must register with an independent study form (available in the Undergraduate Program Office in Warren Hall). Open only to graduate students. Undergraduates should enroll in AEM 498. Prerequisite: permission of instructor. S-U grades optional. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

[AEM 699 M.P.S. Research] 1-6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report. Staff.

[AEM 700 Individual Study in Applied Economics and Management] Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff. This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

[AEM 708 Advanced Production Economics] Fall. 3 credits. Prerequisite: AEM 608, 710, or equivalents; ECON 609 is highly recommended. Offered alternate years. Not offered 2003–2004. R. N. Boisvert. Covers theoretical and mathematical developments in production economics, with emphasis on estimation production relationships, scale economics, technical change, and factor substitution. Developments in flexible functional forms, duality, and dynamic adjustment models are emphasized. Considerable emphasis is given to empirical specification and estimation. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

[AEM 711 Econometrics II] Fall. 3 credits. Prerequisite: AEM 610 or equivalent. T. D. Mount. Coverage beyond AEM 610 of dynamic models, including single equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics covered include endogeneity, stability, causality, and cointegration.

[AEM 712 Quantitative Methods I] Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended. R. N. Boisvert. A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

[AEM 713 Quantitative Methods II] Spring. 3 credits. Prerequisite: ECON 609. S-U grades optional. J. M. Conrad. This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of optimization and numerical analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

[AEM 714 Experimental Economics] Fall. 4 credits. Prerequisite: ECON 609. Offered alternate years. W. D. Schulze. The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining; compensation and performance; public goods; externalities and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

[AEM 717 Research Methods in Agricultural Economics] Spring. 2 credits. Limited to graduate students. R. N. Boisvert. Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

[AEM 730 Seminar on International Trade Policy: Agriculture, Resources and Development] Spring. 3 credits. Limited to graduate students. Prerequisites: AEM 630 or equivalent. Not offered spring 2004. D. R. Lee. This course examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.
This course focuses on models of individual, product/factor markets analysis. Empirical household analysis, reciprocity networks, and agricultural land, labor and financial economies. Topics covered include: receive 1 credit. Students who in addition actively participate by offering proposals, papers, and preliminary thesis faculty instructor present draft research results for group review and discussion.

AEM 900 Graduate-Level Thesis Research
Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted specifically to a master's program. For students in a Ph.D. program only before the "A" exam has been passed.

AEM 901 Doctoral-Level Thesis Research
Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

ANIMAL SCIENCE

AN SC 100 Domestic Animal Biology I
Fall, 4 credits. S-U grades optional. Lecs, M W F 9:05; lab, T W R or F 1-2:25. W. R. Butler and staff. An introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

AN SC 212 Animal Nutrition
Fall, 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. Lecs, M W F 10:10; lab, M T W R or F 1-2:25. A. W. Bell and staff. An introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

AN SC 213 Nutrition of the Dog

AN SC 214 Nutrition of Exotic Animals

AN SC 215 Exotic Avian Husbandry and Propagation
Fall, 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150, or one year of introductory biology. Lec, M 2:30-4:25. J. Parks and D. Muscarella. Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and local field trips.

AN SC 216 Nutrition of the Cat
AN SC 221 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: a year of college biology. Lecs, T R 9:05; sec, T W R or F 2:00-4:25; E. J. Pollak.
An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 222 Introduction to Canine Genetics
Fall, spring or summer. 1 credit. Prerequisites: introductory biology or permission of instructor. S-U grades only. To receive credit, register through the School of Continuing Education. sceu.cornell.edu/DL/html/caninegeneti cs.html. E. J. Pollak and P. A. Ottenacu.
Introduction to basic Mendelian genetics and simply inherited characteristics in the dog. This distance-education course delivered by CD and web interaction for residents and nonresidents consists of lectures on basic genetic principles, probabilities, linkage and genetic testing, and seminars on genome mapping, inherited sexual disorders, bleeding disorders, and eye defects. This course cannot be taken for credit by students who have successfully completed AN SC 221.

AN SC 250 Dairy Cattle Principles
Fall. 3 credits. S-U grade optional. Lecs, T R 10:10-11:25; lab, M W F 1:25-4:25; D. M. Galton and T. Batchelder.
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351, 354, and 355.

AN SC 251 Dairy Cattle Selection
Fall. 2 credits. Prerequisite: open only to seniors or permission of instructor. S-U grades optional. Lec, T R 11:15-12:05. D. M. Galton.
Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis is on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horses
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lecs, T R 9:05; labs, R 1:25-4:25; H. F. Hinta.
Selection, management, feeding, breeding, and training of light horses.

[AN SC 280 Molecular Biology in Agriculture and Medicine]
The applications of molecular biology to animal research, animal agriculture, industry and medicine are discussed. An introduction of basic recombinant DNA techniques is followed by topics such as genome projects, comparative and functional genomics, genetic screening, gene therapy, transgenic animal production, and mammalian cloning. Ethical issues raised by the use of these technologies are explored in class discussions. Laboratory demonstrations are used to support some lectures.

AN SC 290 Meat Science (also FOOD 290)
Fall. 2 or 3 credits. Lecs, T R 11:15; lab, M W or R 12:20-3:20. Lecture only. 2 credits. Lecture plus lab. 3 credits. Lab cannot be taken without lecture. D. Shaw.
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to commercial meat plant may be taken.

AN SC 300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and 1 year of introductory biology. Lecs, M W F 10:10. J. E. Parks.
Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and sexual development. An emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register. Labs, M W F or R 1:25-4:25. Each lab limited to 30 students. J. E. Parks.
Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

AN SC 305 Farm Animal Behavior (also BIOAP 312)
Spring. 2 credits. Prerequisites: one year of introductory biology and introductory animal physiology (AN SC 100 and 150 or equivalent is sufficient or BIOAP 311); at least 1 animal production course or equivalent experience is recommended. S-U grades optional. Lec, T R 11:15. Staff.
The behavior of production species (cattle, sheep, horses, swine, poultry) and influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 323 Equine Genetics Seminar
Fall. 2 credits. S-U grades only. Prerequisite: AN SC 221 or equivalent. Disc, T 1:25-2:15. P. A. Ottenacu.
Topics of equine genetics are presented and discussed. Students are also required to view one seminar each week. These seminars are animated PowerPoint presentations available in computer lab and can be viewed at flexible times during the week.

[AN SC 341 Biology of Lactation]
A comprehensive survey of the biology of the mammary gland. Lectures cover: (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context to the course, but examples from other mammals including humans are used.

AN SC 351 Dairy Herd Management
Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications of herd health management including on-farm herd health analysis.

AN SC 355 Dairy Cattle Nutrition
Spring. 3 credits. Prerequisite: AN SC 250 or permission of instructor. Letter only. Lecs, W F 10:10-11:25. T. L. Batchelder and L. E. Chase.
Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

AN SC 360 Beef Cattle
Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with management skills through computerized simulations and working directly with cattle. Students spend several days during the semester feeding and caring for cows and their newborn calves.

AN SC 365 Equine Nutrition
Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U grades optional. Lec, M W F 9:05-9:55. H. F. Hinta.
The principles of nutrition for horses are presented. Digestive physiology, sources of nutrients, feeding programs for various classes of horses and interactions of nutrition and diseases are discussed.
An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value of forages and crop residues; physiology of digestion of ruminants that affects feeding behavior; problems of chemical inhibitors in plants; and preservation of tropical forages as hay or silage.

AN SC 410 Nutritional Physiology and Metabolism
Fall. 3 credits. Prerequisites: biochemistry and physiology. M W F 11:15. R. E. Austic and D. E. Bautch. A fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to incriminate metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

AN SC 411 Applied Cattle Nutrition
Fall. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent). AN SC 355 is strongly encouraged. Lecs, M W F 10:12; lab, M 1:25–4:25. Van Amburgh. An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutritional management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case farm studies. Course is designed for juniors, seniors, and entering graduate students.

AN SC 412 Whole Farm Nutrient Management (also CSS 412)
Spring. 2 or 4 credit option. Open to juniors, seniors, and graduate students only. Course offered as two modules. Enrollment in Module 1 for the first half of the semester is required (2 credits). Module 1 consists of crop and manure nutrient management planning; no prerequisites listed. Module 2 is optional (2 credits). This module builds on the crop and manure nutrient management planning module by integrating agronomic nutrient management planning with herd nutrient management planning. AN SC 411 required. Lecs, T R 11:15 and lab T 1:25–4:25 for both modules, with work on case studies outside of lab. M. E. Van Amburgh and Q. M. Kettenring. This course provides students with an understanding of the concepts underlying whole farm nutrient management planning to improve profitability while protecting water and air quality. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for a Concentrated Animal Feeding Operation plan to meet environmental regulations. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning System (cuNMPs) and other tools. All students enrolled learn the concepts and develop the crop and manure nutrient management plan component of a CNMP during the first half of the semester in Module 1. Students opting to continue through the end of the semester in Module 2 (4 credit option) build upon knowledge gained in the first half of the semester while learning the knowledge and skills necessary to integrate crop production and herd feeding management for reducing nutrient imports on farms.

AN SC 413 Contemporary Issues in Animal Science
Spring. 1 credit. Open to juniors, seniors, and graduate students only. Lecs and disc, R 1:25–3:00. Weeks 1–8. L. O. Tedeschi and D. G. Fox. Course lectures and discussions explore contemporary issues affecting animal agriculture, including competition with humans for food resources, biotechnology, impact of consumption of animal products on human health, and impact of livestock farms on environmental/community problems, including odor, pathogens, and excess nutrients effects on water quality. May not be repeated for credit.

AN SC 414 Ethics and Animal Science
Fall. 2 credits. Enrollment limited to juniors, seniors, and graduate students only. Lecs, M 12:20; disc, W 12:20–1:10. D. J. Cherney. Exploration of the place of humans in the biological world, origins of ethics and morality, speciation, the use of animals for research and agricultural purposes, transgenic animals. A book review, participation in discussion in class and on-line, and a project of the student's choice are used to evaluate the performance of each student.

AN SC 420 Quantitative Animal Genetics
Spring. 2 credits. S-U grades only. Prerequisite: AN SC 221 or equivalent. Limited to 50 students. Lecs, M 12:20; sec, M 200–4:25. E. J. Pollak. A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra programs for problem solving.

AN SC 425 Gamete Physiology and Fertilization
Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Next offered fall 2003, 2005, not offered fall 2004. Lecs, R 2:30–4:25. J. E. Parks. Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and new technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

AN SC 427 Fundamentals of Endocrinology (also BIOAP 427)
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson. Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.
AN SC 451 Dairy Herd Business Management  
Emphasis on dairy herd business management with application to herd management analysis. Laboratory includes farm tours and analysis.

AN SC 456 Dairy Management Fellowship  
Spring. 2 credits. Limited to seniors.  
Prerequisites: AN SC 351 and permission of instructor. S-U grades only. Hours TBA. D. M. Galton.  
The program is designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

AN SC 494 Special Topics in Animal Science  
Fall or spring. 4 credits maximum.  
Prerequisite: undergraduate standing. S-U grades optional. Staff.  
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AN SC 495 Introduction to Research  
Fall. 1 credit. S-U grades only. Required of students undertaking Honors in Animal Science. Open to Honors students in other programs and those planning to pursue research, by permission of the instructor.  
An exposure to the world of scientific research including: identifying problems; devising hypotheses and realistic research plans; evaluating scientific writings and other forms of communication; finding and managing reference materials, examining the cost of research and opportunities for funding; discussing the obligations imposed on investigators by society and a host of regulatory agencies, along with responsibilities and freedom in science; and considering ethical issues that affect scientists. Students make oral presentations and prepare brief items of technical writing.

AN SC 496 Internship in Animal Science  
Fall or spring. 1-3 credits; limited to 6 credits maximum during undergraduate career. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff.  
A cooperative program with a cooperating organization (e.g., farm, agribusiness, pharmaceutical company, zoo, educational institution). Internships must be approved in advance by the student's academic adviser and must provide an acceptable, professionally supervised experience of at least 60 hours on the job per credit required.

AN SC 497 Individual Study in Animal Science  
Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study or a lecture topic offered by a professor. Since topics may change, the course may be repeated for credit.

AN SC 498 Undergraduate Teaching  
Fall or spring. 1, 2, or 3 credits; limited to 2 experiences during undergraduate career. Limited to students with a GPA of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).  
Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and to regularly discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499 Undergraduate Research  
Fall or spring. 6 credits maximum during undergraduate career. Open only to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with a GPA of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).  
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

AN SC 601 Amino Acids (also NS 601)  
R. E. Austic.  
A course stressing the dynamic aspects of protein digestion and absorption, amino acid transport and amino acid and nitrogen metabolism, and their relationships to the nutritional requirements for amino acids.

AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)  
Emphasizes metabolism, gene regulation, functional genomics, and genetic defects of mineral nutrition. Team-taught lectures span from single gene mutation to social and environmental aspects of mineral nutrition and mineral-related disorders. Effective approaches to improve global mineral nutrition by agriculture and food systems are discussed.

AN SC 604 Vitamins (also NS 604)  
Fall. 2 credits. Lec, T R 10:10. Staff.  
For description, see NS 604.

AN SC 606 Ruminant Nutrition: Microbial Ecology and Forage Chemistry  
This course provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.

AN SC 610 Animal Science Seminar  
Fall and spring. 1 credit. Registration limited to graduate students. S-U grades only. Lect T 12:20-1:10. D. J. R. Cherney.  
Students attend a weekly seminar on topics related to animal science. The requirement for an S grade is to regularly attend seminars during the semester.

AN SC 619 Field of Nutrition Seminar (also NS 619)  
Fall and spring. No credit. No grades given.  
For description, see NS 619.

AN SC 620 Seminar in Animal Breeding  
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours TBA. E. J. Pollak.  
Seminar on current topics in animal breeding and statistics as applied to genetic evaluation and selection of domestic animals.

AN SC 621 Seminar: Endo/Reprod Biology  
Fall and spring. 1 credit. Prerequisites: permission of instructor. Registration limited to graduate students. S-U grades only. Lect, W 4:40. W. R. Butler and staff.  
Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

AN SC 625 Nutritional Toxicology (also TOX 625)  
Exploration of toxicological principles and a selective survey of natural food and feed toxicants. At the end of this course, students understand relationships between nutrition and toxicology; are prepared to conduct research concerning the effects of naturally occurring toxicants; and are able to use multimedia to present their understanding of a class of toxicants. Occasionally, the class takes walking field trips. In addition, students read printed and electronic communications and create STELLA simulation models and a system of web pages related to a specific family of toxicants.

AN SC 640 Individual Study in Animal Science  
Fall or spring. 1 or more credits. S-U grades optional. Staff.  
Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

AN SC 650 Molecular Techniques for Animal Biologists  
Spring. 4 credits. Prerequisites: BIOBM 330 or BIOBM 332 or BIOBM 333 or equivalents and permission of instructors. Enrollment limited to 15 students. Offered alternate years. Next offered spring 2004, 2006; not offered spring 2005. Lec, T 11:15; labs, T and R 1:25-4:25. Y. Boisclair and S. Quirk.  
A laboratory course designed for students with little or no experience with techniques in
molecular biology. Emphasis is on modern techniques used in conducting research in animal-related sciences such as nutrition, physiology, pharmacology, and immunology (e.g., subcelling, mutagenesis of DNA, RT-PCR, analysis of gene and protein expression, overexpression of proteins, and study of protein-DNA interactions). Lectures introduce laboratory exercises and supplement laboratory topics. Students perform an independent project requiring time outside scheduled laboratories and give a scientific presentation.

AN SC 694 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: graduate standing; S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AN SC 720 Advanced Quantitative Genetics
Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. S-U grades optional. Hours TBA. Offered alternate years. Next offered spring 2004, 2006; not offered spring 2005.

R. L. Quaas.

This course covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial focus is the estimation of breeding values for purposes of ranking animals for selection. The core of the course is the mixed linear model; linear estimators and predictors are treated extensively. The importance of appropriate modeling is emphasized. Generalizations to nonlinear models, via Bayesian principles, are made, i.e., inferences from posterior distributions.

AN SC 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted specifically to a master's program.

AN SC 900 Graduate-Level Thesis Research
Fall or spring. Credit TBA. maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students in a Ph.D. program only before the "A" exam has been passed.

AN SC 901 Doctoral-Level Thesis Research
Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted to candidacy after the "A" exam has been passed.

Milk Quality (FOOD 351)

Agriculture in the Developing Nations (INTAG 602)

Lipids (NS 602)

Basic Immunology, Lectures (BIOG 305)

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

BEE 102 Introduction to Microcomputer Applications
Fall or spring. 3 credits. Letter only. Graduating seniors are guaranteed admittance. All students, including those pre-enrolled (and graduating seniors), must attend the first lecture to guarantee admittance and to select a laboratory section. Lec, fall: T R 12:20-1:30, spring: M W 12:30-1:10, labs, M 1:25-4:25 or 7:30-10:30 P.M. or T 1:25-4:25 or W 1:25-4:25 or 7:30-10:30 or R 1:25-4:25 p.m. Fee, $25 P. E. Hillman.

Introduction to application packages on microcomputers. Laboratories provide experience with word processing, object-oriented and bit-mapped graphics, spreadsheets, visual basic macros database management, presentation graphics, and web page authoring. An independent project related to the student's major is required. These packages such as desktop publishing, multimedia, anti-virus software, and those used for searching the Internet for information are discussed and demonstrated in the lectures, along with an overview of computer hardware, health hazards of computing, and software privacy.

BEE 110 Introduction to Metal Fabrication Techniques
Spring. 3 credits. Each lab limited to 18 students. Lec, T R 9:05; labs M T or R 1:25-4:25, M or T 7:30-10:30. T. J. Cook.

Emphasis is on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. Covers hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

BEE 132 Introduction to Wood Construction
Fall. 3 credits. Each lab limited to 15 students. Lec, T R 9:05; labs, T W or R 1:25-4:25, T or W 7:30-10:30. T. J. Cook.

Principles and practice of wood construction. Covers site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and block construction. Each student plans and constructs an approved carpentry project.

BEE 151 Introduction to Computing

An introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language, JAVA, is used, implemented on interactive personal computers, and applied to problems of interest in biological and environmental engineering. No previous programming experience is assumed.

BEE 152 Computer Applications for Engineers
Spring. 1-3 credits variable (three 1-credit modules). A student can take any one, any two, or all three modules. Prerequisites: BEE 151 or equivalent computer programming course and 1 semester of calculus for the Matlab module. No prerequisites for the other two modules. Letter grades only. Lec, T 2:30-3:20, sec, R 1:25-2:15; lab, R 2:30-4:25. P. E. Hillman.

Major application packages useful to engineering and science students are covered in three modules. The first module introduces Matlab and explores the problem-solving capabilities of Matlab through examples. The second module investigates the data processing and graphing capabilities of spreadsheets. The third module uses presentation graphics to create an effective professional presentation.

Module 01 Matlab (weeks 1 to 5 of the spring semester)
Covers matrix/vector manipulation, basic math functions, graphing of 2-D and 3-D plots, file I/O, string and numerical manipulation, problem solving of linear and nonlinear algebraic functions and ordinary differential equations, integration, curve fitting, and data analysis and statistics. In spring semester.

Module 02 Spreadsheets (weeks 6 to 10 of the spring semester)
Covers use of a spreadsheet application such as Microsoft Excel to include built-in functions, lookup tables, graphs, Visual Basic macros, what-if analysis, and advantages and disadvantages compared to a programming language. Grading based on completion of lab assignments, lecture quizzes, and lecture attendance.

Module 03 Presentation Tools for the Professional Engineer (weeks 11 to 14 of the spring semester)
Covers the use of a presentation graphics application such as Microsoft PowerPoint to create slides for an oral presentation of engineering projects for professional presentations. Special attention is given to the execution of quality presentations. Grading based on lab assignments, lecture quizzes, lecture participation, and an oral PowerPoint presentation and written report submitted as the final exam.
**BEE 200 The BEE Experience**
Spring. 1 credit. Letter only. Prerequisite: nonmajors by permission of instructor. Lect, T 1:25-2:19, J. A. Bartsch.
A required course for freshman majors in Biological and Environmental Engineering. A forum covering the career opportunities for engineering students and the activities and curricula that lead to these opportunities. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career offices, and students. Students develop their undergraduate course plans, complete a web search assignment to locate internships, and select future courses to meet their academic objectives and career goals.

**BEE 222 Bioengineering Thermodynamics and Kinetics**
Spring. 3 credits. Prerequisites: MATH 192, BIO SCI 110; PHYS 213 and one course in chemistry completed or concurrent. Lect, M W 9:00-9:50; lab, R 8:00 or 9:05; R. Lt. Seymour.
Living systems rely on chemical and phase equilibria, precise coordination of biochemical pathways, and the release of chemical energy as heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, work, heat, and chemical reactions; and reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

**BEE 251 Engineering for a Sustainable Society**
Spring. 3 credits. Prerequisite: MATH 293 completed or concurrent. Lect, T R 10:10-11:25, B. A. Ahner.
Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and mass balances in environmental science. The students will be introduced to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE engineering students must complete either BEE 251 or BEE 260 according to their academic plan. BEE students who complete both BEE 251 and BEE 260 will receive engineering credit for only one of these courses.

**BEE 260 Principles of Biological Engineering**
Spring. 3 credits. Prerequisite: MATH 293 completed or concurrent. Lect, T R 8:40-9:55, A. Baeumner.
Focuses on the integration of biological principles with engineering, math, and physical principles. Students learn how to formulate courses for chemical systems in class and practice in homework sets. Topic areas range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE engineering students must complete either BEE 251 or BEE 260 according to their academic plan. BEE students who complete both BEE 251 and BEE 260 will receive engineering credit for only one of these courses.

**BEE 299 Sustainable Development: A Web-Based Course**
Spring. 3 credits. Prerequisite: sophomore standing; lab above, S-U grades optional. N. R. Scott.
Sustainable development is the dominant economic, environmental, and social issue of the twenty-first century. This web-based course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.

**BEE 301 Renewable Energy Systems**
Introduction to energy systems with emphasis on quantifying costs and designing renewable energy systems to convert environmental inputs into useful forms of energy. Course covers solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances. Focus is on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

**BEE 305 Principles of Navigation (also NAV 301)**
Fall. 4 credits. 4 classes each week (lecture-recitation-project work). Lect, M W F 8:00-8:50; lab, R 8:00 or 9:05, L. D. Albright.
An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are also briefly discussed.

**BEE 310 Advanced Metal Fabrication Techniques**
Spring. 1 credit (2-credit option available). Prerequisite: BEE 110 or permission of instructor. Lect, F 2:30-4:20, T. J. Cook.
Principles and practices extending beyond the scope of BEE 110. Includes out-of-position, high-carbon steel and cast iron welding. Topics such as soldering and brazing of aluminum, surfacing, tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc and oxy cutting of metals are covered. Planning, development, and fabrication of a metal construction project is required for the two-credit option.

**BEE 325 Environmental Management**
Fall. 3 credits. Lect, T R 2:55-4:10, W. J. Jewell.
Explores the decline in environmental quality caused by human activities and the limits of science and technology solutions. Understanding complex issues such as global warming and their sustainable solutions are emphasized and illustrated with case studies. Field trips to water supply and waste treatment facilities are included. Emphasis is on water, energy, air quality, and soil evaluations used to illustrate environmental quality problems. (BEE 325 and BEE 625 meet together.) BEE 625 students will complete a semester-long design-oriented project.

**BEE 350 Biological and Environmental Transport Processes**
Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible). Lect, M W F 11:15-12:05; disc, W 2:30-3:20. 2 evening prelims. K. G. Gebremedhin.
Focus is on understanding the principles of heat and mass transfer in the context of biological, biomedical, and environmental systems. Physical understanding of transport processes and simple reaction rates with application examples from plant, animal, and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials are emphasized.

**BEE 360 Molecular and Cellular Bioengineering**
Spring. 3 credits. Prerequisites: biochemistry or AEP 252 or permission of instructor. Lect, T R 2:55-4:10, D. Luo.
Biological engineering at the molecular and cellular level focuses on living organisms (viruses, bacteria, cells, animals, and plants) and different scales (nano, molecular, cellular, tissue, and environment) with two underlying themes: DNA and cancer, and introduction of quantitative and analytical measurement as well as ethics in molecular and cellular bioengineering with emphasis on integration of molecular and cellular biology with engineering.

**BEE 365 Properties of Biological Materials**
Spring. 3 credits. Prerequisites: ENGRD 202 (coregistration permissible). Lect, T R 12:20-1:10; lab W 2:30-4:25, R 2:30-4:25 or F 2:30-4:25, J. A. Bartsch.
Mechanics and structural properties of biological materials. Mechanical testing of animal, plant, and food products. Laboratory exercises in quasi-static and dynamic testing of materials and interpretation of test results. Experimental techniques for determining engineering properties of these materials. This course satisfies the BEE laboratory experience requirement.

**BEE 371 Hydrology and the Environment**
Spring. 3 credits. Prerequisite: one course in calculus. 2 lecs, 1 lab. Lects, T R 9:05-9:55; lab, F 2:30-4:25, M. T. Walter, T. S. Steenhuis.
Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evaportranspiration, ground water, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, and laboratories foster an understanding of concepts and principles of hydrologic processes.

**BEE 411 Biomass Processing: Modeling and Analysis**
Spring. 3 credits. Prerequisites: BEE 250; BEE 350 (or any course in heat and mass transport), BIOM 351, 332, or BIOM 290. Lect, M W F 9:05-9:55, L. P. Walker.
This course is designed to introduce students to how basic concepts from physical chemistry, enzyme and microbial kinetics, and transport phenomena are used to model biomass conversion and degradation processes. Examples of different agricultural and environmental processes are used to explore model development, solutions, and validation. Strong emphasis on the use of differential equations to model process dynamics.
BEE 427 Water Sampling and Measurement
Fall. 3 credits. Prerequisites: fluids or a hydrology course and MATH 191. Lec. T 9:05-9:55, lab. T 1:25-4:25. L. D. Geohring and T. S. Steenhuis.

Get your feet wet and your hands busy with this course on water sampling methods where science and engineering technologies are integrated to quantify, characterize, and analyze environmental engineering problems. This field-based laboratory course focuses on quantification of surface and subsurface flow and quality, and it includes sampling techniques of soils, sediment, and biological waste products. Quality assurance and control protocols and interpretation of watershed loading of contaminants are addressed. This course satisfies the BEE laboratory experience requirement.

BEE 435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: must be at least a junior. Lec. W 1:25-4:25. M. B. Timmons.

An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering health, nutrition, processing, and so on. This course is intended to build upon the undergraduate's previous course background and interests. Includes supervised "hands-on" laboratory experiences.

BEE 450 Bioinstrumentation

Biological and biomedical applications are emphasized in this laboratory-based course. The electronic instrument from sensor to computer is considered. Static and dynamic characteristics of components and systems are determined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. This course satisfies both the BEE laboratory experience and the BEE capstone design requirement.

BEE 453 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 453)
Spring. 3 credits. Prerequisite: heat and mass transfer (BEE 350 or equivalent). Lec. M, W, Th, F; disc/lab. F 11:15. A. K. Datta.

Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes using an industry-standard physics-based computational software on a supercomputer or on high-end personal computers. Biomedical processes and industrial food processing applications of heat and mass transfer are covered. Computational topics include the finite element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major component of the course (no final exam). The course satisfies the BEE capstone design requirement. This course satisfies the BEE capstone design requirement.

BEE 454 Physiological Engineering

Engineering analysis and design in the physiology of animals and humans. Covers the use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: signal processing as related to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments, computing applications, field trips, and live animal demonstrations. This course satisfies the BEE laboratory experience requirement.

BEE 456 Biomechanics of Plants (also BIO PL 456)
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U or letter grade optional. Lec. T R 11:15-12:05; disc. W 2:30-3:20. J. R. Cooke and K. J. Niklas.

An engineering approach is taken to plant form and function following the text Plant Biomechanics. Topics include: mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, biomechanics of organs, the plant body, fluid mechanics and biomechanics, and plant evolution.

BEE 459 Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisites: biochemistry and permission of instructor. Lec. 11:40-12:55, lab. M 1:25-4:25 and 7:30-10:30. A. J. Baumer.

This course provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. The course addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, prepare a biosensor of their choice in the laboratory, and present a poster in a biosensor workshop at the end of the semester. Undergraduate students work together in teams of 2-4 students. This course satisfies the BEE capstone design requirement and the BEE laboratory experience requirement for engineering students.

BEE 464 Biosorption Processes
Fall. 3 credits. Prerequisites: intro biochemistry and physics, MATH 112 or 192, BEE 260 or equivalent, or permission of instructor. Lec. M W F 12:20-1:10. J. B. Hunter.

Biosorption is the science and engineering of fractionating and purifying biological materials. Topics include: living and non-living, antimicrobial, antibiotics, biocides, and even foods. The course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving biosorption performance, and the special challenges of scale-up. Centrifugation, filtration, extraction, membrane methods, ion exchange, chromatography, electrophoresis will be supplemented with student presentations. Intended for senior engineering students in engineering, chemistry, biology, and food science.

BEE 471 Geohydrology (also CEE 431 and EAS 448)
Fall. 3 credits. Prerequisites: MATH 294 and ENGR 202. 2 lecs, 1 disc, lecture, field trip. W. B. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydrodynamics, soil water, and solute transport.

BEE 473 Watershed Engineering
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology. Lecs. T R 10:10-11:00; disc. R 12:55-1:45. M. F. Walter.

Engineering principles are applied to the design of management strategies aimed at solving natural resource problems in the context of watersheds. Emphasis is placed on rural systems and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supply. BEE students who wish to take this course to satisfy the BEE capstone design requirement, must co-register in BEE 496 for one credit hour. This course satisfies the College of Engineering final writing requirement when co-registered in BEE 493.

BEE 474 Drainage and Irrigation Design

This course will focus on design of drainage and irrigation systems for agriculture and nonagricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used whenever possible. One major design project is required of each student. This course satisfies the BEE capstone design requirement.

BEE 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming, and 1 year of calculus. Lecs. T R 1:10-2:55. D. A. Haith.

Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction, collection and transport systems, waste-to-energy combustion, sanitary landfills, composting, recycling and materials recovery facilities, and hazardous waste management. Emphasis is on quantitative analyses.

BEE 476 Solid Waste Engineering

Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction, collection and transport systems, waste-to-energy combustion, sanitary landfills, composting, recycling and materials recovery facilities, and hazardous waste management. Emphasis is on quantitative analyses.

BEE 478 Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent. Lecs. T R 2:30-3:45. W. J. Jewell.

Ecological engineering is the language of sustainable living. Waste management with natural systems, the most advanced form of this new engineering direction, includes constructed wetlands, hydroponic applications of plants in resource-recovery waste management systems, soil restoration, phytoremediation, and bioremediation of toxic. Biomass refineries to create energy-independent communities, sustainable drinking water systems, carbon sequestration, and zero polluting farms are future sustainable.
living topics that also solve some of society's larger problems. BEE students who wish to take this course to satisfy the BEE capstone design requirement must co-register in BEE 496 for one credit hour.

**BEE 481 LRFD-Based Engineering of Wood Structures (also CEE 481)**
Spring. 3 credits. Prerequisite: ENG 202. Lec, M W F 2:20-3:10 (Holister Hall).
Two evening prelms. K. G. Gebremedhin.
Computer-aided and manual computation procedures of Load and Resistance Factor Design (LRFD)-based engineering of wood structures. Topics include national design codes and standards; estimation of design loads (dead, live, wind, snow, and seismic loads); determination of factored resistance and stiffness values; mechanical properties of wood and wood products; designs of beams, columns, trusses, frames, arches, bridges, and diaphragms; and connections and special wood structural members and systems. Engineering design judgment is also discussed as an integral component of the quantitative design procedure. BEE students who wish to take the course to satisfy the BEE capstone design requirement must co-register in BEE 496 for one credit hour.

**BEE 484 Metabolic Engineering**
Spring. 3 credits. Prerequisite: biochemistry or permission of instructor. S-U grades optional. Lec, T R 10:10-11:25.
R. M. Spanswick.
The principles of metabolic engineering as they relate to the regulation of metabolic pathways, including membrane transport, are considered in terms of enzyme kinetics and metabolic control analysis. Case studies, reflecting the interests of the instructor, emphasizes examples involving higher plants. Each student is expected to investigate one topic in depth and make a short class presentation.

**BEE 489 Engineering Entrepreneurship, Management, and Ethics**
The course focuses on engineering economics, engineering management and professional ethics, and associated ethical issues. Course objectives include coverage of: prediction/probability of net returns, financial calculations (internal rate of return, time value of money, pro forma statements); legal structures of businesses; project management; developing an awareness of issues related to professional ethics; and technical writing and communication. This course satisfies the College of Engineering technical writing requirement.

**BEE 493 Technical Writing for Engineers**
Fall or spring. 1 credit. Prerequisites: co-registration with BEE 473 (fall), BEE 450 (spring). Lec, M T W 7:30-9:25 (5 evenings in first half). Staff.
This course meets the College of Engineering technical writing requirement when taken concurrently with BEE 473 in the fall or BEE 450 in the spring. Class meets for five evening sessions during the fall semester and covers writing skills necessary for technical project reports. Also considered: outlines, style, audience, and general writing mechanics.

**BEE 494 Special Topics in Biological and Environmental Engineering**
Fall or spring. 3-4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**BEE 495 BEE Honors Research**
Fall or spring. 1-6 variable credits. Prerequisite: enrollment in the BEE Research Honors program. Letter grade: S-U.
Intended for students pursuing the Research Honors program in BEE. Students must complete the Honors program application by the 3rd week of the fall semester senior year.

**BEE 496 Capstone Design in Biological and Environmental Engineering**
Fall and spring. 1 credit. Corequisite: students must co-register in one of the approved upper level capstone courses (BEE 473, 478, 481). Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Involves capstone design experience, including a technical project incorporating analysis, design, evaluation, synthesis, and a written and oral report of the end-product. This course must be taken in conjunction with one of the following approved BEE courses (BEE 473, 478, 481).

**BEE 497 Individual Study in Biological and Environmental Engineering**
Fall and spring. 1-4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in the upper two-fifths of their class. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

**BEE 498 Undergraduate Teaching**
Fall and spring. 1-4 credits. Prerequisite: written permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
The student assists in teaching a biological and environmental engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, discusses objectives and techniques with the faculty member in charge of the course.

**BEE 499 Undergraduate Research**
Fall and spring. 1-4 credits. Prerequisites: normally reserved for seniors in the upper two-fifths of their class; adequate training for work proposed; and written permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Research in any area of biological or environmental engineering on problems under investigation by the department and of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

**BEE 501-502 M.P.S. Project**
Fall and spring. 1-6 credits. Required of each M.P.S. candidate in the field. BEE graduate faculty.
A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

**BEE 551-552 Agricultural and Biological Engineering Design Project**
Fall and spring. 3-6 credits. Prerequisite: admission to the M.Eng. degree program. BEE graduate faculty.
Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. There, however, is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design projects is required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551-552 is required for the Master of Engineering degree. Students should register for 551 their first semester and complete any additional design project credits with 552. If more than six design project credit hours are desired in one semester, both 551 and 552 may be taken.

**BEE 625 Environmental Management**
Fall. 3 credits. Lec, T R 2:55-4:10. W. J. Jewell.
For description, see BEE 325.

**BEE 647 Water Transport in Plants (also BIOPH 651)**
Fall. 2 credits. Lec, T R 10:10-11:00. R. M. Spanswick.
Topics include water relations of plant cells and tissues using water potential terminology; permeability of plant cells to water and the role of aquaporins; transport of water through whole plants, including transpiration, stomatal physiology, and the modifications due to plant communities; water status and plant growth in relation to water stress.

**BEE 649 Solute Transport in Plants (also BIOPH 649)**
A fundamental treatment of the transport of ions and small organic molecules in plants. Topics will include: electrophysiology of cell membranes, including ion channels and electrogenic ion pumps; transport mechanisms for the major ions; intercellular and long-distance ion transport; cotransport systems for sugars and amino acids, phloem transport; ABC-type transporters.

**BEE 651 Bioremediation: Engineering Organisms to Clean Up the Environment**
Spring. 3 credits. Prerequisites: BIOMI 200 or BIOMI 398 or BIOMI 331 or permission of instructor. Lec T R 10:10-11:00. B. Ahner.
This course examines ways in which organisms may be used to remove or metabolize pollutants in the environment including bacterial degradation of organics and phytoremediation of heavy metals.
Through lectures and current literature, students evaluate the benefits as well as the current obstacles. The current efforts to genetically engineer organisms for bioremediation and the potential risks of releasing them into the environment are examined.

BEE 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of the instructor. Lect R 12:20–1:10; lab 2:00–4:25. D. J. Aanesland.
Application of instrumentation concepts and systems to the measurement of environmental, biological, and chemical phenomena. The construction and characterization of electronic sensors and transducers is emphasized. Imaging processing techniques are introduced. A final project is required.

BEE 655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: MATH 293 or equivalent. Lects, R 2:30–4:30. J-Y. Parlange.
Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, pressure, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, and structure of organizations).

BEE 659 Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisites: biochemistry and permission of instructor. Lect, T R 8:40–9:55; lab, M 1:25–4:25 and 7:30–10:30 PM. A. J. Baesemann.
This course provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. The course addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in agriculture, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, prepare a biosensor of their choice in the laboratory, and present a poster in a biosensor workshop at the end of the semester. Graduate students work independently on individual biosensor projects.

BEE 671 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics. Lect, R 3:35–5:45 (first meeting—TBA). J-Y. Parlange.
The course encompasses a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered alternately with CEE 633—a complementary, but not identical, course.

BEE 672 Drainage
The theory of water and solute flow in aquifers, hill slopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landslides, and land and adverse drainage sites is critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage water is examined. Laboratories are used for hands-on experience with measuring soil parameters and artificial drainage design. This course satisfies the capstone design experience requirement.

BEE 673 Sustainable Development Seminar (also MBA 573)
Spring. 1–3 credits. Prerequisites: upper division undergraduate and graduate students or permission of instructor. Lect, F 1:30–3:30. N. R. Scott.
Sustainable development is the most beneficial concept to come out of the environmental movement in years. The concept of a sustainable world, however, is not a constant. There are many problems, including economics, environment, and political, social, scientific, and technological developments. This seminar explores topics such as energy, agricultural and food systems, green buildings and environmental design, corporate sustainability, and other contemporary issues.

BEE 678 Nonpoint Source Models
Spring, 3 credits. Prerequisites: computer programming and calculus. Lects, T R 8:40–9:55. D. A. Haith.
Development and programming of simulation models for management of water pollutants from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include watershed hydrology and sediment yield, urban and rural runoff, irrigation, waste disposal sites, and pesticides, nutrients, and salts in drainage.

BEE 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: T&M 310 or permission of instructor. Lects, M W F 11:15–12:05. J. R. Cooke.
Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

BEE 687 The Science and Engineering Challenges to the Development of Sustainable Bio-based Industries
Fall. 1 credit. Prerequisite: graduate standing. Lect, R 12:20–1:10; disc, R 1:25–2:15. B. Ahner.
Environmental sustainable alternatives for our energy and chemical needs are critical. This seminar series explores challenges facing the development of industries that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of biological systems for environmental bioremediation.

BEE 694 Graduate Special Topics in Agricultural and Biological Engineering Seminar
Fall or spring. 4 credits maximum. S-U grades optional. ABEN graduate faculty.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

BEE 697 Graduate Individual Study in Agricultural and Biological Engineering
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional. ABEN graduate faculty.
Topics are arranged by the staff at the beginning of the term.

BEE 700 General Seminar
Fall. 1 credit. S-U grades only. Staff.
Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

BEE 740 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED 740)
Spring. 2 credits. Prerequisite: graduate standing or permission of instructor. Lect, M T W R 3:00–4:00, March 24–May 16. D. D. Bowman.
Presents an in-depth look at the management of pathogens in animal manures. It reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. The course discusses common methods of manure processing for the control of these pathogens for the protection of other animals and the human population. The course concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

BEE 750 Orientation to Graduate Study
Fall. 1 credit. Limited to new graduate students. S-U grades only. Lects, first 7 weeks, M 3:35–4:25. D. J. Aanesland.
An introduction to ABEN research policies, programs, methodology, critiques, and degree candidates' responsibilities and opportunities.

BEE 754 Watershed Management
Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructor. Lect, W 2:30–4:25. T. S. Steenhuis and M. J. Pfeffer.
Traditional top-down approaches to watershed management have been challenged by advocates of public participation. These challenges have raised questions about how to effectively integrate science, policy, and public participation. This course reviews different management approaches and evaluates their usefulness in dealing with different watershed management problems. Case examples from watersheds in the United States and overseas are considered.

BEE 760 Nucleic Acid Engineering
Fall. 3 credits. Prerequisites: BEE 360 or permission of instructor. Lect, T, W, TH 2:30–3:20; lab, W 12:20–2:15. D. Luo.
Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the "genetic engineering" sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic...
acid engineering are introduced, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine. A design project and formal project presentation are required.

BEE 771 Soil and Water Engineering Seminar
Fall and spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades only. TBA. Staff. Study of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

BEE 781 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. TBA. Staff. Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations.

BEE 785 Biological Engineering Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. J. R. Cooke. The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

BEE 787 Industrial Ecology of Agriculturally Based BioIndustries
Spring. 3 credits. Prerequisites: 1 year calculus, some knowledge of Matlab, BEE 687, limited to graduate students. L. P. Walker. Input/output modeling methods are used to explore the use of the industrial ecology perspective for the design and analysis of sustainable bio-based industries.

BEE 900 Master’s-Level Thesis Research
Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

BEE 900 Doctoral-Level Thesis Research
Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research.

BIOMETRICS AND STATISTICS

M. Wells, chair, C. Bustamante, C. Castillo-Chavez, R. Lloyd, R. Nielsen, S. J. Schwager, R. Strawderman

The Department of Biostatistics and Computational Biology in the Statistical Science offers the following courses in Biometry and Statistics. Students need to register under Course Listings. College of Agriculture and Life Sciences—Biometry and Statistics.

BTRY 301 Biological Statistics I (also BTRY 301)
Fall. 4 credits. Lec, T R 10:10–11:25; lab, M or W 1:25–2:15, or 2:30–3:20, or 3:35–4:25. Statistical methods are developed and applied to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the S-Plus statistical computing environment.

Spring. 4 credits. Prerequisites: BTRY 301 or BTRY 601. Lec, T R 10:10–11:25; lab times TBA. Linear statistical methods are applied to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the S-Plus statistical computing environment.

BTRY 382 Introduction to Statistical Genomics and Bioinformatics (also STBTRY 382)
Fall. 4 credits. Prerequisite: BTRY 101, MATH 111, BIO G 302, or equivalent. Lec, T R 10:10–11:25; lab, F 1:25–2:15. Survey course focusing on the statistical analysis of genomic data. The course includes an introduction to probability and statistics and application to DNA sequence analysis, phylogenetic inference, population genetics, genetic mapping, molecular evolution, and macromolecular structure prediction. The course is intended for undergraduates and beginning graduate students in the mathematical and biological sciences. Evaluation is based on weekly problem sets and computer assignments as well as a midterm and final examination.

BTRY 400 Biometry Seminar (also STBTRY 400)
Fall and spring. 1 credit. S-U grades only. Prerequisite: BTRY 302, or 409, or 602 or permission of instructor. Sec, R 3:35–4:25. Students attend a weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor. Students can only take this course twice.

BTRY 408 Theory and Probability (also STBTRY 408)
Fall. 4 credits. Prerequisites: MATH 111, 112, 213, 231, or equivalents. Lec, M W F 10:10–11:00, Sec, M 3:35–5:00. An introduction to probability theory, axiomatic foundations; combinatorics and equally likely events; conditional probability and independence, discrete and continuous random variables, their distributions and moments; generating functions; transformations, extensions to problems involving two or more random variables; random samples. Can serve as either one-semester introduction or a foundation for a course in statistical theory. At least one introductory course in statistical methods is additionally recommended but not required.

BTRY 409 Theory of Statistics (also STBTRY 409)
Spring. 4 credits. Prerequisites: BTRY 408, at least one introductory course in statistics. Lec, M W F 10:10–11:00, Sec, M 3:35–5:00. An introduction to classical theory of parametric statistical inference. Builds on the material covered in BTRY 408. Topics include sampling distributions, principles of data reduction, likelihood, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

BTRY 412 Matrix Computation
Fall. 4 credits. Prerequisite: calculus. Lecs, M W F 9:05–9:55, Sec, M 10:25–11:25, T 10:10–11:00. An introduction to computational linear algebra. The course introduces key notions and algorithms for solving systems of linear equations (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Positive definite matrices, eigenvalues, and their applications in mathematical modeling and statistics are discussed.

BTRY 482 Statistical Genomics (also STBTRY 482)
Spring. 4 credits. S-U grades optional. Prerequisite: BTRY 382 or equivalent. Lec, T R 11:40–12:55; sec, F 12:20–1:10. This course covers topics in the statistical analysis of genetic, molecular, and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of comparative molecular data, QTL mapping, and association mapping. Topics may vary from year to year. This course will be co-taught with BTRY 682. However, undergraduate students will be evaluated on the basis of a final exam and a term paper instead of a research project.

BTRY 494 Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494)
Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 495 Statistical Consulting (also STBTRY 495)
Spring. 2–3 credits. Prerequisites or corequisites: BTRY 302 or BTRY 602 and BTRY 409 and permission of instructor. S-U grades optional. W 1:25–2:15. Participation in the Department of Biological Statistics and Computational Biology consulting service: faculty-supervised statistical consulting with research projects from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BIOLICAL SCIENCES

The program of study in biology is coordinated by the Office of Undergraduate Biology. For course descriptions, see the section on Biological Sciences.

BIOLOGICAL & SOCIETY

The undergraduate major field of study in biology and society is offered through the Department of Science and Technology Studies. For a full description of courses that fulfill field requirements, see the Biology & Society listing under the College of Arts and Sciences in this publication.
BIOMETRY AND STATISTICS 75

BTRY 497 Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497)
Fall and spring. 1–3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).
Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 498 Undergraduate Supervised Teaching (also STBTRY 498)
Fall and spring. 2 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).
Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

BTRY 499 Undergraduate Research (also STBTRY 499)
Fall or spring. 1–3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research.
Students must register with an Independent Study form (available in 140 Roberts Hall).

BTRY 600 Statistics Seminar (also STBTRY 600)
Fall and spring. 1 credit. S-U grades only. Prerequisite or corequisite: BTRY 409 or permission of instructor. Sem 3:35–4:25.

BTRY 601 Statistical Methods I (also STBTRY 601)
Fall and summer. 4 credits. Limited to graduate students; others by permission of the instructor. Lecs, M W F 12:20–1:10; sec, M or T 2:30–4:00 or 7:30–9:00 P.M. or T 10:10–11:40.
Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

BTRY 602 Statistical Methods II (also STBTRY 602)
Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent. Lecs, M W F 11:15–12:05; sec, M 1:00–2:45 or 7:30–9:25 P.M. or T 1:00–2:45.
A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points; goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

BTRY 603 Statistical Methods III (also STBTRY 603)
Spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor.
Offered alternate years. Lecs T R 8:40–9:55. Categorical data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

BTRY 604 Statistical Methods IV: Applied Design (also STBTRY 604)
Spring. 4 credits. Prerequisites: BTRY 601 and 602 or permission of instructor.
Offered alternate years. Lecs M W F 12:20–1:10; lab T 2:30–4:25.
Applications of experimental design including such advanced designs as split plots, incomplete blocks, and Latin squares. Use of the computer for both design and analysis is stressed, with emphasis on solutions of real data problems.

BTRY 652 Computationally Intensive Statistical Inference (also STBTRY 652)
Spring. 4 credits. Prerequisites: BTRY 421 and BTRY 409 or equivalent. Offered alternate years. Lecs, M W F 2:30–3:20.
Modern applications in statistics often require intensive computation not handled by "off-the-shelf" software. This course covers topics in statistical computing including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, refitting models (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation, and Monte Carlo Markov Chain methods). Detailed biological examples are discussed. Programming will be done in Matlab. The focus of the course is on the use of numerical analysis methods for solving problems in statistical inference and estimation.

BTRY 672 Topics in Environmental Statistics (also STBTRY 672)
This course is a discussion group focusing on statistical problems in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

BTRY 682 Statistical Genomics (also STBTRY 682)
This course covers topics in the statistical analysis of genetic, molecular, and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of comparative molecular data, QTL mapping, and association mapping. Topics may vary from year to year.

All students are expected to participate in small research projects.

BTRY 689 Graduate Special Topics in Biometry and Statistics (also STBTRY 689)
Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 697 Individual Graduate Study in Biometry and Statistics (also STBTRY 697)
Fall, spring, or summer. 1–3 credits. S-U grades optional. Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 717 Linear and Generalized Linear Models (also STBTRY 717)
Spring. 3 credits. S-U grades optional. Prerequisites: BTRY 409, BTRY 417, and BTRY 602 or equivalents. Offered alternate years.
Statistical modeling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, quasi-likelihood, and generalized estimating equations. Covers the use of link functions and generalized linear models to accommodate nonlinear models and non-normally distributed data. Also covers the use of random effects to accommodate correlation structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.

BTRY 726 Problems and Perspectives in Computational Molecular Biology (also PL BR 726 and COM S 726)
Fall and spring. 1 credit. S-U grades only. Prerequisite: permission of instructor. Lec, M 1:25–2:15.
This is a weekly seminar series discussing timely topics of computational molecular biology. The course addresses methodological approaches to sequence annotation, protein structure and function relationships, evolutionary relationships across species. Statistical and deterministic computational approaches are covered and specific and detailed biological examples are discussed. Topics of interest are discussed in relation to papers prepared by teams of students and/or faculty. We pair students/faculty from biology backgrounds with students from math, computer science, and statistics for paper preparation. Students submit the salient questions addressed by the paper, the research methods used and the results obtained. At the end of the presentation, questions should be listed on an overhead slide to initiate discussion in the group.

BTRY 795 Statistical Consulting (also STBTRY 795)
Fall and spring. 2–3 credits. Prerequisites or corequisites: BTRY 602 and BTRY 609 and permission of instructor. S-U grades optional. Lec, W 1:25–2:15.
Participants in the Department of Biological Statistics and Computational Biology consulting service: faculty-supervised statistical consulting with researchers from other
disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

**BTRY 798 Graduate Supervised Teaching (also STBTRY 798)**
Fall and spring. 2-4 credits. S-U grades only. Permission of instructor and chair of special committee plus at least 2 advanced courses in statistics and biometry. Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

**BTRY 800 Master's-Level Thesis Research**
Fall or spring. Credit TBA. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the M.S. level.

**BTRY 900 Graduate-Level Dissertation Research**
Fall or spring. Credit TBA. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the Ph.D. level.

**COMM 101**
An overview of current knowledge about mediated communication, contemporary social issues. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues.

**COMM 201 Oral Communication**
Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. K. Berggren, J. Marston, T. Russo, and staff.

**COMM 203 Argumentation and Debate**

**COMM 230 Visual Communication**

**COMM 260 Science Writing for Public Information**
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Fall: Lec 01, M W F 9:05-9:55, Lec 02, M W F 10:10-11:00; spring: Lec 01, M W F 9:05-9:55 or Lec 02, M W F 1:25-2:15. S. Conover.

An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis is emphasized. Not oriented to the mass media.

**COMM 272 Principles of Public Relations and Advertising**
Summer. 3 credits. Not open to freshmen. Staff.

**COMM 282 Communication Industry Research**
Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. VanBuskirk.

**COMM 284 Sex, Gender, and Communication**
Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. VanBuskirk.

The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.
COMM 285 Communication in Life Sciences (also S&T S 285)
Spring. 3 credits. M W F 10:10–11:05.
B. Lewenstein.
Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from labor strikes to the web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301 Business and Professional Speaking
The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentational skills needed in particular settings suited to their own business and professional careers.

COMM 303 Speech and Debate Practicum
Fall and spring. 2 credits. Limited to 10–15 Program in Speech and Debate members only; permission of instructor and completion of 1-year trial basis. J. Hayman.
Students learn preparation for practice in CEDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class is divided into four groups according to level of experience; therefore, it may be repeated to a maximum of eight credits.

COMM 345 Human-Computer Interaction Design
Covers key issues of the design of the interaction between computers and people. Students develop the ability to evaluate solutions to design problems and a familiarity with implementing HCI designs.

COMM 349 Media Technologies (also S&T S 349)
Commonplace notions of communication and media regularly overlook the role of the material technologies. Yet, how and why we communicate the shapes we design; those technologies shape our efforts to communicate and the consequences of those efforts. This course considers technologies of media as an opportunity to analyze the intersection of technology and its social context.

COMM 350 Writing for Magazines
Fall, spring, and summer. 3 credits. Prerequisite: any college-level writing course. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments. Fall: M 12:50–1:45, spring: lec, T R 8–9:55; lab, R 12:20–2:15. S. Conroe.
A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

COMM 352 Science Writing for the Mass Media (also S&T S 352)
Fall. 3 credits. Not open to freshmen. Limited to 24 students. Prerequisite: 1 college-level writing course. Lec, M W 9:05–10:00; lab, W 12:20–2:15. B. Lewenstein.
How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

COMM 353 Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 260, COMM/S&T S 352, ENG 350, or permission of the instructor. Offered even-numbered years. B. Lewenstein.
Students cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting, students review science writing techniques and issues. At the meeting, students meet with science writers and attend press conferences and scientific sessions. Students write at least two stories. Students are responsible for all costs of travel, lodging, and meals.

COMM 376 Planning Communication Campaigns
Spring. 3 credits. Prerequisites: COMM 282 or equivalent social research course (may be taken concurrently). T R 11:40–12:55. Staff.
This course provides a theoretical and practical overview of the audiences, messages, and evaluation of political and other types of communication campaigns. Emphasis is placed on political campaigns, but principles of campaign planning and evaluation relevant to other kinds of messages are covered. Topics include campaign tactics and audience responses, audience segmentation, message construction, political advertising, agenda-setting, framing and framing in political campaigns, interrelationships between issues, framing of issues versus content of issues, attitude-change, and audience behaviors. Common methods of data collections (focus groups, experiments, surveys, etc.) and analysis of campaign-related data sources are included.

COMM 382 Advanced Communication Research
Fall. 3 credits. Prerequisites: COMM 120, 282, may be restricted to honors students. TBA. Staff.
This course provides an advanced approach to data analysis and methods of data collection in communication research. It is intended for seniors who intend to complete an honors project or other advanced research. Every week we examine one or two research situations in greater detail, analyze specific problems connected to the method used, and discuss strategies for data analysis and presentation. This provides all students who graduate with distinction in research—indeed of their specific thesis topic—with a more in-depth understanding of the methods used in communication research and how they are applied to concrete projects.

COMM 398 Issues in Teaching Communication
Fall and spring. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301. Alternate M 7:30–9:10 P.M. K. Berggren. This seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405 Community Service Practicum
Fall and spring. 2 credits. May be repeated for credit. Limited to 10–15 Program in Speech and Debate members; permission of instructor required. TBA. J. Hayman. Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 410 Organizational Communication: Theory and Practice

COMM 418 Communication and Persuasion
Spring. 3 credits. Limited to juniors and seniors only. Prerequisite: COMM 282 or equivalent social science research methods course; and COMM 116 and 120 or introductory psychology or social psychology. T R 10:10–11:40. Staff. Focus is on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. These theories are applied to a variety of communication situations, including mass communication, advertising, public relations, public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

COMM 420 Public Opinion and Social Processes
Provides an overview of the concept of "public opinion" and its implications for macrosocial processes—from both a scientific and an applied angle. The course examines the historical development of the concept in fields such as political science, social psychology, and communication science, and then takes a closer look at what we mean by "measuring" public opinion. Are we talking about merely summing across individual opinions, or are there more subtle dynamics of public opinion that go beyond what individuals in a society think? Based on this more theoretical work, we will focus on the importance of public opinion and public opinion perception for different aspects of
democratic societies, such as policymaking, risk perceptions, or political participation.  

**COMM 421 Communication and the Environment**  
Spring. 3 credits. Offered even-numbered years.  
J. Shanahan.  
Students investigate how values, attitudes, social structures, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media persuade and inform, and discussion of the implications of public consumption of environmental content.  

**COMM 422 Psychology of Television (and Beyond)**  
Fall. 3 credits. Prerequisites: introductory psychology or HDPS or COMM 120 or COMM 116. Lec, M W F 12:20-1:10. Sec 01: T 11:15-12:05; Sec 02: W 1:25-2:15; Sec 03: W 2:30-3:20; Sec 04: R 1:25-2:15. M. Shapiro.  
A survey of knowledge about how people mentally process television and other audiovisual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include: why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.  

**COMM 424 Communication in the Developing Nations**  
Fall. 3 credits. Limited to juniors and seniors. Lec, T 1:25-2:35; lab T 2:35-4:25. R. Colle.  
The role of communication in development programs, particularly in the Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning, and community development and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.  

**COMM 428 Communication Law**  
Spring. 3 credits. Limited to junior, senior, and graduate students; others by permission of the instructor. Lec, M W F 11:15-12:20. D. Grossman.  
This course deals with the law governing communication media. Topics covered include First Amendment concepts, restraints on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.  

**COMM 440 Advanced Human-Computer Interaction Design**  
Fall. 3 credits. T R 10:10-11:25. G. Gay.  
Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.  

**COMM 445 Seminar in Computer-Mediated Communication**  
Spring. 3 credits. Prerequisites: COMM 240 or 245. T R 11:40-12:55. J. Walther.  
Focuses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student collaborations using electronic conferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual teams, videoconferencing, and others as they emerge.  

**COMM 450 Language and Technology**  
Fall. 3 credits. T R 11:40-12:55. J. Hancock.  
Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Attention will focus on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.  

**COMM 466 Public Communication of Science and Technology (also S&T 466)**  
Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 350, or ENGR 350, or permission of instructor. Offered even-numbered years. M W 2:55-4:10. B. Lewenstein.  
Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, and analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.  

**COMM 476 Communication Fellows Program**  
Spring. 2 credits. Prerequisites: permission of instructor; limited to communication seniors selected on academic basis and determined by the interest of the faculty. Lec. M W 2:55-4:10. G. Gay.  
A series of lectures, seminars, and guest speakers exploring the planning, evaluation, and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers. Fee of $150.00 charged.  

**COMM 490 Independent Honors Research in Social Science**  
Fall or spring. 1-6 credits. Limited to undergraduates who have met the requirements for the honors program. M 2:55-4:10. D. Schaeufele.  
Students who have successfully completed 382 who have met the requirements for the honors program. TBA. D. Schaeufele.  
Students who have successfully completed 382 will register for no more than 3 credits. Students who have not completed an advanced research methods course may register for up to 6 credit hours.  

**COMM 496 Risk Communication**  
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.  

**COMM 499 Special Topics in Communication**  
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.  

**COMM 499 Communication Internship**  
2 credits (sec. 1) or 1 credit (sec. 2). K. Berggren.  
Students who register for section 1 will receive a structured, on-the-job learning experience under the supervision of communication professionals in a cooperating organization. Requirements include mandatory participation in two two-day symposiums (spring semester), will receive an "R" grade and two post-internship discussions (fall semester) plus a minimum of 120 hours of work experience in communication (summer or fall) and a final paper that analyzes the work experience according to communication theories. The preparatory symposiums and summary evaluation sessions may be done by distance education if necessary. The preliminary symposiums may be taken by students who are still seeking a specific internship. Students may register in a subsequent semester for one additional hour (section 2) for an internship with an organization that requires intern to receive academic credit. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required.  

**COMM 499 Individual Study in Communication**  
Fall or spring. 1-3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.  

**COMM 499 Communication Teaching Experience**  
Fall or spring. 1-3 credits; may be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (3.2 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register
with an Independent Study form (available in J40 Roberts Hall). Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research
Fall or spring. 1–3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in J40 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific, systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

[COMM 510 Organizational Communication: Theory and Practice
Not offered 2003–2004.]

COMM 540 Impact of Information Technology
Spring. 3 credits. Prerequisite: permission of instructor. Letter grade only. TR 1:25–2:40. G. Gay. The course focuses on theories of communication's influence on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories are also applied to a variety of communication situations including mass communication, advertising, public relations/ public information, and interpersonal communication. Lectures concurrent with COMM 442; graduate students should enroll in COMM 638.

COMM 620 Public Opinion and Social Processes
Fall. 3 credits. TR 10:10–11:25. D. Scheufele. The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 420; graduate students should enroll in COMM 620.

COMM 621 Advanced Communication and the Environment
Spring. 3 credits. TR 10:10–11:25. Offered even-numbered years. J. Shanahan. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 622 Advanced Psychology of Television (and Beyond)
Fall. 3 credits. Prerequisites: graduate student status and permission of instructor. TBA. M. Shapiro. A survey of knowledge about how people mentally process television and other audio-visual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include: why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.

COMM 624 Communication in the Developing Nations
Fall. 3 credits. Open to juniors, seniors, and graduate students. Lect. T 1:25–2:35; lab. T 2:30–4:25. R. D. Colle. The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning, and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 640 Human Computer Interaction Design
Fall. 3 credits. Prerequisites: graduate standing or permission of instructor. TR 10:10–11:25. G. Gay. Graduate-level readings and research supplementing COMM 440. This course focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 645 CMC Graduate Seminar
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor. J. Walther. Graduate-level readings and research supplementing COMM 445. Through close reading and research in communication and technology, and through participation in projects using these technologies, students enhance experimental, theoretical, and critical understanding of contemporary computer-mediated communication systems and uses. Topics include virtual teams, videoconferencing, and others.

COMM 650 Language and Technology
Fall. 3 credits. TR 11:40–12:55. J. Hancock. Graduate-level readings and research supplementing COMM 450. The course examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Attention will focus on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

[COMM 676 Communication Planning for Social and Behavioral Change

COMM 680 Studies in Communication
Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W 5:40–6:55 and additional meetings TBA. M. Shapiro. Development of, and contemporary issues in, communication theory. Discussion includes the interaction between communication and society, social groupings, and mental processing.

COMM 682 Methods of Communication Research
Spring. 3 credits. Lect. M W F 12:20. D. Scheufele. An analysis of the methods used in communication research. Emphasis is on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

[COMM 683 Qualitative Research Methods in Communication
Not offered 2003–2004.]

COMM 686 Risk Communication
Spring. 3 credits. TR 1:25–2:15; lab R 2:30–4:25. C. Scherer. An examination of the theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 480; graduate students should enroll in COMM 680.
COMM 691 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only. Staff.
Some week scholars from a wide variety of fields present varied topics in theory or research as it relates to communication; other weeks graduate students present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Staff. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

[COMM 781 Seminar in Psychology of Communication
Spring. 3 credits. Letter grade. Prerequisite: COMM 680 and 681 or equivalent graduate level theory in psychology or social psychology. Offered odd-numbered years. Not offered 2003-2004. M. Shapiro. Discussion and analysis of selected current issues in the psychology of communication. Students discuss and synthesize current research and theory in the mental processing of communication.]

COMM 794 Seminar in Communication Issues
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: permission of instructor. Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: permission of instructor. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory
Fall and spring. 1-3 credits each semester. Letter grade only. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.

Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799 Graduate Research
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor. Small group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 800 Master's-Level Thesis Research
Fall or spring. 1-6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair. Thesis research for Master of Science (Communication) students.

COMM 901 Doctoral-Level Dissertation Research
Fall or spring. 1-9 credits. May be repeated for a maximum of 9 credits. S-U grades only. Prerequisites: completion of "A" exam, permission of committee chair. Dissertation research for doctoral candidates.

CROP AND SOIL SCIENCES

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Courses by Subject
Crop Science: 311, 312, 314, 315, 317, 415, 444, 455, 608, 610, 612, 613, 614, 691, 820, 920, 921

All following Crop and Soil Science courses prefixes were previously listed as SCAS.

General Courses

CSS 190 Sustainable Agriculture (also HORT 190)

This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes scientific principles of management that conserve or renew those resources for continuing benefit to society. The information is of general value for nonmajors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the web. Extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

CSS 494 Special Topics in Crop and Soil Sciences (undergraduate level)
Fall or spring. 1-3 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department committee, and the same course is not offered more than twice under this number.

CSS 497 Individual Study in Crop and Soil Sciences
Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). The topics in soil science, crop science, or environmental information science are arranged at the beginning of the term for individual study or for group discussions.

CSS 498 Teaching Experience in Crop and Soil Sciences
Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course.

CSS 499 Undergraduate Research
Fall or spring. Credit TBA. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Independent research on current problems selected from any phase of crop science or soil science.

CSS 695 Planning and Reporting Research
Spring. 2 credits. First meeting the first T of the semester in 102 Bradfield. Next offered spring 2005. G. W. Fick. New graduate students and students starting to write their theses have found this course very helpful. Topics covered include scientific writing, reviewing, seminar presentations, and poster presentations. The nature of science and the scientific method are also discussed along with professional ethics in the conduct and communication of science.

CSS 696 Seminar in Crop and Soil Sciences
Fall and spring. 1 credit. S-U grades only. Lec, T 3:30-4:30. Staff. Seminar cover current research and selected topics in the crop and soil sciences and related fields.

Crop Science

CSS 311 Grains and Nutriceuticals
Fall. 4 credits. Prerequisite: CSS 260 or BIOLP 241. Lecs, M W F 10:10; lab, M 1:25-4:25. 1 or 2 field trips during lab periods (until 5 P.M. or on weekends). R. L. Obendorf. Globally, six seed crops provide 75 percent of the caloric and protein needs of mankind by direct consumption or indirectly through animal and microbial products. Seed crops for starch, protein, oil, fiber, sugar, nutriceutical, pharmaceutical, and industrial uses are emphasized, including adaptation, growth and development, environmental stress, optimization of yield and quality, and genetic improvement in the context of food systems for improved health. Laboratory uses living plants, extensive crop garden, and computer simulation.
CSS 312 Forage Crops
Spring. 4 credits. Prerequisites: introductory course in crop science or biology or permission of instructor. Lec, T R 10:10-11:15; Lab, M or W 1:25-2:25. Next offered spring 2005. G. W. Fick.
The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

CSS 314 Tropical Cropping Systems: Biodiversity, Social, and Economic Impacts (also INTAG 314)
Fall. 3 credits. Prerequisite: introductory course in crop science or soil science or biology or permission of instructor. Lec, T R 9:25-10:40; E. C. Fernandes.
Characterization and discussion of traditional shifting cultivation; lowland rice-based systems; upland cereal-based systems; smallholder mixed farming including root crops and livestock; plantation fruit and oil crops; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The impact of tropical cropping systems on the environment are evaluated.

CSS 315 Weed Science
Fall. 4 credits. Prerequisite: introductory course in biology or botany. Lec, T R 10:10-11:25; Lab, T or W 2:00-4:25.
A. Ditommaso.
Principles of weed science are examined. Emphasis is on: (a) weed biology and ecology; (b) chemistry of herbicides in relation to effects on plant growth and the environment; and (c) current management strategies that are relevant to both crop and noncrop ecosystems. Hands-on laboratory sessions cover weed identification and ecology, and herbicide selectivity and symptomology.

CSS 317 Seed Science and Technology (also HORT 317)
Fall. 3 credits. Prerequisite: BIOL 241 or equivalent. Lec, T R 11:15-12:05; Lab, R. Two all-day field trips will be scheduled during the semester. Offered alternate years. A. G. Taylor, Geneva Experiment Station (Ithaca contact, R. L. Obendorf). The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

CSS 415 Principles and Practices of Agroforestry (also NTRES 415 and HORT 415)
Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. Lec, M W F 10:10-11:00. Optional laboratory. CSS (SCAS) 416 (also NTRES 416 and HORT 416). E. Fernandes, K. Mudge, L. Buck, J. Lassoie.
An introduction to modern and traditional agroforestry systems that involves spatial or temporal integration of multiple woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and nonwoody components of agroforestry systems are considered. Concepts and theories of site and species selection will be presented. Selected topics that will be examined include: agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

CSS 416 Principles and Practices of Agroforestry—Laboratory (also NTRES 416 and HORT 416)
Fall. 1 credit. Prerequisite: CSS 415 and/or HORT 415. K. Mudge, E. Fernandes, L. Buck, J. Lassoie.
An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management techniques applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

CSS 444 Integrated Pest Management (also ENTOM 444)
Fall. 4 credits. Prerequisites: BIOEE 261, ENTOM 212 or 241, and PL PA 241 or their equivalents or permission of instructor. Lec, M W F 9:05; labs, M 1:25-4:25.
J. E. Losey and A. Ditommaso.
Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

CSS 445 Mineral Nutrition of Crops and Landscape Plants (also HORT 455)
Spring. 3 credits. Prerequisite: CSS 260 and BIOL 242, or equivalent. Lec, M W F 9:05; lab, R 1:30-4:00. Offered alternate years. H. C. Wien and staff.
A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students will understand the principles of mineral nutrition in crop plants, and are able to diagnose deficiencies by symptoms and tissue tests and devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

CSS 608 Water Status in Plants and Soils
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lec, 1 hour TBA; lab, W 1:25-4:25, first class meeting R. T. L. Setter.
Covers techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

CSS 610 Physiology of Environmental Stresses
Fall. 3 credits. Prerequisite: plant physiology, BIOPL 242 or 341, or permission of instructor. Offered even years. Lec, T R 10:10-11:25. Next offered 2004. T. L. Setter.
A study of the responses of plants to environmental stresses, including chilling, freezing, high temperature, salinity, drought, hypoxia, and toxic elements. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

CSS 612 Seed Physiology and Biotechnology
Spring. 3 credits. Prerequisite: plant physiology. M W F 11:20-12:00. T. L. Setter.
A study of environmental constraints on crop-plant productivity from an eco-physiological perspective. Acclimation responses and genetic adaptation are examined for temperature, light, water, compacted soil, and mineral nutrient environments. Topics include: photosynthesis and nitrogen assimilation, translocation, and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral sinks in response to environment; seed set; water transport and stomatal regulation; root growth in flooded and compacted soils; and drought responses. Emphasis is on growth processes of vegetative plant organs.

CSS 614 Weed Ecology and Management
Spring. 3 credits. Prerequisite: plant physiology. M W F 12:20-1:00. T. L. Setter.
A study of environmental constraints on crop-plant productivity from an eco-physiological perspective. Acclimation responses and genetic adaptation are examined for temperature, light, water, compacted soil, and mineral nutrient environments. Topics include: photosynthesis and nitrogen assimilation, translocation, and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral sinks in response to environment; seed set; water transport and stomatal regulation; root growth in flooded and compacted soils; and drought responses. Emphasis is on growth processes of vegetative plant organs.

CSS 642 Plant Mineral Nutrition (also BIO PL 642)
Spring. 3 credits. Prerequisite: BIO PL 341 or equivalent. Lec, M W F 10:10-11:00. Offered alternate years. L. V. Kochian, R. M. Welch.
A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements, the
involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate the above topics.)

**CSS 691 Special Topics in Crop Science**
Fall or spring. 1–6 credits. S-U grades optional. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

**CSS 920 Graduate-Level Thesis Research in Crop Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

**CSS 921 Doctoral-Level Dissertation Research in Crop Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted for candidacy after the "A" exam has been passed.

### Environmental Information Science

**CSS 398 Environmental Microbiology (also BIOMI 397)**
Fall. 3 credits. Prerequisite: BIOMI 261 or BIOMI 290 or CSS (SCAS) 260 or permission of instructor. Lecs, M W F 10:10–11:00. W. C. Gihorn. The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

**CSS 410 Environmental Impact of Agricultural Biotechnology**
Spring. 3 credits. Prerequisite: BIO G 109 or equivalent. Lecs, M W 1:25–2:15; lab, W 2:30–4:25. Staff. Outlines how changes in agricultural practice associated with the introduction of genetically modified (GM) crops might impact the environment. Current knowledge of the different kinds of environmental problems caused by some GM crops will be discussed, as well as the principles and questions that have emerged from studies of environmental impact so far.

**CSS 411 Resource Inventory Methods (also CEE 411)**
Spring. 3 credits. Prerequisite: permission of instructor. Lecs, M W 9:05–9:55; lab, M R 1:25–4:25. A. Lembo. A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

**CSS 420 Geographic Information Systems**
Fall. 4 credits. Prerequisite: CSS (SCAS) 411 or permission of instructor. Lecs, T R 9:05–9:55; lab, T 10:10–11:10; M W R F 1:25–4:25. A. Lembo. Principles and applications of geographic information systems for the characterization and assessment of agronomic and environmental resources. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment are considered.

**CSS 465 Global Positioning System**
Fall and spring. 1 credit. Prerequisite: CSS 411 or CSS 420, or equivalent, or consent of instructor. Lecs, F 9:05–12:05. A. Lembo. Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization; field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration.

**CSS 485 Problem Solving in Environmental and Agroecosystem Sciences**
Fall. 4 credits. Prerequisite: CSS 260 or equivalent. Limited to seniors. Lecs, 1st meeting F 1:25; lab, at least one 4-hour afternoon per week plus additional time as needed. P. Baveye. Capstone experience for seniors, centering on the interdisciplinary analysis of a specific problem (e.g., heavy metal contamination of Cornell orchard in fall 2003), with a number of faculty members serving as technical resources and guidance as needed. This course involves field trips, in-depth discussions of data assembled prior to the course, gathering of relevant scientific information (in groups), and report writing. Students will be expected to work approximately 15 hours per week on a range of assignments. The course is conceived as the first of a sequence of two complementary courses, but it can be taken alone.

**CSS 486 Problem Solving in Environmental and Agroecosystem Sciences II**
Spring. 4 credits. Prerequisite: CSS 485. Limited to seniors. Lecs, TBA; lab, at least one 4-hour afternoon per week plus additional time as needed. P. Baveye. Capstone experience for seniors, in continuation of CSS 485. Students work in groups to carry out the laboratory measurements identified in the fall, with faculty members serving as technical support and lecturing as needed. Students will be expected to work approximately 15 hours per week on a range of laboratory measurements. The results of these measurements are discussed as they become available and are combined with the rest of the assembled information to come up with recommendations about the management of the targeted problem (e.g., in spring 2004, heavy metals in Cornell orchard).

**CSS 620 Spatial Modeling and Analysis**
Spring. 3 credits. Prerequisites: CSS (SCAS) 420, CSS (SCAS) 461, or permission of instructor. Lecs, T R 9:05–9:55; lab, T W 1:25–4:25. A. Lembo. Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification, and evaluation. Application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

**CSS 660 Remote Sensing Fundamentals (also CEE 610)**
Fall. 3 credits. Prerequisite: permission of instructor. Lecs, M W F 12:20–1:15; lab, F 12:20–1:25, 1:25–2:30, 2:30–4:25. W. D. Philpot. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

**CSS 675 Modeling the Soil-Plant-Airshome System (also EAS 675)**
Spring. 3 credits. Prerequisite: CSS (SCAS) 483 or equivalent. Offered alternate years. Lecs, T R 8:40–9:55. S. J. Riva. Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, morphology, and development, potential crop production and crop production limited by moisture and nutrient availability, plant-plant competition, and land surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formulation are discussed.

**CSS 694 Special Topics in Environmental Information Science**
Fall or spring. 1–6 credits. S-U grades optional. Staff. Study of topics in environmental science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

**CSS 860 Master's-Level Thesis Research in Environmental Information Science**
Fall or spring. Credit by arrangement. S-U grades only. Graduated faculty. Limited to students specifically in a master's program.

**CSS 960 Graduate-Level Dissertation Research in Environmental Information Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduated faculty. Limited to students in a Ph.D. program only before the "A" exam has been passed.

**CSS 961 Doctoral-Level Dissertation Research in Environmental Information Science**
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduated faculty. Limited to students admitted to candidacy after the "A" exam has been passed.
CSS 362 Soil Morphology
Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. All-day field trip required. R 1:25-4:25. Staff. The principles for field identification of soil properties, profiles, and landscapes are presented. Soil pits are examined, described, classified, and interpreted in the field.

CSS 363 Soil Genesis, Classification, and Survey
Fall. 4 credits. Prerequisite: CSS (SCAS) 260. S-U grades optional. Lecs, T R 11:40-12:55, lab, R 2:30-4:30. Offered alternate years. H. M. van Es. Introduces students to the principles of soil and water interaction and to the effects of human intervention on these processes. Aspects of soil and water management, including hydrology, erosion and conservation, water management, contaminant movement, tillage, soil compaction, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

CSS 365 Environmental Chemistry: Soil, Air, and Water
Spring. 3 credits. Prerequisites: CHEM 207-208. Lecs, M W F 10:10-11:00. M. B. McBride. An overview of the chemical processes that control the concentrations and bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil’s function as a filter for contaminants. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

CSS 372 Nutrient Management in Agro-Ecosystems
Spring. 4 credits. Prerequisite: CSS (SCAS) 260 or permission of instructor. Lecs, T R 8:40-9:55. S. Riha. Students become familiar with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agro-ecosystems. Emphasis is placed on where nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations. Graduate students should enroll in CSS 472.

CSS 412 Whole Farm Nutrient Management (also AN SC 412)
Spring. 2 or 4 credit option. Open to juniors, seniors, and graduate students only. Course offered as two modules. Enrollment in Module 1 for the first half of the semester is required (2 credits). Module 1 consists of crop and manure nutrient management planning, no prerequisites. Enrollment in Module 2 for the second half of the semester is optional (additional 2 credits). This module builds on the crop and manure nutrient management planning module by integrating agronomic nutrient management planning with herb nutrient management planning. AN SC 411 required. Lec, T R 11:15 and lab T 1:25-4:25 for both modules, with work on case studies outside of lab. D. G. Fox and Q. M. Ketterings. This course provides students with an understanding of the concepts underlying whole farm nutrient management planning to improve profitability while protecting water and air quality. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for a Concentrated Animal Feeding Operation plan to meet environmental regulations. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning System (CNMPS) and other tools. All students enrolled learn the concepts and processes of developing the crop and manure nutrient management plan component of a CNMP during the first half of the semester in Module 1. Students opting to continue through the end of the semester in Module 2 (4 credit option) build upon knowledge gained in the first half of the semester by learning the knowledge and skills necessary to integrate crop production and herd feeding management for reducing nutrient imports on farms.

CSS 466 Soil Ecology (also HORT 466)
Spring. 4 credits, with laboratory. Prerequisite: CSS (SCAS) 260 or biology or ecology and CSS 260 or permission of instructor. Lecs, T R 10:10-11:25, lab, W 1:25-4:25. J. E. Thies and L. Drinkwater. Surveys the diversity of soil organisms and their roles in terrestrial ecosystems. The course covers the fundamental principles and features of biologically mediated processes in the soil and the function of soil organisms in the wider context of both managed and unmanaged ecosystems. The role of plant-microbe interactions in shaping the larger ecosystem serves as the basis for comparing soil community structure and function across a variety of ecosystems. The class investigates the consequences of anthropogenic activities from local soil management to global change on soil biodiversity and the health of ecosystems. Field trips around Ithaca are arranged. Offered alternate years.

CSS 471 Properties and Appraisal of Soils of the Tropics
Spring. 3 credits. Prerequisites: CSS (SCAS) 260 or equivalent. S-U grades optional. No audits accepted. Lecs, T R 12:20; disc, W 1:25-3:25. Offered alternate years. A. VanWambeke. The course examines the conditions in which soils form, and considers ecological, geological, and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management described, and methods to alleviate the constraints to crop production and soil conservation in the environment are examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes by reviewing the most recent sources of information generated in tropical countries and published in Latin-American, French, and English journals. The last part of the course gives special attention to soil-affecting factors, i.e., cultivation, cropping systems, and the characteristics of acid-sulfate soils. Lectures include slides of soils, landscapes, and cropping systems. The course is available on a compact disk in Mann Library.

CSS 472 Nutrient Management and Research in Agro-Ecosystems
Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. Lecs, T R 8:40-9:55, lab, R 1:25-4:25. J. Lehmans. Students become familiar with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agro-ecosystems. Emphasis is placed on where nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations. The laboratory experiments conclude with a final paper.

CSS 473 Ecology of Agricultural Systems (also BIOEE 473)
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. Lee and L. R. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips to R: 2:30-5:30. Not offered fall 2003. A. G. Power and E. C. Fernandes. Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-microbe relations, plant-herbivore interactions, biological pest control, and evolutionary processes in agriculture. Case
I studies from both the tropics and the temperate zone are used to illustrate systems. Energy budgets, soil heat flow, water movement, and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum are covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

CSS 621 Applications of Space-Time Statistics
Spring. 2 credits. Prerequisite: STBTRY 601 or equivalent. Offered alternate years.
TBA. H. Van Es.
An introduction to space-time statistics with applications in agriculture and environmental management. Topics include geostatistics (including use of ArcView's Geostatistical Analyst), temporal statistics, sampling, experimental design, state-space analysis, data mining, and fuzzy logic. The focus is on landscape-scale processes and a user's perspective.

CSS 663 Pedology
Spring. 3 credits. Prerequisite: CSS (SCAS) 361 or permission of instructor. M W F 11:15-12:05. Staff.

CSS 666 Applied Plant/Microbe Interactions
Fall. 4 credits. Prerequisite: CSS 366 or equivalent, or permission of instructor. Lec. M T W Th 1:25-2:25, lab. F 1:25-4:25. Offered alternate years. J. E. Thies.
Discussions on current research into applied plant/microbe interactions including: molecular signaling between plants and microbes involved in symbiotic, associative, or pathogenic interactions; and new methodologies for understanding the role(s) soil microorganisms play in plant production. In the lab, students undertake an individual research project matched to their interests in which they employ current methods. Project results are presented as a final poster.

CSS 667 Advanced Soil Physics
Spring. 3 credits. Prerequisites: one year of college physics and CSS (SCAS) 483 or permission of instructor. S-U grades optional. Offered alternate years. M W F 11:15-12:05. P. C. Baveye.
A detailed study of measurement processes and of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamical and mechanistic (molecular) standpoint. Also covered are mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.

CSS 669 Organic Matter—Soils, Sediments, and Waters
Spring. 3 credits. Prerequisites: CSS (SCAS) 260 or CHEM 357-358 or equivalent. M W F 10:10-11:00. J. M. Duxbury. A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Includes a modeling project of soil carbon dynamics in natural or agricultural ecosystems.

CSS 671 Soil Chemistry
Fall. 3 credits. Prerequisite: 1 year of physical chemistry or permission of instructor. Lec. M W F 10:10. Offered alternate years. M. B. McBride. A detailed examination of the structure and surface chemistry of colloidal particles common to soils. Exchange, mineral-solution equilibria, and adsorption reactions of silicate clays, oxides, and organic matter are emphasized. The behavior of environmental contaminants in soils, particularly metals and toxic organics, is described.

CSS 672 Nutrient Cycling in Natural and Managed Ecosystems
Nutrient cycling in soil and the interface between the soil and the vegetation, atmosphere and ground water are covered. We examine the biogeochemistry of nutrient elements in natural ecosystems, disturbed or degraded ecosystems, and agricultural systems including pollution in watersheds. Students develop independent projects, present a research proposal and conduct field research which concludes in a presentation and a paper in publishable format.

CSS 693 Special Topics in Soil Science
Fall, spring, or summer. 1-6 credits. S-U grades optional.
Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

CSS 696 Seminar: Organic Inputs In Tropical Soils and Agroforestry (also NTRES 696 and INTAG 696)
A variety of speakers present seminars on organic inputs in the tropics and agroforestry. Students are required to prepare synopsis of each seminar.

CSS 880 Master's-Level Thesis Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

CSS 980 Graduate-Level Dissertation Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only before the "A" exam has been passed.

EARTH AND ATMOSPHERIC SCIENCES

EAS 101 Introductory Geological Sciences
Spring. 3 credits. Staff. Designed to enhance an appreciation of the physical world. Natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems are emphasized. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth System Science) are covered. Water, mineral, and fuel resources and environmental concerns are also examined. Field trips in the Ithaca region.

EAS 102 Evolution of the Earth and Life (also BIO G 170)
Spring. 3 credits. Lec. T R 9:05-9:55 or 11:15-12:05; labs T W or R 2:00-4:25.
J. L. Cisne.
This course covers: earth systems and their evolution; earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; precedents for ongoing global change; and dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping current geography and fossil-collecting field trips.

EAS 107 How the Earth Works
Spring or summer. 1 credit. M 12:20-1:10.
J. L. Cisne.
A user-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

EAS 108 Earth in the News
Summer. 3 credits. L. Losh.
Provides an introduction to physical geology and earth systems science and explores the scientific basis for informed decision making regarding many timely environmental issues including global warming; water pollution and use; geologic hazards such as floods, earthquakes, and volcanoes; fossil fuel distribution and use; and land use.

EAS 109 Dinosaurs
Fall. 1 credit. Lec. T W or R 12:20-1:10.
J. L. Cisne.
An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines
contribute to understanding dinosaurs and their world.

**EAS 111 To Know the Earth**
Fall. 3 credits. Lecs T R 10:10–11:25.
J. M. Bird.
Acquaints the nonscientist with Earth, its major features, how the Earth has evolved, Earth system science, and building a habitable planet. Covers the effects of human activity on geologic environments, mitigating environment damage, and living with natural hazards. Also covers mineral resource use in the twenty-first century and an environmentally sound fuel-minerals cycle.

**EAS 122 Earthquake! (also ENGR 122)**
Spring. 3 credits. Lecs T R 1:25–2:40.
L. D. Brown.
The science of natural hazards and strategic resources is explored. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

**EAS 131 Basic Principles of Meteorology**
Fall. 3 credits. Lecs, M W F 9:05.
M. W. Wysocki.
A simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulation; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

**EAS 133 Basic Meteorology Lab**
Fall. 1 credit. Prerequisite: concurrent enrollment in EAS 131. S-U grades optional. T W or R 1:25–4:25 or M W 7:00–9:30 P.M. M. W. Wysocki.
Laboratory course covering topics presented in EAS 131.

**EAS 150 Introduction to Fortran Programming**
Fall. 3 credits. Lecs, T R 12:20–1:10; lab T 1:25.
M. W. Wysocki.
An introduction to the elements of computer programming using Fortran. Exercises involve mainly meteorological problems.

**EAS 154 The Sea: An Introduction to Oceanography, Lecture (also BIOEE 154)**
Spring, summer. 3 credits. The optional one-credit laboratory for this course is offered as EAS/BIOEE 155. S-U grades optional. Lecs, T R 11:40–12:55. Spring: C. H. Greene, W. M. White; summer: B. C. Monger.
A survey of the physics, chemistry, biology, and geology of the oceans for both science and non-science majors. Topics include: seawater spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate change, ocean ecology, and coastal processes.

**EAS 155 The Sea: An Introduction to Oceanography, Laboratory (also BIOEE 155)**
Spring. 1 credit. Prerequisite: concurrent enrollment in EAS/BIOEE 154. S-U grades optional. Lab, M 2:00–4:25 or 7:30–9:55 P.M., or W 7:30–9:55 P.M. C. H. Greene.
Laboratory course covering topics presented in EAS/BIOEE 154.

**EAS 200 Art, Archaeology, and Analysis (also ENGRD 198, MS&E 285)**
Spring. 3 credits. Lecs M W F 11:15–12:05.
R. W. Kay.
An interdepartmental course on the use of techniques of science and engineering in cultural research. Applies physical and physiological principles to the study of archaeological artifacts and works of art. Covers historical and technical aspects of artistic creation. Includes analyses by modern methods to deduce geographic origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for engineering.

**EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 211)**
Fall. 3 credits. Prerequisites: PHYS 112 or 207. Lecs T R 10:10–11:00, lab R 2:00–4:25 or W 7:30–9:30. L. M. Cathles.
This course covers: formation of the solar system; accretion of the Earth; the rock cycle: radioactive isotopes and the geologic time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport; and the weathering cycle: chemical cycles, CO2 (weathering), rock cycle, controls on global temperature (CO2 or ocean currents), and oil and mineral resources.

**EAS 210 Introduction to Field Methods in Geological Sciences**
1 lab, Saturday field trips. 3 credits. Prerequisite: EAS 101 (or 201) or permission of instructor. R. Allmendinger.
Considers the methods by which rocks are used as a geological database. Covers field methods used in the construction of geologic maps and cross sections; systematic description of stratigraphic sections. Field and laboratory sessions meet on Saturdays until Thanksgiving. There is also one additional lecture during most of these weeks. There is one weekend field trip to the Adirondack Mountains.

**EAS 213 Marine and Coastal Geology**
Summer. 4 credits. Prerequisite: Staff.
A special two-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. Estimated cost for 2003 (including tuition, room, board, and all required field trips) is $12,200. For more details and an application, contact the SML office, G14 Stimson Hall, or visit www.sml.cornell.edu.

**EAS 250 Meteorological Observations and Instruments**
Spring. 3 credits. Prerequisite: EAS 131.
Lecs, M W 12:20; lab, R 1:25.
M. W. Wysocki.
This course covers methods and principles of meteorological measurements and observations, weather, atmosphere, and remote systems. Also covered are: instrument sitting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis. The course is intended to serve as preparation for Observers Examination. Lab fee $50.

**EAS 260 Soil Science (also CSS 260)**
Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05; lab, M T or W 1:25. S. J. Riha.
Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characteristics, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the soil as an ecosystem considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

**EAS 268 Climate and Global Warming**
Spring. 3 credits. Prerequisite: basic college math; S-U grades optional. Lecs. M W F 9:05. A. T. DeGaetano.
Students from a range of disciplines become familiarized with some contemporary issues in climatology as global warming and El Niño. Introductions to the natural greenhouse effect, past climates, observed and projected climate changes and impacts. Atmospheric climate variations (e.g. El Niño) and their consequences and predictability. Weekly student-led discussions of issues appearing in journals such as Nature.

**EAS 296 Forecast Competition**
Fall and spring. 1 credit. S-U grades only. Prerequisite: sophomore undergraduate standing in atmospheric science, or permission of instructor. D. S. Wilks.
This two-semester course provides daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded after the second semester. May be repeated for credit.

**EAS 302 Evolution of the Earth System**
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lecs M W F 10:10–11:00. Disc W 2:30–3:20. W. White and staff.
Co-evolution of life and the Earth system: Earth's early history: plate tectonics, continental drift, and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.

**EAS 315 Geomorphology**
Fall. 4 credits. Prerequisite: one course in either geology, hydrology, or soil science. Lecs T R 8:00–9:55, lab, M T 2:00–4:25.
B. L. Ikels.
A study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure, as we examine their modification by physical interaction with the atmosphere and oceans. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field
examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe. Two Saturday field trips.

**EAS 321 Introduction to Biogeochemical Cycles (also NTRES 321)**

Fall. 4 credits. Prerequisites: CHEM 207. MATH 112, plus a course in biology and/or geology. Lecs T R 12:20-1:10, disc W or R 2:00-4:25. L. A. Derry, J. Yavitt. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and carbon models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

**EAS 326 Structural Geology**

Spring. 4 credits. Prerequisite: MATH 112, EAS 101 or 201, or permission of instructor. One weekend fieldtrip. Lecs M W F 11:15-12:05, lab T 2:00-4:25. R. W. Allmendinger. Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, folding, and structural families.

**EAS 331 Climate Dynamics (also ASTRO 331)**

Fall. 4 credits. Prerequisites: two semesters of calculus and one semester of physics. Lecs M W F 12:20-1:10, disc F 1:25-2:15. K. H. Cook and P. J. Gierasch. Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

**EAS 334 Microclimatology**

Spring. 3 credits. Prerequisite: A course in physics. T R 10:10-11:25. Offered alternate years. D. S. Wilks. The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

**EAS 341 Atmospheric Thermodynamics and Hydrostatics**

Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. M W F 10:10-11:00. M. W. Wysocki. Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

**EAS 342 Atmospheric Dynamics (also ASTRO 342)**

Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. Lecs M W F 10:10-11:00. K. H. Cook and P. J. Gierasch. An introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). The governing equations of atmospheric flow are derived from first principles and applied to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

**EAS 350 Dynamics of Marine Ecosystems**

Fall. 3 credits. Prerequisites: one year of calculus and a semester of oceanography (i.e., EAS 154), or instructor's permission. Lecs, T R 1:25-2:40. C. H. Greene. This lecture course covers the interactions of physical and biological processes in marine ecosystems. It begins by looking at these processes on a global scale and works down to the scales relevant to individual organisms. Topics include: global patterns of ocean circulation; glacial cycles of ocean production; climate variability and the role of the ocean in global climate change; the El Niño/Southern Oscillation; ecosystem dynamics of the open ocean and coastal environments.

**EAS 352 Synoptic Meteorology**

Spring. 3 credits. Prerequisite: EAS 341 and EAS 342. Lecs, T R 9:05, lab, M 1:25. M. W. Wysocki. Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course strengthens previously introduced meteorological concepts which are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

**EAS 355 Mineralogy**

Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. Lecs M W F 11:15-12:05, lab T 2:00-4:25. S. Mahlburg Kay. Examination of minerals by hand-specimen and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals are covered. X-ray diffraction is introduced. Includes an independent research project.

**EAS 356 Petrology and Geochemistry**

**EAS 375 Sedimentology and Stratigraphy**

Fall. 4 credits. Prerequisite: EAS 101 or 201. Lecs M W F 11:15-12:05, lab T 2:00-4:25. J. L. Cisne. Covers formation of sedimentary rocks; depositional processes and environments; correlation of strata in relation to time and environment; petrology of sandstones and limestones; geological age determination; reconstruction of paleogeography and interpretation of geologic history from stratigraphic evidence; and organization of strata in stratigraphic sequences.

**EAS 388 Geophysics and Geotectonics**

Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHY 208 or 213. Lecs M W F 12:20-1:10, lab M 2:00-4:25. B. L. Isacks. Covers global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

**EAS 417 Field Mapping in Argentina**

Summer. 3 credits. Prerequisites: EAS 210 and 326. Spanish desirable, but not required. S. Mahlburg Kay. Modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampas Ranges (Pampa Geologic), and shallow-level silicic intrusives (Cerro Blancou-Ullun).

**EAS 444 Reflection Seismology**

Fall. 3 credits. Prerequisites: MATH 192 and PHY 208, 213, or equivalent. Lecs T R 1:25-2:40, labs TBA. L. D. Brown. Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling, and interpretation software from LandMark.

**EAS 435 Statistical Methods in Meteorology and Climatology**

Fall. 3 credits. Prerequisite: 1 introductory course each in statistics (e.g., AEM 210) and calculus. T R 10:10-11:25. D. S. Wilks. Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes some statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models including the MOS system. Also covers forecast verification techniques and scoring rules, time series analysis, EOFs, and other research topics as time permits.

**EAS 437 Geophysical Field Methods (also ARKEO 437)**

Fall. 3 credits. Prerequisites: PHY 213 or 208, or permission of instructor. L. D. Brown. Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis is on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted.

**EAS 447 Physical Meteorology**

Fall. 3 credits. Prerequisite: 1 year each of calculus and physics. M W F 9:05-9:55. Offered alternate years. A. T. DeGaetano.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, microphysical cloud processes, and principles of radar probing of the atmosphere.

EAS 451 Synoptic Meteorology II
Fall. 3 credits. Prerequisites: EAS 341 and 342. Lecs, T R 9:05; lab, M 1:25-3:20. S. J. Colucci. Structure and dynamics of mid-latitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected mid-latitude weather events.

EAS 452 Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. R. W. Kay. Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

EAS 453 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Lecs T R 8:40-9:55, lab TDA. Offered alternate years. W. M. White. The Earth from a chemical perspective. Covers: the formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems; and ore deposition.

EAS 454 Mesoscale Meteorology
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40-12:55. Offered alternate years. S. J. Colucci. Structure and dynamics of mid-latitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. The course also considers tropical weather systems and mesoscale modeling.

EAS 455 Volcanology

EAS 456 Marine Ecology (also BIOEE 462)
Spring. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years. Not offered 2003-2004. C. D. Harrell and C. H. Greene. Lectures and discussion focus on current research in both areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, and ecosystem perspectives and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

EAS 457 Weather Forecasting and Analysis
Spring. 3 credits. Prerequisites: EAS 352 and EAS 451. M. W. Wysocki. An applied course with an opportunity to focus on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student's knowledge of atmospheric dynamics, thermodynamics, and computer data analysis, to forecast the development and movement of multi-scale weather systems. Students participate in weekly forecast discussions, write daily forecasts which include a synoptic discussion, quantitative precipitation prediction, and severe weather outlook for the forecast region, and lead class discussion on assigned readings.

EAS 458 Sedimentary Basins: Tectonics and Mechanisms
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Not offered 2003-2004. T. E. Jordan. Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Course covers interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Also covers stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Uses modern and ancient examples.

EAS 459 Advanced Stratigraphy
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan. Course covers modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy at scales beyond deposits to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks are considered as are physical controls on the stratigraphic record and numerical modeling.

EAS 460 Environmental Biophysics (also CSS 483)
Spring. 3 credits. Prerequisite: EAS/CSS 260 or equivalent, or permission of instructor. M W F 11:15. Offered alternate years. Not offered 2003-2004. S. J. Riba. Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum are covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.

EAS 461 Intro to Radar Remote Sensing (also ECE 487)
Fall. 3 credits. Prerequisite: PHYS 208 or 213 or equivalent, or permission of instructor. Lees, M W F 9:05-9:55. D. L. Hysell. Course on the fundamentals of radar, antennas, and remote sensing. Students are exposed to the principles underlying the analysis and design of antennas used for communication and radars developed for weather, mapping, and other applications. They also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of
GRICULTURE AND LIFE SCIENCES 2003-2004

backgrounds will be able to take the course. Emphasis placed on radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Radar remote sensing of the Earth from spacecraft receives special attention.

EAS 491-492 Undergraduate Research Fall, spring. 1 to 4 credits. Staff. Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.

EAS 494 Special Topics in Atmospheric Science (undergraduate level) Fall or spring. 1-3 credits. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. The same course is not offered more than twice.

EAS 496 Internship experience Fall or spring. 1-2 credits. S-U grades only. Staff.

EAS 497 Individual Study in Atmospheric Science Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form. Staff. Topics are arranged at the beginning of the term for individual study or for group discussions.

EAS 498 Teaching Experience in Earth and Atmospheric Sciences Fall, spring. 1-4 credits. S-U grades only. Students must register with an Independent Study Form. Staff. The student assists in teaching an EAS course appropriate to his/her previous training. The student participates in a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

EAS 499 Undergraduate Research In Atmospheric Science Fall or spring. Credit by arrangement. S-U grades only. Students must register with an Independent Study form. Staff. Independent research on current problems in atmospheric science.

EAS 500 Design Project In Geohydrology Fall, spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue for 2 or more semesters. L. M. Cathles. The project may address one of the many aspects of groundwater flow and contamination, and must involve a significant geohydrologic analysis and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

EAS 502 Case Histories in Groundwater Analysis Spring. 4 credits. L. M. Cathles. Groundwater flow in a specific area, such as a proposed nuclear waste disposal site, analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

EAS 622 Advanced Structural Geology I Spring. 3 credits. Prerequisites: EAS 325 and permission of instructor. Offered alternate years. Not offered 2003-2004. R. W. Allmendinger. Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; and pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

EAS 624 Advanced Structural Geology II Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger. Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Covers techniques of balanced cross sections.

EAS 629 Geology of Orogenic Belts Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird. A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term.

EAS 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics Fall. 3 credits. Prerequisite: EAS 388 or permission of instructor. Not offered 2003-2004. Course covers: definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals; applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the Earth's dynamic, and distributed seismicity.

EAS 641 Analysis of Biogeochemical Systems Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. Not offered 2003-2004. L. A. Derry. Covers dynamics of biogeochemical systems; kinetic treatment of biogeochemical cycles; box models, residence time, response time, analytical and numerical solutions of model systems; Eigen-analysis of linear systems; feedback and nonlinear cases, problems of uncertainties in natural systems; modeling software such as Stella II and Matlab; and applications to current research of participants or from recent literature.

EAS 651 Atmospheric Physics (also ASTRO 651) Fall. 3 credits. Prerequisites: a good background in undergraduate calculus and physics is required. Offered alternate years. Not offered 2003-2004. K. H. Cook, P. J. Gierasch, S. J. Colucci. A survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, most effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Thermal structure and greenhouse effects on the Earth and other planets are discussed. The course is taught at the level of Fundamentals of Atmospheric Physics by Sally.

EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652) Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. Not offered 2003-2004. S. J. Colucci and P. J. Gierasch. Course covers quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

EAS 656 Isotope Geochemistry Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. Not offered 2003-2004. W. M. White. Nucleosynthetic processes and the isotopic abundance of the elements. Geochronology and cosmochemistry using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 3He and 32Cl. Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.

EAS 666 Applied Multivariate Statistics Spring. Prerequisites: multivariable calculus, matrix algebra, two previous courses in statistics. Offered alternate years. Not offered 2003-2004. T R 10:10-11:25. D. S. Wilks. Statistical techniques for multivariable data. Topics include multivariate exploratory data analysis, the multivariate normal distribution, parametric and non-parametric inferences about multivariate means, principal component analysis, canonical correlation analysis, discriminant analysis, and cluster analysis. Geophysical applications are emphasized, using primarily atmospheric and oceanographic data as examples, but the development is general enough to be of broader interest.
EAS 767 Modeling the Soil-Plant-Air System (also CSS 675)
Spring. 3 credits. Prerequisite: EAS/CSS 463 or equivalent. T R 8:40-9:55. Offered alternate years. S. J. Riha.
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation is discussed.

EAS 682 Special Topics in Atmospheric Science
Fall or spring. 1–6 credits. S-U grades. Staff.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered depend on staff and student interests.

EAS 685 Computer Methods in Geologic Sciences
Fall, spring. 3 credits. L. Brown and B. L. Isacks.
Independent research projects using modern computer resources in the Department of Earth and Atmospheric Sciences. Possibilities include: image and seismic processing, seismic and geomechanical modeling, GIS, use of interpretation workshops for 3-D seismic and satellite imagery; modeling fluid flow through complex media.

EAS 700-799 Seminars and Special Work
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.
Advanced work on original investigations in earth and atmospheric sciences. Topics change from term to term. Contact appropriate professor for more information.

EAS 711 Upper Atmospheric and Space Physics
D. L. Lyons.

EAS 722 Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731 Plate Tectonics and Geology
J. M. Bird.

EAS 751 Petrology and Geochemistry
R. W. Kay.

EAS 755 Advanced Topics in Petrology and Tectonics
J. M. Bird.

EAS 757 Current Research in Petrology
S. Mahlung Kay.

EAS 762 Advanced Topics in Paleobiology
W. D. Allmon.

EAS 771 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773 Paleobiology
J. L. Cisne.

EAS 775 Advanced Topics in Oceanography
Spring. C. H. Greene.

EAS 780 Earthquake Record Reading
Fall. M. Barazangi.

EAS 781 Geophysics, Exploration Seismology, Ground-Penetrating Radar
L. D. Brown.

EAS 783 Advanced Topics in Geophysics
B. L. Isacks.

EAS 789 Lithospheric Seismology Seminar
L. D. Brown.

EAS 793 Andes-Himalaya Seminar

EAS 795 Low Temperature Geochemistry
L. A. Derry.

EAS 796 Geochemistry of the Solid Earth W. M. White.

EAS 797 Fluid-Rock Interactions
L. M. Cathles.

EAS 799 Soil, Water, and Geology Seminar
L. M. Cathles and T. S. Steenhuis.

EAS 850 Master's-Level Thesis Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.
Limited to students specifically in the master's program in atmospheric science.

EAS 850 Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.
Limited to students admitted to candidacy in the atmospheric science Ph.D. program only before the "A" exam has been passed.

EAS 851 Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.
Limited to students admitted to candidacy in the atmospheric science Ph.D. program after the "A" exam has been passed.

EDUCATION

EDUC 100 Multiculturalism in Education and Society
Fall or spring. 3 credits. S-U option available. Prerequisite: introductory psychology. W 2:00-4:25 plus time TBA. Not offered 2003–2004. Staff.

EDUC 115 Introductory College Mathematics
Spring. 4 credits. M W F 11:15 or 12:20. S. Piliero.

EDUC 120 Education for Empowerment

EDUC 121 Developing Critical Thinking Abilities
Spring. 3 credits. W 8:00 or 9:05. S. K. Kroma.

EDUC 151 Engaging Diversity: Multicultural Issues in Education and Society
Fall or spring. 3 credits. S-U grades optional. Lec., T R 1:25–2:40. S. K. Kroma.
The course explores diversity issues that affect students, for example, race, culture, gender, and class in the context of modern American society. Through selected readings and course activities, students recognize the strengths of a diverse community and acquire the knowledge and skills necessary for living and working in it. The focus is on critical thinking about the differences in our society, and the strategies we need for cross-cultural interactions.

EDUC 210 Psychology of Learning and Memory
Fall. 3 credits. Prerequisite: introductory psychology. W 2:00–4:25 plus times TBA. Not offered 2003–2004. Staff.

EDUC 211 Psychological Foundations of Education
Spring and fall. 3 credits. Limited to 20 students. S-U option available. Prerequisite: introductory psychology. W 2:00–4:25 plus times TBA. Not offered 2003–2004. Staff.

"English Only" official language policy? Should Kwanza be celebrated as a public holiday? These are some of the many questions that challenge the notion of "cultural unity" one expressed as the "melting pot." In this course students develop writing skills as they explore discourse on the forces responsible for our cultural diversity and the changing perspectives on our "cultural unity." Through writing activities, students learn to critically examine the historical, political, and legal contexts of this diversity and define their own views on the competing public positions that multicultural education issues arouse.
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

EDUC 220 Community Learning and Service Partnership
Fall and spring. 3 or 4 credits. Limited to 25 students. S-U grades optional. T 2:30-4:25 A. Watt

In this service-learning course, students partner with Cornell service workers to accomplish a variety of learning goals selected by the employees. In addition to facilitating adult learning, students critically observe their own experiential learning. Class discussions focus on interpersonal communication, diversity, empowerment, and critical reflection. For a fourth credit, students agree to provide additional service through CLASP.

EDUC 240 The Art of Teaching
Fall and spring. 3 credits. Fall: M 12:20-4:15, F 12:20-2:15 or 2:30-4:25; Spring: M 8:00-9:55 or 12:20-2:15 or T 2:30-4:25 or W 12:20-2:15 or 2:30-4:25. Staff

This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

EDUC 317 Psychology of Adolescence
Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. T R 11:15-12:05; F morning section TBA. D. E. Schrader

This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescence, using case analysis as a methodological tool. Educational implications are discussed for both formal and informal settings.

EDUC 331 Careers in Agriculture, Extension, and Adult Education
Fall. 1–3 credits. Letter grade only. F 2:00-4:25. G. J. Applebee

This course offers modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module offers one hour of credit, and students may take one or more of the modules. The course provides an historical perspective and an introduction to the organization and scope of programs for each module. Students examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

EDUC 332 Instructional Methods in Agricultural Science Education
Spring. 1–3 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. R 2:00-4:25. Staff

Selection, practice, and evaluation of methods in Agricultural Science education are stressed.

The course offers an opportunity to explore teaching strategies and methodology unique to teaching agriculture in schools. Content includes classroom and youth leadership in secondary agricultural education programs. Participants are required to participate in field experiences at arranged times.

EDUC 335 Youth Organizations
Spring. 3 credits. T R 10:10-11:25; lab TBA. Staff

Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

EDUC 380 Independent Honors Research in Social Science
Fall or spring. 3 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program. Staff

EDUC 401 Our Physical Environment
Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $7. T 1:25-4:25. V. N. Rockcastle

A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and techniques for teaching. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

EDUC 404 Learning and Teaching I
Fall 4 credits. Prerequisite: admission to Cornell Teacher Education Program, or permission of instructor. Letter grade. Lee, M W 7:30-8:45 p.m.; lab, 4 hours fieldwork TBA. Staff

This course is designed to foster development of pedagogical and reflective understandings crucial to good teaching. Students explore what it means to understand and teach through examining key disciplinary topics, which requires rethinking disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on learners' understandings and classroom structures.

EDUC 405 Learning and Teaching in Agriculture, Mathematics, and Science
Spring. 4 credits. Prerequisite: EDUC 404 or permission of instructor. Letter grade. Lee, M W 7:30-8:45 p.m.; lab, 4 hours fieldwork TBA. Staff

Students analyze the art and science of teaching agriculture, mathematics, and science and develop their skills and knowledge as teachers through furthering their study of the processes of learning, planning (in relation to state and national standards), assessment, and teaching. There are 40 hours of field-work required.

EDUC 411 Educational Psychology
Fall. 3 credits. Prerequisite: PSYCH 101 or permission of instructor. S-U grades optional. Lee, T R 11:15-12:05; disc, F TBA. D. E. Schrader

This course applies psychological concepts to educational settings with a focus on understanding the interaction between people, context, and knowledge in school and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and learning across the life span, but has a focus on secondary education.

EDUC 413 Psychology of Human Interaction

Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

EDUC 420 Field Experience
Fall or spring. 1–4 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff

Students may engage in planned, supervised, professional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

EDUC 441 Language, Literacy, and Schooling
Spring. 3 or 4 credits. M W 2:55-4:10; lab, TBA. S. Kromu

This course is a foundation for literacy activities in secondary education. It examines current research, policy, and practice relating to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic language proficiency. For the fourth credit hour, students spend two out-of-class hours a week on individual project activities.

EDUC 445 Curriculum Design Workshop
Summer. 3 credits. Staff

A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.

EDUC 448 Instruction for Students with Disabilities
Summer. 3 credits. Staff

This course provides preservice middle and secondary school teachers a comprehensive overview of disability law, functional limitations caused by disabling conditions, and classroom strategies to provide academic accommodations/adjustments to meet the
EDUC 450 Education Technology
Staff.
The use of intelligent tools changes how and what teachers teach. This course addresses applications and implications of technology in the educational setting. Students work with a variety of educational technologies including distance and distributed learning and investigate how technology can be used to facilitate the teaching of disciplinary knowledge and manage student data.

EDUC 451 Multicultural Issues in Education
This course explores issues pertaining to teaching and learning in multicultural classrooms in American schools. It examines events that have shaped contemporary American society, the educational policies and practices that affect cultural diversity that have emerged, and the teacher's role in dealing with cross-cultural issues in the classroom.

EDUC 452 Multicultural Issues in Secondary Education
Fall. 1 credit. Prerequisites: EDUC 451 and permission of instructor. Letter grade. S. K. Kroma.
Students spend two out-of-class hours a week in a classroom setting in the Ithaca school community and write a project on culturally responsive teaching based on their experience.

EDUC 459 Education in Africa and the Diaspora (also AS&RC 459)
Fall. 3 credits (4 in CA&S). T 10:10-12:35. N. Assié-Lumumba.
This course deals with educational innovations geared to promoting equal opportunity based on gender, race, and class in Africa and the African Diaspora. After an introduction on the concepts and innovations and the stages of innovation as planned change, the course focuses on concrete cases and different types of educational innovations. The selected case studies, in the United States, include the creation and expansion of historically black institutions with a focus on Tuskegee Institute (now Tuskegee University), Lincoln University, Spelman College, and the Westside Preparatory School in Chicago. The African cases to be studied include African languages for instructing in Nigeria and science education in Nigeria, Ujamaa and education for self-reliance in Tanzania, television as a medium of instruction and technological innovation in Côte d'Ivoire, classroom action research in Lesotho, and higher education and distance learning in South Africa.

EDUC 463 Policies, Practices, and Critical Issues of Distance Learning in Developing Countries
Spring. 3 credits optional. T 2:00-4:25. N. Assié-Lumumba.
Distance learning is being increasingly adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (Information and Communication Technologies) used and the different forms of virtual learning institutions are examined.

EDUC 471 Social and Political Context of American Education
Investigation of goals, roles, and outcomes of schooling in American society and the policy environment in which schools operate. We analyze the behavior and impact of educational organizations (at local, state, and national levels) as they attempt to address societal problems and interpret and respond to changes in policy. The course includes current, historical, urban, and rural issues and problems.

EDUC 473 Philosophies of Education
This course provides historical and conceptual frameworks for students to develop theoretical perspectives on education and to analyze and critique arguments in contemporary educational debates. Focusing on the formal education system and reform movements in the United States, this course addresses moral, social, and political philosophies as they relate to educational decision-making practice.

EDUC 477 Law and Educational Policy
A study of recent federal court decisions concerning education. Emphasis is on examining legal issues against a background of related educational issues and in terms of the consequences for legal decisions for the development and operation of educational institutions.

EDUC 480 Global Seminar: Environment and Sustainable Food Systems (also ALS 480 and INTAQ 480)
Spring. 1-3 credits. Prerequisite: juniors, seniors, and graduate students. Letter grade. Lec, R 8:00-9:55 a.m.; lab 3:35-4:25, one additional hour unscheduled. J. Lassie, L. Buck, D. Miller.
For description, see ALS 480.

EDUC 483 Comparative Studies in Adult Education
Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international adult-education development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

EDUC 494 Special Topics in Education
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

EDUC 495 Senior Seminar
Spring. 2 credits. Education majors or permission of instructors. S-U only. TBA. Undergraduate coordinator for the department. Not offered 2003-2004.
This seminar focuses in depth on two or three significant educational issues, which may vary from year-to-year depending on the interests and background of students and faculty. The seminar attempts to help students relate the knowledge gained in their particular concentrations to a set of broad issues in education. While education faculty is involved in selecting the issues and providing guidance for the seminar, students are expected to provide the initiative and leadership in the classroom.

EDUC 497 Individual Study In Education
Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 498 Undergraduate Teaching
Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with GPA of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and to regularly discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with GPAs of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.
EDUC 502 Education and Development in Africa (also AS&RC 502)
Spring. 3 credits (4 in CASS). S-U grades optional. Discussion TBA. Staff.
This course introduces the students to the theory and practice of education in Africa.

EDUC 503 Professional Seminar in Education
Fall, spring, or summer. 1–4 credits (1 credit each seminar). S-U grades optional. Discussion TBA. Staff.
This course is designed to develop the students' professional portfolio.

EDUC 523 Food and Fiber Across the Curriculum
Summer. 0–3 credits. S-U grades optional. Discussion TBA. Staff.
This course examines the importance of food and fiber systems in various cultures.

EDUC 549 Effective College Teaching:
Fall and spring. 2 credits. S-U grades optional. Staff.
This course is designed to help participants become more effective college teachers.

EDUC 578 Further Training for International Teaching Assistants
Fall, spring, summer. 1–6 credits. S-U grades optional. S. C. Piliero, A. Solomon, and D. J. Trumbull.
This course is designed to provide further training for international teaching assistants.

EDUC 602 Teaching Agriculture, Science/Mathematics: Methods, Materials, Practice
Fall or spring. 9 credits. Prerequisite: course in educational psychology. S-U grades optional. M T W R F 9:00–3:00. Staff.
This course is designed to help participants become more effective college teachers.

EDUC 609 Methods for Interpretive Research
Spring. 3 credits. Prerequisite: course in research methods or permission of instructor. T R 2:55–4:10. D. J. Trumbull.
This course is designed to help participants become more effective college teachers.

EDUC 611 Educational Psychology
This course is designed to help participants become more effective college teachers.

EDUC 614 Gender, Context, and Epistemological Development (also FGSS 625)
This course is designed to help participants become more effective college teachers.

EDUC 615 Self and Interpersonal Development and Education (also FGSS 625)
This course is designed to help participants become more effective college teachers.

EDUC 620 Internship in Education
Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff.
This course is designed to help participants become more effective college teachers.

EDUC 623 Secondary Agriculture, Science, and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: permission of instructor. S-U grades optional. S. C. Piliero, A. Solomon, and D. J. Trumbull.
This course is designed to help participants become more effective college teachers.

EDUC 632 Communication and Intercultural Competence
This course is designed to help participants become more effective college teachers.

EDUC 633 Further Training in the Teaching of Science/Mathematics
This course is designed to help participants become more effective college teachers.

EDUC 634 Teaching and Learning: Theory and Practice
This course is designed to help participants become more effective college teachers.

EDUC 635 Community and School Mathematics/Science: Theory and Practice
This course is designed to help participants become more effective college teachers.

EDUC 636 Theories of Science Learning: Theory and Practice
This course is designed to help participants become more effective college teachers.

EDUC 637 Perspectives on Mathematics Teaching and Learning
This course is designed to help participants become more effective college teachers.

EDUC 638 Science and Mathematics: Theory and Practice
This course is designed to help participants become more effective college teachers.
[EDUC 621 Work-Experience Coordinator Certification Course I
Summer. 3 credits. S-U grades optional. Not offered 2003-2004. Staff. The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, evaluation of work experience programs including articulation with JPTA and VESID. Field interviews are required. A prerequisite for Course II, EDUC 622.]

[EDUC 622 Work-Experience Coordinator Certification Course II
Summer. 3 credits. Prerequisite: EDUC 621 Work-Experience Certification Course I. Not offered 2003-2004. Staff. The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.]

EDUC 630 Special Problems in Agricultural, Extension, and Adult Education
Fall or spring; may also be offered in summer. 1-3 credits. S-U grades optional. Staff. The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural, extension, and adult education.

EDUC 632 Teaching Agricultural, Extension, and Adult Education
Summer. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. Staff. The focus of the course is on the selection, use, and evaluation of methods and materials for teaching agricultural, extension, and adult education. A comprehensive and informal instruction is covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

EDUC 633 Program Planning in Agricultural, Extension, and Adult Education
Spring. 3 credits. S-U grades optional. Lec, R 2:00-5:00. W. C. Keeler. Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 635 Experiential Learning
Fall. 2 credits. Prerequisite: open to undergraduates with permission of instructor. S-U grades optional. T 12:20-2:15. Not offered 2003-2004. Staff. Participants explore various dimensions of scholar and practitioner thinking about the understanding and practice of experiential learning. Theoretical perspectives on experiential education, reflective practice, and a critical learning systems perspective are explored through readings and applied assignments. The instructor introduces methods of facilitation designed to encourage inquiry and dialogue for improvement of both nonformal and formal educational activities. The course process is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.

EDUC 645 Curriculum for a Diverse and Technological Society
Spring. 3 credits. Letter grade only. Disc, TBA, Staff. Basic curriculum concepts, principles, and theories are examined. Special emphasis is given to the ways that diversity and technology drive changes in the development of curriculum. Each student chooses a particular curriculum for analysis as a project. Within that context theoretical perspectives on curriculum and the basic elements of any curriculum are discussed.

EDUC 651 Administration Leadership and Organizational Change
Fall. 3 credits. T 3:35-6:00. J. W. Sipple. Perspectives on the administration of educational organizations. Consideration of social science, learning and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 671 American School Reform: Organizational and Sociological Perspectives
Spring. 3 credits. S-U grades optional. Lec, M 1:55-4:25. J. W. Sipple. For individuals interested in the role of schools in society and in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization given the long history of policy initiatives directed at schools. The focus is American K-12 public education, though issues of pre-K, private, and post-secondary education are covered.

EDUC 680 Foundations of Extension Adult Education
Fall. 3 credits. Limited to 20 students. S-U grades optional. R 3:35-6:00. A. Wilson. An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Development of conceptual, historical, and current research directions are examined through a seminar approach.

EDUC 682 Community Education and Development
Fall. 3 credits. Limited to 25 students. Letter grade only. W 1:25-4:25. S. Peters. An examination of the concept of community, changes in community, life, the analysis of community, alternative strategies for community development, patterns of response to community by universities, colleges, schools, Cooperative Extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

EDUC 685 Training and Development: Theory and Practice (also INTAG 685)
Spring. 4 credits. S-U grades optional. F 9:05-12:05; lab TBA. M. Kroma. Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

EDUC 694 Special Topics in Education
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Staff. Topics to be announced.

EDUC 700 Directed Readings
Fall or spring. Variable, 6 credits. Limited to graduate students with permission of instructor. S-U grades optional. Staff. For study that predominantly involves library research and independent study.

EDUC 701 Empirical Research
Fall or spring. Variable, 6 credits. Limited to graduate students with permission of instructor. S-U grades optional. Staff. For study that primarily involves collection and analysis of research data.

EDUC 702 Practicum
Fall or spring. Variable, 6 credits. Limited to graduate students with permission of instructor. S-U grades optional. Staff. For study that predominantly involves field experience in community settings.

EDUC 703 Teaching Assistantship
Fall or spring. Variable, 6 credits. Limited to graduate students with permission of instructor. S-U grades optional. Staff. For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

EDUC 704 Research Assistantship
Fall or spring. Variable, 6 credits. Limited to graduate students with permission of instructor. S-U grades optional. Staff. For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

EDUC 705 Extension Assistantship
Fall or spring. Variable, 6 credits. Limited to graduate students with permission of instructor. S-U grades optional. Staff. For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

EDUC 711 Contemporary Issues in Educational Psychology
Fall and spring. Variable, 3 credits. TBA. Staff. This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics vary from semester to semester. Students may take the course more than once.
EDUC 714 Moral Development and Education
This seminar discusses current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis is placed on development from adolescence through adulthood.

EDUC 718 Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:00–4:25. Not offered 2004. A. Wilson
Deals with adult development and learning behavior from points of view of educational psychology and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 730 Seminar in Agricultural Extension, and Adult Education
Spring. 3 credits. S-U grades optional. R 8:00–9:55. S. Peters
Emphasis is on current problems and research in agriculture, extension, and adult education. Includes discussion and analysis of student and staff research.

EDUC 762 Comparative and International Education
Fall. 3 credits. S-U grades optional. M 2:00–4:25. N. Assie-Lumumba
This seminar critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics of the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies and developing countries. Specific case studies are drawn from different countries.

EDUC 783 Farmer-Centered Research and Extension (also INTAG 783)
Fall. 3 credits. S-U option. M. Kroma
This course provides an introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extension is its potential to legitimize people’s knowledge by enhancing their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

EDUC 800 Master’s-Level Thesis Research
Fall or spring. Credit: TBA. S-U grades optional. Fall student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

EDUC 900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

ENTOMOLOGY

EDUC 260, 264, 394, 400, 483, 490, 685.

ENTOM 210 Alien Empire: Bizarre Biology of Bugs
Spring. 2 credits. Limited to 100 students. S-U grades optional. Lecs, T R 9:05; optional field trips, required lab demonstrations. Offered alternate years. B. N. Danforth
Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects by examining their evolutionary history, anatomy, development, feeding habits, life-history strategies, behavior, and their interactions with humans (both positive and negative) through history. Optional field trips and one open lab provide hands-on opportunities for examining these amazing animals.

ENTOM 215 Spider Biology: Life on a Silken Thread
Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U grades optional. Lecs, W F 1:25–2:15. L. S. Rayor
An introduction to the fascinating world of spiders. Evolution, ecology, behavior, and physiology of spiders and their close kin are explored from a modern perspective. Topics include identification of major spider families, spiders’ unique use of silk, risky courtship, predatory behavior, ornate lifestyles, social spiders, and potential use in IPM.

ENTOM 241 Applied Entomology
Spring. 3 credits. Limited to 18 students. Prerequisites: BIO G 101–102 (may be taken concurrently) or equivalent. Lecs, T R 10:10; lab/disc, T 12:20–3:15. W. M. Tingey
Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

ENTOM 260 Introductory Beekeeping
Fall. 2 credits. Lecs, T R 11:15. N. W. Calderone
Introduces students to the life history, physiology, and behavior of honey bees, as well as to the fundamentals of practical beekeeping. Classical and contemporary research on the dance language, chemical communication, behavior, division of labor, and evolution of social behavior are reviewed. Lectures on pollination of agricultural crops, honey and beeswax, bees in ancient and modern rituals, Africanized honey bees, and insect politics are also included.
ENTOM 264 Practical Beekeeping
Fall. 1 credit. Limited to 20 students. Prerequisite: ENTOM 260 (may be taken concurrently). Lab, R 2:00-4:25.
N. W. Calderone. This course consists of 14 laboratory sessions that acquaint students with practical methods of colony management. Laboratories involve hands-on work with honey bee colonies and equipment. Some of the topics covered include management of bees for apple pollination, honey harvesting and processing, and disease identification/control. The class makes a number of field trips to commercial beekeeping operations. Students conduct simple experiments to demonstrate color perception by bees, as well as the chemical basis for swarming, nest guarding, and mating.

ENTOM 277 Natural Enemies Managing Pests: An Introduction to Biological Control
Spring. 2 credits. S-U grades optional. Lecs, T R 1:25-2:15; lab demonstration; optional field trip. Offered alternate years. Not offered spring 2004; next offered spring 2005. A. E. Hajek. An introduction to the dynamic field of biological control. What is it and when should it be used? This course covers a diversity of types of biological control including use of parasitoids, predators, pathogens, and competitors as well as plant breeding to control pests from microbes to weeds to invertebrates and vertebrates. This course is intended for students curious about safely controlling pests.

ENTOM 322 Comparative Insect Morphology
Spring. 5 credits. Prerequisite: ENTOM 212 or 241. Lecs, M W T F 9:05; labs, M W 1:25-4:25. Offered alternate years. Not offered spring 2004; next offered spring 2005. B. N. Danforth. This course provides a detailed introduction to the external and internal anatomy of insects. Lectures introduce basic concepts in insect morphology, such as the organization of the insect body plan and organ systems, functional morphology, homology, phylogeny, modularity, and development. The laboratory portion of the course introduces students to the basic methods of insect microdissection, specimen preparation, and scientific illustration. High-quality, publishable illustrations are produced based on student artwork.

ENTOM 325 Insect Behavior
Spring. 3 credits. Prerequisite: introductory biology or introductory entomology or permission of instructor. Lecs, T R 10:10-11:25. Offered alternate years. Not offered spring 2004; next offered spring 2005. L. S. Rayor. Insects form diverse organisms on earth, with equally diverse behavior. This course explores the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.

ENTOM 331 Introductory Insect Systematics
Spring. 4 credits. Prerequisite: ENTOM 212. Lecs, T R 12:20; labs, T R 1:25-4:25. Lab fee $50. Offered alternate years. Q. D. Wheeler. An introduction to the classification, evolutionary history, and distribution of insects. Laboratory practice in the identification of orders, families, and representatives of a number of families. An independent project involving description of one or more larval stages is required. See instructor before course to best satisfy this requirement.

ENTOM 333 Maggots, Grubs, and Cutworms: Larval Insect Biology
Spring. 5 credits. Prerequisite: ENTOM 212 and permission of instructor. S-U grades optional. Lecs, T R 11:15; labs T R 1:25-4:25. Offered alternate years. Not offered fall 2003; next offered fall 2004. J. K. Liebold. This course introduces insect larval biology, anatomy, and ecological and phylogenetic relationships. The laboratory includes field sampling, preparation of specimens for descriptive study, identification of unknowns, and discussions. An independent project involving description of one or more larval stages is required. See instructor before course to best satisfy this requirement.

ENTOM 344 Insect Conservation Biology
Spring. 5 credits. Prerequisite: one course in either entomology or conservation biology or permission of instructor. S-U grades optional. Lecs, T R 10:10-11:25. Offered alternate years. J. E. Losey. Provides an in-depth look at the concepts and issues surrounding the conservation of insects and other invertebrates. Topics covered include: sampling rare populations, insect conservation genetics, the role of phylogeny in determining conservation priorities, refuge design, saving individual species, plus the unique political, social, and ethical aspects of insect conservation and preservation of the ecological services (i.e., pollination, decomposition, pest suppression, insectivore food sources).

ENTOM 352 Medical and Veterinary Entomology
Fall. 3 credits. Prerequisites: BIO G 101-102 or permission of instructor. S-U grades optional. Lecs, T R 10:10-11:25. Offered alternate years. Not offered fall 2003; next offered fall 2004. L. C. Harrington. Diseases resulting from arthropod-borne pathogens (such as malaria, dengue, and yellow fever) cause considerable human and animal suffering and death worldwide. This course explores the impact of vector-borne disease and provides a comparative overview of the fields of medical and veterinary entomology. The goal of the course is to encourage an understanding of evolutionary and ecological issues associated with disease and pests. The laboratory includes field trips, collection, and identification of arthropods of medical/ veterinary importance, and hands-on experience with modern laboratory research methods. Undergraduate and graduate students from entomology as well as other disciplines including pre-medical and veterinary students are encouraged to enroll.

ENTOM 370 Pesticides, the Environment, and Human Health (also TOX 370)
Fall. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Lab, T R 9:05. Offered alternate years. Not offered fall 2003; next offered fall 2004. J. G. Scott. A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the role of risk benefits, regulation, politics, and current controversies associated with pesticide use and genetically modified crops.

ENTOM 394 Circadian Rhythms (also BIOGD 394 and BIONB 394)
Fall. 4 credits. Prerequisite: ENTOM 212, or BIOGD 281, or BIONB 221 or 222, or permission of instructor. S-U grades optional. Lec, W 7:30-9:10 p.m. Offered alternate years. J. Ewer. This course explores the neural, endocrine, and molecular mechanisms by which organisms "keep time," and how their clocks are synchronized with the planet's 24 hour light and temperature cycles. The course leans heavily on the knowledge obtained from the analysis of rhythms in insects, especially Drosophila, but also includes an in-depth analysis of circadian rhythms in plants, fungi, and some other organisms, from cyanobacteria to mammals.

ENTOM 400 Insect Development (also BIOGD 402)
Spring. 4 credits. Prerequisite: ENTOM 212 or BIOGD 281 or permission of instructor. S-U grades optional. Lecs, M W 11:15; lab, M 12:20-2:20; disc, F 11:15-12:05. Offered alternate years. J. Ewer. The course emphasizes the mechanisms that underlie embryonic and post-embryonic developmental processes of insects. The portion of the course on embryonic development leans heavily on knowledge obtained from Drosophila, but also covers more classical studies as well as recent advances exploring the molecular basis for the evolution of body plan. The post-embryonic development portion covers the control of growth, molting, and metamorphosis. The laboratory uses modern techniques to illustrate developmental events at the organismal and cellular level. The discussion section involves the analysis and presentation of primary research papers.

ENTOM 443 Entomology and Pathology of Ticks and Shrews (also PL PA 443)
Fall. 4 credits. Prerequisites: ENTOM 212 or equivalent and PL PA 241 or equivalent. S-U grades optional. Evening prelims. Lecs, M W F 11:15; lab, F 1:25-4:25. Offered alternate years. Not offered fall 2003; next offered fall 2004. P. A. Weston and G. W. Hudler. For students preparing for careers in horticulture, urban forestry, pest management, and natural history and recreational nature education. Deals with the nature, diagnosis, assessment, and management of insect and disease pests on trees and shrubs in forests, urban landscapes, Christmas tree plantations, and other sites where intensive pest management is practiced.

ENTOM 444 Integrated Pest Management (also CSS 444)
Fall. 4 credits. Prerequisites: BIOEE 261, ENTOM 212 or 241, and PL PA 241 or their equivalents or permission of instructor. Lecs, M W F 9:05; labs, M 1:25-4:25. J. E. Losey and A. Ditommaso.
Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories consist of exercises to reinforce techniques and the application of computer technology to management problems.

**ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution** (also BIOEE 452)

Spring. 3 credits. Prerequisites: 1 year of introductory biology. BIOEE 261, CHEM 257 or 357/358 and 251 or 301; or permission of instructor. Lecs, M W F 11:15. Offered alternate years. Not offered spring 2004; next offered spring 2005. P.

Significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

**ENTOM 453 Principles and Practice of Historical Biogeography** (also BIOPL 453)

Fall. 3 credits. Prerequisite: a course in systematics or permission of instructor. S-U grades optional. Lecs, T R 10:10, lab T 1:25–4:25. Offered alternate years. J. K. Liebherr and M. Luckow.

A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. Laboratories focus on computer applications and discussion of controversial issues.

**ENTOM 455 Insect Ecology** (also BIOEE 455)

Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. S-U grades optional. Lecs, T R 9:05; labs, M W F 11:15. Offered alternate years. Not offered fall 2003; next offered fall 2004. Staff.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

**ENTOM 456 Stream Ecology** (also BIOEE 456 and NYTRES 456)

Spring. 4 credits. Limited to 60 students. Recommended. BIOEE 261, S-U grades optional. Lecs, T R 9:05; labs, T W or R 1:25–4:25. Offered alternate years. B. L. Peckarsky.

Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation, and the impacts of disturbances. Lab: field projects include descriptive and experimental techniques, hypothesis testing and writing of scientific papers related to environmental assessment.

**ENTOM 463 Invertebrate Pathology**

Spring. 4 credits. Prerequisites: one year of introductory biology. S-U grades optional. Lecs, M W F 9:05; lab, W 1:25–4:25. Offered alternate years. A. F. Hajek

Lecture presents principles of pathology as applied to invertebrates. Topics explored include noninfectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizoitology of insect diseases, and use of pathogens for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microinjection, electrophoresis, immunosaic, density gradient centrifugation, soil extraction, and computer simulation.

**ENTOM 470 Ecological Genetics**

**ENTOM 471 Freshwater Invertebrate Biology and Biomonitoring** (available in 140 Roberts Hall).

Lecture explores the morphology, physiology, behavior, feeding ecology, and evolution of macroscopic freshwater invertebrates with an emphasis on contrasting the attributes of aquatic and terrestrial insects. Laboratory involves field collections and identification of invertebrates and stresses the use of taxonomic keys. Students prepare a collection of freshwater invertebrates or conduct a project using freshwater invertebrates to biomonitor stream habitat quality.

**ENTOM 477 Biological Control**

Fall. 3 credits. Prerequisites: ENTOM 212, BIOEE 261, and permission of instructor. Lecs, T R 9:05; lab, T 1:25–4:15. Offered alternate years. J. Nyrop and A. Hajek.

Lectures present case studies exploring classical biological control, augmentation and conservation, and applications of strategies to control arthropod pests and weeds. Labs focus on selected concepts in more depth using live organisms.

**ENTOM 483 Insect Physiology**

Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Lecs, M W F 11:15; lab W 1:25–4:25 and a disc, TBA. Offered alternate years. Not offered fall 2003; next offered fall 2004. C. Gilbert.

An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. Students are also introduced to some common methods used in physiological research and to the critical reading of scientific literature.

**ENTOM 490 Toxicology of Insecticides** (also TOX 490)

The history, metabolism, and mechanism of action of genetically modified, synthetic, and naturally occurring insecticides. Insecticide resistance, resistance management, and new approaches to insect control with genetically modified organisms are discussed.

**ENTOM 494 Special Topics in Entomology**

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not to be offered more than twice under this number.

**ENTOM 497 Individual Study in Entomology**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

**ENTOM 631 Systematics of the Coleoptera**

**ENTOM 632 Advanced Coleopterology**

**ENTOM 634 Special Topics in Systematic Entomology**

Fall or spring; taught on demand. 2–4 credits. Prerequisite: permission of instructor. Staff.

Lectures on the classification, evolution, and biometrics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

**ENTOM 635 Insect Molecular Systematics**

Spring. 2 credits. Prerequisite: permission of instructor. Offered alternate years. B. N. Danforth.

Analysis of DNA sequence variation can provide a powerful tool for resolving problems in insect systematics, from species level taxonomic decisions to higher level (ordinal) relationships. This course introduces students, through readings of the primary literature, to the basic methods of insect molecular systematics, including DNA extraction, gel electrophoresis, PCR, DNA purification, and DNA sequencing (manual and automated). Results are analyzed using available computer programs. Students are encouraged to collect preliminary data for thesis or post-doctoral research.

**ENTOM 644 Advanced IPM: Theory and Implementation**

This advanced course in integrated pest management (IPM) consists of a rotating series of four-week interactive modules on specialized topics. Topics range from basic ecology and genetics of pests and their natural enemies to...
specific strategies for pest management implementation. The course is designed to provide advanced IPM instruction for graduate and upper-level undergraduate students with intermediate backgrounds in IPM. In special cases, students with little or no background in IPM seeking intensive instruction on a specialized topic may enroll with permission of the instructor. Each module is a unique unit and students may take any or all modules each time the course is offered. Prerequisites and grading procedures are determined by the instructor(s) of each module. Potential modules include: Insecticide Resistance and Resistance Management—J. Scott; Entomology (Ithaca); Crop Protection Decision Making—J. Nyrop; Entomology (Geneva); Greenhouse and Floriculture IPM—J. Sanderson: Entomology (Ithaca); Agricultural Acarology—J. Sanderson: Entomology (Ithaca); Fruit Arthropod IPM Methods in NY—A. Agnello, G. English-Loeb; Entomology (Geneva); Plant Resistance—W. Tingley: Entomology (Ithaca); Aerial Sampling in Pest Management—E. Shields: Entomology (Ithaca); Conservation Biological Control—J. Nyrop and G. English-Loeb; Entomology (Geneva); Insect Population Ecology—J. Losey: Entomology (Ithaca); Veterinary Entomology—IPM Methods for NY—P. Kaufman and D. Rutz: Entomology (Ithaca); Chemical Conversations and Integrated Pest Management—C. Lin: Entomology (Geneva).

ENTOM 652 Seminar in Medical Entomology
Fall. 1 credit. Prerequisite: permission of instructor or ENTM 352. Disc, TBA. L. C. Harrington. Addresses a variety of topics in the field of medical entomology. The course consists of weekly discussions of key papers on topics chosen by participating students and faculty.

ENTOM 662 Insect Behavior Seminar
Spring. 2 credits. Prerequisites: permission of instructor and ENTM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Hours TBA. C. Gilbert.

[ENTOM 685 Seminar in Insect Physiology
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Hours TBA. Offered alternate years. Not offered spring 2004, next offered spring 2005. C. Gilbert.]

ENTOM 707 Individual Study for Graduate Students
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

ENTOM 709 Teaching Entomology
Credit TBA. Staff. Teaching entomology or for extension training.

ENTOM 767 Current Topics in Entomology
Fall. 1 credit. Required of graduate students pursuing a degree in the field of Entomology. Lec and disc, TBA. Coordinator: E. J. Shields. This course provides lectures, readings, and discussion to introduce first-year graduate students to the research activities of faculty in the graduate field of Entomology. Class meets weekly for one hour.

ENTOM 800 Master's-Level Thesis Research
Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff.

Jugatae Seminar
Fall and spring. A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

FLORICULTURE AND ORNAMENTAL HORTICULTURE
See Horticulture.

FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION
Freehand Drawing and Scientific Illustration courses are offered through the Department of Horticulture and are described in the section "Freehand Drawing and Scientific Illustration."

FOOD SCIENCE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

FOOD 101 Science and Technology of Foods
Fall. 1 credit. S-U grades only. M T 1:25-2:15. J. H. Hotchkiss and staff. This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice is given.

FOOD 102 Exploring Food Processing
Spring. 1 credit. S-U grades only. F 12:20, 5 field trips; one on F 12:30-4:00, four on F 12:30-5:30. D. P. Brown. A series of seminars on current technological and regulatory developments in food science. Field trips to five commercial food manufacturing/processing plants are used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, is required.

FOOD 150 Food Choices and Issues
Spring. 2 credits. S-U grades optional. T R 12:20-1:10. R. H. Liu and D. D. Miller. This course provides Cornell students with the knowledge needed to make healthy food choices. Topics include the U.S. food system; relationships between diet and health; food processing, food safety, and discussion of contemporary issues relating to food quality, safety, and nutrition. Students assess the nutritional quality of their personal diets and learn how to make changes to improve their diets.

FOOD 200 Introductory Food Science
Fall. 3 credits. Prerequisite: college-level courses in chemistry and biology. Letter grades only. M W F 11:15-12:05. J. H. Hotchkiss.

A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods; nutritional significance; food formulation, preservation, and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging are stressed.

FOOD 210 Food Analysis
Spring. 3 credits. Prerequisite: CHEM 208 or equivalent. Enrollment limited to 24 students. Lecs, W F 1:25-2:15, lab, M 12:20-3:20. R. H. Liu and J. M. Brown. Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectroscopy are discussed.

FOOD 250 Kosher and Halal Food Regulations
Spring. 2 credits. Sophomore standing and above. S-U grades optional. Lec M T 7:30-9:25 p.m. J. M. Reginstein. A comprehensive introduction to kosher and halal foods in the American food industry with
some coverage of home practices. The kosher food law's origin, and their application in modern food processing are examined. The nature of the kosher supervision industry in America is described. Kosher food laws are also examined and the interactions between the two communities explored. Current food-related issues in both communities are reviewed, including recent court decisions. Some aspects of ethnic foods may also be considered.

**FOOD 290 Meat Science (also AN SC 290)**
Fall. 2 or 3 credits. Letter grades only. Lecs. T R 11:15; lab M or R 12:20-3:20. Lab cannot be taken without lecture. D. E. Shaw.

An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservations, nutritive value, inspection, and marketing are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants may be taken.

**FOOD 321 Food Engineering Principles**
Fall. 3 credits. Prerequisites: FOOD 200 and introductory physics. Letter grades only. M W F 9:05-9:55. S. S. H. Rizvi.

Introduces the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, heat and mass transport, and refrigeration and psychrometrics.

**FOOD 351 Milk Quality**
Fall. 1 credit. Prerequisite: AN SCI 250 or equivalent or permission of instructor. Letter grades only. F 12:20. M. Wiedmann.

This course focuses on the effects of on-farm and after-harvest practices on milk and dairy food quality and safety. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

**FOOD 394 Applied Food Microbiology (also BIOMI 394)**

Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes are reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.

**FOOD 395 Food Microbiology Laboratory**
Fall. 2 credits. Prerequisite: BIOMI 291 or equivalent. Letter grades only. M W 2:00-4:25. J. M. Brown.

Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

**FOOD 396 Food Safety Assurance**
Spring. 2 credits. Prerequisite: MICRO 290 or permission of instructor. T R 9:05-9:55. Offered alternate years. Next offered spring 2005, not offered 2004.
R. B. Gravani.

This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Case studies and exercises are used to demonstrate and apply the key principles that are discussed.

**FOOD 400 Current Topics in Food Science and Technology**

Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

**FOOD 401 Concepts of Product Development**
J. H. Hotchkiss.

A discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

**FOOD 405 Managing Food Waste without Trashin the Environment**

A look at the various waste streams generated in food, agricultural, and environmental processes. Some aspects of ethnic foods may also be considered.

**FOOD 406 Dairy and Food Fermentations**

This is a lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.

**FOOD 410 Sensory Evaluation of Food**

Topics include sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research, and product development. The psychological principles in sensory testing and statistical methods for sensory data analysis are presented. The laboratory provides first-hand experience in organizing and conducting sensory tests and an introduction to online date collection and analysis. Undergraduate Food Science majors are required to take both the lecture and the laboratory.

**FOOD 415 Principles of Food Packaging**

The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The influence of packaging on shelf life is presented. Emphasis is placed on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

**FOOD 417-418 Food Chemistry I and II**
Spring 417; fall 418. 3 credits. Spring; 2 credits, fall. Prerequisites: CHEM 257 or BIOM 330 or 331. S-U or letter grade.

**FOOD 417**

A course on the chemistry of foods and food ingredients. The chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components and additives are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on the quality and nutritional aspects of several food commodity groups (dairy, meat, fruits and vegetables, cereals and legumes) are described.

**FOOD 419 Food Chemistry Laboratory**
Spring. 2 credits. Prerequisites: biochemistry (BIOM 330 or 331 or CHEM 257 or equivalent) and concurrent registration in food chemistry (FOOD 417). M W 12:20-4:25. D. D. Miller.

Laboratory exercises dealing with the chemical properties of food components and changes they undergo in processing and storage. Relationships between the chemical composition of foods and functional, nutritional, and organoleptic properties are stressed. Laboratory techniques commonly used in food research are introduced. A laboratory research project is required. This involves writing a research proposal for the project, conducting laboratory research to test hypotheses described in the proposal, analyzing the data, and writing a paper following the format used by the Journal of Food Science.

**FOOD 423 Physical Principles of Food Preservation and Manufacturing**
Fall. 3 credits. Prerequisite: PS 321. Letter grades only. Lec, T R 11:15-12:05; disc, T 12:20-2:15. S. J. Mulvaney and J. S. Roberts.
This course emphasizes the fundamental principles that underlie much of food preservation and manufacturing. A systems analysis approach is used to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration and drying. Selected products serve as case studies for more complex manufactured foods.

FOOD 425 Dairy Foods Processing

A lecture/laboratory course focused on principles and practices fundamental to the manufacture, evaluation, and storage of dairy foods. A variety of common food processing unit operations are discussed and demonstrated using dairy foods as examples. Students develop an understanding of the science and technology that underpins modern dairy foods processing and gain hands-on experience in the manufacture of safe, high quality dairy products ranging from pasteurized milk to cheddar cheese. Laboratories include a study of a food processing pilot plant facility. One full day field trip to operating dairy plants in the area will be scheduled during the semester.

FOOD 430 Understanding Wine and Beer

An introduction to wine and beer appreciation through the study of fermentation biology, product composition, and sensory perception. Samples of wines and beers will be used to illustrate the sensory properties, microbiological processes, and chemical components that determine quality. Students learn to recognize the major features of wine and beer that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; the sensory properties of wines from different grape varieties, viticultural practices, and wine-making techniques; and the effects of brewing raw materials and processing procedures on beer quality.

FOOD 447 International Postharvest Food Systems
Fall or spring. 3 credits. Prerequisite: Food Science 394. Letter grades only. Lect, M W 10:10-11:00. Offered alternate years. Next offered fall 2004. Staff.

An interdisciplinary course designed for all undergraduate and graduate students. Describes postharvest food losses and methods to reduce the loss. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish; biology and control of fungi, insects, and vertebrates in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.

FOOD 450 Fundamentals of Food Law

Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis is on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also refers to other regulatory agencies. Emphasis is placed on how a food or agricultural professional interacts with this legal system during legislative action, regulatory rule making, and with respect to compliance.

FOOD 456 Advanced Concepts in Sensory Evaluation

Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. A major independent research project is conducted on a current issue in sensory evaluation.

FOOD 459 Special Topics in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FOOD 471 Individual Study in Food Science
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study Form (available in 140 Food Science). S-U grades optional. Staff.

May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

FOOD 498 Undergraduate Teaching Experience
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study Form (available in 140 Roberts Hall). S-U grades only. Staff.

Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

FOOD 499 Undergraduate Research in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study Form (available in 140 Roberts Hall). This course may be repeated for credit. Staff.

Students conduct original research directed by a food science faculty member.

FOOD 559 Research for Lausanne Exchange Students
Fall/spring. 10 credits maximum. Prerequisite: permission of instructor. S-U grades optional. Staff.

Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member. A final report is written and presented to the faculties of both Cornell University and the University of Lausanne.

FOOD 600 Seminar in Food Science
Fall and spring. 1 credit. S-U grades only. Required for all graduate students in the field of Food Science and Technology. T 4:00-5:00. Staff.

A weekly seminar series on contemporary topics and issues in the field of Food Science and Technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of Food Science and Technology may use the series to present their required thesis research seminar. Required of all graduate students in the field of Food Science and Technology. Strongly recommended for graduate students minoring in Food Science and Technology.

FOOD 604 Chemistry of Dairy Products

A detailed study of milk constituents and their properties. The chemical and physical changes that occur in dairy products prior to, during, and after processing are covered. This course emphasizes current research in dairy chemistry.

FOOD 607 Advanced Food Microbiology

This two-credit course explores advanced topics in food microbiology. A major emphasis is placed on critical evaluation of current literature and on microbiological concepts that affect food microbiology. Specific areas that are covered include microbial ecology of foods, rapid detection and typing methods for foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Seminars and guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment).

FOOD 608 Chemometric Methods in Food Science
Fall. 2 credits. Prerequisites: basic statistics and chemistry or permission of instructor. S-U grades optional. W 1:25-3:20. Offered alternate years. Next offered fall 2004. K. J. Siebert.

Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and product properties,
optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. These techniques covered are also applicable to many other problems in biology and chemistry.

FOOD 616 Flavors—Analysis and Applications  
An advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. The course surveys taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems, and consumer acceptance.

FOOD 620 Food Carbohydrates (also NS 620)  
Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: BIOLBM 330 or equivalent. T R 10:10-11:00. Offered alternate years. Not offered spring 2005. B. A. Lewis and J. W. Brady.  
A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

FOOD 621 Food Lipids  
An advanced course in food lipids. Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasis is on lipid oxidation, emulsions, and functional foods associated with lipids.

FOOD 644 Food Polymer Science: Principles and Applications  
Spring. 2 credits. Prerequisites: Introductory chemistry and physics. T R 1:20-1:10. Offered alternate years. S. J. Mulvany.  
Integration of polymer science, chemistry, and materials science principles as the basis for characterization of the physical properties of biopolymer materials of interest to the food industry. Emphasis is on unique aspects of food materials, e.g., plasticization by water, physical gelation, transient networks, and effects of thermal treatments on material properties. Problems and case studies based on proteins, starches, gelatin, and other hydrocolloids relevant to food systems.

FOOD 665 Food and Bioprocessing Systems  
Fundamental and quantitative analyses of processes for manufacture of foods and related biological products. Topics covered include centrifugation, membranes, supercritical fluids, extraction, high pressure, pulsed electric field, thermal processing, drying and crystallization.

FOOD 684 Special Topics in Food Science  
Fall or spring. 4 credits maximum. S-U grades optional. Staff.  
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FOOD 695 Current Readings in Food Science  
Fall and spring. 1 credit. Prerequisite: 300- to 400-level course relevant to the chosen topic. S-U grades only. Lect., by arrangement/1 hour per week. S-U grades only. Staff.  
A seminar series on current topics chosen by participating faculty and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include (but are not limited to) Food Microbiology and Food Safety; Food Chemistry, Irradiating; Food Engineering. This course can be taken multiple times. Graduate students in Food Science are strongly encouraged to enroll in this course. Interested students should contact the designated instructor(s) for each term.

FOOD 698 Graduate Teaching Experience  
Fall and spring. 1 to 3 credits. S-U grades only. Staff.  
Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

FOOD 800 Masters-Level Thesis Research  
Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to master's candidates, permission of Special Committee chair. S-U grades only. Graduate faculty.

FOOD 900 Graduate-Level Thesis Research  
Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to doctoral students who have passed the "A" exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

HORT 201 The Art of Horticulture  
Fall and spring. 2 credits. Studio T 1:25-4:25. M. A. Merwin.

This introductory course explores the breadth of the art and beauty of horticulture. It addresses the symbolic use of plants and gardens in art, the natural history of horticulture as recorded in art, the artist's relationship with the garden, and the use of plant materials in art forms. Students will have ample opportunity to paint, illustrate, photograph, and write about plants and gardens.

HORT 225 Vegetable Production  
Fall. 4 credits. Lects, M W F 11:15; lab, W 2:00-4:25; 4 field trips (September). W 11:15-6:00. L. A. Ellerbrock.

Intended for those interested in the production, processing, and marketing of vegetables. Topics included are techniques, problems, and trends in the culture, harvesting, and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the greenhouse are included.

FRUIT AND VEGETABLE SCIENCE: HORTICULTURAL SCIENCE  
See Horticulture.

HORTICULTURE  

HORT 101 Horticultural Science and Systems  
Fall. 4 credits. Lect, M W F 9:05; lab, W 1:25-4:25. I. A. Merwin.

The science and technology of horticultural plants grown for food and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

HORT 190 Sustainable Agriculture (also CSS 190)  
Fall. 2 or 3 credits. Lect, R 10:10; lab, M or T 2:00-4:25. C. J. Peters and J. Mt. Pleasant.

Designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates) and emphasizes scientific principles of management that conserve or renew those resources for continuing benefit to society. The information is of general value for nonmajors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the web. Extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

HORT 201 The Art of Horticulture  
Fall and spring. 2 credits. Studio T 1:25-4:25. M. A. Merwin.

This introductory course explores the breadth of the art and beauty of horticulture. It addresses the symbolic use of plants and gardens in art, the natural history of horticulture as recorded in art, the artist's relationship with the garden, and the use of plant materials in art forms. Students will have ample opportunity to paint, illustrate, photograph, and write about plants and gardens.

HORT 225 Vegetable Production  
Fall. 4 credits. Lects, M W F 11:15; lab, W 2:00-4:25; 4 field trips (September). W 11:15-6:00. L. A. Ellerbrock.

Intended for those interested in the production, processing, and marketing of vegetables. Topics included are techniques, problems, and trends in the culture, harvesting, and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the greenhouse are included.

FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION  
Freewith Drawing is a program in the Department of Horticulture.

[FR DR 109 Nature Drawing]  
[FR DR 214 Watercolor]
HORT 243 Taxonomy of Cultivated Plants (also BIOL 243)
Fall. 4 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOL 248. Lec, M W F 1:25-4:25. A. M. Petrovic. Study of the scientific principles involved in the maintenance of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, pest management, and nutrition in the management of turfgrass sites.

HORT 300 Herbaceous Plant Materials
Fall. 3 credits. Fee for field trip: $75. Lecs, T R 10:10; lab, T 2:00-4:25. W. B. Miller. Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennials. Emphasizes those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

HORT 301 Plants for Interiors
Spring. 3 credits. Lecs, M W 11:15; lab, M 1:25-4:25. Offered even years. T. C. Weiler. Study of plants for interiors: identification, design characteristics, and cultural requirements; use of plants as elements of planting design (trees, shrubs, groundcovers, and accent plants including potted flowering plants and cut flowers); the interior landscape industry (organization, bidding, installation, maintenance). Required three-day field trip, estimated cost, $130.

HORT 310 Production and Marketing of Greenhouse Crops
Spring. 4 credits. Letter grade only. Lecs, T R 10:10; lab R 1:25-4:25. Offered odd years. T. C. Weiler. Covers basics of establishing a greenhouse operation, growing crops in optimized environments, and serving niche or mass markets. The course discusses technology basics including structures and equipment, systems for heating and cooling, lighting, irrigating and fertigation, materials handling, environmental stewardship and integrated pest management, and production management. Also covered are world centers of greenhouse crop production, culture of cut, pot, bedding, vegetable, and fruit crops in greenhouses, emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student grows one or more crops. Required three-day field trip, estimated cost, $130.

HORT 317 Seed Science and Technology (also CSS 317)
Fall. 3 credits. Prerequisites: BIOL 241 or an equivalent course approved by instructor. Letter grade only. Offered odd years. Lecs, T R 11:15-12:50; lab, R 1:25-4:25. A. G. Taylor. Experiment Station. Study of the principles and practices involved in seed production, conditioning, storage, quality management, packaging, and stand establishment. Information is applicable to various kinds of agricultural and horticultural seeds. Hands-on laboratory experience.

HORT 330 Turfgrass Management
Fall. 4 credits. Prerequisite: CSS 260 or permission of instructor. Lec, M W F 1:25-4:25. A. M. Petrovic. Study of the scientific principles involved in the maintenance of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, pest management, and nutrition in the management of turfgrass sites.

HORT 400 Principles of Plant Propagation
Fall. 3 credits. Prerequisites: BIOL 242 and 244 or another course in plant physiology. Lecs, T 9:05; lab, R 1:25-4:25. K. W. Mudge. Sexual (seed) propagation and asexual (vegetative) propagation including cuttage, grafting, tissue culture, layering, and specialized vegetative reproductive structures. Physiological, environmental, and anatomical principles and applications are stressed in lecture and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

HORT 401 The How, When, and Why of Grafting—A Distance Learning Approach
Spring. 2 credits. Lec: autotutorial (web); lab: greenhouse/autotutorial (web/cd); discussion: web. One introductory face-to-face meeting TBA. K. W. Mudge: A ten-week, web/CD-based autotutorial approach to the principles and practices of grafting and budding as applied to plant propagation. Emphasis is on the role of grafting in modern horticultural practice and on student development of hands-on grafting skills. Instruction involves web-based asynchronous presentation of lecture and lab materials (web, CD-ROM), asynchronous discussion, and autotutorial hands-on grafting lab exercises.

HORT 415 Principles and Practices of Agroforestry (also NTRSES 415 and CSS 415)
Fall. 3 credits. Prerequisite: senior or graduate standing or permission of instructor. S-U option. Lec, M W F 10:10-11:00. Optional laboratory, HORT 416 (also NTRSES 416 and CSS SCAS 416). Offered even years. E. Fernandez, K. Mudge, C. Buck. An introduction to modern and traditional agroforestry systems which involves spatial and temporal integration of multiple uses. Woody plants (trees, shrubs) with annuals or perennial crops or with livestock. Interactions between woody and nonwoody components of agroforestry systems are considered, based on above- and below-ground processes. The sustainability of agroforestry systems is critically examined from biophysical, socio-economic, and policy perspectives.

HORT 416 Principles and Practices of Agroforestry—Laboratory (also NTRSES 416 and CSS 416)
Fall. 1 credit. Optional lab component of HORT 415. Prerequisites: NTRSES 310 and CSS SCAS 415. S-U grades optional. Offered odd years. K. Mudge, C. Buck. An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

HORT 420 Principles of Nursery-Crop Production
Fall. 4 credits. Prerequisite: HORT 400. Lecs, M W F 9:05; lab, M 2:00-4:25. Field trips. Offered odd years. G. L. Good. Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.

HORT 425 Postharvest Biology of Horticultural Crops
Fall. 3 credits. Lecs, M W 9:05-9:55; lab, W 1:25-4:25. Offered odd years. S. Gan. A study of the processes controlling the physical and chemical changes in harvested yet living horticultural crops or their parts. The theoretical principles and fundamental processes underlying these changes will be discussed. Strategies and practical handling procedures/conditions for storage, transportation, and quality monitoring of harvested horticultural crops will also be discussed.

HORT 435 The Care of Woody and Herbaceous Plants in the Landscape
Fall. 4 credits. Prerequisites: HORT 301 and 491. Lecs, M W F 9:05; lab, M 1:25-4:25. Offered even years. G. L. Good. A study of the practices involved in the maintenance of ornamental plants in the landscape. Major emphasis is on post-planting techniques, including water and fertilization, weed management, pruning, and general tree care. Labs have a hands-on focus.

HORT 440 Restoration Ecology
Fall. Weeks 1-10. 3 credits. Prerequisite: upper division or graduate standing. Letter grade only. Lecs, T R 10:10; lab, F 1:25-4:25. Offered odd years. T. H. Whitlow. An inquiry based treatment of the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.

HORT 442 Berry Crops: Culture and Management
Fall. 3 credits. Lecs, M W 9:05; lab, M 1:25-4:25. Offered even years. M. P. Pruitt. An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.
HORT 444 Vineyard Management
Fall. 3 credits. Lecs; T R 9:05; lab, R 1:30–4:25. Offered odd years. R. M. Pool. Commercial grape production with an emphasis on the problems of production in cold climates. Students examine site selection, world and regional grape varieties, and the anatomical and physiological basis for vineyard management decision making. Laboratory exercises and field trips offer hands-on experience.

HORT 445 Ecological Orchard Management
Spring. 3 credits. Prerequisite: introductory biology. S-U grades optional. Lecs, T R 10:10; lab, T 1:25–4:25. Offered even years. I. A. Merwin.
The ecology and technology of deciduous perennial crop systems, with labs providing hands-on experience in orchard management. Previous coursework in horticulture and other plant sciences is suggested.

HORT 449 Green Signals and Triggers—The Plant Hormones (also BIOPL 449)
Fall. 1 credit. Prerequisites: introductory biology course and BIOPL 242 or 342 or permission of instructor. S-U grades optional. Lecs, F 1:25–2:15. Offered odd years. P. J. Davies.
A study of the plant hormones and how they regulate plant growth and development. Topics include the discovery, role in growth and development, mode of action and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

HORT 455 Mineral Nutrition of Crops and Landscape Plants (also CSS 455)
Spring. 3–5 credits. Prerequisite: CSS 260 and BIOPL 242 or equivalent. Lecs, M W F 9:05; lab/disc, M 2:00–4:25. Offered even years. H. C. Wien and staff.
A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and can devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient supplies.

HORT 456 Golf Course Management
Surveys the diversity of soil organisms and their roles in terrestrial ecosystems. The course covers the fundamental principles and features of biologically mediated processes in the soil and the function of soil organisms in the wider context of both managed and unmanaged ecosystems. The role of plant–microbe interactions in shaping the larger ecosystem will serve as the basis for comparing soil community structure and function across a variety of ecosystems. The class investigates the consequences of anthropogenic activities from local soil management to global change on soil biodiversity and microbiolally mediated soil processes. In the laboratory, students explore an array of methods for assessing soil biological community composition and microbially mediated processes in soil.

HORT 475 Golf Course Management
Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Lecs, T R 12:20–1:10; lab, T R 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
This course focuses on the identification, uses, and establishment of golf plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project requires students to implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices.

HORT 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491)
Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Lecs, T R 12:20–1:10, lab, T R 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
The second half of this course continues focus on the winter identification, uses and establishment of woody plants in urban and garden settings. Lecs, T R 12:20–1:10, lab, T R 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
The second half of this course continues focus on the winter identification, uses and establishment of woody plants in urban and garden settings. Lecs, T R 12:20–1:10, lab, T R 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
The second half of this course continues focus on the winter identification, uses and establishment of woody plants in urban and garden settings. Lecs, T R 12:20–1:10, lab, T R 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
The second half of this course continues focus on the winter identification, uses and establishment of woody plants in urban and garden settings. Lecs, T R 12:20–1:10, lab, T R 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
The second half of this course continues focus on the winter identification, uses and establishment of woody plants in urban and garden settings. Lecs, T R 12:20–1:10, lab, T R 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course. Attendance limited to Horticulture and Landscape Architecture majors or permission of the instructors.

HORT 494 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings may vary by semester, and will be advertised before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 495 Undergraduate Seminar—Current Topics in Horticulture
Fall and spring. 1 credit. Undergraduate participation in weekly departmental seminar series. Graduate students should enroll in HORT 600. May be taken four times for one credit per semester. S-U grades only. R 4:00. D. W. Wolfe and L. A. Weston.

HORT 496 Internship in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisites: permission of student's adviser in advance of participation in internship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Staff.

HORT 497 Independent Study in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall). Independent study in horticultural sciences under the direction of one or more faculty members. Staff.

HORT 498 Undergraduate Teaching Experience
Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 499 Undergraduate Research
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in horticultural sciences.

HORT 500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1-6 credits. (6 credits maximum toward M.P.S. (Agriculture) degree). S-U grades optional. Staff. A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Master of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

HORT 600 Seminar in Horticulture
Fall and spring. 1 credit. S-U grades only. W 4:30-5:25. R 4:00. D. W. Wolfe and L. A. Weston. Weekly seminars consist of graduate student research projects, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring or minoring in horticulture. Undergraduate students register under HORT 495.

HORT 615 Quantitative Methods in Horticultural Research
Spring. Weeks 1-7. 2 credits. Prerequisite: BTRY 601, BTRY 602 or permission of instructor. S-U grades only. W 2:30-4:25. Offered every year. D. W. Wolfe.
This course provides experience in applying statistics principles to real-world agricultural research problems. Examples of lab, greenhouse, and field studies from the published literature are utilized. Other quantitative methods are explored. Topics include: approaches to controlling and analysis of variation, common block and incomplete block designs; selecting an appropriate significance level; designing on-farm experiments and demonstration plots; regression methods in relation to mechanistic models and path and principal components analysis; and plant growth analysis techniques.

HORT 616 Breeding for Pest Resistance (also PL BR 618)
Fall. 2 credits. S-U grades optional. Prerequisites: BLOG 281 and PL BR 403 or equivalents. An introductory course in plant pathology and/or entomology also highly recommended. Offered every year.LEC, M 2:30-4:25. P. D. Griffiths. For description, see PL BR 618.

HORT 620 Woody Plant Physiology
Spring. 4 credits. BIOP, BIOM 331, CHEM 357, or equivalent, or permission of instructor. Letter grade only. Lec, T R 8:40-9:55; lab, T 1:25-2:25. T. H. Whitlow. An examination of physiological processes in woody plants emphasizing whole plant integration and how these processes affect plant growth under both natural and cropping systems. Topics include: evolution of the woody plant form, structure and function of the root and shoot, growth periodicity, dormancy, growth analysis, carbon balance and allocation, root symbioses, and physiological responses to biotic and abiotic stress. Faculty from Geneva and Fruit and Vegetable Science collaborate in teaching.

HORT 625 Advanced Postharvest Biology
Spring. 3 credits. TBA. Coordinator: S. Gan.

HORT 635 Tools for Thought
Fall or spring. 1 credit. S-U grades only. One hour per week, TBA. Staff. A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

HORT 636 Current Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course are not offered more than twice under this number.

HORT 700 Graduate Teaching Experience
Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours TBA. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories, and tutoring.

HORT 800 Thesis Research, Master of Science
Fall or spring. Credit variable. TBA. S-U grades only.

HORT 900 Thesis Research, Doctor of Philosophy
Fall or spring. Credit TBA. S-U grades only.
INTERNATIONAL AGRICULTURE

INTAG 300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits. R. W. Everett.
A forum to discuss both contemporary and future world food issues and the need for an integrated, multinational team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

INTAG 314 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS 314)
Fall. 3 credits. Prerequisite: an introductory course in crop science, soil science, or biology or permission of instructor. E. C. Fernandes.
Characterization and discussion of traditional shifting cultivation, lowland rice-based systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to specific diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The effect of tropical cropping systems on the environment is evaluated.

INTAG 402 Agriculture in the Developing Nations I
Fall. 2 credits. K. V. Raman, W. R. Coffman.
The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and non-government agencies. The lectures/discussions attempt to establish the global context for sustainable agricultural development and focus on agriculture and rural development in the tropics, using case studies. This course may be taken as a stand-alone survey course in international agriculture, but it is also the preparatory course for participation in Agriculture in the Developing Nations II (INTAG 602), which includes a trip to a developing country during the intersession.

INTAG 403 Traditional Agriculture in Developing Countries
Fall. 1 credit. S-U only. Staff.
Today, perhaps over half of the world’s arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course examines traditional systems from several disciplinary points of view.

INTAG 404 Crop Evolution, Domestication, and Diversity (also PLBR 404, BIOPL 404)
Spring. 2 credits. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor. S. Kresovich.
Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species.

INTAG 480 Global Seminar: Environment and Sustainable Food Systems (also ALS 480 and EDUC 480)
Spring. 1–3 credits. Prerequisite: juniors, seniors, and graduate students. Letter grade. J. Lassoie, L. Buck, D. Miller.
For description, see ALS 480.

INTAG 494 Special Topics in International Agriculture (also INTAG 984)
Fall, spring, summer. 1–3 credits. S-U grades optional. Staff.
The department teaches “trial” courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

INTAG 496 International Internship
Fall, spring. 1–6 credits. See CILS internship policy guidelines and submit approved internship form prior to enrollment. S-U grades optional. Staff.
An international internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student’s work. The student researches and initiates an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting.

INTAG 497 Independent Study in INTAG
Fall and spring. 1–3 credits. S-U or letter grade. Prerequisite: permission of instructor and signed Independent Study form. Staff.
Independent Study in INTAG allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

INTAG 598 International Development M.P.S. Project Paper
Fall and spring. 1–6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the field of International Development (ID). S-U grades only. N. Uphoff.
A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

INTAG 599 International Agriculture and Rural Development M.P.S. Project Paper
Fall and spring. 1–6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the field of International Agriculture and Rural Development (IARD). S-U grades only. R. Blake.
A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

INTAG 602 Agriculture In The Developing Nations II
Spring. 3 credits. Prerequisites: INTAG 402 and (or) permission of instructors. Field trip to India during January intersession. Note: cost of January 2004 field-study trip is approx. $2500, which includes air fare, board and lodging (some merit and need based financial aid may be available). T R 2:30–4:25 until midterm only. K. V. Raman and W. R. Coffman.
Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week overseas field-study trip to India, during January is followed by discussions and assignments dealing with problems in food, agriculture and livestock production in the context of social and economic conditions.

INTAG 603 Administration of Agricultural and Rural Development (also GOVT 692)
Spring. 4 credits. N. T. Uphoff and T. W. Tucker.
An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities during their professional careers.

INTAG 612 Intellectual Property Management and Licensing (also PL BR 612)
Spring. 2 credits. Prerequisite: open to graduate students and to seniors undergraduates. S-U grades optional. A. F. Krattiger, M. A. Mutschler, R. Potter, and R. D. Kryder.
For description, see PL BR 612.

INTAG 620 Rural Livelihoods and Biological Resources: Technologies and Institutions

INTAG 685 Training and Development: Theory and Practice (also EDUC 685)
Spring. 4 credits. S-U grades optional. M. Kroma.
Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural community development, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

INTAG 694 Graduate Special Topics in INTAG
Fall or spring. 1–4 credits. S-U or letter option. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

LANDSCAPE ARCHITECTURE

LA 140 The Symbols of New York State’s Cultural Landscape

Spring. 3 credits. Lectures with slides and other media illustrate how successive waves of New Yorkers continually defined and redefined their sense of place and “the power of place” by references to natural symbols such as Niagara Falls and to human constructions such as towns of Iroquois long houses and cities of skyscrapers.

LA 141 Grounding in Landscape Architecture

Fall. 4 credits. Limited to 15 students. Letter grade only. Cost of basic drafting equipment for the major plus materials for projects, about $250.

Introduction to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawing, and model making are used to understand design principles of the changing landscape.

LA 142 Grounding in Landscape Architecture

Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor. Cost of basic drafting equipment and project supplies, about $250.

Fundamentals of landscape design applied to small-scale site-planning projects. Work in the studio introduces course participant to the design process, design principles, construction materials, planting design, and graphics.
Both before and after 1492. A major focus is American Indian cultures and philosophies continually transformed their cultural perceptions of landscape.

LA 155 American Indian Cultural Landscapes: Changes in Time
 FALL 3 credits.
 Lectures with slides and other media illustrate various American Indian civilizations and philosophies both before and after 1492. A major focus is how all Indian societies, from hunting societies to agricultural communities, continually transformed their cultural landscapes. Lectures also include how European expansion forcefully transformed Indian American cultural landscapes.

LA 201 Medium of the Landscape
 FALL 5 credits. Limited to landscape architecture majors. Cost of basic drafting equipment, supplies, and fees, about $200; expenses for field trip, about $250.
 This studio course emphasizes the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthform, water, and vegetation.

LA 202 Medium of the Landscape
 SPRING 5 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
 This course focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architectural projects.

LA 260 Pre-Industrial Cities and Towns of Native America (also CRP 360 and CRP 666 and LA 666)
 FALL 3 credits. Offered alternate years.
 Various American Indian civilizations as well as diverse European cultures have all exerted their influence on the organization of town and city living. The course considers how each culture has altered the landscape in its own unique way as it created its own built environments.

LA 261 Fieldwork in Urban Archaeology (also CRP 261 and AIS 261)
 FALL 4 credits.
 Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve, what lies beneath today's cities, and how previous centuries have altered the urban landscape. Students participate in a local archaeological excavation. Three Saturday 8-hour field labs are required; students choose three labs from seven that are offered.

LA 262 Laboratory in Landscape Archaeology (also ARKEO 262)
 SPRING 3 credits. Prerequisites: LA 261 or ARKEO 261 or permission of instructor. Cost of supplies and fees, about $250; expenses for field trip, about $250.
 This course engages the theory and practice of participatory community design through a real community service project. Participants gain an understanding of how to integrate meaningful public service with design invention and creativity, engage rigorous design research methods, and understand how institutional and community contexts influence design problem-solving. Students will be expected to work independently and collaboratively on team projects in a community. One class period per week will be designated for community fieldwork.

LA 266 Jerusalem through the Ages (also NES 266, JWST 266, ARKEO 266, RELST 266)
 FALL 3 credits.
 Explores the history, archaeology, and natural topography of Jerusalem throughout its long life, from its earliest remains in the Chalcolithic period (ca. 4000 B.C.E.) to the 19th century, including Jebusite Jerusalem, Jerusalem as the capital of the Davidic dynasty, the Roman era city of Herod and Jesus, the Crusaders and medieval Jerusalem, and Ottoman Jerusalem as the city entered the modern era. Students examine the original historical sources (e.g., Bible, Josephus, the Madaba map, etc.) which pertain to Jerusalem.

LA 282 The American Landscape
 FALL 3 credits.
 An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature.

LA 301 Integrating Theory and Practice I
 FALL 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
 Course participants are engaged in the art and science of design. This includes relating construction and planting details to concepts and program. The studio focuses on site-scale projects that consider significant cultural and natural landscapes. Theories of landscape restoration, sustainable design, and landscape representation are explored through projects that derive form from site and place.

LA 302 Integrating Theory and Practice II
 SPRING 5 credits. Cost of supplies and fees, about $250; basic expenses for field trip, about $250.
 The studio focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationships to site design and planning are critically explored through theory and practice in this studio.

LA 315 Site Engineering I
 SPRING 3 credits. Prerequisite: permission of instructor. Cost of supplies and fees, about $250; basic expenses for field trip, about $250.
 Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316 Site Engineering II
 FALL 2 credits. Prerequisite: LA 315 or permission of instructor.
 Lectures and studio projects dealing with earthwork estimating; storm water management; site layout, and horizontal and vertical road alignment.

LA 318 Site Construction
 SPRING 5 credits. Prerequisite: permission of instructor.
 The emphasis of this course is detail design and use of landscape materials in project implementation. Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Students develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants fabricate material prototypes in wood and metal.

LA 402 Integrating Theory and Practice: Community Design Studio
 SPRING 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
 This course engages the theory and practice of participatory community design through a real community service project. Participants gain an understanding of how to integrate meaningful public service with design invention and creativity, engage rigorous design research methods, and understand how institutional and community contexts influence design problem-solving. Students will be expected to work independently and collaboratively on team projects in a community. One class period per week will be designated for community fieldwork.

LA 403 Directed Study: The Concentration
 FALL 1 credit. Prerequisite: Any landscape architecture undergraduate students in their final year of study. Cost of supplies and fees, about $250.
 Working with their advisor, students create a written and visual paper that documents the concentration's intent.

LA 410 Computer Applications in Landscape Architecture
 FALL or SPRING 3 credits. Offered to landscape architecture students only. Limited to 15 students.
 This course is designed to develop a working knowledge of various computer software applications with emphasis on Autocad. The course explores other applications relative to land-use planning and the profession of landscape architecture.

LA 412 Professional Practice
 SPRING 1 credit. Prerequisite: Any landscape architecture undergraduate students only. Cost of supplies and fees, about $250.
 The course provides the student a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or in other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

LA 483 Seminar in Landscape Studies
 FALL 3 credits. Limited to seniors in any major or graduate students in any field. Offered spring 2005.
 A topical seminar with a different subject and method each time it is offered. Subject and schedule include "Landscape and Visual Culture," (fall 2003) an inquiry into the visual construction of landscape and landscape representation in visual (painting,
photography, film, graphic design) and written texts, "Understanding Ordinary Landscapes," (fall 2004) a study of common places, including their spatial and visual patterns, uses, and material culture; "Landscape and Critical Thinking," (fall 2005) dealing with landscape as a tool for studying social and artistic issues, landscape as a basis for social inquiry.

**LA 486 Placemaking by Design**
- Fall. 3 credits. Preference given to juniors, seniors and graduate students. Limited to 20 students. S-U grades optional.
- This seminar provides an understanding of contemporary planning and landscape architectural design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. The seminar addresses the following questions. What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

[LA 490 Rome Wasn't Built in a Day]
- Spring. 3 credits.
- In this electronic course, students learn about the historical context and urban development of Rome through the study of Rome from antiquity to the present. The course engages participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, and readings and exercises are developed using the digital text, the course engages participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, and readings and exercises are developed using the digital text, the course engages participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide.

**LA 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491)**
- Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Limited to 48 students. S-U grades optional. Cost of supplies, about $50; expenses for field trips, about $50.
- This course focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about a variety of planting, pruning, and care practices of site amelioration and plant establishment. Design follows the written specifications and graphic details are produced to implement these practices.

**LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492)**
- Spring. 4 credits. Prerequisites: a passing grade in HORT/ LA 491. Attendance limited to horticulture and landscape architecture majors. Limited to 48 students. S-U grades optional. Cost of supplies, about $50; expenses for field trips, about $50.
- This course focuses on the identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing and planting techniques. Students critically assess potential planting sites, select appropriate trees, shrubs, vines and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

**LA 494 Special Topics In Landscape Architecture**
- Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional.
- Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

**LA 495 Green Cities: The Future of Urban Ecology (also CRP 495)**
- Fall. 4 credits.
- Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. The politics, design, and economics of "green cities" are examined in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

**LA 497 Individual Study In Landscape Architecture**
- Fall or spring. 1-5 credits; may be repeated for credit. S-U grades optional.
- Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

**LA 498 Undergraduate Teaching**
- Fall or spring. 1-2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
- This course includes giving up to three lectures per week, teaching a laboratory course, or teaching an independent study course under the supervision of department faculty.

**LA 499 Undergraduate Research**
- Fall or spring. 1-5 credits. Students must register with an Independent Study form. Students will carry out independent research in Landscape Architecture under appropriate faculty supervision. Research goals should include description, prediction, and explanation and should generate new knowledge in the field of landscape architecture.

**LA 500 Composition and Theory**
- Fall. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250. Field trip about $250.
- The studio focuses on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

**LA 505 Landscape Representation I**
- Fall. 3 credits. Prerequisite: concurrent enrollment in LA 501 or permission of instructor.
- This course introduces students to both conventional and unconventional modes of landscape architectural design representation. Drafting, orthographic drawing, axiomatic project, lettering, analysis and concept drawing are taught alongside more expressive modes of direct site study and representation.

**LA 506 Graphic Communication II**
- Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor.
- This intermediate level course focused on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drafting, analysis and orthographic drawing, concept modelling, composite drawings, and visual books.

**LANAR 524 History of European Landscape Architecture**
- Fall. 3 credits.
- Offered through the College of Architecture, Art, and Planning.

**LANAR 525 History of American Landscape Architecture**
- Spring. 3 credits.
- Offered through the College of Architecture, Art, and Planning.

**LA 545 The Parks and Fora of Imperial Rome**
- Spring. 3 credits. Prerequisites: advanced standing in a design field, classics or history of art, other disciplines, or by permission of the instructor.
- This advanced seminar is seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome. Opportunity for a spring break trip to Rome.

[LA 569 Archaeology in Preservation Planning and Site Design (also CRP 569)]
- Spring. 3 credits. Offered alternate years.
- Offered spring 2005.
- In response to federal, state, and local legislation, historical archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

**LA 580 Landscape Preservation: Theory and Practice**
- Fall. 3 credits. Prerequisites: limited to junior and senior undergraduates, and graduate students.
This course examines the evolving practice of landscape preservation in the United States. Topics include the recent history of the discipline, methodologies in documentation of historic landscapes, and important practitioners and notable projects. Format for the class is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

**LA 582 The American Landscape**

Spring. 3 credits. An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature. Graduate students complete additional outside work and attend an additional class session.

**LA 590 Theory Seminar**

Spring. 3 credits. Seminar in landscape design theory. For graduate students and seniors.

**LA 598 Graduate Teaching**

Fall or spring. 1–3 credits. Prerequisite: permission. Students must register with an Independent Study form. Staff. Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the term. (Credit hours are determined by 2 hours per week = 1 credit hour).

**LA 601 Integrating Theory and Practice I**

Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250. The studio focuses on site-scaled projects that consider significant cultural and natural landscapes. Theories of landscape restoration, sustainable design, and landscape representation are explored through projects that derive form from site and place. The integration of site history, ecology, and site use supports an understanding and relationship between design and site.

**LA 602 Integrating Theory and Practice II**

Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250. The studio builds upon prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. The course focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

**LA 603 Directed Study: The Concentration**

Fall, spring. 1 credit. Prerequisite: any landscape architecture graduate student in their final year of study. Working with their adviser, students create a written and visual paper that documents the concentration intent.

**LA 615 Site Engineering I**

Spring. 3 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

**LA 616 Site Engineering II**

Fall. 2 credits. Prerequisite: LA 615 or permission of instructor. Lectures and studio projects dealing with earthwork estimation, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

**LA 618 Site Construction**

Spring. 5 credits. Prerequisite: permission of instructor. The emphasis of this course is detail design and use of landscape materials in project implementation. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants fabricate material prototypes in wood and metal.

**LA 619 Advanced Site Grading**

Fall. 2 credits. Limited to 10 students. Prerequisite: LA 315 or LA 615. Grading skills and knowledge applied as a design component of site planning projects.

**LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)**

Fall. 3 credits. Offered alternate years. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. This course considers how each culture altered the landscape in their own way as they created their own built environments.

**LA 680 Graduate Seminar in Landscape Architecture**

Fall or spring. 1–3 credits. May be repeated, for credit. Limited to graduate students. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Includes seminar topics and group study not considered in other courses.

**LA 638 Special Topics in Landscape Architecture**

Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

**LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)**

Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250. Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-D computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

**LA 702 Advanced Design Studio**

Spring. 5 credits. A capstone studio that provides the opportunity to explore issues in contemporary landscape architecture and to integrate related fields. Topics include the influences of culture, history, and criticism, as well as reinterpretation of engineering and representation.

**LA 800 Master's Thesis in Landscape Architecture**

Fall or spring. 9 credits. Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

**NATURAL RESOURCES**

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new Information as soon as possible.

**NTRES 110 Introduction to the Field of Natural Resources**

Fall. 3 credits. Limited to first-year students in Natural Resources. This course provides a comprehensive overview of the modern field of natural resources and environment to new students. The course focuses on identifying the components of knowledge required to understand the Earth's natural resources and ecological systems, and to participate intelligently in their conservation and management. Local case studies are used to introduce students to the scientific, ethical, and societal basis for protection and management of natural resources and environments. Students become actively engaged in data collection and analysis, use quantitative models to analyze and interpret data, explore the human dimensions of natural resource issues, and come to understand the complexities of the policy process and management strategies.

**NTRES 201 Environmental Conservation**

Spring. 3 credits. T. Fahey

At the beginning of the twenty-first century, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often
A practical, field-oriented course emphasizing nonindustrial, private forest land in the multiple purpose management of small, principled and practices of stewardship and research projects in local forests.

NTRES 303 Forest Management and productivity, and nutrient cycling.

NTRES 302 Forest Ecology Laboratory Fall. 1 credit. Cost of weekend trip approximately $30. Concurrent enrollment in NTRES 301 required. T. J. Fahey. Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

NTRES 303 Forest Management and Maple Syrup Production Spring. 3 credits. Letter grades only. Offered alternate even years. P. J. Smallidge. A practical, field-oriented course emphasizing principles and practices of stewardship and multiple purpose management of small, nonindustrial, private forest land in the northeastern United States, including the production of maple syrup.

NTRES 305 Applied Population Ecology Fall. 3 credits. Letter grade only. Prerequisite: NTRES 210 and background in biology or ecology strongly recommended; completion or concurrent enrollment in CALS math requirement. E. Cooch.

An in-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. The course examines models of single- and multispecies population dynamics, with emphasis on understanding the relationship between ecological processes and the animal level and subsequent dynamics at the population level. Significant emphasis is placed on principles as applied to conservation and management. Computer and field-based exercises are used to reinforce concepts presented in lecture.

NTRES 306 Natural Resources Planning and Management Fall. 3 credits. Prerequisite: junior standing. T. B. Lauber. Focus is on terrestrial and aquatic resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 308 Natural Resources Planning and Management Fall. 3 credits. Prerequisite: NTRES 301 or BTRY 301. J. T. Fahey. Emphasis is placed on the application of these principles to the conservation and management of fisheries resources and aquatic habitats. Illustrative examples are provided from current literature and case studies.

NTRES 310 Fish Ecology, Conservation, and Management Spring. 3 credits. Prerequisites: NTRES 210 or permission of instructor; NTRES 305 or a general ecology course recommended. J. Jackson, E. Mills, L. Rudstam.

Basic principles of fish ecology at the individual, population, and community level are covered, particularly as they relate to interactions between fish and the aquatic environment. Emphasis is placed on the application of these principles to the conservation and management of fisheries resources and aquatic habitats. Illustrative examples are provided from current literature and case studies.

NTRES 311 Fish Ecology Laboratory Spring. 1 credit. Prerequisite: NTRES 310 or concurrent enrollment. Two weekend field trips. J. Jackson, E. Mills, L. Rudstam. Two overnight weekend field trips to the Cornell Biological Field Station and the Adirondack Field Station. Activities include experiences with various fish sampling gear and analysis of collected samples. Discussions about sampling considerations and inferences we can make by contrasting the ecology of fish in lakes of different productivity. Includes visit to a state of the art fish hatchery and evening discussion session during the field trips. Written reports required.

NTRES 314 Environmental Governance Fall. 3 credits. S. Wolf.

This course considers the question of environmental governance, defined as the assembly of social institutions that regulate natural resource use and shape environmental outcomes. Participants will explore the roles of public policy, market exchange, and collective action in resource management. Theoretical concepts from a variety of social science perspectives will be introduced to support case studies and student-led discussions. Comparative analysis of how governance is pursued in different countries, historical periods, and ecological contexts (forestry, endangered species, water quality) will highlight scope for institutional innovation. Students who wish to take the course for graduate credit should see NTRES 603.

NTRES 315 Biological Statistics I (also BTRY 301) Fall. 4 credits. Prerequisite: 1 semester of calculus. P. J. Sullivan.

Statistical methods are developed and applied to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus statistical computing environment.

NTRES 316 Biological Statistics II (also BTRY 302) Spring. 4 credits. Prerequisite: NTRES 315 or BTRY 301. J. Tantillo.

Linear statistical methods are applied to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the Splus statistical computing environment.

NTRES 320 Principles of Toxicology (also TOX 320) Spring. 3 credits. Prerequisites: one year each of chemistry and biology with labs, 1 semester of organic chemistry lecture or permission of instructor. J. W. Gillett.

This introductory lecture course in human and environmental toxicology emphasizes basic principles (exposure, dose-response, effects) involved with pesticides, hazardous wastes, and natural products. Science-based assessments for risk analysis and policy are integrated with other considerations. Guest speakers and extensive case studies augment lectures and student team exercises applied to management and policy. For description, see EAS 321.
NTRES 350 Global Ecology and Management
Spring. 3 credits. Prerequisites: college-level ecology. J. B. Yavitt. The subjects of biogeography, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community and biogeography, and ramifications of global climatic change.

[NTRES 370 Conservation of Birds]
Spring or summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. Offered alternate odd years. Next offered spring 2005. C. R. Smith.

A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds are explored in the contexts of agricultural practice, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change, and the economic importance of bird study as an outdoor recreational activity.

[NTRES 371 Conservation of Birds Laboratory]
Spring or summer. 1 credit. Concurrent enrollment in NTRES 370 required. Saturday mornings TBA. Offered alternate odd years. Next offered spring 2005. C. R. Smith.

A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered include the choice and effective use of field guides, binoculars, and other tools for bird identification. Field trips for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations.

[NTRES 400 International Environmental Issues]
Fall or winter. 4 credits. Prerequisite: junior standing or above. Next offered fall 2004.

NTRES 402 Environmental and Natural Resources Policy Processes
Spring. 3 credits. Prerequisites: junior standing, special application process, and course fee (approx. $400). Lec. January 12-day intersession, three 2-hour orientation sessions in January and four 2-hour sessions in February and March. Completed applications due by October 15. Applications are available by contacting map.10@cornell.edu or at www.dnr.cornell.edu/courses/NTRES/402/402in fо.htm. B. A. Knuth.

An intensive exploration of the environmental policy process and its conceptual framework. Recognizing and defining natural resource or environmental problems and issues, aggregating interests; agenda-setting; formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislature, executive branch, and other agencies. Case studies, presentations by Washington policy makers appearing as guest lecturers. Required interviews, term paper, and oral reports. Includes 11 days in January in Washington, D.C.

NTRES 406 Ecology Risk Assessment (also TOX 406)
Fall. 3 credits. Prerequisites: BIOES 261 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. J. W. Gillett.

This course strives to develop understanding of and competence in the different types of ecological (nonhuman health) risk assessments based on USEPA principles and methods. Focus is on cases for chemical, physical, and biological stressors in a variety of circumstances.

NTRES 407 Religion, Ethics, and the Environment
Fall. 4 credits. For juniors, seniors, and graduate students; others by permission only. S-U grades optional. R. A. Baer.

How religion (especially Christianity and Judaism), philosophy, and ethics influence our treatment of nature. Themes include character and moral development, similarities and differences between moral and scientific claims, truth telling, public reason, and property. Also covers animals rights vs. ecosystem concerns, responsibility to future generations, the limitations of rationalism in ethics, and discussion of whether women approach moral issues differently than men. One additional credit may be available through the Writing-in-the-Majors program. Students may apply at the first class, only 8-10 students will be accepted.

NTRES 411 Seminar in Environmental Ethics
Fall. 4 credits. For seniors, juniors and graduate students. S-U grades optional.

Moral concerns relative to the natural environment and agriculture. Major themes generally include: animal rights vs. ecosystem concerns; natural resource management and the concept of the public interest; applying environmental ethics in a democratic and pluralistic society; how our treatment of one another parallels our treatment of nature; and land use ethics. Several classes focus on the nature of facts, values, knowledge, and truth telling.

NTRES 415 Principles and Practices of Agroforestry (also HORT 415 and CSS 415)
Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. Lec. M W F 10:10-11:00. Offered alternate years; possibly offered fall 2003. L. Buck, E. Fernandes, K. Mudge.

An integrated set of laboratory field exercises designed to expose students to: the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, and water; and methods of wetland identification and delineation.

NTRES 416 Wetland Ecology and Management-Laboratory
Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. L. Buck.

An integrated set of laboratory field exercises designed to expose students to: the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, and water; and methods of wetland identification and delineation.

NTRES 417 Principles and Practices of Agroforestry—Laboratory (also HORT 416 and CSS 416)
Fall. 3 credits. Prerequisite: NTRES 415. Offered alternate years; possibly offered fall 2003. L. Buck, E. Fernandes, K. Mudge.

A thorough analysis of the ecological and quantitative dimensions for decision making in modern conservation biology and management. Emphasis is on analysis of variation and maintenance of biological diversity, and principles and techniques, including demographic viability analysis of populations, genetic analysis, as well as aspects of the human dimensions of conservation biology.
transformed into useful information for decision makers.

**NTRES 471 Ecoregions: Ecology and Conservation**
Spring. 2 credits. Letter grade only. Prerequisites: NTRES 210, 305; statistics recommended; junior standing or above. Lec/Lab. Offered alternate even years. C. R. Smith.

Approaches to characterizing and classifying terrestrial habitats and ecoregions at a variety of spatial scales are reviewed and discussed. A landscape approach is used to introduce habitat management concepts and land cover classifications. Legislation guiding federal land management decisions is discussed, and field trips may go to areas managed by public and private land management organizations.

**NTRES 498 Stream Ecology (also ENTOM 456, BIOEE 456)**
Spring. 4 credits. Limited to 60 students. Prerequisites: none; BIOEE 261 recommended. Offered even years. P. Beckarsky.

For description, see ENTOM 456.

**NTRES 458 Human Dimensions of Natural Resource Management**
Spring. 3 credits. Grades optional. Limited to juniors and seniors. J. Enck and B. Lauber.

This course focuses on how a social science-based understanding of human attitudes, values, and behaviors can be incorporated in natural resource management decisions and actions. Examples from federal, state, and nongovernmental fish, wildlife, and forest management programs are used to illustrate the importance of socioeconomic considerations in problem solving and decision making.

**NTRES 459 Wildlife Population Analysis: Techniques & Models**
Spring. 3 credits. Prerequisites: NTRES 305 (or equivalent, or by permission of instructor), a college-level math or statistics class. Lecture/lab: 2-week intensive course (M-T W R F morning lectures, afternoon labs) in January with follow-up meetings during the spring semester.

This course will explore the theory and application of a variety of statistical estimation and modeling techniques used in the study of wildlife population dynamics. The course will focus on exploration of a selection of the tools needed for modern wildlife conservation and management, including (possibly) analysis of mark-recapture data, population viability analysis, decision theory, and matrix modeling.

**NTRES 460 Quantitative Ecology and Management of Fisheries Resources**
Spring. 4 credits. S-U grades optional. Prerequisites: NTRES 304 recommended or permission of instructor. Offered alternate even years. P. J. Sullivan.

The dynamics of marine and freshwater fisheries resources are examined with a view towards observation, analysis, and decision making from a quantitative framework. Growing pressure on fisheries' resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries' issues. Quantitative models are useful for integrating information needed by decision makers addressing these issues. The course develops analytical methods to assess the dynamics and status of fisheries' resources and then demonstrates how the information may be

**NTRES 470 Ecological Change and Human Dimensions**
Fall, spring, or winter. Credit TBA. S-U grades optional. Prerequisite: permission of instructor; R. A. Baer, T. Brown, L. E. Duck, D. J. Decker, J. Enck, J. Gillett, B. Knuth, B. Lauber, J. Tamills, S. Wolf. Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 494 Special Topics in Natural Resources**
Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**NTRES 495 Individual Study in Fish and Wildlife Biology and Management**

Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 496 Special Topics in Fish and Wildlife Biology and Management**
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of instructor: B. Bedford, B. Blossey, T. Fahey, M. Krasny, J. Lassoie, R. Schneider, R. Sherman, P. Smallidge, J. Yavit.

Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 498 Teaching in Natural Resources**
Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

**NTRES 500 Professional Projects—M.P.S.**
Fall and spring. Credit TBA. Limited to graduate students working on professional master's projects. S-U grades only.

**NTRES 600 Introduction to Graduate Study in Natural Resources**
Fall. 2 credits. Prerequisite: course is open to beginning graduate students whose faculty advisers are in Natural Resources. S-U grades. Lec TBA.

Designed for beginning Natural Resources graduate students, this course includes faculty-led discussions of key natural resources issues, student discussions of research ideas, and skill building sessions on proposal writing and giving research presentations. Students are required to complete a research proposal.

**NTRES 601 Seminar on Selected Topics in Natural Resources**
Fall or spring. 1 credit. S-U grades only. TBA. Check with department for availability. Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

**NTRES 602 Seminar on Selected Topics in Resource Policy and Management**
Fall. 2 credits. S-U grades only. Check with department for availability. Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

**NTRES 603 Introductory Seminar (also CEE 603)**
Fall or spring. 1 credit. S-U grades only. Offered alternate even years. P. Sullivan.

This introductory seminar is required for undergraduate students interested in the field of natural resources. The seminar introduces the core concepts of natural resources and their management, and provides an overview of the research and professional opportunities in the field. Students will learn about the principles and methods used in natural resource management, and will have the opportunity to interact with professionals in the field. The seminar is based on lectures, discussions, and guest lectures, and is designed to help students develop the knowledge and skills needed to pursue further study in natural resources.

**NTRES 604 Seminar on Selected Topics in Resource Policy and Management**
Fall. 2 credits. S-U grades only. TBA. Check with department for availability. Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

**NTRES 605 Issues in Risk Analysis Seminar (also CEE 605)**
Fall. 1 credit. Prerequisite: calculus. Advanced course in statistics and basic natural sciences (Chemistry, Biology, Earth Systems). S-U only. Lec, TBA. J. Gillett and R. Davidson.

Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risks, communications issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series. Enrollment in seminar requires short reports and preparation for two regular discussion meetings for class members designed to integrate the issues raised during the semester.

**NTRES 607 Ecotoxicology (also TOX 607)**
Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. Offered alternate even years. J. W. Gillett.

Lectures, readings, and special guest focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology,
ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

**NTRES 612 Fish and Wildlife Ecology Seminar**

Fall and spring. 1 credit. Prerequisite: permission of instructor. Check with department for availability. Staff.

Discussion of individual research, current problems, and current literature in fish and wildlife ecology. Offering varies by semester and subject to availability.

**NTRES 614 Environmental Governance**

Spring. 4 credits. S. Wolf.

For description, see NTRES 314. Students taking the course for graduate credit will be required to read supplemental materials, undertake more complex research assignments, and participate in seminar discussion section.

**NTRES 615 Case Studies and Special Topics in Agroforestry**

**NTRES 616 Forest Science and Management Seminar**

Fall. 2 credits. For graduate students and upper-level undergraduates. J. B. Yavitt.

This seminar course includes review of current literature, student research, and selected topics of interest. Topics include biogeography, ecology, and human use of forests located in boreal, temperate, and/or tropical environments.

**NTRES 618 Critical Issues in Conservation and Sustainable Development**

Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30–4:25. Staff.

Establishes a conceptual foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and rural development. Students work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

**NTRES 620 Wildlife Population Analysis: Techniques and Models**

Spring. 3 credits. Prerequisites: NTRES 305 or permission of instructor. S-U grades optional. Not offered 2003–2004. L. E. Buck.

**NTRES 625 Quantitative Ecology and Management of Fisheries Resources**

Spring. 4 credits. S-U grades optional. Prerequisites: NTRES 304 recommended or permission of instructor. Offered even years. P. J. Sullivan.

The course is taught in conjunction with NTRES 460 (see description above). Students taking the course for graduate credit are asked, in addition to the 400-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

**NTRES 670 Spatial Statistics**

Spatial statistical concepts and techniques are developed and applied to ecological and natural resource issues. Topics include visualization of spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. Students should consider taking this course simultaneously with CSS 620.

**NTRES 694 Special Topics in Natural Resources**

Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**NTRES 696 Organic Inputs in Tropical Soils and Agroforestry (also INTAG 696 and CSS 696)**

Fall and spring. 1 credit. S-U grades only. F 12:20–1:10. E. Fernandes, L. Fisher.

For description, see INTAG 696.

**NTRES 698 Current Topics: Environmental Toxicology (also TOX 698)**

Fall, spring. 1–3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

**NTRES 699 Graduate Individual Study in Natural Resources**

Fall or spring. Credit. TBA. S-U grades only. Prerequisite: permission of instructor. NTRES graduate faculty.

**NTRES 800 Master's Thesis Research**

Fall and spring. Credit. TBA. Limited to graduate students working on master's thesis research. S-U grades only.

**NTRES 900 Graduate-Level Thesis Research**

Fall and spring. Credit. TBA. Limited to graduate students in a Ph.D. program only before the "A" exam has been passed. S-U grades only.

**NTRES 901 Doctoral-Level Thesis Research**

Fall and spring. Credit. TBA. For students admitted to candidacy after the "A" exam has been passed. S-U grades only.

**Related Courses in Other Departments**

Courses in many other departments are relevant to students majoring in Natural Resources. The following list includes some of the most closely related courses but is not exhaustive.

- Environment and Society (R SOC 208, 324, 340, 410, 440, 495)
- Environmental Law, Ethics, and Philosophy (SATS 206; CRP 390, 443, 444, 451, 453, PHIL 241, 246, 247, 381)
- Human Systems and Communication (COMM 260, 285, 352, 421)
- Physical Sciences (BEE 151, 301, 371, 425, 435, 471, 473, 475, 478; CSS and EAS 260, 321, 365, 371, 398, 483; EAS 102, 104; CEE 432)
- Public Policy and Politics (GOVT 427, 428; BIO & SOC 461; CEE 529)
- Resource Economics (AEM 250, 450, 451)
- Spatial Data Interpretation (CSS 411, 420, 620, 660)

**PLANT BREEDING**

**Note:** class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

**PL BR 201 Plants, Genes, and Global Food Production**

Fall. 2 credits. Prerequisite: 1 year of introductory biology or permission of instructor. Lec, T R 11:15–12:05. S. R. McCouch.

This course provides an introduction to plant breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the GLS distribution requirement GROUP B—Biological Sciences.

**PL BR 228 Plant Genetics**

Spring. 2 or 3 credits (2 credits if taken after BIOLGD 281). Prerequisites: 1 year of introductory biology or equivalent, permission of instructor required for students who have taken BIOLGD 281.

This course surveys the fundamentals of plant genetics. It shows how this information is used in plant biology and allied agricultural sciences and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance, linkage analysis, polyploidy, analysis of nuclear, chloroplast and
mitochondrial genomes, pollination controls, and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

**PL BR 401 Plant Cell and Tissue Culture**  
Fall. 3 credits. Prerequisites: a course in plant biology or genetics, or permission of instructor. Lects, T R 10:10. E. D. Earle. Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Plant improvement via gene transfer and other manipulations of cultured cells is a major topic.

**PL BR 402 Plant Tissue Culture Laboratory**  
Fall. 1 credit. Enrollment limited. 
Prerequisites: PL BR 401 (may be taken concurrently) or permission of instructor. W or R 1:25-4:25 (alternate weeks) plus 1 hr TBA. E. D. Earle, A. R. Alan.

This course provides hands-on experience in plant tissue culture and complements PL BR 401. Lab work includes cell, tissue and organ culture techniques related to propagation, storage, and genetic manipulation. Experiments use a broad range of plant materials and include protoplast culture and Agrobacterium-mediated gene transfer.

**PL BR 403 Genetic Improvement of Crop Plants**  
Fall. 3 credits. Prerequisites: genetics (BIOGD 281, PL BR 225, or other standard genetics course), and a course in crops or horticulture M W F 9:05-9:55. V. Gracen.

Genetic enhancement of crop value to humans begins with domestication and continues with farmers' variety development and scientifically trained plant breeders' applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history of crop domestication, and the practice of plant breeding. The course explains the necessary technical and biological knowledge and skills of the modern plant breeder, and includes case studies of specific crop improvement programs. These case studies are used to illustrate the history and practice of plant breeding, demonstrate the potential of genetic improvement of crop plants, and the problems faced by breeders in plant improvement.

**PL BR 404 Crop Evolution, Domestication and Diversity (also BIOPL 404, INTAG 404)**  
Fall. 2 credits. S-U or letter grade. 
Prerequisites: BIOGD 281 or PL BR 225 or permission of the instructor. Lect, T R 9:05. S. Kresovich.

Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Underlying ethical, legal, and social issues affecting conservation and use also are addressed.

**PL BR 446 Plant Cytogenetics Laboratory**  
Spring. 1 credit. S-U only. Prerequisites: a course in genetics or permission of instructor. Will be offered as a 2-week module at a time to be arranged. Check with department for further information. K. N. Wassef.

This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis is on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Basic techniques for examination of plant chromosomes are covered.

**PL BR 494 Special Topics in Plant Breeding**  
Fall or spring. 4 credits maximum. S-U grades optional. 
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. The number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL BR 496 Internship in Plant Breeding**  
Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. 
Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Students must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty advisor and student, stating the conditions of the work assignment, supervision, and reporting.

**PL BR 497 Individual Study in Plant Breeding**  
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. 
Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

**PL BR 498 Undergraduate Teaching**  
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. 
Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

**PL BR 499 Undergraduate Research**  
Fall or spring. Credits variable. S-U optional. 
Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate research projects in plant breeding.

**PL BR 604 Methods of Plant Breeding Laboratory**  
Fall. 2 credits. Prerequisite: PL BR 403 or equivalent (may be taken concurrently). S-U optional. T R 1:25-4:15. M. E. Sorrells and R. E. Anderson.

Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

**PL BR 606 Advanced Plant Genetics**  
Spring. 3 credits. S-U grades optional. 
Prerequisites: BIOGD 281 or equivalent and instructor's permission. Lects, T R 1:25-2:40. M. Jahn.

Provides an advanced survey of genetics in higher plants including selected topics in Mendelian genetics, plant reproductive biology, chromosome biology, cytogenetics, and epigenetics. The development of critical analytical skills is stressed through case studies, in-class exercises, and the course project.

**PL BR 607 Analysis of Sequence Similarity**  
Spring. 1 credit. Enrollment limited. S-U grades only. Prerequisites: basic biology, basic genetics, familiarity with computers. Permission of instructor required. M W F 11:15-12:05 for 4 weeks. Dates TBA.

This course focuses on the tools available for accessing nucleotide and protein sequence similarity in plants, animals, and microbes and the strengths and limitations of these approaches for answering biological questions. The mathematical and statistical background of the algorithms is presented in lectures, and weekly on-line projects provide students with experience in addressing a range of biological problems involving sequence analysis.

**PL BR 612 Intellectual Property Management and Licensing**  
Fall. 2 credits. Prerequisite: open to graduate students and to senior undergraduates. S-U or letter option. Lect, M W F 10:30-11:20, weeks 1-4, A. F. Krattiger, M. A. Mutschler, R. Potter, and R. D. Kryder.

Comprehensive course for graduates and senior undergraduates in any field of agriculture and the life sciences on intellectual property (IP) management and licensing. The course covers statutory protection (copyright, trademarks, patents, plant variety protection), contracts (from material transfer to licensing), management of IP (freedom-to-operate, valuation, genetic resources, trade, marketing, etc.) and negotiation. Emphasis is on technology transfer and international aspects. The course is particularly relevant to students interested in science management, technology transfer, international agriculture, and business.

**PL BR 618 Breeding for Pest Resistance (also HORT 618)**  
Fall. 2 credits. S-U grades optional. 
Prerequisites: BIOGD 281 and PL BR 403 or equivalents. An introductory course in plant pathology and/or entomology also highly recommended. M 2:30-4:25, weeks 1-4. Offered alternate even years. P. Griffiths.

A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of...
PL BR 653.6 Molecular Breeding (also BIOPL 653.5)
Fall. 1 credit. S-U grade or letter option.
Lecs, M W F 10:10-11:00 (12 weeks) Oct. 1-Oct. 29. Offered alternate years.
S. Tanksley.
Application of DNA markers to the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

PL BR 900 Graduate-Level Dissertation
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students in a Ph.D. program only before the "A" exam has been passed.

PL BR 901 Doctoral-Level Dissertation Research
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students admitted to candidacy after the "A" exam has been passed.

PL BR 653.7 Quantitative Genetics in Plant Breeding
Spring. 3 credits. S-U grades optional.
Prerequisite: PL BR 653.6 offered alternate years.
M. E. Sorrells.
Emphasis is on critical discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required. Grades are based on 4 papers demonstrating creative thinking and analysis of plant breeding concepts.

PL BR 716 Perspectives in Plant Breeding Strategies
Spring. 3 credits. S-U grades optional.
Prerequisite: PL BR 653.6 offered alternate years.
M. E. Sorrells.
Emphasis is on critical discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required. Grades are based on 4 papers demonstrating creative thinking and analysis of plant breeding concepts.

PL BR 717 Quantitative Genetics in Plant Breeding
Spring. 3 credits. S-U grades optional.
Prerequisites: PL BR 403 and BTRY 601 or equivalent. M 2:55-4:10. Offered even years.
D. R. Viands.
Discussion of quantitative genetics and quantitative trait loci (QTLs) for more efficient plant breeding. Specific topics include: components of variance (estimated from various mating designs); theory and computer analysis for QTL, population structure, multiple locus regressions, and interval analysis; heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse are evaluated to provide data for computing quantitative genetic parameters.

PL BR 726 Problems and Perspectives in Computational Molecular Biology (also CS 726 and BTRY 726)
Fall and spring. 1 credit. S-U only.
Prerequisite: permission of instructor.LEC M 1:25-2:15.
This is a weekly seminar series discussing timely topics of computational molecular biology. The course addresses methodological approaches to sequence annotation, protein structure and function relationships, evolutionary relationships across species. Statistical and deterministic computational approaches are covered and specific and detailed biological examples are discussed. Topics of interest are discussed in relation to papers prepared by teams of students and/or faculty. We pair students/faculty from biology backgrounds with students from math, computer science and statistics for paper preparation. Students summarize the salient questions addressed by the paper, the research methods used and the results obtained. At the end of the presentation, questions should be listed on an overhead slide to initiate discussion in the group.

PL BR 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students working on a master's thesis.

PL BR 801 Independent Research
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students admitted to candidacy after the "A" exam has been passed.

PL PA 201 Magical Mushrooms, Mischievous Molds
Spring. 2 credits. S-U optional. Lecs, T R 11:15. G. W. Hudler.
A presentation of the fungi and their roles in nature and in shaping past and present civilizations. The historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals are emphasized.

PL PA 241 Plant Diseases and Disease Management
Fall. 4 credits. Prerequisite: one year of biology. Lecs, M W F 11:15; lab, T or W 1:25. Lectures co-meet with PA 401; laboratories and exams are separate. Credit can only be for one of these courses. Staff.
An introduction to plant diseases, their diagnosis, and management. Topics covered include: fungi, bacteria, viruses, nematodes, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control.
For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasis is on pests of northeastern flora but examples from other parts of the country and the world are also used. Forest, shade, and ornamental plants are considered.

**PL PA 494 Special Topics in Plant Pathology**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL PA 497 Independent Study**

Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

**PL PA 498 Teaching Experience**

Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

**PL PA 499 Undergraduate Research**

Fall or spring. 3–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for research experience under the direction of a faculty member.

**PL PA 600 Professional Skills in Science and Plant Pathology**

Fall. 1 credit. S-U grades only. Lec, T 9:00-9:55; lab T 12:25-1:25.

Prerequisites: PL PA 401 or permission of instructor. Lee, M W 9:05 (7 weeks, 1st half of semester only); lab W 12:25–1:25 (7 weeks, 1st half of semester only). Offered alternate years. Next offered fall 2005. S. V. Beer.

This course emphasizes bacterial disease of plants, their occurrence in the field, isolation of bacterial pathogens and identification by traditional and contemporary techniques. Bacterial culture and plant inoculation, epidemiology and control.

**PL PA 608 Genomics of Bacterium-Host Interactions (also BIOMI 651)**

Fall. 1 credit. S-U grades only. Prerequisites: BIOMI 250 or permission of instructor. Lec, M W 9:05-9:55, Grady, S. W. 12:25–1:25 (7 weeks, 1st half of semester only). Offered alternate years. Next offered fall 2005. A. Collmer and S. W. Winans.

Introduction to genotypic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artemis tools, the pathogens *Yersinia pestis*, *V. cholerae*, *Pseudomonas syringae*, *Ralstonia solanacearum*, *Agrobacterium tumefaciens*, and the symbiont *Sinorhizobium meliloti*.

**PL PA 609 Fungal Pathology**

Spring. 1 credit. S-U grades only. Prerequisites: PL PA 309, 401 or equivalent, or permission of instructor. Lec, F 12:25–1:25 (7 weeks, 2nd half of semester); lab F 2:20–3:20 (7 weeks, 2nd half of semester). Offered alternate years. W. Loeber.

A team taught course providing basic information on the biology of fungal pathogens and the diseases they cause. The
life cycles and disease cycles of representative pathogens and diseases they cause are emphasized along with etiological and epidemiological aspects of the diseases covered.

[PL PA 610 Oomycete Biology and Pathology]
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05-9:55 (7 weeks, 1st half of semester). Offered alternate years. Next offered fall 2005. E. B. Nelson. This course is intended to provide students with a broad exposure to the biology of Oomycetes. The basic attributes of this important group and animal, plant, and invertebrate parasites are detailed in lectures and demonstration sessions. Emphasis is placed biological characteristics important to the pathology of these organisms. Topics address evolutionary biology, systematics, genetics, developmental biology, mechanisms of pathogenesis, unique aspects of Oomycete metabolism and reproduction, growth, and dormancy. Key ecological aspects of the interaction of Oomycetes with plants and other microbes are covered. Practical aspects of Oomycete biology, including isolation from environmental samples, epidemiology, and disease control are also addressed.]

[PL PA 620 Ecology of Plant Pathogens]
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05-9:55 (7 weeks, 1st half of semester). Offered alternate years. E. B. Nelson. The basic ecological concepts, principles, methods, and literature important to the understanding of the interactions of plant pathogens with their physical, biochemical, and microbial environments are covered. Ecological processes that regulate the pre-infection behavior of plant pathogens are emphasized in both aboveground and belowground habitats. Topics include the nature and behavior of pathogen inoculum, population and community biology, pathogen interactions with plant-associated microbial populations and communities, rhizosphere and phyllosphere dynamics, and more.

[PL PA 621 Chemical and Biological Disease Control]
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05-9:55 (7 weeks, 2nd half of semester). Offered alternate years. E. B. Nelson and W. Koeller. A discussion of the principles and methods used for the control of plant diseases. Emphasis is placed on chemical and biological strategies for disease control. Topics include historical aspects of disease management in plant pathology, the discovery, use and mode of action of major fungicide groups, pathogen resistance to fungicides, microbial strategies for biological control, regulation and commercialization of microorganisms, transgenic microorganisms and strategies for integrating biological and chemical control strategies.

[PL PA 622 Plant Disease Epidemiology]
Fall. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05 (7 weeks, 1st half of semester). Offered alternate years. M. G. Milgroom. An introduction to basic concepts of population dynamics of plant pathogens and plant diseases in time and space. Emphasis is on the interplay between theory and empirical studies on disease progress, spatial patterns and spread, forecasting and risk assessment for plant pathogens.

[PL PA 623 Pathogen Population Genetics]
Fall. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 9:05 (7 weeks, 2nd half of semester). Offered alternate years. M. G. Milgroom. Introduction to basic principles of population genetics and evolution as they relate to plant pathogens. Topics include quantifying genetic diversity, population structure, reproductive systems and migration. Special emphasis is on the applications of population genetics to answering questions about the biology and epidemiology of plant pathogens. Examples from fungi, oomycetes, bacteria and viruses are included.

[PL PA 628 Filamentous Fungal Genomics and Development (also BIOGD 6328)]
Spring. 1 credit. S-U grades optional. Prerequisite: BIOGD 281 or equivalent. Lec, M W F 10:10. (4 weeks, last 4 of semester) Next offered spring 2005. B. G. Tuigeon. Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity) and reproduction, both sexual and asexual, are described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as Cochliobolus heterostrophus, Magnaporthe grisea, and Ustilago maydis and from well known genetic models such as Aspergillus nidulans and Neurospora crassa.

[PL PA 642-661 Special Topics Series]
Unless otherwise indicated, the following description applies to courses 642-661. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

[PL PA 642 Pathogen Population Biology]
Fall. TBA. M. G. Milgroom.

[PL PA 644 Current Topics in Oomycete Biology]

[PL PA 645 Plant Virology]

[PL PA 647 Phytobacteriology Research Updates]

[PL PA 649 Fungal Biology]
Spring. 1 credit. TBA. K. T. Hodge.

[PL PA 650 Diseases of Vegetable Crops]

[PL PA 652 Field Crop Pathology]

[PL PA 656 Special Topics in Plant Disease Management]
Fall and spring. 1 credit. S-U grades only. Lec, F 12:20–1:10. C. D. Smart. Weekly discussions of current topics in plant disease management. These include not only management practices, but also factors that influence management strategies. Students are required to read current literature and present oral reports on a topic. This course is offered only at the Geneva campus.

[PL PA 661 Diagnostic Lab Experience]
Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. T. A. Zitter. For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnosticians. Coursework or experience in diagnostic techniques is strongly advised. Priority is given to graduate students in plant pathology and plant protection.

[PL PA 662 Molecular Plant-Pathogen Interactions I and II (also BIOPL 652.1)]
Spring. 1 credit. Prerequisites: BIODG 281, BIODB 350 or 351, and BIOP 653.1. Lec, M W F 10:10. (12 weeks) Jan. 26–Feb. 20. A. Colmer, S. B. Lazzorowitz, G. Martin, B. Turgeon. Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Beginning spring 2004, alternate years will focus on: (I) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to pathogen production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apoptotic responses that limit infection, and RNA interference; and (II) the genetic and molecular mechanisms of fungal pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

[PL PA 663 Plant Molecular Biology 1]
Fall. 1-5 credit. Prerequisites: BIO GS 281, BIO BM 330 or 331.

Section 01 Concepts and Techniques in Plant Molecular Biology (BIO PL 653.1)

This is an introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences, and serves as a prerequisite to other modules in the BIO PL 653 (fall) and BIO PL 652 (spring) series. The course is divided into two sections: 1) gene discovery, which covers genetic, molecular, and genomics approaches to the isolation of plant genes; and 2) gene characterization, which covers DNA sequencing, DNA and RNA blotting, use of gene databases, and various approaches to producing transgenic plants. Emphasis is on understanding the appropriate
This course deals with production and uses of
transgenic plants for agricultural and industrial
purposes. Topics include procedures for gene
introduction and control of gene expression,
as well as strategies for obtaining transgenic
plants that are resistant to insects, diseases,
and herbicides, produce useful products, or
have improved nutritional and food
processing characteristics. Regulatory and
social issues relating to plant biotechnology are
discussed.

**PL PA 664 Molecular Plant-Microbe Interactions (also BIOL 652, Sec 02 and BIOMI 652, Sec 02)**
Spring. 1 credit. Prerequisites: BIODG 281,
BIOM 330 or 331 or 333, and BIOL 655 (section 01) or their equivalents. S-U grades optional. Lects, M W 12:20-12:35 (12 lecs) Jan. 26-Feb. 20. Offered alternate even years. S. C. Winans.

For course description, see BIOL 652, Sec. 02.

**PL PA 681 Plant Pathology Seminar**
Fall and spring. 1 credit. Required of all
plant pathology majors. S-U grades only.

**PL PA 684 Special Topics in Plant Pathology**
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this
number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL PA 788 Research in Molecular Plant Pathology**
Fall and spring. 2, 4, or 6 credits.
Prerequisite: permission of instructor before beginning research. S-U grades only.
S. V. Beer.

Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Plant Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

**PL PA 797 Special Topics**
Fall or spring. 1-5 credits. S-U grades optional.
An opportunity for independent study of a special topic.

**PL PA 798 Graduate Teaching Experience**
Fall or spring. 1-5 credits. S-U grades. Staff.
Graduate teaching assistant in a mycology or
plant pathology course by mutual agreement
with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

**PL PA 800 Master's-Level Thesis Research**
Fall or spring. Credit THA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.
For students working on a master's degree.

**PL PA 900 Graduate-Level Thesis Research**
Fall or spring. Credit THA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.
For students in a Ph.D. program who have not passed the "A" exam.

**PL PA 901 Doctoral-Level Thesis Research**
Fall or spring. Credit THA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.
For doctoral candidates who have passed the "A" exam.

**POMOLOGY (FRUIT SCIENCE)**
See Horticulture

**RURAL SOCIOLOGY**

**R SOC 201 Population Dynamics (also SOC 202)**
Fall and spring, or summer. 3 credits. S-U optional. Students must register for this course as R SOC 201. T R 1:55-2:10. P. Eloundou-Enyegue.

This course provides an introduction to population studies. After reviewing basic concepts and demographic principles and techniques, the course focuses on how demographic processes (fertility, mortality, and migration) affect social and economic outcomes. Discussions cover special topics related to population growth and distribution, including mass education, marriage and family formation, labor force participation, inequality and poverty, women's status, resource allocation, and the environment.

**R SOC 205 International Development (also SOC 260)**
Fall and spring. 3 credits. Enrollment limited to 35. ALs students must register for this course as R SOC 201. T R 1:55-2:10. P. Eloundou-Enyegue.

New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is on the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. Also examined are the new global justice movements, such as environmentalism, feminism, and landless workers, peasant, and grassroots activism.

**R SOC 206 Gender and Society (also FGSS 206)**
Spring. 3 credits. Enrollment limited to 35. Lects, M W 11:15-12:05; sec, various times. Staff.
Course familiarizes students with origins of gender hierarchies, social and behavioral
similarities/differences between females and males, and the degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality are a major focus of the course. Objectives are met through lectures, readings, films, participant observation, and personal experiences.

[R SOC 207 Problems of Contemporary Society (also SOC 207)]
Fall. 4 credits. S-U grades optional. Lec, M W F 11:15-12:05; Sec F. D. Heckathorn. This course examines contemporary social problems, with a focus on their sources in the organization of society. Modern societies are based on three fundamental types of institutions—social norms, hierarchies, and markets. Each is subject to distinctive types of failures resulting in problems that include poverty, prejudice and discrimination, intolerance and hate, alcohol and drug abuse, physical and mental illness, crime and delinquency, and urban problems. In analyzing these problems, the institutions through which they are created and perpetuated, and the forms of institutional change required to address them, are emphasized.

[R SOC 208 Technology and Society]

[R SOC 209 Social Inequality (also SOC 208)]

[R SOC 213 Social Indicators, Data Management, and Analysis]
Fall. 3 credits. Offered alternate years (complement of R SOC 214). T R 11:40-12:55. J. Francis. A survey of definitions of social indicators and general principles of social indicators research is illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, and so on, based on census data, household surveys, and key-informant and other low-cost techniques, are examined using personal computers.

[R SOC 214 Research Methods for the Social Sciences]

[R SOC 215 Introduction to Organizations (also SOC 215)]

[R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also LSP 220)]
Fall. 3 credits. S-U optional. Enrollment is limited to 15. T R 10:10-11:25. P. A. Parra. Discusses the health status of minorities in the United States. This course explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

[R SOC 261 Sociology of Sustainable Development]

[R SOC 275 Immigration and a Changing America]
Fall. 3 credits. S-U grades optional. M. W 2:55-4:10. M. M. Kritz. Immigration has shaped population and society throughout U.S. history. Today, immigration has reemerged as a major force in American life. The course examines how contemporary and earlier immigrations differ in their determinants and consequences. The first part of the course focuses on who the new immigrants are, why they come, where they live, and what they do. Current trends in immigration are discussed as well as immigration and refugee policies that shape immigration. The second part of the course evaluates the integration of immigrants, having on U.S. society, economy, and policy. Theories of immigration, immigration policies, and the diversity of immigrant experiences receive attention throughout the course.

[R SOC 301 Theories of Society (also SOC 375)]
Spring. 3 credits. Prerequisites: Rural sociology or sociology course. S-U grades optional. Enrollment is limited to 30. T R 11:40-12:55. P. Eberts. An introduction to the "classical" sociological theorists (Marx, Weber, Durkheim) of the late nineteenth and early twentieth century, as well as "erased" and missing sociological voices of the period (such as C. Perkins, Gilmor, W.E.B. DuBois). The course addresses the dramatic social upheavals including the fall of the Ottoman Empire, industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. The intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society are emphasized.

[R SOC 302 Evaluating Statistical Evidence (also SOC 301)]
Fall. 4 credits. S-U optional. Lec, M W 11:15-12:05. S. Szelenyi. A first course in statistical evidence in the social sciences emphasizes statistical inference and multiple regression models. Theory is supplemented with numerous applications.

[R SOC 305 Education, Inequality and Development]
Spring. 3 credits. Letter grade. Prerequisite: introductory social science course. T R 10:10-11:00. P. Eloundou-Enyegue. Improvements in formal schooling are often advocated as solutions for a variety of socioeconomic problems in nonindustrial and industrial nations alike. This course critically assesses human capital approaches to development. Topics include (1) the variety and functions of school systems, (2) the individual and macro-level determinants of education, (3) education and socioeconomic stratification, (4) the effects of education on development, and (5) tools for evaluating education projects.

[R SOC 311 Social Movements (also AIS 311)]
Spring. 3 credits. Prerequisites: R SOC 101/SOC 101 or permission of instructor. S-U grades optional. T R 1:25-2:40. A. Gonzales. Social movements are collective efforts by relatively powerless groups of people to change society. Typically, they are utilized as political action outside the institutional framework, social movements are politics by other means. This course examines the transnational dimensions of social movements to assess the implications of globalization for political mobilization and the ways that social movement actors engage global political processes to effect social change. Under what circumstances do movements emerge? How do global processes shape both domestic and transnational political mobilization? How do movements internally organize and choose political tactics and strategies to achieve their goals? How have social movements changed history, identities, society, and politics? This course addresses these and related questions through an examination of indigenous peoples movements in the United States, Canada, and Latin America.

[R SOC 318 Ethnohistory of the Northern Iroquois (also AIS 318)]

[R SOC 324 Environment and Society (also S&TS 324 and SOC 324)]
Fall or summer. 3 credits. Enrollment limited to 100. T R 2:55-4:10. C. Geisler. The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, social ecology, NIMBYism, risk assessment, ecological modernization, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, desertification, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/ideological issues.

[R SOC 331 Consumer Demographics (also AEM 416)]
Fall. 3 credits. Letter grades only. T R 8:40-9:55. W. Brown. Students participate in a consulting project, using demographic and geographic analysis to describe consumer characteristics and behavior for a chain of retail establishments. Requires skills in both quantitative analysis and technical writing.

[R SOC 333 Genomics and Society]

[R SOC 336 Rural Areas in Metropolitan Society]

[R SOC 340 Sociology of Food Systems]

[R SOC 360 Sociology of American Indians (also AIS 361)]

[R SOC 367 American Indian Politics and Policy (also AIS 367)]

[R SOC 370 Comparative Issues in Social Stratification (also SOC 371)]
Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25-2:40. T. A. Lyson. This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning, and experiences of inequality. Throughout the course special attention is given to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.
R SOC 380 Independent Honors Research in Social Science
Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. Students should select a faculty advisor and begin project development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

R SOC 410 Health and Survival Inequalities (also SOC 410)
Historical inequalities in health and survival continue to exist today. This course covers some of the markers of such inequalities, including region, class, race, gender, and age and examines some of the biological, socioeconomic, and political determinants of these differences. Macro as well as individual and family-level determinants are examined. Policy prescriptions are evaluated and new innovative approaches proposed.

R SOC 414 Population Policy (also B&amp;S 341)
R SOC 421 Theories of Reproduction (also SOC 421)
Spring. 4 credits. S-U grades optional. TBA. A. Brown.
Examines the contentious debate on what makes women have any, few, or many children. It covers theories of population growth and changing fertility in both historical and contemporary perspectives. Demographic concepts like "the demographic transition" and "natural fertility" are discussed. Primary attention is given to "sociocultural" and gender-based" explanations of reproductive behavior. The course also looks at theories about the place of the state in women's lives.

R SOC 430/630 Human Migration: Internal and International
Fall. 3 credits. Offered even years. Prerequisite: Demography course or permission of instructor. T R 2:50-4:25. D. Brown.
This course analyzes the determinants and consequences of internal and international migration in developed and developing nations. Multilevel and multidisciplinary approaches are emphasized. Public policy implications of the volume and composition of migration for origin and destination communities are examined. Techniques and measurement issues are discussed. (For 630, graduate students will also meet with instructor every other week to discuss graduate readings and topics relevant to term project.)

R SOC 431/631 Comparative Ethnic Stratification: Demographic Perspectives
Spring. 3 credits. S-U grades optional. Prerequisite: Intro to Sociology or permission of instructor. T R 11:40-12:55. D. Gurak.
A comparative examination of ethnic stratification and mobility that focuses principally on measures of social groups that can be empirically measured using readily available demographic sources. These include residential segregation, occupational status and mobility, marriage and family formation patterns, health and mortality, family structure, fertility, and marriage. The role of migration in shaping ethnic stratification systems is examined. About half of the course examines the U.S. situation. Other societies receiving significant attention include India, Brazil, Nigeria, and several European societies. For 631, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

R SOC 435/635 Indigenous Peoples and Globalization (also AIS 435/635)
Spring. 3 credits. Limited to 25 students. Prerequisites: undergraduates, permission of instructor. S-U grades optional. M 10:10-1:10. A. Gonzales.
Examines ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those pressures. Globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the NAFTA or the de-territorialization of social and political arrangements cotemporal with modernization or the expansion of communication and its impact on traditional knowledge systems, have had profound social, cultural, and economic impacts on indigenous peoples. At issue are the lands, resources, traditional knowledge, intellectual and cultural property, and indigenous struggles for recognition and self-determination.

R SOC 437 Aging and Aging Social Policy in the 1990s
R SOC 438/638 Population and Development
Fall. 3 credits. S-U grades optional. Prerequisite: permission of instructor. T R 11:40-12:55. D. Gurak.
Examines major historical and recent demographic transitions in mortality, fertility, age structure, and composition and explores the relationships between these transitions and the social, economic, and cultural changes being experienced by diverse societies prior to, during, and following the onset and conclusions of the demographic shifts. Case studies from diverse historical periods and geographic locations are used. Graduate students also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

R SOC 494 Special Topics in Rural Sociology
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

R SOC 495/695 Population and Development in Sub-Saharan Africa
R SOC 497 Independent Study in Rural Sociology
Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional.
Informal study may include a reading course, research experience, or public service experience.

R SOC 560 Managing Local Environmental Systems: Social Perspectives and Research Bases
R SOC 599 M.P.S. Project
Fall and spring. 1-6 credits. S-U optional. Lec: TBA. Graduate faculty. For students admitted specifically to a M.P.S. program.

R SOC 601 Theoretical and Methodological Approaches to Community and Rural Development
Fall. 3 credits. Letter grade only. Prerequisite: graduate student. Lec, W 7:30-10:00 P.M. P. Eberts.
A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: (1) community structural changes and policy-making; (2) participatory processes for generating community development; and (3) planning strategies as mechanisms for creating community development opportunities.

R SOC 602 Community Development Seminar
R SOC 603 Classical Sociological Theory
Fall. 4 credits. Prerequisites: open to graduate students only. T R 2:55-4:10. M. J. Pfeffer.
Students review the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives of the course are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

R SOC 605 Sociological Theories of Development
Spring. 3 credits. T 2:30-5:30. Staff.
This course is a critical examination of a historical range of theories and research in the sociology of development from the post-war period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous and other social movements.

R SOC 606 Sociology of Natural Resources and Development
R SOC 608 Demographic Techniques (also PAM 608)
Fall. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U grades optional. W 4:30-7:30. D. Gurak, K. Joyner.
This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.
This graduate seminar considers issues surrounding population and development in Asia. Case studies pertaining to Southeast Asia and both are considered from a historical perspective. Recent social, economic, and demographic changes in the region are considered in depth. Evolving gender roles in demographic changes in the region are highlighted. The linkages between population and development are elaborated and both are considered from a historical perspective. Recent social, economic, and demographic changes in the region are considered in depth. Evolving gender roles in demographic changes in the region are highlighted.

This seminar introduces students to a number of qualitative methods of field research in the social sciences. We discuss field observation, archival research, in-depth individual interviews, and focus group interviews. We assess the strengths and weaknesses of various strategies of field research and consider a range of practical matters such as choice of research site and (and sample where appropriate), choice of questions, and issues of validity and reliability. Ethical considerations are highlighted.

This seminar is designed to introduce graduate students in the social science to the variety of epistemological approaches used by social scientists to analyze social change and development. Both positivist and non-positivist approaches are examined. The relationship of quantitative and qualitative methodologies are related to different epistemologies.

ADMINISTRATION
Porus Olpadwala, dean
Andrea Simitch, associate dean
Nasrine Seraji, chair, department of architecture
Buzz Spector, chair, department of art
Pierre Clavel, chair, department of city and regional planning
John McKeown, interim director, administration and finance
Elizabeth A. Cutter, director, admissions and student services
M. Susan Lewis, director, career services
Leon Lawrence, director, multicultural affairs
Margaret N. Webster, director, visual resources facility
Jayne A. Worden, registrar

FACULTY ADVISERS
Architecture students are assigned faculty advisers. Juniors and seniors have one assigned adviser and are also invited to share their concerns with and to seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

After the first year, students may select their advisers. Students are required to have an adviser throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

DEGREE PROGRAMS
Degree
Architecture B.Arch.
Fine Arts B.F.A.
History of Architecture and Urbanism B.S.
Urban and Regional Studies B.S.

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are no entrance or exit examinations. All students have an equal opportunity to succeed; there are no graded tests, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university.

The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES
The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the lower level of Sibley Dome. There are darkrooms in the Department of Art that are available for general use by students in the college and are primarily used as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries
The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 146,900 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,400 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 450,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries
The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Rome Program
The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored 17th century Palazzo Lazzaroni in the center of the eternal city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, fine arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be
met, since course offerings in Rome are limited. For additional information, see individual department listings or contact the Rome Program Office, 149 East Sibley Hall.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

Scholastic Standards
Term by term, a candidate for an undergraduate degree in this college is required to successfully complete a minimum of 12 credit hours with a grade point average for the term of not less than 2.0 (C). The record of each student who falls below the standard will be reviewed by the college's Academic Records Committee for appropriate action, among those described below:

1) The student is issued a WARNING. This means the student’s performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on FINAL WARNING or given a REQUIRED LEAVE OF ABSENCE from the college.

2) The student is issued a FINAL WARNING. This indicates the student’s record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student may be given a REQUIRED LEAVE OF ABSENCE from the college.

3) The student is placed on a REQUIRED LEAVE OF ABSENCE. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after a leave of absence of at least two semesters. Application for readmission is made by letter addressed to the college’s Academic Records Committee. The student must submit evidence that time has been well used, and if employed, the student must submit a letter from the employer(s). Students on required leave are not allowed to register extramurally at Cornell, as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on a required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department to request credit for courses taken. Readmission to the college after a required leave of absence is at the discretion of the college's Academic Records Committee. Applications for spring term readmission must be made by November 15, and applications for fall term readmission must be made by April 15. The second required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college.

4) The student is placed on a REQUIRED WITHDRAWAL. The student may not reregister in the College of Architecture, Art, and Planning and is dismissed from the college and permanently prohibited from continuing studies in it.

A student may choose to enroll in Cornell courses (through the School of Continuing Education and Summer Sessions, Department of Extramural Study) while on a required leave of absence; however, these courses will not be applied toward the degree even if readmission is granted.

The required withdrawal action does not prevent the student from applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence at the end of the next term if the performance during that term is deemed to be grossly deficient.

It is necessary to have a cumulative average of at least 1.7 (C) for graduation.

ARCHITECTURE

Professional Degree Program
The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student’s ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental controls, structures, construction and computer graphics, and applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in the areas of planning options and electives. For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year, interested students petition the department to substitute ARCH 601–602 or 603–604 for ARCH 501–502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501–502 sequence.
Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including ARCH 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

#### Free

Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college. Total credits 176

#### Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students. It is often advantageous for undergraduates to concentrate in specific sub-disciplines of architecture, especially if they anticipate application to specialized graduate programs; therefore, the following concentrations in architecture are offered within the department for B.Arch. and B.F.A. in Architecture candidates only:

- Architecture, Culture, and Society 362 (or equivalent), plus 9 credits in this area.
- Architectural Science and Technology 261, 262, 263, 264, 361, 362, 363, distribution requirement (3 credits), plus 6 credits in this area.
- History of Architecture 181, 182, distribution requirements (9 credits), plus 7 credits (including a 4 credit hour seminar course) in this area.
- Theory of Architecture 231, 232, distribution requirements (6 credits), plus 6 credits in this area.
- Visual Studies in Architecture 151, 152, distribution requirement (3 credits), plus 9 credits in this area.

Students wishing to receive recognition for a concentration, must submit a Concentration Request form to the Architecture Department Office. In order for a course to count toward a concentration, the student must receive a grade of C or better.

Transfer Students
Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.

Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-semester design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint participants with opportunities, issues, and methods in the field of architecture.

Alternative Programs

Bachelor of Fine Arts
After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

Bachelor of Science in History of Architecture
The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

Admission requirements. Two years of undergraduate study, ARCH 181 and 182 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

All students who wish to enter the program, either from Cornell or other institutions, must apply by November 15 for spring admission, or by March 31 for fall admission. Applications for both internal and external transfer students are available from the Admissions Office, College of Architecture, Art, and Planning, Cornell University, B-1 West Sibley Hall, Ithaca, NY 14853-6702. Completed applications must be submitted to the Admissions Office.

Curriculum. A student entering the program is assigned an adviser from the history of architecture faculty by the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1. 24 credits of 300-level courses in architectural history: ARCH 380 through ARCH 399
2. 12 credits in 600-level architectural history seminars: ARCH 681 through ARCH 699, or 8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only
3. One 300-, 400-, or 600-level course in architectural theory
4. 24 credits in electives selected in consultation with the student's adviser
5. Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual Degree Options
Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement time is shortened to one year.

Summer Term in Architecture
The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

Concentration in Architecture for Non-Majors
A special concentration has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Non-Majors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students are admitted to this program through application to the Department of Architecture.

The curriculum for students accepted to the Concentration in Architecture Program totals 15 credit hours. Grades received must be C or better in all courses.

9 credits of required courses, including one semester each of:
- ARCH 130, 131, or 132: Introduction to Architecture 3 credits
- ARCH 151: Drawing I 2 credits
- ARCH 111: Concentration in Architecture: Design Studio 4 credits
- ARCH 110: Introduction to Architecture: Design Studio, offered in the summer only, may substitute for ARCH 111.

And 6 credits of elective department courses, chosen, for example, from among the following:
- ARCH 130, 131, 132: Introduction to Architecture 3 credits
- ARCH 152: Drawing II 2 credits
- ARCH 181, 182: History of Architecture I, II 5 credits each
- ARCH 342: Architecture as a Cultural System 3 credits
ARCH 231, 232: Architectural Design I, II 2 credits each
ARCH 263, 264, 363: Structures 3 credits each
ARCH 261, 361, 362: Environmental Controls 3 credits each
ARCH 262: Building Technology 3 credits
ARCH 476: Computer Applications 3 credits

Architectural Design

Courses in brackets are not offered this year.

Each student in the architecture program (undergraduate, graduate, and in the Rome Program) is charged a fee each semester to help defray the continuing costs of refurbishing and replacing equipment.

Sequence Courses

ARCH 101 Design I
Fall and spring. 6 credits. Limited to department students. Staff.
An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102 Design II
Spring. 6 credits. Limited to department students. Prerequisite: ARCH 101 and ARCH 151. A continuation of ARCH 101. Staff.
Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201–202 Design III and IV
Fall and spring. 6 credits each term. Coregistration in ARCH 231–232 and completion of ARCH 151–152 required. Limited to department students. Prerequisite for ARCH 201 is ARCH 102 and ARCH 152. Prerequisite for ARCH 202 is ARCH 201. Staff.

ARCH 301–302 Design V and VI
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 301 is ARCH 202. Prerequisite for ARCH 302 is ARCH 301. Staff.

ARCH 401–402 Design VII and VIII
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 401 is ARCH 302. Prerequisite for ARCH 402 is ARCH 401 or ARCH 300. Staff.
Programs in architectural design, urban design, or architectural technology and environmental science, and other topics.

ARCH 501 Design IX
Fall or spring. 6 credits. Limited to department students. Prerequisite: ARCH 402. Staff.
Programs in architectural design, building technology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 502 Design X–Thesis
Fall or spring. 8 credits. Prerequisite: ARCH 501 or ARCH 500 and ARCH 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement. Staff.

ARCH 601–602 Special Program in Architectural Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only. Staff.

Graduate Courses

ARCH 701–702 Problems in Architectural Design
Fall and spring. 9 credits each term. Staff. Basic first-year design course for graduate students whose major concentration is architectural design.

ARCH 703–704 Problems in Urban Design
Fall and spring. 9 credits each term. Staff. Basic first-year design course for graduate students whose major concentration is urban design.

ARCH 801 Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH 701 and ARCH 702. Staff.
Second-year design course for graduate students whose major concentration is architectural design.

ARCH 802 Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: ARCH 703 and ARCH 704. Staff.
Second-year design course for graduate students whose major concentration is urban design.

Elective Design Courses

ARCH 103–104 Elective Design Studio 103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for ARCH 103: permission of instructor. Staff.

ARCH 200, 300, 400 Elective Design Studio
Fall or spring. 6 credits. This course is for students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Staff.

ARCH 309 Elective Design Studio
Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 202. Staff.
ARCH 309 is a design studio that, upon completion, will be credited as an elective design studio. With the successful completion of ARCH 302, ARCH 309 may be used as a substitute for ARCH 401.

ARCH 500 Design IX Alternate Studio
Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 402. Corequisite: ARCH 510. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510. In order to take ARCH 502, one must have a grade of C or better in ARCH 500 and a passing grade in ARCH 510. Staff. For description, see ARCH 401–402.

ARCH 503 Design Ix
Fall and spring. 6 credits. Limited to department students. Prerequisite: ARCH 402 and a passing, but non-advancing, grade in ARCH 501.
A structured studio for those needing to retake ARCH 501. The course operates within the fourth-year design studios. Only if ARCH 501 is taken in conjunction with ARCH 503 can it be followed by ARCH 502.

ARCH 504 Design Xa
Fall or spring. 6 credits. Limited to department students. Prerequisite: ARCH 503 or a passing, but non-advancing, grade in ARCH 502.
A structured studio for those needing to take an alternative to design thesis. This course operates within the fourth-year design studios.

Related Courses and Seminars

ARCH 110 Introduction to Architecture: Design Studio
Summer. 3 credits. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. S-U option. Not offered every year. Staff.
A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty, as well as periodic reviews of the group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 111 Concentration in Architecture: Design Studio
Spring. 4 credits. Not open to architecture majors. Prerequisite: acceptance into the Concentration in Architecture Program. Staff.
A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as by periodic reviews by guest critics.

ARCH 303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff.
ARCH 306 Praxis: Community Design Workshop (also ARCH 606)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis.
Praxis is a workshop-based, hands-on course directed to underserved local and global communities who seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to non-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork, as well as written, verbal, and graphic communication skills to negotiate the public realm.

ARCH 313.01 Furniture Design (Visual Studies)
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn architectural studies credit must enroll in this section. Prerequisite: permission of instructor. Not offered every year. G. Hascup.
This course explores the history, design and materiality of furniture. Analysis of materials and joinery-connective systems are developed in parallel with ergonomic restraints. Design transformation occurs through cycles of conceptual alternatives (models and drawings), increasing in scale as the idea evolves. Full-scale prototypes and detailed tectonic drawings are required on three pieces.

ARCH 313.02 Furniture Design (Technology)
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn architectural technology credit must enroll in this section. Prerequisite: permission of instructor. Not offered every year. G. Hascup.
For description, see ARCH 313.01.

ARCH 313.03 Furniture Design (Free Elective)
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn architectural design credit must enroll in this section. Prerequisite: permission of instructor. Not offered every year. G. Hascup.
For description, see ARCH 313.01.

ARCH 317 Contemporary Italian Culture
Fall or spring. Variable credit (maximum 3). For students in the Rome Program only. Staff.
This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice
Fall or spring. 3 credits. M. Schack.
An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction to non-profit agencies. Application of computer technology in preparing specifications.

ARCH 412 Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 411. M. Schack.
Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

ARCH 510 Thesis Introduction
Foreign summer programs and Rome programs only. 3 credits. Must be taken in conjunction with ARCH 500. Prerequisite for ARCH 500 is ARCH 402. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510 during a foreign summer program or in Rome. Staff.
Lectures, seminars, and independent research leading to complete development of the student's thesis project. General instruction in the definition, programming, and development of a thesis topic.

ARCH 605 Special Problems in Design
Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Staff.
Independent study. This course does not count for design sequence credit.

ARCH 606 Praxis: Community Design Workshop (also ARCH 306)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis.
For description, see ARCH 306.

ARCH 610 Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in the Architectural Design and Urban Design Program. Not offered every year. Staff.
Issues in architectural and urban design.

ARCH 611-612 Urban Housing Developments
611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students.
Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 613 Transportation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.
The effect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 614 Low-Cost Housing
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.
Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 618-619 Seminar in Urban and Regional Design
618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students.
Not offered every year. Staff.
A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by participants and visitors.
ARCH 334 Column, Wall, Elevation, and Facade: A Study of the Vertical Surface in Architecture (also ARCH 634)
Fall or spring. 3 credits. Limited to third-year students and above. J. Wells. Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades.

The first part of the seminar is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 335 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: ARCH 231–232 or permission of instructor. Not offered 2003–2004. Staff.

ARCH 336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year students and above. Not offered 2003–2004. Staff.

Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and urban theories, architectural sequence, facades, the free plan, and "DOMINO" theory.

ARCH 337 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 338 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic is announced before preregistration.

ARCH 339 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. L. Mirin and C. Pearman.

An examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 431 Theory of Architecture
Fall. 3 credits. Not offered every year. Staff.

Gardening and architecture; urban parks; villas and country houses; and Italian, French, and English landscape gardens. Site planning.

ARCH 432 Theory of Architecture
Spring. 3 credits. Prerequisite: third-year status. Not offered every year. Staff.

The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 435 Architecture and Representation
Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of ARCH 231–232. Not offered every year. Staff.

A study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 634 Column, Wall, Elevation, and Facade: A Study of the Vertical Surface in Architecture (also ARCH 334)
Fall or spring. 3 credits. Limited to third-year students and above. J. Wells. For description, see ARCH 334.

ARCH 635 Critical Theory in Architecture
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

ARCH 637 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 638 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic is announced before preregistration.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each term. Prerequisite: permission of instructor. B. MacDougall. Topic to be announced before preregistration.

ARCH 445 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. B. MacDougall.

This course focuses on traditional societies in which beliefs about architectural order are born out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time, and into contemporary theory.

ARCH 446 Topics in Architecture, Culture, and Society
Fall or spring. 3 credits. Prerequisite: ARCH 342 or permission of instructor. B. MacDougall.

ARCH 447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. Staff.

This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

ARCH 448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Can substitute ARCH 445, 446, 447, or 448 with permission of instructor. B. MacDougall.

What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. B. MacDougall. Independent study.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each term. Prerequisite: permission of instructor. B. MacDougall. Topic to be announced before preregistration.

ARCH 445 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. B. MacDougall.

This course focuses on traditional societies in which beliefs about architectural order are born out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time, and into contemporary theory.

ARCH 446 Topics in Architecture, Culture, and Society
Fall or spring. 3 credits. Prerequisite: ARCH 342 or permission of instructor. B. MacDougall.

ARCH 447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. Staff.

This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

ARCH 448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Can substitute ARCH 445, 446, 447, or 448 with permission of instructor. B. MacDougall.

What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. B. MacDougall. Independent study.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each term. Prerequisite: permission of instructor. B. MacDougall. Topic to be announced before preregistration.
ARCH 649 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. B. MacDougall. Independent study.

Visual Studies

Darkroom fees are charged for all photography courses.

ARCH 151 Drawing I
Fall. 2 credits. Staff. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151. Staff. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also ART 181)
Fall or spring or summer. 3 credits. Staff. For description see ART 181.

ARCH 351 Photography II (also ART 261)
Fall, spring or summer. 4 credits. Prerequisite: ARCH 251 or ART 161, or permission of instructor. Staff. For description see ART 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit. Staff. Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production issues related to the exchange of architectural ideas. Exercises cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography
Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Staff. Independent study.

ARCH 458 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 459 Special Topics in Visual Studies I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff. Topics announced before preregistration.

ARCH 658 Special Investigations in Visual Studies II
Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 659 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff. Topics announced before preregistration.

Architectural Science and Technology

Structures
ARCH 263 Structural Concepts
Fall. 4 credits. Prerequisite: MATH 111 or approved equivalent. M. Cruvellier. Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 264 Structural Elements
Spring. 3 credits. Prerequisite: ARCH 263. J. Ochshorn or staff. Concepts and procedures for the design of individual structural components (columns, beams, etc.) in steel, concrete, and timber construction.

ARCH 363 Structural Systems
Fall or spring. 3 credits. Prerequisite: ARCH 264. M. Cruvellier. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 364 Vertigo Structures (also ARCH 664)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier. A course in which students examine and experiment with the design of tall vertical structures, principally in terms of overall structural form and behavior, but also in the context of aesthetic, structural, economic, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 365 Bridge Design (also ARCH 665)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn. For description, see ARCH 366.

ARCH 366 The Tectonic Articulation of Structure (also ARCH 366)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn. For description, see ARCH 366.

Construction
ARCH 262 Building Technology, Materials, and Methods
Spring. 3 credits. J. Ochshorn. Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 367 Working Drawings (also ARCH 667)
Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn. Architecture is represented schematically before it is built. Between this initial conceptualization and a building's construction is a process of design development culminating in a set of contractual documents which include drawings and specifications. Through a series of exercises and a final project, this course examines the process of design development and the logical structure of “working drawings.” At the same time, the production of working drawings is pursued as a creative design process. None in which a kind of tension emerges between the various “fictions” of the design and the “reality” of the construction.

ARCH 465 Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 262 or permission of instructor. Not offered every year. Staff. Topics announced before preregistration.

ARCH 467 Special Investigations in Construction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.
ARCHITECTURE, ART, AND PLANNING

ARCH 667 Working Drawings (also ARCH 367)
Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.
For description, see ARCH 367.

Environmental Controls

ARCH 261 Environmental Controls—Site Planning
Fall. 3 credits. Staff.
The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361 Environmental Controls—Lighting and Acoustics
Fall. 3 credits. Staff.
Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design; light, color, and form. Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems
Spring. 3 credits. Staff.
Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems, and plumbing.

ARCH 464 Special Topics in Environmental Controls
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year. Staff.
Topics announced before preregistration.

ARCH 474 Special Investigations in Environmental Controls
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff.
Independent study.

Computer Applications

ARCH 372 Imaging and the Electronic Age
Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures. 1 recitation. Not offered every year. D. Greenberg.
Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology are presented. The technical fundamentals of computer graphics capabilities are emphasized. The latter half of the course covers the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education. The course is heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 374 Computer Graphics I (also COM S 468)
Fall. 3 credits. Prerequisite: COM S/ENGRD 211. Staff.
For description, see COM S 465.

ARCH 375 Practicum in Computer Graphics
Fall. 2 credits. Enrollment limited. Prerequisites: COM S 212 and permission of instructor. Recommended: COM S 314. Corequisite: COM S 417. Staff.
For description, see COM S 418.

ARCH 378 Microcomputer Applications in Design
Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor. Not offered 2003-2004. Staff.
This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 379 Design by Computer
Spring. 3 credits. Limited to third-year students and above. Not offered every year. Staff.
Exploration of the formalization of the design process for computability with the computer, and the role of computers in design. Lecture with CAD lab.

ARCH 476 Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 374 or 379 or permission of instructor. Not offered every year. Staff.
Topics announced before preregistration.

ARCH 477-478 Special Projects in Computer Graphics
477, fall; 478, spring. Variable credit (maximum 4). Limited to third-year students and above. Prerequisites: ARCH 374, plus concurrent registration in COM S 314 or equivalent, and permission of instructor. D. Greenberg.
Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector, and color raster displays.

ARCH 479 Micro-Computer Applications in Design (also ARCH 679)
Fall. 3 credits. Prerequisites: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate status. H. Richardson.
The course explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course is devoted to examining the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second part of the course explores the uses of information technologies to model and simulate the creative design process. These explorations include: developing a library of design ideas, building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and "reverse architectural" of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

Graduate Courses

ARCH 679 Micro-Computer Applications in Design (also ARCH 479)
Fall. 3 credits. Prerequisite: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate status. H. Richardson.
For description, see ARCH 479.

ARCH 761-762 Architectural Science Laboratory
761, fall; 762, spring. 6 credits each term. Open to architectural science graduate only. D. Greenberg.
Projects, exercises, and research in the architectural sciences.

ARCH 763-764 Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit (maximum 12). Limited to architectural science graduate students. Staff.
Independent study.

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 181-182 in the first year, and three additional courses from the 380-399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to satisfy history of architecture or independent requirements.

Sequence Courses

ARCH 181 History of Architecture I
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain. Staff.
The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 182 History of Architecture II
Spring. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain; may be taken independently of ARCH 181. Staff.
The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design theories, themes, and ideas are addressed in greater detail leading to the present time.

Directed Electives

ARCH 386 History of Theory
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff.
This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include
ARCH 381 From Eutopia to the Ghetto: Renaissance Urban Form
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor.
Not offered every year. M. Lasansky.
Significant developments in European urban design from 1300–1600. Particular attention will be awarded to Italy and Spain. The course focuses on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions contextualize the city within a larger cultural framework. We will consider how civic, economic, social, political, legislative, technical, and artistic factors have had a significant impact on the form, function, and patronage of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice is also emphasized throughout the discussion of several twentieth-century urban plans and built projects.

ARCH 382 The Cinematic City
Fall. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky.
This course examines the relationship between cinematic media and architecture. It explores the representation, perception, and understanding of architecture as it has been mediated by various cinematic genres including film, television, and documentary. We will consider how cinema has been deployed as a tool in architectural production, how it has influenced the experience and design of space, the extent to which it has been used as a vehicle for critical commentary on the urban condition, and the way it is imbedded in the historical development of architecture and urbanism.

ARCH 383 The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Lasansky.
This course examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of significant buildings, sites, and urban events. We focus on late eighteenth-, nineteenth-, and twentieth-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovanni), political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (such as the world’s fair, department stores, museums, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 384 The Urban Landscape of Renaissance Rome: 1450–1600
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Lasansky.
This class is an exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. We survey the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity; the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment; and the unique topography and natural resources of the city’s location. The last portion of the course addresses the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. C. Otto.
Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 386 The Architecture of India and Its Interpretation
Fall or spring. 3 credits. Not offered every year. B. MacDougall.
This course surveys the architectural record of ancient and medieval India with an emphasis on stupas and temple traditions. It devotes attention to European efforts to write a Western-style architectural history for India and to the British fascination with explaining Indian ethnicity and history over two centuries. We will attempt to evaluate the claim made by the historian James Ferguson that architecture provided the basis for reconstructing an imperfectly known Indian history. We will also examine the notion that scholarly enterprises were closely entwined with strategies of imperial power. To this end, we will read 19th-century firsthand reports on architecture in antiquarian English-language journals alongside more modern accounts. They will be compared with indigenous architectural writings that were often unacknowledged by Europeans.

ARCH 387 The 19th Century: Tales of the City
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods.
Nineteenth-century cities as settings for modernism and modernity, new visions, and experiences of modern life, are the focus of this course. The relationship between urbanity and creativity that emerges during the 19th century engage us in Berlin, Paris, London, New York, Chicago, New Orleans, and other cities. Issues of center and periphery, nation and locality, and capital and colony also emerge. Urban pleasures and dangers for men, women, and the other as revealed through literature, painting, photography, and film are examined.

ARCH 388 Modernism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. C. Otto.
Precursors and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course.

The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in serving the state during the 1930s.

ARCH 389 Architecture, Revolution, and Tradition
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods.
From early eighteenth to early nineteenth century, European society underwent profound change. Political absolutism—the doctrine of unlimited governmental control—was challenged; Enlightenment attitudes—commitments to human reason, science, and education—gained ascendancy. This course considers architectural and urban design in these times of tumult. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 390 American Architecture and Building I (also AM ST 390)
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods.
A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts are emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders are examined. The architectural expressions of Native Americans, African Americans, women, and others are treated in addition to those of European colonists and settlers.

ARCH 391 American Architecture and Building II (also AM ST 391)
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods.
A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392 Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods.
An exploration of certain themes deemed critical to modern architecture through representation in both commercial and avant-garde films from the medium’s birth until the present day. The focus varies each semester with particular emphasis to include the representation of house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theater, literature, and advertising also are examined. The course includes selected readings from modern architecture and film, screenings in class, class discussions, presentations, and papers.
ARCH 393 The Cumulative City
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor.
Not offered every year. C. Otto.
Well-established cities were transformed by radical and unimagined change in the
nineteenth and twentieth centuries. Politics and economies were recast, populations
exploded, and new technologies reshaped transportation, communication, and building. This
course explores transformation historically in the cumulative city, focusing on
specific cities in America and Europe, Africa and Asia. The cultural context of each city is
examined to understand how it changed and how meanings became associated with
evolving urban forms.

ARCH 394 Toward the Millennium
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor.
Not offered every year. C. Otto.
Theory and practice in architecture and urbanism are investigated from the 1950s to
the present. From the Americanized International Style to the recent
internationalism of design attitudes, the
immediate past is explored historically to probe the matrix of meanings associated with
contemporary form, urbanism, and technology.

ARCH 396 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor.
Not offered every year. Staff.
Topics to be announced.

ARCH 397 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor.
Not offered every year. Staff.
Topics to be announced.

ARCH 398 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor.
Not offered every year. Staff.
Topics to be announced.

ARCH 399 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor.
Not offered every year. Staff.
Topics to be announced.

Courses in Preservation
ARCH 563 Measured Drawing (also CRP 567)
Fall. 3 credits. For undergraduate architecture students and graduate students in
history and preservation. Prerequisite: permission of instructor. M. Tomlan.
For description, see CRP 567.

ARCH 564 Problems in Contemporary Preservation Practice (also CRP 563)
For description, see CRP 563.

ARCH 565 Perspectives on Preservation (also CRP 562)
Fall. 3 credits. M. Tomlan.
For description, see CRP 562.

ARCH 566 Documentation for Preservation (also CRP 560)
Fall or spring. 3 credits. M. Tomlan.
For description, see CRP 560.

ARCH 587 Building Materials Conservation (also CRP 564)
Spring. 3 credits. Open to juniors, seniors, not offered every year. M. Tomlan.
For description, see CRP 564.

ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses
(also CRP 561)
Fall or spring. 4 credits. M. Tomlan.
For description, see CRP 561.

Graduate Seminars in the History of Architecture and Urbanism
All topics for ARCH 682 to ARCH 699 will be announced prior to the start of the semester.

ARCH 680 Seminar in Historiography
Fall. 4 credits. Prerequisite: permission of instructor. Staff.
Historiographic and methodological issues are examined in relation to the history of architecture
and urbanism. Taught by different faculty members in successive years, the seminar is
required of all first- and second-year graduate students in the History of Architecture and
Urbanism Program.

ARCH 682 Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. Staff.

ARCH 683 Seminar in the History of Theory
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. Staff.

ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics,
and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. M. Lasansky.

ARCH 686 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. C. Otto.

ARCH 688 Seminar in Twentieth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. C. Otto.

ARCH 689 Seminar in the History of Cities
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. Staff.

ARCH 690 Seminar in American Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every

ARCH 692 Seminar in Nineteenth-Century Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every

ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisites: permission of instructor. Not offered every
year. Staff.

ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. Staff.

ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. Staff.

ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every
year. Staff.

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Prerequisite: permission of instructor.
May not be taken by students in design to satisfy undergraduate history requirements.
Staff.
Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. For B.S. honors candidates in history only. Staff.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Prerequisite: permission of instructor.
Staff.
Independent study for graduate students only.

ARCH 899 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 4 credits. Staff.
Independent preparation of the M.A. essay, often developed from topics investigated in
ARCH 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Staff.
Independent study for the doctoral degree.

ART

director of graduate studies; B. Perlus, J. L. Squier, W. S. Taft, K. WalkingStick, and
visiting critics.

Undergraduate Program
The curriculum in art is a program of study within the College of Architecture, Art, and
Planning, as well as other colleges at Cornell.
The undergraduate curriculum in art is an excellent background for a career in the visual
arts. Past graduates have found it to be an excellent preparation for a career in applied
art, although no specific technical courses are offered in such areas as interior design, fashion,
or commercial art.
The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student’s time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression. A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, or a Bachelor of Science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate’s career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an adviser in both colleges of their dual degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met.

It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

**Bachelor of Fine Arts Degree Requirements**

**Credits and Distribution**

130 credits are required for the B.F.A. degree. A minimum of 62 are taken in the Department of Art. A minimum of 57 are taken outside the department.

**Curriculum**

Students are expected to take an average course load of 16 credits per semester during their four years. If a student wishes to take more than three studio courses in any one semester they must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned to the department prior to the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.

**Specific Course Requirements**

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

### Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, photography, or printmaking (26 credits). Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved project course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

#### Concentration Requirements (27 credits total: 26 in printmaking)

<td>Early Christian to the Baroque Age</td>
</tr>
</tbody>
</table>

**Dual Concentration**

If a student is interested in studying in more than one area, they may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 25 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration (14 for printmaking). Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

<td>22</td>
</tr>
</tbody>
</table>

**Combined Media Concentration**

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.

Students must file an approved "Area of Concentration" form. In addition to the courses required of all BFA majors during their first and second year (see BFA curriculum), students must take two studios at a 200 level or 300 level, a minimum of 2 "Out of College" studio electives (OCE Studio) of 3-4 credits each, ART 481/Pre-Thesis Combined Media and ART/482 Thesis Combined Media.

**Note:** The total number of in/out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

### Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. (Under special circumstances, seniors may petition to attend the Rome Program.) Only under special circumstances, and with prior petition and approval, are seniors allowed to attend the Rome program. Students wishing to spend two consecutive semesters in Rome must submit a petition, which should include the proposed course schedule for both semesters and must have appropriate faculty approval.

**16 Total**

Other electives available to BFA students include courses in Architectural History, Visual Studies, City and Regional Planning, and Independent Study in Art.

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level Theory and Criticism requirement.
Out-of-College Requirements

A minimum of 57 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each); Social Sciences (minimum of three courses, of at least 3 credits each); and Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the History of Art. One course must be taken in each of the following areas:

Three electives: any art history elective at the 300-level or above or any architectural history elective. (Note: course offerings may vary each semester. Students are encouraged to consult with their adviser. Students may petition to substitute courses of similar content.)

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

For those students matriculating in fall of 2003:

Students are required to take ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture; Art History elective; and a Freshman Writing Seminar during the fall semester of the freshman year. ART 131/132/133, Introductory Printmaking; Art History elective; and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year.

Courses that will fulfill Theory and Criticism requirement (note: offerings may change from year to year. Check the current course catalog.)

The M.F.A. Program

The Master of Fine Arts program requires four terms of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master’s degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each term; of these, nine credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 623, 624). Students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Fees are charged for all studio courses. See the specific course description for course fees. To take advantage of the special opportunities afforded by summer study, there are several course offerings during summer session.

Guidelines for Independent Study

A student who wishes to undertake an Independent Study must be a junior and in good academic standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the
studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of four.

**Courses in Theory and Criticism**

**ART 111 Introductory Art Seminar**  
Fall. 1 credit. Limited to B.F.A. students. S-U only. Staff.  
Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed. A maximum of two absences are allowed except by permission of chairman.

**Related Courses**

**ART 214 Art and the Multicultural Experience**  
Fall. 3 credits. R. Dalton.  
This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. Students question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

**ART 312 Modern Art in Italy**  
Fall or spring. 3 credits. Rome Program only. Staff.  
This course introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, critics, and others. Traces art from ideal to realization and explores the gallery and its relationship to artists and to promotion of art, the role of the art critic and museum, and art collecting. Fulfills 300-level Theory and Criticism requirement for Fine Arts majors.

**ART 317 History of Art in Rome: Early Christian to the Baroque Age**  
This course is a survey of the early Christian period to the fantastic visions of Piranesi in the eighteenth century. Special emphasis is placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

**ART 318 History of Art in Rome: Renaissance in Rome and Florence**  
Fall. 4 credits. Rome Program only. Not offered every year. Staff.  
This course surveys art from the beginning of the 15th century to Michelangelo's death in 1564 with field trips to important churches, collections, and villas. Emphasis is given to sculpture and painting, and in the case of fresco, mosaics, and stucco decoration, the relationship with architecture and environment is a key element.

**ART 419 Independent Study/Supervised Readings in Art**  
Fall, spring, or summer. Credits variable (maximum 4). Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.  
Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

**ART 611 Professional Skills for the Visual Artist**  
Spring. 3 credits. Limited to M.F.A. students. Staff.  
This seminar will help fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work as art-related employment. Students will complete a resource notebook that will be useful to them in the years after they graduate. Topics include: funding resources, exhibition opportunities, employment opportunities, documentation of work, health, safety, and legal issues.

**ART 612 Recent Practice in the Visual Arts**  
Fall. 3 credits. Limited to M.F.A. students. Staff.  
This seminar is designed to provide graduate students with an overview of recent visual art work. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial are discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

**ART 613 On-Line Publication for the Visual Artist**  
This seminar is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an on-line magazine. Additionally each student learns to create a home page on the web.

**ART 614 Contemporary Theory in the Visual Arts**  
This seminar explores selected writings on current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

**ART 623 Contemporary Theory and Visual Culture**  
Fall. 3 credits. Limited to M.F.A. students. Staff.  
This seminar explores selected writings on current issues in the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary practice in the visual arts. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

**ART 624 Current Criticism in the Visual Arts**  
Spring. 3 credits. Limited to M.F.A. students. Staff.  
This seminar is designed to introduce graduate students to critical writing in the visual arts, both in print and in digital format. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an on-line magazine. Additionally, each student learns to create a home page on the web.

**Studio Courses in Painting**

Fees for painting courses: 121, 221, 321, 322, 421, 422, 429: $40

**ART 121 Introductory Painting**  
Fall, spring, or summer. 3 credits. Staff.  
This course is an advanced course centered on issues of artistic expression. A variety of painting materials and techniques are explored. In addition, paints and associated techniques developed in the twentieth century are used as well as developing technologies applicable to the painting process.

**ART 221 Painting I**  
Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor. Staff.  
This course is an advanced course centered on issues of artistic expression. A variety of painting materials and techniques are explored. In addition, paints and associated techniques developed in the twentieth century are used as well as developing technologies applicable to the painting process.

**ART 321 Painting II**  
Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor. Staff.  
This course is an advanced course centered on issues of artistic expression. A variety of painting materials and techniques are explored. In addition, paints and associated techniques developed in the twentieth century are used as well as developing technologies applicable to the painting process.

**ART 421 Pre-Thesis in Painting**  
Fall or spring. 6 credits. Prerequisite: ART 322. Staff.  
This course is an advanced course centered on issues of artistic expression. A variety of painting materials and techniques are explored. In addition, paints and associated techniques developed in the twentieth century are used as well as developing technologies applicable to the painting process.

**ART 422 Thesis in Painting**  
Fall or spring. 6 credits. Prerequisite: ART 421. Staff.  
This course is a focused independent project demonstrating creative ability and technical proficiency. Projects are exhibited in an appropriate space at the end of the term.

**ART 429 Independent Studio in Painting**  
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.  
This course is an independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and project under the supervision of a faculty member selected to guide their progress and evaluate their results.
ART 721-722, 821-822 Graduate Painting
721, fall; 722, spring; first-year M.F.A. students. 9 credits. 821, fall; 822, spring; second-year M.F.A. students. 9 credits. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

### Studio Courses in Printmaking

Fees for printmaking courses:
- Intaglio: 131, 231, 431.1, 439.1: $95
- Lithography: 133, 233, 431.2, 432.2, 439.2: $95
- Screenprinting: 132, 232, 431.3, 432.3, 439.3: $45

**ART 131 Introductory Intaglio**
Fall and spring. 3 credits. Staff.
This course is a basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

**ART 132 Introductory Graphics**

**ART 133 Introductory Lithography**
Fall and spring. 3 credits. Staff.
This course studies the theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

**ART 231 Intaglio II**
Spring. 4 credits. Prerequisite: ART 131. Staff.
A studio course in advanced etching techniques. Refinement of processes and ideas through the use of acquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple plate color printmaking.

**ART 232 Advanced Screen Printing**

**ART 233 Lithography II**
Spring. 4 credits. Prerequisite: ART 133. Staff.
The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche, wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

**ART 331 Printmaking III**
Fall or spring. 4 credits. Prerequisite: ART 231, 232, or 233 or permission of instructor. Staff.
The course is the study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

**ART 332 Printmaking IV**
Fall. 4 credits. Prerequisite: ART 331 or permission of instructor. Staff.
This course is a continuation and expansion of ART 331.

**ART 431 Pre-Thesis in Printmaking**
Fall or spring. 6 credits. Prerequisite: ART 332. Staff.
This course is a further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

**ART 432 Thesis in Printmaking**
Fall or spring. 6 credits. Prerequisite: ART 431. Staff.
Advanced printmaking project to demonstrate creative ability and technical proficiency.

### Independent Studio in Printmaking

**ART 439 Independent Studio in Printmaking**
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in printmaking that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 731-732, 831-832 Graduate Printmaking**
731, fall; 732, spring; first-year M.F.A. students. 9 credits. 831, fall; 832, spring; second-year M.F.A. students. 9 credits. Staff.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

### Studio Courses in Sculpture

Fees for sculpture courses:
- 141: $50
- 241, 341, 342, 343, 441, 442: $75

**ART 141 Introductory Sculpture**
Fall, spring, or summer. 3 credits. Staff.
A series of studio problems introduce the student to the basic principles of artistic expression in threedimensional media, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

**ART 241 Sculpture II**
Fall or spring. 4 credits. Prerequisites: ART 141, or an architecture design studio, or permission of instructor. Staff.
Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze/metal casting processes. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

**ART 341 Sculpture III**
Fall or spring. 4 credits. Prerequisite: ART 241 or permission of instructor. Staff.
This course is a continued study of the principles of sculpture and conceptual development. Each student explores the selection and expressive use of materials, media, scale, and content. Group discussions and individual criticism. Experimentation is encouraged.

**ART 432 Sculpture IV**
Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor. Staff.
This course is a continuation and expansion of ART 341. Special projects may include site-specific and/or large-scale installations.

**ART 343 Sculpture V**
Fall or spring. 4 credits. Prerequisite: ART 342 or permission of instructor. Staff.
This course is a further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through bi-monthly group discussions and individual criticism. Students complete a body of work through an approved statement of purpose and proposed schedule.

**ART 442 Thesis in Sculpture**
Fall or spring. 6 credits. Prerequisite: ART 441. Staff.
Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

**ART 449 Independent Studio in Sculpture**
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 741-742, 841-842 Graduate Sculpture**
741, fall; 742, spring; first-year M.F.A. students. 9 credits. 841, fall; 842, spring; second-year M.F.A. students. 9 credits. Staff.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

### Studio Courses in Photography

Darkroom fees for photography courses:
- Fee for B & W courses: $135
- Fee for color courses: $215
- Fee for an additional B & W course taken the same term: $55
- Fee for an additional color course taken the same term: $135

**ART 161 Photography I (also ARCH 251)**
Fall, spring, or summer. 3 credits. Staff.
This course is a basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photographic imagery.

**ART 168 Black-and-White Photography**
Summer. 3 credits. 3-week session only. Staff.
This course is intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

**ART 169 Color Photography**
Summer. 3 credits. 3-week session only. Staff.
This course is intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of color photographic imagery.

**ART 261 Photography II (also ARCH 351)**
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
This course is a continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

**ART 263 Color Photography**
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
This is a studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

**ART 264 Photo Processes**
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
This is a studio course in alternative and non-silver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

**ART 265 Studio Photography**
Fall or spring. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
A course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

**ART 361 Photography III**
Fall, spring, or summer. 4 credits. Prerequisite: ART 161, 261, or permission of instructor. Staff.
This course is the continued study of creative use of photography, with emphasis on specialized individual projects.

**ART 461 Pre-Thesis in Photography**
Fall or spring. 6 credits. Prerequisite: ART 261, 263. Staff.
This is a studio course intended for photography majors and other qualified students.

**ART 462 Thesis in Photography**
Fall or spring. 6 credits. Prerequisite: ART 461. Staff.
This is a studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

**ART 469 Independent Studio in Photography**
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in photography that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 461-462 Graduate Photography**
761, fall; 762, spring, first-year M.F.A. students. 9 credits. 861, fall; 862, spring, second-year M.F.A. students. 9 credits. Staff.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

**Course Fees:**
- 171, 372, 479: $250
- 271, 272: $105
- 391, 392: $50
- 481, 482, 489: $70

**Prerequisites:**
- Student must be a junior in good academic standing and have the written permission of the instructor. Rome Program only. Staff.
- Fall, spring, or summer. 4 credits variable. This course is an independent studio in drawing that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.
This course is an independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 391 Media Arts Studio I (also ARCH 459/659, FILM 391, DANCE 391)
Fall. 3 credits. Prerequisite: FILM 277 or 377; student must be a junior and have permission of the instructor. Lab fee $50. Staff.
For description, see FILM 391.

[ART 392 Media Arts Studio II]
Spring. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, THETR 377, MUSIC 120, or equivalent; and student must be a junior and have permission of the instructor. Lab fee $50. Not offered 2003–2004. Staff.

ART 400 Rome Studio
Fall or spring. 4 credits. Rome Program only. Content for the Rome studio is determined by the instructor. Prerequisite: permission of the instructor. Fee: $60. Additional fees apply for photography and printmaking. Staff.
Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media consist primarily of painting, drawing, sculpture, printmaking, or those assigned by the instructor. ART 400 fulfills four credits of the concentration requirement.

ART 479 Independent Studio in Electronic Imaging
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans a studio course and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 481 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in the course. Students must enroll in the pre-thesis course in their primary area of concentration. Staff.
In this course students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482 Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: ART 481 and written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in the course. Students must enroll in the thesis course in their primary area of concentration. Staff.
In this course students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 489 Independent Studio in Combined Media
Fall, spring, or summer. Credits variable (maximum 4). Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in combined media that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

City and Regional Planning

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies
The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements
Requirements for Graduation: URS requirements include: (1) eight semesters of residence; (2) 120 credits; (3) two freshman seminars; (4) qualification in one foreign language; (5) four groups of distribution requirements; (6) required courses for major; (7) area requirements for major; (8) free electives; (9) a minimum of 34 courses; and (10) completion of the university requirement of two one-credit nonacademic courses in physical education. Please note that physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. Please note that no course may satisfy more than one requirement.

1. General Education
a. Freshman writing seminars: 2 courses
b. Foreign language: 3 courses or qualification in one foreign language
c. Distribution Requirements: 9 courses

Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1–4.

Group 1: Physical and biological sciences (2–3 courses required)
Group 2: Quantitative and formal reasoning (1–2 courses required)
Group 3: Social sciences and history (2–3 courses required)
Group 4: Humanities and the arts (2–3 courses required)

Advanced Placement Credit
Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S–U courses cannot be applied to the distribution requirements.

2. Required Courses for the Major in Urban and Regional Studies: 5 courses
CRP 100: The American City
CRP 101: The Global City: People, Production, and Planning in the Third World
Statistics (at least 3 credits from approved list below)
AEM 210: Introduction to Statistics
BTRY 261: Statistical Methods
ECON 219: Introduction to Statistics and Probability
IRST 210: Statistical Reasoning
MATH 171: Statistical Theory and Application in the Real World
SOS 301: Evaluating Statistical Evidence (II)
Microeconomics course (at least 3 credits, from an approved list)
Architecture course (at least 3 credits)

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses
A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis
a. Design
CRM 381: Principles of Spatial Design and Aesthetics

b. Economics
CRM 370: Regional Question: The Case of Italy (Rome)
CRM 401: Seminar in Urban Political Economy
CRM 404: Urban Economics
CRM 417: Industrial Restructuring: Implications for State and Local Policy

c. Environment
CRM 354: Introduction to Environmental Planning
CRM 378: Recycling Resource Management
CRM 380: Environmental Politics
CRM 384: Green Cities
CRM 443: Emerging Global Environmental Trends
*CRM 444: Resource Management & Environmental Law
*CRM 451: Environmental Law
*CRM 453: Environmental Aspects of International Planning
*Meets requirement only with instructor's permission.

d. History
CRM 261: Urban Archaeology
CRM 360: Pre-Industrial Cities and Towns of North America
CRM 361: Seminar in American Urban History
ARCH 399: Special Topics: Architectural History (Rome)
ART 317.20: Art History: Early Christian, Romanesque, and Gothic Art in Rome and Central Italy (Rome)
ART 318.20: Art History: Renaissance in Rome (Rome)
HIST 419: Seminar in American Social History: Race, Class, and the American City (Cornell-in-Washington)

e. Politics/Policy
CRM 293: Inequality, Diversity, and Justice
CRM 314: Planning, Power, and Decision Making
CRM 318: Politics of Community Development
CRM 365: American Indians, Planners, and Public Policy
CRM 371: Cuba: The Search for Developing Alternatives
CRM 376: Latin American Cities
CRM 412: Devolution, Privatization, and the New Public Management

CRM 416: European City-Urban Political Economy (Rome)
CRM 418: Government Policy Workshop
CRM 448: Social Policy and Social Welfare (also Cornell-in-Washington)
CRM 474: The Third World Urbanization
GOVT 500: Politics/Policy: Theory, Research, and Practice (Cornell-in-Washington)
(4 credits of the 8-credit course—see B below)

f. Quantitative Analysis
CRM 321: Introduction to Quantitative Methods for the Analysis of Public Policy
CRM 328: Overview: Quantitative Methods Policy Analysis
CRM 408: Introduction to Geographic Information Systems (seniors only)
CRM 529: Mathematics for Planners
ILRST 211: Quantitative Reasoning II

B. Students must take any additional 5 CRM courses (of at least 3 credits each, letter grade only)

NOTE: Cornell in Washington Program: GOVT 500: Politics/Policy: Theory, Research, and Practice can be used to fulfill four credits.

4. Free Electives: 6–9 courses

5. Physical Education (2 terms of PE)

Required courses for graduation: 34
Required credits: 120

Honors Program
Each year a few well-qualified juniors may join the honors program. Each honors student develops and writes an honors thesis under the guidance of his or her faculty adviser.

Concentrations
The department recognizes concentrations earned within the university (accepting standards set by various colleges). Students may apply for concentrations in any college (e.g. Africana Studies, Architecture, Latino Studies, Southeast Asian Studies, Women's Studies, etc.). When a student satisfies the requirements for a concentration, and formal notification is received by the AAP Registrar, the concentration will be recorded on the student's official transcript.

Off-Campus Opportunities
Cornell in Washington Program. Students in good standing may earn degree credits in the Cornell in Washington program through coursework and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy.

Cornell Abroad. Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study abroad opportunities are continually being developed. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Middle East, and France should be forthcoming. We encourage URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing may earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

Research and fieldwork. Students are welcome to work with departmental faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options
Linked degree options. Urban and regional studies students may earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree options. Students accepted in the Cornell College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major, and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should consult either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures
Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.
Transfer Students
In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional and should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor William W. Goldsmith, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701 (telephone: 607-255-4613).

The Graduate Program In City and Regional Planning
There are five graduate degree programs in the city and regional planning department. The Master of Regional Planning program stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning. The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning. Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts.

The Master of Professional Studies in Sustainable Development (MPS/ID) degree is administered through the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). It is intended to meet the specific training needs of experienced planners or mid-career professionals in related fields.

The 60-credit Master of Arts (MA) in Historic Preservation Planning prepares students for professional work in the creative preservation and utilization of our physical heritage.

The Master of Science (MS) or Master of Arts (MA) in Regional Science is the study of regional economies and their interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations.

The Doctor of Philosophy (PhD) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

Off-Campus Opportunities

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by another faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information
Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program In Urban and Regional Studies

CRP 100 The American City
Fall. 3 credits. S-U grades optional for out-of-department students only. W. W. Goldsmith.

An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the twentieth-first century. Readings, discussions, and brief papers explore topics ranging from urban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

CRP 101 The Global City: People, Production, and Planning in the Third World
Spring. 3 credits. S-U grades optional for out-of-department students only. N. Kuder. A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 106 UFS First-Year Seminar
Spring. 1 credit. S-U grades only. W. Goldsmith.

This seminar introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

CRP 281 Fieldwork In Urban Archaeology
Fall. 3 credits. S. Baugher.
For description, see LA 261.

CRP 293 Inequality, Diversity and Justice (also GOVT 293, PHIL 193, SOC 293)
Spring. 4 credits. R. Miller.
For description, see PHIL 193.

CRP 309 Community Development Seminar (also CRP 509)
Spring. 3 credits. Letter grade. K. Reardon.
The seminar provides an introduction to the theory, method, and practice of contemporary community development. Topics examined include: the role community-based organizations are playing in promoting sustainable development in distressed communities; the contribution planners are making to enhancing the organizational capacity of community-based organizations; and the interplay between neighborhood-based community development activities and regional economic development policy making.

CRP 314 Planning, Power, and Decision Making
Spring. 3 credits. Staff.
This seminar examines various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these questions and many others.

CRP 318 Politics of Community Development (also CRP 518)
Spring. 3 credits. Letter grade. P. Clavel.
A seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

CRP 321 Introduction to Quantitative Methods for the Analysis of Public Policy
Spring. 3 credits. Not offered every year. Staff.
An introduction to the role and use of quantitative methods in the study of urban and regional issues. This course focuses on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, simulation, and others. Strengths and weaknesses of those methods are also be considered.

CRP 328 Overview: Quantitative Methods in Policy Planning (also CRP 528)
Fall. 3 credits. S-U grades optional. Staff.
This course introduces students to the basic tools that are used in policy analysis. Its goal is to set the context for the techniques presented, to understand the questions that each addresses, to be aware of their potential and limitations, their range of applicability, and the pitfalls to be avoided.
CRP 334 Neighborhood Planning Workshop (also CRP 530) Fall. 3 credits. Letter grade. R. Reardon. This workshop offers students the opportunity to collaborate with local residents, leaders and officials in the development of revitalization plans that address the critical environmental, economic, and social challenges confronting their neighborhood and local area. A participatory action research approach is used to co-produce professional-quality development plans with local stakeholder groups. Significant fieldwork required.

CRP 332 Urban Policy Research Seminar on New York City Fall. 3 credits. Open to students who have successfully completed the Cornell Urban Scholars, Adult Literacy, or Urban Semester Programs or permission of instructor(s). Grades optional. Staff. This course is designed to enhance students' organizational, analytical, research, and communication skills in producing scholarly articles of publishable quality that critically examine important urban policy issues affecting the lives of New York City's poorest children, families, and neighborhoods. Students will produce policy-oriented journal articles that address vital issues confronting the city's most vulnerable residents, whom they've identified while working in Cornell-sponsored summer internships with nonprofit organizations and public agencies that provide direct services to the poor.

CRP 343 Affordable Housing Policy and Programs (also CRP 643) Spring. 3 credits. S-U grades optional. R. Pendall. An overview of federal, state, and local policies and programs to deliver affordable housing to low-income people, public housing, vouchers, inclusionary zoning, rent control, and much more. Lectures, debates, short papers, and term paper.

CRP 354 Introduction to Environmental Planning (also CRP 554) Spring. 3 credits. S-U grades optional. A. M. Pender. An introduction to problems facing planners and decision makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues such as sustainability, quality of life, environmental hazards and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventorying and risk analysis.

CRP 360 Pre-Industrial Cities and Towns of North America (also LA 260/ LA 666 and CRP 666) Fall. 3 credits. S-U grades optional. S. Baugher. For description, see LA 260.

CRP 361 Seminar in American Urban History (also CRP 661) Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan. Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 363 American Indians, Planners, and Public Policy (also CRP 547 and LA 263/ LA 547) Spring. 3 credits. S. Baugher. For description, see LA 263.

CRP 368 The History of Urban Form in America (also CRP 668) Fall. 3 credits. Letter grades. M. Tomlan. This course covers the history of city planning in America from colonial times to the early 20th century including long range reviews of European influences on urban form. Lectures, discussions, and short papers.

CRP 370 The Regional Question: The Case of Italy Spring. 4 credits. For majors in urban and regional studies only. Rome Program only. Staff. The "regional problem" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore theoretical and practical aspects of regional inequality. The question of how Italy's integration into the European Union affects and is affected by its regional issues will be considered.

CRP 371 Cuba: The Search for Development Alternatives Fall. 3 credits. Open to sophomores, juniors, seniors. Not offered 2003-2004. B. Lynch. Cuba is a symbol; it is also a society. This course looks beyond the symbol to Cuban society, environment, and political economy in a Caribbean context. The 1959 Revolution was a defining moment in Cuban history and a central element in Cuban culture. Students learn about the experiences that shaped the revolution, altered its course in the 1970s and 1980s, and led to the special period of the 1990s.

CRP 376 Latin American Cities (also CRP 676) Fall. 3 credits. Not offered 2003-2004. B. Lynch. This course offers students an opportunity to understand urban dynamics in a rapidly changing region of the world. We ask how colonial powers, the nation-state, and global economic forces have shaped Latin American urban landscapes and the patterns of daily life in the city. The first part of this course explores the social, political, and spatial dimensions of these processes. Topics include rural-urban flows, sociospatial segregation, housing environment and employment. The second half of the course focuses on responses to these social and economic transformations: state interventions and repression, coping strategies, social movements, and transmigration.

CRP 378 Recycling and Resource Management (also CRP 578) Spring. 3 credits. S-U grades optional. Not offered every year. R. Young. Advanced resource recycling and management systems are critical to the development of a sustainable society. This course reviews the political, technological, and economic strategies necessary for cities and communities to achieve a closed loop resource management system. Drawing from readings, speakers, and field trips that examine the cutting edge of recycling program development, the course provides students with comprehensive exposure to leading practitioners and best practices in the recycling field. Open to undergraduate and graduate students. Graduate students have additional research requirements.

CRP 380 Environmental Politics Fall. 4 credits. Letter grade. R. Booth. Examines the political decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 381 Principles of Spatial Design and Aesthetics (also CRP 581) Fall. 3 credits. Limited to 30 students. Not offered 2003-2004. R. Trancik. A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications, factors in the contemporary urban context of Europe and North America.

CRP 384 Green Cities (also CRP 584 and LA 495) Fall. 4 credits. S-U grades optional. Not offered every year. R. Young. For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life that are ecologically sound. This course examines the history and future of urban ecology and the technology and policies that shape it. Alternative transportation, renewable energy, urban design, recycling and resource management, and sustainable economics are explored as means toward transforming cities to become the basis of a new, ecological society. Open to both graduate and undergraduate students. Graduate students have additional research requirements.

CRP 395 Special Topics Fall, spring, summer. 4 credits variable. Hours to be arranged. Staff. For description, see department coordinator, 106 West Sibley.

CRP 395.03 Wilderness and Wildlands: Issues in Policy and Planning (also CRP 679.03) Fall. 2-3 credits variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thordike. Wilderness and wildland resources have been under assault by the Congress, the "Wise Use" movement, property rights activists, pollutants and the actual users. This seminar will consider historical and philosophical foundations and political factors that impact decisions about wilderness policies, planning, acquisition, protection and management. The role of government, professional planners and managers, organized special interests, legal system, citizens, and user groups will be examined. Practical exposure to planning and policy development through readings, discussions, guest practitioners and field trip to Finger Lakes National Forest. Optional weekend trip to Adirondack Park Wilderness area.
[CRP 400] *Introduction to Urban and Regional Theory*  

[CRP 401] *Seminar in Urban Political Economy*  

[CRP 404] *Urban Economics* (also CRP 504)  
Spring. 4 credits. Prerequisite: microeconomics. M. Drennan. 
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time is spent in discussing problems of cities in developing countries.

[CRP 408] *Introduction to Geographic Information Systems (GIS)* (also CRP 508)  
Spring. 4 credits. A-M. Esnard. 
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

[CRP 412] *Devolution, Privatization, and the New Public Management* (also CRP 610, AEM 433/633, and FGSS 411/811)  
Fall. 3 credits. S-U grades optional. M. Warner. 
This course addresses devolution and privatization of government services in a national and international context and then focuses on the local public sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring are reversed including changing roles for the private, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the term.

[CRP 416] *European City: The Public Sphere and Public Space*  
Spring. 2–4 credits variable. Open to all juniors and seniors. S-U option available to non-majors. Enrollment may be limited by the instructor. Rome Program only. Staff. 
An examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socio-economic underpinnings of the city. How are cities organized, and how do citizens relate to the state, the city to the nation, the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? All of these, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)? All of these questions are covered.

[CRP 417] *Economic Development: Firms, Industries, and Regions* (also CRP 517)  
Spring. 4 credits. S. Christopherson. 
Economic development policy in the United States has focused historically on the provision of subsidies to individual firms. As the limitations of this strategy have become more apparent, alternative approaches including multi-firm and workforce development are being implemented. This comparative course draws on cases from a variety of industries and national contexts. Particular attention is paid to economic development issues and policies in New York State.

[CRP 418] *Government Policy Workshop* (also CRP 616, AEM 434/634 and FGSS 420/620)  
Students undertake research requested by clients (associations of local government unions, non-profits, and state, federal, and international agencies) to analyze and identify alternative approaches to restructing government service delivery. The course requires teamwork and includes qualitative and quantitative methods of analysis in collaboration with clients.

[CRP 443] *Emerging Global Environmental Trends* (also CRP 543)  
Spring. 3 credits. Limited to 20 students. Open to juniors, seniors, and graduate students, and by permission of instructor. Not offered 2003–2004. R. Booth. 
This seminar focuses on the emergence of broad trends that suggest human society is facing a global environmental crisis. It examines the factual grounds on which concern about these trends is founded, their implications, and steps human society might take in order to reverse or otherwise alter these trends before they generate enormous and irreversible problems.

[CRP 444] *Resource Management and Environmental Law* (also CRP 544 and NTRES 444)  
Spring. 4 credits. Open to juniors, seniors, and graduate students, and by permission of instructor. R. Booth. 
This course introduces the application of legal concepts and processes to the management of natural resource areas. It explores the role of the common law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and other natural resources on public lands, and to the conflicts inherent in government attempts to regulate important natural resources on private lands.

[CRP 448] *Social Policy and Social Welfare* (also CRP 548)  
Spring. 4 credits. S. Christopherson. 
This course addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social welfare controversies. The first part of the course introduces principles that guide the development of social policy including fairness and justice. Various conceptions of society are examined for their influence on the nature and extent of social welfare provision, comparing the United States with other industrialized countries. The second part of the course examines how economic change and government policy affect social provision in the United States.

[CRP 451] *Environmental Law* (also CRP 581)  
Fall. 4 credits. R. Booth. 
An introduction to how the legal system handles environmental problems. Study of federal environmental statutes (e.g. the Clean Air Act, the Clean Water Act) and important judicial decisions that have been handed down under those statutes and federal regulations. Discussions cover environmental law topics from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, government, environmental engineering, law, business, architecture, landscape architecture, and other fields. Course assignments for graduate students differ in some aspects from those for undergraduates.

[CRP 453] *Environmental Aspects of International Planning* (also CRP 683)  
Fall. 4 credits. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences. Not offered 2003–2004. B. Lynch. 
This seminar examines the ways in which roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations—formulate environmental debates and design conservation and remediation programs and policies in the Third World.

[CRP 457] *Community Service Fieldwork*  
Fall or spring. 4 credits variable. Permission of instructor required. Staff. 
Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects involve urban and regional issues as defined by a client and agreed upon by the faculty member.

[CRP 474] *Urban Transformations in the Global South* (also CRP 674)  
Spring. 4 credits. S-U grades optional. B. Lynch. 
Economic globalization and the post-colonial political order are continually reshaping urban societies and landscapes in the global South, often by relegating everyday life to the margins and shrouding it in illegality. This course focuses on the spatial, social, and political dimensions of urban transformations, paying particular attention to such topics as competition among cities for international capital and its implications for social relations, dynamic interrelations between informal sectors and labor markets and in housing, urban environmental challenges and municipal efforts to address them, and issues related to governance, social movements, and new formulation of citizenship.
space and the public-nonprofit sectors are as that of city and regional planning. Both the public and nonprofit sectors is the same city and regional planning. The perspective of and public. The concept of space is central to the context of every topic is both spatially oriented. From foundation courses in economics is it from foundation courses in economics is microeconomics necessary. M. Drennan. Fall. 4 credits. No prior knowledge of econometrics necessary. M. Drennan. Fall. 4 credits. Microeconomics. M. Drennan. Spring. 4 credits. Prerequisite: microeconomics. M. Drennan. For description, see CRP 404.

Graduate Courses and Seminars
Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

CRP 504 Urban Economics (also CRP 404)
Spring. 4 credits. Prerequisite: microeconomics. M. Drennan. For description, see CRP 404.

CRP 508 Introduction to Geographic Information Systems (GIS) (also CRP 408)
Spring. 4 credits. A-M. Esnard. For description, see CRP 408.

CRP 509 Community Development Seminar (also CRP 309)
Spring. 3 credits. K. Beardon. For description, see CRP 309.

CRP 512 Public and Spatial Economics for Planners
Fall. 3 credits. No prior knowledge of economics necessary. M. Drennan. Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513 Introduction to Planning Practice and History
Fall. 4 credits. P. Clavel and N. Kudva. An introductory graduate seminar on the theory and history of planning, profession, and related public intervention in urban affairs. Topics are analyzed from the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

CRP 517 Economic Development: Firms, Industries, and Regions (also CRP 417)
Spring. 4 credits. S. Christopherson. For description, see CRP 417.

CRP 518 Politics of Community Development (also CRP 318)
Spring. 3 credits. P. Clavel. For description, see CRP 318.

CRP 519 Urban Theory and Spatial Development
Spring. 3 credits. W. W. Goldsmith. This course surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. We consider orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities, the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

CRP 520 Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits. Not offered every year. Staff. An introduction to statistical and mathematical concepts and methods of use in planning and policy analysis. Topics include matrix algebra, probability, sampling, estimation, and regression, and the use of a microcomputer statistical package.

CRP 521 Mathematical Foundation for Planning Analysis
Fall. 1 credit. S-U grades only. Meets for two hours, once each week, for approximately half the semester. Not offered every year. Staff. Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

CRP 525 Introductory Methods of Planning Analysis
Fall. 4 credits. R. Pendall. A course on quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include descriptive and inferential statistics, mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 528 Overview: Quantitative Methods in Policy Planning (also CRP 328)
Fall. 3 credits. S-U grades optional. Staff. For description, see CRP 328.

CRP 529 Mathematics for Planners
Fall. 4 credits variable. S-U grades optional. Staff. The course covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences, and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

CRP 530 Neighborhood Planning Workshop (also CRP 330)
Fall. 4 credits. K. Reardon. For description, see CRP 330.

CRP 532 Real Estate Development Process
Fall. 3 credits. Letter grade. Fee for case studies packet. B. Olson. Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 533 Real Estate Marketing and Management
Fall. 3 credits. R. Abrams. The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 537 Real Estate Seminar Series
Fall and spring. 1/2 credit per term. Restricted to MPS/RE students. S-U grades only. B. Olson. A one-credit course designed to bring students weekly into direct contact with real estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 543 Emerging Global Environmental Trends (also CRP 443)
Spring. 3 credits. Limited to 20 students. Not offered 2003-2004. R. Booth. For description, see CRP 443.

CRP 544 Resource Management and Environmental Law (also CRP 444 and NTRES 444)
Spring. 4 credits. R. Booth. For description, see CRP 444.
CRP 545 Introduction to Quantitative Methods for the Analysis of Public Policy
Spring. 3 credits. Basic statistics is a prerequisite for this course. Not offered every year. M. Drennan.
An introduction to econometrics, covering bivariate and multivariate regression. Applications include population, employment, and tax revenue forecasting for sub-national economies. Probit and logit models explained. Lectures and plan-making exercises included.

CRP 546 Introduction to Community and Environmental Dispute Resolution
Fall. 3 credits. J. Forester.
This course explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547 American Indians, Planners, and Public Policy (also CRP 363 and LA 263/4 LA 547)
Spring. 3 credits. S. Baugher.
For description, see LA 263.

CRP 548 Social Policy and Social Welfare (also CRP 448)
Spring. 4 credits. S. Christopherson.
For description, see CRP 448.

CRP 549 Ethics and Practical Judgment in Planning
An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 481)
Fall. 4 credits. R. Booth.
For description, see CRP 451.

CRP 552 Land-Use Planning
Fall. 3 credits. A-M. Esnard.
Course covers surveys, analyses, and planning techniques for guiding physical development of urban areas, location requirements, space needs, and interrelations of land uses. Emphasis is on residential, commercial, and industrial activities and community facilities, and housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Land-Use Regulations
Spring. 3 credits. R. Pendall.
Seminar covers the essentials of "smart growth," zoning, and subdivision, and the main tools for implementing a land-use plan. Also covers agriculture and open space preservation, infrastructure timing controls, redevelopment, planned unit development, and more.

CRP 554 Introduction to Environmental Planning (also CRP 354)
Spring. 3 credit. S-U grades optional. A-M. Esnard.
For description, see CRP 354.

CRP 555 Urban Systems Studio (also LA 701)
Fall. 5 credits. Prerequisite: permission of instructor. R. R. Trancik.
Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 556 Design in Real Estate Development
Spring. 3 credits. S-U grades optional. M. Schack.
This course provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating and recognizing quality in design are addressed. The analysis of case study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 557 City Planning Design Studio
Spring. 4 credits. Prerequisite: previous design courses or permission of instructor.
Not offered every year. Staff.
A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop in students an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop
Fall or spring. 4 credits variable. S-U grades optional. R. Pendall.
Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 559 Documentation for Preservation (also ARCH 586)
Fall or spring. 3 credits. M. Tomlan.
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 560 Historic Preservation Planning Workshop: Surveys and Analyses (also ARCH 588)
Fall or spring. 4 credits. M. Tomlan.
Course covers techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York, and explorations of local historical resources, funding sources, and review and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 561 Perspectives on Preservation (also ARCH 589)
Fall. 3 credits. M. Tomlan.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563 Problems in Contemporary Preservation Practice (also ARCH 584)
A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation (also ARCH 587)
Spring. 3 credits. Open to juniors, seniors, and graduate students. M. Tomlan.
A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 565 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit. M. Tomlan.
Work on applied projects in history and preservation planning in a field or laboratory setting or both.

CRP 566 Planning and Preservation Practice
Fall. 1 credit. Prerequisite: graduate standing in CRP programs or MPS/RE or permission of instructors. S-U grades only. R. Pendall and M. Tomlan.
Students participate in field study of city planning, historic preservation, economic and community development, and real estate issues in large Eastern U.S. cities.

CRP 567 Measured Drawing (also ARCH 583)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor. M. Tomlan.
Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 569 Archaeology in Preservation Planning and Site Design (also LA 569)
Spring. 3 credits. For description, see LA 569.

CRP 578 Recycling and Resource Management (also CRP 378)
Spring. 3 credits. S-U grades optional. R. Young.
For description, see CRP 378.

CRP 581 Principles of Spatial Design and Aesthetics (also CRP 381)
Fall. 3 credits. Course enrollment limited to 30 students. Not offered 2003-2004. R. Trancik.
For description, see CRP 381.

CRP 584 Green Cities (also CRP 384 and LA 495)
Fall. 4 credits. S-U grades optional. R. Young.
For description, see CRP 384.
An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

**CRP 607 GIS Applications Workshop**

Fall. 4 credits. Prerequisites: an introductory GIS course or permission of instructor. A.-M. Esnard.

This course is an advanced GIS class that focuses upon GIS applications and projects for one or more clients. During some semesters students will work on projects. Contact the instructor directly to learn about project options for the current semester.

**CRP 612 Devolution, Privatization, and the New Public Management (also CRP 412, AEM 433/633 and FGSS 411/611)**

Fall. 3 credits S-U grades optional. M. Warner.

For description, see CRP 412.

**CRP 614 Gender and International Development (also FGSS 614)**

Spring. 3 credits. L. Beneria.

This course has four main objectives: (1) to provide an analysis of the location of women in development processes and to understand the centrality of gender in each case; (2) to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity; (3) to reflect upon the linkages between the global economy and the macro and micro processes of development from a gender perspective; and (4) to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

**CRP 616 Globalization and Development**

Spring. 3 credits. Not offered every year. L. Beneria.

This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of patterns through which the current neoliberal economy has been built, such as trade liberalization, labor market flexibility, the erosion of nation states as economic units, and the formation of trade blocks and global institutions, and the discussion of current debates about future directions.

**CRP 618 Government Policy Workshop (also CRP 418, AEM 434/634 and FGSS 420/620)**

For description, see CRP 418.

**CRP 621 Quantitative Techniques for Policy Analysis and Program Management**

Spring. 4 credits. D. Lewis.

Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

**CRP 631 Local Economic Policy—Field Workshop**

For description, see CRP 412.

**CRP 632 Methods of Regional Science and Planning I**

Spring. 3 credits variable. Staff.

See CRP 632. CRP 633 will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

**CRP 633 Methods of Regional Science and Planning II**

Fall. 4 credits. S-U grades optional.

The purpose of this workshop is twofold: (1) to provide students with research tools useful in developing state-level economic development strategies; and (2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers: firm-specific subsidies. The course consists of lecture and discussion meetings. The workshop sessions include exercises in qualitative information gathering on economic development topics, use of the census in combination with geographic information systems for analysis and presentation, and shift-share analysis.

**CRP 637 Regional Development Planning: An International Perspective**

Fall. 4 credits variable. S-U grades optional. T. Victorisz.

This course develops a broad historical and theoretical context within which urban and regional planning problems across the world are embedded, addressing aspects of the global information economy affecting economic development and cultural identity; and demonstrates how such a broad perspective can make for more viable local plans. From the perspective of commitment to an open society, the course also examines the tension between planning oriented to social equity and the polarizing forces of market fundamentalism.

**CRP 638 Planning and the Global Knowledge Economy: Sustainability Issues**

Spring. 4 credits variable. S-U grades optional. T. Victorisz.

This course analyzes the current sustainability crisis in terms of major changes in the social organization of production, emphasizing the worldwide economic and cultural shocks created by the emerging knowledge economy. Insight into the dynamism of this transition, in the light of a similarly dramatic transition in the past, can guide attempts to move toward sustainability and high-quality urban and regional living environments.

**CRP 642 The Micro-Politics of Participatory Planning Practices**

Spring. 4 credits variable. J. Forester.

This seminar explores issues of "practice" (rhetoric and negotiation, interpretation and judgment, narrative and recognition) as they influence democratic deliberations involving questions of ethics and argument, participation and identification, personal trauma and working-through, and more. The approach we take can be called "critical pragmatism." We use practitioners' oral histories to investigate the challenges of participatory planning practices.

**CRP 643 Affordable Housing Policy and Programs (also CRP 343)**

Spring. 3 credits. S-U grades optional. R. Pendall.

For description, see CRP 343.

**CRP 653 Legal Aspects of Land-Use Planning**

Spring. 3 credits. R. Booth.

Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

**CRP 655 Real Estate Project Workshop**

Spring. 4 credits. Permission of instructor required. Fee for mandatory field trip. R. Abrams and M. Schack.

Students are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field are addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, and others. Projects focus on real world case studies and require professional level reports suitable for oral and written presentations.

**CRP 657 Real Estate Law**

Spring. 3 credits. Letter grade. A. Klausner.

Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and regulations. Current legal issues affecting the real estate industry are discussed.

**CRP 658 Residential Development**

Spring. 3 credits. Letter grade. Fee. For mandatory field trip. B. Olson.

The course explores the residential development process from site acquisition through delivery of the finished product. Topics covered include: market feasibility, land planning and acquisition, product
selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing and sales activities. Current issues in providing competitive housing products in today's markets are also explored. Co-op experiences of the residential development project team is discussed, and classes are supplemented by presentations from visiting professionals. A semester-long project is conducted in student teams on an actual site.

**CRP 661 Seminar in American Urban History (also CRP 361)**
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.
For description, see CRP 361.

**CRP 662 Historic Preservation Planning Workshop: Plans and Programs**
Fall or spring. 1–4 credits. Prerequisite: CRP 561. M. Tomlan.
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

**CRP 663 Historic Preservation Law**
Spring. 3 credits. Offered alternate years. R. Booth.
The course covers: law of historic district and landmark designation; tools for preservation (such as police power, taxation, eminent domain); and recent developments in state and federal historic preservation.

**CRP 664 Economics and Financing of Neighborhood Conservation and Preservation**
Spring. 3 credits. M. Tomlan.
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

**CRP 665 Preservation Planning and Urban Change**
Fall. 3 credits. M. Tomlan.
An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

**CRP 666 Pre-Industrial Cities and Towns of North America (also LA 666)**
Fall. 3 credits. S-U grades optional. S. Baugher.
For description, see LA 666.

**CRP 668 The History of Urban Form in America (also CRP 368)**
Fall. 3 credits. M. Tomlan.
For description, see CRP 368.

**CRP 670 Regional Planning and Development in Developing Nations**
Fall or spring. 4 credits. Prerequisite: second-year graduate standing. Not offered 2003–2004. Staff.
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

**CRP 671 Seminar in International Planning**
Spring. 1 credit. S-U grades only. B. Lynch.
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

**CRP 672 International Institutions**
Spring. 3 credits. L. Beneria.
The course focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the UN system up to the early 1970s, how these function and have evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

**CRP 674 Urban Transformations in the Global South (also CRP 474)**
Spring. 4 credits. S-U grades optional. B. Lynch.
For description, see CRP 474.

**CRP 675 Seminar in Project Planning in Developing Countries**
Fall. 4 credits. D. Lewis.
An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

**CRP 676 Latin American Cities (also CRP 376)**
For description, see CRP 376.

**CRP 677 Issues in African Development (also CRP 477)**
Fall or spring. 1 credit. S-U only. M. Ndulo.
For description, see CRP 477.

**CRP 678 Infrastructure in Developing Countries**
Spring. 4 credits. S-U grades optional. B. Lynch.
This graduate seminar examines (1) the roles of international institutions, national governments, and private-sector actors in shaping infrastructure policies and major construction projects, (2) the project process from initial proposal to construction, and (3) the implications of big projects for different social groups and economic sectors. It also discusses the intended and unintended consequences of mega projects and the reasons they become targets of social movement activity.

**CRP 679 Wilderness and Wildlands: Issues in Policy and Planning (also CRP 395)**
Fall. 2–3 credits variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thorndike.
For description, see CRP 395.

**CRP 683 Environmental Aspects of International Planning (also CRP 453)**
For description, see CRP 453.

**CRP 703 Contemporary Theories of Regional Development**
Fall or spring. 4 credits. Not offered 2003–2004. P. Clavel.

**CRP 714 Gender, Race, and Class in Planning**
Fall. 3 credits. L. Beneria.
This course introduces students to the importance of gender, race, and class issues in planning theory and practice. Both domestic and international topics are covered. Discussions, short papers, and term paper required.

**CRP 732 Methods of Regional Science and Planning III**
Fall or spring. 3 credits. Not offered 2003–2004. Staff.

**CRP 733 Seminar in Regional Models**
Fall or spring. 3 credits. Not offered 2003–2004. Staff.

**CRP 790 Professional Planning Colloquium I**
Fall. 1 credit. Staff.
Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

**CRP 791 Master's Thesis in Regional Science**
Fall or spring. 12 credits variable. S-U grades optional. Hours to be arranged. Regional Science faculty. Staff.

**CRP 792 Master's Thesis, Project, or Research Paper**
Fall or spring. 10 credits variable. S-U grades optional. Staff.

**CRP 795 Planning Internships**
Fall, spring, or summer. 1–12 credits variable. Staff.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

**CRP 795 Master's Thesis in Preservation Planning**
Fall or spring. 1–6 credits variable. Staff.
CRP 796 Professional Writing and Publishing (Colloquium)
Fall or spring. 2 credits. S-U grades only. Not offered every year. Staff. Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings
Fall or spring. 4 credits variable. Limited to graduate students. Prerequisites: permission of instructor. Staff. For description, see department coordinator, 106 West Sibley.

[CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis
Fall or spring. 1 credit. Not offered 2003-2004. Staff.]

CRP 800 Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits. S. Christopherson. An introduction to key conceptual and empirical literature in urban theory. The course focuses on the relationship between political and economic processes and their joint influence on urban spatial form.

[CRP 801 Advanced Seminar in Urban and Regional Theory II
Fall. 3 credits. Not offered 2003-2004. Staff.]

CRP 810 Advanced Planning Theory
Fall. 3 credits. Not offered 2003-2004. Staff.

CRP 830 Seminar in Regional Science, Planning, and Policy Analysis
Fall or spring. 4 credits variable. S-U grades only. Staff. This seminar provides an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered vary each year. Empirical and analytical research are emphasized. Students are expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890 Planning Research Seminar I
Fall or spring. 2 credits. Staff. Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 892 Doctoral Dissertation
Fall or spring. 1-2 credits variable. Staff.

Special Topic Courses
Fall or spring. Variable credit. Staff. Typical topics are:

CRP 609 Urban and Regional Theory
CRP 619 Planning Theory and Politics
CRP 629 Quantitative Methods and Analysis
CRP 639 Regional Development Planning
CRP 649 Social-Policy Planning
CRP 659 Urban Development Planning
CRP 669 History and Preservation
CRP 679 Planning and Developing Regions
CRP 689 Environmental Planning

CRP 699 Regional Science
CRP 719 Planning Theory and Politics

LANDSCAPE ARCHITECTURE
Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program

Landscape Architecture offers a three-year Master of Landscape Architecture License Qualifying Degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in Landscape Architecture; a concentration in a subject related to the core courses; and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, and six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program, administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of specializations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual Degree Options
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information
Note: All of the following courses are offered through the College of Agriculture and Life Sciences except LANAR 497, 524, and 525.

LA 140 The Symbols of New York State's Cultural Landscape
Spring. 3 credits.

LA 141 Grounding in Landscape Architecture
Fall. 4 credits.

LA 142 Grounding in Landscape Architecture
Spring. 4 credits.

LA 201 Medium of the Landscape
Fall. 5 credits.

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.bio.cornell.edu, which includes the Behrman Biology Advising Center. Co-located in Stimson Hall, the professional and student advisers provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisers in the OUB also follow the progress of biology majors and work closely with faculty advisers. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic and career advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Robert C. Seamans or brigantine Corwith Cramer.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the Physical and Life Sciences distribution requirement is a minimum of 18 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109-110, 105-106, or 101 and 105 plus 102 and 104, or 107-108.

For students in the College of Arts and Sciences, all biology ("BIO") courses can be used toward fulfillment of the biological distribution requirement except BIO G 200 (unless permission is obtained), BIO G 209, or BIOM 204. The following courses are especially suitable for the distribution requirement because they have no prerequisites: BIO G 101-104, 105-106, 107-108, 109-110, 170, 202; BIOAP 212; BIOEE 154, 207, 275; BIOGD 184; BIOM 192; BIOMB 111; BIOPL 240, 241.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from BIO G 109-110, 101 and 103 plus 104, 105-106 or 107-108 or from specified courses in chemistry or physics.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged in BIO G 101-104.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.

2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals (DHEW publication 86-23, revised 1996; see p. 16, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253-3520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS...) at the first meeting of the course.

ADVANCED PLACEMENT

For information on credit for advanced placement in Biological Sciences, please see www.bio.cornell.edu/advising/ap.cfm.

THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to re-evaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology adviser, and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–9 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S-U only or if the student's adviser grants permission.

1) Introductory biology for majors (one year): BIO G 109 and 110 plus 101 and 103 plus 102 and 104, or 105–106 or 107-108 or from specified courses in chemistry or physics.

2) General chemistry (one year): Chemistry 207–208, or 206–208, or 215–216.
The Program of Study Requirements. Note: Core courses cannot count toward the high number of required endowed courses for this program of study.

3) Computational Biology: One course in computer programming (BTRY 600, Introduction to Computer Programming or BTRY 601, Introduction to Computing), one course in mathematics (MATH 221, Linear Algebra and Calculus; MATH 251, Linear Algebra; MATH 294, Engineering Mathematics II; MATH 420, Differential Equations and Dynamical Systems, BTRY 408, Theory of Probability; or BTRY 421, Matrix Computation); a bridging course, i.e., a course in mathematical modeling and computer science; BTRY 459, Phylogenetic Systematics; AN SC 420, Evolution; BION 406, Mathematical Modeling of Populations; OR&IE 360, Engineering Probability and Statistics II; OR&IE 361, Introductory Engineering Stochastic Processes.

Note: Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.

THE MAJOR

3) College mathematics (one year): one semester of calculus (MATH 106, 111, 191 or their equivalent) plus one semester selected from the following:
   a. a second semester of calculus (MATH 112, 192, or their equivalents).
   b. a course in finite mathematics (Biometry 101, 417, MATH 105, 251).
   c. a course in statistics (Biometry 301, MATH 171, Applied Economics and Management 210, PSYCH 350, IRL 210).

4) Organic chemistry: CHEM 257 and 251, or 357–358 and 251, or 359–360 and 251, or 359–360 and 301.

6) Genetics: BIOC 281.

7) Biochemistry: BIOBM 330, or 331 and 332, or 333.

8) Evolutionary Biology: BIOE 278 or BIOI 448. Note: BIOI 241, Botany, is a prerequisite course to BIOI 448.

9) A program of study selected from the outline below.

10) Foreign language: students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement for the biology major by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) successfully completing at least six college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasis this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the Program of Study Requirements.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a Program of Study. Whereas the core requirements of the biology curriculum provide the common foundation deemed essential for all biology majors, the role of the Program of Study is to provide either a concentration in a particular area of biology or, in the case of the General Biology Program of Study, a survey of biology that is broad but not superficial. The Program of Study requirement can be met by taking 13 to 15 credit hours of courses chosen by the student in consultation with his or her biology adviser. Programs of Study for particular subject areas are designed by faculty specializing in the subject. Typically, the Program of Study consists of one or more courses that provide the necessary background in the subject and a list of optional courses from that area or related areas, many of which are at an advanced level (300 or higher). Because biology is an experimental science, most Programs of Study require one or more laboratory courses. The laboratory requirement in some Programs of Study can be met by participation in the independent research course (BIO G 499). The possible Programs of Study and their requirements are listed below:

1) Animal Physiology: BIOAP 311
   a) Lecture courses: BIOE 454 Physiological Engineering; AN SC 300 Animal Reproduction and Development; AN SC 410 Nutritional Physiology and Metabolism; AN SC 427 Fundamentals of Endocrinology; BIO G 305 Basic Immunology; BIOAP 214 Biological Basis of Behavior; BIOAP 458 Mammalian Physiology; BIOBM 407 Nature of Sensing and Response: Signal Transduction in Biological Systems; BIOBM 437 Eukaryotic Cell Proliferation; BIOG 385 Developmental Biology; BIOGD 483 Molecular Aspects of Development; BION 322 Hormones and Behavior; BION 325 Neurodiseases-Molecular Aspects; BION 326 The Visual System; BIONB 492 Sensory Function; NS 331 Physiological and Biochemical Bases of Human Nutrition.
   b) Laboratory courses: BEO 454 AN SC 301 Animal Reproduction and Development; BIO G 401 Introduction to Scanning Microscopy; BIO G 403 Transmission Microscopy for Biologists; BIOAP 413 Histology: The Biology of the Tissues; BIOAP 319 Animal Physiology Laboratory; BIOAP 416 Cellular Physiology and Genomics Laboratory; BIOBM 440 Laboratory in Biochemistry and Molecular Biology; BION 491 Principles of Neurophysiology.

2) Biochemistry: CHEM 300, Quantitative Chemistry; six credits of organic chemistry (CHEM 357–358 or 359–360); a minimum of four credits of organic chemistry laboratory (CHEM 301–302 or 301 or 251–252); four credits of biochemistry laboratory courses (BIOBM 440, Laboratory in Biochemistry and Molecular Biology); AND PHYSICAL Chemistry (CHEM 389–390 or 287–288 or 389–288).

Note: CHEM 284 is designed for biologists. Five hours of Biochemistry are recommended (331 and 332, or 330 and 334 or 333 and 334) and students are urged to take BIOBM 432, Cell Biology. Students interested in graduate work in the area of biochemistry should take PHYS 207–208 and consider taking a third semester of calculus in preparation for CHEM 389–390. Be sure to complete CHEM 207–208 or 215–216 during the freshman year.

Note: Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.

Note: Bridging courses require linear algebra (MATH 221, Linear Algebra and Calculus; MATH 251, Linear Algebra; MATH 294, Engineering Mathematics II; or BTRY 421, Matrix Computation). Students who use BTRY 408 to fulfill the mathematics requirement or a requirement for an additional course.

Note: Students who use BTRY 408 to fulfill the additional mathematics requirement should not use OR&IE 360, Engineering Probability and Statistics II to fulfill the requirement for an additional course.

Note: Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.
4) Ecology and Evolutionary Biology: BIOEE 261, Ecology and the Environment, and 10 credits from the following lists, including at least one course from each group:
   (a) BIOEE 274, The Vertebrates: Structure, Function, and Evolution; BIOEE 373, Biology of Marine Invertebrates, or BIOSM 376, Marine Invertebrate Zoology; BIOEE 471, Mammalogy; BIOEE 470 and 472, Herpetology Lectures and Laboratory; BIOEE 475, Ornithology; BIOEE 476, Biology of Fishes, BIOEE 477, Bacterial Diversity, BIOPL 241, Introductory Botany; BIOSM 449, Seaweeds, Plankton and Seagrasses; ENTOM 212, Insect Biology.
   (b) BIOEE 263, Field Ecology; BIOEE 452, Herbivores and Plants; Chemical Ecology and Coevolution; BIOEE 455, Insect Ecology; BIOEE 456, Stream Ecology; BIOEE 457 and 459, Limnology: Ecology of Lakes, Lectures and Laboratory; BIOEE 466, Theoretical Ecology; BIOEE 462, Marine Ecology; BIOEE 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; BIOEE 464, Macroevolution; BIOEE 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BIOEE 473, Ecology of Agricultural Systems; BIOEE 478, Ecosystem Biology; BIOEE 479 (EAS 479), Paleobiology; BIOG 481, Population Genetics; BIOG 484, Molecular Systematics; BIOG 487, Molecular Evolutionary Genetics; BIOG 699, Cellular Basis of Development, BIOM 420, Microbial Genomics; BIOM 485, Bacterial Genetics; ENTOM 400, Insect Physiology and Genetic Engineering of Plants; BIOL 641, Laboratory in Plant Molecular Biology; BIOL 644, Regulatory Factors in Plant Growth and Development; BIOL 652, Plant Molecular Biology II; BIOL 653, Plant Molecular Biology I. Up to 3 credits for this Program of Study may be chosen from other Biological Sciences courses, including BIOG 499, Undergraduate Research in Biology, with approval from the faculty adviser.
6) Genetics and Development: A minimum of 13 credits, usually chosen from the following courses:
   - BIOG 385, Developmental Biology
   - BIOG 389, Embryology
   - BIOG 450, Vertebrate Development
   - BIOG 480, Seminar in Developmental Biology
   - BIOG 481, Population Genetics
   - BIOG 482, Human Genetics and Society
   - BIOG 483, Advanced Developmental Biology
   - BIOG 484, Molecular Evolution
   - BIOG 485, Advanced Eukaryotic Genetics
   - BIOG 487, Human Genomics
   - BIOG 600, Development of Sensory Systems
   - BIOG 682, Fertilization and the Early Embryo
   - BIOG 684, Advanced Topics in Population Genetics
   - BIOG 687, Developmental Genetics
   - BIOG 689, Cellular Basis of Development
   - BIOM 420, Microbial Genomics
   - BIOM 485, Bacterial Genetics
   - ENTOM 400, Insect Physiology
   - BIOM 544, Advanced Eukaryotic Genetics
   - BIOM 633, Biosynthesis of Macromolecules
   - BIOM 639, The Nucleus
   - PL BR 606, Advanced Plant Genetics
   - BIOPL 343, Molecular Biology and Genetic Engineering of Plants
   - BIOPL 641, Laboratory in Plant Molecular Biology
   - BIOPL 644, Regulatory Factors in Plant Growth and Development
   - BIOPL 652, Plant Molecular Biology II
   - BIOPL 653, Plant Molecular Biology I
   - BIOPL 659, Advanced Eukaryotic Genetics
   - BIOPL 664, Advanced Invertebrate Genetics
   - BIOPL 665, Advanced Eukaryotic Genetics

7) Insect Biology: ENTOM 212, Insect Biology, plus a minimum of three additional courses totaling at least nine credits selected from the following groups. At least one of the three additional courses must be selected from group (a):
   (a) ENTOM 322, Insect Morphology
   - ENTOM 351, Introductory Insect Systematics
   - ENTOM 483, Insect Physiology
   (b) ENTOM 215, Spider Biology; ENTOM 325, Insect Behavior; ENTOM 333, Larval Insect Biology; ENTOM 352, Medical and Veterinary Entomology; ENTOM 370, Pesticides, Environment and Human Health; ENTOM 394, Circadian Rhythms; ENTOM 400, Insect Development; ENTOM 443, Entomology and Pathology of Trees and Shrubs; ENTOM 444, Integrated Pest Management; ENTOM 452, Herbivores and Plants; ENTOM 453, Historical Biogeography; ENTOM 455, Insect Ecology; ENTOM 456, Stream Ecology; ENTOM 463, Invertebrate Pathology; ENTOM 470, Ecological Genetics; ENTOM 471, Freshwater Invertebrate Biology and Biomonitoring; ENTOM 477, Biological Control; ENTOM 490, Insect Toxicology; ENTOM 644, Advanced IPM.
8) Microbiology: Students in the Microbiology Program of Study must complete BIOM 290 and BIOM 291. At least 8 additional credits are required, which must include at least one course from each of the following courses: BIOM 414, BIOM 416, BIOM 418, or BIOM 485. Additional approved courses are included in the lists below. Students are invited to complete their requirements in one of three areas of interest: i) Prokaryotic Biology, ii) Molecular Microbiology and Biotechnology, and iii) Pathogenic Microbiology.

- Prokaryotic Biology: BIOM 391 (Advanced Microbiology Laboratory), BIOM 414 (Bacterial Diversity), BIOM 416 (Bacterial Physiology), and BIOM 418 (Microbial Ecology)
- Molecular Microbiology and Biotechnology: BIOM 391 (Advanced Microbiology Laboratory), BIOM 414 (Bacterial Diversity), BIOM 416 (Bacterial Physiology), and BIOM 394 (Applied and Food Microbiology)
- Pathogenic Microbiology: BIOM 404 (Pathogenic Bacteriology and Mycology), BIOM 408 (Viruses and Disease I), BIOM 409 (Viruses and Disease II), and BIOM 417 (Medical Parasitology)

9) Molecular and Cell Biology: Chemistry 357–358 or 359–360; BIOB 432, Survey of Cell Biology; BIOL 440, Laboratory in Biochemistry and Molecular Biology; and at least 7 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two courses from the following lists: BIOG 416, Cellular Physiology and Genomics Laboratory, BIOM 433, Laboratory in Cell Biology, BIOM 454, Applications of Molecular Biology, BIOM 457, Eukaryotic Cell Proliferation, BIOM 459, Molecular Basis of Human Disease; BIO G 305, Immunology; BIOG 385, Developmental Biology; BIOG 483, Advanced Developmental Biology; BIOG 484, Molecular Evolution; BIOG 486, Advanced Eukaryotic Genetics; BIOM 290, General Microbiology, Lectures; BIOM 408, Viruses and Disease I; BIOM 409, Viruses and Disease II; BIOM 420, Microbial Genetics; BIOM 485, Bacterial Genetics; BION 222, Neurobiology and Behavior II: Introduction to Neurobiology; BION 325, Neurotoxins: Molecular Aspects; BION 425, Molecular Neurophysiology; BION 495, Molecular Biology; and at least 13 credits from the following lists, including at least one course from each group:
   (a) BIOL 322, Insect Morphology
   - BIOL 351, Introductory Insect Systematics
   - BIOL 483, Insect Physiology
   (b) BIOL 215, Spider Biology; BIOL 325, Insect Behavior; BIOL 333, Larval Insect Biology; BIOL 352, Medical and Veterinary Entomology; BIOL 370, Pesticides, Environment and Human Health; BIOL 394, Circadian Rhythms; BIOL 400, Insect Development; BIOL 443, Entomology and Pathology of Trees and Shrubs; BIOL 444, Integrated Pest Management; BIOL 452, Herbivores and Plants; BIOL 453, Historical Biogeography; BIOL 455, Insect Ecology; BIOL 456, Stream Ecology; BIOL 463, Invertebrate Pathology; BIOL 470, Ecological Genetics; BIOL 471, Freshwater Invertebrate Biology and Biomonitoring; BIOL 477, Biological Control; BIOL 490, Insect Toxicology; BIOL 644, Advanced IPM.
and Genetic Approaches to Neurosciences; BIOPL 343, Molecular Biology and Genetic Engineering of Plants; BIOPL 444, Plant Cell Biology. Graduate-level courses such as BIOBM 631, Protein Structure and Function; BIOBM 633, Biosynthesis of Macromolecules: BIOBM 636, Cell Biology; and BIOBM 639, The Nucleus are also acceptable with permission of adviser. Five hours of biochemistry are recommended (BIOBM 331 and 332, or 330 and 334, or 333 and 334). CHEM 207-208 or 215-216 should be completed within the freshman year.

10) Neurobiology and Behavior: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section (four-credits per term), and seven additional credits. The seven additional credits must include at least one ADVANCED course from the BIONB offerings. "Topics" courses (BIONB 426 and 720b) and independent study (BIO G 499) may be used as supplemental credits but do not qualify as ADVANCED courses.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 for only three credits must still take the 1 credit discussion section in BIONB 221 and 222. To arrange this, the student should consult the professors in charge of the two courses.

11) Nutrition: NS 331, Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least nine credits of additional coursework in the biological aspects of nutrition, such as: NS 222, Maternal and Child Nutrition; NS 315, Obesity and the Regulation of Body Weight; NS 332, Methods in Nutritional Sciences; NS 347, Human Growth and Development; NS 421, Nutrition and Exercise; NS 431, Mineral Nutrition and Chronic Disease; NS 441, Nutrition and Disease; NS 452, Molecular Epidemiology and Dietary Markers of Chronic Diseases; NS 455, Nobel Prizes in Biomedical Research; NS 475, Mechanisms Underlying Mammalian Developmental Defects; NS 601, Proteins and Amino Acids; NS 602, Lipids; NS 603, Mineral Nutrition: Metabolic, Health, and Environmental Aspects; NS 604, The Vitamins; and NS 614, Topics in Maternal and Child Nutrition. Some courses require NS 115, Nutrition Health and Society, which may be used as part of the additional nine credits.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count towards the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will count toward the 100 hours required in A&S if those credits fulfill major requirements.

12) Plant Biology: Students choose one area of study from the following two options:

Option (a) Botany: Students are required to take Introductory Botany (BIOPL 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 242 and 244, Plant Function and Growth, Lectures and Laboratory; BIOPL 243, Taxonomy of Cultivated Plants; BIOPL 247, Ethnobotany; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPL 345, Plant Anatomy; BIOPL 348, The Healing Forest; BIOPL 359, Biology of Grasses; BIOPL 404, Crop Evolution, Domestication, and Diversity; BIOPL 422, Plant Development; BIOPL 441, Plant Cell Biology; BIOPL 445, Photosynthesis, BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOPL 452/454, Systematics of Tropical Plants and Field Lab; BIOPL 463, Plant Biochemistry, BIOOE 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOEE 466 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) Plant Biotechnology: Students are required to take BIOPL 345 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits from the following list: BIOPL 241, Introductory Botany; BIOPL 242 and 244, Plant Function and Growth, Lectures and Laboratory; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 422, Plant Development; BIOPL 441, Plant Cell Biology; BIOPL 462, Plant Biochemistry; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

13) Systematics and Biotic Diversity: A minimum of 13 credits from the following two groups, including credits from group (a), and three from group (b), and at least two laboratory courses (marked with *). BIO G 499, Undergraduate Research in Biology, with approval of the adviser, can be used in fulfillment of up to four credits in group (a), and can count as one laboratory course if it has a laboratory component of two or more credits.

(a) *BIOEE 274, The Vertebrates: Structure, Function, and Evolution; *BIOEE 371, Human Paleontology; *BIOEE 473, The Invertebrates: Form, Function, and Evolution; *BIOEE 471, Mammalogy; *BIOEE 472, Herpetology; *BIOEE 475, Ornithology; *BIOEE 476, Biology of Fishes; BIOMI 290, General Microbiology, Lectures; *BIOMI 291, General Microbiology, Laboratory; BIOMI 415, Bacterial Diversity, Lectures; *BOPHI 241, Introductory Botany; *BIOPL 243, Taxonomy of Cultivated Plants; BIOPL 247, Ethnobotany; *BIOPL 248, Taxonomy of Vascular Plants; BIOPL 343, The Healing Forest; BIOPL 359, Biology of Grasses; BIOPL 645, Families of Tropical Flowering Plants, Lectures; *BIOPL 646, Families of Tropical Flowering Plants; *ENTOM 212, Insect Biology; ENTOM 215, Spider Biology: Life on a Silken Thread; *ENTOM 322, Insect Morphology; *ENTOM 331, Introductory Insect Systematics; *ENTOM 471, Freshwater Invertebrate Biology; *ENTOM 631, Systematics of the Coleoptera; PL PA 309, Introductory Mycology; PL PA 319, Field Mycology.

(b) BIOEE 404, Macroevolution; BIOEE 414, Phylogenetic Systematics; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOPL 453, Historical Biogeography; BIOPL 442, Current Topics in Botany.

14) Independent Option: Students who want to undertake a course of study not covered by the existing programs of study may petition the Biological Sciences Curriculum Committee. Information on independent option and Curriculum Committee petition forms are available in the Office of Undergraduate Biology, 216 Stimson Hall.

Independent Research and Honors Program

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in participating in research should contact faculty members with compatible research interests. Faculty members may consider the students' previous academic accomplishments, interests and goals, and the availability of space and equipment when agreeing to supervise a student in his or her laboratory. Students conducting research may enroll for credit in Biological Sciences BIO G 499. Undergraduate Research in Biology. Registration for this course is done at 216 Stimson Hall. The student's research project must have significant biological content in order to be considered for BIO G 499 credit. Students may not earn credit for research conducted outside of Cornell. Up to three credits of research may be used to complete the program of studies in general biology, genetics and development, systematics and biotic diversity, as well as four credits of research in neurobiology and behavior. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall and at www.bio.cornell.edu.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office of Undergraduate Biology, 216 Stimson Hall, and must be submitted in October of the senior year to the Honors Program Committee by the announced deadline. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have a cumulative grade-point average of at least 3.0. In addi-
tion, students must have at least a 3.0 cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An honors candidate usually enrolls for credit in BIO G 499, Undergraduate Research in Biology, under the direction of the faculty member acting as honors supervisor, although the honors program does not require enrollment for credit. Students accepted into the honors program are required to participate in honors research seminars during both semesters of their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.00 Cornell cumulative and science grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final grade point average is a factor in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer here at Cornell engaged in full time research on their honors project. Students interested in staying for the summer also are encouraged to apply to the Cornell Hughes Scholars Program.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic and research adviser during their sophomore year to carefully plan their academic schedule to meet the requirements of the honors program. Application forms, requirements, deadlines for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall.

INDEX OF COURSES

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOBM; Ecology and Evolutionary Biology, BIOEE; Genetics and Development, BIOGD; Microbiology, BIOMI; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOSL.

Note: Biological sciences ("BIO") courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

**CURRICULUM COMMITTEE**

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

**ADvising**

Students in need of academic advice are encouraged to consult their advisers or come to the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the multidisciplinary program of Biology and Society should see "Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.
GENERAL COURSES (BIO G)

Three introductory biology course sequences are taught during the academic year. BIO G 101-104, BIO G 105-106, and BIO G 109-110; and one during the eight-week summer session: BIO G 107-108. BIO G 101-104, 105-106, and 107-108 are prerequisites for biological sciences majors and other students needing eight credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. BIO G 109-110 is a course sequence intended for nonmajors, and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of eight credits in introductory biology (including advanced placement credits).

BIO G 101-102 Biological Sciences, Lectures
101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional, with permission of instructor. Lect, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 25 and Nov. 4, spring, Feb. 26 and Apr. 8. C. Walcott. Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory, and discussions of plant and animal systems are integrated. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

BIO G 103-104 Biological Sciences, Laboratory
103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lab, M T W or R 1:25-4:25, M or W 7:30-10:30, or T or R 5-8:11. One 3-hour lab each week and a weekly lec for discs, special lecs, etc. J. C. Glaeser, P. R. Ecklund, and staff. BIO G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology.
BIO G 109-110 Biological Principles

109, fall; 110, spring. 3 credits each term. Limited to 600 students. Both BIO G 109 and 110, taken in either order, are required to fulfill the distribution requirement in the colleges of Agriculture and Life Sciences and Human Ecology. Either course fulfills the College of Arts and Sciences distribution requirement, however, both are recommended since they constitute a survey. Students with transfer credit must consult with the course instructors for appropriate placement. Due to overlap in content, BIO G 109 may not be taken after BIO G 102, or BIO G 106, or equivalent, and BIO G 110 may not be taken after BIO G 101, BIO G 105, or equivalent.

BIO G 109-110 may not be used as an introductory course for the major in biological sciences or as introductory biology for premedical requirements. Note that this course satisfies the prerequisite for many but not all second- and third-level courses in biology. Letter grade only. Students do not choose lab sections during course enrollment; lab assignments are made during the first day of classes. Examining procedures fall, Sept. 25 and Nov. 4, spring, Feb. 26 and Apr. 8. Lecs, fall: T R 11:40, spring: M W F 9:05; lab meets alternate M T W R or F 2-4:25, or F 10:10-12:35 (fall), or T 10:10-12:35 (spring), or W 7:30-10 P.M.

H. Greene, D. Winkler, P. Davies, C. Eberhard and staff.

Students who do not plan to major in biology may take this broad introductory course. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Broad goals of the course encompass an understanding of the potential benefits and limitations of science, the complexity and workings of the natural world, and the internal machinery of life—how our bodies and those of other animals and plants work. Fall semester covers biological diversity, genetics, evolution, ecology, behavior and conservation biology; spring semester covers human physiology, plant development, genetic engineering, infectious diseases, and human health. Laboratory sections enable small groups of students to meet with course staff and are used for problem-solving experiments, independent projects, and discussions. There are dissections of preserved vertebrate, invertebrate, and plant materials; for those students who object to dissection, alternative materials are available for study and there is no grade penalty for omitting dissection or observation of animals. Testing for students choosing to be tested, will involve identification of important structures in real organisms.

BIO G 200 Special Studies in Biology

Fall, spring, or summer. 1-3 credits.

Prerequisites: written permission from the Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S-U grades optional, with permission of instructor. Hours TBA. Staff.

A registration device for students who want to register in a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used in fulfillment of college distribution requirements except by permission from the Office of Undergraduate Biology.

BIO G 201 Sophomore Seminar: Your Future in Biology at Cornell and Beyond

Fall. 1 credit. Limited to 40 students.

Prerequisite: one year of introductory biology. Sophomores and new junior transfer students only. S-U grades only.LEC 2 hours each week and B. Cornella.

A seminar course focusing on the academic and career interests of sophomore biology majors and new junior transfer students. Biology faculty, Office of Undergraduate Biology staff, biology alumni, and upperclass students will lead weekly sessions on diverse topics that may include the biology curriculum, bioethics, burgeoning fields and careers in biology, faculty and undergraduate research, biology in the post-9/11 era, and women in science.

BIO G 202 The Diversity of Life

J. L. Davis, J. J. Doyle.

The main focus of this course is on the diversity of living and extinct species. This diversity is examined from an evolutionary perspective, with an emphasis on the discovery of species and in the analysis of relationships among them. Interactions between humans and other species are examined during the latter portion of the semester.

BIO G 209 Introduction to Natural Science Illustration

Summer (6-week session). 2 credits.

Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional. Lecs and labs, T R 6:30-9:30 P.M. B. S. King.

An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratch-board, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

BIO G 305 Basic Immunology Lectures (also VETMI 315)

Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor. Lecs, T R 8:30-9:55. J. A. Marsh.

A survey of immunology, with emphasis on the biological functions of the immune response.

BIO G 400 Undergraduate Seminar in Biology

Fall or spring. Variable credit (1-3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional. Staff.

Specialized seminars on topics of interest to undergraduates presented by biology faculty, including visiting faculty.

BIO G 401 Introduction to Scanning Electron Microscopy

An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, students use the scanning electron microscope to study and obtain micrographs of features that interest them.

BIO G 403 Transmission Electron Microscopy for Biologists

Fall, 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 8 students. Minimum of 4 students. Prerequisites: BIOP 313, BIOPL 345 or 443. S-U grades optional. Two sections: Sec 01, 1 credit, weeks 1-4; sec 02, 3 credits, weeks 5-12. Students may register for one or both sections. Fee may be charged. Lecs, T 11:15; labs, M W or T R 1:25-4:25.

M. V. Parthasarathy.

Section 01, 1 credit, weeks 1-4, covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper preparation of the specimen and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 3 credits, weeks 5-12, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials this section studies chemical fixatives, cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

BIO G 408 Presentation Skills for Biologists

Spring. 1 credit. S-U only. Prerequisites: previous research experience. Preference given to students accepted into the Biology Honors Program. L. Southard and G. Hess.

This course covers oral and written communication skills used in presenting research to other scientists. Topics covered include organization and writing of scientific papers, presentation tips for research seminars, and preparation of visual aids using Microsoft PowerPoint. All students present a 10-minute seminar on their research and evaluate other presentations.

BIO G 410 Teaching Contemporary Biology

Fall. 3 credits. S-U grades optional.

Prerequisite: one year introductory biology; permission of instructor. L. Southard and S. Merkel.

This course provides students with the opportunity to experience teaching high school science. Students select an important biologi-
cal concept, then develop inquiry-based teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which familiarize the students with the scientific content of the course. Students then work in teams with high school teachers to develop their presentations. The final part of the course includes practice presentations and teaching at regional high schools.

**BIO G 431 Frontiers in Biophysics**
Fall. 1/2 credit. S-U grades only. Leec TBA.
G. Feigenson and staff. A day of lectures on Saturday, Sept. 13, 9:00-4:00, Racker Building, Biotechnology Bldg, giving an overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates who are considering a career in biophysics and for graduate students who are interested in biophysics research opportunities at Cornell.

**BIO G 450 Light and Video Microscopy for Biologists**
Spring. 3 credits. Limited to 12 students. Prerequisites: one year of introductory biology and permission of instructor. Lecs, T R 1:25-2:20; lab, R 2:50-4:30. R. O. Wayne. Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living cells.

**BIO G 498 Teaching Experience**
Fall or spring. 1-4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent. Arts students may not count this course toward graduation. They may, however, upon petition of their advisor to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility, but not eligibility for graduating with distinction. S-U grades optional, with permission of instructor. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105-106; BIOAP 311, 312, 313, 316; BIOBM 330, 331; BIOEE 274, 475; BIOGD 281; and BIOM 291, 292.

**BIO G 499 Undergraduate Research in Biology**
Fall or spring. Variable credit. Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor. Students in the College of Agriculture and Life Sciences may use up to 15 credits of independent study (BIO G 499) towards graduation. Prerequisite: written permission of faculty member who supervises the research and the College of Agriculture and Life Sciences. They may use up to 15 credits of independent study (BIO G 499) towards graduation. Prerequisite: written permission of faculty member who supervises the research and the College of Agriculture and Life Sciences. They may use up to 15 credits of independent study (BIO G 499) towards graduation. Prerequisite: written permission of faculty member who supervises the research and the College of Agriculture and Life Sciences. They may use up to 15 credits of independent study (BIO G 499) towards graduation. Prerequisite: written permission of faculty member who supervises the research and the College of Agriculture and Life Sciences. They may use up to 15 credits of independent study (BIO G 499) towards graduation. Prerequisite: written permission of faculty member who supervises the research and the College of Agriculture and Life Sciences. They may use up to 15 credits of independent study (BIO G 499) towards graduation. Prerequisite: written permission of faculty member who supervises the research and the College of Agriculture and Life Sciences. They may use up to 15 credits of independent study (BIO G 499) towards graduation. Prerequisite: written permission of faculty member who supervises the research and the College of Agriculture and Life Sciences.
BIOLOGICAL SCIENCES - 2003-2004

Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor. Lect, M W 12:20–1:10; lab, M W 12:20–5:00. E. R. Loew, N. A. Lorr and staff.

A series of student-conducted in vitro and in vivo experiments designed to illustrate basic physiological principles in animals, with emphasis on relevance to humans, and to introduce students to physiology research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, dissection under anesthesia, and design, and interpretation of results. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, laboratory performance, weekly quizzes, and a mid-term and a final exam.

BIOAP 413 Histology: The Biology of the Tissues
Spring. 4 credits. Prerequisite: one year of introductory biology. Recommended. BIOBM 330 or 331, or their equivalents. S-U grades optional, with permission of instructor. Lecs, M W 1:25; labs, M W 2:30–4:25. S. Suarez, L. Mizra.

Provide students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphometry at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized.

BIOAP 416 Cell Physiology and Genomics Laboratory
Spring. 4 credits. Limited to 24 students. Designed for graduate and upper-level undergraduate students with preference for Biology majors with a Physiology concentration. Prerequisite: concurrent, or previous enrollment in BIOAP 316, Cell Physiology, or BIOBM 432, Survey of Cell Tissues (also NS 475). Spring. 3 credits. Prerequisites: BIOBM 330, 331–332, or 333 (may be taken concurrently). M W 9:05; lab, R 2:00. Offered alternate years. Next offered in spring 2004. D. Noden and P. Stover.

For description, see NS 475.

BIOAP 619 Lipids (also NS 602)
Fall. 2 credits. Lecs, T R 11:15. A. Bensadoun.

Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, structure, and metabolism; molecular biology, function, and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

BIOAP 710-718 Special Topics in Physiology
Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

BIOAP 711 Readings in Applied Animal Behavior
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. Next offered in 2003. Lec, 1 hour each week. TBA. K. A. Houpt.

BIOAP 714 Cardiac Electrophysiology
Fall. 1 credit. S-U grades only. Offered alternate years. R. Gilmour.

Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasis on dynamic aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOAP 715 Stress Physiology: To Be Discussed as Part of Animal Welfare
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent required. Offered alternate years. K. A. Houpt.

The emphasis is on physiological assessment of stress.

BIOAP 719 Graduate Research in Animal Physiology (also VETPH 628)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Graduate student auditors allowed. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOAP 720 Animal Physiology and Anatomy Seminar
Spring and fall. 1 credit each semester. Prerequisite: admission to the graduate Field of Physiology.

This seminar course is designed to provide graduate students in the Field of Physiology with training to become professional scientists. Students who participate are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester and in one special session devoted to a particular topic, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

BIOAP 757 Current Concepts in Reproductive Biology
Fall. 3 credits. Limited to 20 students. Prerequisite: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Lec/disc, T R 10:10–12:05. Offered alternate years. J. E. Fortune, W. R. Butler, and staff. A team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy, parturition, placenta and reproductive tracts; and student participation in the form of discussions and/or presentations.

BIOAP 811 Advanced Physiological Methods I
Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: TBA. This is a course for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of faculty members in the Field of Physiology to acquaint graduate students with the latest techniques/methods in biomedical/physiological/genomic research. Three modules are offered each semester by arrangement with the course coordinator.
BIOAP 812 Advanced Physiological Methods II  
Spring. 2 credits. Enrollment limited.  
Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: TBA.  
This is a course for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of faculty members in the Field of Physiology to acquaint graduate students with the latest techniques/methods in biomedical/physiological/genomic research. Three modules are offered each semester by arrangement with the course coordinator.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)  
BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology  
Summer (6-week session). 4 credits.  
Prerequisites: one year of introductory biology for majors, one year general chemistry, and CHEM 257, or 357-358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. S. Ely or H. T. Nivison.  
Topics include the structure and function of proteins, enzymes, cellular metabolism, and the replication and expression of genes.

BIOBM 334 Computer Graphics and Molecular Biology  
Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330. Students who have completed BIOBM 333 or 331/332 (BIOBM 332 may be taken concurrently) will be permitted to register. J. E. Blankenship, P. C. Hinkle, and staff.  
Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOBM 432 Survey of Cell Biology  
Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent.  
A survey of a wide array of topics focusing on the general properties of eukaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437; BIOGD 483; and BIOBM 632, 656, and 639.

BIOBM 433 Laboratory in Cell Biology  
Spring. 1 credit. Prerequisites: concurrent enrollment in, or completion of, BIOBM 432, or equivalent. Two labs per week for the first seven weeks of the semester; T R 1:30-4:30 P.M. W. Brown.  
A laboratory course to introduce students to classic and modern methods in cell biology. The focus is on material not presented in the BIOBM 440 laboratory courses. Exercises include analysis of membrane proteins and lipid composition, use of light, fluorescence, and electron microscopy, transfection of mammalian cells with eDNA expression vectors, live cell imaging of fluorescently labeled proteins using confocal microscopy, and subcellular fractionation of organelles, and in vitro reconstitution of organelle assembly. Space is limited to 12 students. Preference given to biology majors concentrating in Molecular and Cell Biology.

BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry  
Fall. 3 credits. Enrollment limited to 50 students. Prerequisites: BIOBM 330 or 333 or 331/332. Recommended: BIOGD 281. S-U grades optional. Lecs, M W F 11:15-12:05. J. M. Calvo, S. Ely.
Lecture topics include large-scale sequencing of genomes, drug discovery based upon genomics, combinational approaches to chemical libraries, pharmacogenomics, antibiotics derived from innate immune system, DNA and eukaryotic animals, engineering plants resistant to insects, and gene therapy. About one-quarter of the course is devoted to exploring factors that are required for commercializing ideas and to some social ramifications of biotechnology.

**BIOM 435-436 Undergraduate Biochemistry Seminar**

4 credits. Fall, Winter, Spring. First meeting will be at 4 P.M. on Tuesday, January 27, 471 Biochemistry Building. 1 credit each term. May be repeated for credit. Limited to upper-class students. Prerequisites: BIOM 330, 335, or 351–352, or written permission of instructor. S-U grades only. Seminar time TBD. Organizational meeting first W of each semester.

Selected papers from the literature on a given topic are evaluated critically during six or seven 2-hour meetings.

**BIOM 437 Eukaryotic Cell Proliferation (also TOX 437)**

Fall. Variable credits. Students may take lectures for 2 credits, or take both lectures and discussions for 3 credits. Enrollment for discussion section is limited to 20 students, with preference given to graduate students. Prerequisite: BIOG 101–102 or BIOG 105–106 and BIOM 330 or BIOM 331–332. Recommended: BIOD 281 and BIOM 452. S-U grades optional. Lec., T R 12:20–1:10. Disc., D. A. Not offered 2003–2004. R-H. Cohen

The course covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death.

The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion section.

**BIOM 439 Molecular Basis of Human Disease (also BIOD 439)**

Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOM 330, BIOM 331–332, or BIOM 333) and genetics (e.g., BIOD 281) or permission from instructor. Recommended: cell biology (e.g., BIOM 452 or BIOAP 310) and physiology (e.g., BIOAP 311 or BIOAP 458). S-U grades optional. Lec., T R 10:10–11:25. W. L. Kraus

This course examines how changes in the normal expression of structure, and activity of gene products caused by genetic mutations, epigenetic phenomena and environmental agents lead to human diseases. The material focuses on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics are selected from hormone insensitivity syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of infectious agents and environmental toxins.

Examples of diseases are selected to emphasize various aspects of genetics, molecular biology, cell biology, physiology, immunology, and endocrinology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, are presented. A portion of each class period will be devoted to discussion of practice questions.

**BIOM 440 Laboratory in Biochemistry and Molecular Biology**

Fall, spring, or summer (3-week session). 4 credits. Enrollment limited. Preference is given to undergraduate biology majors having Biochemistry or Molecular and Cell Biology, and graduate students and to graduate students in a minor in the Field of Biochemistry. Prerequisites: BIOM 330 or 333 or 331–332 (331 or 332 may be taken concurrently). Labs, M W 12:20–4:25 (disc, F 1:25) or T R 12:20–4:25 (disc, M 3:35). Summer (3-week session): M–F 10:30–3:30. S. Ely, H. Nivison.

Experiments related to molecular biology (includes PCR, DNA cloning, restriction mapping, and DNA sequence analysis), protein purification, and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE and immunoblotting), and determination of enzyme kinetic parameters.

**BIOM 631 Protein Structure and Function**

Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

**BIOM 632 Membranes and Bioenergetics**

Spring. 2 credits. Prerequisite: BIOM 330 or 333 or 331–332 or equivalent. Lec., T R 11:15. Offered alternate years. P. C. Hinkle. Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast membrane systems, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.

**BIOM 633 Biosynthesis of Macromolecules**

**BIOM 636 Advanced Cell Biology**

Spring. 2 credits. Prerequisites: BIOM 330 or 333 or 331–332, and 452, or their equivalents. Lec., T R 9:05–9:55. A. P. Bretcher. This course aims to provide an integrated view of eukaryotic cell organization as elucidated using biochemical, molecular, genetic, and cell biological approaches. Major topics include the cellular traffic and cell polarity. Together with BIOM 437, 632, and 639 this course provides broad coverage of the cell biology subject area.

**BIOM 641 Laboratory in Plant Molecular Biology (also BIOL 641)**

Fall. 4 credits. Prerequisites: BIOD 281 or equivalent, BIOM 330 or 331 or equivalent, and permission of instructor. S-U grades with permission of instructor. Lec., M W F 9:05–4:30. J. B. Nasrallah, M. R. Hanson. Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

**BIOM 652 (Section 05) Molecular Biology of Plant Organelles (also BIOL 652.5)**

**BIOM 653 (Section 04) Molecular Aspects of Plant Development I (also BIOL 653.4)**

1 credit. Lec., M W F 10:10 (12 credits) Nov. 1–Dec. 2. J. B. Nasrallah. This module focuses on the molecular genetics of plant development. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signaling in the establishment and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOL 652, Sec. 02 (Molecular Aspects of Plant Development II).

**BIOM 658 Macromolecular Interactions and Cell Function**

Spring. 2 credits. Prerequisite: BIOM 330 or 333 or 331–352. Recommended: BIOM 631 or 633. S-U grades optional. Lec., T R 9:05–10:05. J. Lis.

These lectures focus on the principles of protein-protein and protein-nucleic acid interactions that underlie cellular processes such as signal transduction, intracellular traffic, gene regulation, and cell development. The emphasis will be on high-throughput examination of the structural basis of these processes as related to cell function. Some specific topics covered are signal amplification, nuclear import and export, transcription by RNA polymerase II, RNA processing and export, and translation of mRNAs.

**BIOM 659 The Nucleus**

Spring. 2 credits. Prerequisites: BIOM 330 or 333 or 331–352, or their equivalent. Recommended: BIOD 281. Lec., T R 10:10. J. T. Lis.

Lectures on topics of eukaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the structure and movement of chromosomes, and nuclear export and import. This course covers the structure and function of the nucleus at the molecular and cell biological levels, and together with BIOM 437, 632 and 636, provides broad coverage of the cell biology subject area.

**BIOPL 653 Molecular Biology of Plant Organelles (also BIOL 653.5)**

**BIOPL 655 Molecular Aspects of Plant Development I (also BIOL 655.4)**

1 credit. Lec., M W F 10:10 (12 credits) Nov. 1–Dec. 2. J. B. Nasrallah. This module focuses on the molecular genetics of plant development. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signaling in the establishment and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOL 652, Sec. 02 (Molecular Aspects of Plant Development II).
[BIOBM 730] Protein NMR Spectroscopy (also VETPR 730)
Spring. 2 credits. Prerequisites: CHEM 399 and 390, or CHEM 287 and 288, or permission of instructor. S-U grades optional. Offered alternate years. Next offered Spring 2005. Lec TBA. L. K. Nicholson, R. E. Osvald.
The student acquires the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignment, structure determination, and dynamics' characterization is studied.

BIOBM 732-737 Current Topics in Biochemistry
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOBM 530 or 335 or 331–332 or equivalent. S-U grades only. Hours TBA. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

BIOBM 738 Macromolecular Crystallography (also CHEM 788)
Spring. 3 credits. Prerequisite: permission of instructor. Lecs, T, R 10:10. Offered alternate years. S. E. Elcock. Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the three-dimensional structures of macromolecules.

BIOBM 751 Ethical Issues and Professional Responsibilities
Spring. 1 credit. Limited to graduate students beyond first year. S-U grades only. Organizational meeting will be held on the first W of the semester. Sem, W 3:35–4:25. Additional sections may be offered. P. Hinkle.
Ethical issues in research and the professional responsibilities of scientists are discussed in a case-study format. Topics discussed include: regulations; data selection, manipulation, and representation; fraud, misconduct, and whistle-blowing; conflicts of interest and commitment; authorship, ownership, and intellectual property; peer review and confidentiality; scientific response to external pressure; legal liabilities; and professional codes of ethics.

BIOBM 761 Topics in Cancer Cell Biology (also VETM 761)
Spring. Series of 1 credit graduate sections that reflect the cancer expertise of the Cornell faculty. (Course Director: Dr. B. U. Pauli). For description, see VETM 761.

BIOBM 830 Biochemistry Seminar
Fall or spring. No credit. Sem, F 4:00. Staff. Lectures on current research in biochemistry, presented by distinguished visitors and staff members. Lectures are open to everyone, but registration is limited to graduate students in Biochemistry, Molecular and Cell Biology.

BIOBM 831 Advanced Biochemical Methods I
Fall. 6 credits. Required of, and limited to, first-year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Labs and discussions 12 hours each week TBA. Organizational meeting first R of semester 10:10. T. C. Hufnaker.
The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half of the course comprises research in the laboratory of a professor chosen by the student (See BIOBM 832). Students must enroll separately for each half.

BIOBM 832 Advanced Biochemical Methods II
Spring. 6 credits. Required of, and limited to, first-year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Lab TBA. T. C. Hufnaker. Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the Director of Graduate Studies and the research adviser.

BIOBM 833 Research Seminar in Biochemistry
Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Lab TBA. G. P. Hess. A seminar course with critical discussion by students of original research papers. A variety of topics in biochemistry, molecular and cell biology are covered.

BIOBM 836 Methods and Logic in Biochemistry, Molecular and Cell Biology, Part I
Spring. 1 credit. Limited to first-and second-year students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Sem and disc TBA. D. Shalowitz. Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOBM 838 Methods and Logic in Biochemistry, Molecular and Cell Biology, Part II
Spring. 2 credits. Limited to second-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Monday, 9–11. D. Shalowitz.
An interactive seminar to develop general skills needed to support a career in scientific research: experimental design, writing scientific papers and grants, oral presentation, basic statistical and computational methods, managing a research laboratory, etc. Student projects include preparation and presentation of a mock research grant proposal.

ECOLOGY AND EVOLUTIONARY BIOLOGY

BIOEE 154 The Sea: An Introduction to Oceanography, Lectures (also EAS 154)
Spring. 3 credits. The optional one-credit laboratory for this course is offered as BIOEE/EAS 155. S-U grades optional. Lecs, T 11:40–12:55. C. H. Greene, W. M. White. See EAS 154 for full course description.

BIOEE 155 The Sea: An Introduction to Oceanography, Laboratory (also EAS 155)
Spring. 1 credit. Prerequisite: concurrent enrollment in BIOEE/EAS 154. S-U grades optional. Labs, M 2:00–4:25 or 7:30–9:55. W. B. Provine. See EAS 155 for full course description.

BIOEE 207 Evolution (also HIST 287 and S&TS 287)
Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 278. Does not meet the evolutionary biology requirement for the biological sciences major. S-U grades optional. Fall: Lecs, T 10:10; disc, 1 hour each week TBA. Summer (6-week session): Lecs and disc, M W 6:00–9:00 P.M. W. B. Provine. Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology, and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIOEE 261 Ecology and the Environment
Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lecs, M W 11:15; disc, W or R 1:25, 2:30, or 3:35. A. F. Chabot, T. C. Huffaker, W. M. White.
We explore the interactions between the environment and organisms as individuals, populations, communities, and ecosystems. The emphasis is on basic ecological principles and processes that are generally useful in understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines. Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and function, biodiversity, biogeochemistry, and productivity. Human influences on ecosystems, human-created ecosystems (agricultural and urban ecosystems), and sustainable practices are covered.

BIOEE 263 Field Ecology
Fall. 3 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOEE 261. Lec, R 1:25; lab, F 12:20–4:25; 1 weekend field trip to the Hudson Valley. P. L. Marks. Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

BIOE 264 Tropical Field Ornithology
Winter, January 5-19, 2004. 3 credits.
Limited to 15 students. Prerequisite: permission of either instructor. Lecs, M W F 10:10, disc, M 10:10 or TBA. Lecs every W and F; occasional lectures on M. Offered alternate years. Not offered 2003-2004. K. A. R. Kennedy, J. D. Haas.
An introduction to the evolution of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Pilkington fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

BIOE 278 Evolutionary Biology
Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week, limited to 20 students per section each semester. Students must register for the 4-credit option; interested students complete an application form on the first day of class.) Limited to 300 students. Prerequisite: 1 year of introductory biology or permission of instructor. First-semester freshmen must have permission of instructor. S-U grades optional. Evening prelms: spring, Mar. 4 and Apr. 6. Lecs, TR 9:05; disc, 1 hour each week TBA. Fall, M. Geber; spring, M. Shulman.
The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the four-credit option must register for additional materials from the primary literature and write a series of essays in place of the regular prelims.

BIOE 274 The Vertebrates: Structure, Function, and Evolution
An introductory course in vertebrate organismic biology which explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

BIOE 362 Dynamic Models in Biology (also MATH 362)
Spring. 3 credits. Prerequisites: two semesters of introductory biology (BIO G 101-102, 105-106, 107-108, 109-110 or equivalent) and completion of the mathematics requirements for the Biological Sciences major or equivalent. S-U grades optional. Lecs, M W F 10:10-11:00. Some class meetings (during the regular lecture time) will be in computer lab. Offered alternate years. S. P. Ellner, J. M. Guckenheimer.
Introductory survey of the development, computer implementation, and applications of dynamic models in biology and ecology. Case-study format, covering a broad range of current application areas such as regulatory networks, neurobiology, cardiology, infectious disease management, and conservation of endangered species. Students also learn how to construct and study biological systems models on the computer using a scripting and graphics environment.

BIOE 371 Human Paleontology (also ANTHR 371)
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lecs, M W F 2:30; lab, 1 hour each week TBA; occasional field trips. Offered alternate years. K. A. R. Kennedy.
A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

BIOE 373 Biology of the Marine Invertebrates
Fall (but course must be taken in the previous summer at the Shoals Marine Laboratory (SML)). 5 credits. Limited to 24 students. Prerequisite: one year of introductory biology for majors. Permission of faculty required because it is off campus. Students in BIOE 373 are strongly encouraged to take BIOE 477. Three-week, full-time course. Daily and evening lectures, laboratories, and field work. Course is taken during the summer; enroll for credit for the subsequent fall semester. Total cost for board, room, and headboard at SML $1,200. Offered alternate years. C. D. Harvell, J. G. Morin.
An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shoals Marine Laboratory provides students with a rich diversity of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

BIOE 405 Biology of the Neotropics
Fall. 2 credits. Limited to 18 students. Prerequisite: BIOE 261 or permission of instructor. S-U grades optional. Lecs and disc, W 7:30-9:30 p.m. P. H. Wrege, A. S. Flecker.
This course is an introductory survey of the biology of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn basic characteristics and phenomena important to understanding neotropical biology, to gain firsthand knowledge of the resources in tropical biology available at Cornell, and to learn how to organize and execute a meaningful seminar presentation.

BIOE 452 Herbivores and Plants: Chemical Ecology and Coevolution (also ENTOM 452)
Spring. 3 credits. Prerequisites: one year of introductory biology; BIOE 261, CHEM 257 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Field trips, additional lectures, or laboratory demonstrations may be held in place of F lecture. Lecs, M W F 11:15. Offered alternate years. Not offered 2003-2004. P. P. Feeny.
Topics include: significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant feeding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; and implications for human food and agriculture.

BIOE 453 Speciation
An advanced course in evolutionary biology focusing on the pattern and process of speciation and the nature and origin of intrinsic barriers to gene exchange. Topics covered in
lectures include species concepts and definitions, the history of ideas about speciation, the biological basis of intrinsic barriers to gene exchange, current models for the origin of such barriers, genetic architecture of speciation, rates of speciation. Emphasis will be on developing a rigorous conceptual framework for discussing speciation and on detailed analysis of a series of case histories.

[BIOEE 455 Insect Ecology (also ENTOM 455)]
Fall. 3 credits. Prerequisite: BIOEE 261 or equivalent and ENTOM 212 or knowledge of another taxon. S-U grades optional. Lecs, M W F 11:15. Offered alternate years.
Topics include the nature and consequences of biotic diversification, ecological and evolutionary processes in general.

[BIOEE 456 Stream Ecology (also ENTOM 456 and NTRES 456)]

[BIOEE 457 Limnology: Ecology of Lakes, Lectures]
Fall. 3 credits. Prerequisite: BIOEE 261 or written permission of instructor. Recommended: introductory chemistry. Letter grade, S-U by permission only. Lecs, M W F 11:15. Offered alternate years. Not offered 2003–2004. N. G. Hairston, Jr.
Limnology is the study of fresh waters and other inland, nonmarine environments. This course focuses on lakes and ponds, which are considered as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical properties of the environment impact organisms in important ways and organisms, likewise, influence physics and chemistry. As a result, lakes provide excellent systems for studying the links between physical (thermal and mixing), chemical (dissolved elements and compounds), and organismal dynamics. Lakes are exciting environments for study in their own right, and for gaining perspective on ecological and evolutionary processes in general.

[BIOEE 459 Limnology: Ecology of Lakes, Laboratory]
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOEE 457. Letter grade, S-U by permission only. Lab, T W or R 1:25–4:25; 1 weekend field trip. Fee, $12 (for food on field trip). Offered alternate years. Not offered 2003–2004. N. G. Hairston, Jr., staff.
Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Exercises focus on understanding the freshwater environment, on experimentation, and on understanding ecological processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.

[BIOEE 460 Theoretical Ecology]
Spring. 4 credits. Enrollment limited. Prerequisites: completion of the Biological Sciences mathematics requirement or equivalent, and either one additional semester of mathematics, statistics or modeling (e.g., BEE 250, BEE 367, NTRES 305, NTRES 340, NTRES 410, BIOLN 422) or permission of instructor. S-U grades optional. Lecs, T R 1:25–2:40, lab, M–W, 2:00–4:25. Offered alternate years. Not offered 2003–2004. S. P. Ellner.
An introduction to the models used to construct ecological theory and analyze data on ecological dynamics, and to the mathematical and computer methods used to analyze these models. Applications from individual decision-making through multispecies and spatial dynamics introduce the main themes in theoretical ecology: optimization, dynamics, and the links between process and pattern. The lab includes instruction in computer programming and review of mathematical methods.

[BIOEE 462 Marine Ecology (also EAS 462)]
Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. Marine ecosystems are treated at multiple levels of organization. Emphasis on exploration, interrelationships, and examples of ecosystems and interrelationships. Examples are drawn from all types of marine habitats, including intertidal zones, coastal waters, and tropical coral reefs.

[BIOEE 463 Plant Ecology and Population Biology, Lectures]
Fall. 3 credits. Prerequisite: BIOEE 261 or 278 or equivalent, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOEE 465. Lecs, M W F 11:15. Offered alternate years. Not offered 2003–2004. M. A. Geber, P. L. Marks.
This course examines the biological and historical factors affecting the structure of plant communities, and the processes of plant species distribution and abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities is considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from primary literature.

[BIOEE 464 Macroevolution]
Spring. 4 credits. Limited to 25 students. Prerequisite: BIOEE 278 or permission of instructor. Grad students interested in taking this course are strongly encouraged to preregister. S-U grades optional, with permission of instructor. Lecs, T R 10:10–11:25, disc, 1 hour each week TBA. Offered alternate years. A. R. McCune.
An advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include phylogeny reconstruction, patterns and processes of speciation, the origin of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involves data and approaches from genetics, morphological, ecological, systematic, paleobiology, development, and the fossil record.

[BIOEE 465 Plant Ecology and Population Biology, Laboratory]
Field and laboratory exercises are designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

[BIOEE 466 Physiological Plant Ecology, Lectures]
A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and physiology at the population, community, and ecosystem levels. Readings drawn from the primary literature and textbooks.

[BIOEE 467 Seminar in the History of Biology (also HIST 415, B & S CO 447, and S & T S 447)]
Fall or summer (6-week session). 4 credits. Limited to 18 students. S-U grades optional. W. B. Provine.
Specific topics change each year.

[BIOEE 468 Physiological Plant Ecology, Laboratory]
Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOEE 466. Lecture, 1:25–4:25, plus additional lab hours TBA. Offered alternate years. Not offered 2003–2004. J. P. Sparks.
A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of three hours/week in additional lab time for this course.

[BIOEE 469 Food, Agriculture, and Society (also B & S CO 469 and S & T S 469)]
A multidisciplinary course dealing with the social and environmental impacts of food production in the United States and developing countries. Agroecosystems of various kinds
are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

**[BIOEE 470 Herpetology, Lectures]**

Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology.

**[BIOEE 471 Mammalogy]**
Fall. 4 credits. Recommended: BIOEE 274. S-U grades optional, with permission of instructor. Carpooling to the Vertebrate Collections at Cornell Business and Technology Park is necessary several times during the semester. Fee, $15. Lecs, M W F 12:20; lab, M T or W 1:25-4:25; 1 weekend field trip required. Not offered 2003-2004. Staff.

Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systems, ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the Museum of Natural History. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

**[BIOEE 472 Herpetology, Laboratory]**
Spring. 2 credits. Limited to 35 students. Prerequisite: BIOEE 261 or permission of instructor. Carpooling to the Vertebrate Collections at Cornell Business and Technology Park is necessary several times during the semester. Fee, $30. Labs, T R 1:25-4:25; occasional field trips and special projects. Offered alternate years. Not offered 2003-2004. H. W. Greene.

Laboratory topics include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

**[BIOEE 473 Ecology of Agricultural Systems (also CSS 473)]**
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. During the first 6 weeks of class, the Thursday meetings may run later because of field trips. Lecs and labs, T R 2:30-4:35. Not offered 2003-2004. A. G. Power, E. C. M. Fernandez. Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

**[BIOEE 474 Forensic Anthropology and Human Biology (also ANTHR 474)]**
Spring. 5 credits. Limited to 16 students. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Prerequisite: permission of instructor by preregistering in E231 Corson. Independent research project required. Lecs and labs, T R 10:10-12:05; additional hours TBA. Offered alternate years. Not offered 2003-2004. K. A. R. Kennedy.

Forensic anthropology within the forensic sciences is covered in a broad survey of laboratory and field methods for students with interest in this applied area of biological anthropology. Emphasis is upon human skeletal biology, pathology, age and sex determination, and relevant techniques for the archaeologist and forensic anthropologist.

**[BIOEE 475 Ornithology]**
Spring. 4 credits. Limited to 35 students. Prerequisite: permission of instructor by preregistering in E235 Corson. Recommended: BIOEE 274. S-U grades optional, with permission of instructor. Carpooling to the Laboratory of Ornithology is necessary. Fee, $15. Lecs and labs, T R 12:20-4:25; occasional field trips and special projects. Offered alternate years. D. W. Winkler.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

**[BIOEE 476 Marine Invertebrates]**
Fall. 4 credits. Limited to 24 students. Recommended: BIOEE 274 or equivalent experience in vertebrate zoology. S-U grades optional, with permission of instructor. A small lab fee may be required. Lecs, M W F 10:10; lab, M 12:20-4:25. With additional lab time TBA. 2 field trips. Offered alternate years. Not offered 2003-2004. A. R. McCune.

An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local marine species. Two field trips, including one full-day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

**[BIOEE 477 Marine Invertebrates Seminar]**
Fall. 1 credit. Prerequisite: BIOEE 373 or permission of instructor. S-U grades only. Sem, 1 hour each week TBA. Offered alternate years. C. D. Harvell, J. G. Morin.

Discussions and directed readings center around current research themes in Invertebrate Biology. Designed as an on-campus companion course to the field-based BIOEE 373, Marine Biology of the Marine Invertebrates. Students will write individual research essays based on projects done in the field.

**[BIOEE 478 Ecosystem Biology]**

Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. We consider anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Also includes analysis of climate change and regional environmental change from an ecosystem perspective.

**[BIOEE 479 Paleobiology (also EAS 479)]**
Fall. 2 credits. Prerequisite: one year of introductory biology for majors and either BIOEE 274, EAS 375, BIOEE 373, or permission of instructor. S-U grades optional. Lecs, T R 10:10-11:25, lab W 2:00-4:25. Offered alternate years. J. A. Allmon.

See EAS 479 for full course description.

**[BIOEE 480 Topics in Marine Biology]**
Spring. 2 credits. May be repeated for credit. Primarily for undergraduates. Limited to 15 students. Prerequisite: permission of instructor. S-U grades optional. Lecs, T R 12:20-4:25; occasional field trips and special projects. Offered alternate years. J. A. Allmon, M. Shulman.

Seminar courses on selected topics in marine biology; may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

**[BIOEE 660 Field Studies in Ecology and Systematics]**
Fall or spring. Variable credit. Prerequisite: BIOEE 261, a taxon-oriented course, and permission of instructor. S-U grades optional, with permission of instructor. Lecs and field trips TBA. Estimated costs: TBA. Staff.

This course provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

**[Section 01: Life Histories of Marine and Freshwater Invertebrates]**
Spring. 2 credits. Prerequisite: undergraduates must have previous experience or course work with marine or freshwater invertebrates. Extended field trips over winter break. Fee, TBA (to cover transportation and housing). Offered alternate years. Not offered 2003-2004. C. D. Harvell, N. G. Hairston, Jr.

Field trips to the Yucatan Coast of Mexico. Students employ experimental approaches to study the ecology of invertebrate life histories.

**[Section 02: Graduate Field Course in Ecology]**
Spring. 3 credits. Restricted to graduate students. A fee will be required to help cover food and lodging for trip to Florida. Offered alternate years. P. L. Marks, R. B. Root.
The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida for two weeks and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, everglades, and coral reefs.

**BIOEE 661 Environmental Policy (also ALS 661 and B&SOC 481)**

Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an “R” grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, R 2:30–4:30. D. Pimentel.

This course focuses on complex environmental issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.

**BIOEE 665 Limnology Seminar**

A seminar course on advanced topics in freshwater ecology.

**BIOEE 668 Principles of Biogeochemistry**

Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science. Permission of instructor required for undergraduates. S-U grades optional. Lec and disc, T R 10:10–12:05. Offered alternate years. R. Howarth, C. Goodale.

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.

**BIOEE 669 Plant Ecology Seminar**

Includes review of current literature, student research, and selected topics of interest to participants.

**BIOEE 670 Graduate Seminar in Vertebrate Biology**

Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem TBA. Staff.

Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

**[BIOEE 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)]**

Fall. 3 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lec, M 2:30; sem and disc, W 7:30–9:30 p.m. Offered alternate years. Not offered 2003–2004.

R. A. R. Kennedy.

A survey of the historical background of present-day concepts of human evolutionary variations and adaptations in space and time. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.

**BIOEE 754-760 Special Topics in Evolution and Ecology**

Fall or spring. 1–3 credits. May be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 668. S-U grades optional, with permission of instructor. Staff.

Independent or group intensive study of special topics of current interest. Content varies each semester.

**BIOEE 763 Workshop in Biogeochemistry**

Fall or spring. 1 credit. May be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 668. S-U grades optional. Workshop and disc, TBA. Staff.

Provides a workshop-forum in which graduate students interact with invited world leaders in biogeochemistry. Workshop topics change each semester. A one-week workshop will be preceded by seven one-hour preparatory discussions of readings.

**BIOEE 767 Current Topics in Ecology and Evolutionary Biology**

Fall. 4 credits. Prerequisite: permission of instructor required for undergraduates. S-U grades optional. Lec and disc, T R 10:10–12:05, 5 P. P. Feeny.

Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

**BIOEE 899 M.S. Thesis Research**

Fall or spring. 1–15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology. S-U grades optional. E&FB field faculty.

Thesis research conducted by an M.S. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

**BIOEE 999 Ph.D. Dissertation Research**

Fall or spring. 1–15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology as a Ph.D. student. S-U grades optional. E&FB field faculty. Dissertation research conducted by a Ph.D. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

ECOLOGY AND EVOLUTIONARY BIOLOGY 167
GENETICS AND DEVELOPMENT (BIOGD)

**BIOGD 132 Orientation Lectures in Molecular Biology and Genetics (also BIOBM 132)**
Spring, weeks 1–3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lect, S 10:10, for first three S of semester. Staff. Discussions by six professors about their research and promising new areas for research in the future.

**BIOGD 281 Genetics**
Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance after first week of classes. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Lecs, T R 10:10–12:55; lab, T or W or R or F 2:30–4:25. Problem-solving sessions strongly recommended, T or W 8:30–10:00 (additional session by arrangement). T. D. Fox, M. L. Goldberg, R. J. MacIntyre. A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions cover gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in *Drosophila*.

**BIOGD 282 Human Genetics**
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Each discussion limited to 20 students. Prerequisite: 1 year of introductory biology or equivalent. S-U grades optional. Lecs, M W F 10:10–11:15; J. Liu. An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

**BIOGD 389 Embryology**
Spring. 3 credits. Preference given to seniors. Prerequisites: 1 year of introductory biology and a knowledge of mammalian adult anatomy. Lecs, TBA; labs, TBA. Not offered 2003–2004. Staff. A course designed to examine the development of characteristics that make vertebrates unique. The course starts with an introduction to recent evolutionary and molecular approaches to understanding the rise of vertebrate structures. The development of vertebrate structures, such as neural crest, specialized sense organs, and limbs, is examined in detail with emphasis on the cellular and molecular events controlling their development.
tions, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

**BIOGD 482 Human Genetics and Society**
Fall. 4 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying genetics and molecular biology.
Prerequisites: BIOGD 281 and BIOBM 330 or 333 and 331 and 332, and permission of instructor. S-U grades optional. T R 2:30-4:25. R. A. Calvo.
Presentation of some of the science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Among the topics considered are assisted reproductive strategies, eugenics, genetic counseling, genetic screening, preimplantation genetic diagnosis, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, human cloning, forensic uses of genetics, and genetic diseases. Students lead some discussions. There is a major writing component to the course.

**BIOGD 483 Advanced Developmental Biology**
Spring. 3 credits. Prerequisites: BIOGD 281; BIOBM 332 or 330 or 333; and BIOGD 385 or permission of instructor. Lecs. T R 9:05-10:15. A. G. Clark.
An advanced course in developmental biology, with emphasis on the molecular underpinnings of development. Simultaneously, a molecular/cell biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational, and post-translational regulation of gene expression and cellular events such as signal transduction and cell-cell communication. Numerous developmental systems are discussed and analyzed in microorganisms, plants, and, especially, animals including fruit flies, nematode worms, and vertebrates. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

**BIOGD 487 Human Genomics**
Fall. 3 credits. Prerequisite: BIOGD 281. Lecs. T R 9:05-10:15. A. G. Clark.
Fundamental concepts of transmission, population, and molecular genetics will be applied to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Students will be placed on the role of full genome knowledge in mediating variation in disease risk, will be explored in depth. Methods such as genome-wide association and whole-genome sequencing will be examined. The course will be conducted as a series of lectures with classroom discussion. Assignments will include a series of problem sets and a term paper.

**BIOGD 488 Molecular Evolution**
Spring. 3 credits. Prerequisites: BIOGD 281 and or phylogenetic trees, M W 8:40-9:55. Offered alternate years. R. J. MacIntyre.
An analysis of evolutionary changes in genes and their protein products. Theories of the evolution of the genetic code, the construction of phylogenetic trees from biochemical data, and the role of gene duplications in evolution are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes, including the evolution of satellite DNA sequences and transposable elements.

**BIOGD 489 Bacterial Genetics (also BIOMI 489)**
Fall. 2 credits. Graduate students, see BIOMI 685 for prerequisites: BIOGD 281. Recommended: BIOMI 290 and BIOMB 330 or 331 and 332. Lecs. M W 7:30-9:25 P.M. Staff.
For course description, see BIOMI 485.

**BIOGD 486 Advanced Eukaryotic Genetics**
Spring. 4 credits. Enrollment may be limited to 20 students. Prerequisite: BIOGD 281. BIOBM 330 or 333 and 331 and 332. S-U grades optional. T R 12:20-1:25 and R 12:20-1:30; disc R 1:25-2:15 or F 11:15-12:05. E. E. Alani.
The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosomes and cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

**BIOGD 485 Human Genomics**
Fall. 3 credits. Prerequisite: BIOGD 281. Lecs. T R 9:05-10:15. A. G. Clark.
Fundamental concepts of transmission, population, and molecular genetics will be applied to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Students will be placed on the role of full genome knowledge in mediating variation in disease risk, will be explored in depth. Methods such as genome-wide association and whole-genome sequencing will be examined. The course will be conducted as a series of lectures with classroom discussion. Assignments will include a series of problem sets and a term paper.

**BIOGD 680 Development of Sensory Systems (also BIOMI 600)**
Spring. 2 credits. Prerequisites: introductory biology, genetics, development, and neurobiology, or permission of instructor. S-U or letter grades. Lee, M W F 10:10-11:00. Offered alternate years. C. F. Aquadro, A. G. Clark.
An in-depth exploration of current areas of research in sensory genetics. Readings primarily from recent books and the recent literature. Specific topics are announced from the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

**BIOGD 681 Advanced Bacterial Genetics (BIOMI 485)**
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOMI 332, 330 or 333, and BIOMI 385 or permission of instructor. Lecs. R 2:30-4:25. Offered alternate years. M. F. Wolflner.
This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, cell and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization (sperm/egg binding, sperm entry into egg), pronuclear fusion, egg activation, initiation and terminating the cleavage, division period, cytoplasmic determinants, and changes in nuclear and cytoplasmic architecture.

**BIOGD 684 Advanced Topics in Population Genetics**
Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. Lec. T 2:30-4:25. Offered alternate years. C. F. Aquadro, A. G. Clark.
An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the recent literature. Specific topics are announced from the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

**BIOGD 685 Advanced Bacterial Genetics**
Spring. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOMI 330 or 331-332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lecs. M W 7:30-9:25; disc. R 10:10-11:00. Staff.
For course description, see BIOMI 485.

**BIOGD 687 Developmental Genetics**
Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 and 385 or their equivalents. S-U grades optional. Lec TBA. Offered alternate years. K. J. Kemphues.
Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in fruitflies, nematodes, mice and fish. Possible topics include pattern formation, cell lineage, neural development, sexual information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are encouraged to discuss each topic in class.
[BIOGD 689 Cellular Basis of Development

This course focuses on the integration of different cellular processes in various developmental contexts. Topics include cell migration, cell adhesion and fusion, cell growth and proliferation, cell-cell communication, and cell death. Students are required to read current literature and participate in discussions in class.

BIOGD 780 Current Topics in Genetics
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics, written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor. Seminar TBA. Staff.

BIOGD 781 Problems in Genetics and Development
Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc TBA. Staff

An introduction to the research literature in selected areas through weekly problem sets and discussions.

BIOGD 782-783 Current Genetics/Development Topics
Spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced. Hours TBA. Staff.

BIOMI 291 Seminar in Genetics and Development
Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Sem, TBA. Staff.

Each graduate student presents a seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIOMI 292 General Microbiology
Fall or spring. 2 credits. Summer (6-week session). 2 or 3 credits (2 credits if taken after BIOMI 192). Prerequisites: 1 year of introductory biology for majors and 1 year of college chemistry, or equivalent. Recommended: concurrent registration in BIOMI 291. Lecs. M, W 14:30—15:20; labs, M—W 12:25—1:15 E. L. Madsen.

BIOMI 293 General Microbiology Laboratory

A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 294 Advanced Microbiology Laboratory

A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: (1) ecology, (2) physiology, (3) genetics, and (4) structure and function. Students are encouraged to take this course during their third year of study.

BIOMI 394 Applied and Food Microbiology (also FOOD 394)
Fall. 2—3 credits. Prerequisites: BIOMI 290—291. M W F 12:20—1:10. C. A. Batt.

Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes are reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.

BIOMI 397 Environmental Microbiology (also CSS 398)
Fall. 3 credits. Prerequisites: BIOEE 261 or BIOMI 290 or CSS (SCAS) 260 or permission of instructor. Lecs. M W F 10:10. E. L. Madsen.

The biological properties, evolution, and behavior of microorganisms in natural systems are discussed in relation to past and present environmental conditions on Earth and other living planets. The functional role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as nutrient and toxic elemental cycles, transformation of pollutant chemicals, wastewater treatment, environmental biotechnology, and astrobiology.

BIOMI 404 Pathogenic Bacteriology and Mycology (also VETMI 404)
Spring. 2 or 3 credits (3 credits with lecture and seminar with permission of instructor for undergraduates). Prerequisites: BIOMI 290 and 291. Strongly recommended: BIO G 305. Lecs. M W F 10:10; sem, F 10:10. Offered alternate odd years. D. Debie.

This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The emphasis of this course is infection and disease pathogenesis. Topics include disease causality; interactions of host, pathogen and environment, including immunity to bacterial and fungal, and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular level.

BIOMI 408 Viruses and Disease I (also BIOG 408) VETMI 408
Spring. 2 credits. Prerequisites: BIOMI 290, 291, BIOG 305; and permission of instructor. Recommended: BIOGD 281. Lecs. M
Section 3—Microbial Physiology/Diversity
Fall. S. H. Zinder.
The major energy conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea are reviewed. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.

Section 4—Microbial Pathogenesis
Spring. S. C. Winans.
An introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples will include bacterial pathogens of both animals and plants.

Section 5—Environmental Microbiology
Spring. E. L. Madsen.
A core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. The crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere will be discussed.

BIOMI 791 Advanced Topics in Microbiology
Fall. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Sec 01 Bacterial Genetics, T 4:00-5:00, S. C. Winans; Sec 02 Environmental Microbiology, W 4:00-5:00, E. R. Angert. Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

BIOMI 795-796 Current Topics in Microbiology
Fall. 795; spring, 796. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lects TBA. Staff. Lectures and seminars on special topics in microbiology.

BIOMI 797 Scientific Communication Skills
Fall and spring. 1 credit each semester. S-U grades only. F 2:30-3:20. Staff. The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Taken by students in the Graduate Field of Microbiology during their first two semesters, a third semester is optional.

BIOMI 798 Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. F 1:25-2:15. Staff. All graduate students in the Field of Microbiology are required to attend BIOMI 798 and are required to present a seminar concerning their research at least once each year.

W 7:30 p.m. Offered alternate even years. J. Casey.
The course covers basic concepts in virology with emphasis on virus-host interactions. Special attention is given to those aspects of bacterial metabolism not normally studied in microbiology. Consideration is given to chemical structure, replication and assembly are studied with particular emphasis on virus-host cell interactions. Vaccination, chemotherapy and evolution of viruses are also discussed.

BIOMI 409 Viruses and Disease II (also VETMI 409)
This course is complementary to BIOMI 408, Viruses and Disease I, but is complete in its own right. As such, completion of BIOMI 408 is not a requirement. The structure and classification of viruses, virus entry, genome replication and assembly are studied with particular emphasis on virus-host cell interactions. Vaccination, chemotherapy and evolution of viruses are also discussed.

BIOMI 414 Bacterial Diversity
Spring. 3 credits. Prerequisites: BIOMI 290, and 291, BIOMI 330 or 331 or 333 recommended. Lecs, M W F 11:15. Offered alternate odd years. S. H. Zinder.
A consideration of the evolutionary biology, physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

BIOMI 416 Bacterial Physiology
Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331, or their equivalents. Lecs, M W F 11:00. Offered alternate even years. J. P. Shapleigh.
The focus of the course is on physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

BIOMI 417 Medical Parasitology (also VETMI 431)
Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Lecs, T R 3:35–4:25. D. Bowman.
A systematic study of arthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitisms.

BIOMI 418 Microbial Ecology
Spring, 3 credits. Prerequisites: BIOMI 290 and 291, or BIOMI 498 and instructor's permission, and BIOMI 330 or 331 and 332. Lecs, M W F 10:10–11:00. E. R. Angert.
Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course introduces current biochemical and macromolecule sequence-based methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

BIOMI 420 Microbial Genomics
Spring. 2 credits. Prerequisites: BIOMI 290, BIO G 261, BIOMI 330, or equivalent. Lecs, T R 10:10–11:00. Offered alternate odd years. J. P. Shapleigh and J. D. Helmann.
Genomic information is revolutionizing biotechnology. We discuss the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

BIOMI 485 Bacterial Genetics (also BIOGD 485)
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 and 332 or 333. Lecs, W 7:30–9:25. P. Staff.
Concepts and principles of formal genetic analysis applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis.

BIOMI 610 Introduction to Chemical and Environmental Toxicology (also TOX 610)
Fall. 3 credits. Prerequisite: graduate standing in the field or consent of the instructor. Letter grades. Lecs, M W F 11:15–12:05. A. Hay.
Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Special attention is given to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

BIOMI 652 (Section 02) Molecular Plant-Microbe Interactions (also BIOPL 652, Sec 02, PL PA 664)
Spring. 1 credit. Prerequisites: BIOGD 281, BIOMI 330 or 331, or BIOMI 653 (section 01) or their equivalents. S–U grades optional. Lecs, M W F 12:20 (12 lecs) Jan. 26-Feb. 20. Offered alternate even years. S. C. Winans.
For course description, see BIOPL 652, Sec 02.

BIOMI 690 Prokaryotic Biology
Fall and spring. 4 weeks/8 lectures. 1 credit/section to be offered. T R 10:15–11:30.

Section 1—Microbial Structure and Function
Fall. J. P. Shapleigh.
Discussion of those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

Section 2—Microbial Genetics
Fall. J. D. Helmann.
Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, recombination, repair, and mutagenesis.
BIOMI 799 **Microbiology Seminar**
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Sem R 4–5. Staff.

**Related Courses in Other Departments**
- Advanced Food Microbiology (Food Science 607)

**NEUROBIOLOGY AND BEHAVIOR (BIONB)**

**BIONB 111 Brain Mind and Behavior**
*(also PSYCH 111 and COGST 111)*
Spring. 3 credits. No prerequisites. Intended for freshmen and sophomores in the humanities and social sciences; seniors not allowed. Not recommended for psychology majors; biology majors may not use the course for credit toward major. Letter grades only. Lecs, M W F 9:05. E. Adkins Regan and R. R. Hoy.
See COGST 111 for description.

**BIONB 221 Neurobiology and Behavior I: Introduction to Behavior**
Fall, 3, 4, or 5 credits (4 credits with one discussion per week; 5 credits with two discussions per week and participation in the Writing in the Majors program). 4- or 5-credit option required of students in the neurobiology and behavior program of study. Each 4-credit discussion section is limited to 20 students, with preference given to students studying neurobiology and behavior. Enrollment in the 5-credit option is limited to 12 students. Students may not preregister for the 5-credit option; interested students complete an application form on the first day of class. Not open to freshmen. Prerequisite: 1 year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lecs, M W F 12:20. disc TBA. T. D. Seeley and staff.

A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

**BIONB 221 Neurobiology and Behavior I: Introduction to Behavior**
Summer. 3 or 4 credits (4 credits with one discussion per week). Prerequisite: 1 year of introductory college biology. S-U grades optional. Course fee: none. Six-week session. M-F. 4:00–5:15 p.m. Staff.

A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

**BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology**
Spring. 3 or 4 credits (4 credits with discussion and written projects). 4-credit option requires of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisite: 1 year of introductory biology for majors and 1 year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lecs, M W F 12:20; disc TBA. C. Linster and staff.

A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

**BIONB 322 Hormones and Behavior**
*(also PSYCH 322)*
Fall. 3 credits. Two lectures plus a section in which students read and discuss original papers in the field, give an oral presentation, and write a term paper. Limited to juniors and seniors. Prerequisite (any one of the following): PSYCH 223, or BIONB 221, or BIONB 222, or one year of introductory biology plus a course in psychology. Letter grades only. Graduate students see PSYCH 722. Lec M W F 11:15. E. Adkins Regan. See PSYCH 322 for description.

**BIONB 323 Methods in Animal Behavior**
Fall. 4 credits. Prerequisites: BIONB 221 and permission of instructor (must fill out an application available in W365 Mudd Hall). Letter grades only. Lec, M W F 1:25–2:15; labs M W 2:15–4:25. Offered alternate years. S. L. Veihrencamp and J. W. Bradbury.

Covers methods for observing, quantifying and analyzing behavioral interactions and communication signals. Lectures plus a series of workshops and projects designed to introduce students to commonly used field and laboratory methods. Emphasis is on experimental design and basic statistical techniques. Some lab work with live insects included. Additional lab time often needed to complete experiments.

**BIONB 324 Biopsychology Laboratory**
*(also PSYCH 324)*
Fall. 4 credits. Limited to 20 juniors and seniors. Prerequisites: PSYCH 223 or BIONB 221 or 222, and permission of instructor. Labs, T R 1:25–4:25. T. J. DeVoeogd. See PSYCH 324 for description.

**BIONB 325 Neurodiseases—Molecular Aspects**
Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOGD 281, BIOM 330, or 341; co-registration in one of the two is acceptable. S-U grades optional. Lecs, T R 9:05; disc T, 1:25, 2:30, or 3:35. T. R. Podleski.

The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodiseases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example, Alzheimer's, Huntington's, prion diseases, schizophrenia, depression, disorders affecting ion channels, and muscular dystrophy. Emphasis is placed on how these studies provide a useful approach to studying the mammalian nervous system by exposing the functions of genes that would be difficult to identify in other ways.

**BIONB 326 The Visual System**
Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311, or permission of instructor. S-U grades optional. Lecs, M W F 10:10; disc, 1 hour each week TBA. Offered alternate years. H. C. Howland.

The visual systems of vertebrates are discussed in breadth and depth as well as some aspects of invertebrate vision. Topics covered include the optics and anatomy of eyes, retinal neurophysiology, structure and function of higher visual centers, ocular motility and ocular and visual system development.

**BIONB 327 Evolutionary Perspectives on Human Behavior**
Fall. 3 credits. Prerequisites: BIONB 221 and permission of instructor required. Letter grades only. M W 2:55–4:10. S. T. Emlen.
A Socratically taught, discussion-based course dealing with evolutionary perspectives on human behavior. Topics include genes and behavior, the evolutionary environment of adaptation, the evolutionary function of emotions, human mating system, parenting strategies, and cooperation and conflict within family-based societies. All class members read and discuss primary papers and recent books. Each student is responsible for leading multiple discussions, for writing an original paper, and for peer-reviewing papers of other class members.

**BIONB 328 Biopsychology of Learning and Memory**
*(also PSYCH 332)*
Spring. 3 credits. Prerequisites: 1 year of biology and either a biopsychology class or BIONB 222. S-U grades optional. Limited to 60 students. Graduate students see PSYCH 632. Lecs, M W F 11:15. T. J. DeVoeogd. See PSYCH 332 for description.
BIONB 329 Ecology of Animal Behavior (also BIOBM 329)  
Summer. 4 credits. Prerequisite: 1 year of introductory college biology.  
Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. See BIOBM 329 for description.

BIONB 330 Introduction to Computational Neuroscience (also PSYCH 330, COGST 330 and BME 330)  
Fall. 3 or 4 credits (4 credits includes a laboratory providing additional computer simulation exercises). Limited to 25 students. Prerequisites: BIONB 222 or permission of instructor. S-U grades optional. Lecs. T R 2:55-4:10. Offered alternate years. C. Linster. This course covers the basic ideas and techniques involved in computational neuroscience. It surveys diverse topics including: neural dynamics of small networks of cells, neural coding, learning in neural networks and in brain structures, memory models of the hippocampus, sensory coding, and others.

BIONB 392 Drugs and the Brain  
Fall. 4 credits. Prerequisites: BIONB 222 or equivalent course in neurobiology with permission of instructor. A knowledge of biochemistry is useful but not required. S-U grades optional. T R 10:10-11:25; disc TBA. Offered alternate years. R. M. Harris-Warrick and L. M. Nowak. An introduction to neuropharmacology, with an emphasis on the neural mechanisms of psychoactive drugs. Topics include a brief introduction to neuropharmacology and a discussion of the major neurotransmitter families. The rest of the course covers the major psychoactive drugs, including cocaine, heroin, psychedelics, marijuana and alcohol, as well as pharmaceuticals for the treatment of anxiety, schizophrenia and depression. The course includes a term paper in the form of a grant proposal to study a current problem in neuropharmacology.

BIONB 394 Circadian Rhythms (also BIOGD 394 and ENTOM 394)  
Fall. 2 credits. Prerequisite: ENTOM 212, or BIOGD 261, or BIONB 221 or 222, or permission of instructor. S-U grades optional. Lect. W 7:30-9:10 p.m. Offered alternate years. J. Ewer. For description, see ENTOM 394.

BIONB 396 Introduction to Sensory Systems (also PSYCH 396 and 696)  
Spring. 4 credits. Limited to 25 students. Prerequisites: an introductory course in biology or biopsychology, plus a second course in behavior, biopsychology, cognitive science, neuroscience, or perception. Students are expected to have knowledge of elementary physics, chemistry, and biology or psychobiology, plus a second course in behavior. S-U grades optional. Lecs. M W F 10:10. Offered alternate years. Not offered 2003-2004. B. P. Halpern. See PSYCH 396 for description.

BIONB 420 Topics in Neurobiology and Behavior  
Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. TBA. Staff Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. See department office (W363 Mudd Hall) for offerings.

BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431 and 631)  
Fall. 3 or 4 credits. The 4-credit option involves a term paper or creation of a relevant web site. Limited to 25 students. Prerequisites: an introductory course in biology or psychology; plus a second course in perception, neurobiology, cognitive science, or biology. T R 10:10-11:25. B. P. Halpern. For description see PSYCH 431.

BIONB 422 Modeling Behavioral Evolution  
Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, 1 year of calculus, 1 course in probability or statistics, and permission of instructor (Office: W309 Mudd Hall, phone: 254-4352). This course is open to advanced undergraduates and graduate students. S-U grades optional. Lecs. T R 2:55-4:10; computer lab, 1 class period per week TBA. Offered alternate years. H. K. Reeve. This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to critically assess recent evolutionary theories of animal behavior, as well as to develop their own testable models or biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

BIONB 424 Neuroethology (also PSYCH 424)  
Spring. 4 credits. Prerequisites: BIONB 221 or 222, or 1 year of introductory biology for majors and permission of instructor. S-U grades optional. M W F 11:15; disc, T 1:25 or R 3:35. Offered alternate years. C. D. Hopkins. Neuroethologists take a comparative and evolutionary approach to study the nervous system. They ask, how do brains of animals compare and how did they come about through the process of evolution? How are neural circuits adapted to species-typical behavior? What is the hope and interest in the study of a large diversity of animals, compared to a specialized look at just a few mammalian species? Can we hope to understand how animals with specialized behaviors have specialized nervous systems? What is the sensory world of a real animal and how does it vary from species to species? These and other questions derive this introductory survey of neuroethology including: exotic senses; amazing motor programs; surprising integration.

BIONB 425 Molecular Neurophysiology  
Spring. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional. T R 2:55-4:10. Offered alternate years. D. P. McCobb. The course covers ion channels, the primary proteins generating cellular electrical signals function in nerve cells and other excitable cells (e.g., muscle, heart, glands). The latest electrophysiological and molecular genetic experiments are reviewed. Diversity of electrophysiology deriving from structure and expression patterns is considered in the contexts of behavior and behavioral plasticity (learning), neural development, and channel evolution. Course format includes written and oral presentations, reviewing scientific literature in selected areas, and proposing new experiments.

BIONB 426 Animal Communication  
Spring. 4 credits. Prerequisites: BIONB 221. Letter grade only. T R 2:55-4:10; disc, 1 hour each week TBA. Offered alternate years. J. W. Bradbury, S. L. Vehrencamp. An integrated approach to animal communication, organized into three parts: 1) the physics and physiology of producing, transmitting, and receiving signals; 2) optimal strategies for encoding information, using information to make decisions, and designing signals; and 3) the behavioral ecology of signal evolution.

BIONB 427 Animal Social Behavior  
Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOEE 261 or 278, and advance permission of instructor. Letter grade only. Lecs and discs, T R 2:30-4:25. Offered alternate years. P. W. Sherman. A writing-intensive advanced course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, conflict and cooperation in animal societies, and Darwinian medicine.

BIONB 429 Offaction and Taste: Structure and Function (also PSYCH 420)  
Spring. 3 or 4 credits. (4-credit option requires a term paper or research project. The research project can but does not need to study nonhuman vertebrates.) Preference given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: one 300-level course in biopsychology or equivalent. Lecs. T R 9:05. Offered alternate years. B. P. Halpern. See PSYCH 429 for description.

BIONB 430 Experimental Molecular Neurobiology (also BIOBM 443)  
Spring. 2 credits variable. Limited to 12 students. Prerequisites: co-meeting with BIOBM 443 lab. Mandatory registration via web page: www.mbg.cornell.edu/courses.html. Letter grade only. Dates: 1 hour each week on day other than lab day; Lab T or R all day, or M and W afternoons, to be coordinated with other BIOBM 430 sections. Offered alternate years. D. L. Detcheverry. See BIOBM 443 for description.
BIONB 440 Electromics in Neurobiology
Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites: a calculus course. S-U grades optional. Lecs, T R 8:40-9:55, lab, W 1:25-4:25. Offered alternate years. B. R. Land.
The course emphasizes understanding of the electrical functioning of the nervous system and enables students to build instrumentation to study the nervous system. It is taught by mathematical formulation, and construction of circuit examples drawn from practical neurobiological instrumentation problems and the electronic basis of neurons.

BIONB 441 Computers in Neurobiology
Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites: a calculus course. S-U grades optional. Lecs, T R 8:40-9:55, lab, W 1:25-4:25. Offered alternate years. B. R. Land.
This course is an introduction to computer instrumentation techniques and data reduction. It gives a basic understanding of the techniques used for coupling a biological experiment to a computer. It includes techniques to convert raw data to scientific visualization. Some computer modeling examples drawn from practical neurobiological problems are done.

BIONB 470 Biophysical Methods (also A&EP 470 and VETPR 470)
Spring. 5 credits. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level; some knowledge of cellular biology helpful but not required. Letter grades only. Lecs, M W 2:55-4:10. M. Lindau.

BIONB 491 Principles of Neurophysiology
Fall. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students with permission of instructor. Lecs, M W 10:10, lab, M or T 12:20-4:25. B. R. Johnson.
A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology including computer acquisition and analysis of laboratory results. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. Invertebrate preparations are used as model systems. (See A&EP 470 web site: http://www.nbb.cornell.edu/neurobio/bionb491/bionb491.html.)

BIONB 492 Sensory Function (also PSYCH 492 and 692)
Spring. 4 credits. Limited to 25 students. Prerequisite: a 300-level course in biophysics, BIONB 222, or BIOM 311, or equivalent. Students are expected to have knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Graduate students see PSYCH 692. Lecs, M W F 10:10. Offered alternate years. B. P. Halpern, H. C. Howland. See PSYCH 492 for description.

BIONB 493 Developmental Neurobiology
Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Lecs, M W 2:55-4:10. Offered alternate years. B. R. Land.
Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nervous systems differentiate, grow morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

BIONB 494 Brain Evolution and Behavior
Spring. 3 credits. Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 222 or equivalent. S-U grades optional. Lecs, T R 8:40-9:55. Offered alternate years. A. H. Bass.
Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors will be studied in three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.

BIONB 495 Molecular and Genetic Approaches to Neuroscience
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: BIONB 222 and BIORM 300 or 332. Letter grade only. Lecs, T R 2:55-4:10. Offered alternate years. D. L. Deitche.
Focus of the course is on how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated channels, potassium channels, seven membrane spanning receptors, development of the neuromuscular junction, neurotransmitter release, second messengers, and learning and memory.

BIONB 496 Bioacoustic Signals in Animals and Man
Fall. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: 1 year of introductory biology, PHYS 101-102 or PHY 207-208. Letter grades only. Lecs, M W 9:05, lab TBA. Offered alternate years. C. W. Clark and R. R. Hoy.
Humans and animals live in a world of sound. Mechanisms for sound production and perception are extremely varied. Acoustic signals mediate social interactions and are used to scan the environment for food and to aid in navigation. For many species acoustic sensing plays a critical role in predator detection and avoidance. This course studies animal acoustic signaling by introducing them to various animal acoustic systems. The course presents the physical properties of sound, physiological mechanisms for sound production and hearing, and the behavioral contexts in which sounds are used. Acoustic techniques are provided in the laboratory where students learn how to record, synthesize, and analyze sounds with the aid of recorders and Mac and/or PC computers running customized software. Labs are designed around the lecture material and provide practical “real-world” exercises designed to stimulate discovery of fundamental principles described in lectures. Class research projects on a selected topic in bioacoustics are required. Engineering students with interests in music, audio analysis, digital signal processing, and computer science are encouraged.

BIONB 531 Topics in Cognitive Studies (also COGST 531, LING 531, PSYCH 531, COM S 531)
Spring. 4 credits. Prerequisites: COGST 501, PSYCH 214, or permission of instructor. Open to advanced undergraduates. S-U grades optional. M 4:30-5:30 P.M. S. Edelman and H. Segal. See COGST 531 for description.

BIONB 600 Development of Sensory Systems (also BIOGD 600)
Spring. 2 credits. Prerequisites: Introduction to biology (genetics, development, and neurobiology) required, or permission of instructor. S-U grades only. M 7:00-8:40 P.M. M. Whitlock. This course will explore the unique and shared mechanisms used in sensory system development of both vertebrates and invertebrates. The first class of the course will provide a general introduction to the development of sensory systems in vertebrates and invertebrates. Following classes will involve the reading of current and classic papers on sensory system development. Students will choose a topic and articles from a list provided by the instructor. Students will be responsible for an oral presentation and short paper.

BIONB 623 Chemical Communication (also CHEM 622)
Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: 1 year of introductory biology for majors or equivalent, course work in biochemistry, and CHEM 358 or equivalent. S-U grades optional. Lecs, M W 10:10; disc, F 10:10. Offered alternate years. J. Meinwald and T. Eisner.
The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics to be covered vary each year and may place emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.

BIONB 720 Seminar in Advanced Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem TBA. Staff and students. Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics submitted by faculty or students to the chair of the Department of Neurobiology and Behavior.

BIONB 721 Introductory Graduate Survey in Neurobiology and Behavior
Fall. 2 credits. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only. Lecs and discs, W 4:00-6:00 P.M. H. K. Reeve and staff. Lectures, readings, and discussion introduce first-year graduate students to the research activities of the faculty in the Graduate Field of Neurobiology and Behavior. Class meets weekly for two hours. Students also prepare a
research proposal on a potential topic for their thesis research (in the format of an NSF or NIH grant). This proposal is prepared in consultation with one or more relevant faculty members.

**PLANT BIOLOGY (BIOPL)**

**BIOPL 240 Green World/Blue Planet**

Summer (6-week session). 3 credits. S-U grades optional. Limited to 12 students.

Lecs, M-F 10:00-11:15. T. Silva.

This course focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

**BIOPL 241 Introductory Botany**

Fall. 3 credits. Lecs, T R 9:05; lab, M T W or R 1:25-4:25, or M W 7:30-10:30 PM.

K. J. Niklas.

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

**BIOPL 242 Plant Function and Growth**

Spring. 3 credits. S-U grades optional. Primarily for undergraduates in agricultural sciences, but also for any biological sciences students wanting to know about plant function. Suitable as a second-year course for nonmajors to satisfy the biology distribution requirement. Prerequisites: 1 year of introductory biology and/or BIOPL 241. Recommended: 1 year of introductory chemistry. Concurrent enrollment in BIOPL 244 required of plant science undergraduates and highly recommended for other science majors. May not be taken for credit after BIOPL 342 except by written permission of instructor. Evening prelims Feb. 26 and Apr. 1. Lecs, M W F 10:10-10:40. P. J. Davies.

How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis, light relations in crops; plant-water relations, water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

**[BIOPL 243 Taxonomy of Cultivated Plants (also HORT 243)]**

Fall. 4 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 246. Lecs, M W F 9:00, lab, M or W 2:00-4:25. Offered alternate years. Not offered 2003-2004. M. A. Luckow. A study of the plants and their relationships, and their classification into families and genera, emphasizing cultivated plants. Typical topics include, but are not limited to, plant-water relations, membrane properties and processes, stress; tissue culture; and genetic engineering of plants.

**[BIOPL 244 Plant Function and Growth, Laboratory]**

Spring. 2 credits. Limited to 14 students per section. Prerequisite: concurrent enrollment in BIOPL 242. May not be taken for credit after BIOPL 344. Disc and lab, M T or W 12:20-4:25. T. Silva. Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level. Students must take lab and discussion on same day.

**BIOPL 245 Plant Biology**

Summer (6-week session). 3 credits. Limited to 24 students. Lecs, M-F 11:30-12:45, labs, M W 2:00-5:00. T. Silva. Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas which are available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

**[BIOPL 247 Ethnobiology]**

Fall. 3 credits. S-U grades optional. Lecs, T R 11:15; disc, R 12:20-1:25 or F 12:20. Not offered 2003-2004. Offered alternate years. D. M. Bates. A consideration of the principles, methods, and issues of ethnobiology. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, undeniﬁed organisms, resource management, and ownership of nature, and methodology are among the topics covered.

**[BIOPL 248 Taxonomy of Vascular Plants]**

Spring. 4 credits. Prerequisite: 1 year of introductory biology. May not be taken for credit after BIOPL 243. S-U grades optional. Lecs, M W F 9:05, lab, W or R 1:25-4:25. Offered alternate years. J. I. Davis. An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the mechanisms of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identiﬁcation and presents an overview of vascular plant diversity, with particular attention to the ﬂowering plants.

**BIOPL 340 Methods in Biological and Biochemical Prospecting**

Spring. 2 credits. Prerequisites: Intro Biology (BIOG 101-104) required. Completion or concurrent enrollment in organic chemistry, recommended. TBA. Offered alternate years. E. Rodriguez. Student participants learn and apply methodologies in ethnobotany, chemical ecology and zoopharmacognosy as they apply in a multidisciplinary fashion to chemical prospecting. The use of techniques in the chemistry of natural products and biological and chemical techniques are described. Classical examples of drug development, from quinine to taxol, in the course of chemical prospecting are discussed. An overall medicinal medicinal perspective is emphasized, with mention of specific worldwide spread of diseases pressing for new drugs.

**BIOPL 342 Plant Physiology, Lectures**

Spring. 3 credits. Prerequisites: 1 year of introductory biology and either concurrent enrollment in BIOPL 344 or written permission of instructor. May not be taken for credit after BIOPL 242 unless written permission is obtained from instructor. Lecs, T R 10:10-11:25. T. G. Owens. An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

**BIOPL 343 Molecular Biology and Genetic Engineering of Plants**

Spring. 2 credits. Prerequisite: 1 year general biology or permission of instructor. S-U grades optional. Lecs, T R 11:15. M. E. Nasrallah. An introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. The course emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed towards undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

**BIOPL 344 Plant Physiology, Laboratory**

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 342. May not be taken for credit after BIOPL 244. Similar to BIOPL 344 but at a more advanced level. Lab, R 1:25-4:25; disc, R 12:20. T. Silva.
Experiments exemplify concepts covered in BIOPL 342 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

**BIOPL 345 Plant Anatomy**
Fall. 4 credits. Limited to 15 students. Prerequisite: 1 year of introductory biology or a course in botany. Lecs, M W 9:05; labs, M W 2:00–4:25. Offered alternate years. Not offered 2003–2004. Staff. A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

**BIOPL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants**

**BIOPL 422 Plant Development**
Fall. 2 credits. Lecs, T R 9:05–9:55. Prerequisites: coursework in molecular biology (e.g., BIOBM 331, 332, or 333), or genetics (e.g., BIOGD 281), or permission of instructor. S-U grades optional. J. Hu. An introduction to plant development, study of the mechanisms of morphogenesis and cell fate determination at the organismal, cellular, and molecular levels.

**BIOPL 440 Phylogenetic Systematics**
Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lecs, T R 10:10; labs, T R 2:00–4:25. Not offered 2003–2004. Offered alternate years. K. C. Nixon. Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

**BIOPL 442 Current Topics in Ethnobiology**
Fall. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades optional. Lec/disc, W 2:30–4:25. Offered alternate years. D. M. Bates. Explorations of the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnobiology, and the role of plants and animals in human lives, in subsistence and exchange, and in thought.

**BIOPL 443 Topics and Research Methods in Systematics**
Fall or spring. 1–2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. Staff. A series of one-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

**BIOPL 444 Plant Cell Biology**
Fall. 4 credits. Limited to 24 students. Prerequisite: 1 year of introductory biology or permission of instructor. Lecs, M W F 9:05; lab, M or W 1:25–4:25. R. O. Wayne. Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

**BIOPL 447 Molecular Systematics**
Fall. 3 credits. Prerequisite: BIOEE 278 or BIOG 281 or BIOBM 330, or written permission of instructor. Lecs, T R 8:30–9:55. Offered alternate years. J. D. Doyle. The theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organellar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

**BIOPL 449 Green Signals and Triggers—The Plant Hormones (also HORT 449)**
Fall. 1 credit. S-U grades optional. Prerequisite: 1 year of introductory biology and plant physiology (BIOPL 242 or 342) or permission of instructor. F 1:25–2:15. Offered alternate years. P. J. Davies. A study of plant hormones and how they regulate plant growth and development. Topics covered include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

**BIOPL 452 Systematics of Tropical Plants**
Fall. 3 credits. Prerequisite: BIOPL 243 or BIOPL 248. Letter grades only. Lecs, M W; lab, T 1:25–4:25. Offered every three years. K. C. Nixon. The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context in lectures, discussions, and laboratory, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families.

**BIOPL 453 Principles and Practice of Historical Biogeography (also ENTIM 453)**
Fall. 3 credits. Prerequisite: a course in systematic or permission of instructors. S-U grades optional. Lecs, T R 10:10; lab T 1:25–4:25. Offered alternate years. J. K. Liebherr and M. A. Luckow. A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. Laboratories focus on computer applications and discussion of controversial issues.

**BIOPL 454 Systematics of Tropical Plants: Field Laboratory**
Spring. 1 credit. Limited to 15 students. Prerequisite: prior enrollment in BIOPL 452 or permission of instructor. Letter grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered every three years. K. C. Nixon. An intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification combined with laboratory analysis of available materials in a "whole-biology" context. Two-week field trip over winter break.
BIOL 456 Biomechanics of Plants (also BEE 456)

BIOL 482 Plant Biochemistry
Spring. 3 credits. Prerequisites: BIOL 242 or 342 or equivalent and BIOLBM 330 or 331 or equivalent or permission of instructor. Letter-grade only. Lecs, M W F 9:05. J. Rose, K. van Wijk. This course focuses on biochemistry of plant specific processes, with the aim to obtain an integrative overview of plant biochemistry. Examples include processes such as cell wall biochemistry, pigment biosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics based experimental tools, such as proteomics and metabolomics, are discussed.

BIOL 641 Laboratory in Plant Molecular Biology (also BIOLBM 641)
Fall. 4 credits. Prerequisites: BIOLB 281 or equivalent, BIOLBM 330 or 331 or equivalent, and permission of instructor. S-U grades with permission of instructor. Lab, T R 12:20–1:25. J. B. Nasrallah, M. R. Hanson. Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

BIOL 642 Plant Mineral Nutrition (also CSS 642)
Spring. 3 credits. Prerequisite: BIOL 342 or equivalent. Lecs, M W F 10:10. Not offered 2003–2004. Offered alternate years. L. V. Kochian, R. M. Welch. A detailed review of the processes by which plants acquire and use mineral nutrients from the soil. Topics include: the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acidic soils). Specific mineral elements are emphasized to illustrate these topics.

BIOL 647 Seminar in Systematic Botany
Fall of spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional. Sem, T 12:20. Bailey Hortorium staff. Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

BIOL 649 Solute Transport in Plants (also BEE 649)

BIOL 651 Water Transport in Plants (also BEE 647)
Fall. 2 credits. Letter only. Lecs T R 10:10. Offered alternate years. R. M. Spanswick. See BEE 647 for description.

BIOL 652 Plant Molecular Biology II Spring. 4 credits. Prerequisites: BIOLG 281 and BIOLBM 330 or 332, or their equivalents. Recommended: BIOLBM 331, S-U grades optional. A series of four-week modules on specialized topics. Coordinator: J. B. Nasrallah.

Section 01 Molecular Plant-Pathogen Interactions I and II (also PL PA 662)
1 credit. Lecs, M W F 10:10 (12 lecs) Jan. 26–Feb. 20. A. C. Miller, S. G. Lazarowitz, G. Martin, B. G. Turgeon. An examination of the molecular and cellular factors that control plant-pathogen interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Beginning spring 2004, alternate years will focus on: (I) plant perception of microbial pathogens and pathogens defense genes, apoptosis responses that limit infection, and RNA interference; and (II) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

Section 02 Molecular Plant-Microbe Interactions (also BIOLBM 652, PL PA 664)
1 credit. S-U grades optional. Lecs, M W F 12:20 Jan.–Feb. 20 (12 lecs). Offered alternate years. S. C. Winans. Course focuses on the interactions of Agrobacterium and Rhizobia with plants. Topics include: regulation of nitrogenase activity and expression, and the operation of the vegetative shoot apical meristem. The module is a companion to BIOL 653, Sec 04 (Plant Development I).

Section 03 Molecular Aspects of Plant Development II
1 credit. S-U grades optional. Lecs, M W F 10:10 (12 lecs) Mar. 29–Apr. 23. T. Brutnell. The molecular genetics of plant development. This module focuses on vegetative development and includes topics such as the development of the shoot, root, and vascular system, and the operation of the vegetative shoot apical meristem. The module is a companion to BIOL 653, Sec 04 (Plant Development I).

Section 04 Plant Gene Evolution and Phylogeny
1 credit. Lecs, M W F 1:25 (12 lecs). Offered alternate years. J. D. Doyle. Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on basic issues, methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.

Section 05 Molecular Biology of Plant Organelles (also BIOLBM 652.5)
1 credit. S-U grades optional. Lecs, M W F 10:10 (12 lecs) Feb. 23–Mar. 19. M. R. Hanson, D. B. Stern. An in-depth examination of the molecular biology of plant mitochondria and plastids. Topics include the organization, evolution, and expression of organelle genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organelle proteins. Special topics include mitochondrial- and cytoplasmic-encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleus-organelle interactions.

Section 06 Proteomics in Plant Biology
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Mar. 29–Apr. 23. K. van Wijk. Introduction to proteomics and mass spectrometry and its application in Plant Biology. Course includes discussions of protein separation, protein tagging and visualization techniques; principles of biological mass spectrometry and interpretation; and bioinformatics tools in proteomics, comparative proteomics, phosphorylation mapping. We will discuss limitations and possibilities of proteomics on plants for which little sequence information is available and experimental papers involving plant proteomics.

Section 07 Plant Cell Walls: Structure to Proteome
1 credit. S-U grades optional. Lecs, M W F 10:10 (12 lecs) Mar. 29–Apr. 23. J. Rose. This course examines the structure and function of plant cell walls, exploring their dynamic nature and fundamental contribution to numerous aspects of plant growth and development. Topics include: wall biosynthesis; cell wall structure and composition, regulation of cell expansion and differentiation; defense against pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance; induction of pathogen defense genes, apopotic responses that limit infection, and RNA interference; and the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

BIOL 653 Plant Molecular Biology I
Fall. 1–5 credits (1 credit per section). Prerequisites: BIOLG 281 and BIOLBM 330 or 332, or their equivalents. Recommended: BIOLBM 331, S-U grades optional. Coordinator: J. B. Nasrallah. A series of four-week modules on specialized topics.

Section 01 Concepts and Techniques in Plant Molecular Biology (also PLPA 663.01, PLPA 663.02)
2 credits. Lecs, M W F 10:10 (24 lecs) Sept. 3–Oct. 29. S. R. McCouch, J. Giovannoni, J. Rose. This is an introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences. This section serves as a prerequisite to other modules in the BIOL 653 (fall) and BIOL 652 (spring) series. The course is divided into three sections: 1) Gene discovery: covers genetic, molecular, and genomics approaches to the isolation of plant genes; 2) Gene characterization: covers DNA sequence analysis, assessment of gene expression, functional genomics approaches, and production of
transgenic plants; 3) Analysis and characterization of proteins and metabolites; includes proteomics approaches to the analysis of plant proteins, protein-protein interactions, and metabolic profiling through emerging methods and technologies. This course will consist of 2 lectures and 1 day of discussion/week. Course material will be coordinated with BIOL 641 (lab). Emphasis is on understanding techniques and approaches that are appropriate for different experiments and objectives.

Section 02 Plant Biotechnology (also PLBR 653.2 and PLPA 663.2)
1 credit. Lecs, M W F 1:25 (12 lecs) Oct. 1-Oct. 29. M. Zaitlin, E. D. Earle. This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Section 03 Plant Genome Organization and Function (also PLBR 653.3)
1 credit. Lecs. M W F 10:10 (12 lecs). Not offered 2003–2004. Offered alternate years. S. D. Tanksley. This section covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

Section 04 Molecular Aspects of Plant Development I (also BIOBM 653.4)
1 credit. Lecs. M W F 10:10 (12 lecs) Oct. 31–Nov. 26. J. H. Nasrallah. This module focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOL 652, Sec 02 (Molecular Aspects of Plant Development II).

Section 05 Molecular Breeding (also PLBR 653.6)
1 credit. Lecs. M W F 10:10 (12 lecs). Oct. 1-Oct. 29. Offered alternate years. S. D. Tanksley. Application of DNA markers to the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

BIOPL 654 Botanical Nomenclature
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Lees. 1 credit. TBA. Offered alternate years. Not offered 2003–2004. Staff. An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

BIOPL 656 Topics in Plant Evolution
Spring. 1 credit. Prerequisite: BIOL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc TBA. Offered alternate years. Not offered 2003–2004. K. J. Niklas. A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOPL 740 Plant Biology Seminar
Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology. Sem. F 11:15. Staff. Lectures on current research in plant biology, presented by visitors and staff.

BIOPL 741 Problems in Plant Cell and Molecular Biology
Spring. 2 credits. Limited to first- and second-year graduate students in the Plant Cell and Molecular Biology Program. Disc TBA. Staff. An introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOPL 742 Current Papers in Plant Biology
Fall or spring. 1 credit. Enrollment is limited. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only. Sem. 1 hour each week TBA. Staff.

BIOPL 743 Faculty Research in Plant Cell and Molecular Biology
Fall. 1 credit. Limited to graduate students; written permission from a member of the Plant Cell and Molecular Biology Program or by permission of coordinator required for undergraduates. Disc TBA. Staff. An introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOPL 744 Graduate Research in Plant Cell and Molecular Biology
Fall or spring. 1 credit. Seminar R 12:20. Staff. Required of, and limited to, second-, third-, and fourth-year graduate students in Plant Cell and Molecular Biology. Each student presents one seminar per year on his or her thesis research, and then meets with the thesis committee members for evaluation.

BIOPL 745 Current Topics in Systematics
Fall. 1 credit. Limited to graduate students, except by permission of instructor. S-U grades optional. Disc. T 12:20. Bailey Hortorum staff. A seminar with presentations and discussion by students of original research papers in systematic biology.

BIOPL 746 Research Seminar in Systematics
Spring. 1 credit. Limited to graduate students, except by permission of instructor. Disc. T 12:20. Bailey Hortorum staff. A student-led seminar presentation based on his or her thesis research or a related topic.

BIOPL 749 Graduate Research in Botany
Fall or spring. Variable credit. May be repeated for credit. S-U grades optional. Staff. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

COURSES IN MARINE SCIENCE
Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology offered through the Office of Undergraduate Biology, the undergraduate specialization in Ocean Sciences offered through the Science of Earth Systems Program, and the summer program of courses offered by the Shoals Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Stimson Hall, or on their web site, www.mml.cornell.edu.

Undergraduate Specialization in Marine Biology and Oceanography
Biological Sciences majors in the Ecology and Evolutionary Biology program of study have the option of specializing their program of study in the area of Marine Biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1) BIOSM 154, The Sea: An Introduction to Oceanography
2) BIOSM 364, Field Marine Science, BIOSM 375 Field Marine Biology and Ecology, and/or at least one 400-level BIOSM field course at the Shoals Marine Laboratory
3) BIOEE 462, Marine Ecology

Undergraduate Specialization in Ocean Sciences
Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisci-
pilary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1) BIOEE 373 Biology of the Marine Invertebrates
2) BIOEE 457 Limnology
3) BIOEE 462 Marine Ecology
4) BIOEE 478 Ecosystem Biology
5) BIOEE 490 Topics in Marine Biology
6) BIOSM 303 Ecology of Marine Fishes
7) BIOSM 308 Marine Microbial Ecology
8) BIOSM 309 Climates and Ecosystems
9) BIOSM 329 Ecology of Animal Behavior
10) BIOSM 364 Field Marine Science
11) BIOSM 365 Underwater Research
12) BIOSM 374 Field Ornithology
13) BIOSM 375 Field Marine Biology and Ecology
14) BIOSM 413 Research in Marine Biology
15) BIOSM 418 Tropical Marine Science
16) BIOSM 449 Seaweeds, Plankton and Invertebrates
17) BIOSM 367 Marine Invertebrate Zoology (note: not the same as BIOEE 373)
18) BIOSM 477 Marine Vertebrates
19) EAS 375 Sedimentology and Stratigraphy
20) EAS 455 Geochemistry
21) EAS 475 Special Topics in Oceanography
22) EAS 479 Paleobiology
23) NTRRES 306 Coastal and Oceanic Law and Policy

Sea Semester
BIOEES 366 SEA: Introduction to Oceanography
BIOEES 367 SEA: Introduction to Maritime Studies
BIOEES 368 SEA: Introduction to Nautical Science
BIOEES 359 SEA: Practical Oceanography I
BIOEES 370 SEA: Practical Oceanography II

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of topics and laboratories. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences.

Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives provide fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collective and research excursions aboard the Laboratory's 47-foot research vessel, John M. Kingsbury or the 36-foot research vessel, John B. Heiser. Field experience is an integral component of all courses, using Appledore Island's extensive intertidal and subtidal zones, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, there are numerous guest lecturers including engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the Sea Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office. Not all of these courses are offered each semester, consult the SML catalog for current offerings.

**BIOSM 160 The Oceanography of the Gulf of Maine**

Summer. 4 credits. Limited to 24 students. A special 2-week course offered aboard a SEA vessel, the Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, contact the SML office, G14 Stimson Hall or the Sea Education Association office at P.O. Box 6, Woods Hole, MA, 02543. Daily lectures, labs, and fieldwork for 2 weeks. SML faculty.

An exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend 10 days aboard the Sea Education Association's sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.

**BIOSM 161 Introduction to Marine Science**

Summer. 4 credits. S-U grades optional. A special 2-week course offered in cooperation with Rider University at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, contact the SML office, G14 Stimson Hall. Daily lectures, labs, and fieldwork for 2 weeks. This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include: beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology, and ecology of kelp beds and intertidal marshes.

**BIOSM 162 Marine Environmental Science**

Summer. 3 credits. Prerequisite: open to high school students who have successfully completed two high school science courses. A special 12-day course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecture, lab and field work for 12 days. SML faculty.

Environmental studies have become an integral component of high school programs around the country, however opportunities to apply this course work to the marine environment are limited. Marine Environmental Science will focus on coastal marine habitats, with an emphasis on issues as they relate to global habitats and concerns. Laboratory exercises and field work will include explorations along Appledore Island's rocky intertidal zone and excursions to neighboring islands to observe harbor seal and seabird colonies. Offshore cruises will include oceanographic sampling exercises and field trips to seabird and whale foraging grounds. Lectures and discussions will expose MEP students to topics ranging from fishes to plankton, kelp beds to lobsters, and plankton to whales. Fundamental scientific research methods and equipment will be introduced, and each student will have the opportunity to be involved in group research projects.

**BIOSM 204 Biological Illustration**

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and...
The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social and mating behaviors, defense and escape, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

BIOSM 364 Field Marine Science (FMS)  
Summer. 6 credits. Prerequisites: 1 year of college-level biology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G-14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered 2004. SML faculty.

BIOSM 374 Field Ornithology  
Summer. 4 credits. Prerequisites: 1 year of introductory biology and permission of instructor. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G-14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. Offered alternate years. SML faculty.

Focuses on field work designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including point counts, transects, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 375 Field Marine Biology and Ecology (FMBE)  
Summer. 6 credits. Prerequisites: 1 full year of college level biology. S-U grades optional. A 4-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML Office, G-14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty.

Focuses on field work designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including point counts, transects, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 376 Marine Invertebrate Zoology  
Summer. 6 credits. Prerequisites: 1 year of introductory biology and permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G-14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered alternate years. SML faculty.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. Emphasis is placed on the evolution of form and function, the ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. Appledore Island's unique location provides an excellent venue for the study of freshly collected and in situ representatives of most of the major phyla.

BIOSM 377 Marine Pollution  
Summer. 4 credits. Prerequisites: 1 year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G-14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered alternate years. Not offered 2004. SML faculty.

An introduction to the biology of marine pollutants, including sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.
BIOSM 418 Tropical Marine Science
Summer. 6 credits. Limited to 15 students. Prerequisites: Daily labs; SML faculty. A three-week course offered in Akumal, Mexico. For more details, contact Shools Marine Laboratory, G-14 Stimson Hall, 255-3717.

A course designed for students interested in learning about coral reef ecology and conservation in an environment where these topics are of immediate concern. Students will spend four weeks in Akumal, Mexico, a small resort town located about 60 miles south of Cancun on the Caribbean coast of the Yucatan Peninsula. Housing will be provided by the Centro Ecologico Akumal, a local organization dedicated to the conservation of Akumal and the protection of its coral reefs. The major component of the course will be spent studying basic coral reef ecology and learning the benthic fauna of the local reefs. During the remainder of the course students will participate in a reef-monitoring research project that will aid in the establishment of a marine park in Akumal. Akumal is a developing center for research in coral reef biology and ecology. TMS students will have the opportunity to interact with the scientists involved in this research.

BIOSM 449 Research in Marine Biology
Summer. Credits variable (2 credits/7 days on site). For more details and an application, consult the SML office, G-14 Stimson Hall. See Schedule: Independent Biological Research: Independent study with a member of the Shools Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

BIOSM 497 Special Topics in Oceanography: Satellite Remote Sensing in Biological Oceanography
Summer. 4 credits. Prerequisite: Concurrent enrollment in oceanography and/or marine biology, or permission of the instructor. Strong computer skills are desired. S-U grades optional. A special 4-week course offered at Cornell’s Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G-14 Stimson Hall. Daily labs, and fieldwork for 4 weeks. Offered alternative years. Not offered 2004. SML faculty. "Remote Sensing" provides hands-on research experience in hydrologic optics and satellite remote sensing to advanced undergraduate and beginning graduate students. The course is comprised of four principal parts, each taught by a separate team of instructors at two different locations: Part 1 (nine days) will be conducted at Shools Marine Laboratory and aboard the RV Kingsbury in waters surrounding the Isles of Shoals. Part 2 (19 days) will be devoted to the theory and measurement of seawater optical properties, emphasizing the dependence of apparent optical property on chlorophyll and dissolved organic matter concentrations. Parts 2-4 (19 days) will be conducted at the Science of Earth Systems' computer laboratory on the Cornell campus. Part 2 will cover satellite remote sensing of the apparent optical properties of seawater with an emphasis on processing SeaWIFS data using SeaDAS software and IDL programming language. Part 3 addresses satellite remote sensing of physical oceanographic processes that influence ecosystem dynamics with an emphasis on AVHRR-derived sea-surface temperature and SST-derived ocean winds. Part 4 is devoted to independent projects; student will attempt to integrate SeaWIFS, AVHRR, and SST/I data in order to address questions of biological-physiological interactions.

BIOSM 477 Marine Vertebrates
Summer. 6 credits. Prerequisite: A course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell’s Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G-14 Stimson Hall. Daily labs, and fieldwork for 3 weeks. SML faculty. Topics in marine vertebrate biology emphasize laboratory studies, field collections or observations, and readings from the current literature. Topics covered include: systematics of lives of the Gulf of Maine; elasmobranch physiology, interpretation of life history and parameters from oolitic microstructure; teleost skeleton structure and function; population biology and the contemporary Gulf of Maine fishery; Marine reptiles, the biology of sea turtles in cold water; colonization in sea birds; avian adaptations to life at sea; evolution and systematics of marine mammals; diving physiology; and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

BIOSM 495 Research Methods in Marine Biology
Summer 1 credit. Prerequisite: concurrent enrollment in BIOSM 497, or permission of instructor. Primarily for undergraduates. A special 3-week course offered at the Shools Marine Laboratory (SML). For more details or an application, consult the SML office, G-14 Stimson Hall. Weekly seminars for 8 weeks. J. G. Morin and M. J. Shulman. Seminar course on research methodology, experimental design, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 499.

BIOSM 499 Research in Biology
Summer. Credits variable (2 credits/7 days on site). For more details and an application, consult the SML Office, G-14 Stimson Hall. See Schedule: Independent Biological Research: Independent study with a member of the Shools Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

Research Experiences for Undergraduates (REU)
5 credit. The National Science Foundation (NSF) Research Experiences for Undergraduates (REU) program provides support for undergraduates to pursue supervised, independent research projects at the Shools Marine Laboratory. Nine students will be selected from a competitive, national pool to participate in the eight-week summer program. For more information and an application, please contact the SML office, G-14 Stimson Hall, or visit SML’s web site at: www.sml.cornell.edu.

BIOSM 650 Field Marine Ecology and Environmental Science for Teachers
Summer. 2 credits. Prerequisites: One year of college-level biology; teaching experience recommended. A special 1-week course offered at Cornell's Shools Marine Laboratory (SML) on an island off Portsmouth, NH. For more details, or an application, consult the SML office, G-14 Stimson Hall. Daily lectures and field work for one week. Intended for grades 6-12 teachers, but also open to undergraduate junior and senior students interested in teaching. Teachers will develop hands-on, experiential approaches to the marine sciences, with an emphasis on coastal and environmental issues. Extensions to freshwater ecology also will be included. Field work is emphasized, with numerous excursions to the rocky intertidal and with off-shore ocean sampling. Lectures will focus on biodiversity, adaptations, predator-prey interactions, environmental sustainability, and how to engage and motivate students with aquatic projects.

EAS 213 Marine and Coastal Geology
Summer. 4 credits. Prerequisite: An introductory course in geology or ecology or permission of the instructor. A special 2-week course offered at Cornell’s Shools Marine Laboratory (SML) on an island off Portsmouth, NH. For more details or an application, consult the SML office, G-14 Stimson Hall. Daily labs, and fieldwork for 2 weeks. SML faculty. The Isles of Shoals and western Gulf of Maine offer a unique opportunity to investigate the geologic origin of marine and terrestrial environments and how these influences present-day ecological habitats and communities. This course develops two themes: (1) Using field and laboratory methods, the marine geology of the Paleozoic rocks that form the islands is examined. (2) Using ship-based geophysical
Shore Component (six weeks)

BIOSM 366 SEA Introduction to
Oceanography
3 credits. Prerequisite: concurrent enrollment in BIOSM 366. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

BIOSM 367 SEA Introduction to Maritime Studies
3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

BIOSM 368 SEA Introduction to Nautical Science
3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

Sea Component (six weeks)
Courses 359, 370 and 372 take place aboard the SSV Robert C. Seamans, a 134-foot auxiliary-powered brigantine schooner built in 2001, or the SSV Cornith Cramer, a 134-foot steel auxiliary-powered brigantine built in 1953 for SEA. Students are put to sea aboard the SSV Robert C. Seamans or the SSV Cornith Cramer. Enrollment is open to both men and women judges capable of benefiting from SEA semester; a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence. For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, orcall SEA directly at 800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees: tuition for the entire 17-credit SEA Semester, approximately $17,000, includes room and board at SEA. Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

BIOSM 369 SEA Practical Oceanography I
4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

BIOSM 370 SEA Practical Oceanography II
4 credits. Prerequisites: BIOSM 366 and 369. Building on the concepts of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

BIOSM 372 SEA Practical Oceanography III
Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

§Joint appointment with the College of Engineering.
MISSION

The faculty of Computing and Information Science (CIS) offers courses and programs campuswide in various academic disciplines in which computing is integral. The faculty associated with CIS programs hold joint appointments with CIS and another Cornell academic unit. The FCIS has, so far, focused its interdisciplinary efforts in the areas of computational biology, computational science and engineering, digital arts and graphics, and information science. Each area of interest is in a different stage of development, with information science leading the way.

COMPUTATIONAL SCIENCE AND ENGINEERING

Another FCIS area of activity is computational science and engineering. Numerous courses are taught throughout the university. Topics include numerical methods, modeling and simulation, and real-time computing and control. The FCIS itself sponsors several “tool-based” short courses for students who anticipate that their studies will have a strong computational component (CIS 401, 402, 403, 404). A course on data structures for computational science (CIS 409) is also offered.

DIGITAL ARTS AND GRAPHICS

The FCIS is working to develop research programs and curriculum in the digital arts. Several courses already exist in this area (ART 372, ART 391, MUSIC 120, COM S 465, 467, 468), and more can be expected in the near future.

RELATIONSHIP WITH COMPUTER SCIENCE

FCIS programs have connections to computer science, the study of computation in all of its forms. Computation is both abstract and physical, both artificial and natural, and its study is a unique combination of fundamental science, applied science, and enabling technology. The curriculum covers the theory of algorithms and computing and its many applications in science, engineering, and business. Students learn the algorithmic method of thinking and how to bring it to bear on a wide range of problems. They also study the elements of computing and information technology such as system design, problem specification, programming, system analysis and evaluation, and complex modeling. Research areas include programming languages, compilers, computing systems, artificial intelligence, natural language processing, computer graphics, computer vision, databases, networks, bioinformatics, the theory of algorithms, scientific computing, and computational logic.

Undergraduate majors in Computer Science are offered in the College of Engineering and the College of Arts and Sciences. A minor in Computer Science is available to undergraduates in the College of Engineering. These programs are administered by the Department of Computer Science, whose professors are members of both the College of Engineering and the College of Arts and Sciences.

There is also a one-year Master of Engineering Program in Computer Science and a Ph.D. program in Computer Science. These degree programs are administered by the Graduate Field of Computer Science.
THE INFORMATION SCIENCE
CONCENTRATION/MINOR

A concentration/minor in Information Science is available to students in the Colleges of Arts and Sciences; Engineering; Agriculture and Life Sciences (CALS); Human Ecology; and Architecture, Art, and Planning (AAP; available to Architecture, Art, and Planning students), and the School of Industrial and Labor Relations (ILR). Because of small differences in regulations between the colleges, there are sometimes slight variations in the requirements depending on a student's college and, in a few cases, a student's major. All students interested in pursuing the Information Science concentration/minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation date, and (intended) major to infosci-minor@cs.cornell.edu. Students are also referred to www.cis.cornell.edu/infoscience/concentration.htm for the most up-to-date description of the concentration and its requirements.

Information Science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information.

The concentration/minor has been designed to ensure that students have substantial grounding in all three of these areas. To this end, the requirements for the undergraduate concentration/minor are as follows. All courses must be chosen from the course lists below. In addition, a letter grade of C or better is required; S-U courses are not allowed.

- **Statistics:** one course.
- **Human-centered systems** (human-computer interaction and cognitive science): two courses (for all colleges except Engineering); one course (Engineering).
- **Social systems** (social, economic, political, cultural, and legal issues): one course.
- **Information systems** (primarily computer science): two courses.
- **Elective:** one additional course from any component area. (Engineering students and all Computer Science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors should check with their advisers to make sure there are no special departmental restrictions or requirements.)

**Statistics**

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

**Human-Centered Systems**

- COGST 101 Introduction to Cognitive Science
- PSYCH 205 Perception
- PSYCH 214 Cognitive Psychology
- COMM 240 Communication and Information Technology
- COMM 245 Psychology of Social Computing
- PSYCH 280 Introduction to Social Psychology
- COMM 345 Human-Computer Interaction Design
- PSYCH 347 Psychology of Visual Communications
- PSYCH 380 Social Cognition
- PSYCH 413 Information Processing: Conscious and Unconscious
- PSYCH 416 Modeling Perception and Cognition
- COM S 465 Introduction to Computer Graphics
- COMM 440 Advanced Human-Computer Interaction Design
- COMM 450 Language and Technology

**Social Systems**

- STS 250 Technology in Society
- STS 292 Inventing an Information Society
- ECON 301 Microeconomics*
- ECON 313 Intermediate Microeconomic Theory*
- SOC 304 Social Networks and Social Processes
- STS 349 Media Technologies
- STS 355 Computers: From Babbage to Gates
- STS 387 The Automatic Lifestyle: Consumer Culture and Technology
- LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors
- STS 411 Knowledge, Technology, and Property
- ECON 419 Economic Decisions Under Uncertainty
- COMM 428 Communication Law
- OR&IE 435 Introduction to Game Theory*
- STS 438 Minds, Machines, and Intelligence
- ECON 467 Game Theory*

*Only one of ECON 301 and ECON 313 can be taken for IS credit. Only one of OR&IE 435 and ECON 467 can be taken for IS credit.

**Information Systems**

- CIS 130 Creating Web Documents*
- COM S 211 Computers and Programming*
- CIS 230 Intermediate Web Design*
- CIS 330 Applied Databases
- LING 424 Computational Linguistics
- CIS 430 Information Discovery
- CIS 431 Web Information Systems
- CIS 432 Introduction to Database Systems
- COM S 465 Computer Graphics I
- LING 474 Introduction to Natural Language Processing
- OR&IE 474 Statistical Data Mining
- COM S 478 Machine Learning
- OR&IE 480 Information Technology
- CIS 501 Software Engineering
- ECE 562 Fundamental Information Theory
- COM S 574 Language Technologies
- COM S 578 Empirical Methods in Machine Learning and Data Mining

*CIS 130 cannot be taken for Information Science credit by Engineering students. Computer Science majors cannot use CIS 130 or CIS 230. COM S 211 cannot be taken for Information Science credit by majors for which it is a required course, e.g., Computer Science (COM S) and Operations Research and Industrial Engineering (OR&IE).

**CIS COURSES**

Courses offered under the CIS rubric are of particular interest to students in the computing and information sciences.

**CIS 130 Introductory Web Programming (also COM S 130)**

Fall, summer. 3 credits. No prerequisites. Interactive online media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students having little or no computer background to tools and techniques for creating interactive documents. Questions of both design and technical issues are emphasized. Students must think seriously about digital graphic
impact and must learn how to do some relatively simple programming with a scripting language (such as JavaScript). Topics covered include HTML, JavaScript, interaction techniques (including DHTML), ways of coping with slow connections; the incorporation of sound, video, and images in web documents; animation techniques (Flash 5); ethics; and e-commerce.

CIS 191 Media Arts Studio I (also ART 391, THETR 391)
Fall. 3 credits. Prerequisite: one of the following: ART 171, THETR 277, 377, MUSIC 120, or equivalent; must be a junior and have permission of the instructor. Lab fee $50. See ART 391 for description.

CIS 230 Intermediate Web Design (also COM S 230)
Spring. 3 credits. Prerequisite: COM S 130 or equivalent.
Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). COM S 230 concentrates almost exclusively on the server side. The main emphasis in COM S 230 is learning about server side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web site development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability, as well as ways of incorporating other programs toward the end of the course, students are shown how these development tools are working. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

CIS 330 Applied Database Systems (also COM S 330)
Spring. 3 credits. Prerequisites: COM S 211/ENGRD 211.
An introduction to modern database systems and three-tier application development using database systems. Concepts covered include the relational model, query languages, data modeling, database tuning, three-tier architectures, Internet data formats and query languages, server- and client-side technologies, decision support systems, and an introduction to data mining. The course is targeted at users of database systems and at application development using database systems and includes several programming projects comprising the design and implementation of a database-backed web site.

CIS 387 The Automatic Lifestyle: Consumer Culture and Technology (also ST&S 387)
Spring. 4 credits.
Our daily lifestyle in consumer culture is intimately intertwined with technology. Industrialized technology makes consumer culture possible, yet at the same time the economic and cultural trends of consumer culture select and shape the kinds of technology that become available. How is our daily lifestyle in consumer culture shaped by technology? How are everyday technologies shaped by the demands of consumer culture? What alternatives do we have? In this course, we synthesize history, sociology, and speculative design to answer these questions.

CIS 401 Introduction to Applied Scientific Computing with MATLAB
Fall. 1 credit. Usually weeks 2–5. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.
An introduction to the use of MATLAB as an aid to scientific research. The course introduces the basic syntax and features of MATLAB and develops the background necessary for the more specialized courses. The course covers basic MATLAB programming and vectorized operations, data input/output, and simple visualization. The course emphasizes applied issues such as managing large data sets, simulation, and visualization but also introduces fundamental ideas in scientific computing such as floating point arithmetic and algorithm efficiency. Although the course uses MATLAB, the ideas and concepts covered are common to many computational environments.

CIS 402 Scientific Visualization with MATLAB
Fall. 1 credit. Usually weeks 6–10. Prerequisite: COM S 100 or equivalent programming experience; COM S 401/CIS 401 recommended but not required. S-U grades only.
A survey of the advanced visualization features in MATLAB. The course covers MATLAB’s “handle graphics” paradigm, specialized graphics routines for vectors and fields, and includes color mapping, lighting, and new features for controlling object transparency. Although the course is meant to introduce students to the capabilities of the MATLAB system, it also emphasizes the basic goal of visualization: producing an image that effectively communicates a scientific result.

CIS 403 Development of Scientific Computing Programs
Spring. 1 credit. Usually weeks 1–4. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.
This course is designed for graduate students who, in their research, will develop computer programs to solve or engineer problems (e.g., in Fortran, C, or Java). Approaches and tools are presented that facilitate the development of good software. The course emphasizes the tools available in UNIX and Windows environments. Topics covered include compilers, debuggers, software design, and project management.

CIS 404 Survey and Use of Software Libraries for Scientific Computing
Spring. 1 credit. Usually weeks 5–8. Prerequisites: COM S 100 or equivalent programming experience; COM S 403/CIS 403 recommended but not required. S-U grades only.
Many software packages and code libraries have been developed for the solution of standard problems in scientific computing. Examples of such libraries are LAPACK, IMSL, Numerical Recipes routines, MATLAB functions, and routines available in online repositories such as Netlib. This course discusses how to link to or compile standard library formats and considers the legal and ethical aspects of using other people’s code (or having them use yours). The course also surveys some of the standard problems and the available libraries and discusses the issues that arise in their use (e.g., accuracy, robustness, and generality).

CIS 409 Data Structures and Algorithms for Computational Science
Fall. 4 credits. Prerequisite: COM S 211 or equivalent programming experience. Not offered every year.
Covers data structures and algorithms with emphasis on those useful for computational science. This course is intended for students outside of the Department of Computer Science whose work involves a significant amount of computing. Topics include basic data structures as well as more advanced topics. Emphasis is placed on the use of abstract data types and on how best to select appropriate data structures.

CIS 430 Information Discovery (also COM S 430)
Fall. 3 credits. Prerequisite: COM S 211 or equivalent.
This course studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing and filtering information, and the use of classification systems and thesauruses. The techniques studied include examples from web searching and digital libraries.

CIS 431 Web Information Systems (also COM S 431, formerly CIS/COM S 502)
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with the technology of web sites.
This course examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such as XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries, and the distributed information environment of the web.

CIS 490 Independent Reading and Research
Fall, spring. 1–4 credits.
Independent reading and research for undergraduates.

CIS 515 Culture, Law, and Politics of the Internet
Fall. 4 credits.
This course explores the culture, law, and politics of the Internet, everything from "No one will know you are a dog on the Internet" to debates on the constitutionality of the Digital Millennium Copyright Act. Free speech concerns, Internet governance, domain naming, copyright, privacy, and security are highlighted as well as a variety of policy issues such as acceptable use bandwidth usage on campuses, protocols for DMCA compliance, and the balance of classroom and distributed learning.

CIS 519 Computer Animation (also ART 372)
Fall. 4 credits. Prerequisite: COM S/ENGRD 211.
This course introduces students to various advanced animation techniques, including modeling, 2D key cel animation, motion and kinematics, lighting and materials, 3D key frame animation, physically based simulation, special effects, storyboarding, and cinematography. The first half of the course consists of lectures/seminars and some didactic project assignments with supplemental reading assignments. The second half consists of a final project in which students may work in groups to create an original work of computer animation.

[CIS 576 Decision Theory I (also ECON 476, 676)]
Fall. 4 credits. Prerequisites: mathematical sophistication. See ECON 476 for description.

[CIS 577 Decision Theory II (also ECON 477, 677)]
Spring. 4 credits. Prerequisites: Mathematical sophistication. See ECON 476 for description.

[CIS 630 Representing and Accessing Digital Information (also COM S 630)]
Fall. 4 credits. Prerequisites: COM S 472 or 478 or 578 or the equivalent. This course covers the representation, organization, and access of digital information with an emphasis on textual information. Topics include structured and semistructured data, information retrieval, natural language processing, and machine learning, with links to work in databases and data mining, and computational linguistics.

[CIS 685 The Structure of Information Networks (also COM S 685)]
Fall. 4 credits. Prerequisite: COM S 482.

[CIS 750 Evolutionary Computation and Design Automation (also COM S 750, M & AE 650)]
Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Not offered every year.

[CIS 751 Media Research and Critical Design (also COM S 751)]
Fall. 4 credits. Prerequisites: graduate standing in COM S or equivalent ability to read technical research papers. Contact instructor if unsure of qualifications. Not offered every year.

[CIS 752 Seminar on Scholarly Information Architecture]
Fall. 3 credits. Prerequisites: concurrent enrollment in COM S 431 or equivalent experience. S-U grades only. Not offered every year.

COMPUTER SCIENCE
The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. The department is also part of CIS, and its courses are an integral part of its several educational programs.

[COM S 099 Fundamental Programming Concepts]
Fall, summer. 2 credits. No prerequisites. S-U grades only. Credit cannot be applied toward the Engineering degree. Freshmen only.

This course is designed for students who intend to take COM S 100 but are not adequately prepared for that course. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience and students who do not intend to take COM S 100 should not take this course.

[COM S 100 Introduction to Computer Programming]
Fall, spring, summer. 4 credits. An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. There are two versions of the course. Both provide adequate preparation for COM S/ENGRD 211. Both versions are not offered every semester.

[COM S 100M Introduction to Computer Programming]
Corequisite: MATH 111, 191, or equivalent. This version starts with a seven-week introduction to programming in MATLAB. Iteration, functions are introduced. During the second seven weeks of the course students examine how these ideas are handled in the object-oriented framework provided by the Java programming language. Throughout the course, examples and assignments are chosen to give the student an appreciation for computational science and engineering. The pace of the course assumes that the student has no prior programming experience.

[COM S 100J Introduction to Computer Programming]
This course is an introduction to programming using the Java programming language. A two-week unit on MATLAB is included. Topics include algorithms, language concepts, selection, repetition, functions, objects and classes, arrays, strings, and inheritance. Principles of software development and style are emphasized. The course assumes basic high school mathematics (no calculus) but no programming experience.

[COM S 100K Introduction to Computer Programming (also PSYCH 102)]
Fall. 1 credit. Usually weeks 5-8. A brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. Projects may be done using any modern implementation of C. COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

[COM S 113 Introduction to C]
Fall, spring. 1 credit. Usually weeks 1-4. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only.

A brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. Projects may be done using any modern implementation of C. COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

[COM S 114 Unix Tools]
Fall. 1 credit. Usually weeks 5-8. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only. An introduction to Unix, emphasizing tools for file management, communication, process control, managing your Unix environment, and rudimentary shell scripts. Knowledge of at least one programming language is encouraged. Projects assume no previous knowledge of Unix or expertise in any particular language.

[COM S 130 Introductory Web Programming (also CIS 130)]
Fall, summer. 3 credits. Prerequisites: ECON 476 or equivalent. Interactive online media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students having little or no computer background to tools and techniques for creating interactive documents. Questions of both design and technical issues are emphasized. Students must think seriously about digital graphic impact and must learn how to do some relatively simple programming with a scripting language (such as JavaScript). Topics covered include HTML, JavaScript; interaction techniques (elementary DHTML); ways of coping with slow connections; the incorporation of sound, video, and images in web documents; animation techniques (Flash 5); ethics; and e-commerce.

[COM S 172 Computation, Information, and Intelligence (also ENGR 172)]
Fall. 3 credits. Prerequisites: some knowledge of calculus. An introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, compute-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets will be assigned. Not open to students who have completed the equivalent of COM S 100.

[COM S 201 Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201)]
Fall, spring, summer. 1 credit. Limited to 24 students. Prerequisites: concurrent or prior registration in Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191) is suggested but not required. Knowledge of programming languages is not assumed. Fall, B. Halpern and staff; spring, D. Field and staff.

For description, see COGST 201.

[COM S 211 Computers and Programming (also ENGR 211)]
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, subtyping), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms, and Java as the principal programming language.

[COM S 212 Java Practicum]
Fall, spring, summer. 1 credit. Letter grade only. Pre- or corequisite: COM S/ENGRD 211. A project course that introduces students to the ways of software engineering using the Java programming language. The course requires the design and implementation of several large programs.
COM S 213 C++ Programming
Spring, 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S-U grades only. An intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O, user-defined classes and types, derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++. Students planning to take COM S 213 normally do not need to take COM S 113; 213 includes most of the material taught in 113.

COM S 214 Advanced UNIX Programming and Tools
Spring, 1 credit. S-U grade only. Prerequisite: COM S 114 or equivalent. A focus on Unix as an environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging with C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take COM S 114 first.

COM S 215 Introduction to C#
Fall, spring, 1 credit. Prerequisite: COM S/ENGRD 211 or equivalent experience. Introduces students to building applications in the .NET environment using the C# language.

COM S 230 Intermediate Web Design (also CIS 230)
Spring, 3 credits. Prerequisite: COM S 130 or equivalent. Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). COM S 130 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web development tools. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

COM S 280 Discrete Structures
Fall, spring, 4 credits. Prerequisite: COM S/ENGRD 211 or permission of instructor. Covers mathematical aspects of programming and computing. Topics are chosen from the following: mathematical induction, logical proof, propositional and predicate calculi; combinatorics; matrices; covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory, sets, functions, and relations; partially ordered sets; graphs; and algebraic structures.

COM S 312 Data Structures and Functional Programming
Fall, spring, 4 credits. Prerequisite: COM S 211/212 or equivalent programming experience. Should not be taken concurrently with COM S 314. An advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include lists, sets, trees, maps, persistent data structures, Church numerals, lambda calculus, lazy evaluation, and continuations.

COM S 314 Computer Organization (also ECE 314)
Fall, spring, 4 credits. Prerequisite: COM S 211, COM S 312, or ENGRD 230 are recommended but not required. Should not be taken concurrently with COM S 312. Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, datapath design, memory hierarchies including caches and virtual memory, I/O devices, and bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

COM S 321 Numerical Methods in Computational Molecular Biology (also BIO BM 321 and ENGRD 321)
Fall. 3 credits. Prerequisites: at least one course in calculus, such as MATH 106, 111, or 119 and a course in linear algebra, such as MATH 221 or 294 or BTBY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures. An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, protein folding, score functions, and field equations. Students become adept at plotting, interpolation, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization will also be treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 322 Introduction to Scientific Computation (also ENGRD 322)
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or MATH 294). An introduction to elementary numerical analysis and scientific computing. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, stability, and cache and virtual memory, I/O devices, and bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

COM S 324 Computational Linguistics (also COGST 424, LING 424)
Fall, spring. 4 credits. Prerequisites: LING 203, labs involve work in the Unix environment; COM S 114 recommended. For description, see LING 424.

COM S 330 Applied Database Systems (also CIS 330)
Spring, 3 credits. Prerequisite: COM S 211/ENGRD 211. COM S 330 majors may use only one of the following toward their degree: CIS/COM S 330 or COM S 433. An introduction to modern database systems and three-tier application development using database systems. Topics covered include the relational model, data modeling, database tuning, three-tier architectures, transaction processing, and distributed database systems. The course is targeted at users of database systems and at application development using database systems and includes several programming projects comprising the design and implementation of a database-backed web site.

COM S 381 Introduction to Theory of Computation
Fall, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.

COM S 411 Programming Languages
Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor. An introduction to the theory, design, and implementation of programming languages. Topics include: operational semantics, type systems, higher-order function, scope, lambda calculus, laziness, exceptions, side effects, continuations, objects, and modules. Also discussed are logic programming, concurrency, and distributed and persistent programming.

COM S 412 Introduction to Compilers
Spring. 3 credits. Prerequisites: COM S 312 (or permission of instructor) and COM S 314. Corequisite: COM S 415. An introduction to the specification and implementation of modern compilers. Topics covered include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages. The course entails a substantial compiler implementation project.

COM S 413 Practicum in Compilers
Spring. 2 credits. Corequisite: COM S 412. A compiler implementation project related to COM S 412.

COM S 414 Systems Programming and Operating Systems
Fall, spring, summer. 3 credits. Prerequisite: COM S 211, 212, 312 (or permission of instructor), and 314. Corequisite: COM S 415 in spring only. An introduction to the implementation of modern operating systems, with emphasis on the design and implementation of modern operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.
COM S 415 Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: COM S 414.
The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.
Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation. This course requires more mathematical preparation than COM S 222.
COM S majors and minors may use only one of the following toward their degree: COM S 321, 322 or 421.

COM S 426 Introduction to Computational Biology
Fall. 3 credits. Prerequisites: COM S/ENGRD 211, COM S 280.
Computational biology is a relatively new field that is rooted in two different disciplines: computer science and molecular biology. It is concerned with the study of biological systems and phenomena, in search for explanations, rules, patterns, and regularities. The focus of this course is the set of algorithms, tools, and models used today to analyze biological data and recover and discover hidden information. These tools can be used to predict the function of new genes, discover hidden motifs that are biologically significant, study evolutionary processes, better understand cellular "computations," and aid in the development of new therapeutic agents for various diseases. Some of the topics covered are sequence analysis (alignment, multiple sequence alignment), motif detection, phylogenetic trees, secondary structure prediction, Hidden Markov Models, and analysis of gene expression data.
This course is intended mostly for students in the computational sciences because it focuses on algorithms and mathematical models. No knowledge of biology is needed (the course starts with a brief overview of the basic entities and the central dogma of molecular biology, and other relevant terms are introduced as needed).

COM S 427 Practicum in Computational Biology
Fall. 2 credits. Pre- or corequisite: COM S 426.
In this course, students develop a system or an application to analyze biological data. Possible applications are a database system to manipulate multiple data types, a learning system to detect hidden patterns in massive biological data sets, a software suite for sequence comparison or analysis of gene expression data, etc.

COM S 430 Information Discovery (also CIS 430)
Fall. 3 credits. Prerequisite: COM S 211 or equivalent.
This course studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and ranking information and the use of classification systems and thesauri. The techniques are illustrated with examples from web searching and digital libraries.

COM S 431 Web Information Systems (also CIS 431; formerly CIS/COM S 502)
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with the technology of web sites.
This course examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented in the course are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and the legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries, and the distributed information environment of the web.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312, or 211/212, and permission of instructor.
Recommended: COM S 213 and strong programming skills in C or C++.
An introduction to modern relational database systems. Conceptual data models include storage structures, access methods, query languages, query processing and optimization, transaction processing, and database design theory. The course primarily covers the internals of database systems and includes four large programming assignments in C++.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432.
COM S majors may use only one of the following toward their degree: CIS/COM S 330 or COM S 433.
An introduction to building web-database applications. Students implement a small e-commerce system using Active Server Pages, Java Server Pages, Cookies, and Servlets. The practicum also introduces technologies such as XML/XPath/XSLT and WAP. COM S majors may use only one of the following toward their degree: CIS/COM S 333 or COM S 433.

COM S 465 Computer Graphics I (also ARCH 374)
Fall. 3 credits. Prerequisite: COM S/ENGRD 211. May not be taken after completion of CIS/COM S 474.
An introduction to the principles of computer graphics in two and three dimensions. Topics include human visual perception, digital images, rasterization and anti-aliasing, 2D and 3D affine geometry, perspective and 3D viewing, splines, elementary 3D surface modeling, and ray tracing. Homework assignments require some programming.

COM S 467 Computer Graphics II
Spring. 3 credits. Prerequisite: COM S 465.
This course covers the principles of computer graphics in detail. A wide variety of topics are covered, including 3D transformations, the hardware graphics pipeline, advanced texturing and shading, visual perception and color science, rendering algorithms including global illumination, animation, user interfaces, visualization, and 3D surface modeling.

COM S 468 Computer Graphics Practicing
Spring. 2 credits. Prerequisite: COM S 465.
Corequisite: COM S 467.
This course provides COM S 467 students with hands-on experience in computer graphics programming. Programming assignments cover 3D transformations, modeling, shading, rendering, animation, and user interfaces. The course uses Java, OpenGL, and Cg for code development.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 (or equivalent).
A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristics, search, problem solving, natural language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.
Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.

COM S 474 Introduction to Natural Language Processing (also COGST 472, LINL 474)
Fall 4 credits. Prerequisites: COM S 211. Not offered every year.

COM S 478 Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.
Learning and classifying are two of our basic abilities. Machine learning is concerned with the question of how to train computers to learn from experience, to adapt and make decisions accordingly. This course introduces the set of techniques and algorithms that constitute machine learning as of today, including inductive inference of decision trees, the parametric-based Bayesian learning approach, Bayesian belief networks and Hidden Markov Models, non-parametric methods, discriminant functions and support vector machines, neural networks, stochastic methods such as genetic algorithms, unsupervised learning and clustering, and other issues in the theory of machine learning. These techniques are used today to automate procedures that were previously performed by humans as well as to explore untouched domains of science.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481.
COM S 482 Introduction to Analysis of Algorithms
Spring or summer. 4 credits. Prerequisites: COM S 280, 312, and either 381 or 481, or permission of instructor.
Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 483 Quantum Computation (also PHYS 481 and 481)
Spring. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers. Not offered every year. For description, see PHYS 481.

COM S 486 Applied Logic (also MATH 486)
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

COM S 490 Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

COM S 501 Software Engineering
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.
An introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

COM S 504 Applied Systems Engineering I (also CEE 504, ECE 512, M&A 591, OR&E 512, SYS 510)
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is supervised by an instructor. For description, see M&A 591.

COM S 505 Applied Systems Engineering II (also CEE 505, ECE 513, M&A 592, OR&E 513, SYS 520)
Spring. 3 credits. Prerequisite: Applied System Engineering I (CEE 504, COM S 504, ECE 512, M&A 591, OR&E 512). For description, see M&A 592.

COM S 513 System Security
Spring. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language.
This course discusses security and survivability for computers and communications networks. The course includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Topics for authorization and authentication as well as cryptographic protocols are covered.

COM S 514 Intermediate Computer Systems
Fall. 4 credits. Prerequisites: COM S 414 or permission of instructor.
This course focuses on practical issues in designing and implementing distributed software. Topics vary depending upon instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by coregistering in COM S 490, 515, or 790.

COM S 519 Computer Networks
Spring. 4 credits. Prerequisites: COM S 314 or permission of instructor. Not offered every year.
Introduction to computer networks with an emphasis on evolving Internet standards. Detailed introduction to networking protocols for reliable data transfer, flow control, congestion control, naming and addressing, routing, error control, and multiple access. Fundamentals of layered protocols and techniques for protocol design and implementation. This course is project-oriented and requires substantial programming experience.

COM S 522 Computational Tools and Methods for Finance
Spring. 4 credits. Prerequisites: knowledge of financial economics, stochastic processes, and probability.
A broad introduction to current algorithms and models for risk management, including some of the following: artificial intelligence, scheduling, queueing, computational economics, traffic planning, algorithm design, and application to real-world learning and decision-making tasks. The course also covers experimental methods for comparing learning algorithms, for understanding and explaining their differences, and for exploring the performance under which each is most appropriate.

COM S 572 Heuristic Methods for Optimization (also CEE 509)
Spring. 3 or 4 credits. Prerequisites: COM S 401 or 412 or permission of instructor.
This course describes a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, random walk, and direct search algorithms. Algorithms are used to find values of discrete and/or continuous variables arising in optimization and model fitting.
Applications are discussed in a range of areas including some of the following: artificial intelligence, scheduling, queueing, computational economics, traffic planning, algorithm design, and application to real-world learning and decision-making tasks. The course also covers experimental methods for comparing learning algorithms, for understanding and explaining their differences, and for exploring the performance under which each is most appropriate.

COM S 574 Language Technologies
Fall. 3 credits. Prerequisites: COM S 472 or 478 or 578 or the equivalent. Not offered every year.
This course focuses on computational techniques for large-scale text-processing applications, including information retrieval, text classification, information extraction, document clustering, document ranking, summarization, topic detection and tracking, and question answering. The course focuses on statistical and machine learning approaches to these natural language processing tasks as well as methods for their empirical evaluation.

COM S 578 Empirical Methods in Machine Learning and Data Mining
Fall. 4 credits. Prerequisites: COM S 280 and 312 or equivalent.
This implementation-oriented course presents a broad introduction to current algorithms and approaches in machine learning, knowledge discovery, and data mining and their application to real-world learning and decision-making tasks. The course also covers experimental methods for comparing learning algorithms, for understanding and explaining their differences, and for exploring the performance under which each is most appropriate.

COM S 601 System Concepts
Fall. 3 credits. Prerequisites: open to students enrolled in the COM S Ph.D. program. Not offered every year.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Graduate standing or permission of instructor.
A study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

COM S 612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.
COMPUTING AND INFORMATION SCIENCE (CIS) - 2003-2004

COM S 613 Concurrent Programming
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year.

COM S 614 Advanced Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.
An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

COM S 615 Adaptive Systems
Fall. 4 credits. Prerequisite: COM S 614 recommended.
This course broadly examines self-organization in distributed systems, with particular emphasis on peer-to-peer and mobile ad hoc networks. Students read recent research papers on particular hybrid and hybrid routing protocols for ad hoc networks, system support for mobility, peer-to-peer systems and their applications.

COM S 621 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.
Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621. Offered odd-numbered years only.
Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

COM S 624 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: previous exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations, and knowledge of MATLAB. Offered in even-numbered years.
Finite difference methods for the solution of ordinary and partial differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.

COM S 626 Computational Molecular Biology
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods. Problems and algorithms in computational molecular biology. Topics include sequences (alignment, scoring functions, complexity of searches and alignment, secondary structure prediction, families, and function), the protein folding problem (lattice models, lattice searches, the HP model, chemical potentials, statistical potentials, funnels, complexity and model verification, global optimization, homology, threading), and the dynamics of complex biomolecules (the Molecular Dynamics method, long-range forces, statistics of flexible systems, reduced models).

COM S 627 Computational Biology: The Machine Learning Approach
Spring. 4 credits. Prerequisites: COM S 426 or 626 and COM S 478 or 578 or permission of instructor.
No longer offered.
This is a graduate-level course in computational biology that focuses on machine learning models and their application to computational problems in biology. Some topics covered are unsupervised and supervised learning (Support Vector Machines, Hidden Markov Models, deterministic and probabilistic suffix trees) and supervised learning (embedding, PCA, ICA, clustering) learning in computational biology, advanced statistical analysis of sequences, analysis of microarrays, and modeling of complex systems (Bayesian Belief Networks, DEA).

COM S 630 Representing and Accessing Digital Information (also CIS 630)
Fall. 4 credits. Prerequisites: COM S 472 or 478 or 578 or the equivalent.
This course covers the representation, organization, and access of digital information with an emphasis on textual information. Topics include structured and semistructured data, information retrieval, natural language processing, and machine learning, with links to work in databases, data mining, and computational linguistics.

COM S 632 Advanced Database Systems
Spring. 4 credits. Prerequisite: COM S 472 or 578 or the equivalent.
A variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and discussion. Development of a term project with research content is required.

COM S 644 Machine Vision
Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATI 221 or equivalent.
An introduction to computer vision, with an emphasis on discrete optimization algorithms and applications in medical imaging. The following topics are covered: edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

COM S 655 Advanced Rendering
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and an undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and computer graphics. Offered fall 2003.
This course covers advanced topics in realistic rendering with a focus on fast/interactive techniques. Topics include light transport and global illumination, Monte-Carlo ray tracing and radiosity, hardware rendering, and image-based rendering.

COM S 667 Physically Based Rendering
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and an undergraduate-level understanding of algorithms, programming, and vector calculus. Offered spring 2004.
An advanced course in realistic image synthesis, focusing on the computation of physically accurate images. Topics include radiometry, light transport, and global illumination; rendering with participating media; advanced models for material properties; and physical measurement of light sources, images, and materials.

COM S 671 Introduction to Automated Reasoning
Fall. 4 credits. Prerequisite: (COM S 611 and graduate standing) or permission of instructor.
Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Special emphasis is on type theory and logic and on tactic-oriented theorem proving.

COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.
Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

COM S 674 Natural Language Processing
Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. COM S 474 is NOT a prerequisite. Not offered every year.
This course presents a graduate-level introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. The course covers: syntactic analysis, semantic interpretation, and discourse processing, examining both symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildly context-sensitive formalisms, deductive approaches to interpretation, machine translation, and machine learning of natural language.

COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic.
Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues include common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, modeling resource-bounded reasoning, and connections to game theory.
[COM S 677 Reasoning about Uncertainty]
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered 2003–2004. Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logic of probability, combining knowledge and probability, probability and adversaries, conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief, and decision theory.

[COM S 678 Advanced Topics in Machine Learning]
Spring. 4 credits. Prerequisites: COM S 478 or equivalent, or COM S 578 or equivalent, or permission of instructor. This course extends and complements COM S 478 and COM S 578, giving in-depth coverage of new and advanced methods in machine learning. In particular, we connect to open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

[COM S 681 Analysis of Algorithms]
Fall. 4 credits. Prerequisites: COM S 482 or graduate standing. Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NPh-completeness, and randomized reducibilities. Also covers topics such as parallel algorithms and efficient data structures.

[COM S 682 Theory of Computing]
Spring. 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor. Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

[COM S 683 Advanced Design and Analysis of Algorithms]
Spring. 4 credits. Prerequisites: COM S 681 or permission of instructor. Not offered every year.

[COM S 684 Approximation and Network Algorithms]
Fall. 4 credits. Prerequisites: COM S 681 or permission of instructor. Not offered every year.

[COM S 685 The Structure of Information Networks (also CIS 685)]
Spring. 4 credits. Prerequisite: COM S 482. Information networks such as the World Wide Web are characterized by the interplay between heterogeneous content and a complex underlying link structure. This course covers recent research on algorithms for analyzing such networks and models that abstract their basic properties. Topics include combinatorial and probabilistic techniques for link analysis, centralized and decentralized search algorithms, generative models for networks, and applications with work in the areas of social networks and citation analysis.

[COM S 686 Logics of Programs]
Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486. Not offered every year.

[COM S 709 Computer Science Colloquium]
Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science. A weekly meeting for the discussion and study of important topics in the field.

[COM S 711 Seminar in Advanced Programming Languages]
Fall, spring. 3 credits.

[COM S 713 Seminar in Systems and Methodology]
Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning such as COM S 611, 613, 671, a logic course, or permission of instructor. Not offered every year. Discussion of contemporary issues in the design and analysis of computing systems. Emphasis is on the proper use of nger, models, and formalism.

[COM S 715 Seminar in Programming Refinement Logics]
Fall, spring. 4 credits. Prerequisite: permission of instructor. Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

[COM S 717 Topics in Parallel Architectures]
Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year. Covers topics in parallel computers. Material includes architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

[COM S 719 Seminar in Programming Languages]
Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

[COM S 721 Topics in Numerical Analysis]
Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester TBD. Topics are chosen at instructor's discretion.

[COM S 726 Problems and Perspectives in Computational Molecular Biology (also PL BR 726)]
Fall, spring. 1 credit. S-U grades only. This is a weekly seminar series discussing timely topics in computational molecular biology. The course addresses methodological approaches to sequence and structure analysis, function prediction, studies of evolutionary relationships, and analysis of large biological systems. Statistical and deterministic computational approaches are covered, and specific and detailed biological examples are discussed. For each topic, we select one or two representative papers that made significant advances in this field. The lectures are given by faculty and students. The seminar is open to all from the life sciences, computational sciences, and physical sciences. We aim to bridge these disciplines by pairing students/faculty from complementary backgrounds.

[COM S 732 Seminar in Database Systems]
Fall, spring. 4 credits. S-U grades only.

[COM S 750 Evolutionary Computation and Design Automation (also CIS 750, MAAE 650)]
Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Not offered every year.

[COM S 751 Media Research and Critical Design (also CIS 751)]
Fall. 4 credits. Prerequisite: graduate standing in COM S or equivalent ability to read technical research papers. Contact instructor if unsure of qualifications. Not offered every year.

[COM S 752 Seminar on Scholarly Information Architecture (also CIS 752)]
Fall. 3 credits. Prerequisite: concurrent enrollment in COM S 502 or equivalent experience. S-U grades only. Not offered every year.

[COM S 754 Systems Research Seminar]
Fall. 1 credit. S-U grades only.

[COM S 772 Seminar in Artificial Intelligence]
Fall, spring. 4 credits. Prerequisites: permission of instructor. S-U grades only.

[COM S 775 Seminar in Natural Language Understanding]
Fall, spring. 2 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

[COM S 786 Introduction to Kleene Algebra]
Spring. 4 credits. Prerequisites: COM S 481 required, COM S 482 or 681, COM S 682, elementary logic (MATH 481 or 681), algebra (MATH 432) recommended. Kleene algebra is a algebraic system that axiomatically captures the properties of a natural class of structures arising in logic and computer science. It has appeared in various guises in relational algebra, semantics and logics of programs, automata and formal language theory, and the design and analysis of algorithms. In this course, we review the history of the development of Kleene algebra and Kleene algebra with tests (Kleene/Boolean algebra). We study models, compare axiomatizations, and derive completeness, expressiveness, and complexity results. We also discuss various applications in program schematology, program verification, compiler optimization, and programming language semantics and logic.

[COM S 789 Seminar in Theory of Algorithms and Computing]
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

[COM S 790 Special Investigations in Computer Science]
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

[COM S 990 Special Investigations in Computer Science]
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.
ADMINISTRATION
W. Kent Fuchs, dean
Michael Spencer, associate dean for research, graduate studies and professional education
Zellman Warhaft, associate dean for diversity and faculty recruitment
Deborah Cox, assistant dean for strategic planning, assessment, and new initiatives
Cathy Long, assistant dean for administration
Marsha Pickens, assistant dean for alumni affairs and development
David Gries, associate dean for undergraduate programs
Betsy East, assistant dean for student services

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for the School of Applied and Engineering Physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for the Department of Biological and Environmental Engineering are centered in Rilev-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of special interest in engineering include the following:
Center for Applied Mathematics. A cross-disciplinary center that administers a graduate program.
Center for Nanoscale Systems in Information Technologies. A National Science Foundation Nanoscale and Technology Center whose mission is to explore new methods for creating nanoscale devices for use in information technologies. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle.
Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.
Center for Theory and Simulation in Science and Engineering. A supercomputer facility used for advanced research in engineering and the physical and biological sciences.
Cornell High Energy Synchrotron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanofabrication Facility (part of the National Science Foundation-funded National Nanofabrication Users Network). A center that provides equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications.

Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.

W. M. Keck Foundation in Nanobiotechnology. Facilities of this program include tools for nanoscale diagnostics of biomaterials.

Laboratory of Plasma Studies. A center for research in plasma physics.

Cornell Center for Materials Research. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment for materials research.

National Astronomy and Ionosphere Center. The world's largest radio-telescope facility, operated by Cornell in Arecibo, Puerto Rico.

National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.

Nanobiotechnology Center. A National Science Foundation Science and Technology Center whose mission is to develop nanoscale tools for use in the life sciences. The facilities of this center are distributed between Clark Hall, Kimball Hall, and the Biotechnology Center.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. A resource that develops novel measurement and optical instrumentation for solving biophysical problems.

Power Systems Engineering Research Center. A National Science Foundation cooperative center between university and industry in which research is centered on power systems and infrastructure networks.

Program of Biomedical Engineering. An interdisciplinary field that administers the graduate field of Biomedical Engineering.

Program of Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.

The programs listed on this page are sponsored by College of Engineering units and several are industry affiliated.

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of bachelor of science, master of engineering (with field designation), master of science, and doctor of philosophy.

General academic information concerning the bachelor of science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the master of science and doctor of philosophy degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science. The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY
Bachelor of science (B.S.) degrees are offered in the following areas:

Biological Engineering
Chemical Engineering
Civil Engineering
Computer Science
Electrical and Computer Engineering
Engineering Physics
Earth and Atmospheric Sciences
Independent Major
Materials Science and Industrial Engineering
Mechanical Engineering
Operations Research and Industrial Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. Subsequently most students enter field programs, which are described separately for each academic area. Criteria for entrance into the field programs are described in the section titled "Affiliation with a Field Program." Alternatively students may enter the Independent Major (described
below), which permits them to pursue a course of study adapted to individual interests.

Students interested in bioengineering may arrange a suitable curriculum through the bioengineering option, the bioengineering minor, the biomedical engineering minor, or the Independent Major. Students interested in supplementing their field program with formal study in another traditional area of engineering may wish to consider one of the engineering minors offered by the college. Information about both the bioengineering option and engineering minors is available in Engineering Advising, 167 Olin Hall. Students interested in environmental engineering and science may pursue the environmental option offered by the School of Civil and Environmental Engineering and the Department of Biological and Environmental Engineering, or the science of earth systems (SES) option offered by the Department of Earth and Atmospheric Sciences.

*Biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, and mechanical engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

†To major in biological engineering, students normally enroll in the College of Agriculture and Life Sciences for the first three years, and jointly in that college and the College of Engineering for the final year. Students initially enrolled in the College of Engineering, however, may affiliate with the field of biological and environmental engineering and complete the degree solely within that college.

Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. Students must meet the Common Curriculum as explained below. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 2003–2004 edition of The Engineering Undergraduate Handbook.)

Course Category    Credits
1) Mathematics       16
2) Physics (depending on field) 8–12
3) Chemistry (depending on field) 4–8
4) First-year writing seminar* 6
5) Computer programming 4
6) Engineering distribution (3 courses)
   a. One Introduction to Engineering (ENGRD) 3
   b. Two other engineering distribution courses (ENGRD) 6
7) Liberal studies distribution 18 (min.)
8) Approved electives 6
9) Field program
   a. Field required courses 30 cr. min.
   b. Field approved electives 9
   c. Courses outside the field 9

*One writing-intensive technical course or a course in technical or scientific writing must also be taken; this course may simultaneously satisfy some other requirement.

From 123 to 133 credits are required for graduation; the specific number of required credits varies depending on which field program is chosen (see field curricula for specific field requirements). Two terms of physical education must be taken in the freshman year, and students must demonstrate proficiency in swimming to satisfy a university requirement.

Mathematics

The normal program in mathematics includes MATH 191 (or 190), 192, 293, and 294. Every student must attain a grade of at least C- in MATH 191 (or 190), 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Failure to achieve at least a C- the second time around will generally result in withdrawal from the engineering program. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 112, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in MATH 191 or equivalent before taking PHYS 112. *The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in MATH 192 before taking PHYS 215, or C- in MATH 293 before taking PHYS 214). Students in the fields of BEE, CHEM, CEE, COM S, EAS (geoscience and SES options), or OR&IE may substitute CHEM 208 for PHYS 214.

Chemistry

CHEM 211 or 207 is required for all students. CHEM 211 is a course designed for students who do not intend any further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213, and 214) first may postpone CHEM 211 until the sophomore year.

In general, students intending to affiliate with the following departments and schools usually take CHEM 211: Applied and Engineering Physics, Computer Science, Electrical and Computer Engineering, Materials Science and Engineering, Mechanical and Aerospace Engineering, and Operations Research and Industrial Engineering. Students considering Chemical Engineering must take CHEM 207 in the fall of their freshman year, to be followed by CHEM 208 in the spring term. All students considering the environmental option in Civil Engineering, the science of earth systems option in Earth and Atmospheric Sciences, or a health-related career such as medicine, should take the CHEM 207–208 sequence.

First-Year Writing Seminars

Each semester of the freshman year, students choose a First-Year Writing Seminar from among more than one hundred courses offered by over thirty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assume beginning students the benefits of a small class.

Technical Writing

Cornell's engineering college has an upper-level technical-writing requirement that students can fulfill by choosing one of the six options below. More information about some of these options is available at www.engineering.cornell.edu/ECP/index.htm.

1) ENGR 350 or ENGR 355, taught by the Engineering Communications Program

2) The Writing-Intensive Co-op—an opportunity to combine work and academics. Some Co-op students do a significant amount of writing on the job; under certain circumstances, this writing might satisfy the college's technical-writing requirement. More information is available at www.engineering.cornell.edu/ECP/Writing-IntensiveCoop.htm.

3) An officially designated Writing-Intensive (W-I) engineering course:
   • ENGRD/AEP 264
   • CHE 432
   • MSE 403 & 404 (both)
   • MSE 405 & 406 (both)
   • MAE 427
   • BEE 450 with co-registration either in ENGR 301, a one-credit attachment that extends the writing done in this course (by permission of 450 instructor), or in BEE 493
   • BEE 473 with co-registration in ENGR 301 (by permission of 473 instructor) or in BEE 493
   • BEE 489 with co-registration in ENGR 301 (by permission of 489 instructor) or in BEE 493.

4) ENGR 302, a one-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing done in his/her course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CGCB's Subcommittee on Technical Writing, the instructor may have students co-register in ENGR 302. May be taken more than once, with different courses. By permission of engineering instructor.

5) COM 260, 263, or 352, taught by the Department of Communication (in the College of Agriculture and Life Sciences)

6) A petition. Occasionally, a student realizes that he/she will be doing a significant amount and variety of technical writing elsewhere in the engineering college. It may be appropriate for the student to submit a petition to the College Curriculum Governing Board's Subcommittee on Technical Writing, asking for permission to use his/her upcoming writing (not past writing) to
meet the technical-writing requirement. More information on criteria and submitting a petition is available at www.engineering.cornell.edu/ECIP/Information.html.

Computing
To fulfill the computer programming requirement, students normally take COM S 100, Introduction to Computer Programming, during their freshman year. Before taking COM S 100, some students choose to take COM S 099, Fundamental Concepts of Computer Programming, offered in the fall semester. COM S 099 is a two-credit S-U course designed for students with virtually no programming experience. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience should not take this course. COM S 099 may not be used as credit toward graduation.

Engineering Distribution
Three engineering distribution courses (nine credits) are required. One course must be an Introduction to Engineering course (designated by ENGRD) to be taken by the student during his/her freshman year. The Introduction to Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem-solving context. See the Introduction to Engineering course listing for current course offerings.

The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1) Scientific computing
   ENGRD 211, Computers and Programming
   ENGRD 241, Engineering Computation
   ENGRD 321, Numerical Methods in Computational Molecular Biology
   ENGRD 322, Introduction to Scientific Computation

2) Materials science
   ENGRD 261, Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
   ENGRD 262, Electronic Materials for the Information Age

3) Mechanics
   ENGRD 202, Mechanics of Solids
   ENGRD 203, Dynamics

Students in the field program in Engineering Physics may substitute A&EIP 333 for ENGRD 203.

4) Probability and statistics
   ENGRD 270, Basic Engineering Probability and Statistics

Students in the field program in Electrical and Computer Engineering may substitute ECE 310 for ENGRD 270. Students in the field program in Engineering Physics may substitute ECE 310 or MATH 471 for ENGRD 270. Students in the field program in Civil Engineering and Biological Engineering may substitute CEE 304 for ENGRD 270.

5) Electrical sciences
   ENGRD 210, Introduction to Circuits for Electrical and Computer Engineers
   ENGRD 230, Introduction to Digital Logic Design
   ENGRD 264, Computer-Instrumentation Design

6) Thermodynamics and energy balances
   ENGRD 219, Mass and Energy Balances
   ENGRD 221, Thermodynamics

7) Earth and life sciences
   ENGRD 201, Introduction to the Physics and Chemistry of the Earth
   ENGRD 251, Engineering for a Sustainable Society
   ENGRD 260, Principles of Biological Engineering

8) Biology and chemistry
   ENGRD 252/A&EIP 252, The Physics of Life
   BIO G 101 and 103, Biological Sciences, Lecture and Laboratory
   BIO G 105, Introductory Biology
   BIO G 107, General Biology (summer only)
   CHEM 389, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

- Biological and Environmental Engineering: ENGRD 202
- Chemical and Biomolecular Engineering: ENGRD 219
- Civil Engineering: ENGRD 202
- Computer Science: ENGRD 211 (co-enrollment in COM S 212 strongly recommended)
- Electrical and Computer Engineering: ENGRD 230
- Earth and Atmospheric Sciences: ENGRD 201
- Materials Science and Engineering: ENGRD 261
- Mechanical Engineering: ENGRD 202
- Operations Research and Engineering: ENGRD 270

Liberal Studies Distribution
The following liberal studies distribution requirements begin with the class entering in 2003. Students who entered before that may choose to use the new requirements.

Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to work in multifaceted groups, and superior communications skills. Cornell has a rich curriculum in the humanities, arts, and social sciences, enabling every engineering student to obtain a true liberal education. A minimum of six courses (totaling at least 18 credits) is required, and they should be chosen with as much care and foresight as courses from technical areas.

- The six courses must be chosen from at least three of the following six groups.
- At least two courses must be from the first three groups (CA, HA, IA).

Please refer to the web site of Cornell Engineering Advising (www.engineering.cornell.edu/studentServices/advising.cfm) for access to a complete listing of acceptable courses in those groups, or a list of courses is available in Engineering Advising, 167 Olin Hall.

1. Cultural Analysis (CA)
Courses in this area study human life in particular cultural contexts through interpretive analysis of the individual, behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), and power and politics (states, colonialism, inequality).

2. Historical Analysis (HA)
Courses in this area interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subaltern, a specific country or region, an event, a process, or a time period.

3. Literature and the Arts (LA)
Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

4. Knowledge, Cognition, and Moral Reasoning (KCM)
Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

5. Social and Behavioral Analysis (SBA)
Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the
relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, conflict resolution).

6. Foreign Languages (not literature courses)

Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

Electives
- Approved electives—six credits required (approved by the academic adviser)

Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:

1. One Introduction to Engineering course (ENGRD).
2. Engineering distribution courses.
3. Courses stressing written or oral communication.
4. Upper-level engineering courses.
5. Advanced courses in mathematics.
6. Rigorous courses in the biological and physical sciences.
7. Courses in business, economics, or language (when they serve the student’s educational and academic objectives).
8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)

Field-approved electives—nine credits (approved by engineering field program faculty and field faculty advisers). Students should refer to the field program curricula for descriptions of courses that meet this category.

- To ensure breadth of engineering studies, field programs will also include nine credits of courses outside the field.

Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed in the “Science and Technology Studies” undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Engineering Advising

From the time students enter the college as freshmen until they are affiliated with a major field (normally prior to the second semester of the sophomore year), they are under the administration of Engineering Advising, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising serves as the primary resource center for undergraduate students in the college, offering general advising and counseling. Also located in Olin Hall are the LIFE Program, Minority Programs, and Women’s Programs, which are primary resources for counseling, support, tutoring, and networking opportunities.

Freshman Year Requirements

By the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:

- MATH 191 (or 190) and MATH 192
- Two of the following: CHEM 211, 207, 208, PHYS 112, 213, 214
- COM S 100
- Two First-Year Writing Seminars
- One Introduction to Engineering course (ENGRD designation)
- Two Physical Education courses

Students with an interest in pre-med (or other health-related careers), Chemical Engineering, the environmental option in Civil Engineering, or the science of earth systems option in Earth and Atmospheric Sciences should enroll in the CHEM 207–208 sequence during their freshman year.

Affiliation with a Field Program

Students must apply for affiliation with a field program during the first term of their sophomore year, although earlier affiliation may be granted at the discretion of the field. This is done by visiting the undergraduate field consultant’s office in the field of their choice and completing the Application for Field Affiliation form. To affiliate with a field program, students must (1) have a 2.0 cumulative grade point average and (2) have satisfied the field’s course and grade requirements as specified below:

(If the student’s courses may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

Field Program Courses and Minimum Grade Requirements

<table>
<thead>
<tr>
<th>Field Program</th>
<th>Courses and Minimum Grade Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biological Engineering</td>
<td>No more than one grade below C- in mathematics and science courses and BEE 151 or its equivalent</td>
</tr>
<tr>
<td>Chemical Engineering</td>
<td>No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses</td>
</tr>
<tr>
<td>Civil Engineering</td>
<td>A 2.0 GPA in all engineering and science courses and a grade of C- or better in ENGRD 202 (for students in the environmental option who do not take ENGRD 202 prior to affiliation, a grade of C- or better in CHEM 208 is required)</td>
</tr>
<tr>
<td>Computer Science</td>
<td>All potential affiliates are reviewed on a case-by-case basis relative to the following criteria:</td>
</tr>
<tr>
<td>a grade of C or better in all completed critical MATH courses</td>
<td></td>
</tr>
<tr>
<td>a GPA of 2.7 or better in all completed critical COM S courses and critical MATH courses</td>
<td></td>
</tr>
</tbody>
</table>

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

Dual Degree Option

A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and either a Bachelor of Arts or Bachelor of Fine Arts degree can be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Agriculture and Life Sciences may apply and, after acceptance of their application, begin the dual degree program in their second or third year. Those

Critical COM S courses:
- COM S 211, 212, 280, 312, 314, 321, 322, 414, 421, 381, 481, and 482

Critical MATH courses:
- MATH 112, 122, 192, 221, 222, 223, 224, 293, 294, 356, 356 and ENGRD 270

Courses used to determine affiliation may be repeated if the original course grade is below a “C.” The most recent grade is used when a course is repeated. Qualifying courses must be taken at Cornell.

Electrical & Computer Engineering
- A grade of B- or better in all required mathematics and physics courses

Geological Sciences
- Good academic standing in the College of Engineering

Materials Science & Engineering
- A grade of C- or better in all physics and chemistry courses and a grade of C- or better in ENGRD 201 or ENGRD 262

Mechanical Engineering
- A grade of C- or better in mathematics and science courses and ENGRD 202

Operations Research & Engineering
- A grade of C- or better in MATH 191, 192, ENGRD 270 and a 2.0 GPA in all mathematics, science, and engineering courses (both overall and in the term immediately prior to affiliation)

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.
recognizes formal study of a particular technical subject area in engineering normally outside the student's major. Therefore, it may be necessary for some students choosing to complete the requirements for an engineering minor to spend more than the traditional eight semesters to complete their studies at Cornell. In many cases, however, courses fulfilling minor requirements may also satisfy other degree requirements (e.g., distribution courses, approved electives, or field-approved electives). Students undertaking a minor are expected to complete their requirements during the time of their continuous undergraduate enrollment at Cornell.

To complete an engineering minor, an undergraduate engineering student must:

- be enrolled in a major field program that approves the participation of its affiliates in the desired minor.
- successfully complete all the requirements for a bachelor of science degree in engineering.
- satisfactorily complete six courses (18 credit minimum) as stipulated in a college-approved minor.

Students may apply for certification of an engineering minor at any time after the necessary course work has been completed in accordance with published standards. Students who receive certification in an approved engineering minor will be recognized by means of an official notation on their Cornell transcript following graduation.

The College of Engineering currently offers minors in the following areas (offering departments are indicated in parentheses):

- **Applied Mathematics (T&AM)**
- **Biological Engineering (BEE)**
- **Biomedical Engineering (BME)**
- **Civil Infrastructure (CEE)**
- **Computer Science (COM S)**
- **Electrical and Computer Engineering (ECE)**
- **Engineering Management (CEE)**
- **Engineering Statistics (OR&IE)**
- **Environmental Engineering (BEE/CEE)**
- **Geological Sciences (EAS)**
- **Industrial Systems and Information Technology (OR&IE)**
- **Information Science (COM S)**
- **Materials Science and Engineering (MS&E)**
- **Mechanical Engineering (M&AE)**
- **Operations Research and Management Science (OR&IE)**

Additional information on specific minors can be found in the departmental sections of this publication, the Engineering Undergraduate Handbook, the undergraduate field office of the department offering the minor, and Engineering Advising.

**Minor in Applied Mathematics**

To complete the minor, the student must take at least six (6) courses beyond MATH 294, to be chosen as follows:

a) At least 3 courses must be chosen from groups 5 and 6.

b) At least 1 course must be chosen from groups 1, 2, 3, or 4.

c) No more than 1 200-level course may be chosen.

d) No more than 1 course may be chosen that is offered by the student's major department.

1. **Analysis**

   - **T&AM 310 Advanced Engineering Analysis I**
   - **MATH 311 Introduction to Analysis**
   - **MATH 420 Differential Equations and Dynamical Systems**
   - **OR&IE 321 Mathematical Physics I**

2. **Computational methods**

   - **COM S 322 Introduction to Scientific Computation**
   - **CEE 241 Engineering Computation**
   - **OR&IE 320 Optimization I**

3. **Probability and Statistics**

   - **OR&IE 270 Basic Engineering Probability and Statistics**
   - **OR&IE 350 Engineering Probability and Statistics II**
   - **EE 310 Introduction to Probability and Random Signals**
   - **CEE 304 Uncertainty Analysis in Engineering**

4. **Applications**

   - **A&EP 333 Mechanics of Particles and Solid Bodies**
   - **CHE 323 Fluid Mechanics**
   - **CEE 331 Fluid Mechanics**
   - **CEE 371 Structural Behavior**
   - **EE 425 Digital Signal Processing**
   - **M&AE 323 Intro to Fluid Mechanics**
   - **MS&E 303 Thermodynamics of Condensed Systems**

5. **Advanced Courses**

   Only one of the following three may be chosen:

   - **T&AM 311 Advanced Engineering Analysis II**
   - **MATH 422 Applied Complex Analysis**
   - **A&EP 322 Mathematical Physics II**

   Only one of the following two may be chosen:

   - **EE 411 Random signals**
   - **OR&IE 361 Introductory Engineering Stochastic Processes I**

   Only one of the following two may be chosen:

   - **COM S 381 Introduction to Theory of Computing**
   - **COM S 481 Introduction to Theory of Computing**

   Only one of the following two may be chosen:

   - **M&AE 571 Applied Dynamics**
   - **T&AM 570 Intermediate Dynamics**

   **Also, you can choose from:**

   - **COM S 482 Introduction to the Design of Algorithms**
   - **OR&IE 321 Optimization II**
OR&IE 431 Discrete Models
OR&IE 435 Introduction to Game Theory
OR&IE 462 Introductory Engineering Stochastic Processes II
EE 522 Nonlinear Systems
T&AM 578 Nonlinear Dynamics and Chaos
T&AM 610 Methods of Applied Math I
T&AM 611 Methods of Applied Math II

6. Math Courses
Any 300+ level course offered by the Mathematics Department in algebra, analysis, probability/statistics, geometry or logic, with the following exceptions:

i) MATH 311 or MATH 420, if any course from group 1 is chosen.
ii) MATH 422, if T&AM 311 or A&EP 322 are chosen from group 5.

Academic Standards: A letter grade of C or better for each course in the minor.

Required Courses
COM S/ENGRD 211 Computers and Programming
COM S 321 Numerical Methods in Computational Biology
or COM S/ENGRD 322 Introduction to Scientific Computing
or COM S 421 Numerical Analysis

The Bioengineering Option and the Biological Engineering and Biomedical Engineering Minors
Students wishing to apply the concepts and methods of the engineering, computational and physical sciences to living systems or health issues may pursue one of three courses of study:

(1) the bioengineering option, requiring completion of two to three bioengineering courses and one to two biological sciences courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (BMEP 501). The student will receive official notification on their transcript. Further information is available in Engineering Advising, 167 Olin Hall.

(2) the biological engineering minor, requiring six courses (18 credit hours minimum) including BEE 550, two analysis courses, two application courses, and one basic science course. This minor provides the student an opportunity to further their understanding of living systems and the basic transport processes that occur in these systems. Further information is available from the BEE Program Coordinator, 207 Riley-Robb Hall.

(3) the biomedical engineering minor, requiring six courses (18 credit hours minimum) from at least four of five different groups—Introductory Biology, Advanced Biology, Molecular and Cellular BME, BME Analysis of Physiological Systems, BME Applications. Further information is available from the Biomedical Engineering Program coordinator, 270 Olin Hall.

International Programs
All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today's engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in Engineering Advising, 167 Olin Hall. Students who seek advice on obtaining an international co-op work experience should visit the Engineering Cooperative Education and Career Services office, 201 Carpenter Hall.

Engineering Communications Program
The Engineering Communications Program (ECP), created in 1987 at the urging of the College of Engineering faculty and employers of Cornell engineers, provides instruction in technical writing, oral presentation, and the use of graphics in both. Information about the ECP's courses and annual prizes, as well as the college's technical-writing requirement, is available at www.engineering.cornell.edu/ECP/index.htm. The ECP is a recipient of the Engineering Dean's Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences having various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting technical information, do library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment is 20 students per section; like writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students' work receives abundant written comments, and conferences are frequent. Besides teaching its courses, members of the ECP are available to consult with the faculty teaching the officially designated "writing-intensive" technical courses. They oversee the communications component of the Writing-Intensive Co-op, sit on the College Curriculum Governing Board's Subcommittee on Technical Writing and the Subcommittee on Liberal Arts, and occasionally give talks to alumni/ae and student groups.

If you have any questions, please call 255-8558, come by the ECP's office (Hollister 425), or stop at any ECP member's office on the fourth floor of Hollister.

Engineering Cooperative Education Program
A special program for engineering undergraduates is the Engineering Cooperative Education Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

To be eligible, a student must have been enrolled at Cornell for four semesters prior to working, with a cumulative GPA of 2.7 or higher. (Students in Computer Science and Biological and Environmental Engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of participating employers and select their work assignments from among those they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin the first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same employer the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Cooperative Education and Career Services office, 201 Carpenter Hall.

MASTER OF ENGINEERING DEGREE PROGRAMS
One-year Master of Engineering (M.Eng.) programs are offered in 14 fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. Prospective students interested in additional information should contact the graduate education office in the College of Engineering or visit the Master of Engineering web site (www.engineering.cornell.edu/grad) for program specifics. The M.Eng. degree fields and their academic departments under which they are administered are listed below.

M.Eng. (Aerospace): Mechanical and Aerospace Engineering
M.Eng. (Agricultural and Biological): Biological and Environmental Engineering
M.Eng. (Chemical): Chemical and Biomolecular Engineering
M.Eng. (Civil & Environmental): Civil and Environmental Engineering
M.Eng. (Computer Science): Computer Science
M.Eng. (Electrical): Electrical and Computer Engineering
M.Eng. (Engineering Physics): Applied and Engineering Physics
M.Eng. (Geology): Earth and Atmospheric Sciences
M.Eng. (Materials): Materials Science and Engineering
M.Eng. (Mechanical): Mechanical and Aerospace Engineering
M.Eng. (Nuclear): Nuclear Science and Engineering
M.Eng. (OR&EE): Operations Research and Industrial Engineering

M.Eng. (Systems): Systems Engineering

Admission:

Requirements for admission vary by field and prospective students should contact the appropriate field. In general, the standard M.Eng. application requirements include:

- Statement of Purpose
- Complete transcripts from each college or university you have attended
- At least two letters of recommendation
- Graduate Record Examinations (GRE) scores—may not be required by all fields

Many fields waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Students should check with the appropriate field office for specific program requirements. A list of M.Eng. field links and general admission information is posted on the web at www.engr.cornell.edu/grad/meng/app.html.

The following M.Eng. options are offered:

- The Bioengineering Option
- The Financial Engineering Option
- The Manufacturing Option
- The Engineering Management Option
- The Systems Engineering Option

Each option is available to M.Eng. students in specific fields. The Master of Engineering Options web page, www.engr.cornell.edu/grad/meng/options.html, lists specific details including availability and contact information.

Cooperative Programs with the Johnson Graduate School of Management:

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering training with a business degree.

The Knight Scholarship Program offers three options or categories of financial support:

- The Alumni Knight Scholarship Option
- The Undergraduate Knight Scholarship Option
- The Six-Year Knight Scholarship Option

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional careers. Participation in the Knight Scholarship program requires admission by each respective academic program (M.Eng, M.B.A.) as well as an application to participate in the Knight Scholarship Program. Refer to the Knight Scholarship web site (www.engr.cornell.edu/grad/knight) for program specifics or contact the Office of Research, Graduate Studies, and Professional Education, 146 Olin Hall.

Early Admission Program:

Superior Cornell students who will have between one and eight credits remaining in their last undergraduate semester may petition the appropriate field representative for early admission to the M.Eng. program.

Program Options:

Cornell's Master of Engineering Program allows students to supplement their field curriculum with a program option. Students who choose a program option enroll in courses that satisfy elective requirements.

BIOMEDICAL ENGINEERING PROGRAM

Michael L. Shuler, director, Donald L. Bartel, associate director; William Lee Olbricht, director of graduate studies.

The Biomedical Engineering Program's (BMEP) charge is to bridge engineering, biology, and medicine. Students are educated to convert basic discoveries in biology and medicine into medically useful devices and therapies to improve human health. Biomedical engineers also contribute to biological discovery. The 30 Biomedical Engineering Graduate Field and program faculty represent 12 departments and six colleges (including Well Medical College). The BME field offers research opportunities in biomedical mechanics; biomaterials; drug delivery, design, production, and metabolism; biomedical instrumentation and diagnostics; and system biology.

The BMEP currently administers the Biomedical Engineering Graduate Field and the M.S./Ph.D. degree programs. A Master of Engineering program in Biomedical Engineering (BME) is in the process of approval and is anticipated to be offered as early as fall 2004.

Minor in Biomedical Engineering

The BMEP also is responsible for a new minor program in biomedical engineering. Students graduating in the Class of 2006 and later must complete the minor as specified by BMEP. Students graduating in 2004 and 2005 may elect to complete the requirements in the Biomedical Engineering Minor offered by Theoretical and Applied Mechanics (T&AM).

Offered by: Biomedical Engineering Program

Administered by: Biomedical Engineering Program Director, 270 Olin Hall; Michael L. Shuler, 270 Olin Hall, mls50@cornell.edu, 255-7577

Eligibility: All undergraduates in the College of Engineering are eligible to participate in the Biomedical Engineering minor unless they are also pursuing the Bioengineering Option. (Students may participate in either the Bioengineering Option OR the Biomedical Engineering minor but not both.)

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The field includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug-delivery systems, and wound closure devices.

Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. The purpose of this minor is to allow students in the College of Engineering to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain recognition for their interest and capability in this rapidly growing area.

Requirements

Required Course: BMEP 501, Bioengineering Seminar (1 credit)

To complete the minor, the student also must take at least six (6) courses (minimum of 18 credits) from the five groups listed below, with at least four of the groups represented and four of which must be from Categories 3, 4, and 5. At least four of the six courses must be from outside the student’s major.

Students who are considering the BME minor are asked to register with the Biomedical Engineering Program Office (270 Olin). A BME faculty adviser will be assigned and will approve the student's BME minor plan.

1. Introductory Biology (maximum of 4 credits and one course towards BME minor)
   - BIOG 110 and ENGR 101—Biological Principles and Introduction to Biomedical Engineering Analysis
   - BIOG 101, 102, 103, and 104—Biological Sciences
   - BIOG 105 and 106—Introductory Biology
   - BIOG 107 and 108—General Biology
   - A "5" on AP Biology Test

2. Advanced Biology
   - BIOG 330—Principles of Biochemistry, Individualized Instruction
   - BIOG 334—Principles of Biochemistry, Proteins, Metabolism, and Molecular Biology
   - BIOG 331 and 332—Principles of Biochemistry, Proteins and Metabolism and Principles of Biochemistry, Molecular Biology
   - BIOP 311—Introductory Animal Physiology Lectures
   - BIOGD 281—Genetics
   - BION 222—Introduction to Neurobiology
   - BION 290—General Microbiology Lectures
   - BIOGD 389—Embryology

3. Molecular and Cellular Biomedical Engineering
   - BMEP 301 (CHME 401)—Molecular Principles of Biomedical Engineering
   - BMEP 302 (CHME 402)—Cellular Principles of Biomedical Engineering
   - A&EP 252—The Physics of Life
   - BEE 350—Molecular and Cellular Bioengineering

4. BME Analysis of Physiologic Systems
   - BMEP 401—Biomedical Engineering of Metabolic and Structural Systems
M&AE 464—Orthopaedic Tissue Mechanics
M&AE 465—Neuromuscular Biomechanics
BEE 454—Physiological Engineering
CHEME 481—Biomedical Engineering
BIOLB 330—Introduction to Computational Neuroscience

5. Biomedical Engineering Applications
A&EE 470—Biophysical Methods
BEE 450—Biomaterials
BEE 453—Computer-Aided Engineering; Applications to Biomedical Processes
BEE 459—Bioengineering and Biomedical Techniques
Com S 321—Numerical Methods in Computational Molecular Biology
ECE 402—CDE in Biomedical System Design
ECE 338—Nanofabrication
ECE 578—Computer Analysis of Biomedical Images
BEE 365—Properties of Biological Materials
MS&E 265 OR TXA 439—Biological Materials and Their Synthetic Replacements OR Biomedical Materials and Devices for Human Body Repair
M&AE 565—Biomechanical Systems—Analysis and Design

A new M.Eng. degree in BMEF is currently being planned for Fall 2004 pending New York State approval. The recommended sequence for admission to the M.Eng. BME will be BIOG 110 and ENGRG 101; any category 2 course; BMEF 301, 302, 401, and 402. The M.Eng. BME program will require knowledge of molecular and cellular BME, and of BME analysis of physiological systems.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit
The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

(1) Advanced placement examinations given and scored by the College Entrance Examination Board (CIEE);
(2) General Certificate of Education (GCE) Advanced ("A") Level Examinations;
(3) International Baccalaureate (IB) Higher Level Examinations; or
(4) Cornell's departmental placement examinations, given during orientation week prior to the beginning of fall-term classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways:

(1) They may enroll in a more advanced course in the same subject right away.
(2) They may substitute an elective course from a different area.
(3) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams
The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 (or 190), 192, 293, and 294 are required.

First-term math (MATH 191): AP credit may be earned by:
- a score of 3, 4, or 5 on the CEEB BC exam, or
- a score of 5 on the CEEB AB exam, or
- a passing score on the Cornell departmental exam for first-term math.

First-year math (through MATH 192): AP credit may be earned by:
- a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112 and 213 are required.

PHYS 112: AP credit may be earned by:
- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
- a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 may not enroll in PHYS 213 unless concurrently enrolled in MATH 299.

PHYS 213: Students receiving a 5 on the Electricity and Magnetism portion of the C exam may choose to accept AP credit for PHYS 213 or placement in PHYS 217 with no AP credit for PHYS 213. For advice or more information contact the departmental representative at 607 255-6016.

Chemistry: CHEM 207 or CHEM 211 is required.

CHEM 207 or CHEM 211: AP credit may be earned by:
- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for chemistry.

Note: students who are successful in obtaining AP credit for CHEM 207 and who are considering majors in Chemical Engineering or Materials Science and Engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. You may want to discuss this option with your faculty advisor.

Computing: COM S 100 is required. AP credit may be earned by:
- a score of 5 on the CEEB A or a score of 4 or 5 on the AB exam, or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
- eight credits will be offered to students who receive a 5 on the CEEB AP exam;
- six credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

First-Year Writing Seminar: Two First-Year Writing Seminars (for a total of six credits) are required.

- AP credit for one First-Year Writing Seminar may be earned by a score of 5 on either of the CEEB AP English exams. Students who earn a score of 4 on the AP English Literature and Composition exam will be offered three credits which may be applied toward the Humanity/History category (a) of the Liberal Studies distribution requirement. Students who earn a score of 4 on the AP English Language and Composition exam will be offered three credits which may be applied toward the Expressive Arts (d) category of the Liberal Studies distribution requirement.

Liberal Studies Distribution: Six courses beyond two First-Year Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CIEE) AP tests. AP credit earned in the liberal studies distribution cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CIEE) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 550 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the student to six credits, which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty advisor.

Advanced Placement and Credit for International Credentials
Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE: "A")
Hong Kong Advanced Level examinations and the joint examination for the Higher School...

Note: Advanced Placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

**General Policies for Advanced Placement**

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week; permission to take these tests after the start of fall-term classes must be requested in a written petition to the college's Committee on Academic Standards, Petitions, and Credit (ASPAC). A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from Engineering Advising, 167 Olin Hall.

**Transfer Credit for First-Year and Continuing Students**

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, students must complete and submit a Transfer Credit Form (one form for each request), accompanied by a course description. (Transfer Credit Forms are available from Engineering Advising or the Registrar's Office and should be submitted prior to enrollment.) An official transcript from the offering institution (bearing the institutional seal and registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.
- To apply for transfer credit, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course may require course materials, textbooks used, etc., in addition to the course description before approving the course.
- Departmental approval is not required to apply for transfer credit that satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in Engineering Advising.
- Cornell does not award credit for courses taken during a semester credit load ranges from approximately 15 to 17 credits. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from mathematics, science, and/or engineering
2. A C- or better in the mathematics course
3. A semester average of 2.0 or higher
4. No F, U, or INC grades

Requirements for unaffiliated second-semester freshmen and sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 14 credits passed in courses that meet engineering degree requirements (normally at least two courses from mathematics, science, or engineering courses)
2. A C- or better in the mathematics course
3. A semester average of 2.0 or higher
4. No F, U, or INC grades

**Academic Progress**

The total number of credits required for graduation range from 125 to 135, depending on the field program. Therefore, an average semester credit load ranges from approximately 15 to 17 credits.

Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in MATH 191 (or 190), 192, 293, and 294. Those who fail to meet this standard are allowed to repeat a course once in the following semester. Failure to achieve at least a C- the second time will generally result in withdrawal from the
College of Engineering. Physics and advanced mathematics courses often have mathematics prerequisites, and having to repeat the prerequisite course may delay progress in the physics and mathematics curricula. Students are expected to continue the core engineering math courses each semester until completed.

Dean's List
Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor are determined by the dean of the college. For 2003–2004, the requirement is a semester average of 3.4 or higher (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may earn Dean’s List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean’s List status receive certificates from the Engineering Registrar’s Office, and the honor is noted on the transcript.

Graduating with Distinction and Honors Program

Graduating with Distinction
Meritorious students graduating with a bachelor of science degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude.

- Cum laude will be awarded to all engineering students with an overall GPA ≥ 3.5. Cum laude will also be awarded to all engineering students who received a semester GPA ≥ 3.5 in each of the last four semesters of attendance at Cornell; in each of these semesters, at least 12 letter graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for pro-rated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.5 in their last semester and meet the conditions above in the prior four semesters.
- Magna cum laude will be awarded to all engineering students with an overall GPA ≥ 3.75 (based on all credits taken at Cornell).
- Summa cum laude will be awarded to all engineering students with an overall GPA ≥ 4.0 (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

Field Honors Program
To be eligible for field honors, a student must enter a program with and maintain a cumulative GPA of ≥ 3.5. If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of “With Honors.” For more specific information, see the field program outline in this catalog.

S-U Grades
Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of C- or better in a course will receive a grade of S; those earning less than C receive a grade of U. (Any course in which a U grade is received does not count toward graduation requirements.)

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one course with a semester in which the choice between letter grade and S-U is an option. (Additional courses offered “S-U only” may be taken in the same semester as the “elected S-U” course.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed Add/Drop Form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option.

Residence Requirements
Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field. Students who entered the college as a second-semester sophomore or later must meet specific conditions, established at the time of this report. Under the S-U option, students earning a U grade is received does not count toward graduation requirements.

Candidate for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field. Students who entered the college as a second-semester sophomore or later must meet specific conditions, established at the time of this report. Under the S-U option, students earning a U grade is received does not count toward graduation requirements.

Students may not complete their last semester extramurally.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad Office, 474 Uris Hall. Programs should be planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell
It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division Office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with Engineering Advising.

Students who wish to transfer into the College of Engineering may apply at Engineering Advising—application forms are available in 167 Olin Hall. It is preferred that a student apply in the semester in which he/she is completing affiliation criteria for the desired field. Students who would enter the college as a second-semester sophomore or later must be accepted by a field program as part of the admission process. Students who would enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of field affiliation but must be sponsored by a field program.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in Engineering Advising, 167 Olin Hall.

Leave of Absence
A leave of absence may be voluntary, medical, or required. A description of each follows.

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through Engineering Advising; the first step is to interview to establish eligibility to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the student must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

**Medical Leave:** Medical leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Such leaves are granted for at least six months and up to two years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student’s academic standing will also be subject to review both at the time the leave is granted and upon the student’s return.

**Required Leave:** A required leave of absence is imposed in cases where the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are only offered in the fall or the spring semester. Leaves are given when the probability of success is increased substantially by deferring the student’s return by one semester (or, in unusual circumstances, one year).

**Rejoining the College**

Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student’s activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

**Withdrawal from the College**

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

**Voluntary Withdrawal:** Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their field office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

Any student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intra-university transfer process should be followed.

If students who have withdrawn subsequently wish to return, they must make a formal application for readmission. This is rarely granted. It is subject to a review of the student’s academic background and depends on available space in the college and in the student’s major field.

**Required Withdrawal:** Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action only withholds them from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

**ENGINEERING COOPERATIVE EDUCATION AND CAREER SERVICES**

This office assists engineering students (freshmen through Ph.D.) in career development and job search issues, and administers the Engineering Cooperative Education Program (see separate entry under the Engineering Special Programs section). Individual advising and group seminars are available, and more than 200 national employers typically visit the office annually to recruit technical students and graduates; additional job opportunities are posted electronically. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities. Students seeking co-op opportunities must meet specific requirements. Further information on all services is available from the Engineering Cooperative Education and Career Services Office, 201 Carpenter Hall (255-5000), and on the web at www.engineering.cornell.edu and www.engr.cornell.edu/coop.

**APPLIED AND ENGINEERING PHYSICS**

**Bachelor of Science Curriculum**

The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are available at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics good background in a conventional area of engineering or applied science.

The industrial demand for engineering physics graduates with baccalaureate is highly, and many students go directly to industries where they work in a variety of areas that either combine, or are in the realm of various other more conventional areas of engineering. Recent graduates have included bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, energy engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state device development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, medical physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The Engineering Physics program fosters the breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR/A&EP 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman Introduction to Engineering course); ENGR/A&EP 130, Introduction to Nanoscience and Nanotechnology (a freshman Introduction to Engineering course), ENGRD/A&EP 264, Computer- Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Optics (a junior/senior course); A&EP 365, Electronic Circuits (a sophomore/junior course), PHYS 410, Advanced Experimental Physics; and A&EP 438, Computational Engineering Physics (a senior computer laboratory). Undergraduates who plan to enter the field program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take PHYS 112 or PHYS 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the technical writing requirement with the engineering distribution course ENGRD 264. Engineering Physics students need to take only two engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 363 in the spring semester of the sophomore year. Students with one semester of advanced placement in math, who have received a grade of A- or better in MATH 129, may wish to enroll in mathematics courses that are available during the sophomore year. For advice in this option, consult with the A&EP associate director.
In addition to the requirements of the Engineering Common Curriculum, the upper-class core requirements of the field program are as follows:

**Course** | **Credits**
--- | ---
A&EP 333, Mechanics of Particles and Solid Bodies | 4
A&EP 355, Intermediate Electromagnetism | 4
A&EP 356, Intermediate Electrodynamics | 4
A&EP 361, Introductory Quantum Mechanics | 4
A&EP 363, Electronic Circuits | 4
A&EP 423, Statistical Thermodynamics | 4
A&EP 434, Continuum Physics | 4
PHYS 410, Advanced Experimental Physics | 4
A&EP 321, Mathematical Physics I, or MATH 421 (applied mathematics) | 4
A&EP 322, Mathematical Physics II, or MATH 422 (applied mathematics) | 4
Six field-approved electives (18-23 credits), of which five must be technical. The technical electives are expected to be upper-level courses (300 or above). Total field credits=58 credit hours minimum.

The Engineering Common Curriculum allows students to take only four courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering students with strong preparation are encouraged to consider taking an additional course during one or both semesters of the freshman year so that they may have additional flexibility in developing a strong, individualized educational program in their later years, and for allowing options such as a semester or year abroad or early graduation.

Two of the four credits of PHYS 410 required for the BS degree in Engineering Physics can be satisfied by successfully completing A&EP/PHTS 330. The remaining two credits of PHYS 410 can be satisfied by taking PHYS 400 for two credits, provided that the experiments completed in PHYS 400 do not overlap with those in A&EP/PHTS 330. (A list of experiments that are not appropriate will be prepared by A&EP faculty and made available in the A&EP office.) If a student chooses this option, A&EP/PHTS 330 may also count as a technical elective, provided the remaining three technical electives are four credits each.

**Choosing elective courses.** A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individual programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program that is in accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Bruce Kusse.

Electives need not be all formal course work; qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of similarly equivalent courses to the listed required courses.

The Engineering Physics program requires that a minimum of B- or better be attained in each physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.3.

**Engineering Physics Honors Program**

**Eligibility**

The bachelor of science degree with honors will be conferred upon those students who, while completing the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.5.

**Content**

1. Complete at least eight credits of field-approved electives at the 400-level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.
2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

**Timing**

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**

Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written comments. The proposal is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is necessary for successful completion of the honors requirement.

**Master of Engineering (Engineering Physics) Degree Program**

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanotechnology science and technology, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nano-structure science and technology. Core courses in this specialty include the microcharacterization of materials and the microprocessing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, nanotechnology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and photography. Each individual program is planned by the student in consultation with the program chair. The objective is to provide a...
an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

**BIOLOGICAL AND ENVIRONMENTAL ENGINEERING**

**Bachelor of Science Curriculum**

Biological and Environmental Engineering (BEE) addresses three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population, protecting and remediating the world's natural resources, including water, soil, air, biodiversity and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering program in the Department of Biological and Environmental Engineering has a unique focus on biological systems, including the environment, which is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a bachelor of science degree and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Two concentrations in Biological and Environmental Engineering are offered: biological engineering and environmental engineering. Students take courses in mathematics, statistics, computing, physics, chemistry, biology, and advanced biology, and fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in the department in areas that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students strengthen their programs by selecting additional courses in the College of Engineering. They may complete minors of a second engineering major. Students planning for medical school also take additional laboratory-based courses in biology, biochemistry and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills and all students complete a capstone design project. Many undergraduate students participate in honors programs, undergraduate teaching and research, independent study, assistantships, research assistantships, design teams, Engineering Cooper, and study abroad. Students completing the BEE major should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate and professional programs in engineering, science, medicine, law, and other fields. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us, and within us. The biological revolution continues and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and interested in the challenges facing society. The Department of Biological and Environmental Engineering is educating the next generation of engineers to meet these challenges.

The Department of Biological and Environmental Engineering is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world. For further details see the department's undergraduate programs publication, available at the BEE Student Service Office, 207 Riley-Robb Hall, or contact the field's advising coordinator, Professor Jim Bartsh, at 255-2800.

The field program requirements for those students joining the program in 2003–2004 are outlined.

**APPLIED MATHEMATICS**

The Center for Applied Mathematics administers a broadly based interdisciplinary graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall. There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select
Technical Engineering Electives
(200 level or above; at least one of these must be an approved laboratory experience course) 18–19
Liberal Studies (two freshmen seminars and at least two courses in humanities or history) 24
Approved Electives 6
Total (minimum) 126

*Basic accredited curriculum. Specializations (options or pre-professional study) may be accommodated by selecting additional courses in the indicated areas). For further information, please contact the BEE Student Services Office, 207 Riley Robb Hall, or contact the undergraduate program director, Professor Jim Bartsch, at jab35@cornell.edu.

Biological and Environmental Engineering Honors Program

Eligibility

The bachelor of science degree with honors will be granted to engineering students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in the Department of Biological and Environmental Engineering and have been recommended for the degree by the honors committee of the department. An honor's program student must enter with and maintain a cumulative GPA ≥ 3.5.

Content

A BEE honors program shall consist of at least nine credits beyond the 126 credit minimum required for graduation in BEE. These nine credits shall be drawn from one or more of the following with at least four credit hours of research in the first category:

- A significant research experience or honors project under the direct supervision of a BEE faculty member using BEE 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.
- A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department under BEE 498, Undergraduate Teaching.
- Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, mathematics, biology, chemistry, and physics at the 400+ and graduate level.

Note: no research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Applications are available in the BEE Student Services office, 207 Riley Robb.

Each applicant to the BEE honors program must have a BEE faculty adviser to supervise the honors program. Written approval of the faculty member who will direct the research is required.

Option in Environmental Engineering

The Environmental Engineering Option provides BEE students the opportunity to follow a structured environmental engineering curriculum. The curriculum was developed and approved jointly by the faculty of BEE and Civil and Environmental Engineering (CEE). The Environmental Engineering Options in BEE and CEE share a common core of courses.

Students complete a prescribed program of courses within the framework of the BEE curriculum.

Chemistry/microbiology: Students must take at least two semesters of chemistry (CHEM 211/257 or CHEM 207/208). They must also satisfy the BEE organic chemistry requirement: either by taking organic chemistry as one of the two required chemistry courses (i.e., CHEM 257) or by taking CEE 451. The microbiology requirement of the Environmental Engineering option can also be met by taking CEE 451.

Chemistry: CHEM 211/257 or CHEM 207/208

Microbiology: CEE 451 or BIOMI 250

Fluid Mechanics: CEE 331

Probability and Statistics: CEE 304

Environmental Engineering: CEE 351

Environmental Quality Engineering: CEE 453

Laboratory Experience in Environmental Engineering: BEE 473 or 475. Watershed Engineering or Environmental Systems Analysis

Inquiries regarding this option should be addressed to the student's adviser or to Jim Bartsch, undergraduate program director, at jab35@cornell.edu.

Minor in Biological Engineering

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Biological Engineering minor: A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E, and OR&IE. (Students may participate in either the Bioengineering Option or the Biological Engineering minor, but not both.)

Note: Students should meet with the BEE Program Director as soon as they decide to pursue the minor. Then they will receive a BEE faculty adviser, who will assist them in completing the minor program.

Biological Engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The Biological Engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Requirements

To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), which meet the following requirements:

- Required course: BEE 350, Biological & Environmental Transport Processes

I. Analysis: Require two (2) from the following courses:

- MS&E 304 (3) Kinetics, Diffusion, and Phase Transformations
- CHEME 313 (3) Chemical Engineering Thermodynamics
- CHEME 390 (3) Reaction Kinetics and Reactor Design
- CEE 437 (3) Experimental Methods in Fluid Dynamics
- BEE 685 (4) Biological Engineering Analysis

II. Application: Require two (2) from the following courses:

- BEE 450 (4) Bioinstrumentation
- BEE 453 (3) Computer-Aided Engineering Applications to Biomedical and Food Processes
- BEE 454 (3) Physiological Engineering
- BEE 459 (4) Biosensors and Bioanalytical Techniques
- BEE 655 (3) Thermodynamics and Its Applications
- CHEME 643 (3) Introduction to Bioprocess Engineering

III. Basic Sciences: One (1) from the following courses:

- BIOBM 233 (3) Introduction to Biomolecular Structure
- BIOI 290 (3) General Microbiology
- BIOBM 350-333 Principles of Biochemistry (2-4)
- BIOBM 434 (3) Applications of Molecular Biology
- BIONB 470 (3) Biophysical Methods

Academic Standards: A letter grade of C- or better for each course in the minor.

Minor in Environmental Engineering

(Offered in cooperation with the School of Civil and Environmental Engineering)

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, and OR&IE. A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific,
Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows.

Students must select courses from the following group listings, with at least one course from each group.

**Group A. Environmental Engineering Processes:**

- CEE 351 Environmental Quality Engineering
- CEE 352 Water Supply Engineering
- CEE 451 Microbiology for Environmental Engineering
- CEE 453 Laboratory Research in Environmental Engineering
- BEE 476 Solid Waste Engineering
- BEE 478 Ecological Engineering
- CEE 644 Environmental Applications of Geotechnical Engineering
- BEE 651 Bioremediation
- CEE 653 Water Chemistry for Environmental Engineering
- CEE 655 Pollutant Transport and Transformation in the Environment
- CEE 658 Sludge Treatment, Utilization, and Disposal
- CEE 654 Aquatic Chemistry

**Group B. Environmental Systems:**

- ENGRI 113 Introduction to Environmental Systems (May count only if taken before the student’s junior year.)
- BEE 475 Environmental Systems Analysis
- CEE 529 Water and Environmental Resources Problems and Policies
- CEE 597 Risk Analysis and Management
- CEE 623 Environmental Quality Systems Engineering
- BEE 678 Nonpoint Source Models

**Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanics:**

- CEE 331 Fluid Mechanics (CHEM 323 or M&AE 323 may be substituted for CEE 331)
- CEE 332 Hydraulic Engineering
- BEE 371 Hydrology and the Environment
- CEE 431/ BEE 471 Geohydrology
- CEE 432 Hydrology
- CEE 435 Coastal Engineering

**Master of Engineering (Agricultural and Biological) Degree Program**

The program for the M.Eng (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of an undergraduate program in biological and environmental engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students’ fundamental knowledge of engineering and develop their design skills. At least three to nine of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.

The program is designed to be flexible so that the candidate may concentrate in any of a variety of specialty areas: biological engineering, energy, environmental engineering, environmental management, food processing engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student’s interests and design project. Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in Biological and Environmental Engineering can qualify for the Dean’s Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topic areas. More information is available from the BEE Student Services Office, 207 Riley Robb Hall (255-2173), or by e-mail at BEE.gradfield@cornell.edu.

**Semester 3 Credits**

- MATH 293, Engineering Mathematics 4
- PHYS 213, Electricity and Magnetism 4
- CHEM 389, Physical Chemistry I (engineering distribution) 4
- ENGRD 219, Mass and Energy Balances (engineering distribution) 3
- Humanities or social sciences 3

**Semester 4 Credits**

- MATH 294, Engineering Mathematics 4
- CHEM 323, Fluid Mechanics 3
- CHEM 290-391, Physical Chemistry (field) 6
- Biology elective 3
- Humanities or social sciences 3

**Semester 5 Credits**

- CHEM 357, Introductory Organic Chemistry 3
- CHEM 251, Organic Chemistry Laboratory 2
- CHEM 313, Chemical Engineering Thermodynamics 4
- CHEM 324, Heat and Mass Transfer 3
- Humanities or social sciences 3

**Semester 6 Credits**

- Advanced Science elective 3
- CHEM 301, Nonresident Lectures 1
- CHEM 332, Analysis of Separation Process 3
- CHEM 372, Introduction to Process Dynamics and Control 1
- CHEM 390, Reaction Kinetics and Reactor Design 3
- Humanities or social sciences 3

**Semester 7 Credits**

- CHEM 432, Chemical Engineering Laboratory 4
- Electives* 9
- Humanities or Social Sciences 3

**Semester 8 Credits**

- CHEM 462, Chemical Process Design 4
- Humanities or social sciences 3
- Electives* 3
- Approved elective 3

**CHEMICAL AND BIOMOLECULAR ENGINEERING**

**Bachelor of Science Curriculum**

The undergraduate field program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Students who plan to enter the field program take CHEM 208 during the freshman year. The program for the last three years, for students who have taken an Introduction to Engineering course during the first year, is as follows.

**Semester 3 Credits**

- MATH 293, Engineering Mathematics 4
- PHYS 213, Electricity and Magnetism 4
- CHEM 389, Physical Chemistry I (engineering distribution) 4
- ENGRD 219, Mass and Energy Balances (engineering distribution) 3
- Humanities or social sciences 3

**Semester 4 Credits**

- MATH 294, Engineering Mathematics 4
- CHEM 323, Fluid Mechanics 3
- CHEM 290-391, Physical Chemistry (field) 6
- Biology elective 3
- Humanities or social sciences 3

**Semester 5 Credits**

- CHEM 357, Introductory Organic Chemistry 3
- CHEM 251, Organic Chemistry Laboratory 2
- CHEM 313, Chemical Engineering Thermodynamics 4
- CHEM 324, Heat and Mass Transfer 3
- Humanities or social sciences 3

**Semester 6 Credits**

- Advanced Science elective 3
- CHEM 301, Nonresident Lectures 1
- CHEM 332, Analysis of Separation Processes 3
- CHEM 372, Introduction to Process Dynamics and Control 1
- CHEM 390, Reaction Kinetics and Reactor Design 3
- Humanities or social sciences 3

**Semester 7 Credits**

- CHEM 432, Chemical Engineering Laboratory 4
- Electives* 9
- Humanities or Social Sciences 3

**Semester 8 Credits**

- CHEM 462, Chemical Process Design 4
- Humanities or social sciences 3
- Electives* 3
- Approved elective 3
CIVIL AND ENVIRONMENTAL ENGINEERING

Bachelor of Science Curriculum

The School of Civil and Environmental Engineering (CEE) offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to the B.S. degree: civil engineering or environmental engineering. Within civil engineering, while it is not necessary to do so, students may concentrate in structural engineering, geotechnical engineering, fluid mechanics and hydrology, water resource systems, or transportation. The environmental engineering curriculum emphasizes study of environmental engineering, water resources, and biophysical systems. Sample curricula are available in the CEE Undergraduate Program Office, 231 Hollister Hall.

Requirements for Admission to the Field:

Students planning to enter the field program in Civil and Environmental Engineering are required to complete the following courses before or during the first semester of the sophomore year with a grade of C- or better: ENGRD 201, Introduction to the Physics and Chemistry of the Earth, ENGRD 211, Computers and Programming, for students interested in transportation,

Field Program:

Civil Engineering Option

For the field program in Civil Engineering, students may elect to substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

Core Courses

Credits

ENGRD 203, Dynamics
3
ENGRD 241, Engineering Computation*
3
CEE 304, Uncertainty Analysis in Engineering
4
CEE 323, Engineering Economics and Management
3
CEE 331, Fluid Mechanics
4
CEE 341, Introduction to Geotechnical Engineering and Analysis
4
CEE 351, Environmental Quality Engineering**
3
CEE 361, Introduction to Transportation Engineering**
3
CEE 371, Modeling of Structural Systems
4

Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRD or approved communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.

*ENGRD 241 can be used to satisfy a field program requirement. If a student elects to use this course as a second distribution course, the student must take an additional field-approved elective to fulfill the core course requirements.

**ENGRD 270 may be accepted (by petition) as a substitute for CEE 351 or CEE 361. If they complete either CEE 376 or CEE 472 and also complete CEE 473. However, this substitute course then counts as a core course only and not as one of the required five CEE Design courses and field-approved electives.

Environmental Engineering Option

These option requirements apply to all students in the Classes of 2002 and later. For the field program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum:
Core Courses | Credits
--- | ---
Introductory Biology (BIO G 101 & 103, BIO G 105, or BIO G 107) | 4
ENGRD 241, Engineering Computation* | 4
CEE 304, Uncertainty Analysis in Engineering | 4
CEE 323, Engineering Economics and Management | 4
CEE 331, Fluid Mechanics | 4
CEE 341, Introduction to Geotechnical Engineering and Analysis | 4
CEE 351, Environmental Quality Engineering | 4
CEE 451, Microbiology for Environmental Engineering§ | 4
CEE 453, Laboratory Research in Environmental Engineering | 4
BEE 475, Environmental Systems Analysis | 3

Additional requirements include one field-approved elective and three design electives from a list of approved courses in the CEE Undergraduate Program. In addition, students must complete one technical communications course from among the courses designated ENGR 496 or approved communications courses. If the technical communications course is taken as an express art, then students must take an additional approved elective.

*ENGRD 241 can be used to satisfy the program requirement. If a student elects to use this course as a second distribution course, the student must take an additional field-approved elective to fulfill the core course requirements.

§The requirement for students prior to the class of 2002 is two field-approved electives and no requirement for a core course in introductory biology.

Civil and Environmental Engineering Honors Program
Eligibility
The bachelor of science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the faculty of the school. An honors program student must enter with and maintain a cumulative GPA of 3.5.

Content
A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Senior Honors Thesis (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member of a regularly recognized course in the College of Engineering, i.e., ENGRG 470: Peer Teaching in Engineering or CEE 401: Undergraduate Teaching in CEE (1-3 credits per/semester).

3. Advanced or graduate courses at the 500-level or above.

The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing
All interested students must apply no later than the beginning of the first semester of their senior year, but are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

Procedures
Each applicant to the CEE honors program must have a faculty adviser to supervise the student's individual program. The student must submit a letter from the student describing the specific honors proposal and include the name of the faculty adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

Engineering Minor Programs
The School of Civil and Environmental Engineering currently offers three engineering minor programs: civil infrastructure, engineering management, and environmental engineering (offered in cooperation with the Civil and Environmental Engineering Undergraduate Programs Offices, 221 Hollister Hall). Descriptions and requirements for each program follow:

Minor in Civil Infrastructure
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering management minor: BEE, A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE.

The minor in civil infrastructure is intended to introduce engineering undergraduates to the professional and management aspects of civil engineering and construction, including topics such as design, construction, and project management. The requirements for the civil infrastructure minor are outlined below. For further details, consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Required Courses (3):
   - CEE 304 Uncertainty Analysis in Engineering
   - ENGRG 270 Basic Engineering Probability and Statistics

II. Additional Courses: choose any 5 (groupings are for information only)*

Geotechnical Engineering
- CEE 341 Introduction to Geotechnical Engineering and Analysis
- CEE 640 Foundation Engineering
- CEE 641 Retaining Structures and Slopes
- CEE 644 Environmental Applications of Geotechnical Engineering

Structural Engineering
- CEE 371 Modeling of Structural Systems
- CEE 376 Physical and Computational Material Simulation
- CEE 472 Fundamentals of Structural Mechanics
- CEE 473 Civil Infrastructure Design I
- CEE 474 Civil Infrastructure Design II
- CEE 481 LRFD-Based Engineering of Wood Structures
- CEE 672 Fundamentals of Structural Mechanics
- CEE 673 Advanced Structural Analysis

Other Related Courses
- CEE 332 Hydraulic Engineering
- CEE 361 Introduction to Transportation Engineering
- CEE 595 Construction Planning and Operations

*Other CEE courses approved by petition in advance.

Academic Standards: A letter grade of C or better for each course in the minor.

Minor in Engineering Management
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering management minor: BEE, A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

The requirements for the engineering management minor are outlined below. For further details, consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Required Course: ENGRD 202 Mechanics of Solids
2. Additional Courses: choose any 5 (groupings are for information only)*

Geotechnical Engineering
- CEE 341 Introduction to Geotechnical Engineering and Analysis
- CEE 640 Foundation Engineering
- CEE 641 Retaining Structures and Slopes
- CEE 644 Environmental Applications of Geotechnical Engineering

Structural Engineering
- CEE 371 Modeling of Structural Systems
- CEE 376 Physical and Computational Material Simulation
- CEE 472 Fundamentals of Structural Mechanics
- CEE 473 Civil Infrastructure Design I
- CEE 474 Civil Infrastructure Design II
- CEE 481 LRFD-Based Engineering of Wood Structures
- CEE 672 Fundamentals of Structural Mechanics
- CEE 673 Advanced Structural Analysis

Other Related Courses
- CEE 332 Hydraulic Engineering
- CEE 361 Introduction to Transportation Engineering
- CEE 595 Construction Planning and Operations

*Other CEE courses approved by petition in advance.

Academic Standards: A letter grade of C or better for each course in the minor.

Minor in Engineering Management
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering management minor: BEE, A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

The requirements for the engineering management minor are outlined below. For further details, consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Required Course: ENGRD 202 Mechanics of Solids
2. Additional Courses: choose any 5 (groupings are for information only)*

Geotechnical Engineering
- CEE 341 Introduction to Geotechnical Engineering and Analysis
- CEE 640 Foundation Engineering
- CEE 641 Retaining Structures and Slopes
- CEE 644 Environmental Applications of Geotechnical Engineering

Structural Engineering
- CEE 371 Modeling of Structural Systems
- CEE 376 Physical and Computational Material Simulation
- CEE 472 Fundamentals of Structural Mechanics
- CEE 473 Civil Infrastructure Design I
- CEE 474 Civil Infrastructure Design II
- CEE 481 LRFD-Based Engineering of Wood Structures
- CEE 672 Fundamentals of Structural Mechanics
- CEE 673 Advanced Structural Analysis

Other Related Courses
- CEE 332 Hydraulic Engineering
- CEE 361 Introduction to Transportation Engineering
- CEE 595 Construction Planning and Operations

*Other CEE courses approved by petition in advance.

Academic Standards: A letter grade of C or better for each course in the minor.
or CEE 310 Introduction to Probability and Random Signals
CEE 323 Engineering Economics and Management
OR&IE 350 Financial and Managerial Accounting

II. Additional Courses—choose any 3*

CEE 490 Management Practice in Project Engineering
CEE 506 Civil and Environmental Systems
CEE 593 Engineering Management Methods: Data, Information, and Modeling
CEE 594 Economic Methods for Engineering and Management
CEE 595 Construction Planning and Operations
CEE 597 Risk Analysis and Management
CEE 598 Introduction to Decision Analysis
NBA 507 (formerly 401) Entrepreneurship for Scientists and Engineers
or MAE/ENGRG 461 Entrepreneurship for Engineers
or BEE 489 Engineering Entrepreneurship, Management and Ethics

*Other courses approved by petition in advance.
T&AM 310 may not be substituted for CEE 304.

Academic Standards: a letter grade of C or better for each course in the minor.

Minor in Environmental Engineering
(Offered in cooperation with the Department of Biological and Environmental Engineering)

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&REP, CHEME, COM S, EAS, ECE, M&E, MS&E, OR&IE.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation’s resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

The requirements for the environmental engineering minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall, or the Biological and Environmental Engineering Undergraduate Programs Office, 207 Riley-Robb Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

Students must select courses from the following group listings, with at least one course from each group.

Group A. Environmental Engineering Processes:
CEE 351 Environmental Quality Engineering
CEE 352 Water Supply Engineering
CEE 451 Microbiology for Environmental Engineering
CEE 453 Laboratory Research in Environmental Engineering
BEE 476 Solid Waste Engineering
BEE 478 Ecological Engineering
CEE 644 Environmental Applications of Geotechnical Engineering
CEE 651 Bioremediation
CEE 653 Water Chemistry for Environmental Engineering
CEE 654 Aquatic Chemistry
CEE 655 Pollutant Transport and Transformation in the Environment

Group B. Environmental Systems:
ENGRI 113/CEE 113* Solving Environmental Problems for Urban Regions (*May count only if taken before the student’s junior year.)
BEE 475 Environmental Systems Analysis
CEE 597 Risk Analysis and Management
CEE 623 Environmental Quality Systems Engineering
BEE 678 Nonpoint Source Models

Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanics:
CEE 331 Fluid Mechanics (CHEME 323 or M&E 323 may be substituted for CEE 331)
CEE 352 Hydraulic Engineering
BEE 371 Hydrology and the Environment
CEE 431/BEE 471 Geohydrology
CEE 432 Hydrology
CEE 436 Case Studies in Environmental Fluid Mechanics
CEE 437 Experimental Methods in Fluid Dynamics
BEE 473 Watershed Engineering
BEE 474 Drainage and Irrigation Systems
CEE 531 Flow and Contaminant Transport Modeling in Groundwater
CEE 533 Flow in Porous Media and Groundwater
CEE 655 Transport, Mixing, and Transformation in the Environment
BEE 671 Analysis of the Flow of Water and Chemicals in Soils
BEE 672 Drainage

Academic Standards: A letter grade of C- or better in each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Master of Engineering (Civil) Degree Program
The M.Eng. (Civil) degree program is a 30-credit (usually 10-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program’s 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional (design-option) or managerial (management-option) practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, with some options indicating an intensive, full-time session between semesters. The general degree requirements and admissions information are described above in the section entitled “Master of Engineering Degree Programs.” Each student’s program of study is designed individually in consultation with an academic adviser and then submitted to the school’s Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 590) and a two-course design project (CEE 501 and 502).
2) Specialization in a major concentration area—three to five courses in either environmental engineering, environmental fluid mechanics/hydraulics, geotechnical engineering, structural engineering, transportation management, or water resources and environmental systems engineering.
3) Technical electives.
4) Study in a related area or areas.

Courses taken as technical electives or in the related subject area(s) may consist of graduate or advanced courses in fields related to the major concentration area, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1) Five courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).
2) One course in finance, accounting, or engineering economics, as appropriate given a student’s background.
3) One course in individual and/or organizational behavior from a recommended list.
4) Three courses from a disciplinary or functional specialization, subject to adviser’s approval.

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. For the most current and accurate details, visit our web site at www.cs.cornell.edu/ugrad.

The Major

The bachelor of science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:

- qualified for Latin honors in the College of Engineering (basically, a cumulative GPA ≥ 3.5)
- at least two courses (3+ credit hours per course) of COM S course work at or above the 500-level (graded courses only; no seminars or two-credit project courses)
- at least six credits of COM S 490 (independent research) spread over two semesters, with a grade of A- or better each term.

See the COM S undergraduate web site for more information on eligibility: www.cs.cornell.edu/ugrad.

Content

Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math elective, or the specialization.

Timing

Honors determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: ugrad@cs.cornell.edu. The subject line for this message should read “HONORS TRACK.” Related questions may be addressed to the ugrad e-mail alias, or candidates can call or stop by 303 Upson Hall, 255-0982.

Preparation

Arrangements for doing COM S 490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their advisers and/or browse the department’s web page at www.cs.cornell.edu for specific leads on research opportunities. The Department of Computer Science reserves the right to make changes to the honors program requirements at any time. Generally speaking, all members of the same graduating class in COM S will be subject to the same honors criteria.

Minor in Computer Science

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Minor in Information Science: AEP, BEE, CHEM, COM S, EAS, ECE, M&AE, MSE, and ORIE. Information Science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. The minor has been designed to ensure that students have substantial grounding in all three of these areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing data occurring in the real world. All courses must be chosen from the course lists below. In addition, a letter grade of C or better is required; S-U courses not allowed.

Requirements

To complete the minor, the student must take at least six courses (18 credit minimum) chosen as follows:

- Statistics: one course
- Information systems (primarily computer science): two courses
- Human-centered systems (human-computer interaction and cognitive science): one course
- Social systems (social, economic, political, cultural, and legal issues): one course.
Elective: one additional course from either human-centered systems or social systems.

Statistics
An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

ENG 270 Basic Engineering Probability and Statistics
CEE 304 Uncertainty Analysis in Engineering
ECE 310 Introduction to Probability and Random Signals

Information Systems
COM 211 Computers and Programming*
CIS 230 Intermediate Web Design*
CIS 330 Applied Databases
LING 424 Computational Linguistics
CIS 430 Information Discovery
CIS 431 Web Information Systems
COM 432 Introduction to Database Systems
COM 465 Computer Graphics I
LING 474 Introduction to Natural Language Processing
OR&IE 474 Statistical Data Mining
COM 478 Machine Learning
OR&IE 480 Information Technology
CIS 501 Software Engineering
ECE 502 Fundamental Information Theory
COM 574 Language Technologies
COM 578 Empirical Methods in Machine Learning and Data Mining
*Computer Science majors cannot use CIS 230.
COM 211 cannot be used by majors for which it is a required course, e.g., Computer Science (COM S) and Operations Research and Industrial Engineering (OR&IE)

Human-centered Systems
COGST 101 Introduction to Cognitive Science
PSYCH 205 Perception
PSYCH 214 Cognitive Psychology
COMM 240 Communication and Information Technology
COMM 245 Psychology of Social Computing
PSYCH 280 Introduction to Social Psychology
PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display
COMM 345 Human-Computer Interaction Design
PSYCH 347 Psychology of Visual Communications
PSYCH 380 Social Cognition
PSYCH 413 Information Processing: Conscious and Unconscious
PSYCH 416 Modeling Perception and Cognition
COMM 440 Advanced Human-Computer Interaction Design
COMM 450 Language and Technology
COM S 465 Computer Graphics I

Social Systems
S&TS 250 Technology in Society
S&TS 292 Inventing an Information Society
ECON 301 Microeconomics*
ECON 313 Intermediate Microeconomic Theory*
SOC 304 Social Networks and Social Processes
STS 349 Media Technologies
S&TS 355 Computers: From Babbage to Gates
S&TS 387 The Automatic Lifestyle: Consumer Culture and Technology
LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors
S&TS 411 Knowledge, Technology, and Property
ECON 419 Economic Decisions Under Uncertainty
COMM 428 Communication Law
OR&IE 435 Introduction to Game Theory*
STS 438 Minds, Machines, and Intelligence
ECON 467 Game Theory*
ECON 476/576 Decision Theory I and II
*Only one of ECON 301 and ECON 313 may be taken for IS credit. Only one of OR&IE 435 and ECON 467 may be taken for IS credit.

Master of Engineering (Computer Science) Degree Program
The M.Eng. program in computer science is a one-year program that can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high-performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program in computer science includes several upper-division and graduate courses and a faculty-supervised project. The course and project requirements are flexible and allow students to build up a program that closely matches their interests. In particular, slightly under half the courses may be taken outside the computer science department (for example, many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have at least one credit and no more than eight credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. "early admit" program.

For more information about the M.Eng. program in computer science and the early admission option for Cornell seniors, please consult our web page at www.cs.cornell.edu/grad/meng.

Cooperative Program with the Johnson Graduate School of Management
Undergraduates majoring in computer science may be interested in a program that can lead, in the course of five years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

Earth and Atmospheric Sciences

EARTH AND ATMOSPHERIC SCIENCES
T. E. Jordan, chair; S. J. Riha, co-chair;
Directors of Undergraduate Studies:

M. C. Kelley, F. H. T. Rhodes, W. M. White,
D. S. Wilks, M. W. Wysocki

Bachelor of Science Curriculum
We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is also a powerful planet, with geologic hazards such as earthquakes, hurricanes, and volcanic eruptions that alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important for both future policymakers and ordinary citizens.

Because the human need to understand the earth is so pervasive, we provide our students with three tracks covering the spectrum of modern earth sciences.

The Department of Earth and Atmospheric Sciences offers an undergraduate engineering program which permits students to pursue one of three options leading to a B.S. degree in geological sciences: the geoscience option, the atmospheric science option, and the science of earth systems (SES) option. The geoscience option emphasizes the structure, composition, and evolution of our planet; the atmospheric science option covers the planetary processes producing weather and climate; and the SES option is concerned with processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment.

An engineering minor is available in one or a combination of these programs.
Atmospheric Science Option

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather, climate, and applications to the important practical problems of forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes, and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. The atmospheric science option satisfies both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist, which also qualifies graduates for positions in private-sector forecasting and environmental consulting firms. The option also provides excellent preparation for graduate work in atmospheric science and related fields.

Students following the atmospheric science option are required to take ENGRD 270 as an engineering distribution course. The field program includes required introductory courses in atmospheric science (EAS 131 and 133) and EAS 250 (Instrumentation and Observations). Many of the upper division field courses require EAS 341 (Atmospheric Thermodynamics and Hydraulics) and EAS 345 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 331 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (General Meteorology). Field-approved electives may be chosen from other EAS courses or from selected upper-division courses offered in other departments.

Geoscience Option

The geoscience option reveals Earth’s turbulent history from the formation of our solar system to the plate tectonic cycles that dominate Earth’s present behavior. That history is highlighted by the co-evolution of life and the Earth from the origin of life to the modern inter-glacial phase during which our species has so proliferated. Topics of study also include the fundamental processes responsible for earthquakes, volcanic eruptions, and mountain building. The geoscience option prepares students for advanced study in geology, geophysics, geochemistry, and geobiology, and careers in mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industry should consider including economics courses among their liberal studies distribution courses. Students who want a more general background or want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the same field. The field-approved electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300 level or above. Students may request substitution of EAS 491 and 492, Undergraduate Research, for a four-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.

In addition to course work, students learn by involvement in research projects. Facilities in the department are used for processing seismic signals and digital images of the Earth’s surface, instruments for high-precision isotope and element analyses, and extensive libraries of earthquake records, satellite images, and exploration seismic records. High-pressure, high-temperature mineral physics research uses the diamond anvil cell and the Cornell High Energy Synchrotron Source (CHESS). Undergraduates have served as field assistants for faculty members and graduate students in Argentina, British Columbia, the Aleutian Islands, Scotland, Switzerland, Tibet, and Barbados. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

Science of Earth Systems (SES) Option

The Science of Earth Systems (SES) option provides an integrated view of Earth processes critical to the understanding of our environment. This scientific understanding is the primary foundation used to determine what degree humanities and social sciences can modify or adapt to future change. The SES option is for students interested in careers and/or graduate study in any of the Earth system sciences or a future in environmental law, environmental engineering, science teaching, or environmental policy. The SES option enables students in the College of Engineering to take part in the multidisciplinary, intercollege program in the Science of Earth Systems. Collaborations with other departments provide breadth and depth to the program.

The SES option emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the Earth system including the lithosphere, biosphere, hydrosphere, and atmosphere.

Students are required to take a second semester of introductory biology, and ENGRD 201 (Physics and Chemistry of the Earth) as one of the engineering distribution courses. The option requires a set of three core courses, normally taken in the junior or senior years, which provide breadth and integration. An additional set of five intermediate to advanced courses are selected to provide depth and a degree of specialization. These courses permit the student to specialize in such areas as climate dynamics, biogeochemistry, ocean sciences, environmental geosciences, ecological systems, hydrological sciences, and soil sciences.

The field requirements for the SES option are summarized as follows. CHEM 208 and ENGRD 201/EAS 201 are required. The field program includes BIO G 101/103-102/104 (or BIO G 109–110), BIOEE 261, the three SES core courses listed below, five additional courses selected with the adviser’s approval to provide specialization in one or a combination of the areas covered by SES, and an additional field-approved elective. Two of the specialization courses will count as field-required courses, and three as field-approved electives. At least three of the field-approved electives must be non-EAS courses. The three SES core courses are:

- EAS 302 Evolution of the Earth System—Spring. 4 credits
- EAS 321 Biogeochemistry also NTRES 321—Fall. 4 credits
- EAS 331 Climate Dynamics also ASTRO 331—Fall. 4 credits

Areas of specialization include (but are not limited to) the following:

- Biogeochemistry
- Climate dynamics
- Ecological systems
- Environmental biophysics
- Environmental geology
- Hydrological sciences
- Soil science
- Ocean sciences

In addition to faculty in or associated with the Department of Earth and Atmospheric Sciences, faculty currently associated with the SES program include the following:

W. Brutsaert (CEE); R. Howarth (EEB); J.-Y. Parlange (BEE); J. Yavitt (NTRES).

Earth and Atmospheric Science Honors Program

Eligibility

The bachelor of science degree (in geological sciences) with honors will be granted to students who, in addition to having completed
the requirements for a bachelor's degree, have satisfactorily completed the honors program in Earth and Atmospheric Sciences and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5.

Content
In addition to the minimum requirements, a student must

1. take at least nine credits above the minimum required for graduating and approved by the upperclass adviser;
2. have a written proposal of the honors project accepted by his or her faculty adviser and the director of undergraduate studies;
3. complete an honors thesis involving research (EAS 491-492 or 499, two or more credits each) of breadth, depth, and quality.

Timing
A student interested in completing an honors thesis must, by the beginning of the seventh semester, have a written proposal of the honors project accepted by the student's adviser and the director of undergraduate studies.

Procedures
Each applicant to the Earth and Atmospheric Sciences honors program must have a faculty adviser to supervise the honors thesis research. Written approval by the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Minor in Geological Sciences
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the Geological Sciences minor: BEE, A&EP, CEE, CHEM, COM S, ECE, M&AE, MS&E, and OR&IE.

Whereas many engineering students will encounter and have to understand the natural operating systems of Earth in their professions, the tools and techniques used by Earth scientists to understand these solid and fluid systems over the widest scales of space and time are of use to a wide cross-section of engineering students. This minor is designed to give a flexible set of options for students looking to complement training in their major field with a core education in Geological Sciences.

The requirements for the Geological Sciences minor are outlined below. For further details consult the Undergraduate Programs Office, 2122 Snee Hall, or www.eas.cornell.edu.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Choose one or both of these courses:
   - ENGRD 201 Introduction to the Physics and Chemistry of the Earth
   - EAS 210 Introduction to Field Methods in Geological Sciences

II. Choose at least two courses from the following list of core courses:
   - EAS 302 Evolution of the Earth System
   - EAS 321 Introduction to Biogeochemistry
   - EAS 326 Structural Geology
   - EAS 355 Mineralogy
   - EAS 356 Petrology and Geochemistry
   - EAS 375 Sedimentology and Stratigraphy
   - EAS 388 Geophysics and Geotechnics

III. To complete the minor, these three to four courses are to be supplemented with two to three additional EAS courses at the 300 level or higher. These may include, for example, additional courses from the above list of core courses, undergraduate research courses, and outdoor field courses.

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

ELECTRICAL AND COMPUTER ENGINEERING

Bachelor of Science Curriculum
The Department of Electrical and Computer Engineering offers an undergraduate field program which leads to a B.S. degree in electrical and computer engineering. The curriculum provides a foundation which reflects the broad scope of this engineering discipline.

Concentrations include computer engineering and digital systems; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric and space physics; and semiconductor devices and applications.

Electrical and Computer Engineering Field Program
Students planning to enter the field program in Electrical and Computer Engineering must take ENGRD 230 as an engineering distribution course. The fall of the sophomore year is the preferred term for ENGRD 230 for students without advanced standing in mathematics. Electrical and Computer Engineering students with an interest in computer engineering are encouraged to take ENGRD 211 as an engineering distribution course prior to entry into the field program. In addition, the field program normally begins in the spring of the sophomore year, as shown below. All of these courses (except ECE 210 and ENGRD 230) are taught only once each academic year, either spring or fall, as indicated in the course descriptions.

†Must include one course at the 300 level or above (see Electrical and Computer Engineering Web Handbook for details).

All students graduating with a B.S. degree must fulfill the engineering design requirement and the college technical writing requirement. Two culminating design experience (CDE) courses (4 credits each) satisfy the engineering design requirement. The technical writing requirement is discussed in the College of Engineering section of this book.

Undergraduate specialization is achieved through the various electrical and computer engineering elective courses, as well as other courses in related technical fields within engineering, physics, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

An electrical and computer engineering honors program also exists for those students who apply between their fifth and sixth semesters and meet the program entrance requirements. The honors program requires an additional senior ECE course; a required senior year honors project, at the appropriate level, with an ECE faculty member, and completion of the honors seminar in the junior year. Details are available via the electrical and computer engineering homepage located through the web at
Eligibility, Entry, and Continuation
A student must apply to enter the ECE Honors Program and may do so as early as the beginning of the fifth semester or as late as the end of the sixth semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped from the honors program by College of Engineering regulations. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.

Honors Seminar
Any student in the honors program is required to take (or to have taken) an honors seminar during his or her junior year. The Honors Seminar is a two-credit course (offered spring only) consisting of a weekly series of introductory research lectures by Electrical and Computer Engineering faculty members. Each Honors Seminar enrollee will be required to write two short papers on topics covered in the lecture series. Many Electrical and Computer Engineering faculty members will give a lecture or short series of lectures as part of the Honors Seminar. Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program must receive letter grades for the Honors Seminar.

Honors Project
Any student in the honors program is required to accumulate at least three credit hours from a senior year honors project with an ECE faculty member, consisting either of design, or directed reading. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects explicitly require a written submission summarizing and concluding the project.

Additional Course Work
Any student in the honors program is required to take at least three credit hours of advanced (senior level) ECE course work that has at least a 300-level prerequisite. These credit hours are in addition to any credit hours required as part of the ECE field program.

The program described above requires honors program participants to amass at least nine credit hours over and above the 128 credit hours required for a B.S. degree; thus an honors degree requires a minimum of 157 credit hours.

Minor in Electrical and Computer Engineering
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the Electrical and Computer Engineering minor: BEE, A&EP, CEE, CHEM, COM S, EAS, M&AE, MS&E*, ORRIE. (*MS&E students planning to pursue this minor must receive prior written approval from both MS&E and ECE, via petition.)

The School of Electrical and Computer Engineering enrolls students who wish to complement their major field by obtaining a background in electrical and computer engineering. The minor offers the opportunity to study analog and digital circuits, signals and systems, electromagnetic fields, and additionally specialize at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, or space engineering.

The requirements for the Electrical and Computer Engineering minor are outlined below. For further details consult the Electrical and Computer Engineering Undergraduate Programs Office, 222 Phillips Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Courses:
- ECE/ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers (4 credits)
- ENGRD 230 Introduction to Digital Logic Design

II. Two of the following:
- ECE 301 Signals and Systems I
- ECE 303 Electromagnetic Fields and Waves
- ECE/CS 314 Computer Organization
- ECE 315 Introduction to Microelectronics

III. One other ECE course at the 300 level or above (3 credit minimum)
IV. One other ECE course at the 400 level or above (3 credit minimum)

Academic Standards: A letter grade of C- or better for each course to be counted in the minor and a cumulative GPA of 2.3 or better for all courses in the minor.

Master of Engineering (Electrical) Degree Program
The M.Eng. (Electrical) degree program prepares students either for professional work in electrical and computer engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including a minimum of four courses in electrical and computer engineering. An electrical and computer engineering design project is also required and may account for three to eight credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the eight-credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Cornell undergraduate students with advanced standing frequently take one or more graduate-level courses prior to graduation and may actually begin accumulating credit toward the Master of Electrical and Computer Engineering program in their last semester in undergraduate work. Application of credits taken while an undergraduate at Cornell must be approved in advance of the last semester of undergraduate work.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical and Computer Engineering Program web site at www.ece.cornell.edu/students/progmeng.shtml.

MATERIALS SCIENCE AND ENGINEERING

Bachelor of Science Curriculum
Students majoring in materials science and engineering are required to take ENGRD 261 or ENGRD 262 before affiliating with the field. It is strongly recommended that these courses be taken as engineering distribution during the sophomore year. The field program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

In the field, students are required to complete a series of electives to develop knowledge of materials, such as biomaterials, ceramics, polymers, and semiconductors. Application-related courses include the areas of biotechnology and life science, energy and environment, materials for information science, nanotechnology and technology management and ethics. These requirements are satisfied through a series of technical electives taken mainly in the senior year, selected from multiple engineering and science departments. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current...
The requirements of a Bachelor of Science degree in materials science and engineering are:

1. Completion of the common engineering curriculum including liberal studies electives
2. ENGRD 261, Mechanical Properties of Materials: From Nanodevices to Superstructures OR ENGRD 262, Electronic Materials for the Information Age
3. Completion of 12 required field courses:
   - MS&E 204 Materials Chemistry
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 302 Mechanical Properties of Materials, Processing, and Design
   - MS&E 303 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations
   - MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials
   - MS&E 307 Materials Design Concepts I
   - MS&E 311 Junior Lab I
   - MS&E 312 Junior Lab II
   - MS&E 403/405 Senior Materials Lab I or Senior Thesis I
   - MS&E 404/406 Senior Materials Lab II or Senior Thesis II
   - MS&E 407 Materials Design Concepts II
4. Two materials-related electives covering two groups of different materials
5. Three application-related electives in at least two different types of applications
6. Two applications-related electives must be taken from outside MS&E
7. One additional technical elective outside of MS&E

The department's course curriculum consists of ENGRD 261 or ENGRD 262, the 12 required field courses, and the five technical electives constituting the materials and application-related requirements.

Materials Science and Engineering Honors Program

Eligibility
The bachelor of science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in materials science and engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with, and maintain, a cumulative GPA above 3.5.

Content
The requirements for an honors degree in materials science and engineering are:
1. Students must complete at least nine credits beyond the minimum required for graduation in materials science and engineering. This increases the minimum number of credits for graduation with honors to 140. These additional courses must be technical in nature, i.e., in engineering, mathematics, chemistry, and physics at the 400- and graduate-level, with selected courses at the 300-level. All courses satisfying this requirement must be approved by the upper class adviser.
2. Senior honors thesis (MS&E 405/406) with a grade of at least A.

Note: Undergraduates typically enter the honors program at the beginning of their senior year (seventh semester) and thus must have a cumulative GPA equal to or greater than 3.5 at that point.

Timing
All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member to work on a senior honors thesis during the second semester of their junior year. A student must be in the program for at least two semesters prior to graduation.

Procedures
Each application to the materials science and engineering honors program must have a faculty adviser to supervise the honors program. Written approval of the faculty member who will direct the research is required. After the student's grade-point average is verified, the student will be officially enrolled in the honors program.

Minor in Materials Science and Engineering

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the materials science and engineering minor: BEE, A&EP, CEE, CHEM, COM S, EAS, ECE, M&AE, OR&IE.

Material properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides engineers in related fields with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

The requirements for the materials science and engineering minor are outlined below. For further details, consult the Materials Science and Engineering Undergraduate Program Office, 214 Bard Hall.

Requirements
To complete the minor, students must take at least six courses (minimum of 18 credits), chosen as follows:
1. ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures OR ENGRD 262, Electronic Materials for the Information Age
2. Two of
   - MS&E 204 Materials Chemistry
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 302 Mechanical Properties of Materials, Processing, and Design
   - MS&E 303 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations
   - MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials
3. Three electives chosen from:
   - Any MS&E course at the 300 level or above.
   - Selected courses in materials properties and processing (at the 300 level or above) from A&EP, CHEM, CEE, ECE, M&AE, PHYS, and CHEM, as approved by the MS&E undergraduate coordinator.

Academic Standards: A letter grade of C or better for each course in the minor.

Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This program consists of 30 credits, including course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One three-credit technical elective must include advanced mathematics (modeling, computer application, or computer modeling), beyond the MS&E undergraduate requirements.

MECHANICAL AND AEROSPACE ENGINEERING

Members of the faculty of the graduate fields of Aerospace Engineering and Mechanical Engineering are listed in the Announcement of the Graduate School.

Bachelor of Science Curriculum in Mechanical Engineering

The upperclass field program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction...
to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

**Mechanical systems, design, and materials processing** is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

**Engineering of fluids, energy, and heat-transfer systems** is concerned with the efficient conversion of energy in electric power generation and aerospace and surface transport systems. This is done with an impact of engineering activity (including pollutants and noise), aeronautics, and with the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering, heat, energy, and power engineering; and thermo-fluid sciences.

The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomore students who plan to enter the Mechanical Engineering program take ENGRD 202 (also T&AM 202) as an engineering distribution course. They also are encouraged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of study abroad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students must be approved by the student's advisor.

The course requirements for the degree of bachelor of science in Mechanical Engineering are as follows:

1. **Completion of the Common Curriculum.** During the upperclass years this will typically mean earning credit for five humanities or social science courses.

2. **Completion of the field requirements,** which consist of eleven required courses (beyond ENGRD 202 already mentioned), and five field-approved elective courses.

   The eleven required courses are:

   - **M&AE 212, Mechanical Properties and Selection of Engineering Materials**
   - **M&AE 221, Thermodynamics**
   - **M&AE 225, Mechanical Design and Synthesis**
   - **T&AM 203, Dynamics**
   - **ECE 210, Introduction to Circuits for Electrical and Computer Engineers**
   - **M&AE 323, Introductory Fluid Mechanics**
   - **M&AE 324, Heat Transfer**
   - **M&AE 325, Mechanical Design and Analysis**
   - **M&AE 326, System Dynamics**
   - **M&AE 427, Fluids/Heat Transfer Laboratory**
   - **M&AE 428, Engineering Design**

**Electives**

Students should use the flexibility provided by the field-approved electives, approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

**Field Approved Electives**

The upper-level program includes five field-approved electives. Using these five courses, the student must satisfy the following requirements.

At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student. Typically these are two courses chosen from an appropriate subset of the school’s upper-class offering. However, students may petition for approval of two related courses to form a custom concentration.

The standard concentrations are:

- **Fluids/Aerospace Engineering, M&AE 305, 306, 415, 423, 506, 507**
- **Thermal Systems Engineering, M&AE 423, 449, 453, 501, 506, 543**
- **Materials Processing, M&AE 412, 415, 514**
- **Mechanical Systems, M&AE 412, 471, 470, 478, 479, 525, 565**
- **Biomechanics, M&AE 463, 464, 505**

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&AE 401, 412, 426, 441, 470, 479, 486, 491, and 525.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper-level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after MATH 294. The course must include some material on statistics. Currently, the approved courses are T&AM 310, ORIE 270, and CEE 304.

One of the field-approved electives can be viewed as a technical elective and may be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizational behavior are not accepted. Advisors may approve such courses as approved electives.

**Approved Electives**

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses on business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

The faculty recommendation on humanities/social sciences electives is that students build a program that includes studies in:

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

An additional graduation requirement of the field program is proof of elementary competence in computer-aided design and technical drawing for students affiliating in spring 2003 or later. The demonstration of competence is expected to take place in M&AE 225, Mechanical Synthesis. This proof may also be given in other ways, for example:

a. A course with computer-aided design with technical drawing in high school or in a community college,

b. another computer-aided design and technical drawing course at Cornell, or

c. a departmental examination.

The technical writing requirement of the Common Curriculum is satisfied by M&AE 427.

**Minor in Mechanical Engineering**

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in
Typical focus in Mechanical Systems/Design:

The following two courses:

- M&E 325 Mechanical Design and Analysis
- M&E 326 System Dynamics

The remainder from this list, of which at least one course must satisfy requirement 1b:

- M&E 306 Spacecraft Engineering
- M&E 386/486 Automotive Engineering
- M&E 412 Smash and Crash: Mechanics of Large Deformations
- M&E 417 Introduction to Robotics: Dynamics, Control, Design
- M&E 463 Neuromuscular Biomechanics
- M&E 464 Orthopaedic Tissue Mechanics
- M&E 478 Feedback Control Systems
- M&E 479 Modeling and Simulation of Mechanical and Aerospace Systems
- M&E 490 Special Investigations in Mechanical and Aerospace Engineering
- M&E 491 Design Projects in Mechanical and Aerospace Engineering
- M&E 514 Design for Manufacture and Assembly
- M&E 565 Biomechanical Systems—Analysis and Design
- M&E 571 Applied Dynamics

Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as M&E 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Aerospace) Degree Program

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design. The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer and materials and manufacturing engineering, mechanical systems and design, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. Any subsequent changes must also be approved by the committee. An individual student’s curriculum includes a four- to eight-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 28 credits (of which at least 20 credits must have letter grades). The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have the special approval of the M&E Master of Engineering Committee. The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of six credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&E graduate field office (107 Upson Hall) for additional degree requirements.

Master of Engineering (Mechanical) Degree Program

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design. The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer and materials and manufacturing engineering, mechanical systems and design, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. Any subsequent changes must also be approved by the committee. An individual student’s curriculum includes a four- to eight-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades). The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have the special approval of the M&E Master of Engineering Committee. The technical electives may be courses of appropriate level in mathematics, physics,
The following courses, or equivalents, are included in the 30-credit program:

**Fall term**
- NS&E 509, Nuclear Physics for Applications
- NS&E 612, Nuclear Reactor Theory
- NS&E 633, Nuclear Reactor Engineering
- Technical elective

**Spring term**
- NS&E 545, Energy Seminar
- Technical elective
- Engineering design project
- Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

- A&EP 606/ECE 581, Introduction to Plasma Physics (fall, 4 credits)
- A&EP 607, Basic Plasma Physics (spring, 4 credits)
- A&EP 661, Microcharacterization (fall, 3 credits)
- ECE 457, Silicon Device Fundamentals (fall, 4 credits with lab)
- M&AE 478/CHM E 372, Feedback Control Systems (fall, 4 credits)
- MS&E 459, Physics of Modern Materials Analysis (spring, 3 credits)
- MS&E 603, Analytical Techniques for Materials Science (spring, 4 credits)
- NS&E 484/A&EP 484/ECE 484/M&AE 459, Introduction to Controlled Fusion, Principles and Technology (spring, 3 credits)
- NS&E 521, Radiation Effects in Materials (fall, 1-3 credits)

**OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING**

The foundation of the B.S. curriculum is the development of basic skills in calculus, statistics, probability, mathematical programming, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. In the senior year the curriculum is quite flexible. Students take OR&IE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, or financial engineering.

Because of the wide range of career goals among our students, the B.S. program is designed with a minimum of required courses and a large number of required electives. Students should consult with their field advisers to select electives that best meet their future goals.

The faculty have not sought ABET accreditation of the B.S. curriculum as a program in industrial engineering. Industrial engineering curricula, while excellent for preparing industrial engineers, do not have the flexibility that the wide range of our students requires. Nonetheless, by proper selection of field electives, graduates of the B.S. program can and do become highly successful and competent industrial engineers. (Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.)

A student who intends to enter the field program in Operations Research and Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&IE field program and the typical terms in which they are taken are as follows:

<table>
<thead>
<tr>

**Bachelor of Science Curriculum in Operations Research and Industrial Engineering**

The program is designed to provide a broad education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. The program prepares students for a wide range of careers including operations research, industrial engineering, entrepreneurship, information technology, operations management, consulting, financial engineering, financial services, and management.

**Undergraduate Study**

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs such as those in engineering physics, materials science and engineering, computer science, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

**Master of Engineering (Nuclear) Degree Program**

The two-term curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Center for Nuclear Sciences are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

**Nuclear Science and Engineering**

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

**Announcement of the Graduate School.**

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. **Announcement of the Graduate School.**

Eligibility
The bachelor of science degree with honors will be granted to students who, in addition to having completed the degree requirements, have satisfactorily completed the honors program in Operations Research and Industrial Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of at least 3.5.

Minors

Mathematics Minor
This minor requires the student to develop expertise in mathematics. The goal of the program is to provide the student with a firm understanding of mathematical principles and the ability to apply this knowledge in real-world situations. The requirements for the mathematics minor are outlined below. For further details consult the Mathematics Department.

Operations Research and Engineering Minor Program

Eligibility

The bachelor of science degree with honors will be granted to students who, in addition to having completed the degree requirements, have satisfactorily completed the honors program in Operations Research and Industrial Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of at least 3.5.

Minor in Industrial Systems and Information Technology

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the minor: BEE, A&EP, CEE, CHEM, COM S, EAS, ECE, M&A, E, MS&E. The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and information technology systems.

Course Requirements

I. Required Courses:
- ENGRD 270 Basic Engineering Probability & Statistics
- OR&IE 360 or ECE 310 Basic Engineering Probability & Statistics II or Introduction to Probability & Random Signals

II. Four courses (11 credits minimum) taken from the following list:
- OR&IE 361 or ECE 411 Introductory Engineering Stochastic Processes I or Random Signals
- OR&IE 476 Applied Linear Statistical Models
- OR&IE 467 Simulation Modeling and Analysis
- MATH 472 or BTRY 409 Basic Probability Theory or Statistics
- BTRY 602 Statistical Methods II
- BTRY 603 or ILRST 411 Statistical Methods III or Statistical Analysis of Qualitative Data
- ILRST 310 Statistical Sampling
- ILRST 314 Graphical Methods for Data Analysis
- ILRST 410 Techniques of Multivariate Analysis

*Other course options approved by petition in advance. The student should be aware that some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Minor in Information Technology

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the minor: BEE, A&EP, CEE, CHEM, COM S, EAS, ECE, M&A, MS&E.

The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and information technology systems.
service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

The requirements for the industrial systems and information technology minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

**Requirements**

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. At least three of the following:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&IE 310 Industrial Systems Analysis
   - OR&IE 320 Optimization I
   - OR&IE 480 Information Technology for Operations Research and Industrial Technology

II. The remaining courses/credit hours from the following:
   - OR&IE 350 Financial and Managerial Accounting
   - OR&IE 416 Design of Manufacturing Systems
   - OR&IE 451 Economic Analysis of Engineering Systems
   - OR&IE 525 Production Planning and Scheduling Theory and Practice
   - OR&IE 552 Revenue Management
   - OR&IE 577 Quality Control
   - OR&IE 580 Simulation Modeling and Analysis

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

**Minor in Operations Research and Management Science**

*Eligibility*

Engineering undergraduates affiliated with the following fields are eligible to participate in the operations research and management science minor: BEE, A&EP, CEE, CHEM, COM S, EAS, ECE, M&A, MS&E. The field of operations research and management science (OR/MS) aims to provide rational bases for decision making by seeking to understand and model complex situations to understand and model complex situations with particular emphasis on applications. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

The requirements for the operations research and management science minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

**Requirements**

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Choose three courses from the following list:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&IE 320 Optimization I
   - OR&IE 321 Optimization II
   - OR&IE 360 Engineering Probability and Statistics II
   - OR&IE 361 Introduction Engineering: Statistical Processes I
   - OR&IE 580 Simulation Modeling and Analysis

II. These courses are to be supplemented with additional OR&IE courses at the 300 level or higher, so that entire program includes at least six courses and at least 18 credits. For example, taking the remaining three options on this list would suffice.

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

**Master of Engineering (OR&IE) Degree Program**

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project on a real problem. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems in manufacturing, information, finance, and nonprofit organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is intended for three groups of students: graduates who wish to expand their practical knowledge in the field; Cornell undergraduates lacking exposure to the field; Cornellians with strong background in math-based fields who want to take advantage of OR&IE courses in the United States.

To ensure compatibility, the program in two semesters, the student should have completed courses in probability and statistics and in computer science, as well as four semesters of multivariate calculus. Program requirements include one course of OR&IE courses plus one project course chosen from a broad array of electives, resulting in a specific project course results in completion of one of several options within the program. These include the applied operations research option, the manufacturing option, the financial engineering option, the systems engineering option, the information technology concentration, and the Semester in Manufacturing. Students interested in an option other than the applied operations research option should obtain further information from the following: Center for Manufacturing Enterprise, 207 Hollister Hall, 607-255-7757; financial engineering option and information technology option, 201 Frank H. T. Rhodes Hall, 607-255-9128; Semester in Manufacturing option, 304 Sage Hall, 607-255-4091; systems engineering option, 207 Hollister Hall, 607-255-7757. For students lacking an undergraduate degree in Operations Research, the financial engineering option, which is highly specialized, may entail additional prerequisites or more than two semesters.

I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Engineering.

- **Fall term**
  - OR&IE 516, Case Studies
  - OR&IE 893, Applied OR&IE Colloquium
  - M.Eng. Project
  - Technical electives
  - Minimum of 12

- **Spring term**
  - OR&IE 894, Applied OR&IE Colloquium
  - M.Eng. Project
  - Technical electives
  - Minimum of 10

II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 520, 523, and 560 will take other OR&IE electives in their place):

- **Fall term**
  - OR&IE 560, Engineering Probability and Statistics II
  - OR&IE 520, Optimization I
  - OR&IE 522, Topics in Linear Optimization
  - OR&IE 516, Case Studies
  - OR&IE 580, Simulation Modeling and Analysis
  - OR&IE 893, Applied OR&IE Colloquium
  - M.Eng. Project
  - Technical electives
  - Minimum of 10

- **Spring term**
  - OR&IE 523, Introduction to Stochastic Processes I
  - OR&IE 894, Applied OR&IE Colloquium
  - M.Eng. Project
  - Technical electives
  - Minimum of 8
The M. Eng. portion.

who do not already have it when beginning

usual three years for such a combination.

meeting the business-degree requirements

permits degrees in two years rather than the

for work experience between the M. Eng. and

Management (JGSM).

percent of the students in the JGSM have

systems, and much of the analytical methodo­

program should be discussed with the

the operation of production and service

because modern management is concerned

office of the Johnson Graduate School of

in designing these systems.) This early start on

is the same as that used by systems engineers

undergraduates from other schools, it may be

time out for work experience. For

undergraduates from other schools, it may be

feasible to complete the M. Eng./M.B.A.

completed in six years at Cornell, with

time out for work experience. For

undergraduates from other schools, it may be

be completed in six years at Cornell, with

work experience if they do not already have it on

coming to Cornell. This accelerated program

often incorporates the Twelve-Month M.B.A.

Program of the Johnson Graduate School of

Management (JGSM).

An advantage for OR&IE majors is that, as part

of their undergraduate and/or M. Eng.

curriculum, they study several subjects that are

required for the M.B.A. degree. (This is

because modern management is concerned

with the operation of production and service

systems, and much of the analytical methodology

required to deal with operating decisions is

the same as that used by systems engineers in

designing these systems.) This early start on

meeting the business-degree requirements

permits degrees in two years rather than the

usual three years for such a combination.

The details of planning courses for this

program should be discussed with the

admissions office of the JGSM. Since 95

percent of the students in the JGSM have

work experience, there will typically be a gap

for work experience between the M. Eng. and

M.B.A. portions of the program for students

who do not already have it when beginning

the M. Eng. portion.

Further details and application forms may be

obtained at the office of the School of

Operations Research and Industrial

Engineering, 201 Frank H. T. Rhodes Hall (or

meng@cornell.edu), and at the admissions

office of the Johnson Graduate School of

Management (mbs@johnson.cornell.edu).

The Knight Scholars program, open to Cornell

ingeering graduates, provides financial sup­

port for the M.Eng./M.B.A. combination.

Further details are available in 146 Olin Hall,

(607) 255-7415.

STATISTICAL SCIENCE DEPARTMENT

The universitywide Department of Statistical

Science coordinates undergraduate and gradu­

ate study in Statistics and Probability.

A list of suitable courses can be found in the

Interdisciplinary Centers, Programs, and

Studies section at the front of this catalog.

SYSTEMS ENGINEERING

M. Campbell, R. D'Andrea, R. A. Davidson,

E. Garcia, A. R. George, P. L. Jackson,

Master of Engineering (Systems) Degree Program

The M.Eng. (Systems) degree program is a 30-

credit (usually nine-course) curriculum
designed to prepare students for professional

practice. Applicants must hold an ABET-

accredited (or equivalent) undergraduate
degree in engineering. Those without such

preparation will require course work beyond

the graduate program's 30-credit minimum to

fulfill the engineering preparation require­

ment. The general degree requirements and

admissions information are described above in

the section "Master of Engineering Degree

Programs." Each student's program of study is
designed individually in consultation with an

academic adviser and approved by the

Director of Graduate Studies for Systems.

For the M.Eng. (Systems) program, the

requirements are:

1) SYSEN 510 Applied Systems Engineering

I, SYSEN 520 Applied Systems Engineering II, Project Management (CEE 590), and a two-semester design project (SYSEN 590).

2) Electives may be taken from three
categories of courses: Modeling and
Analysis, Applications, and Systems
Management. At least one course must be
taken from the Modeling and Analysis
category, and no more than one may be
taken from the Systems Management
category. A list of pre-approved electives
is on the Systems Engineering web site at

THEORETICAL AND APPLIED

MECHANICS

T. J. Healey, chair; J. A. Burns, K. B. Cady,

J. M. Guckenheimer, C. Y. Hui, J. T. Jenkins,

and Industrial Engineering may be

interested in a cooperative program at Cornell

that leads to both Master of Engineering and

Master of Business Administration (M.B.A.)
degrees. With appropriate curriculum planning, such a combined B.S./M.Eng./M.B.A. program can be completed in six years at Cornell, with

time out for work experience. For

undergraduates from other schools, it may be

feasible to complete the M. Eng./M.B.A.

program in two years, possibly with an

intervening summer or time out for work

experience if they do not already have it on

coming to Cornell. This accelerated program

often incorporates the Twelve-Month M.B.A.

Program of the Johnson Graduate School of

Management (JGSM).

An advantage for OR&IE majors is that, as part

of their undergraduate and/or M. Eng.

curriculum, they study several subjects that are

required for the M.B.A. degree. (This is

because modern management is concerned

with the operation of production and service

systems, and much of the analytical methodology

required to deal with operating decisions is

the same as that used by systems engineers in

designing these systems.) This early start on

meeting the business-degree requirements

permits degrees in two years rather than the

usual three years for such a combination.

The details of planning courses for this

program should be discussed with the

admissions office of the JGSM. Since 95

percent of the students in the JGSM have

work experience, there will typically be a gap

for work experience between the M. Eng. and

M.B.A. portions of the program for students

who do not already have it when beginning

the M. Eng. portion.

Further details and application forms may be

obtained at the office of the School of

Operations Research and Industrial

Engineering, 201 Frank H. T. Rhodes Hall (or

meng@cornell.edu), and at the admissions

office of the Johnson Graduate School of

Management (mbs@johnson.cornell.edu).

Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

Independent Major in Engineering Science

A student may enroll in the Independent Major in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. This Independent Major is described in the section on undergraduate study in the College of Engineering.

Minor in Applied Mathematics

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Applied Mathematics minor: BEE, A&EP, CEE, CHEMF, COM S, EAS, ECE, M&AE, MSRE, OR&IE. Contact persons: Richard Rand, 207 Kimball Hall, 255-7145, rhr2@cornell.edu, and Tim Healey, 211 Kimball Hall, 255-3738, tjhl0@cornell.edu.

Requirements

to complete the minor, the student must take

at least six courses beyond MATH 294, to be

chosen as follows:

a) No more than one course may be chosen from any one of the groups 1, 2, 3, or 4.

b) At least three courses must be chosen from groups 5 and 6.

c) No more than one 200-level course may be chosen.

d) No more than one course may be chosen that is offered by the student’s major department.

1. Analysis

TRAM 310 Advanced Engineering Analysis I

MATH 311 Introduction to Analysis

MATH 420 Differential Equations and Dynamical Systems

A&EP 321 Mathematical Physics I

2. Computational Methods

COM S/ENGRD 322 Introduction to Scientific Computation

BEE 449 Computational Tools for Engineers

A&EP 241 Engineering Computation

OR&IE 320 Optimization I

3. Probability and Statistics

OR&IE/ENGRD 270 Basic Engineering Probability and Statistics II
ECE 310 Introduction to Probability and Random Signals
CEE 304 Uncertainty Analysis in Engineering

4. Applications
A&EP 333 Mechanics of Particles and Solid Bodies
CHEM 323 Fluid Mechanics
CEE 331 Fluid Mechanics
CEE 371 Structural Behavior
ECE 425 Digital Signal Processing
MS&E 303 Thermodynamics of Condensed Systems
M&AE 323 Introductory Fluid Mechanics

5. Advanced Courses

Eligibility
Students graduating in 2004 and 2005 in the College of Engineering are eligible to participate in the Biomedical Engineering Minor, unless they are also pursuing the Bioengineering Option. (Students may participate in either the Bioengineering Option or the Biomedical Engineering minor, but not both.)

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits) from the five groups listed below, with at least one course from each group. At least four of the six courses must be from outside the student's major. In addition to the six courses for a minimum of 18 credits, all students must take ENGRG 501, Bioengineering Seminar (1 credit).

Required Course: ENGRG 501, Bioengineering Seminar (1 credit)

I. Biomedical and Biomechanics
BEE 365 (3) Properties of Biological Materials
MS&E 265 (3) or TXA 439 (2) Biological Materials and Their Synthetic Replacements
MS&E 463 (3) Neuromuscular Biomechanics
M&AE 464 (3) Orthopaedic Tissue Mechanics
M&AE 565 (3) Biomechanical Systems—Analysis and Design
M&AE 663 (3) Advanced Topics in Neuromuscular Biomechanics
M&AE 664 (3) Mechanics of Bone
BMEP 605.1 (1) Biomaterials
BMEP 606.2 (1) Artificial Organs and Tissue Engineering
BMEP 606.3 (1) Biomechanics of Musculoskeletal Systems

II. Biomedical Systems
BEE 453 (3) Computer-Aided Engineering: Applications to Biomedical and Food Processes
CHEM 481 (3) Biomedical Engineering
BEE 454 (3) Physiological Engineering
BMEP 605.1 (1) Cellular Dynamics and Cancer
BMEP 605.2 (1) Physiological Systems
BMEP 301 (3) Molecular Principles of Biomedical Engineering

III. Instrumentation
BEE 450 (4) Bioinstrumentation
BEE 458 (4) Introduction to Biotechnology
ECE 432 (3) MicroElectro Mechanical Systems (MEMS)
ECE 511 (3) Bioelectric Signal Analysis and Processing
BMEP 606.1 (1) Biomedical Instrumentation and Diagnosis
BEE 659/BEE 459 (4) Biosensors and Biomedical Techniques

IV. Molecular and Cell Biology
BIOGD 281 (5) Genetics
BIOGD 282 (2-3) Human Genetics
BIOI 290 (3) Microbiology
BIOAP 316 (4) Cellular Physiology
BIOBM 330-333 (2-4) Principles of Biochemistry
BIOBM 432 (3) Survey of Cell Biology

V. Physiology
BIOAP 212 (3) Human Physiology
BIOAP 311 (3) Introductory Animal Physiology
BIOAP 313 (4) Histology: The Biology of the Tissues
BIOGD 389 (3) Embryology
BIONB 222 (3–4) Neurobiology and Behavior II: Introduction to Neurobiology
AN SC 427 (3) Fundamentals of Endocrinology
M&AE 463 (3) Neuromuscular Biomechanics

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Note: ENGRG 605-606 and M&AE 664 are graduate courses with limited enrollment. First preference will be given to graduate students.

Master of Engineering (Engineering Mechanics) Degree Program
This program emphasizes fundamentals in engineering science and applied mathematics. In this way the student is prepared to handle a wide variety of multidisciplinary problems. The program is designed for engineering students and students from the physical and mathematical sciences.

The degree program requires satisfactory completion of 30 credits of course work, including 12 credits that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in Theoretical & Applied Mechanics (T&AM). Up to 10 credits will be awarded for an M. Eng. project. The balance of the required 30 credits can be obtained as electives from T&AM or from other departments in the engineering, physical or mathematical sciences. As a consequence, the student has great flexibility in choosing a course of study tailored to his or her interests.

Projects may be chosen from the current interests of the faculty, including: nonlinear dynamics and chaos (with applications to problems in physics, engineering and biology), solid mechanics (fracture mechanics, nonlinear elasticity, shape-memory alloys, composite materials, ultrasonics and acoustics), fluid mechanics (granular materials), space mechanics (evolution of the solar system, planetary rings).

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities.
related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

ENGINEERING COURSES
Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

Engineering Communications (ENGRC)
Engineering Distribution (ENGRD)
Engineering General Interest (ENGRG)
Introduction to Engineering (ENGR)
Biological and Environmental Engineering (BEE)
Applied and Engineering Physics (A&EP)
Chemical and Biomolecular Engineering (CHEM)
Civil and Environmental Engineering (CEE)
Computer Science (COM S)
Earth and Atmospheric Sciences (formerly Geological Sciences) (EAS)
Electrical and Computer Engineering (ECE)
Materials Science and Engineering (M&SE)
Mechanical and Aerospace Engineering (M&A)
Nuclear Science and Engineering (NS&IE)
Operations Research and Industrial Engineering (OR&IE)
Theoretical and Applied Mechanics (T&AM)

ENGINEERING COMMON COURSES

Engineering Communications Courses
Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

ENGRC 334 Independent Study in Engineering Communications
Variable credits (1–3). Letter grade. By arrangement with instructor. Members of the ECP occasionally give independent (also called "directed") studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional communications in more depth than is possible in the ECP's regular courses. Various types of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and writing about technical topics for the public.

ENGRC 335 Communications for Engineering Managers
Fall, spring. 3 credits. Limited to 20 students per section. Designed for juniors and seniors. Prerequisite: two freshman writing seminars and field affiliation. This seminar focuses on communications in organizational contexts common to engineering graduates. Topics may include internal and external communications; balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and managerial information, articulate and support ideas, and communicate with technical and nontechnical audiences. (Note that absences are limited to three, after which sharp penalties occur.) Fulfills the college's technical-writing requirement. May be used as a Free or Approved Elective in expressive arts.

ENGRC 350 Engineering Communications
Fall and spring. 3 credits. Letter grade. 20 students per section. Designed for juniors and seniors. Prerequisite: two freshman writing seminars and field affiliation. The ability to communicate well is a factor in being hired as well as being promoted; the higher an engineer rises, the more writing and presentation he/she will do. ENGRC 350 prepares students for these important activities. They write various types of documents (e.g., letters, memos, executive summaries, problem analyses, proposals, reports), give presentations, and incorporate graphics in both their oral and written work. Students learn how to communicate specialized information to different audiences (e.g., technical and nontechnical people, colleagues and clients, peers and supervisors, in-house departments, and government agencies), work in teams, and address organizational and ethical issues. The course material is drawn from professional contexts, principally engineering, and it generates lively discussion. Class size ensures close attention to each student's work. (Note that absences are limited to three, after which sharp penalties occur.) Fulfills the college's technical-writing requirement. May be used as a Free or Approved Elective in expressive arts.

Engineering Distribution Courses
Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

ENGRD 201 Introduction to the Physics and Chemistry of the Earth (also EAS 201)
Fall. 3 credits. Prerequisites: PHYS 112 or PHYS 207. L. M. Cathles. This course covers the formation of the solar system; accretion and evolution of the earth; the rock cycle; radioactive isotopes and the geological time scale; plate tectonics; rock and minerals; earth dynamics; mantle plumes; the hydrologic cycle; runoff; floods and sedimentation; groundwater flow; contaminant transport; and the weathering cycle: chemical cycles, CO₂ (weathering), rock cycle, controls on global temperature (CO₂ or ocean currents), oil and mineral resources.

ENGRD 202 Mechanics of Solids (also T&AM 202)
Fall, spring. 4 credits. Prerequisite: PHYS 112, coregistration in MATH 192 or permission of instructor. Covers: principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force; shearing force; bending moment, plane stress; bending and torsion of bars.

ENGRD 203 Dynamics (also T&AM 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 293, or permission of instructor. Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers (also ECE 210)
Fall. 3 or 4 credits. Corequisites: MATH 293 and PHYS 213. ECE majors must take 4 credits, includes a design project. Non-ECE majors can take 3 credits. All students must take the lab. Fall. J. C. Belina, C. E. Seyler; spring, M. C. Kelley. This is a first course in electrical circuits and electronics that establishes the fundamental properties of circuits with application to modern electronics. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are closely coupled with the lectures and there is a final design project.

ENGRD 211 Computers and Programming (also COM S 211)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

ENGRD 219 Mass and Energy Balances (also CHEM 219)
Fall. 3 credits. Corequisite: CHEM 101 or an equivalent course in physics. Intermediate programming in high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

ENGRD 221 Thermodynamics (also M&AE 221)
Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 192 and PHYS 112. The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, vapor and gas power systems, refrigeration, and heat pump systems. Combustion and chemical equilibrium. Examples and problems.
are related to contemporary aspects of power generation and broader environmental issues.

**ENGRD 230 Introduction to Digital Logic Design**
Fall, spring. 4 credits. Prerequisite: COM S 100. Fall, W. E. Swartz, spring, W. E. Speight. Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machine design, and analog and digital conversion. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

**ENGRD 241 Engineering Computation (also CEE 241)**
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294. (Completion of MATH 294 is suggested.) W. D. Philpot, C. A. Shoemaker. Introduction to numerical methods, numerical mathematics, and probability and statistics. Development of programming and graphics proficiency with MATLAB and spreadsheets. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, truncation and round-off errors, condition numbers, operation counts, convergence, and stability. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, regression, curve fitting, interpolation, numerical differentiation and integration, and ordinary and partial differential equations. Introduction to finite-difference and finite-element methods. Applications are drawn from different areas of engineering.

**ENGRD 251 Engineering for a Sustainable Society (also BEE 251)**
Spring. 3 credits. Corequisite: MATH 293. Case studies of contemporary environmental issues including pollutant distribution in natural systems, air and water pollution, hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Studied are the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem.

**ENGRD 252 The Physics of Life (also A&EP 252)**
Fall. Prerequisites: MATH 192, CHEM 207 or 211, and co-registration in or completion of PHYS 213. U. Pollack. This course introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions and the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

**ENGRD 260 Principles of Biological Engineering (also BEE 260)**
Spring. 3 credits. Corequisite: MATH 293. Focuses on the integration of biological systems with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and then practice it in homework sets. Topic areas range from molecular principles of reaction kinetics to macroscopic applications, such as energy and mass balances of bioprocessing and engineering design of implantable sensors.

**ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures (also MS&E 261)**
Fall. 5 credits. S. P. Baker. The mechanical properties of materials (strength, stiffness, toughness, ductility, and so on) and their physical origins are examined. The relationship of the elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials is explored. Efforts of time and temperature on materials properties are discussed. The emphasis of this course is on considerations for design and optimum performance of materials and engineered objects.

**ENGRD 262 Electronic Materials for the Information Age (also MS&E 262)**
Fall. 3 credits. Prerequisite: MATH 192; corequisite PHYS 213 or permission of instructor, G. Malliaris. The course examines the electrical and optical properties of materials. Topics covered include the mechanism of electron conduction in metals, semiconductors and insulators, the tuning of electrical properties in semiconductors, the transport of charge across metal-semiconductor and semiconductor/semi-conductor functions, and the interaction of materials with light. Applications in electrophotography, solar cells, electronics, and display technologies are discussed.

**ENGRD 264 Computer-Instrumentation Design (also A&EP 264)**
Fall, spring. 3 credits. Prerequisite: COM S 100. 1 lab, 1 lab. Not open (without instructor’s permission) to seniors. T. Cool Covers the use of a small computer in an engineering or scientific research laboratory. The experiments and devices investigated include: analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, analog nonlinear square fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. Both C++ programming and graphical programming with MATLAB are used for computer interfacing to hardware. A second goal of the course is to develop effective written communication skills in the context of science and engineering. Students prepare progress reports, technical reports, and formal articles based on the experiments.

**ENGRD 270 Basic Engineering Probability and Statistics**
Fall, spring, summer. 3 credits. Prerequisites: MATH 191 and 192. D. Dalthorp. This course gives students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are included. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

**ENGRD 321 Numerical Methods in Computational Molecular Biology (also BIOBM 321 and COM S 321)**
Fall. 3 credits. Prerequisites: at least one course in calculus such as MATH 100, 111, 191, or 192 and a course in linear algebra such as MATH 221 or 294 or BTRY 417. MATH 200 or equivalent and some familiarity with iteration, arrays, and procedures. An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, linear equation solving, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization are also taught. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

**ENGRD 322 Introduction to Scientific Computation (also COM S 322)**
Spring, summer. 3 credits. Prerequisites: COM S 100 and MATH 222 or 294. An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Students will cover parallel computation. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

**Courses of General Interest**
Courses in this category are of general interest and aperative technical interest. It also covers social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

**ENGRG 150 Engineering Seminar**
Fall. 1 credit. First-year students only. S-U grades only. Engineering freshmen meet weekly with their faculty advisers to discuss a range of engineering topics. Discussions may include the engineering curriculum and student programs, what different types of engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

**ENGRG 250 Technology in Society (also ECE 250, HIST 250, SATS 250)**
Fall. 3 credits. A humanities elective for engineering students. R. R. Kline. This course investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the works of key figures such as Morse, Edison, Ford; the government's regulation of the technology; the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.
ENGRG 298 Inventing an Information Society (also ECE 298, S&T 292, and HIST 292)
Spring. 3 credits. Approved for humanities distribution; evaluation can be taken for credit after ENGRG 196/ECE 198. R. R. Kline.
Explores the history of information technology from the 1830s to the present by considering the technological and social history of telecommunication, electronic, power, industry, radio, television, computers, and the Internet. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 323 Engineering Economics and Management (also CEE 323)
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. Student must register under CEE 323. D. P. Loucks.
Introduces engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 360 Ethical and Social Issues in Engineering (also S&T 360)
Spring. 3 credits. Open to sophomores. R. R. Kline.
Studies major ethical and social issues involved in engineering practice. The issues include responsibility for designing products that are not only safe and of high quality but are also socially beneficial; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistleblowing; trade secrets; and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history and sociology of engineering are introduced to analyze these issues.

ENGRG 461 Entrepreneurship for Engineers (also M&A&E 461, OR&E 452)
Fall. 3 credits. Enrollment open to upper-class engineers; others with permission of instructor.
For description, see M&A&E 461.

ENGRG 676 Teaching Seminar
Fall, spring. 1 credit. S-U grades only. Independent Study promoting reflection on teaching styles and experiences for teaching assistants in the College of Engineering. Participants must be concurrently fulfilling a TA assignment. Requirements include: participation in the College of Engineering's TA Development Program, consisting of an initial one and one-half day training session, followed by one evening microteaching session early in the semester; participation in the TA midterm evaluation process, followed by a formal feedback session with program staff; and completion of a reflective journal on teaching experiences. All components are designed to provide TAs with the opportunity to process their understanding of teaching and learning through the formulation of questions, concepts, and theories related to their experiences.

Introduction to Engineering Courses
Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGR 101 Introduction to Biomedical Engineering Analysis (also BMEP 101)
Spring. 1 credit. Requires concurrent registration in BIO G 110. Lec and lab.
D. Grubb and S. Archer
This class is integrated with BIO G 110 to provide examples of engineering analysis of biological topics described in BIO G 110. Emphasis on molecular, cellular, and physiological systems.

ENGR 110 The Laser and Its Applications in Science, Technology, and Medicine (also A&E&P 110)
Fall. 3 credits. A. Greta
The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory, students build and operate a nitrogen laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, optical tweezers, and fiber optics.

ENGR 111 Nanotechnology (also M&A&E 111)
Fall. 3 credits. E. Giannelis.
Nanotechnology has been enabling the Information Revolution with the development of even faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGR 112 Introduction to Chemical Engineering (also CHEM 112)
Fall. 3 credits. Limited to freshmen. T. M. Duncan.
Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 113 Solving Environmental Problems for Urban Regions (also CEE 113)
Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. L. Weber-Shirk.
Learn how to design: reservoirs to provide water during droughts, aqueducts to transport water, water treatment plants to prevent waterborne diseases, and landfills to minimize contamination of the environment. Take field trips, build a miniature water treatment plant, and explore new technologies for making safe drinking water.

ENGR 115 Engineering Applications of Operations Research
Fall, spring. 3 credits. Enrollment open to OR&IE upper-class majors.
An introduction to the design and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems arise, and several standard solution techniques. In a computational laboratory, students encounter problem simulations and use some standard commercial software packages.

ENGR 116 Modern Structural Systems and Materials (also CEE 116)
Fall. 3 credits. R. A. Davidson.
Introduction to civil infrastructure engineering in the 21st century—the latest challenges civil engineers face, and the innovative techniques they are using to address them. Using case studies of famous structures and structural failures, students learn strategies for identifying different structural forms, explain qualitatively how each carries loads, apply basic engineering principles and mathematics to describe their behavior quantitatively, explain how they fail in earthquakes and other extreme events, learn strategies for improving their performance, and recognize their historical, economic, social, and political context. Nontraditional structures, such as aircraft and underground structures, are discussed as well. Includes a project to design, analyze, build, and test an engineering structure.

ENGR 117 Introduction to Mechanical Engineering (also M&A&E 117)
Fall. 3 credits. 2 lectures and 1 lab per week.
An introduction to fundamentals of engineering, with emphasis on mechanical and aerospace engineering. The lectures will cover a little from each aspect of mechanical and aerospace engineering applied to how to design and analyze products or devices and their performance. Students learn and understand materials characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of fluid mechanics, heat transfer, automotive engineering, engineering design and development, patents and intellectual property, and engineering ethics. There will be a final project in which students use the information learned to design and manufacture a product.

ENGR 118 Design Integration: A Portable CD Player (also M&A&E 118 and T&AM 118)
Spring. 3 credits. W. Sachse.
This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elementary mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGR 119 Biomaterials for the Skeletal System (also M&A&E 119)
Fall. 3 credits. D. N. Pashley.
Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments
are used as examples, with their metal, plastic, and ceramic replacements. Topics covered include strength, corrosion, toxicity, wear, and bio-compatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

**[ENGRI 121] Introduction to Biomedical Engineering (also CHEME 121)**
Introduction to the fundamental science and engineering that spawned the biotechnology revolution—technologies of cell cultures, DNA, and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the development of biotechnical processes, from discovery to clinical use, include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

**ENGRI 121 Fission, Fusion, and Radiation (also A&EP 121 and NS&E 121)**
Spring. 3 credits.
Lecture/laboratory course on the physical nature and biological effects of nuclear radiation; benefits and hazards of nuclear energy; light-water reactors, breeder reactors, and fusion reactors; and uses of nuclear radiation in research. Laboratory demonstrations involve Cornell's research reactor; detection of nuclear radiation; activation analysis using gamma-ray spectroscopy; neutron radiography; and pulsed power generators for fusion research.

**ENGRI 122 Earthquake! (also EAS 122)**
Spring. 3 credits.
The science of natural hazards and strategic resources is explored. This course covers techniques for locating and characterizing earthquakes, and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

**ENGRI 124 Designing Materials for the Computer (also MS&E 124)**
Spring. 3 credits. 3 lectures.
Introduces the materials, processes, and properties of thin-film, conductors, polymers, ceramics, and metals used in the microelectronics industry to form integrated circuits, electronic devices, and displays. This course examines lithographic processing, metallization, diffusion, ion implantation, oxidation, and other processes used in fabricating electronic devices and their packages. The technology of displays is discussed, including liquid crystal displays and light-emitting devices.

**ENGRI 126 Introduction to Telecommunications**
Spring. 3 credits. 3 lectures.
This course introduces the technologies that underlie wired and wireless telecommunication systems. The course begins with an introduction to telephony and the public switched telephone network. Moderns and cellular telephony are then introduced, along with ISDN and BISDN. The course concludes with an introduction to ATM and TCP/IP. The course includes both lectures and laboratory demonstrations. Students have the opportunity to design communication systems and to determine their performance through simulations.

**ENGRI 127 Introduction to Entrepreneurship and Enterprise Engineering (also M&AE 127)**
Spring. 3 credits. Open to all Cornell students regardless of major. No prerequisites. This course provides a solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed. This course is considered an “Introduction to Engineering” course by the College of Engineering, and satisfies the curricular requirements for such a course. The course is intended for freshmen and is taught from this perspective and at that level.

**ENGRI 130 Introduction to Nanoscience and Nanoengineering (also A&EP 130)**
Fall, spring. 3 credits.
Lecture/laboratory course designed to introduce freshmen to some of the ideas and concepts of nanoscience and nanotechnology. Topics covered include nanoscience and nanotechnology—that what they are and why they are of interest; atoms and molecules; the solid state; surfaces; behavior of light and material particles when confined to nanoscale dimensions; scanning tunneling microscopy (STM), atomic force microscopy (AFM), microelectromechanical systems (MEMS) design; basic micromachining and chemical synthesis methods, i.e., “top-down” and “bottom-up” approaches to nanofabrication; how to manipulate structures on the nanoscale; physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students will use an AFM to record atomic resolution images, use a MEMS computer-aided design software package to model the entire manufacturing sequence of a simple MEMS device, examine the simulated behavior of nanoscale devices, and compare it with real behavior, construct a simple STM and learn through hands-on experience the basic workings of the device.

**ENGRI 172 Computation, Information, and Intelligence (also COM S 172)**
Fall. 3 credits.
An introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, computer-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, “pencil and paper” problem sets are assigned. Not open to students who have completed the equivalent of COM S 100. Analysis and Design (also EAS 200, and MS&E 288)
Spring. 3 credits.
R. Kay.
An intermediate course in the use of techniques of science and engineering in cultural research. Includes applications of physical and physiological principles to the study of archaeological artifacts and works of art. Also covers historical and technical aspects of artistic creation. Students learn analyses by modern methods to deduce geographical origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for Engineering.

**APPLIED AND ENGINEERING PHYSICS**

**A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGR 110)**
Fall. 3 credits. A. Gaeta.
This is a course in the Introduction to Engineering series. For description, see ENGR 110.

**A&EP 121 Fission, Fusion, and Radiation (also ENGR 121 and NS&E 121)**
Spring. 3 credits.
S-U grades optional for students outside the College of Engineering. K. B. Cady.
This is a course in the Introduction to Engineering series. For description, see ENGR 121.

**A&EP 130 Introduction to Nanoscience and Nanoengineering (also ENGR 130)**
Fall, spring. 3 credits.
This is a course in the Introduction to Engineering series. For description, see ENGR 130.

**A&EP 217 Electricity and Magnetism (also PHYS 217)**
Fall, spring. 4 credits.
Prerequisites: approval of student's adviser and permission of the instructor; co-registration in PHYS 216 or knowledge of special relativity at the level of PHYS 116; MATH 192 or equivalent; and co-registration in MATH 293 or equivalent. Staff.
Intended for students who have done well in PHYS 112 or 116 (or the equivalent) and in mathematics who desire a more analytic treatment than that of PHYS 213. At the level of Electricity and Magnetism by Purcell. Recommended for prospective engineering physics majors. A placement quiz may be given early in the semester, permitting those students who find the material too abstract or analytical to transfer into PHYS 213 without difficulty.

**A&EP 252 The Physics of Life (also ENGRD 252)**
Fall. Prerequisites: MATH 192, CHEM 207 or 211, and co-registration in or completion of PHYS 213. L. Pollack.
For description, see ENGRD 252.

**A&EP 264 Computer-Instrumentation Design (also ENGRD 264)**
Fall, spring. 3 credits.
Prerequisites: COM S 111; B. W. Nickerson.
For description, see ENGRD 264.

**A&EP 321 Mathematical Physics I**
Fall, summer. 4 credits.
Prerequisite: MATH 294.
Intended for upper-level undergraduates in the physical sciences. B. Kusse.
Review of vector analysis; complex variable theory; Cauchy-Riemann conditions; complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal
mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 322 Mathematical Physics II
Spring. 4 credits. Prerequisite: A&EP 321. Second of the 2-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.

B. Kusse.

Topics: partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson's Equations, transform techniques, Green's functions, integral equations, Fredholm equations, kernels, complex variables, theory, boundary points and cuts, Riemann sheets, method of steepest descent, tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 324 Maple Supplement to Mathematical Physics 321 and 322
Spring. 1 credit. R. V. E. Lovelace.

The course gives a broad introduction to Maple in applications to problems of mathematical physics similar to those covered in A&EP 321 and 322. We use Maple to solve differential equations—both linear and nonlinear. We make extensive use of plotting capabilities of Maple. Additionally, we cover matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. We also give an introduction to LaTeX.

A&EP 330 Modern Experimental Optics (see also PHYS 330)
Fall, summer. 4 credits. Enrollment limited. Prerequisites: PHYS 214 or equivalent. E. Bodenschatz.

A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

A&EP 333 Mechanics of Particles and Solid Bodies
Fall. 4 credits. Prerequisites: PHYS 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor.

This course covers: Newton’s mechanics, constants of the physical-body systems, linear oscillations, variational calculus, Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (On the level of Classical Dynamics, by Marion and Thornton.)

A&EP 355 Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent or permission of instructor.

Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace’s equation in various geometrics, electric and magnetic multipole, electric and magnetic materials, energy in fields, classical, quantum, and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356 Intermediate Electrodynamics
Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor.

Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis is on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 333 or PHYS 318, coregistration in A&EP 322 or equivalent and in A&EP 356 or PHYS 326.

A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)
Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded; 1 lab, 2 labs. Fall. E. Kirkland, spring. J. Alexander.

Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Topics include circuits, resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes and transistors. Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory 3-semester physics sequence plus 1 year of junior-level mathematics.

Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, partition functions, quantum statistics, Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Physics, by Kittel and Kroemer, and Statistical Physics, by Ross.

A&EP 434 Continuum Physics
Spring. 4 credits. Prerequisites: A&EP 333 and 350 or equivalent.

A&EP 438 Computational Engineering Physics
Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; coregistration in PHYS 361 permitted.

Numerical computation (derivatives, integrals, differential equations, mapping; Fourier Series; Fourier and Laplace transforms, Green’s functions, Riemann sheets, method of steepest descent, tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 440 Quantum and Nonlinear Optics

An introduction to the fundamentals of the interaction of laser light with matter. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical bistability, propagation of ultrashort pulses, solitons, optical phase conjugation, optical resonance, and two-level atoms, atom cooling and trapping, multiphoton effects, spontaneous and stimulated scattering, and ultra-intense laser-matter interactions.

A&EP 450 Introductory Solid State Physics (also PHYS 454)
Fall. 4 credits. Prerequisites: some exposure to quantum mechanics at the level of PHYS 443, A&EP 361, or CHEM 793 is highly desirable but not absolutely required.

An introduction to the physics of crystalline solids. Covers crystal structures, electronic states, lattice vibrations, and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Optical properties, magnetism, and superconductivity are covered as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel, or Solid State Physics by Ashcroft and Mermin.

A&EP 470 Biophysical Methods (also BIOPH 470)
Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level; some knowledge of cellular biology helpful but not required. Letter grades only.
An overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics covered include methods that examine both structure and function of systems, with emphasis on the applications of these methods to biological membranes. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ECE 484, M&AE 459, and NS&E 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students. Offered on demand. For description, see NS&E 484.

A&EP 490/491 Independent Study in Engineering Physics
Fall, spring. Credit TBA. Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software development, theoretical design and analysis. Details TBA with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 (or equivalent). Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 607 Advanced Plasma Physics (also ECE 582)
Spring. 4 credits. Prerequisites: ECE 581 and A&EP 606. Offered on demand. For description, see ECE 582.

A&EP 633 Nuclear Reactor Engineering (also NS&E 633)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. R. B. Cady. For description, see NS&E 633.

A&EP 661 Microcharacterization
Fall. 3 credits. Prerequisites: introductory 3-semester physics sequence or an introductory course in modern physics. At the senior/first-year graduate level. The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterization is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

A&EP 662 Micro/Nano-fabrication and Processing
Spring. 3 credits. An introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

A&EP 663 Nanobiotechnology (also BIO G 663 and MS&E 563)
Spring. 3 credits. Prerequisites: A&EP 356, or equivalent. Upper level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course is held twice weekly with 75-minute lectures. All lectures are teleconferenced to our NFTC associate institutes.

A&EP 711 Principles of Diffraction (also MS&E 671)
Fall. 3 credits. Letter grades only. Not offered 2003–2004. J. D. Brock. This course is a graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-rays beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics that are covered in the course include: elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder, diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques such as coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

A&EP 751 M ENG Project
Fall, spring. 6–12 credits TBA. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

A&EP 753 Special Topics Seminar in Applied Physics
Fall. 1 credit. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING
For complete course descriptions, see the Biological and Environmental Engineering listing in the College of Agriculture and Life Sciences section or visit the department's website, www.bee.cornell.edu.

BEE 151 Introduction to Computing
Fall. 4 credits. Prerequisite: MATH 191 or equivalent (coregistration permissible). Each lab and recitation session limited to 22 students.

BEE 152 Computer Applications for Engineers
Spring. 3 credits. Prerequisites: BEE 151 or equivalent, MATH 191. Course comprises three one-credit modules: (1) MATLAB; (2) spreadsheets; and (3) presentation graphics.

BEE 200 The BEE Experience
Spring. 1 credit.

BEE 222 Bioengineering Thermodynamics and Kinetics
Spring. 3 credits. Prerequisites: BEE 152 or equivalent, MATH 192. Course in chemical engineering. Required for candidates for the M.Eng. (Engineering Physics) degree. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.
BEE 365 Properties of Biological Materials
Spring. 3 credits. Prerequisites: ENGRD 202 (coregistration permissible).

BEE 371 Hydrology and the Environment
Spring. 3 credits. Prerequisite: 1 course in calculus.

BEE 411 Biomass Processing: Modeling and Analysis
Spring. 3 credits. Prerequisites: BEE 250, BEE 350 (or any course in heat and mass transport), BIOBM 331, 352, or BIOMI 290.

BEE 427 Water Sampling and Measurement
Fall. 3 credits. Prerequisites: soils and/or fluids or hydrology courses and MATH 191.

BEE 435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: minimum junior standing.

BEE 450 Bioinstrumentation
Spring. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming, and use of spreadsheets.

BEE 453 Computer-Aided Engineering: Applications to Biomedical Processes (also M&AE 453)
Spring. 3 credits. Prerequisite: heat and mass transfer (BEE 350 or equivalent).

BEE 454 Physiological Engineering
Fall. 3 credits. Corequisite: fluid mechanics.

BEE 456 Biomechanics of Plants (also BIO PL 456)
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology, and 1 year of calculus, or permission of instructor. S-U grades optional.

BEE 459 Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisites: biochemistry or permission of instructor.

BEE 464 Bioprocessing Processes
Fall. 3 credits. Prerequisites: biochemistry, physics, MATH 112 or 192, BEE 260, or permission of instructor.

BEE 471 Geohydrology (also CEE 431 and GEO/LAS 445)
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202.

BEE 473 Watershed Engineering
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology.

BEE 474 Drainage and Irrigation Design
Spring. 3 credits. Prerequisites: fluid mechanics or hydrology.

BEE 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and 1 year of calculus.

BEE 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry.

BEE 478 Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent.

BEE 481 LRFD-Based Engineering of Wood Structures (also CEE 481)
Spring. 3 credits. Prerequisite: ENGRD 202.

BEE 484 Metabolic Engineering
Spring. 3 credits. Prerequisites: biochemistry or permission of instructor.

BEE 489 Engineering Entrepreneurship, Management and Ethics
Spring. 3 credits. Prerequisites: ENGRD 270 or CEE 304 or equivalent, junior standing.

BEE 493 Technical Writing for Engineers
Fall, spring. 1 credit. Corequisite: BEE 450/473.

BEE 494 Special Topics in Biological and Environmental Engineering
Fall, spring. 1–4 credits. S-U grades optional.

BEE 495 BEE Honors Research
Fall, spring. 1–6 credits. Prerequisites: enrollment in the BEE Honors Research Program.

BEE 496 Capstone Design in Biological and Environmental Engineering
Fall, spring. 1–3 credits. Corequisite: BEE 473 or BEE 478, or BEE 481 and permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 497 Individual Study in Biological and Environmental Engineering
Fall, spring. 1–4 credits. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. S-U grades optional. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 498 Undergraduate Teaching
Fall, spring. 1–4 credits. Prerequisite: written permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 499 Undergraduate Research
Fall, spring. 1–4 credits. Prerequisites: written permission of instructor, adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 511/552 Agricultural and Biological Engineering Design Project
Fall, spring, 552. 2–6 credits. Prerequisite: admission to the M.Eng. (Agricultural and Biological) degree program.

BEE 625 Science and Technology of Environmental Management
Fall. 3 credits. Prerequisite: graduate standing.

BEE 647 Water Transport in Plants
Fall. 2 credits. Offered alternate years.

BEE 649 Wastewater Treatment in Plants
Fall. 2 credits. Offered alternate years.

BEE 651 Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOMI 290 or BIOMI 358 or BIOMI 331 or permission of instructor.

BEE 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of instructor.

BEE 655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: MATH 293 or equivalent.

BEE 671 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: 4 calculus courses and fluid mechanics.

BEE 672 Drainage
Spring. 4 credits. Prerequisites: BEE 471 or BEE 473. S-U grades optional.

BEE 673 Sustainable Development Seminar (also MBA 573)
Spring. 1–3 credits. Prerequisite: upper division undergraduate and graduate students or permission of instructor.

BEE 678 Nonpoint Source Models
Spring. 3 credits. Prerequisites: computer programming and calculus.

BEE 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor.

BEE 687 Sustainable Bio-based Industries
Fall. 1 credit. Prerequisite: graduate standing.

BEE 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall, spring. 1–4 credits. S-U grades optional.

BEE 697 Graduate Individual Study in Agriculture and Biological Engineering
Fall, spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional.

BEE 700 General Seminar
Fall. 1 credit. S-U grades only.

BEE 750 Orientation to Graduate Study
Fall. 1 credit. S-U grades only. Limited to newly joining graduate students.

BEE 754 Watershed Management
Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructor.

BEE 760 Nucleic Acid Engineering
Fall. 3 credits. Prerequisite: BEE 360 or permission of instructor.

BEE 771 Soil and Water Engineering Seminar
Fall, spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional.

BEE 773 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

BEE 785 Biological Engineering Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.
BEE 767 Industrial Ecology of Agriculturally Based Bioindustries  
Spring. 3 credits. Prerequisites: 1 year calculus, MATLAB. BEE 687, graduate standing.

BEE 800 Master's-Level Thesis Research  
Fall, spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades only.

BEE 900 Doctoral-Level Thesis Research  
Fall, spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades only.

BIOMEDICAL ENGINEERING PROGRAM

BMEP 101 Introduction to Biomedical Engineering Analysis (also ENGR 101)  
Spring. 1 credit. Requires concurrent registration in BIO G 110. Lecture and laboratory. D. Gribb and S. Archer. For description, see ENGR 101.

BMEP 265 Biological Materials and Their Synthetic Replacements (also MS&E 265)  
Spring. 3 credits. For description, see MS&E 265.

BMEP 301 Molecular Principles of Biomedical Engineering (also CHEM 401)  
Fall. 3 credits. Prior course work in BIO G 110, BIO BM 330, BIO MI 290 or equivalent. Lect. and lab. K. H. Lee, S. Archer. Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Cytoskeletal and motor proteins and their relationship to nanomachines and nanobiotechnology. Existing and emerging technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

BMEP 302 Cellular Principles of Biomedical Engineering (also CHEM 402)  
Spring. 3 credits. Prerequisite: BMEP 301 or permission of instructor. Lecture and laboratory. D. A. Putnam, S. Archer. Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Three modules comprising: 1) cell culture techniques/receptor ligand interactions, 2) cellular trafficking, and 3) signal transduction.

BMEP 330 Introduction to Computational Neuroscience (also BIONB 330, PSYCH 330, and COGST 330)  
Fall. 3 credits. Limited to 25 students. For description, see BIONB 330.

BMEP 360 Molecular and Cellular Biomechaning (also BEE 360)  
Spring. 3 credits. Prerequisite: biochemistry or A&EP 252. For description, see BEE 360.

BMEP 401 Biomedical Engineering Analysis of Metabolic and Structural Systems (also M&E 466)  
Fall. 3 credits. Prerequisite: prior course work in basic biology. Lect. and lab. L. Bonassar, S. Archer. Quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Biophysics and biomedical engineering of bone. Tissue engineering and biomechanics of soft tissue.

BMEP 402 Information Exchange in Biomedical Engineering Systems  
Spring. 3 credits. Prerequisite: BMEP 401 or permission of instructor. Lec. and lab. Staff. Quantitative biology of the endocrine, nervous, and immune systems. Computation and mathematics of neural nets, communication among macroscale biocommunication systems.

BMEP 404 CDE in Biomedical System Design (also ECE 402)  
Spring. 1–4 credits. Co- or prerequisites: at least one of ECE 425, ECE 476, ECE 453. J. C. Belina. For description, see ECE 402.

BMEP 463 Neuromuscular Biomechanics (also M&E 463)  
Spring. 3 credits. Prerequisite: ENGRD 202 and 203, or permission of instructor. Offered alternate years. For description, see M&E 463.

BMEP 464 Orthopaedic Tissue Mechanics (also M&E 464)  
Spring. 3 credits. Prerequisites: ENGRD 202 and M&E 325 or permission of instructor. Offered alternate years. For description, see M&E 464.

BMEP 481 Biomedical Engineering (also CHEM 481)  
Spring. 3 credits. Prerequisite: CHEM 324 or equivalent permission of instructor. W. L. Olbricht. For description, see CHEM 481.

BMEP 501 Bioengineering Seminar (also BEE 501)  
Fall, spring. 1 credit. For juniors, seniors, and graduate students only. Staff. Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions. Sessions may occasionally be held outside of scheduled times.

BMEP 533 Biomedical Materials and Devices for Human Body Repair (also TXA 439)  
Spring. 2–3 credits. Prerequisites: college Natural Science requirement (Chem. or Biol). C. C. Chu. For description, see TXA 439. Extra project required; some lectures as TXA 439.

BMEP 565 Biomechanical Systems Analysis and Design (also M&E 565)  
Fall, 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials (e.g., T&M ENGRD 202 and 203) and senior standing, graduate standing, or permission of instructor. For description, see M&E 565.

BMEP 570 Biophysical Methods (also BIONB 470 and A&EP 470)  
Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level, some knowledge of cellular biology helpful but not required. Letter grades only. For description, see A&EP 470.

BMEP 578 Computer Analysis of Biomed Images (also ECE 578)  
Spring. 4 credits. Prerequisites: permission of instructor. A. P. Reeves. For description, see ECE 578.

BMEP 605 Fundamentals of Biomedical Engineering I (also CHEM 605)  
Fall. 1–4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. S-U grades optional for graduate students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler. A series of four-week modules on specialized topics.

605.1 Cellular Dynamics and Cancer  

605.2 Physiological Systems  
1 credit. Meets second third of term. Staff. Emphasis is on development of physiologically-based pharmacokinetic models for drug delivery and on models of cardiovascular system, particularly blood flow.

605.3 Biomaterials  
1 credit. Meets final third of term. C. C. Chu and staff. The main objective of the biomaterials module is to provide students with an effective background in a wide range of biomaterials that include polymers, metals/alloys, and ceramics that are currently used in human body repair. After completion of this module, students have the basic and some in-depth knowledge of what biomaterials are made of, how biomaterials contribute to the saving of human lives, the criteria of materials for biomedical use, biocompatibility, failure modes of biomaterials, the current R&D activities in biomaterials, challenges that biomaterials are facing, and future direction of R&D in biomaterials.

[605.4 Biomedical Engineering Project  

Students work in teams on a design problem of their choice related to development of a biomedical device or procedure. Each team prepares a written report.

BMEP 606 Fundamentals of Biomedical Engineering II (also CHEM 606)  
Spring. 1–4 credits. Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. S-U grades optional for graduate students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler. A series of one and two-credit modules on specialized topics.

606.1 Biomedical Instrumentation and Diagnosis  
1 credit. Lect. Meets second third of term. Staff. This course gives a perspective on the use of advanced instrumentation for the diagnosis and treatment of disease and the investigation of fundamental biological processes. The basic theory and application of different microscopic and spectroscopic methods, imaging tomographies, and micro-electromechanical devices to biological systems are explored.
606.2 Artificial Organs and Tissue Engineering
1 credit. Lec. Prerequisite: ENGRG 605, Section 08 (Biomaterials). Meets first third of term. L. Bonassar and staff.
An introduction to the use of cells, biological molecules, and synthetic materials as the basis for building artificial organs and encouraging tissue regeneration. The section discusses the physiological and engineering issues underlying the use of synthetic, extracorporeal systems (e.g., membrane-based dialysis devices), composite implantable materials and nerve regeneration guides, and hybrid cell/polymer implantable systems (e.g., engineered tissues).

606.3 Biomechanics of Musculoskeletal Systems
Integrated lecture/laboratory experience. The anatomy and function of the canine hindlimb are explored in dissection laboratories and through demonstration of a non-invasive technique, computed tomography. Methods of approximating functional joint loads are discussed, and physical testing is demonstrated. A computer model of the stifle (knee) joint is created by combining knowledge of the anatomy and the mechanical environment.

BMEP 631 Engineering Principles for Drug Delivery (also CHEM 631)
Fal. 3 credits. Prerequisite: graduate standing or permission of instructor.
Application of engineering principles (particularly fluid, transport, and kinetics) to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmaceutical stability, transdermal systems, controlled release devices, prodrugs, and foreign body response, cell engineering, cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

BMEP 760 Nucleic Acid Engineering (also BEE 760)
Fall. 3 credits. Prerequisite: BEE 360 or permission of instructor.
For description, see BEE 760.

CHEMICAL ENGINEERING

CHEME 112 Introduction to Chemical Engineering (also ENGRI 112)
Fall. 3 credits. Limited to freshmen.
T. M. Duncan.
This is a course in the Introduction to Engineering series. For description, see ENGRI 112.

CHEME 120 Introduction to Biomedical Engineering (also ENGRI 120)
This is a course in the Introduction to Engineering series. For description, see ENGRI 120.

CHEME 219 Mass and Energy Balances (also ENGRI 219)
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor.
W. L. Olbricht.
For description, see ENGRI 219.

CHEME 301 Nonresident Lectures
Spring. 1 credit. M. Ackley.
Lecturers from industry and from selected departments of the university provide information to assist students in their postgraduate plans.

CHEME 313 Chemical Engineering Thermodynamics
Fall. 4 credits. Prerequisite: physical chemistry II. F. A. Escobedo.
A study of the first and second laws and their consequences for chemical systems. Thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

CHEME 323 Fluid Mechanics
Spring. 3 credits. Prerequisites: CHEME 219 and engineering mathematics sequence.
D. L. Koch.

CHEME 324 Heat and Mass Transfer
Fall. 3 credits. Prerequisite: CHEME 323.
C. Cohen.

CHEME 332 Analysis of Separation Processes
Spring. 3 credits. Prerequisites: CHEME 313 and 323. Y. L. Joo.
Analysis of separation processes involving phase equilibria and mass transfer. Covers: phase equilibria; binary and multicomponent distillation; liquid-liquid extraction; gas absorption, adsorption, membrane separations.

CHEME 372 Introduction to Process Dynamics and Control
Spring. 1 credit. Prerequisites: CHEME 313 and 323. A. B. Anton.
Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

CHEME 390 Reaction Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: CHEME 313 and 323. J. R. Engstrom.
A study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEME 391 Physical Chemistry II (also CHEM 391)
Spring. 4 credits. Limited to engineering students. T. M. Duncan.
For description, see CHEM 391.

CHEME 401 Molecular Principles of Biomedical Engineering (also BMEP 301)
Fall. 3 credits. Prerequisites: BIO G 110 or BIO BM 330. K. H. Lee.
For description, see BMEP 301.

CHEME 402 Cellular Principles of Biomedical Engineering (also BMEP 302)
Spring. 3 credits. D. Putnam.
For description, see BMEP 302.

CHEME 432 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEME 323, 324, 332, and 390. K. E. Ackley and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEME 462 Chemical Process Design
Spring. 4 credits. Prerequisite: CHEME 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEME 470 Process Control Strategies
Spring. 3 credits. A. M. Center.
Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

CHEME 472 Feedback Control Systems (also ECE 471 and M&AE 478)
Fall. 4 credits. Prerequisites: CHEME 372, ECE 301, M&AE 326, or permission of instructor. A. B. Anton and R. D’Andrea.
For description, see M&AE 478.

CHEME 480 Chemical Processing of Electronic Materials
Spring. 3 credits. A. B. Anton.
Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermochemistry of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.
CHME 481 Biomedical Engineering (also BMEP 481)
Spring. 3 credits. Prerequisite: CHME 324 or equivalent or permission of instructor. W. L. Obriech.
Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHME 484 Microchemical and Microfluidic Systems
Fall. 5 credits. Prerequisite: CHME 390 or permission of instructor. J. R. Engstrom.
Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies.

CHME 490 Undergraduate Projects in Chemical Engineering
Fall, spring. Variable credit. Research or studies on special problems in chemical engineering.

CHME 491 Undergraduate Teaching in Chemical Engineering
Fall. 1 credit. T. M. Duncan and M. Ackley.
Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

CHME 520 Chemical Polymer, Biomedical, and Electronic Materials Processing
Fall, spring. 1–6 credits (1 credit per section).

520.1 An Overview of Chemical Processing
Spring. 1 credit. Meets first third of term. Limited to nonchemical engineers. T. M. Duncan.
An introduction to chemical engineering design and analysis—mathematical modeling, graphical methods and dynamic scaling. Open to nonchemical engineers only.

520.2 Introduction to Biomedical Engineering
Spring. 1 credit. Meets first third of term. W. L. Obriech.
Meets concurrently with CHME 481.

520.3 Introduction to Electronic Materials Processing
Spring. 1 credit. Meets first third of term. A. B. Anton.
Meets concurrently with CHME 480.

520.4 Introduction to Polymer Processing
Spring. 1 credit. Meets final second of term. L. A. Archer.
Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

520.5 Chemical Engineering Processing Units and Equipment
Spring. 1 credit. Meets first third of term. K. E. Ackley and A. M. Center.

The hardware of the chemical process and refining industries and their everyday evaluation and trouble shooting.

520.6 Introduction to Petroleum Refining
Fall. 1 credit. Meets second third of term. A. M. Center.
The petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

520.7 Process Control Strategies
Spring. 1 credit. Meets first third of term. A. M. Center.
Meet concurrently with CHME 470.

CHME 543 Bioprocess Engineering
Spring. 3 credits. Prerequisite: CHME 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler.
A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHME 562 Managing Chemical Process Design
Spring. 1 or 2 credits. Prerequisite: CHME 462. K. E. Ackley.
Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

CHME 565 Design Project
Fall, spring. 3 or 6 credits. Required for students in the M Eng. (Chemical) program.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHME 572 Managing New Business Development
Fall. 3 credits. Prerequisites: graduate standing; undergraduates must have permission of instructor. A. M. Center.
A case study approach introduces the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHME 590 Special Projects in Chemical Engineering
Fall. Variable credit. Limited to graduate students.
Nonthesis research or studies on special problems in chemical engineering.

CHME 596 Systems on a Chip
Fall. 3 credits. Not offered 2003. P. Clancy.
Fundamentals of electronic chip fabrication processes for systems on a chip, the complexities of building devices on dissimilar substrates (e.g., Si on plastics), the creation of organic optoelectronic devices, and functional design integration issues. Applications to lab on a chip systems. Group design project required.

CHME 605 Fundamentals in Biomedical Engineering (also BMEP 605)
Fall. 1–4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent.
Undergraduates must have permission of instructor and have completed BEE 454, CHME 481, or MSAE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.

For description, see BMEP 605.

CHME 606 Fundamentals of Biomedical Engineering II (also BMEP 606)
Spring. 1–4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent.
Undergraduates must have permission of instructor. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler.
A series of one- and two-credit modules on specialized topics. For description see BMEP 606.

CHME 631 Engineering Principles for Drug Delivery (also BMEP 631)
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see BMEP 631.

CHME 640 Polymeric Materials
Fall. 3 credits. C. Gohen.
Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

CHME 644 Aerosols and Colloids
Fall. 3 credits. D. Koch.
Dynamics of micro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include: the formation and growth of particles; their transport, rheological, and phase behaviors; and their role in technologies including paints, foods, health-care products, drug delivery, composite materials, and air pollution control.

CHME 661 Air Pollution Control
Spring. 3 credits. P. H. Steen.

CHME 675 Synthetic Polymer Chemistry (also MS&E 622 and CHEM 671)
Fall. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor.
For description, see CHEM 671.

CHME 711 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHME 313 or equivalent. P. Clancy.

CHME 713 Chemical Kinetics and Dynamics
Spring. 3 credits. Prerequisite: CHME 390 or equivalent. F. M. White.
Topics include microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of bimolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex
chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media, and free-radical mechanisms in combustion and pyrolysis.

CHME 731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHME 323 and 324 or equivalent. A. Stroock.
Topics include derivation of the equations of motion for Newtonian fluids, low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics; boundary layer theory; and convective and conductive heat transfer.

CHME 732 Diffusion and Mass Transfer
Spring. 2 credits. Prerequisite: CHME 731 or equivalent. L. A. Archer.
Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHME 741 Selected Topics in Biochemical Engineering
Fall, spring. 1 credit (may be repeated for credit). Prerequisite: permission of instructor. K. H. Lee and M. L. Shuler.
Discussion of current topics and research in biochemical engineering for graduate students.

CHME 745 Physical Polymer Science I
Fall. 3 credits. Corequisite: CHME 711 or equivalent. Offered alternate years; offered 2003-2004. C. Cohen.

CHME 751 Mathematical Methods of Chemical Engineering Analysis
Fall. 4 credits. D. L. Koch.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

CHME 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHME 751 or equivalent. Offered alternate years; offered 2003-2004. P. H. Steen.
Topics include elements of stability and bifurcation theory, branch-following techniques, stability of discrete and continuous systems, and application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.

CHME 790 Seminar
Fall, spring. 1 credit each term.
General chemical engineering seminar required of all graduate students in the field of chemical and biomolecular engineering.

CHME 792 Principles and Practices of Graduate Research
Fall, spring. 1 credit. T. M. Duncan and staff.
A colloquium/discussion group series for first-year graduate students. Topics include the culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, serendipity in research, avoiding self-deception), documenting research (lab notebooks, computer files), and reporting research (writing a technical paper and oral presentations).

CHME 890 Thesis Research
Fall, spring. Variable credit.
Thesis research for the M.S. degree in chemical engineering.

CHME 990 Thesis Research
Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING
Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Systems Engineering and Information Technology. Within each mission area are several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General
CEE 113 Solving Environmental Problems for Urban Regions (also ENGR 113) (F,3cr.)
CEE 116 Modern Structural Systems and Materials (also ENGR 116) (F,3cr.)
CEE 241 Engineering Computation (also ENGRD 241) (F,3cr.)
CEE 304 Uncertainty Analysis in Engineering (F,3cr.)
CEE 308 Introduction to CADD (F,3cr.)
CEE 309 Special Topics in Civil and Environmental Engineering (F,1cr.)
CEE 323 Engineering Economics and Management (also ENGRG 323) (S,3cr.)
CEE 400 Senior Honors Thesis (F,3cr.)
CEE 401 Undergraduate Engineering Teaching in CEE (F,3cr.)

Civil Infrastructure
See also: CEE 116, CEE 241, CEE 304, CEE 308, CEE 503, and CEE 595

Geotechnical Engineering
CEE 341 Introduction to Geotechnical Engineering and Analysis (F,3cr.)
CEE 501/502 Design Project in Geotech/Structures (S,F,3cr.)
CEE 602 Civil Infrastructure Seminar (F,1cr.)
CEE 640 Foundation Engineering (F,3cr.)
CEE 641 Retaining Structures and Slopes (S,3cr.)
CEE 644 Environmental Applications of Geotechnical Engineering (S,3cr.)
CEE 649 Special Topics in Geotechnical Engineering (F,3cr.)
CEE 740 Engineering Behavior of Soils (F,3cr.)
CEE 741 Rock Engineering (S,3cr.)
CEE 744 Advanced Foundation Engineering (F,2cr.)
CEE 745 Soil Dynamics (S,3cr.)
CEE 746 Embankment Dam Engineering (S,2cr.)
CEE 749 Research in Geotechnical Engineering (F,3cr.)
CEE 840 Thesis—Geotechnical Engineering (F,3cr.)

Structural Engineering
CEE 116 Modern Structural Systems and Materials (F,3cr.)
CEE 371 Modeling of Structural Systems (F,3cr.)
CEE 376 Physical and Computational Material Simulation (S,1cr.)
CEE 472 Fundamentals of Structural Mechanics (F,3cr.)
CEE 473 Civil Infrastructure Design I (F,3cr.)
CEE 474 Civil Infrastructure Design II (S,3cr.)
CEE 475 Introduction to Composites Materials (F,3cr.)
CEE 479 Collaborative Distance Design of Structural Systems
CEE 501/502 Design Project in Geotech/Structures (F,S,3cr.)
CEE 602 Civil Infrastructure Seminar (F,S,1cr.)
CEE 671 Random Vibration (F,3cr.)
CEE 673 Engineering Analysis (F,S,3cr.)
CEE 674 Finite Element Modeling of Civil Infrastructure (S,3cr.)
CEE 675 Concrete Materials and Construction (S,3cr.)
CEE 676 Finite Element Analysis for Mechanical, Structural, and Aerospace Applications (S,3cr.)
CEE 677 Stochastic Processes in Science and Engineering (F,3cr.)
CEE 678 Structural Dynamics and Earthquake Engineering (S,3cr.)
CEE 770 Engineering Fracture Mechanics (F,3cr.)
CEE 774 Advanced Structural Concrete (S,3cr.)
CEE 775 Structural Concrete Systems (S,3cr.)
CEE 776 Design of Metal Structures (S,3cr.)
CEE 778 Fundamentals of Structural Mechanics (S,3cr.)
CEE 783 Civil and Environmental Engineering Materials Project (F,3cr.)
CEE 785 Research in Structural Engineering (F,3cr.)
CEE 786 Special Topics in Structural Engineering (F,S,3cr.)
CEE 880 Thesis—Structural Engineering (F,S,3cr.)

**Environment**
See also CEE 113, CEE 241, and CEE 304

**Environmental Engineering**
CEE 113 Solving Environmental Problems for Urban Regions (F,3cr.)
CEE 351 Environmental Quality Engineering (S,3cr.)
CEE 352 Water Supply Engineering (F,3cr.)
CEE 451 Microbiology for Environmental Engineering (F,3cr.)
CEE 453 Laboratory Research in Environmental Engineering (S,3cr.)
CEE 501/502 Design Project in Environmental Engineering (F,S,3cr.)
CEE 601 Water Resources and Environmental Engineering Seminar (F,1cr.)
CEE 632 Hydrology (F,S,3cr.)
CEE 633 Flow in Porous Media and Groundwater (F,3cr.)
CEE 634 Boundary Layer Meteorology (F,3cr.)
CEE 635 Small and Finite Amplitude Water Waves (S,3cr.)
CEE 636 Environmental Fluid Mechanics (S,3cr.)
CEE 637 Experimental Methods in Fluid Dynamics (S,3cr.)
CEE 638 Hydraulics Seminar (S,1cr.)
CEE 639 Special Topics in Hydraulics (F,S,3cr.)
CEE 655 Transport, Mixing, and Transformation in the Environment (F,3cr.)
CEE 735 Research in Hydraulics (F,S,3cr.)
CEE 880 Thesis—Fluid Mechanics and Hydrology (F,S,3cr.)

**Systems Engineering and Information Technology**
See also CEE 113, CEE 241, and CEE 304

**Engineering Management**
CEE 490 Management Practice in Project Engineering (F,S,3cr.)
CEE 590 Project Management (F,S,3cr.)
CEE 591 Engineering Management Project (F,3cr.)
CEE 592 Engineering Management Project (S,3cr.)
CEE 593 Engineering Management Methods: Data, Information, and Modeling (F,3cr.)
CEE 594 Economic Methods for Engineering and Management (S,4cr.)
CEE 595 Construction Planning and Operations (F,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 598 Introduction to Decision Analysis (S,4cr.)
CEE 692 Special Topics in Engineering Management (F,S,3cr.)
CEE 694 Research in Engineering Management (F,S,3cr.)
CEE 764 Special Topics in Transportation (F,S,3cr.)
CEE 860 Thesis—Transportation Engineering (F,S,3cr.)

**Remote Sensing**
CEE 411 Remote Sensing: Environmental Applications (also CSS 411) (S,3cr.)
CEE 610 Remote Sensing Fundamentals (F,3cr.)
CEE 615 Digital Image Processing (S,3cr.)
CEE 671 Project—Remote Sensing (F,S,3cr.)
CEE 768 Special Topics—Remote Sensing (F,S,3cr.)
CEE 810 Thesis—Remote Sensing (F,S,3cr.)

**Systems Engineering**
CEE 504 Applied Systems Engineering (also M&A 591, ECE 512, OR&IE 512, SYSEN 510, COM S 504) (F,3cr.)
CEE 505 Applied Systems Engineering II (also M&A 592, ECE 513, OR&IE 513, SYSEN 520, COM S 505) (F,3cr.)
CEE 506 Civil Infrastructure Systems (S,3cr.)
CEE 509 Heuristic Methods of Optimization (also COM S 574) (S,3cr.)
CEE 603 Systems Engineering and Information Technology Seminar (F,1cr.)

**Transportation**
CEE 361 Introduction to Transportation Engineering (S,3cr.)
CEE 463 Transportation and Information Technology (F,3cr.)
CEE 464 Transportation Systems Design (S,3cr.)
CEE 561 Urban Transportation Planning and Modeling (F,3cr.)
CEE 762 Transportation Research (F,S,3cr.)
CEE 764 Special Topics in Transportation (F,S,3cr.)
CEE 860 Thesis—Transportation Engineering (F,S,3cr.)

**CEE 113 Solving Environmental Problems for Urban Regions (also ENGRI 113)**
Fall. 3 credits. Not open (without instructor’s permission) to upper-division engineering students. Students must register under ENGRI 113. M. L. Weber-Shirk.
This is a course in the Introduction to Engineering series. For description, see ENGRI 113.

**CEE 116 Modern Structural Systems and Materials (also ENGRI 116)**
Fall. 3 credits. Students must register under ENGRI 116. R. A. Davidson.
This is a course in the Introduction to Engineering series. For description, see ENGRI 116.

**CEE 241 Engineering Computation (also ENGRD 241)**
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294 (completion of MATH 294 is suggested). Students must register under ENGRD 241. W. Philpot, C. A. Shoemaker. For description, see ENGRD 241.
CIVIL AND ENVIRONMENTAL ENGINEERING

CCE 304 Uncertainty Analysis in Engineering
Fall. 4 credits. CEE Engineering Co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Stedinger.
Introduction to probability theory and statistical techniques, with examples from civil, environmental, and related disciplines. Course covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, correlation, linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, pollutant concentrations, and models of vehicle arrivals.

CCE 308 Introduction to CADD
Fall, spring. 1 credit. Prerequisite: affiliation in CEE or permission of instructor. Course begins second full week of classes. J. F. Abel, J. J. Bisogni.
Learn to employ Computer Aided Design and Drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD 2000 techniques. Alternative software tools for solid modeling are introduced. Course meets in ACCEL once per week for eleven weeks, and grades are based on attendance, weekly exercises completed in class, and a semester project.

CCE 309 Special Topics in Civil and Environmental Engineering
Fall, spring. 1-6 credits. Staff.
Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CCE 323 Engineering Economics and Management (also ENGRG 323)
Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks.
For description, see ENGRG 323.

CCE 331 Fluid Mechanics
Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202 (may be taken concurrently). E. A. C. Loucks.
Covers: hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulence boundary layer, flows around obstacles, and open-channel flow.

CCE 332 Hydraulic Engineering
Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, and pollutant dispersal. Lectures supplemented by laboratory work and a design project. See www.cee.cornell.edu/cce332/for details.

CCE 341 Introduction to Geotechnical Engineering and Analysis
Spring. 4 credits. Prerequisite: ENGRD 202, CCE 351 (or equivalent), or permission of instructor. H. E. Stewart.
Fundamentals of geotechnical engineering. Topics covered include: origins and descriptions of soil and rock as engineering materials, subsurface exploration methods, principles of effective stresses, stress distribution and ground settlements from surface loads, magnitude and time-dependent subsurface fluid flow, soil strength and failure criteria, geoenvironmental applications, and introduction to hazardous waste containment systems.

CCE 351 Environmental Quality Engineering
Spring. 3 credits. L. W. Lion.
Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for wastewater treatment.

CCE 352 Water Supply Engineering
Fall. 3 credits. Prerequisites: CCE 351 and previous/concurrent enrollment in CEE 451 or BIOMI 290. J. J. Bisogni.
Analysis of contemporary threats to human health from water supplies. Criteria and standards for design and management of Water-quality control theory. Design of water supply facilities.

CCE 361 Introduction to Transportation Engineering
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. J. Mbwana and A. H. Meyburg.
Introduction to technological, economic, and social aspects of transportation. Emphasis is on design and functioning of transportation systems and their components. Covers: supply-demand interactions, system planning, design, and management; traffic flow, intersection control and network analysis; institutional and energy issues; and environmental impacts.

CCE 371 Modeling of Structural Systems
Spring. 4 credits. Prerequisite: ENGRD 202. J. F. Abel.
Analytical and computational modeling of structural systems. The course is based on case studies involving different scales and different materials such as modern steel bridges, soil-foundation-structure systems, micro-electromechanical structures (MEMS), and aerospace vehicle structures. Topics include: analytical methods for solving statically determinate systems; virtual work principles for determination of kinematic and static unknowns; matrix formulation of the flexibility and stiffness methods of structural analysis for statically indeterminate systems; linear members (2D truss, frame); and an introduction to finite element modeling of continua.

CCE 376 Physical and Computational Material Simulation
Spring. 4 credits. Prerequisites: ENGRD 202, CCE 371. Staff.
Material failure phenomena such as fracture, plastic yielding and buckling in metals, plastics, polymeric and cement-based composites including concrete, and smart materials. Material response presented through fundamental theories of physical behavior, theories for predicting response and methods for computational simulation. Practical considerations for material use in civil infrastructure. Weekly lab meetings including fabrication, experimentation and simulation of materials.

CCE 400 Senior Honors Thesis
Fall, spring. 1-6 credits. Staff.
Available to students admitted to the CEE Honors Program. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CCE 401 Undergraduate Engineering Teaching in CEE
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.
Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CCE 402 Engineers without Frontiers
Fall, spring. 2 credits. R. A. Davidson and J. Mbwana. Students may enroll for credit for a maximum of 4 semesters.
Students undertake engineering-based group service projects in cooperation with partner community organizations. The projects, which may be local or international, offer real-life engineering research and design experience from problem formulation through implementation. Students work on interdisciplinary teams with a faculty mentor (often a professor or practicing engineer) and a representative from the partner community organization. Projects are selected based on academic content, potential significance to the partner community, commitment of the partner community organization, and student safety. The instructors coordinate with the Cornell chapter of Engineers without Frontiers.

CCE 411 Remote Sensing: Resource Inventory Methods (also CSS 411)
Spring. 3 credits. Prerequisite: permission of instructor. S. C. DeGloria.
For description, see CSS 411.

CCE 431 Geohydrology (also GEO/LAS 445 and BEE 471)
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes: description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

CCE 432 Hydrology
Spring. 3 credits. Prerequisite: CCE 331. Intended for undergraduates. Lectures concurrent with CEE 632. W. H. Brutsaert.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 632.

CCE 436 Case Studies in Environmental Fluid Mechanics
Spring. 4 credits. Prerequisite: CCE 351 or equivalent. E. A. Cowen.
An introduction to fundamental fluid mechanics and transport processes of the environment through laboratory- and field-based studies (Cayuga Lake, and Fall, Six-Mile, and Cascadilla Creeks) and case studies. Topics include: surface and interfacial waves, dynamics, sediment and nutrient/contaminant transport, and interfacial transfer. Lectures are based on laboratory/field projects. Course includes a design project.

CCE 437 Experimental Methods in Fluid Dynamics
An introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Topics include: principal characteristics and reactions of organic molecules; characteristics of Bacteria, archaebacteria, eukaryotes, fungi, algae, and protozoa; and viruses relevant to water, wastewater and groundwater; pathogens, disease, and immunity; environmental influences on microorganisms; bioenergetics; enzymes and metabolism; microbial genetics; molecular microbiology, and microbial ecology. This is an introductory course; consequently, it is inappropriate for those who have taken BIOMI 290 or equivalent.

CxEE 451 Microbiology for Environmental Engineering
Fall. 3 credits. Prerequisite: two semesters of college chemistry. R. E. Richardson.
An introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Topics include: principal characteristics and reactions of organic molecules; characteristics of Bacteria, archaebacteria, eukaryotes, fungi, algae, and protozoa; and viruses relevant to water, wastewater and groundwater; pathogens, disease, and immunity; environmental influences on microorganisms; bioenergetics; enzymes and metabolism; microbial genetics; molecular microbiology, and microbial ecology. This is an introductory course; consequently, it is inappropriate for those who have taken BIOMI 290 or equivalent.

CxEE 453 Laboratory Research in Environmental Engineering
Spring. 3 credits. Prerequisites: CxEE 351 or permission of instructor. M. L. Weber-Shirk.
Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment; risk assessment, and remediation; pollutant dispersion/transport in rivers; drinking water filtration for pathogen removal; oxygen sag in rivers; and biodegradation in landfills. Design of laboratory experiments, development of laboratory methods, and use of experimental data are emphasized. See www.cee.cornell.edu/cee453 for more information.

CxEE 463 Transportation and Information Technology
Fall. 3 credits. M. A. Turnquist.
Improving the use of existing facilities has become an important objective in transportation planning. This course examines the role of computer and telecommunications technologies in these improvements. Specific attention is focused on the development of analyses to evaluate the benefits of inclusion of these technologies in transportation systems.

CxEE 464 Transportation Systems Design
Spring. 3 credits. Prerequisite: CxEE 361.
Staff
Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

CxEE 472 Fundamentals of Structural Mechanics
Fall, summer. 3 credits. Prerequisites: ENGRD 202, MATH 294. Primarily for seniors or by permission of the instructor. M. D. Grigoriu.
The course covers geometric definitions of deformation, rotation, and strain; small-strain theory; and the concept of stress. Students will learn about equilibrium and the conservation of energy and virtual work. Other course topics include elasticity, basic plasticity, failure criteria for design, plane stress and plane strain, stress function solutions, torsion, beam and plate theory, and buckling. There will be two lectures and a recitation per week.

CxEE 473 Civil Infrastructure Design I
Fall. 4 credits. Prerequisites: CxEE 341 and 376 or permission of instructor. K. C. Hoover.
Behavior and design of reinforced concrete and structures. Discussion of how forces are transferred through elements of building system. Includes a semester project requiring the design of a reinforced concrete structure.

CxEE 474 Civil Infrastructure Design II
Spring. 4 credits. Prerequisite: CxEE 341 and 376 or permission of instructor. K. C. Hoover.
Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

CxEE 475 Introduction to Composite Materials (also M&AE 455, MS&E 555, and TAM 455)
Spring. 4 credits. L. Phoenix.
For description, see TAM 455.

CxEE 479 Collaborative, Distance Design of Structural Systems (also M&AE 491)
Fall, spring. 8 credit hours. Students who enroll in CxEE 479 are expected to take it in both the fall and spring semesters.
This is a new senior-level design course, funded by NASA and the state of New York and taught jointly with Syracuse University. It emphasizes teamwork, collaboration at a distance, and multidisciplinary activities. The project is based on structural systems for a reusable launch vehicle. The course involves design, analysis, simulation, building, testing, virtual reality, and asynchronous learning environments. First semester covers conceptual design, study of advanced mechanics, materials, software applications, risk and cost analysis. The second semester involves detailed design, construction, testing, and simulation.

CxEE 481 LRFB-Based Engineering of Wood (also BEE 481)
Spring. 3 credits. Prerequisite: ENGRD 202.
For description see BEE 481 in the College of Agriculture and Life Sciences section of this catalog.

CxEE 490 Management Practice in Project Engineering
Fall. 3 credits. Prerequisite: permission of instructor K. C. Hoover.
An introduction to the principles of project management. Planning, organizing, communicating, scheduling, and controlling of engineering work done in project teams.

CxEE 501/502 Design Project
Fall, spring. 3 credits each term. Required for students in the M.Eng. (Civil) program. Staff.
CxEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect the diverse specialty areas of the Civil and Environmental engineering field as described below.

CxEE 501/502 Design Project in Geotech Structures
Design of major civil engineering project. Planning and preliminary design during the fall term; final design completed in January intersession.

CxEE 505 Applied Systems Engineering I (also COM S 504, ECE 512, M&AE 591, OR&IE 512, SYSEN 510)
Fall. 3 credits. Prerequisite: senior or graduate standing in engineering, or permission of instructor. R. Roundy/M. E. Campbell.
For description, see SYSEN 510.

CxEE 505 Applied Systems Engineering II (also COM S 505, ECE 512, M&AE 592, OR&IE 513, SYSEN 520)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CxEE 504, COM S 504, ECE 512, M&AE 591, OR&IE 512 or SYSEN 520). L. Nozick, P. Jackson, and R. Thomas.
For description, see SYSEN 520.

CxEE 506 Civil Infrastructure Systems
Spring. 3 credits. Letter S-U.
Prerequisites: Probability and statistics (CxEE 304 or equivalent) and Engineering economics (CxEE 323 or equivalent). L. K. Nozick.
Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, will be examined through case studies related to civil infrastructure.

CxEE 509 Heuristic Methods for Optimization (also COM S 572)
Spring. 3 or 4 credits. Prerequisites: CxEE/ENG 241 or COM S/ENG 211 or 222 or graduate standing or permission of instructor. Not offered every year. G. A. Shoemaker and B. Selman.
This course describes a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, randomized evolution strategy, random walk, and direct search algorithms. Algorithms are used to find values of discrete and/or continuous variables arising in optimization and model fitting. Applications are discussed in a range of areas including some of the following: artificial intelligence, scheduling, protein folding, economic planning, water quality protection, telecommunications, and robotics. The advantages and disadvantages of heuristic search methods for both serial and parallel computa-
Economic concepts are introduced and used to select, calibrate and apply proper analytic decision tools in engineering design and management. Topics covered include: market analysis and pricing strategies; production choices and cost estimation; input acquisition and employee motivation; project evaluation and the cost of capital; decision-making in risky and uncertain environments; industry structure, bidding strategies and game theory; plus the regulatory and ethical consequences of overall managerial strategies.

CEE 595 Construction Planning and Operations
Fall. 3 credits. P. Carr
A course on the fundamentals of construction planning: organization of the work site; construction planning, scheduling, and cost estimating; bidding, temporary structures; applications of computer methods; and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 597 Risk Analysis and Management
Spring. 3 credits. Prerequisite: An introduction to probability and statistics course such as CEE 304, ENGRD 270, ILRST 210, BTRY 261, or ECON 324. Some knowledge of calculus is helpful. Course examines statistical, time series, and mathematical methods in risk analysis, including applications to environmental, technical, and other fields.

CEE 598 Introduction to Decision Analysis
Spring. 3 credits. Prerequisite: an introduction to probability and statistics course such as CEE 304, ENGRD 270, ILRST 210, BTRY 261 or AE 210. Some knowledge of calculus is helpful. Course introduces students to the basic concepts and techniques of decision analysis and modeling. Topics include decision trees, sensitivity analysis, value of information, utility theory, and applications to areas of engineering and life. Includes a group project to analyze a real-world decision.

CEE 601 Water Resources and Environmental Engineering Seminar
Fall. 1 credit. J. R. Stedinger.
Presentation of topics of current interest.

CEE 602 Civil Infrastructure Seminar
Fall, spring. 1 credit. Required for first-year graduate students. Staff.
Presentation of topics of current interest.

CEE 603 Systems Engineering and Information Technology Seminar
Fall, spring. 1 credit. Staff.
Presentation of topics of current interest.

CEE 605 Issues in Risk Analysis Seminar
Fall. 1 credit. S-U option. Staff.
Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risk, communication issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series. Enrollment in seminar requires short reports and participation in two required discussion meetings for class members designed to integrate the issues raised during the semester.

CEE 610 Remote Sensing Fundamentals
(also CCS 660)
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

CEE 615 Digital Image Processing
Spring, 3 credits. Prerequisites: facility with algebra and trigonometry (e.g., MATH 109) and statistics (e.g., CEE 304 or ARME 310) or permission of instructor. W. D. Philpot.
An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

CEE 617 Project—Remote Sensing
On demand. 1-6 credits. W. D. Philpot.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 618 Special Topics—Remote Sensing
On demand. 1-6 credits. W. D. Philpot.
Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

CEE 620 Water-Resources Systems Engineering
Spring. 3 credits. Prerequisites: CEE 323 and CEE 593. D. P. Loucks.
Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. Covers river-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

CEE 621 Stochastic Hydrology
Spring. 3 credits. Prerequisites: CEE 304 or permission of instructor. Not offered 2003-2004. J. R. Stedinger.
Course examines statistical, time series, and stochastic optimization and simulation methods in assessment of water resources planning and management problems involving uncertainty objectivity and hydrologic inputs. Statistical issues include: maximum likelihood and moments estimators, censored data sets and historical information; probability plotting, Bayesian inference; regionalization methods; ARMA models, multivariate stochastic streamflow models, stochastic simulation; and stochastic reservoir-operation optimization models.)
Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include: regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications include linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

CEE 628 Environmental and Water Resources Systems Analysis Seminar
Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker.
Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 631 Flow and Contaminant Transport Modeling in Groundwater
Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 241 or experience in numerical methods and programming, and elementary fluid mechanics.

Potential flows and their calculation. Numerical methods include finite difference, finite elements, and boundary elements. Covers: fundamental equations of saturated and unsaturated flow in porous media; flow in fractured media; numerical modeling of transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. The course includes the use of computer programs.

CEE 632 Hydrology
W. H. Brutsaert.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers: physical laws, statistical prediction methods for design related to hydraulic processes, hydrometeorology and evaporation, infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydrologic systems; and storage routing and routing hydrograph methods.

CEE 633 Flow in Porous Media and Groundwater
Fall. 3 credits. Prerequisite: CEE 331.
W. H. Brutsaert.
Fluid mechanics and equations of single-phase and multiphase flow, methods of solution. Applications involve aquifer hydraulics, pumping wells, drought flows, infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement, and transient seepage in unsaturated materials.

CEE 634 Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 635 Small and Finite Amplitude Water Waves
P. L.-F. Liu.
Review of linear and nonlinear theories of ocean waves. Discussions on the applicability of different wave theories to engineering problems.

CEE 636 Environmental Fluid Mechanics
Spring. 3 credits. E. A. Cowen.
Course covers: analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified flow; steady, unsteady, and unsteady currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 637 Experimental Methods in Fluid Dynamics
E. A. Cowen.
Introduction to experimental data collection and analysis, in particular as they pertain to fluid flows. Covers: computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Also covers: analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CEE 638 Hydraulics Seminar
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. Staff. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 639 Special Topics in Hydraulics
On demand. 1-6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 640 Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341.
F. H. Kulhawy.
Course covers: soil exploration, sampling, and in-situ testing techniques, bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 641 Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341.
T. D. O'Rourke.
Course covers: Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems. Application of course material under field conditions of engineering practice.

CEE 644 Environmental Applications of Geotechnical Engineering
Spring. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O'Rourke.
Covers principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis is on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 649 Special Topics in Geotechnical Engineering
On demand. 1-6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CEE 653 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: 1 semester of college chemistry or permission of instructor. L. W. Lion.
Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 654 Aquatic Chemistry
Spring. 3 credits. Prerequisite: CEE 653 or CHEM 297-298. Not offered 2003-2004.
J. J. Bisogni.
Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, E-h-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 653.

CEE 655 Transport, Mixing, and Transformation in the Environment
Fall. 3 credits. Prerequisite: CEE 331.
P. L.-F. Liu.
Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffusive, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CEE 659 Environmental Quality Engineering Seminar
Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff. Presentation and discussion of current research in environmental engineering.

CEE 671 Random Vibration
Fall. 3 credits. Prerequisites: MRAE 326 and OR&IE 260, or equivalent, and permission of instructor. M. D. Grigoriu.
Review of random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response, spectral descriptors and applications from fatigue, seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolmogorov equations, change of calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.
CIVIL AND ENVIRONMENTAL ENGINEERING

[C EE 673 Engineering Analysis

Vector spaces, linear transformations, and eigenvalue problems with applications to matrix structural analysis, linear dynamics, stability, and principal stresses, strains, and moments of inertia. Fourier analysis for periodic and non-periodic functions, with applications to the solution of ordinary differential equations, beams, plates, and other structural mechanics problems. Partial differential equations with applications to the analysis of static and dynamic response of continuous systems and transport problems.]

[C EE 674 Finite Element Modeling of Civil Infrastructure
Spring. 3 credits. Prerequisites: CEE 371 and either CEE 472 or CEE 778. Staff.

Matrix methods of structural analysis; truss and frame analysis; computer programming of displacement (stiffness) method. Covers the finite element method as an extension of the displacement method of structural analysis; basic two- and three-dimensional continuum elements. Introduction to nonlinear analysis. Emphasis is on applications in Civil Infrastructure design. The course develops the knowledge base for intelligent usage of finite element programs for structural and geotechnical engineers. Brief exposition of the theory and informed use of commercial codes on more advanced topics: shell elements, material and geometric nonlinearity. Also includes: applications to concrete, steel, and soil structures; solution methods; transient problems.]

[C EE 675 Concrete Materials and Construction

Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement and concrete chemistry; physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.]

[C EE 676 Finite Element Analysis (also M&AE 680 and T&AM 666)
Spring. 3 credits. Prerequisite: T&AM 663 or equivalent. Staff.

For description, see M&AE 680.

[C EE 677 Stochastic Problems in Science and Engineering
Fall. 3 credits. Prerequisites: permission of instructor. Not offered 2003–2004. M. D. Grigorou.

Review of probability theory, stochastic processes, and its formulation with illustrations by Monte Carlo Simulation. Analytical and numerical methods for solving stochastic problems defined by algebraic, differential, and integral equations with random/deterministic coefficients and random/deterministic input. Applications include: solution of Laplace, transport, Schrodinger, and other deterministic partial differential equations; dynamic systems subjected to Gaussian and non-Gaussian noise; random eigenvalue problems; and homogenization, structure evolution, and pattern formation for random heterogeneous materials.]

[C EE 678 Structural Dynamics and Earthquake Engineering
Spring. 3 credits. M. D. Grigorou.

Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

[C EE 692 Special Topics in Engineering Management
On demand. 1–6 credits. Staff.

Individually supervised study of one or more specialized topics not covered in regular courses.

[C EE 694 Research In Engineering Management
On demand. 1–6 credits. Staff.

The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

[C EE 710 Research—Remote Sensing
On demand. 1–6 credits. W. D. Philpot.

For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

[C EE 722 Environmental and Water Resources Systems Analysis Research
On demand. 1–6 credits. Staff.

Investigations of particular environmental or water resources systems problems.

[C EE 729 Special Topics in Environmental or Water Resources Systems Analysis
On demand. 1–6 credits. Staff.

Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

[C EE 735 Research in Hydraulics
On demand. 1–6 credits. Staff.

The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

[C EE 740 Engineering Behavior of Soils
Fall. 3 credits. Prerequisite: CEE 341. H. E. Stewart.

[C EE 741 Rock Engineering
Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. T. D. O'Rourke.

Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers: stress states and stress analysis; design of excavations; and openings in, rock masses; and analysis of the stability of rock slopes.

[C EE 744 Advanced Foundation Engineering
Spring. 2 credits. Prerequisite: CEE 640. F. H. Kulhawy.

A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

[C EE 745 Soil Dynamics
Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart.

Study of soil behavior under dynamic loading conditions. Foundation design for vibration loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

[C EE 746 Embankment Dam Engineering
Spring. 2 credits. Prerequisites CEE 641 and 741, or permission of instructor. Not offered 2003–2004. F. H. Kulhawy.

Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.]

[C EE 749 Research in Geotechnical Engineering
On demand. 1–6 credits. Staff.

For students who want to pursue a particular geotechnical topic in considerable depth.

[C EE 750 Research in Environmental Engineering
On demand. 1–6 credits. Staff.

For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

[C EE 752 Environmental and Water Resources Systems Analysis
On demand. 1–6 credits. W. D. Philpot.

Specialized topics not covered in regular courses.

[C EE 756 Biological Processes
Fall. 3 credits. Prerequisite: previous or concurrent enrollment in CEE 653 or permission of instructor. J. J. Bisogni.

Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

[C EE 755 Physical/Chemical Processes
Spring. 3 credits. Prerequisite: CEE 755, or permission of instructor. J. M. Gossett.

Introduction to physical and chemical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

[C EE 757 Environmental Engineering Process Laboratory
Fall. 2 credits. Prerequisite: concurrent enrollment in CEE 653 and CEE 755. J. J. Bisogni and M. F. Shirazi.

Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include: gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes, and coagulation.
CE 758 Biological Processes Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in CE 756. R. Richardson. Laboratory studies of microbiological processes. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies; and enumeration of bacteria.

CE 759 Special Topics in Environmental Engineering
On demand. 1-6 credits. Staff. Supervised study in special topics not covered in formal courses.

CE 762 Transportation Research
On demand. 1-6 credits. A. H. Meyburg. In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

CE 764 Special Topics in Transportation
On demand. 1-6 credits. Staff. Advanced subject matter not covered in depth in other regular courses.

CE 770 Engineering Fracture Mechanics
Fall. 3 credits. Prerequisite: CE 674 or CE 772 (M&E 680/T&AM 666) and T&AM 753, or permission of instructor. Offered alternate years. Not offered 2003-2004. A. Ingraffea. Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elasto-plastic and cohesive approaches to inelastic crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

CE 773 Structural Reliability

CE 774 Advanced Structural Concrete
Fall. 3 credits. Prerequisite: undergraduate concrete design course. Staff. Advanced behavior, analysis, and design of structural concrete with an introduction to prestressing, course project integrating computer simulation and physical experimentation of a design.

CE 775 Structural Concrete Systems
Spring. 3 credits. Prerequisite: CE 774. Not offered 2003-2004. Staff. Behavior and design of structural concrete building and bridge systems; integration of material, component, and system modeling with structural design; independent study project.

CE 776 Advanced Design of Metal Structures
Spring. 3 credits. Prerequisite: CE 374 or equivalent. T. Pekoz. Preliminary design of structural systems. Behavior and design of members and connections. Behavior and computer-aided design of building frames.

CE 778 Fundamentals of Structural Mechanics

CE 783 Civil and Environmental Engineering Materials Project
On demand. 1-3 credits. Staff. Individual projects or reading and study assignments involving engineering materials.

CE 785 Research in Structural Engineering
On demand. 1-6 credits. Staff. Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CE 786 Special Topics in Structural Engineering
On demand. 1-6 credits. Staff. Individual supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CE 810 Thesis—Remote Sensing
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. W. D. Philpot. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CE 820 Thesis—Environmental and Water Resource Systems
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CE 830 Thesis—Fluid Mechanics and Hydrology
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CE 840 Thesis—Geotechnical Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CE 850 Thesis—Environmental Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CE 860 Thesis—Transportation Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

COM S 099 Fundamental Programming Concepts
Fall, summer. 2 credits. No prerequisites. S-U grades only. Credit cannot be applied toward the Engineering degree. Freshmen only. This course is designed for students who intend to take COM S 100 but are not adequately prepared for that course. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience and students who do not intend to take COM S 100 should not take this course.

COM S 100 Introduction to Computer Programming
Fall, spring, summer. 4 credits. An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. There are two versions of the course. Both provide adequate preparation for COM S/ENGRD 211. Both versions are not offered every semester.
COM S 100M Introduction to Computer Programming
Corequisite: MATH 111, 191, or equivalent. This version starts with a seven-week introduction to programming in MATLAB. Iteration, functions, and arrays are introduced. During the second seven weeks of the course, students examine how these ideas are handled in the object-oriented framework provided by the Java programming language. Throughout the course, examples and assignments are chosen to give the student an appreciation for computational science and engineering. The pace of the course assumes that the student has no prior programming experience.

COM S 100J Introduction to Computer Programming
This course is an introduction to programming using the Java programming language. A two-week unit on MATLAB is included. Topics include algorithms, language concepts, selection, repetition, functions, objects and classes, arrays, strings, and inheritance. Principles of software development and style are emphasized. The course assumes basic high school mathematics (no calculus) but no programming experience.

COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and PSYCH 102)
Fall, summer. 3 credits. For description, see COGST 101.

COM S 113 Introduction to C
Fall, spring. 1 credit. Usually weeks 1–4. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only. A brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use Unix for projects, but familiarity with Unix is not required. Projects may be done using any modern implementation of C. COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

COM S 114 Unix Tools
Fall. 1 credit. Usually weeks 5–8. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only. An introduction to Unix, emphasizing tools for file management, communication, process control, managing your Unix environment, and rudimentary shell scripts. Knowledge of at least one programming language is encouraged. Projects assume no previous knowledge of Unix or expertise in any particular language.

COM S 130 Introductory Web Programming (also CIS 130)
Fall, summer. 3 credits. No prerequisites. Interactive online media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students having little or no computer background to tools and techniques for creating interactive documents. Questions of both design and technical issues are emphasized. Students must think seriously about digital graphic impact and must learn how to do some relatively simple programming with a scripting language (such as JavaScript). Topics covered include HTML, JavaScript, interaction techniques (elementary DHTML); ways of coping with slow connections, the incorporation of sound, video, and images in web documents; animation techniques (Flash); ethics, and e-commerce.

COM S 172 Computation, Information, and Intelligence (also ENGR 172)
Fall. 3 credits. Prerequisites: some knowledge of calculus. An introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, computer-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets will be assigned. Not open to students who have completed the equivalent of COM S 100.

COM S 201 Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201)
Spring. 4 credits. Limited to 24 students. Prerequisite: concurrent or prior registration in Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191) is suggested but not required. Knowledge of programming languages is not assumed. Fall, B. Halpern and staff; spring, D. Field and staff. For description, see COGST 201.

COM S 211 Computers and Programming (also ENGR 211)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, subtyping), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

COM S 212 Java Practicum
Fall, spring, summer. 1 credit. Letter grade only. Prerequisite: COM S 211 or permission of instructor.

COM S 213 C++ Programming
Spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 213 and 212 must take 211 first. S-U grades only. An intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user-defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take COM S 213 normally do not need to take COM S 113; 213 includes most of the material taught in 113.

COM S 214 Advanced UNIX Programming and Tools
Spring. 1 credit. S-U grade only. Prerequisite: COM S 114 or equivalent. A focus on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, bash), makefiles, programs for delivering tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take COM S 114 first.

COM S 215 Introduction to C#
Fall, spring. 1 credit. Prerequisite: COM S/ENGRD 211 or equivalent experience. This course covers the basics of the C# programming language and introduces students to building applications in the .NET environment using the C# language.

COM S 230 Intermediate Web Design (also CIS 230)
Spring. 3 credits. Prerequisite: COM S 130 or equivalent. Web programming requires the cooperation of two machines: the one in front of the viewer (the client) and the one delivering the content (the server). COM S 130 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web site development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability and ways of incorporating other programs. Toward the end of the course, students are shown how these development tools are working. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

COM S 280 Discrete Structures
Fall, spring. 4 credits. Pre- or corequisite: COM S/ENGRD 211 or permission of instructor.

COM S 292 Information Science (also COGST 292)
Fall, spring. 1 credit. Prerequisites: concurrent or prior registration in Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191) is suggested but not required. Knowledge of programming languages is not assumed. Fall, B. Halpern and staff; spring, D. Field and staff. For description, see COGST 201.

COM S 310 Advanced UNIX Tools
Fall. 1 credit. Usually weeks 5–8. Prerequisite: COM S 114 or equivalent. Projects that make use of Unix as a programming tool and the one delivering the content (the server). COM S 130 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web site development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability and ways of incorporating other programs. Toward the end of the course, students are shown how these development tools are working. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

COM S 311 Data Structures and Functional Programming
Fall, spring. 4 credits. Prerequisite: COM S 211/212 or equivalent programming experience. An advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include: recursive and higher-order procedures, models of programming language evaluation and compilation, type systems, and polymorphism. Data structures and algorithms covered include graph algorithms, balanced trees, memory heaps, and garbage collection. Also covered are techniques for analyzing program performance and correctness.

COM S 314 Discrete Mathematics
Fall, spring. 4 credits. Prerequisite: COM S 211/212 or equivalent programming experience. A focus on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, bash), makefiles, programs for delivering tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take COM S 114 first.
COM S 314 Computer Organization (also ECE 314)  
Fall, spring. 4 credits. Prerequisite: COM S 210; COM S 211/ENG RD 230 are recommended but not required. Should not be taken concurrently with COM S 312.  
Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, datapath design, memory hierarchies including caches and virtual memory, I/O devices, and bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

COM S 321 Numerical Methods in Computational Molecular Biology (also ENGRD 321)  
Fall. 3 credits. Prerequisites: at least one course in calculus, such as MATH 106, 111, or 191 and a course in linear algebra, such as MATH 221 or 294 or BTRY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures.  
An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, linear equation solving, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization will also be treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition, for the problems of molecular biology. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 322 Introduction to Scientific Computation (also ENGRD 322)  
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or MATH 294).  
An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, and stability are stressed. Includes special lectures on parallel computation. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 324 Computational Linguistics (also COGST 424, LING 424)  
Fall, spring. 4 credits. Prerequisites: LING 203; labs involve work in the Unix environment; COM S 114 recommended. For description, see LING 424.

COM S 330 Applied Database Systems (also CIS 330)  
Spring. 3 credits. Prerequisite: COM S 211/ENG RD 211; COM S majors may use only one of the following toward their degree: CIS/COM S 330 or COM S 433.  
An introduction to modern database systems and three-tier application development using database systems. Concepts covered include the relational model, query languages, data modeling, database tuning, three-tier architectures, Internet data formats and query languages, server- and client-side technologies, decision support systems, and an introduction to data mining. The course is targeted at users of database systems and at application development using database systems and includes several programming projects comprising the design and implementation of a database-backed web site.

COM S 381 Introduction to Theory of Computing  
Fall, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.  
An introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

COM S 411 Programming Languages  
Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor.  
An introduction to the theory, design, and implementation of programming languages. Topics include operational semantics, type systems, higher-order function, scope, lambda calculus, laziness, exceptions, side effects, continuations, effects, and evaluation strategies. Also discussed are logic programming, concurrency, and distributed and persistent programming.

COM S 412 Introduction to Compilers  
Spring. 3 credits. Prerequisites: COM S 312 (or permission of instructor) and COM S 314. Corequisite: COM S 413.  
An introduction to the specification and implementation of modern compilers. Topics covered include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages. The course entails a substantial compiler implementation project.

COM S 413 Practicum in Compilers  
Spring. 2 credits. Corequisite: COM S 412. A compiler implementation project related to COM S 412.

COM S 414 Systems Programming and Operating Systems  
Fall, spring, summer. 3 credits. Prerequisite: COM S 211, 212, 312 (or permission of instructor), and 314. Corequisite: COM S 415 in spring only.  
An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 415 Practicum in Operating Systems  
Fall. Spring. 2 credits. Corequisite: COM S 414.  
The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiuser, multiwindow, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 421 Numerical Analysis  
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.  
Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation. This course requires more mathematical sophistication than COM S 322. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 426 Introduction to Computational Biology  
Fall. 3 credits. Prerequisites: COM S/ENG RD 211, COM S 280.  
Computational biology is a relatively new field that is rooted in two different disciplines: computer science and molecular biology. It is concerned with the study of biological systems and phenomena, in search for explanations, rules, patterns, and regularities. The focus of this course is the set of algorithms, tools, and models used today to analyze biological data and recover and discover hidden information. These tools can be used to predict the function of new genes, discover hidden motifs that are biologically significant, study evolutionary processes, better understand cellular "computations", and aid in the development of new therapeutic agents for treatment of various diseases. Some of the topics covered are sequence analysis (alignment, multiple sequence alignment), motif detection, phylogenetic trees, secondary structure prediction, Hidden Markov Models, and analysis of gene expression data. This course is intended mostly for students in the computational sciences because it focuses on algorithms and mathematical models. No knowledge of biology is needed (the course starts with a brief overview of biological entities and the central dogma of molecular biology, and other relevant terms are introduced as needed).

COM S 427 Practicum in Computational Biology  
Fall. 2 credits. Prerequisite or corequisite: COM S 426.  
In this course, students develop a system or an application to analyze biological data. Possible applications are a database system to manipulate multiple data types, a learning system to detect hidden patterns in massive biological data sets, a software suite for sequence comparison or analysis of gene expression data, etc.

COM S 430 Information Discovery (also CIS 430)  
Fall. 3 credits. Prerequisite: COM S 211 or equivalent.  
This course studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering and the use of classification systems and thesauruses. The techniques are illustrated with examples from web searching and digital libraries.
COM S 431 Web Information Systems (also CIS 431; formerly CIS/COM S 502)
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with the technology of web sites.
This course examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented in the course are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries and the distributed information environment of the web.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312, or 211/212, and permission of instructor. Recommended: COM S 213 and strong programming skills in C or C++.
An introduction to modern relational database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction processing, and database design theory. The course primarily covers the internals of database systems and includes four large programming assignments in C++.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432.
COM S majors may use only one of the following toward their degree: CIS/COM S 330 or COM S 433.
An introduction to building web-database applications. Students implement a small e-commerce system using Active Server Pages, Java Server Pages, Cookies, and Servlets. The practicum also introduces technologies such as XML/XPath/XSLT and WAP.

COM S 465 Computer Graphics I (also ARCH 374)
Fall. 3 credits. Prerequisite: COM S/ENGRD 211. May not be taken after completion of COM S 417.
An introduction to the principles of computer graphics in two and three dimensions. Topics include human visual perception, digital images, rasterization and anti-aliasing, 2D and 3D affine geometry, perspective and 3D viewing, spline curves, elementary 3D surface modeling, and ray tracing. Homework assignments require some programming.

COM S 467 Computer Graphics II
Spring. 3 credits. Prerequisite: COM S 465.
This course covers the principles of computer graphics in detail. A wide variety of topics are covered, including 3D transformations, the hardware graphics pipeline, advanced texturing and shading, visual perception and color science, rendering algorithms including global illumination, animation, user interfaces, visualization, and 3D surface modeling.

COM S 468 Computer Graphics Practicum
Spring. 2 credits. Prerequisite: COM S 465. Corequisite: COM S 467.
This course provides COM S 467 students with hands-on experience in computer graphics programming. Programming assignments cover 3D transformations, modeling, shading, rendering, animation, and user interfaces. The course uses Java, OpenGL, and Cg for code development.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 (or equivalent).
A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.
Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.

COM S 474 Introduction to Natural Language Processing (also COGST 474, LING 474)
Fall, 4 credits. Prerequisites: COM S 211. Not offered every year.

COM S 478 Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.
Learning and classifying are two of our basic abilities. Machine learning is concerned with the question of how to train computers to learn from experience, to adapt and make decisions accordingly. This course introduces the set of techniques and algorithms that constitute machine learning as of today, including inductive inference of decision trees, the parametric-based Bayesian learning approach, Bayesian belief networks and Hidden Markov Models, non-parametric methods, discriminant functions and support vector machines, neural networks, stochastic methods such as genetic algorithms, unsupervised learning and clustering, and other issues in the theory of machine learning. These techniques are used today to automate procedures that were previously performed by humans as well as to explore untouched domains of science.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.
A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms
Spring. Summer. 4 credits. Prerequisites: COM S 280, 312, and either 381 or 481, or permission of instructor.
Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 483 Quantum Computation (also PHYS 481 and 581)
Spring. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers. Not offered every year. For description, see PHYS 481.

COM S 486 Applied Logic (also MATH 486)
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

COM S 490 Independent Reading and Research
Fall, spring. 1-4 credits.
Independent reading and research for undergraduates.

COM S 501 Software Engineering
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.
An introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

COM S 504 Applied Systems Engineering I (also CEE 504, ECE 512, M &A 591, OR & IE 512, SYS EN 510)
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor. For description, see M &A 591.

COM S 505 Applied Systems Engineering II (also CEE 505, ECE 513, M &A 592, OR & IE 513, SYS EN 520)
Spring. 3 credits. Prerequisite: Applied System Engineering I (CEE 504, COM S 504, ECE 512, M&A 591, OR&IE 512).
For description, see M&AE 592.

COM S 513 System Security
Spring. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language.
This course discusses security and survivability for computers and communications networks. The course includes discussions of policy...
issues (e.g., the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Mechanisms for authorization and authentication as well as cryptographic protocols are covered. 

**COM S 514 Intermediate Computer Systems**

Fall. 4 credits. Prerequisites: COM S 414 or permission of instructor. This course focuses on practical issues in designing and implementing distributed software. Topics vary depending upon instructor. Recent offerings have covered object-oriented design, basic agent methodologies, and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by coregistering in COM S 490, project. Many students obtain additional project credit by coregistering in COM S 490, project. Many students obtain additional project credit by coregistering in COM S 490, project. Many students obtain additional project credit by coregistering in COM S 490, project.

**COM S 519 Computer Networks**

Spring. 4 credits. Prerequisites: COM S 314 or permission of instructor. Not offered every year. Introduction to computer networks with an emphasis on evolving Internet standards. Detailed introduction to networking protocols for reliable data transfer, flow control, congestion control, naming and addressing, routing, error control, and multiple access. Fundamentals of layered protocols and techniques for protocol design and implementation. The course is project-oriented and requires substantial programming experience.

**COM S 522 Computational Tools and Methods for Finance**

Spring. 4 credits. Prerequisites: programming experience (e.g., C, FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. Not offered every year. This course provides a hands-on introduction to computational methods and tools used in finance. Students study both the underlying methods and their implementation using the MATLAB Financial Toolbox, along with additional MATLAB tools, are used extensively. The underlying numerical techniques discussed include: nonlinear least-squares procedures (basic linear algebra, linear and nonlinear optimization, finite-difference methods for PDEs, quadratic programming (and linear complementarity problems), and specialized tree (and lattice) evaluation methods.

**COM S 572 Heuristic Methods for Optimization (also CEE 509)**

Spring. 4 credits. Prerequisites: COM S/ENG 211 or 322 or CEE/ENG 241, or graduate standing, or permission of instructor. Not offered every year. This course describes a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, random walk, and direct search algorithms. Algorithms are used to find values of discrete and/or continuous variables arising in optimization and model fitting. Applications are discussed in a range of areas including some of the following: artificial intelligence, scheduling, protein folding, economic planning, water quality protection, telecommunications, and robotics. The advantages and disadvantages of heuristic search methods for both serial and parallel computation are discussed in comparison to other optimization algorithms.

**COM S 574 Language Technologies**

Fall. 3 credits. Prerequisites: COM S 472 or 478 or 578 or the equivalent. Not offered every year. This course studies computational techniques for large-scale text-processing applications including: information retrieval, text classification, information extraction, document clustering, document ranking, summarization, topic detection and tracking, and question answering. The course focuses on statistical and machine learning approaches to these natural language processing tasks as well as methods for their empirical evaluation.

**COM S 578 Empirical Methods in Machine Learning and Data Mining**

Fall. 4 credits. Prerequisites: COM S 280 and 312 or equivalent. This implementation-oriented course presents a broad introduction to current algorithms and approaches in machine learning, knowledge discovery, and data mining and their application to real-world learning and decision-making tasks. The course also covers experimental methods for comparing learning algorithms, for understanding and explaining their differences, and for exploring the conditions under which each is most appropriate.

**COM S 601 System Concepts**

Fall. 3 credits. Prerequisites: open to students enrolled in the COM S Ph.D. program. Not offered every year.

**COM S 611 Advanced Programming Languages**

Fall. 4 credits. Graduate standing or permission of instructor. A study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

**COM S 612 Compiler Design for High-Performance Architectures**

Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor. Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependence tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multiprocessors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

**COM S 613 Concurrent Programming**

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year.

**COM S 614 Advanced Systems**

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

**COM S 615 Adaptive Systems**

Fall. 4 credits. Prerequisites: COM S 614 recommended. This course broadly examines self-organization in distributed systems, with particular emphasis on peer-to-peer and mobile ad hoc networks. Students read recent research papers on proactive, reactive and hybrid routing protocols for ad hoc networks, system support for mobility, peer-to-peer systems and their applications.

**COM S 621 Matrix Computations**

Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

**COM S 622 Numerical Optimization and Nonlinear Algebraic Equations**

Spring. 4 credits. Prerequisite: COM S 621. Offered odd-numbered years only. Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

**COM S 624 Numerical Solution of Differential Equations**

Spring. 4 credits. Prerequisites: previous exposure to numerical analysis (e.g., MATH 421 or 621) and differential equations, and knowledge of MATLAB. Offered in even-numbered years.

Finite difference methods for the solution of ordinary and partial differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.

**COM S 626 Computational Molecular Biology**

Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization. Problems and algorithms in computational molecular biology. Topics include sequence alignment, scoring functions, complexity of searches and alignment, secondary structure prediction, families, and function), the protein folding problem (lattice models, lattice searches, the HP model, chemical potentials, statistical potentials, funnels, complexity and model verification, global optimization, homology, threading, dynamics of complex biosystems (the Molecular Dynamics
method, long-range forces, statistics of flexible systems, reduced models).

COM S 627 Computational Biology: The Machine Learning Approach
Spring. 4 credits. Prerequisites: COM S 426 or 620 and COM S 478 or 578 or permission of instructor.
This is a graduate-level course in computational biology that focuses on machine learning models and their application to computational problems in biology. Some topics covered are supervised (Support Vector Machines, Hidden Markov Models, deterministic and probabilistic suffix trees) and unsupervised (embedding, PCA, ICA, clustering) learning in computational biology, advanced statistical analysis of sequences, analysis of microarrays, and modeling of complex systems (Bayesian Belief Networks, DEA).

COM S 630 Representing and Accessing Digital Information (also CIS 630)
Fall. 4 credits. Prerequisites: COM S 472 or 478 or 578 or the equivalent.
This course covers the representation, organization, and access of digital information with an emphasis on textual information. Topics include structured and semi-structured data, information retrieval, natural language processing, and machine learning, with links to work in databases, data mining, and computational linguistics.

COM S 632 Advanced Database Systems
Spring. 4 credits. Prerequisite: COM S 432/433 or permission of instructor.
A variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and development of a term project with research content is required.

COM S 664 Machine Vision
Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent.
An introduction to computer vision, with an emphasis on discrete optimization algorithms and an applications-based perspective. The following topics are covered: edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several small algorithms covered in the course and complete a final project.

COM S 665 Advanced Rendering
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and an undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming. Offered fall 2003.
This course covers advanced topics in realistic rendering with a focus on fast/interactive techniques. Topics include light transport and global illumination, Monte-Carlo ray tracing and radiosity, hardware rendering, and image-based rendering.

COM S 667 Physically Based Rendering
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and an undergraduate-level understanding of algorithms, programming, and vector calculus. Offered spring 2004.
An advanced course in realistic image synthesis, focusing on the computation of physically accurate images. Topics include radiometry; light transport and global illumination; rendering with participating media; advanced models for material properties; and physical measurement of light sources, images, and materials.

COM S 671 Introduction to Automated Reasoning
Fall. 4 credits. Prerequisite: (COM S 611 and graduate standing) or permission of instructor.
Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Special emphasis is on type theory and logic and on tactic-oriented theorem proving.

COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.
Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

COM S 674 Natural Language Processing
Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. COM S 474 is NOT a prerequisite. Not offered every year.
This course presents a graduate-level introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. The course covers syntactic analysis, semantic interpretation, and discourse processing, examining both symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildly context-sensitive formalisms, deductive approaches to interpretation, machine translation, and machine learning of natural language.

COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic.
Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues include common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, models for resource-bounded reasoning, and connections to game theory.

COM S 677 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered 2003–2004.
Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, probability and adversaries, conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief, and decision theory.

COM S 678 Advanced Topics in Machine Learning
Spring. 4 credits. Prerequisites: COM S 478 or equivalent, or COM S 578 or equivalent, or permission of instructor.
This course extends and complements COM S 478 and COM S 578, giving in-depth coverage of new and advanced methods in machine learning. In particular, we connect to open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

COM S 681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.
Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, and randomized reducibilities. Also covers topics such as parallel algorithms and efficient data structures.

COM S 682 Theory of Computing
Spring. 4 credits. Prerequisite: COM S 381 or 481 and COM S 482 or 681 or permission of instructor.
Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

COM S 683 Advanced Design and Analysis of Algorithms
Spring. 4 credits. Prerequisite: COM S 681 or permission of instructor. Not offered every year.

COM S 684 Approximation and Network Algorithms
Fall. 4 credits. Prerequisites: COM S 681 or permission of instructor. Not offered every year.

COM S 685 The Structure of Information Networks (also CIS 685)
Spring. 4 credits. Prerequisite: COM S 482.
Information networks such as the world wide web are characterized by the interplay between heterogeneous content and a complex underlying link structure. This course connects recent research on algorithms for analyzing such networks and models that abstract their basic properties. Topics include combinatorial and probabilistic techniques for link analysis, centralized and decentralized search algorithms, generative models for networks, and connections with work in the areas of social networks and citation analysis.

COM S 686 Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, 582, and MATH 481 or MATH/COM S 486.
Not offered every year.
COM S 709 Computer Science Colloquium
Fall, spring. 1 credit. S-U grades only. For staff, visiting, and graduate students interested in computer science. A weekly meeting for the discussion and study of important topics in the field.

COM S 711 Seminar in Advanced Programming Languages
Fall, spring, 3 credits.

COM S 712 Seminar in Systems and Methodology
Fall, spring, 4 credits. Prerequisites: graduate course employing formal reasoning such as COM S 611, 613, 671, a logic course, or permission of instructor. Not offered every year. Discussion of contemporary issues in the design and analysis of computing systems. Emphasis is on the proper use of rigor, models, and formalism.

COM S 715 Seminar in Programming Refinement Logics
Fall, spring, 4 credits. Prerequisite: permission of instructor. Topics in programming logics, possibly including type theory, constructive logic, decision procedure, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

COM S 717 Topics in Parallel Architectures
Fall, 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year. Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 719 Seminar in Programming Languages
Fall, spring, 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 721 Topics in Numerical Analysis
Fall, spring, 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester TBA. Topics are chosen at instructor's discretion.

COM S 726 Problems and Perspectives in Computational Molecular Biology (also PL BR 726)
Fall, spring, 1 credit. S-U grades only. This is a weekly seminar series discussing timely topics in computational molecular biology. The course addresses methodological approaches to sequence and structure analysis, function prediction, study of evolutionary relationships, and analysis of large biological systems. Statistical and deterministic computational approaches are covered, and specific and detailed biological examples are discussed. In each topic, we select one or two representative papers that made significant advances in this field. The lectures are given by faculty and students. The seminar is open to all from the life sciences, computational sciences, and physical sciences. We try to bridge these disciplines by pairing students/faculty from complementary backgrounds.

COM S 732 Seminar in Database Systems
Fall, spring, 4 credits. S-U grades only.

[COM S 750 Evolutionary Computation and Design Automation (also CIS 750, MAE 650)]
Fall, 4 credits. Prerequisite: programming experience or permission of instructor. Not offered every year.

[COM S 751 Media Research and Critical Design (also CIS 751)]
Fall, 4 credits. Prerequisites: graduate standing in COM S or equivalent ability to read technical research papers. Contact instructor if unsure of qualifications. Not offered every year.

[COM S 752 Seminar on Scholarly Information Architecture (also CIS 752)]
Fall, 3 credits. Prerequisite: concurrent enrollment in COM S 502 or equivalent experience. S-U grades only. Not offered every year.

[COM S 754 Systems Research Seminar]
Fall, 1 credit. S-U grades only.

COM S 772 Seminar in Artificial Intelligence
Fall, spring, 4 credits. Prerequisites: permission of instructor. S-U grades only.

COM S 775 Seminar in Natural Language Understanding
Fall, spring, 2 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 786 Introduction to Kleene Algebra
Spring, 4 credits. Prerequisites: COM S 482 or 681, COM S 682, elementary logic (MATH 481 or 681), and Kleene algebra (MATH 432). Recommended. Kleene algebra is an algebraic system that axiomatically captures the properties of a natural class of structures arising in logic and computer science. It has appeared in various guises in relational algebra, semantics and logics of programs, automata and formal language theory, and the design and analysis of algorithms. In this course, we review the history of the development of Kleene algebra and Kleene algebra with tests (Kleene/Boolean algebra). We study models, compare axiomatizations, and derive completeness, expressiveness, and complexity results. We also discuss various applications in program schematology, program verification, compiler optimization, and programming language semantics and logic.

COM S 789 Seminar in Theory of Algorithms and Computing
Fall, spring, 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790 Special Investigations in Computer Science
Fall, spring, 4 credits. Prerequisite: permission of a computer science adviser. Letter grade only.

COM S 990 Special Investigations in Computer Science
Fall, spring, 4 credits. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

Courses
For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Arts and Sciences or the College of Agriculture and Life Sciences section.

EAS 101 Introductory Geological Sciences
Fall, spring. 3 credits. Staff.

EAS 102 Evolution of the Earth and Life (also offered as BIO G 170)
Spring. 3 credits. J. L. Cisne.

EAS 107 How the Earth Works
Fall. 1 credit. J. L. Cisne.

EAS 108 Earth in the News
Summer. 3 credits. S. L. Losh.

EAS 109 Dinosaurs
Fall. 1 credit. J. L. Cisne.

EAS 111 To Know the Earth and Build a Habitable Planet
Fall. 3 credits. J. M. Bird.

EAS 122 Earthquake! (also ENGRD 122)
Spring. 3 credits. L. D. Brown.
This is a course in the Introduction to Engineering series. For description, see ENGRD 122.

EAS 131 Basic Principles of Meteorology
Fall. 3 credits. M. W. Wysocki.
The one-credit laboratory for this course is EAS 133.

EAS 133 Basic Meteorology Lab
Fall. 1 credit. Laboratory. Prerequisite: concurrent enrollment in EAS 131. M. W. Wysocki.
Laboratory course covering topics presented in EAS 131. This course is required for atmospheric science majors, but is optional for other students taking EAS 131.

EAS 150 Introduction to Fortran Programming
Fall. 3 credits. M. W. Wysocki.

EAS 154 The Sea: An Introduction to Oceanography (also BIOEE 154)
Spring, summer. 3 credits. Lecture: Spring: C. H. Greene, W. M. White; Summer: B. C. Monger. The optional one-credit laboratory for this course is EAS 155/BIOEE 155.

EAS 155 The Sea: An Introduction to Oceanography (also BIOEE 155)
Spring. 1 credit. Laboratory. Prerequisite: Concurrent enrollment in EAS 154. C. H. Greene.
Laboratory course covering topics presented in EAS 154.

EAS 200 Art, Archaeology, and Analysis (also ENGRD 185, or MS&E 285)
Spring. 3 credits. R. W. Kay.
This is a course in the Introduction to Engineering series. For description, see ENGRD 185.

EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)
Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cathles.
EAS 210 Introduction to Field Methods in Geological Sciences  
Fall. 3 credits. Prerequisites: EAS 101 or 201, or permission of instructor. 1 lecture, Saturday field trips. R. W. Allmendinger.

EAS 213 Marine and Coastal Geology  
Summer. 4 credits. Prerequisite: an introductory course in geology or ecology or permission of instructor. Staff.

EAS 250 Meteorological Observations and Instruments  
Spring. 3 credits. Prerequisite: EAS 131. M. W. Wysocki.

EAS 260 Soil Science (also CSS 260)  
Fall. 4 credits. S. J. Rha.

EAS 268 Climate and Global Warming  
Spring. 3 credits. A. T. DeGaetano.

EAS 296 Forecast Competition  
Fall and spring. 1 credit. S-U grades only. Prerequisite: sophomore undergraduate standing in atmospheric science, or permission of instructor. D. S. Wilks.

EAS 302 Evolution of the Earth System  
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. W. M. White, W. D. Allmon, B. L. Isacks.

EAS 315 Geomorphology  
Fall. 4 credits. Prerequisite: one course in geology, hydrology, or soil science. B. L. Isacks.

EAS 321 Introduction to Biogeochemistry (also NTRES 321)  
Fall. 4 credits. Prerequisites: MATH 112, EAS 101, or 201, or permission of instructor. One weekend field trip. R. W. Allmendinger.

EAS 326 Structural Geology  
Spring. 4 credits. Prerequisite: MATH 112, EAS 101, or 201, or permission of instructor. W. W. White.

EAS 331 Climate Dynamics (also ASTRO 331)  
Fall. 4 credits. Prerequisite: two semesters of calculus and one semester of physics. K. H. Cook, P. J. Gierasch.

EAS 334 Micrometeorology  
Spring. 3 credits. Prerequisite: a course in physics. Offered alternate years. D. S. Wilks.

EAS 341 Atmospheric Thermodynamics and Hydrostatics  
Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. M. W. Wysocki.

EAS 342 Atmospheric Dynamics (also ASTRO 342)  
Spring 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook and P. J. Gierasch.

EAS 350 Dynamics of Marine Ecosystems  
Fall. 3 credits. Prerequisites: 1 year of calculus and a semester of oceanography (i.e., EAS 154), or instructor’s permission. C. H. Greene.

EAS 352 Synoptic Meteorology I  
Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. M. W. Wysocki.

EAS 355 Mineralogy  
Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay.

EAS 356 Petrology and Geochemistry  
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.

EAS 375 Sedimentology and Stratigraphy  
Fall. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cisne.

EAS 388 Geophysics and Geotechnics  
Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.

EAS 417 Field Mapping in Argentina  
Summer. 3 credits. Prerequisites: EAS 210 and 326. Spanish desirable but not required. S. Mahlburg Kay.

EAS 434 Reflection Seismology  
Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. L. D. Brown.

EAS 435 Statistical Methods in Meteorology and Climatology  
Fall. 3 credits. Prerequisites: an introductory course in statistics (e.g., AEM 210) and calculus. D. S. Wilks.

EAS 436 Geophysical Field Methods  
Fall. 3 credits. Prerequisites: PHYS 213 or 208 or permission of instructor. L. D. Brown.

EAS 447 Physical Meteorology  
Fall. 3 credits. Prerequisites: 1 year each of calculus and physics. Offered alternate years. A. T. DeGaetano.

EAS 451 Synoptic Meteorology II  
Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci.

EAS 453 Advanced Petrology  
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. R. W. Kay.

EAS 454 Advanced Mineralogy  
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. Not offered 2003–2004. S. Mahlburg Kay.

EAS 455 Geochemistry  
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 256. Offered alternate years. W. M. White.

EAS 456 Meteorology and Climatology  
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. S. J. Colucci.

EAS 457 Atmospheric Air Pollution  
Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years. Not offered 2003–2004. M. W. Wysocki.

EAS 458 Volcanology  

EAS 462 Marine Ecology (also offered as BIOEE 462)  

EAS 475 Special Topics in Oceanography  
Fall, spring, summer. 2–6 var. credits. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger.

EAS 476 Sedimentary Basins: Tectonics and Mechanics  
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Not offered 2003–2004. T. E. Jordan.

EAS 478 Advanced Stratigraphy  
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.

EAS 479 Paleobiology (also BIOEE 479)  
Fall. 4 credits. Prerequisites: 1 year of introductory biology and either BIOEE 274 or 373 or EAS 375, or permission of instructor. Offered alternate years. W. Almon.

EAS 481 Senior Survey of Earth Systems  
Spring. 3 credits. Limited to seniors majoring in geological science. J. M. Bird.

EAS 483 Environmental Biophysics  
Spring. 3 credits. Prerequisites: EAS/CSS 260 or equivalent, or permission of instructor. Offered alternate years. Not offered 2003–2004. S. J. Rha.

EAS 487 Intro to Radar and Remote Sensing (also ECE 487)  
Fall. 3 credits. Prerequisites: PHYS 208 or 213 or equivalent or permission of instructor. D. L. ‘Hyssel.

EAS 491-492 Undergraduate Research  
Fall, spring. 1-6 credits. S-U grades optional. Undergraduate level.

EAS 494 Internship Experience  
Fall, spring. 1-2 credits. S-U grades only.

EAS 497 Individual Study in Atmospheric Science  
Fall, spring. 8 credits maximum. S-U grades optional. Undergraduate level.

EAS 498 Advanced Structural Geology I  
and elementary dipole antenna; analysis of wireless communication links.

**ECE 306 Fundamentals of Quantum and Solid-State Electronics**

Spring, 4 credits. Prerequisites: PHYS 214 and MATH 294. C. L. Tang. Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

**ECE 310 Introduction to Probability and Random Signals**

Spring, 4 credits. Prerequisite: MATH 294. This course may be used in place of ENGRD 270 to help satisfy the engineering distribution requirement. T. L. Fine. Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Mathematics are given in such areas as communications, and device modeling, probability, and characteristic functions; nonlinear transformations of data; expectation and correlation; and the central limit theorem.

**ECE 311 Electrical and Computer Engineering Honors Seminar**

Spring, 1 or 2 credits. Staff. Students registered for this course are required to attend all of the colloquia lectures. Summary papers are required. Honors students who take the seminar for letter grade are required to write two summary papers for two credits. Non-honors students, who must take the seminar pass/fail, are required to write one summary paper for one credit. Each summary paper reviews a topic presented during the term.

**ECE 314 Computer Organization (also COMP 314)**

Fall, spring, 4 credits. Prerequisites: COM S/ENGRD 211 or ENGRD 230 required. Fall: COM S staff; spring, S. A. McKee. Course description for spring offering: basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor. For fall description, see COM S 314.

**ECE 315 Introduction to Microelectronics**

Fall, spring, 4 credits. Prerequisites: ECE 210 and ECE 215. Fall, A. Lal; Apel; spring, B. A. Minge. B. A. Minge. Design of digital and analog electronic circuits in the context of modern integrated circuit technology. Course coverage includes the building blocks of integrated circuits: introductory physics of semiconductors, MOS and junction transistors; digital electronics—inverters, logic circuits, and memory; and analog circuits—multi-stage and differential amplifiers.

**ECE 338 Nanofabrication**

Spring, 3 credits. Prerequisites: PHYS 213 or 217, PHYS 214 or 218, CHEM 211 or 207, or equivalent. E. C. Kan. Fundamentals of nanofabrication for integrated circuits. Optoelectronics, microelectro mechanical systems (MEMS), sensors, (nano)biotechnology, biology, chemistry, and micro-systems. Hands-on and virtual laboratory as facilitated by available resources. Designed for electrical/computer engineering, materials science/engineering, mechanical/aerospace engineering, chemical engineering, applied/engineering physics, agricultural/biological engineering, biology, and chemistry students.

**ECE 391-392 Junior Electrical and Computer Engineering Project**

Fall, spring, 391, 392, 1-8 credits. Limited to juniors in Engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit a Request for Independent Project form to the Electrical Engineering Undergraduate Office.

**ECE 402 Biomedical System Design (also BMEP 404)**

Spring, 1-4 credits. Co- or prerequisite: at least one of: ECE 425, ECE 476, ECE 453. J. C. Belina. Course introduces techniques of measuring and conditioning low-level (biological) signals. Topics include special signal to noise improvement circuits for analog signals, techniques to remove common-mode and correlated noise, and computer-aided techniques for analyzing sampled data. Final 6 or 7 weeks devoted to designing/prototyping a safe and effective “ambulatory microprocessor-controlled blood pressure monitor.” Formal design document is required. ECE 402 is a culminating design experience (CDE) course.

**ECE 411 Random Signals in Communications and Signal Processing**

Fall, 3 credits. Prerequisite: ECE 301 and 310 or equivalent. A. Scaglione. Introduction to models for random signals in discrete and continuous time: Markov chains, Poisson process, queueing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

**ECE 413 Introduction to Nuclear Science and Engineering (also M&AE 458)**

Fall, 3 credits. Prerequisites: PHYS 214 and MATH 294. K. B. Cady. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field. Introduction to the fundamentals of nuclear reactivity and reactions, interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics.

**ECE 415 GPS: Theory and Design (also M&AE 415)**

Fall, 4 credits. Prerequisite: a 300-level engineering course with advanced math content such as ECE 301 or ECE 303, or M&AE 326. P. M. Kintner. An introduction to the GPS operating principles and engineering practice with a culminating design exercise. Analytical methods, receiver analysis, error computation, dilution of precision, antennas, differential GPS. ECE 415 is a culminating design experience (CDE) course.

**ECE 425 Digital Signal Processing**

Fall, 4 credits. Prerequisites: ECE 301, ECE 302, and ECE 310. T. W. Parks. B. A. Hutchins. An advanced course in digital signal processing. Topics include sampling, A/D and D/A conversion, digital filter design, implementation, and system theory. Wiener filtering, spectral estimation, introduction to two-dimensional sampling, and Fourier techniques.

**ECE 426 Applications of Signal Processing**

Spring, 4 credits. Prerequisite: ECE 425. B. A. Hutchins. Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis. ECE 426 is a culminating design experience (CDE) course.

**ECE 430 Lasers and Optical Electronics**

Fall, 4 credits. Prerequisite: ECE 303 or equivalent. C. L. Tang. An introduction to the operation and application of lasers. Material covered includes different types of lasers, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Applications of coherent radiation to nonlinear optics, communication, and research are discussed.

**ECE 432 MicroElectro Mechanical Systems (MEMS)**

Spring, 4 credits. Prerequisite: ECE 315 or permission of instructor. A. Lal. Introductory course to MEMS: microsensors, microactuators, and microsystems. Fundamentals of MEMS, including materials, microstructures, devices and simple microelectro-mechanical systems, scaling electronic and mechanical systems to the micrometer/nanometer scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an introductory course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry. ECE 432 is a culminating design experience (CDE) course.

**ECE 433 Introduction to Microwave Devices and Circuits**

Fall, 4 credits. Prerequisites: ECE 303 and ECE 306. Staff. An introduction to the properties of microwave devices and circuits and the
considers that must be appreciated when the operating frequency approaches or exceeds 1 GHz. Topics include microwave devices, microwave measurement techniques, S-parameters, signal flow diagrams, matching networks, bias circuit design considerations, and computer-aided device and circuit analysis. Laboratories cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

**ECE 437 Fiber and Integrated Optics**  
Spring. 4 credits with a project.  
Prerequisite: ECE 403 or equivalent.  
M. Lipson.  
Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides, numerical analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components. ECE 437 is a culminating design experience (CDE) course.

**ECE 445 Computer Networks and Telecommunications**  
Fall. 4 credits. Prerequisite: ECE 341 or COM S 441 and a course in probability.  
S. Servetto.  
Design of performance analysis of communication systems operating over packet-switched networks. This is a basic course in networking that aims to bridge the gap between a classical networking class and components. ECE 445 is a culminating design experience (CDE) course.

**ECE 451 Electric Power Systems I**  
Fall. 3 credits. Prerequisite: ECE 301 or equivalent. J. S. Thorp.  
The objective is to acquaint the student with modern electric power system analysis and control. Topics appropriate for the restructured industry and advanced protection and control systems are stressed. Topics include transmission line models, transformers and per unit system, generator models, power flow, system protection, computer relaying, and GPS-based measurement and control systems.

**ECE 452 Electric Power Systems II**  
Spring. 3 credits. Prerequisite: ECE 451 or permission of instructor. R. J. Thomas.  
Acquaints students with modern electric power system operation and control. Topics include: distributed generation, power plant control systems, and high-voltage transmission system protection and control systems.

**ECE 453 Analog Integrated Circuit Design**  
Fall. 4 credits. Prerequisites: ECE 301 and ECE 315 or equivalent. ECE 453 is a culminating design experience (CDE) course.  
B. A. Mishra.  
Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques. ECE 453 is a culminating design experience (CDE) course.

**ECE 457 Silicon Device Fundamentals**  
Fall. 4 credits. Prerequisites: ECE 315 and ECE 306 or MSE 262 or AEP 450.  
F. C. Krein.  
Semiconductor carrier statistics, band diagrams, transport and their applications in diodes, MOSFET, and BJT. Emphasis is put on the CMOS operations for advanced VLSI technology. Six labs cover device measurements and design by simulation. By using the combined simulation and measurement, the course culminates in a comprehensive design project dealing with technical concerns in current VLSI industry as well as its economical, environmental, and social impacts. ECE 457 is a culminating design experience (CDE) course.

**ECE 467 Telecommunication Systems I**  
Fall. 4 credits. Prerequisites: ECE 301 and ECE 302. C. R. Johnson.  
An introduction to broadband digital receiver design. Topics include: PAM and QAM modulation, down-conversion, pulse-shaping, matched filtering, carrier frequency and phase recovery, baud-time synchronization, packet marker synchronization, adaptive linear equalization, and coding. Course projects include composition and testing of a Matlab-based software receiver. ECE 467 is a culminating design experience (CDE) course.

**ECE 468 Telecommunication Systems II**  
Spring. 4 credits. Prerequisite: ECE 467 or permission of instructor. Suggested prerequisite: ECE 411. C. R. Johnson.  
Fundamentals of digital communications. Topics include: digital source coding, Huffman coding, sampling, quantization, analog source coding; optimum receivers for digital transmission through additive white Gaussian noise (AWGN) channels, matched filters; channel coding and equalization; digital transmission through band-limited AWGN channels, inter-symbol interference (ISI), equalization techniques; phase-locked loops (PLL); trellis-coded modulation (TCM); and spread-spectrum communication systems.

**ECE 472 Feedback Control Systems**  
Spring. 4 credits. Prerequisite: CHEM 372, ECE 301, M&AE 326, or permission of instructor. Staff.  
For description, see M&AE 478.

**ECE 474 Digital VLSI Design**  
Fall and spring. 5 credits (fall 4, spring 1). Prerequisites: ENGRD 230, ECE/CS 314.  
R. Manohar.  
Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, clocking, and synchronization, PLAs, memories, physical design, floor planning, and simulation. ECE 474 is a culminating design experience (CDE) course.

**ECE 475 Computer Architecture**  
Fall. 4 credits. Prerequisites: ENGRD 230 and ECE 403 or equivalent. J. F. Martinez.  
Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation, branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and tradeoffs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level. ECE 475 is a culminating design experience (CDE) course.

**ECE 476 Digital Systems Design Using Microcontrollers**  
Spring. 4 credits. Prerequisite: ECE 457 (CDE).  
B. R. Land.  
Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed. ECE 476 is a culminating design experience (CDE) course.

**ECE 494 Introduction to Controlled Fusion: Principles and Technology**  
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and the physical sciences. Offered alternate years. D. A. Hammer.  
For description, see NS&E 484.

**ECE 486 Electromagnetic Waves and Communication**  
Spring. 3 credits. Prerequisite: ECE 303.  
D. L. Hysell.  
This course is recommended for students who wish to obtain a greater understanding of the fundamentals of guided waves, high data rate electronics and wireless communication. Topics covered include vector and scalar potentials, transmission lines, waveguides, fiber optics, antenna arrays, and propagation in different environments including interference and diffraction.

**ECE 487 Introduction to Radar and Remote Sensing**  
Fall. 3 credits. Prerequisites: ECE 301 and ECE 403.  
D. L. Hysell.  
Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, and aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, and range and frequency aliasing. Synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; and radar astronomy techniques.
ECE 488 RF Circuits and Systems
Spring. 4 credits. Prerequisites: ECE 315 or equivalent. 2 design credits. Lab credit. W. E. Schwartz.
Basic RF circuit and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar applications, and computer-aided circuit analysis. Five laboratory sessions. ECE 488 is a culminating design experience (CDE) course.

ECE 491-492 Senior Electrical and Computer Engineering Project
Fall, 491; spring, 492. 1-8 credits. Limited to seniors in Engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make informal presentations with faculty advisor prior to registration for this course and submit a request for an independent project form to the Electrical Engineering undergraduate office.

ECE 495 Optimizing Compilers
Fall. 4 credits. Prerequisite: ECE/COM S 314. M. Burtscher.
This course provides in-depth coverage of modern compiler optimizations for high-performance microprocessors. Topics include static single assignment form (SSA), redundancy elimination, loop optimizations, procedure optimizations, register allocation, instruction scheduling, control-flow optimizations, interprocedural analysis and optimization, numerous "small" optimizations, and feedback optimizations. The projects involve implementing, testing, and evaluating a number of advanced compiler optimizations for a high-end microprocessor.

ECE 496 Principles of Large Scale, Complex Adaptive Networks
Spring. 4 credits. Prerequisites: ECE requirements through the 200 level, plus some knowledge of probability. Recommended for junior and senior ECE students interested in the systems area. S. Ben-David.
Large-scale complex adaptive (LSCA) networks in ECE include the Internet, World Wide Web, bulk electric power distribution systems, wireless and wired telecommunications networks. We study several principles common to LSCA bulk electric power distribution systems; wire-based network, abstracted to expose its networks. Each principle will be introduced in a course, then explored in depth. A. W. Bojanczyk, State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of Linear Systems by T. Kailath.

ECE 513 Applied Systems Engineering II
Fall. 4 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M&AE 591, or OR&E 512). R. Thomas, L. Nozick, P. Jackson. For description, see M&AE 592.

ECE 521 Theory of Linear Systems
Fall. 4 credits. Prerequisite: ECE 302 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations. A. W. Bojanczyk. State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of Linear Systems by T. Kailath.

ECE 523 Adaptive Filtering in Communication Systems
Spring. 4 credits. Required prerequisite: ECE 411 and ECE 467. Not offered 2003–2004. C. R. Jackson. Fundamentals of the basic adaptive filters intended for digital communication systems applications. Wired and wireless communication systems tasks (such as channel equalization, echo cancellation, antenna beam forming, and interference rejection) are used to motivate adaptive filter design issues. Assignments consist of reports on adaptive digital filter algorithms and their simulated evaluation.

ECE 526 Signal Representation and Modelling
Spring. 4 credits. Prerequisites: ECE 425. T. W. Parks. Sampling and signal reconstruction. Approximation theory. Linear inversion theory. Exponential signal modeling. Multirate filter banks, wavelets, and lifting. Laboratory experiments with speech and image signals.

ECE 531 Applied Quantum Optics for Photonics and Optoelectronics
Fall. 4 credits. Prerequisites: ECE 306 and 407, or PHYS 443. F. Rana. Introduces the basic concepts of quantum optics and quantum electronics necessary for understanding the behavior of optical fields in photonic and optoelectronic devices and systems. Topics include quantization of the electromagnetic field, quantum mechanical properties of photon states, vacuum fluctuations, noise and quantum Langevin equations, matter-photon interactions, phase-sensitive and phase-insensitive optical amplifiers, direct and coherent photon detection, lasers, parametric oscillators, and photonic devices for quantum information processing.

ECE 535 Semiconductor Physics
Fall. 4 credits. Prerequisites: ECE 407 and 457, or permission of instructor. S. Tiwari. Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, and surface and interface effects. On the level of Compound Semiconductor Device Physics by S. Tiwari.

ECE 548 Digital Image Processing
Fall. 4 credits. Prerequisites: ECE 411, ECE 425, familiarity with linear algebra. S. S. Hemami.
Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration techniques. Attention is allocated to compression. Equal emphasis is placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

ECE 550 Digital Image Processing
Fall, 4 credits. Prerequisites: ECE 411, ECE 425, familiarity with linear algebra. S. S. Hemami.
Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration techniques. Attention is allocated to compression. Equal emphasis is placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

ECE 551 Electric Systems Engineering and Economics (Electricity Markets)
Fall, 4 credits. Prerequisites: basic calculus, microeconomics. R. J. Thomas, T. D. Mount.
This course is designed to explore new arrangements in power system planning and operation brought about by the current restructuring of the electric industry. The course is organized around lectures on 1) how basic economic principles interact with basic engineering principles used to determine the physical and operational makeup of the system; and 2) the principles and techniques of optimization and their applications to emerging institutional arrangements in the power industry. The course involves extensive laboratory work designed to test the principles under discussion. A laboratory project is assigned, requiring building an intelligent software agent capable of performing in a competitive market with rules similar to those being set up in the electric power business today. The agents are exercised in a class competition.

ECE 554 Advanced Analog VLSI Circuit Design
Spring. 4 credits. Prerequisite: ECE 453. A. B. Apseul.
Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design, translinear circuits and systems, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

ECE 555 Compound Semiconductor Electronics
Spring, 3 or 4 credits; 4 with a project. Prerequisite: ECE 457 or equivalent. Not offered 2003–2004. T. W. Parks. Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices, including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency
operation of compound semiconductor devices. Includes six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characteristics of compound semiconductor devices.)

**ECE 561 Error Control Codes**
Fall. 4 credits. Prerequisite: ECE 301 or ECE 521 or equivalent. A strong familiarity with linear algebra is assumed. S. B. Wicker.

An introduction to the theory and practice of error control codes. Topics include algebraic codes, convolutional codes, concatenated codes, and codes on graphs. The construction and decoding of Reed-Solomon (RS) codes will be considered in some detail, as will the iterative (turbo) decoding of concatenated codes and codes on graphs. The use of error control in wireless systems will be discussed throughout the course.

**ECE 562 Fundamental Information Theory**
Spring. 4 credits. Prerequisite: ECE 310 or equivalent. Staff.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**ECE 563 Communication Networks**
Fall. 4 credits. Prerequisite: ECE 411 or permission of instructor. Z. Haas.

Classical line-switched communication networks: point-process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets. Flow control and capacity assignment algorithms, ATM networks.

**ECE 564 Detection and Estimation**
Spring. 4 credits. Prerequisites: ECE 411 or permission of instructor. Z. Haas.

**ECE 566 Wireless Networks**

An introductory course in mobile and wireless networks. The course is targeted mainly at the graduate level but is open to undergraduates as well. The course covers fundamental techniques and protocols in the design and operation of the first, second, and third generation of wireless networks. Examples of related topics include cellular systems, medium access control, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques, common air interfaces (AMPS, IS-136, IS-95, GSM, personal communications system (PCS), cordless telephones), satellite communication, ad hoc networks (Bluetooth), Internet Mobility, Personal Communication Services (PCS), and so on.

**ECE 567 Digital Communications**
Fall. 4 credits. Prerequisites: ECE 310, ECE 411, or instructor's consent. L. Tong.

A graduate-level introduction to fundamentals of digital communications. Complex random signals. Digital modulation and optimal receiver principles. Baseband and passband transmissions and processing. Interference channels and equalization techniques. Performance analysis including bit error rate calculation and rate and channel capacity. Applications in wireless and digital subscriber loops (DSL).

**ECE 568 Mobile Communication Systems**
Spring. 4 credits. Prerequisites: ECE 411 and ECE 467; corequisite: ECE 468.

A Scaglione.

Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

**ECE 572 Parallel Computer Architecture**
Spring. 4 credits. Prerequisite/corequisite: ECE 475, J. P. Martinez.

Principles and tradeoffs in the design of parallel architectures. Emphasis is on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

**ECE 574 Advanced Digital VLSI Design**
Spring. 4 credits. Prerequisites: ECE 474, ECE 475. R. Manohar.

Top-down approach to asynchronous design and the relation between computer architecture and VLSI design. For the asynchronous design component: high-level synthesis, design by program transformations, and correctness by construction. Topics include delay-insensitive design techniques, description of circuits as concurrent programs, circuit compilation, and electrical optimizations. Students complete a group project of the design of a pipelined microprocessor. The processor can be clocked, asynchronous, or a combination of the two. Note: the only difference between taking and not taking ECE 574 is fabricating and testing the chip. All students have to design one.

**ECE 575 High-Performance Processor Architecture**
Spring. 3 credits. Prerequisite: ECE 475. M. Burtscher.

This course provides in-depth coverage of the advanced architectural features of current and next-generation high-performance microprocessors. Topics include design, out-of-order execution, register renaming, caching, value prediction, confidence estimation, branch prediction, predication, control speculation, multithreading, compiler optimizations, and cache designs of existing processors. Projects involve writing simulators to evaluate the performance of various microprocessor components.

**ECE 576 Advanced Digital VLSI Design Project**
Course starts in spring term and finishes the following fall (2-semester course). 5 credits. Prerequisites: ECE 474, ECE 475. Groups receive an R in ECE 576, for the spring, until they fabricate and test their chips the following fall. Offered spring 2004 and fall 2004. R. Manohar.

For description, see ECE 574.

**ECE 577 Feedback Neural Networks**
Fall. 4 credits. Prerequisite: ECE 310. Not offered 2003–2004. T. ECE 474, ECE 475. Feedback neural networks (multi-layer perceptrons) are computing systems formed out of many highly interconnected nonlinear memoryless elements that are arranged in a parallel architecture that is loosely modeled on that of the brain. Focus is on their roles as pattern classifiers, signal processors, estimators, and forecasters and on their role in communication systems. Includes exploration of neural networks through mathematical analysis and extensive simulation studies using MATLAB.

**ECE 579 Radio Frequency (RF) Integrated Circuit Design**
Fall and spring. 6 credits. Prerequisites: ECE 433, ECE 453, and ECE 488.
K. T. Kornegay.

This two semester, 6-credit, course conveys a practical knowledge of advanced concepts related to the design radio-frequency (RF) integrated circuits in state-of-the-art silicon germanium (SiGe) technology. Emphasis is on the circuit architecture, design, trade-offs, optimization, and layout of RF integrated circuits for use in wireless applications. Special attention is devoted to the most important challenges facing RF circuit designers today, such as the impact of noise, power distribution, and consumption. Low-noise amplifier, voltage-controlled oscillator (VCO), phase-lock loop, and high-performance mixer design are emphasized. The basic transmitter/receiver building blocks are covered, and students learn how to design and assemble them to form single-chip wireless systems.

**ECE 581 Introduction to Plasma Physics**
Fall. 4 credits. Prerequisite: ECE 303 or equivalent. First-year graduate-level course; open to exceptional seniors. D. A. Hammer.

Topics covered include plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; twofluid and hydromagnetic equations; plasma oscillations and waves; CMA diagram; hydromagnetic stability; and elementary applications to space physics, plasma technology, and controlled fusion.

**ECE 585 Upper Atmospheric Physics I**
Fall. 4 credits. Prerequisites: Physics through 214 or equivalent, introductory chemistry, ECE 486 or equivalent.
M. C. Kelle.

ECE 506 Upper Atmospheric Physics II
Spring. 4 credits. Prerequisites: ECE 581 and ECE 585. C. E. Seyler.
Topics include solar phenomena, solar wind, and space weather; magnetospheric structure and physical processes; plasma instabilities in the ionosphere and magnetosphere; and magnetic reconnection and the relation to high-latitude phenomena.

ECE 587 Energy Seminar (also NS&E 545 and M&A 545)
Fall, spring. 1 credit. May be taken for credit in any semester. E. Fisher.
Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Examples of topics to be surveyed include: energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

ECE 596 VLSI for Optical Interconnects
Spring. 4 credits. Prerequisites: ECE 515; ECE 453, or permission of instructor. A. B. Apsel.
This course is a graduate-level introduction to the concepts of optoelectronic interconnects. We will cover high-speed circuit design of transmitters and receivers for chip-to-chip and Ethernet communication channels. Topics include transimpedance amplifiers, data formats, introduction to optical devices, drivers, comparisons to conventional interconnect, and novel receiver architectures.

ECE 598 Contemporary Topics in Micromachining Microsystems
Spring. 3 credits. A. L. Fisher.
Contemporary topics in MEMS will be covered with a focus on using science and engineering to analyze the why and how of MEMS/NEMS solutions. The aim of this course is to learn how to think about the microsystems. The focus areas will be communication systems incorporating MEMS and autonomous systems incorporating MEMS.

ECE 630 Photonics
Fall. 3 credits. M. Lipson.
This course covers the primary advances in the photonic field with emphasis on emerging technologies. Typical topics include novel optical materials, optical MEMS, Photonic Band Gaps and the role of optics in next-generation computers.

ECE 672 Distributed Systems
Fall. 3 credits. Prerequisite: ECE 475. W. E. Speight.
Design of distributed systems, with particular emphasis on the field of cluster-based architectures. Students read papers, discuss topics in class, make presentations to the class, and complete a major software design project. Topics include runtime system design, coherence protocols for software distributed shared memory systems, fault-tolerant systems, file access, emerging interconnection networks, process and thread migration, adaptive systems, and cluster-based solutions for web servers and multimedia applications.

ECE 682 Advanced Plasma Physics
Spring. 3 credits. Prerequisite: ECE 581.
Not offered 2003-2004. C. E. Seyler, Boltzmann and Vlasov Equations; dielectric tensor; waves in hot magnetized plasmas; Landau and cyclotron damping; microinstabilities; low-frequency stability; nonlinear phenomena; solitons and nonlinear wave equations; ponderomotive effects and parametric processes; plasma models.

ECE 691-692 Electrical and Computer Engineering Colloquium
Fall. 691; spring, 692. 1 credit each term. For students enrolled in the graduate field of Electrical and Computer Engineering.
Staff.
Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

ECE 693-694 Master of Engineering Design
Fall, 693; spring, 694. 1-8 credits. For students enrolled in the M.Eng. (Electrical) degree program.
Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

[ECE 696 Topics in Communications
Spring. 3 credits. Prerequisite: ECE 562.
Introduction to multi-user problems in information theory (such as multiple access and broadcast channels, distributed correlated sources, coding with side information, multiple descriptions), and to classical networking problems (such as routing, flow control, delay, performance of protocols). Emphasis is on developing tools needed to do research work in this area.]

ECE 697 Topics in Computer Systems
Fall, spring. 1 credit. S-U only.
Prerequisites: ECE 475 and interest in computer systems. S. A. McKee, staff.
A course for systems graduate students in which the class reads papers about the design and implementation of computer systems and their components. Influential papers from the past as well as papers describing current research and development efforts are discussed.

ECE 791-792 Thesis Research
Fall, 791; spring, 792. 1–15 credits. For students enrolled in the master’s or doctoral program.

Materials Science and Engineering
Undergraduate Courses

MS&E 111 Nanotechnology (also ENGR 111)
Fall. 3 credits. E. Giannelis.
This is a course in the Introduction to Engineering series. For description, see ENGR 111.

MS&E 118 Design Integration: A Portable CD Player (also ENGR 118 and TAM 118)
Spring. 3 credits. W. Sachse.
This is a course in the Introduction to Engineering series. For description, see ENGR 118.

MS&E 119 Biomaterials for the Skeletal System (also ENGR 119)
Fall. 3 credits. D. T. Grubb.
This is a course in the Introduction to Engineering series. For description, see ENGR 119.

MS&E 124 Designing Materials for the Computer
Spring. 3 credits. 3 lectures.
This is a course in the Introduction to Engineering series. For description, see ENGR 124.

MS&E 204 Materials Chemistry
Spring. 4 credits.
This course is designed to give a molecular understanding of materials properties with emphasis on general concepts. In the first part, the structure of atoms is discussed introducing fundamental concepts of quantum chemistry. In the second part the transition from atoms to molecules is made discussing symmetry aspects of chemical bonding. The last part describes the transition from molecules to materials. Materials classes covered include modern examples of polymers, organic semiconductors, ceramics, organic-inorganic hybrids, and superconductors emphasizing the interdisciplinary nature of materials science. Examples illustrate current materials research involving nanotechnology, organic optoelectronics, self-assembling materials, or nano-ceramic.

MS&E 206 Atomic and Molecular Structure of Matter
Spring. 4 credits.

MS&E 261 Mechanical Properties of Materials: From Nanodevices to Superstructures (also ENGRD 261)
Fall. 3 credits. S. P. Baker.
For description, see ENGRD 261.

MS&E 262 Electronic Materials for the Information Age (also ENGRD 262)
Fall. 3 credits. Prerequisite: MATH 192.
Corequisites: PHYS 213 or permission of instructor. G. Malliaris.
For description, see ENGRD 262.

MS&E 265 Biological Materials and Their Synthetic Replacements
Spring. 3 credits.
From contact lenses and false teeth to arterial implants and hip joints, a tremendous range of synthetic materials are used in contact with the body to replace or supplement natural biological materials. The course considers a number of biological systems and describes the properties and structure of the natural materials. Requirements for candidate replacement materials are discussed, with historical and current solutions. These involve material properties such as strength and corrosion resistance as well as toxicity and bio-compatibility. Design constraints, including methods of production, economics, regulatory approval, and legal liabilities, are also considered.

MS&E 281 The Substance of Civilization—Materials through the Ages
Fall. 3 credits. 2 lectures. 1 lab. S. L. Sass.
Materials have enabled revolutionary advances in how we live, work, fight, travel, and play—hence the naming of eras after them—Stone, Bronze, and Iron Ages. This course explores the role of materials in the development of the modern industrial Western civilization by putting technology into an historical and human context and examining the advances made possible by innovations with materials, starting with the Stone Age. Interconnections between crucial innovations and historical events are identified and explored. Lectures, demonstrations, and hands-on laboratory experiments elucidate the origin of the unique properties of materials such as polymers, ceramics, metals, and glass. This course is designed to fulfill the science requirement in the College of Arts and Sciences.

MS&E 291-292 Research Involvement IIa and IIb
291, fall; 292, spring. 3 credits each term.
Prerequisite: approval of department. Staff. Supervised independent research project in association with a faculty member and faculty research group of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-term affiliation with a research group.

MS&E 302 Mechanical Properties of Materials, Processing, and Design (also MS&E 582)
Spring. 4 credits. Prerequisite: MS&E 206. Corequisite: MS&E 304 or permission of instructor. Staff. Stress and infinitesimal strain as second-rank Cartesian tensors. Linear elasticity and fourth-rank Cartesian tensors. Symmetry effects (Nye, Physical Properties of Crystals). Design criteria for beams, shafts, and pressure vessels (Dowling, Mechanical Behavior of Materials). Generalized plastic flow relations. Design based on yielding, fracture toughness, fatigue, creep, and rupture with specific applications. Basis for improved materials.

MS&E 303 Thermodynamics of Condensed Systems
Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson. The three laws of thermodynamics are introduced as the fundamental basis for thermal and chemical equilibrium, coupled with statistical mechanical interpretations for entropy and specific heat capacities. These principles are applied to understanding phase equilibria and phase diagrams, heterogeneous reactions, solutions, surfaces, and defects. Introduction to electrochemistry and fuel/power cells.

MS&E 304 Kinetics, Diffusion, and Phase Transformation (also MS&E 584)
Spring. 4 credits. Prerequisite: MS&E 303 or permission of instructor. The topics covered include phenomenological and atomistic theories of diffusion; diffusion in metals, glasses, and ceramics; polymers; diffusion in the presence of driving forces; fast diffusion paths; thermo- and electrotransport; interfaces and microstructure; nucleation and growth; growth of product layers (spray deposition); solidification of alloys; diffusion and diffusionless transformations in solids; glass transition.

MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials (also MS&E 585)
Fall. 4 credits. Prerequisite: MS&E 206 or permission of instructor. R. B. van Dover. Electronic structure of materials and connection to transport, magnetic, and dielectric properties. Wave and particle nature of electrons, wave packets, potential wells, barriers, tunneling. Valence electron behavior in crystals, density of states for metals, Fermi level, field and thermionic emission, Schottky barriers. Periodic potentials and bands structure of crystals. Intrinsically and doped semiconductors, junctions electronic and optical devices. Physical origin of magnetic behavior, ferromagnetic domains, magneto-resistance. Materials for data storage and manipulation. Polarization in dielectric materials, frequency dependence of dielectric constants and refractive indices. Ferroelectric domains. Dielectric components in devices. The close connection between fundamental concepts and current technology will be emphasized.

MS&E 307 Materials Design Concept I
Fall. 2 credits. S. Sass. For description, see MS&E 407.

MS&E 311 Junior Laboratory I
Fall. 1 credit. C. K. Ober. Practical laboratory covering the analysis and characterization of materials and processing. The fall semester labs will be based on materials from courses in thermodynamics of condensed systems and electronic, magnetic, and dielectric properties of materials.

MS&E 312 Junior Laboratory II
Spring. 1 credit. C. K. Ober. Practical laboratory covering the analysis and characterization of materials and processing. The spring semester labs will be based on the course material in kinetics, diffusion, and phase transformation and mechanical properties of materials, processing, and design.

MS&E 391-392 Research Involvement IIa and IIb
391, fall; 392, spring. 3 credits each term. Prerequisite: approval of department. Staff. For description, see MS&E 291. May be a continuation or a 1-term affiliation with a research group.

MS&E 403-404 Senior Materials Laboratory I and II
403, fall; 404, spring. 2 credits. D. Grubb. Practical laboratory covering the analysis and characterization of materials and processing. Emphasis is on design of experiments for evaluation of materials' properties and performance testing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

MS&E 405-406 Senior Thesis I and II
405, fall; 406 spring. 4 credits each term. A. Ruoff. Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approval depends on involvement in ongoing experimental research in direct collaboration with one or more ongoing research programs. Periodic oral and written presentations and a final written thesis are required. Both semesters must be taken to complete the laboratory requirement. This course is required for graduation with honors.

MS&E 407 Materials Design Concepts II
Fall. 2 credits. S. Sass. The goal of this course is to introduce materials design in the context of real world materials design projects carried out in industry. In the first portion of the course, the process of engineering design will be studied in light of economic, environmental, regulatory, and safety issues. Patent searching and communication skills will be addressed. In the second portion of the course, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on the case studies.

MS&E 491-492 Research Involvement IVa and IVb
491 fall; 492, spring. 3 credits each term. Prerequisite: approval of department. Staff. For description, see MS&E 291. May be a continuation or a 1-term affiliation with a research group.

MS&E 495 Undergraduate Teaching Involvement
Fall, spring. Variable credit. Staff. This course will give credit to students who help in the laboratory portions of ENGR 111, 119, or 124, ENGR 261, or MS&E 281. The number of credits earned will be determined by the teaching load and will typically be 1–3 credits.

MS&E 512 Mechanical Properties of Thin Films
Spring. 3 credits. Offered alternate years. Mechanical properties that are unique to materials in the form of thin films (typical thickness 1 micrometer and less) and micrometer-scale structures. Mechanics of two-dimensional structures. Stress and mechanical property measurement methods in small dimensions. Microstructural development in thin films. Elastic, plastic, and fracture response of films and constrained volumes.

MS&E 521 Properties of Solid Polymers

MS&E 523 Physics of Soft Materials
Fall. 3 credits. Offered alternate years. U. B. Wiesner. The course covers general aspects of structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers, liquid crystals, gels, and surfactant solutions. A general formalism for the description of order in terms of orientation distribution functions is introduced. Examples are given for the measurement of order parameters for partially ordered materials. Finally, the dynamics of
soft materials is discussed. Besides transport and flow behavior aspects of the local dynamics of soft materials are presented. Emphasis is put on the discussion of various techniques frequently used (and available at Cornell) for characterization of structure, order and dynamics of soft materials such as NMR or various scattering techniques. Using examples of modern multidimensional spectroscopic methods the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented at the end of the class.

MS&E 541 Microprocessing of Materials
Fall. 3 credits. Prerequisite: MS&E 521 or permission of instructor. Offered alternate years. C. K. Ober.
Preparation of synthetic polymers by step- and chain-growth polymerization; condensation; free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and kinetic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Special topics include liquid crystals, polyelectrolytes, photoreactive, and supramolecular chemistry. At the level of Principles of Polymerization by Odian.

MS&E 525 Organic Optoelectronics
Fall. 3 credits. Offered alternate years. G. G. Malliaris.
Overview of relevant materials from small aromatic molecules to conjugated polymers. Focuses on optoelectronic properties, including photophysics (absorption, emission, photogeneration, recombination), charge transport (doping, hopping, disorder, charge injection), and elements of nonlinear optics. Optoelectronics applications (such as electrophotography, light-emitting diodes, lasers, photovoltaic cells, thin film transistors) are also discussed.

MS&E 531 Introduction to Ceramics
Fall. 3 credits. R. Dieckmann.
This course covers ceramic processes and products, structure of ceramic crystals, structure of glasses, structural defects (point defects, dislocations), surfaces, interfaces and grain boundaries, diffusion in ionic materials (atomic and phenomenological approach, relationships between diffusion and point defect structure), ceramic phase diagrams, phase transformations. Physico-chemical aspects of the different topics are emphasized.

MS&E 532 Glass, Ceramic, and Glass-Ceramic Materials: Critical Components in Technologies
Spring. 3 credits. Offered alternate years. Staff.
The course discusses preparation of glasses and ceramics in both bulk and thin film form by conventional and unconventional techniques. Topics include hydrolysis and condensation of molecular precursors, colloids, gelation, aging, drying, and sintering. Emphasis is placed on phenomenology and modeling. Spectroscopic and scattering techniques are discussed. Synthesis and properties of nanoparticles and nanocomposites are also presented and discussed.

MS&E 544 Plasma Processing of Electronic Materials (also ECE 482)
Spring. 3 credits. Prerequisites: PHYS 213 and 214 or equivalent. Offered on demand. Staff.
For description, see ECE 482.

MS&E 545 Magnetic Materials
Fall. 3 credits. Prerequisites: PHYS 213 and 214 or equivalent. Offered alternate years. Not offered 2003-2004. D. G. Ast.
This course covers the fundamentals of magnetic phenomena and specific magnetic materials and their use in modern applications. Magnetization phenomena, the origin of magnetism in a material, magnetic domains, and magnetic anisotropy are included in the fundamentals. Specific magnetic materials and their applications include ferromagnetism in thin films and fine particles, amorphous magnetic materials; magnetic recording, magnetic circuits.

MS&E 546 Solar Cells: Energy from the Environment
Fall. 2 or 3 credits. Nec. 2 credits. Lab. 1 credit. Laboratory enrollment is limited to 10 students. No prerequisites. Not offered fall 2005. D. G. Ast.
Solar cells provide power to satellites but are increasingly used for other applications, including the generation of electricity to power homes and even cars and airplanes. This course introduces the physics, design, manufacturing, testing, applications, and long-term reliability of solar cells. Topics include the energy distribution of the solar spectrum in space and at the surface of the earth, the physics of converting light into electricity, the ideal conversion efficiency of solar cells, solar cell design, the economical fabrication of solar cells, testing and government regulations, and the long-term reliability of solar cells. The course covers mostly classical solid state solar cells but provides an introduction to emerging competing technologies using polymers and organic dyes. In the laboratory, students fabricate and test a solar cell. The instructor provides special recitations, as needed, for students lacking a send background. Students interested in the subject of solar cells. The recommended textbook is Solar Cells, Operating Principles, Technology and Systems Applications by Martin Green.

MS&E 555 Introduction to Composite Materials (also CEE 475, M&E 455, and T&M 455)
Spring. 4 credits. For description, see T&M 455.

MS&E 563 Nanobiotechnology (also A&EP 663 and BIO G 663)
Spring. 3 credits. For description, see A&EP 663.

MS&E 571 Analytical Techniques for Material Science (Also M&E 603)
Spring. 3 credits. Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids, characteristics of the emergent radiation. Techniques covered include ion scattering, Auger electron spectroscopy, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, and X-ray techniques. Selection and design of experiments.

MS&E 572 Computational Materials Science
Spring. 3 credits. Prerequisite: MS&E 303 or equivalent; programming M. O. Thompson.
Computational methods for predicting the behavior of condensed matter systems, including Monte Carlo, molecular dynamics, and phase field approaches. Extraction of physical parameters from simulation results and limitations of computational methods. Survey of interatomic potential development and quantum-mechanical ab-initio techniques. Examples drawn from surface and condensed phase systems.

Graduate Professional Courses

MS&E 501-502 Special Project
501, fall; 502, spring. 6 credits each term. Master of Engineering research project.

MS&E 502 Mechanical Properties of Materials, Processing, and Design (also MS&E 302)
Spring. 4 credits. Corequisite: MS&E 584 or permission of instructor. For description, see MS&E 302.

MS&E 583 Thermodynamics of Condensed Systems (also M&E 303)
Fall. 4 credits. M. O. Thompson, for description, see MS&E 303.
Further Graduate Courses

MS&E 621 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607)
Fall. 4 credits. Prerequisite: CHEM 605 or permission of instructor. S. Lee.

For description, see CHEM 607.

MS&E 622 Synthetic Polymer Chemistry (also CHEM 675 and CHEM 671)
Spring. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor. Staff.

For description, see CHEM 671.

MS&E 631 Solid-State Reactions
Fall. 3 credits. Offered alternate years. R. Dieckmann.

Topics include point defects (thermal disorder,component-activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries, transport in solids (definition and different types of diffusion coefficients, reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick’s laws); point-defect relaxation (migration controlled, phase-boundary-reacted controlled); inter-diffusion, solid-state reactions involving compound formation (oxidation of metals, reactions between solids), and de-mixing of materials in potential gradients, and selected solid-state processes (internal reactions, etc.).

MS&E 632 Solid State Electrochemistry
Fall. 3 credits. Prerequisite: MS&E 631 or permission of instructor. Not offered 2003–2004. R. Dieckmann.

Topics include disorder in solids; thermodynamic quantities or quasi-free electron and electron defects in semiconductors; mobility, diffusion, and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes, and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations; and technical applications of solid electrolytes. At the level of Electrochemistry of Solids by H. Rickert.

MS&E 655 Composite Materials (also M&E 655 and T&AM 655)
Spring. 4 credits. Staff.

For description, see T&AM 655.

MS&E 665 Principles of Tissue Engineering (also M&E 665, BMEP 665)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. L. Bonassar.

This course covers introductory concepts in tissue engineering, including: polymers, biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

MS&E 671 Principles of Diffraction (also A&EP 711)
Spring. 3 credits. Letter grades only. J. D. Brock.

For description, see A&EP 711.

MS&E 672 Transmission Electron Microscopy
Spring. 3 credits. Prerequisite: MS&E 206 or equivalent. Offered alternate years. This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include microscope optics and conventional and high-resolution image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi patterns, and convergent beam patterns), and obtaining useful images of crystal defects. Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Current text is Transmission Electron Microscopy by D. B. Williams and C. B. Carter.

MS&E 681 Surfaces and Interfaces in Materials
Spring. 3 credits. Offered alternate years. This course deals with special topics in the field of surface and interface science. Some knowledge of basic statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes is assumed. The following are the main topics: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

Specialty Courses

MS&E 800 Research in Materials Science
Fall, spring. Credit to be arranged. Staff. Independent research in materials science under the guidance of a member of the staff.

MS&E 801 Materials Science and Engineering Colloquium
Fall and spring. 1 credit each term. Credit limited to graduate students. Staff. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

MS&E 802 Materials Science Research Seminars
Fall, spring. 2 credits each term. For graduate students involved in research projects. Staff. Short presentations on research in progress by graduate students and staff.

Related Course in Another Department

Introductory Solid-State Physics (PHYS 454)
MECHANICAL AND AEROSPACE ENGINEERING

General and Required Courses

M&AE 101 Naval Ship Systems (also NAV S 202)
Spring. 3 credits.
For description, see NAV S 202.

M&AE 117 Introduction to Mechanical Engineering (also ENGR 117)
Fall. 3 credits. 2 lectures and 1 lab per week.
This is a course in the Introduction to Engineering series. For description, see ENGR 117.

M&AE 127 Introduction to Entrepreneurship and Enterprise Engineering (also ENGR 127)
Spring. 3 credits. Open to all Cornell students regardless of major. No prerequisites.
For description, see ENGR 127.

M&AE 212 Mechanical Properties and Processing of Engineering Materials
Spring. 4 credits. Prerequisite: ENGRD 202 (strictly enforced). Software fee.
Introduction to the broad range of mechanical behavior of engineering materials and their processing. Origins of mechanical properties: atomic bonding and crystalline structures, point and line defects, plastic deformation of crystals and polycrystals, strain-hardening behavior and basic elements of plasticity. Fundamentals of thermal processing are introduced including the development of equilibrium microstructures in metals and time-dependent phase transformations. Bulk deformation processes are introduced including the ideal work and slab analysis methods. General failure of materials and materials selection topics are explored. The laboratory component of the course introduces students to the fundamentals of mechanical testing and thermal processing as well as instrumentation using common engineering transducers such as strain gages and thermocouples.

M&AE 221 Thermodynamics (also ENGRD 221)
Fall, spring, may be offered summer. 3 credits.
Prerequisites: MATH 192 and PHYS 112.
For description, see ENGRD 221.

M&AE 225 Mechanical Synthesis
Spring. 4 credits. Prerequisite: ENGRD 202. Pre- or corequisites: ENGRD 203 and ENGRD 221. Lab fee.
A hands-on introduction to the mechanical design process. Basic prototyping skills developed using machine tools. Mechanical dissection used to demonstrate successful product design and function. Design projects provide experience from conceptualization through prototype construction and testing. Basic instruction on CAD and technical sketching.

M&AE 323 Introductory Fluid Mechanics
Fall. Usually offered in Engineering Cooperative Program also. 4 credits.
Prerequisites: ENGRD 202 and 203 and coregistration in 221, or permission of instructor.
Topics covered include physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers, introduction to compressible flow.

M&AE 324 Heat Transfer
Spring. May also be offered in Engineering Cooperative Program. 3 credits.
Prerequisite: M&AE 325 or permission of instructor.
Topics include steady and unsteady heat conduction, forced and free convection, external and internal flows; radiation heat exchange; mass transfer boiling and condensation. Heat exchangers and fins. Thermophysical transport properties. First law and rate equations are derived for heat transport processes in energy systems, including applications in propulsion and power, thermal environmental control, and manufacturing.

M&AE 325 Mechanical Design and Analysis
Fall. Usually offered in Engineering Cooperative Program also. 4 credits.
Prerequisites: ENGRD 202, ENGRD 203, M&AE 212, and M&AE 225. Lab fee.
Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

M&AE 326 System Dynamics
Spring. May be offered in Engineering Cooperative Program. 4 credits.
Prerequisite: MATH 294, ENGRD 203.
Junior standing required.
Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

M&AE 427 Fluids/Heat Transfer Laboratory
Fall. 3 credits. Prerequisites: M&AE 323, 324. Fullfills the technical writing requirement.
Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and the thermal sciences. Measurements of flame temperature, pressure, heat transfer, viscosity, lift and drag, fluid-flow rate, effects of turbulence, flow visualization, and spark ignition engine performance. Biweekly written assignments.

M&AE 428 Seminar on Engineering Design
Fall. 2 credits. Prerequisite: completion of 6 semesters in mechanical engineering or equivalent. S/U grades only.
This course is offered to illustrate the design “process” in action. It consists of formal lectures and invited seminars by industrial and academic practitioners of design. Case studies are presented in weekly invited lectures from a wide range of disciplines, including thermofluid processes, manufacturing, energy, mechanical design, aerospace, and biological sciences. The invited lectures are supplemented by one or more design “projects” in the semester.

M&AE 591 Applied Systems Engineering I (also CEE 504, COM S 504, ECE 512, ORIE 512, SYSEN 510)
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor.
For description see SYSEN 510.

M&AE 592 Applied Systems Engineering II (also CEE 505, COM S 505, ECE 512, ORIE 512, SYSEN 510)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M&AE 591, or ORIE 512, SYSEN 510).
For description see SYSEN 520.

Mechanical Systems, Design, Materials Processing, and Precision Engineering

[M&AE 103] Introduction to Computer Aided Manufacture (CAM)
Fall. Spring. 1 credit, approximately 8 weeks (total 15 hrs. of instruction and 15 hrs. of lab). Prerequisite: M&AE 225, equivalent experience, or permission of instructor. Limited enrollment. Not offered 2003–2004.
M&AE 103 introduces students to the fundamentals of computer-aided manufacture (CAM) through the use of computer numerical control (CNC) programming using G codes and solid modeling software. Students learn setup, tool selection, and operation of CNC mills and lathes. They also receive an introduction to the CNC machine tool as an electro-mechanical system. This course is required for students wishing to use the CNC equipment in the Emerson Lab's Product Realization Facility for team or research projects.

M&AE 378 Mechatronics
Fall. 4 credits. Prerequisite: MATH 294, or permission of instructor. Limited enrollment.
Analog circuits, passive and active components, filter design, transistors, diodes, and power amplifiers are covered. Other topics include: electronics, piezoelectric and shape memory material transduction, gear trains, pulse width modulation, optical encoders, A/D and D/A conversion, discretization, aliasing, microprocessors, and programming.
Laboratory experiments culminate in a controlled robotic vehicle project.

M&AE 386 Automotive Engineering
Spring. 3 credits. Prerequisite: M&AE 325 or permission of instructor.
Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles. Engines, transmissions, suspension, brakes, and aerodynamics will be discussed. The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches. Co-meets with M&AE 486.

M&AE 409 Data Structures and Algorithms for Computational Science (also CIS 409)
Fall. 4 credits. Prerequisite: COM S 100 or programming experience in any language.
For description, see CIS 409.

[M&AE 412] Smash and Crash: Mechanics of Large Deformations
Severe loading is a defining feature of both materials processing and crash worthiness. Materials are stressed beyond their elastic limits intentionally, resulting in large permanent deformations. In materials processing, the desire is to change a work piece shape to manufacture a component; in crash worthiness, the intent is to absorb a vehicle's energy and to protect its occupants. In this course, the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods, including bound theorems, are presented. The fundamentals are applied to a number of topics in materials processing and crash design. The laboratory experience deals with these topics, culminating with the team design, construction, and testing of a crash cage.

M&E 415 GPS: Theory and Design (also ECE 415)
Fall, 4 credits. Prerequisites: A 300-level engineering course with advanced math content such as ECE 301, ECE 303, or M&E 326. For description, see ECE 415.

M&E 417 Introduction to Robotics: Dynamics, Control, Design
Spring, 3 credits. Introductory course in the analysis and control of mechanical manipulators and related robotic machines. Topical include spatial descriptions and transformations, manipulator kinematics and inverse kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators, trajectory control, and compliant motion control. Simulation and design using MATLAB and multi-body codes are used.

M&E 425 FSAE Automotive Design Project
Fall, spring, 3 or 4 credits. Intended for M&E or ECE juniors and seniors or by arrangement with instructor. Usually 3 credits. Permission of instructor only. Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems.

M&E 426 FSAE Auto Design Project (Design Option)
Fall, spring, 3 or 4 credits. Limited to M&E seniors; permission of instructor only.

Senior design version of M&E 425. For description, see M&E 425.

M&E 440 Hybrid Electric Vehicle
Fall, spring, 3 credits for team members; 4 credits for team leaders. Enrollment limited to a maximum of 4 students. Permission of instructor only. Team work on the design and fabrication of a hybrid vehicle for national competition.

M&E 441 Hybrid Electric Vehicle (Design Option)
Fall, spring, 3 or 4 credits. Limited to M&E seniors; permission of instructor only.

Senior design version of M&E 440. For description, see M&E 440.

M&E 455 Introduction to Composite Materials (also CEE 475, MSE 555, and T&M 455)
Spring, 4 credits. For description, see T&M 455.

M&E 461 Entrepreneurship for Engineers (also ENGRG 461 and OR&AIE 452)
Fall, 3 credits. Enrollment open to upper class engineers; others with permission of instructor limited enrollment. This course develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business plans, technology transfer, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft skills are left for other courses. Course work consists of discussions, assignments, and the preparation and presentation of a complete business plan.

M&E 463 Neuromuscular Biomechanics (also BMEP 463)
Spring, 3 credits. Prerequisites: ENGRD 202 and 203 or permission of instructor. Offered alternate years. Not offered 2003-2004. Modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Physiology of neurons and muscles introduced and related to the production of force and movement in biological systems. Representation of neuromuscular systems as simultaneous equations. Exploration of the muscular redundancy problem using optimization methods and general-purpose languages (such as Mathematica or MATLAB). Selected clinical applications.

M&E 464 Orthopaedic Tissue Mechanics
Spring, 3 credits. Prerequisites: ENGRD 202 and M&E 325 or permission of instructor. Offered alternate years. Applications of mechanics and materials principles to tissues. Physiology of bone, cartilage, ligament, and tendon introduced and related to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

M&E 466 Biomedical Engineering Analysis of Metabolic and Structural Systems (also BMEP 401)
Fall, 3 credits. Prerequisite: prior course work in basic biology. For description, see BMEP 401.

M&E 470 Finite Element Analysis for Mechanical and Aerospace Design
Spring, 3 credits. (4 credits as M&E design elective for M&E seniors) Prerequisite: senior standing or permission of instructor. Limited enrollment. Evening examinations. Term project. Fulfills senior design requirement for M&E students. Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as MATLAB and ANSYS). Selected mechanical and aerospace applications. Co-meets with M&E 570.

M&E 477 Engineering Vibrations
Spring, 3 credits. Prerequisite: M&E 326 (or co-registration), or permission of instructor. Lumped element, distributed parameter, and mixed structural vibratory systems are examined. Equations of motion are derived from Newton's law and Lagrange's equations. Eigenanalysis, free and forced responses, and frequency-time domain solutions are considered. Vibration absorbers, isolators, and vibration suppression control systems using feedback approaches are also investigated. Co-meets with M&E 577.

M&E 478 Feedback Control Systems (also CHEM 472, ECE 472)
Spring, 4 credits. Prerequisites: one of the following: CHEM 372, ECE 301, M&E 326, or permission of instructor. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes.

M&E 479 Modeling and Simulation of Mechanical and Aerospace Systems
Fall, 3 credits. Prerequisite: senior engineering standing or permission of instructor. Evening examinations. Term project. Fulfills M&E senior design elective. Limited enrollment. F. Valero-Cuevas. Analysis and simulation of linear and nonlinear systems. Representation of discrete and distributed dynamical systems by state-variable models. Time- and frequency-domain simulation via general-purpose languages (such as MATLAB and Mathematica) and special-purpose simulation software (such as Simulink). Selected applications from diverse fields. Co-meets with M&E 579.

M&E 486 Automotive Engineering Design
Spring, 4 credits. Prerequisite: senior standing. Fulfills field senior design requirement for M&E students. For description, see M&E 386.

M&E 514 Design for Manufacturing and Assembly
Fall or spring, 4 credits. Prerequisites: M&E 212 or 412, and introductory probability and statistics, or permission of instructor. Nominal DFMA (design for manufacture and assembly) and variational DFMA are covered in two parallel streams. The nominal stream is based on readings in a popular text that surveys the role of DFMA in the product development process in part and product design. The second stream, covered mainly through lectures, addresses dimensional variability and its control through parametric and geometric tolerancing, dimensional metrology, and statistical quality and process control.
M&AE 525 Mechatronics Systems Engineering Project
Fall, spring. 4 credits each term (must be taken for BMEP 526 alternate years. Not offered 2003-2004.)*
Engineering students only. Corequisite: M&AE 650 or equivalent, graduate standing, or permission of instructor.
Prerequisite: M&AE 326 or equivalent, graduate standing, or permission of instructor. Graduate version of M&AE 470.
For description, see M&AE 470.

M&AE 565 Biomechanical Systems—Analysis and Design (also BMEP 565)
Fall. 3 or 4 credits. Prequisites: undergraduate courses in dynamics and strength of materials, (e.g., T&AM/ENGRD 202 and 203) and junior standing, graduate standing, or permission of instructor.
Mechanics and design in musculoskeletal systems. Emphasis on the modeling and analysis of bones and joints and the analysis and design of biomechanical systems frequently encountered in orthopaedic engineering, including bone-implant systems. Crosslisted with BMEP 565.

M&AE 570 Simulation of Mechanical and Aerospace Systems (also MAE 470)
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
Evening examinations. Term project.
Graduate version: M&AE 470. For description, see M&AE 470.

M&AE 571 Applied Dynamics
Fall. 3 credits. Prerequisites: graduate standing, seniors with T&AM/ENGRD 203, and M&AE 326 or permission of instructor. 2 lectures.
Introduction to multidisciplinary dynamics; dynamics of rigid bodies; Newton-Euler methods, Lagrangian dynamics, principle of virtual power (Kane-Jourdain methods); and applications to robotics, space dynamics of satellites, electro-mechanical systems. Introduction to multidisciplinary simulation using working model.

M&AE 577 Engineering Vibrations
Spring 3 credits. Prerequisite: M&AE 326 or equivalent, graduate standing, or permission of instructor. Graduate version of M&AE 477.
For description, see M&AE 477.

M&AE 579 Modeling and Simulation of Mechanical and Aerospace Systems
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. Limited enrollment. Even lectures. Term project. Graduate version of M&AE 479.
For description, see M&AE 479.

M&AE 613 Simulation Methods in Mechanics of Materials
Spring. 4 credits. Prerequisite: M&AE 612 or TAM 665, programming experience, knowledge of MATLAB, FORTRAN, or C; introductory finite element course recommended. Offered alternate years. Not offered 2003-2004.
Presentation of mechanics framework for simulations of large plastic deformations. Discussion of constitutive theories for the constitutive description of mechanical behavior of solids. Presentation of finite element formulations for solving problems that include nonlinearity from large deformations and inelastic behavior of several numerical issues, including consistent computational formulations, error estimation, adaptive meshing, and contact algorithms. Applications in polymer processing, metal forming, micromechanics, and inelastic design.

M&AE 615 Mechanics of Materials: Experiments and Simulations
Fall. 4 credits. Prerequisite: M&AE 680 (finite elements) or permission of instructor. Not offered 2003-2004.
This course focuses on experiments and simulations related to the mechanical properties of metals and materials processing. A general introduction to sensors and instrumentation for engineering measurements is also included. Testing for mechanical properties/model parameter characterization and simple boundary value problems: linear elasticity, inelastic deformation, fatigue, and fracture, including rate and temperature effects. Process simulation experiments including forging, extrusion, rolling, and ironing may also be conducted. In addition, an emphasis is placed on the experimental formulation interface. Students perform analyses including finite element modeling to correlate and predict materials behaviors observed in the experiments. These analyses include linear elasticity behavior, state variable plasticity modeling, and fracture mechanics.

M&AE 655 Composite Materials (also MS&E 655 and TAM 655)
Spring. 4 credits. For description, see TAM 655.

M&AE 663 Advanced Topics in Neuromuscular Biomechanics (also BMEP 663)
Spring. 3 credits. Permission of instructor only. Offered alternate years.
F. Valero-Cuevas.
Advanced topics in modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Mathematical representation of the functional interactions among neurons, muscles, and skeletal structures. Numerical prediction of force and movement in biological systems, and projects exploring muscle coordination using optimization design methods and general-purpose languages (such as Mathematica or MATLAB). Project-based investigation of clinically relevant topics.

M&AE 664 Mechanics of Bone
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor. Offered alternate years. Not offered 2003-2004.
This course focuses on current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.

M&AE 665 Principles of Tissue Engineering (also BMEP 665 and MS&E 665)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. L. Bonassar.
See BMEP 665 for description.

M&AE 675 System Identification and Control
Fall. 4 credits. Prerequisite: M&AE 478/ECE 471/CHME 472, M&AE 521/ECE 521, or equivalent.
Covers the identification of linear uncertain and nonlinear models and their connections to control. Black box methods, such as subspace methods, and model tuning approaches, such as recursive parameter estimation, are presented. Connections to control include the development of model uncertainties and bounds and control approaches consistent with identified models.
Current trends in model identification for control are discussed. Other topics, such as hybrid models, are presented given enough time.

M&AE 676 Model-Based Estimation
Fall. 4 credits. Prerequisite: linear algebra, differential equations, and MATLAB programming. Open to M.S./Ph.D.; others by permission of the instructor.
This course covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are least-squares estimation for general problems and Kalman filtering for dynamic systems problems. Techniques for linear models are taught as techniques for nonlinear models. Both theory and application are presented.

M&AE 677 Robust and Optimal Control
Spring. 4 credits. Prerequisite: M&AE 478/ECE 471/CHME 472 (or equivalent), ECE 521 (or equivalent), graduate standing, or permission of instructor. Not offered 2003-2004.
An introduction to model based control of multi-input, multi-output systems. Emphasis on design techniques that result in closed loop systems that are insensitive to modeling errors and that achieve a pre-specified level of performance. Topics include lq spaces and performance measures, model reduction and approximation, H2 and H-infinity optimal control, explicit models of system uncertainty, and the analysis of uncertain control systems. Most of the design and analysis tools developed in the course are in the form of linear matrix inequalities or semidefinite programs. Each student is expected to: (1) give a presentation on a research paper, which is chosen from a list provided by the instructor, or (2) to complete a design project applying the techniques developed in the course.

M&AE 680 Finite Element Analysis (also MS&E 680 and TAM 680)
Spring. 4 credits. Prerequisites: T&AM 663 and TAM 610 or equivalent, graduate standing or permission of instructor.
Theoretical, practical, and actual programming techniques for finite element analysis and design, with emphasis on structural, mechanical, and thermal problems. Focusing on the FEM as a method for numerical solution of differential equations. Topics include: strong and weak problem forms; weighted-residual...
and variational formulations; formulations for elliptic, parabolic, and hyperbolic problems (Laplace's equation, elasticity, heat conduction, structural dynamics, wave propagation), meshing and error estimation, and various kinds of elements.

The focus of this course is the evaluation of mechanical properties from knowledge of the material microstructure, with attention to anisotropic elastic and plastic behaviors. Topics include mathematical and mechanics preliminaries, mathematical foundations of orientations, including parameterizations, symmetries, and fibers; construction and sampling of orientation distributions; hypotheses used to link macro and micro length scales; methodology for evaluation of effective elastic and plastic moduli; evolution of orientations and orientation distributions with deformation. Applications to polycrystalline solids (metal alloys and minerals), composite materials, biomaterials (soft tissues), and polymers.

Energy, Fluids, and Aerospace Engineering

[M&E 305] Introduction to Aeronautics
Fall. 3 credits. Prerequisite: T&AM/ENG RD 205; limited to upperclass engineers, others with permission of instructor. Introduction to aerodynamic design of aircraft. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Calculation of lift and drag for aircraft. Analysis of aerodynamic performance, stability, and control. Description and performance of reciprocating and jet propulsion engines; propeller theory.

[M&E 306] Spacecraft Engineering
Spring. 3 credits. Junior and senior engineering students. Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics covered include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.

[M&E 400] Components and Systems: Engineering in a Social Context (also M&AE 400)
Fall. 3 credits. Prerequisites: upperclass standing, 2 years of college physics. Serves as an approved elective but not as a Field Elective in Mechanical Engineering. Not offered 2003–2004.

This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Defense, supersonic transport, and the automobile and its effect on the environment, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

[M&E 401] Components and Systems: Engineering in a Social Context
Fall. 4 credits. Prerequisites: senior standing; 2 years of college physics. M&E senior field design requirement. Not offered 2003–2004.

For description, see M&E 400.

[M&E 423] Intermediate Fluid Dynamics
Spring. 3 credits. Prerequisite: M&E 323. Fall. 3 credits. M&E 623.

This course builds on the foundation of M&E 323. Emphasis is placed on the fundamental principles and numerical calculation of real flows (both engineering and environmental) using a computational fluid dynamics package. Topics covered include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, and turbulence.

[M&E 449] Combustion Engines
Spring. 3 credits. Prerequisites: ENGRD 221 and M&E 323.

Introduction to combustion engines, with emphasis on the application of thermo-dynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, ideal-cycle analyses, deviations from ideal processes, engine breathing, combustion, knock. Description and control of undesirable exhaust emissions.

[M&E 453] Computer-Aided Engineering: Applications to Biomedical Processes (also BEE 453)
Spring. 3 credits. Prerequisite: heat and mass transfer (BEE 350 or equivalent). Fall. 3 credits. M&E 650. M&E 305. M&E 680 (or equivalents). Second year standing in MS/Ph.D. program.

Fulfills computer applications elective for M&E students. See BEE 453 for description.

[M&E 454] Introduction to Nuclear Science and Engineering (also ECE 443)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.

For description, see ECE 443.

[M&E 459] Introduction to Controlled Fusion: Principles and Technology (also A&EE 484 and ECE 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in Engineering and the physical sciences. Offered alternate years. Offered spring 2004.

For description, see NS&E 484.

Spring. 3 credits. Prerequisites: ENGRD 221, M&E 323, M&E 326, or equivalents. Open to graduate and upperclass students or approval from instructor. Critically examines the technology of energy systems that will be acceptable in a world faced with global warming, local pollution, and declining supplies of oil. The focus is on renewable energy sources (wind, solar, biomass), but other non-carbon-emitting sources (nuclear) and lowered-carbon sources (co-generative gas turbine plants, fuel cells) are also studied. Both the devices as well as the overall systems are analyzed.

[M&E 506] Aerospace Propulsion Systems
Fall. 3 credits. Prerequisite: M&E 323 or permission of instructor. Offered alternate years.

[M&E 507] Dynamics of Flight Vehicles

[M&E 523] Intermediate Fluid Dynamics with CFD
Spring. 4 credits. Prerequisites: graduate standing or permission of instructor. This course is intended for M&E students who wish to take a single fluid dynamics course. Students desiring more intensive treatment should consider M&E 601 and one or more of M&E 636, M&E 736, and M&E 737. This class co-meets with M&E 423. In addition to the normal requirements for M&E 423, this course includes an extensive CFD design project.

[M&E 543] Combustion Processes
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics covered include thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, droplet combustion, and combustion of solids.

[M&E 601] Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics, surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids, boundary layers, viscous flows, boundary layers, and potential flows.

[M&E 602] Fluid Dynamics at High Reynolds Numbers
Spring. 4 credits. Prerequisite: M&E 601. Offered alternate years.

Analysis and discussion of a wide range of specific flows and flow regimes characterized by high Reynolds number are provided. Potential flows, conformal transformations, slender-body theory, and Kelvin's impulse are included. Laminar viscous flows are studied, including fully diffused flows, "exact" solutions, and boundary layers. Compressible flows are treated, including propagation and viscous decay of sound and shock waves and
their decay, and the method of characteristics for analysis of such problems. Stratified flows, especially gravity and capillary waves, are analyzed. Various stability problems associated with high Reynolds number flows are discussed. Finally, certain low Reynolds number flows associated with creeping motions or with ultra-small scale will be described.

[M&AE 603 Compressible Fluid Dynamics]
Fall. 4 credits. Graduate standing or permission of instructor. Not offered 2003–2004. Fundamentals of compressible gas dynamics are described using thermodynamics and fluid properties, together with isentropic and viscous andaducous flow theories; normal and oblique shock-waves, Prandtl-Meyer expansion fans; sound waves and acoustics; and duct flows including effects of area, friction, and heat interaction. Applications include high-speed aerodynamics, including hypersonic combustor design.

[M&AE 608 Physics of Fluids]
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory: velocity distribution, collisions, Boltzmann equation. Quantum theory: postulates of quantum mechanics, internal structure, rigid rotor, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relation to thermodynamics, calculations of thermodynamic properties. Chemical rate processes.

[M&AE 631 Turbulence and Turbulent Flows]
Fall. 4 credits. Prerequisite: M&AE 601, graduate standing, or permission of instructor. Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

[M&AE 632 Multiphase Turbulence: Particulates, Drops and Polymer Suspensions]
Spring. 4 credits. Prerequisites: M&AE 601, graduate standing, or permission of instructor. The course will cover turbulent transport of suspensions of microstructures: (i) particulates; (ii) drops; and (iii) polymer molecules. Topics include transport properties of individual microstructures, statistical averaging and the closure problem, Euler/Lagrangian methods, multiphase transport equations, direct numerical simulation and large eddy simulation. The course emphasizes fundamental questions concerning modeling of discrete phases by continuum mean equations.

[M&AE 636 Elements of Computational Aerodynamics]
Fall or spring. 4 credits. Prerequisites: graduate standing and a graduate-level course in fluid mechanics. Not offered 2003–2004. Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course has common lectures with M&AE 736 but is more applications oriented and uses commercial software for all computational exercises.

[M&AE 643 Computational Combustion]
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. S. B. Pope. Examines laminar and turbulent flames and the fundamental chemical and transport processes involved. Emphasis is on using computational tools (Chemkin and Fluent) to calculate flame properties, which are compared to experimental data. Topics covered include equilibrium chemistry, chemical kinetics, reactor studies, conservation equations, transport properties, laminar premixed and non-premixed flames, turbulent jets, turbulence modeling, and PDF models of non-premixed turbulent combustion. A knowledge of combustion at the level of M&AE 543, Combustion Processes, is useful but not required.

[M&AE 645 Turbulent Reactive Flow]
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Large turbulent reactive flows occur in combustion devices, the chemical process industry, the atmosphere, oceans, and elsewhere. In the last decade, substantial progress has been made in the understanding of these flows, through both experimental and computational approaches. This course focuses on turbulent combustion and describes the different phenomena involved, the basic processes and governing equations, experimental techniques and observations and a range of modeling approaches. Class meets, on average, twice per week.

[M&AE 650 Evolutionary Computation and Design Automation (Also COM S 750, CIS 750)]
Fall. 4 credits. Not offered 2003–2004. For description, see COM S 750.

[M&AE 651 Conduction and Radiation Heat Transfer]

[M&AE 652 Convection Heat Transfer]
Fall, weeks 8–14. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. An intermediate treatment of convection heat transfer. Governing equations developed in integral and differential forms. Boundary layers. Laminar and turbulent flows. Internal and external, forced and free convection. Entropy and system arguments for optimal design. Parameter identification. At the level of, but extends, Heat Transfer by Bejan.

[M&AE 714 Computational Sensors: Information Technologies for Complex Continuum Systems]
Fall. 4 credits. Prerequisites: exposure to computational mathematics, background in continuum systems and processes such as fluid flow, thermal transport and/or deformation of materials/structures. Not offered 2003–2004. N. Zabaras. Syllabus: examples of industrial control of continuum systems; mathematical preliminaries; finite element approach to partial differential equations; inverse problems and inverse problem solving; optimal control problems; numerical analysis of distributed control problems; reduced-order models for continuum systems; feedback laws for continuum systems; robust control and uncertainty, data mining of continuum systems and models, data compression and transmission techniques; advanced adaptive sensing and actuation of continuum fields.

[M&AE 733 Stability of Fluid Flow]

[M&AE 734 Analysis of Turbulent Flows]

[M&AE 736 Theory of Computational Aerodynamics]
Fall. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some higher-level (FORTRAN, MATLAB, etc.) programming experience. Not offered 2003–2004. Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic
Special Offerings

M&A 490 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Prerequisite or corequisite M&A 428. Fulfills field design requirement.
Intended for individual students or small groups of students who want to pursue a particular project or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&A 491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Prerequisite or corequisite M&A 428. Fulfills field design requirement.
Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses. Students should adhere to the design process and documentation guidelines available at the M&A undergraduate office.

M&A 545 Energy Seminar (also ECE 587, M&A 545)
Fall, spring. 1 credit. May be taken for credit both semesters.
Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Examples of topics to be surveyed include energy resources and economics, coal-based electricity generation, nuclear reactors, solar power, energy conservation by users, and air pollution control.

M&A 594 Enterprise Engineering Colloquium (also ORIE 693-894)
Fall, spring. Credit TBA. Limited to graduate students.
For description, see ORIE 893-894.

M&A 595 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Limited to graduate students.

M&A 695 Special Topics in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Graduate standing and permission of instructor.

M&A 737 Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some MATLAB, C++, or other programming experience.
Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

Special lectures by faculty members on topics of current research.

M&A 791 Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each term. S-U grades only. For graduate students selected to participate in research projects.
Presentations on research in progress by faculty and students.

M&A 799 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend.
Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&A 890 Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&A 990 Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

Nuclear Science and Engineering

NS&E 121 Fission, Fusion, and Radiation (also A&E 121 and ENGR 121)
Spring. 3 credits. S-U grades optional for students outside the College of Engineering. K. B. Cady.
This is a course in the Introduction to Engineering series. For description, see ENGR 121.

NS&E 484 Introduction to Controlled Fusion: Principles and Technology (also A&E 484, ECE 484, and M&A 459)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Not offered 2003-2004. D. A. Hammer.
Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include fuels and controls required for fusion power, and basic fusion-reactor concepts; fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or internal confinement fusion-reactor designs.

NS&E 509 Nuclear Physics for Applications
Fall. 3 credits. Prerequisites: sophomore physics and math or permission of instructor; some upper-division physics is desirable. Primarily for graduate students,

especially those with a major or minor in Nuclear Science and Engineering; also open to qualified undergraduates. V. O. Kostroun.
A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields. Reactivity, nuclear reactions, and interaction of radiation with matter. At the level of Radiochemistry and Nuclear Methods of Analysis by Ehrmann and Vance and Nuclear and Radiochemistry by Friedlander, et al.

NS&E 545 Energy Seminar (also ECE 587 and M&A 545)
Fall, spring. 1 credit. May be taken for credit both semesters. E. Fisher.
For description, see ECE 587.

NS&E 590 Independent Study
Fall, spring. 1-4 credits. Grade option letter or S-U. Staff.
Independent study or project under guidance of a faculty member.

NS&E 591 Project
Fall, spring. 1-6 credits. Staff.
Master of Engineering or other project under guidance of a faculty member.

NS&E 612 Nuclear Reactor Theory
Fall. 4 credits. Prerequisite: 1 year of advanced calculus and some nuclear physics. Offered on demand. K. B. Cady.
Physical theory of fission reactors; fission and neutron interactions with matter; theory of neutron diffusion; slowing down and thermalization; calculations of criticality and neutron-flux distribution in nuclear reactors; and reactor kinetics. At the level of Nuclear Reactor Theory by Lammers.

NS&E 633 Nuclear Reactor Engineering (also A&E 633)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.
The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

Operations Research and Industrial Engineering

ORIE 310 Industrial Systems Analysis
Spring. 4 credits. Prerequisite or corequisite: ENGRD 270 or permission of instructor. J. Callister.
Design of production facilities, including engineering economy, materials handling, process design, and facility layout. Covers operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control.

ORIE 320 Optimization I
Fall. 4 credits. Prerequisites: MATH 221 or 294. J. Renegar.
Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and
production planning. Introduction to interior-point methods for linear programming.

OR&E 321 Optimization II
Spring. 4 credits. Prerequisite: OR&E 320 or equivalent. L. Trotter.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer programming, dynamic programming, and network optimization. Formulation and modeling are stressed as well as numerous applications.

OR&E 350 Financial and Managerial Accounting
Fall. 4 credits. J. Callister.
Course covers principles of accounting, financial reports, financial-transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

OR&E 360 Engineering Probability and Statistics II
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. G. Samorodnitsky.
This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypergeometric testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

OR&E 361 Introductory Engineering Stochastic Processes I
Spring. 4 credits. Prerequisite: OR&E 360 or equivalent. K. Athreya.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

OR&E 416 Design of Manufacturing Systems
Fall. 4 credits. Senior OR&E students only. Others by permission of instructor only. P. Jackson/J. Muckstadt.
This is a project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures.

OR&E 431 Discrete Models
Fall. 4 credits. Prerequisites: OR&E 320 and COM S 211 or permission of instructor. D. Shmoys.
Course covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

OR&E 432 Nonlinear Optimization
This course is an introduction to the practical and theoretical aspects of nonlinear optimization. Attention is given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Methods of numerical linear algebra are introduced as needed.

OR&E 434 Optimization Modeling
Emphasis is on modeling complicated decision problems as linear programs, integer programs, or highly structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.

OR&E 435 Introduction to Game Theory
Fall. 3 credits. E. Friedman.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; and games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

OR&E 436 A Mathematical Examination of Fair Representation
Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor. R. Bland.
This course covers the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. At first blush it appears that there is a straightforward approach that must lead to a fair, or fairest apportionment, for any fixed house size and known populations. However, indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to some other realms where indivisible resources are to be allocated among competing constituencies.

OR&E 451 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: OR&E 320 and OR&E 350.
Course topics include financial planning, including cash-flow analysis and inventory flow models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment selection and capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

OR&E 452 Entrepreneurship for Engineers (also MAE 461 and ENGRG 461)
Fall. 3 credits. Enrollment open to upper-class engineers, others by permission of instructor. J. Callister.

For description see MAE 461.

OR&E 462 Introductory Engineering Stochastic Processes II
Spring. 4 credits. Prerequisite: OR&E 361 or equivalent. Not offered 2003–2004.
Course topics include stationary processes, martingales, random walks, and gambler’s ruin problems, processes with independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

OR&E 464 Extreme Value Analysis with Applications to Finance and Data Communications
Spring. 3 credits. Prerequisites: open to undergraduate and M.Eng. students who have had a stochastic processes course at the level of OR&E 361 as well as a prior course in statistics. S. Resnick.
These will cover the basic models of extreme events used in hydrology, finance, insurance, environmental science (pollution controls), reliability, risk management. The basic models contain parameters that must be estimated, and graphical and analytic estimation methods are discussed. Extreme quantiles and very small exceedance probabilities need to be estimated, and usually the part of a distribution tail which is way beyond the range of the data needs to be considered. This leads to discussion of estimation needed for VAR (value-at-risk) calculations. The course material intersects the related field of heavy tailed modeling and the implications of heavy tails in insurance and data networks.

OR&E 467 Credit Risk: Modeling, Valuation, and Management
Spring. 4 credits. Prerequisite: OR&E 361. G. Kiescke.
Credit risk refers to losses due to changes in the credit quality of a counter party in a financial contract. The course is an introduction to the modeling and valuation of credit risks. Emphasis will be on credit derivative instruments used for hedging credit risks, including credit swaps, spread options, and collateralized debt obligations.

OR&E 468 Financial Engineering with Stochastic Calculus I
Fall. 4 credits. Prerequisite: knowledge of probability at the level of OR&E 360. K. Giesecke.
This course is an introduction to continuous-time models of financial engineering and the mathematical tools required to use them, starting with the Black-Scholes model. Driven by the problem of derivative security pricing and hedging in this model, the course develops a practical knowledge of stochastic calculus from an elementary standpoint, covering topics including Brownian motion, martingales, the Ito formula, the Feynman-Kac formula, and Girsanov transformations.

OR&E 469 Financial Engineering with Stochastic Calculus II
Building on the foundation established in OR&E 468/568, this course will cover the basic models of finance and option arbitrage theories of complete markets, including models for equities, foreign
exchange, and fixed-income securities, in relation to the main problems of financial engineering, pricing and hedging of derivative securities, portfolio optimization, and risk management. Other topics include model calibration and incomplete markets.

**OR&IE 473 Operations Research Tools for Finance and Engineering.**
Spring. 3 credits. Prerequisites: engineering math through MATH 294 and OR&IE 270 and 360. D. Ruppert.
This course is an introduction to the applications of OR techniques, e.g., probability, statistics, simulation, optimization, to finance and financial engineering. No previous knowledge of finance is required. The course first reviews probability and statistics and then surveys assets returns. ARIMA time series models, portfolio selection, regression, CAPM, option pricing, GARCH models, fixed-income securities, resampling techniques, and behavioral finance. The use of MATLAB, MINITAB, and SAS for computation is also covered.

**OR&IE 474 Statistical Data Mining**
Fall. 3 credits. Prerequisites: OR&IE 360 and MATH 294 or equivalent, or permission of instructor.
This course examines the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments are done using one or more statistical computing packages.

**OR&IE 476 Applied Linear Statistical Models**
Spring. 2 credits. Prerequisite: ENGRD 270.
Course topics include multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

**OR&IE 480 Information Technology**
Fall. 4 credits. Prereq: OR&IE 350 or permission of instructor.
This is a project course that encompasses various aspects of information technology related to operations research and industrial engineering. Topics include the design of databases and information systems, the World Wide Web, the economics and industrial organization of IT goods and services, electronic markets, and agent based interactions.

**OR&IE 481 Delivering OR Solutions with Information Technology**
Spring. 2 credits. Prerequisites: OR&IE 480. Enrollment limited. M. Eisner.
Study of ways information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques in spreadsheet software, and web-based techniques. Several actual applications are investigated. Labs introduce Visual Basic for Applications (VBA) for decision support.

**OR&IE 483 Applications of Operations Research and Game Theory to Information Technology**
Spring. 3 credits. Prerequisites: OR&IE 321, OR&IE 361 or permission of Instructor. Not offered 2003-2004.
This course covers a variety of operations research and game theoretic problems arising in information technology. Examples include web searching, network traffic and congestion control, online auctions, and trust and reputations in electronic interactions.

**OR&IE 490 Teaching in OR&IE**
Fall, spring. Varying credit. Prerequisite: permission of instructor.
This course involves working as a TA in an OR&IE course. The course instructor assigns credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

**OR&IE 499 OR&IE Project**
Fall, spring. Varying credit. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the associate director.

**OR&IE 512 Applied Systems Engineering I (also CEE 505, COM S 504, ECE 512, M&E 581)**
Fall. 3 credits. Prerequisite: permission of instructor. R. Roundy.
For description, SYSEN 510.

**OR&IE 513 Applied Systems Engineering II (also CEE 505, COM S 505, ECE 513, M&E 582)**
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M&E 592, or OR&IE 512).
P. Jackson.
For description, see SYSEN 520.

**OR&IE 515 Design of Manufacturing Systems**
Fall. 4 credits. Prerequisite: permission of instructor. Limited to graduate students in Engineering and the Business School.
For description, see OR&IE 416.

**OR&IE 516 Case Studies**
Fall. 1 credit. Limited to M.Eng. students in OR&IE. E. Eisner.
Students are presented with an unstructured problem that resembles a real-world situation. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

**OR&IE 518 Supply Chain Management**
Spring. 3 credits. Prerequisites: one of the following: OR&IE 310, OR&IE 416, OR&IE 525, or OR&IE 562. J. Muckstadt, H. Topaloglu.
A supply chain is the scope of activities that convert raw materials (e.g., wheat) to finished products delivered to the end consumer (e.g., a box of cereal at the local P&G), usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, system dynamics, control, design, re-engineering. Covers the relationship between the supply chain and the company's strategic position relative to its clients and its competitors. Discusses dimensions of intercorporate relationships with partners, including decision-making, incentives, and risk.

**OR&IE 520 Operations Research I: Optimization I**
For description, see OR&IE 320.

**OR&IE 521 Optimization II**
For description, see OR&IE 321.

**OR&IE 522 Operations Research I: Topics in Linear Optimization**
Fall. 1 credit. Prereq or coreq: OR&IE 520. Students who have already taken OR&IE 521 should not enroll. Limited to M.Eng. students in OR&IE.
An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

**OR&IE 523 Operations Research II: Introduction to Stochastic Processes I**
For description, see OR&IE 361.

**OR&IE 524 Design of Manufacturing Systems II**
Spring. 4 credits. Prerequisites: OR&IE 562, OR&IE 416; or by permission of instructor. Not offered 2003-2004.
This project course focuses on the design and analysis of a globa corporation's operations. Working in teams, students examine issues pertaining to a prototype company on the following topics: information system design, marketing, strategic location of facilities, customer based manufacturing, new capacity, planning logistics, production planning, scheduling, inventory control, and financial analysis. Meetings between project teams and faculty are substituted for some lectures or laboratories. Analytical methods appropriate for conducting analysis are discussed in lectures.

**OR&IE 525 Production Planning and Scheduling Theory and Practice**
Spring. 4 credits. Coreq: OR&IE 320, OR&IE 360. A. Sapra.
Topics covered include production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus is on setup time as a determinant of plans and schedules.

**OR&IE 528-529 Selected Topics in Applied Operations Research**
Fall, spring. Varying credit. Prerequisite: permission of instructor.
Current topics dealing with applications of operations research.

**OR&IE 551 Economic Analysis of Engineering Systems**
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 250.
Lectures concurrent with OR&IE 451. For description see OR&IE 451.

**OR&IE 560 Engineering Probability and Statistics II**
For description, see OR&IE 360.

**OR&IE 561 Queuing Systems: Theory and Applications**
Fall. 3 credits. Prerequisite: OR&IE 361 or permission of Instructor. Not offered 2003-2004.
Course covers: basic queuing models; delay and loss systems; finite source, finite capacity, balking, reneging; systems in series and in parallel; FCFS versus LCFS; busy period problems; output, design and control problems; priority systems; queueing networks; the
product formula; time sharing; server vacations; and applications to equipment maintenance, computer operations and flexible manufacturing systems.]

**OR&IE 562 Inventory Management**

Fall. 3 credits. Prerequisite: OR&IE 321, 361, or permission of instructor. A. Sapra. The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

**OR&IE 563 Applied Time-Series Analysis**

Fall. 3 credits. Prerequisites: OR&IE 361 and ENGRD 270 or permission of instructor.

The first part of this course treats regression methods to model seasonal and nonseasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

**OR&IE 564 Introductory Engineering Stochastic Processes II**

Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462.

For description, see OR&IE 462.

**OR&IE 565 Applied Financial Engineering**

Spring. 4 credits. Limited to M.Eng. students. P. Protter.

This course has two components: a sequence of lectures and a project. The course is co-listed with the Johnson School. The lectures are given by the faculty for the course and by invited speakers from the financial industry. The project satisfies the M.Eng. project requirement.

**OR&IE 566 Extreme Value Analysis with Applications to Finance and Data Communications**

Spring. 3 credits. S. Resnick.

For description, see OR&IE 464.

**OR&IE 567 Credit Risk: Modeling, Valuation, and Management**

Spring. 4 credits. Prerequisite: OR&IE 361. K. Giesecke.

For description, see OR&IE 467.

**OR&IE 569 Financial Engineering with Stochastic Calculus II**

For description, see OR&IE 469.

**OR&IE 575 Experimental Design**

Course covers sampling, blocking, sample size determination, factorial designs, 2p full and fractional factorials, response surfaces, Latin squares, split plots, and Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

**OR&IE 576 Regression**

Spring; weeks 8-14 (alternates with 575). 2 credits. Prerequisite: OR&IE 476. J. Booth.

Course covers nonlinear regression, advanced diagnostics for model checking, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, and regression with correlated errors. Computing in MINITAB or SAS.

**OR&IE 577 Quality Control**

Fall. 3 credits. Prerequisite: ENGRD 270. B. Turnbull.

Course covers concepts and methods for process and acceptance control; control charts for variables and attributes; process capability analysis; acceptance sampling; continuous sampling plans, life tests; and use of experimental design and Taguchi methods for off-line control.

**OR&IE 580 Simulation Modeling and Analysis**

Fall. 4 credits. Prerequisite: OR&IE 360 (may be taken concurrently) and computing experience, or permission of instructor. S. S. Pamboris.

**OR&IE 597 Systems Engineering Project**

Fall. R grade only; spring, 8 credits. For M.Eng. students.

For M. Eng. Students enrolled in the Systems Engineering Option. A substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. (The following projects are pre-approved: FSAE, HEV, Robocup, Brain.) A formal report is required.

**OR&IE 598 Master of Engineering Manufacturing Project**

Fall. R grade only; spring, 5 credits. For M.Eng. students.

Project course for M.Eng. students enrolled in the Manufacturing Option coordinated by the Center for Manufacturing Enterprise.

**OR&IE 599 Project**

Fall. R grade only; spring, 5 credits. For M.Eng. students.

Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

**OR&IE 625 Scheduling Theory**

Spring. 3 credits. D. Shmoys.

Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial-time optimization and approximation algorithms and on related complexity issues.

**OR&IE 626 Advanced Production and Inventory Planning**

Fall, spring. 4 credits. J. Muckstadt; fall, H. Topaloglu, spring.

Introduction to a variety of production and inventory control planning problems, the development of mathematical models corresponding to these problems, and a study of approaches for finding solutions.

**OR&IE 630 Mathematical Programming I**

Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra. R. Bland.

A rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma, and exploiting special structure in the simplex method and computational implementation.

**OR&IE 631 Mathematical Programming II**

Spring. 4 credits. Prerequisite: OR&IE 630. L. Trotter.

A continuation of OR&IE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

**OR&IE 632 Nonlinear Programming**

Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 2003–2004.

Necessary and sufficient conditions for unconstrained and constrained optimization. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).

**OR&IE 633 Graph Theory and Network Flows**

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2003–2004.

Topics covered include directed and undirected graphs, bipartite graphs, hamilton cycles and Euler tours, connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.

**OR&IE 634 Combinatorial Optimization**

Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

**OR&IE 635 Interior-Point Methods for Mathematical Programming**

Fall. 3 credits. Prerequisites: MATH 411 and OR&IE 630, or permission of instructor. M. Todd.

Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discussion of the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms and various ways of combining them. Emphasis on recent mathematical theory and the most modern viewpoints.

**OR&IE 636 Integer Programming**

Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 2003–2004.

Topics covered include discrete optimization; linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.
[ORIE 637] **Semidefinite Programming**  
Course covers: linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality, computational methods, particularly interior-point algorithms.

[ORIE 639] **Polyhedral Convexity**  
A comprehensive introduction to the geometry and combinatorics of polyhedral convex sets. Also, linear inequalities, supporting and separating hyperplanes, polarity, convex hulls, facets, and vertices; face lattices; convex cones and polytopes; minkowski sums; gale transforms; simplicial and polyhedral subdivision; and applications to linear programming, combinatorial optimization, and computational geometry.

[ORIE 650] **Applied Stochastic Processes**  
Fall; 4 credits. Prerequisite: a 1-semester calculus-based probability course. U. Prabhu.  
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

[ORIE 651] **Probability**  
Spring; 4 credits. Prerequisite: real analysis at the level of MATH 413 and a previous 1-semester course in calculus-based probability. P. Protter.  
Course covers sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

[ORIE 662] **Advanced Stochastic Processes**  
Fall; 3 credits. Prerequisite: ORIE 651 or equivalent. Not offered 2003–2004.  
Course topics include Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Levy processes, regenerative phenomena, random walks, and stochastic integrals.

[ORIE 670] **Statistical Principles**  
Fall; 4 credits. Corequisite: ORIE 650 or equivalent. B. Turnbull.  
Topics include review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

[ORIE 671] **Intermediate Applied Statistics**  
Fall; 3 credits. Prerequisite: ORIE 670 or equivalent. J. Booth.  
Course topics include statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.

[ORIE 674] **Statistical Learning Theory for Data Mining**  
Spring; 3 credits. Prerequisites: Probability at the level of ORIE 651, and statistical at the level of ORIE 670. Not offered 2003–2004.  
This course will provide a thorough grounding in probabilistic and computational methods for statistical data mining. We intend to cover a subset of the following topics from supervised and unsupervised data mining: The framework of learning. Performance measures and model selection. Methodology, theoretical properties, and computing algorithms used in parametric and nonparametric methods for regression and classification. Frequentist and Bayesian methods.

[ORIE 677] **Sequential Methods in Statistics**  
The statistical theory of sequential design and analysis of experiments has many applications; including monitoring data from clinical trials in medical studies and quality control in manufacturing operations. Topics in this course include classical sequential hypothesis tests, Wald's SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and Bayesian and decision theoretic approaches.

[ORIE 678] **Bayesian Statistics and Data Analysis**  
Spring; 3 credits. Prerequisites: ORIE 670 and some knowledge of measure theoretic probability, e.g., co-registration in ORIE 650. D. Ruppert.  
Prior, posterior, Bayes estimators, Bayes factors, credible regions, hierarchical models, computational methods (especially MCMC), empirical Bayes methods, Bayesian robustness. The course will include data analysis and MCMC computation in WinBUGS and possibly other languages such as MATLAB.

[ORIE 680] **Simulation**  
Spring; 4 credits. Prerequisite: computing experience and ORIE 650 or equivalent, or permission of instructor. S. Henderson.  
Introduction to Monte Carlo and discrete-event simulation. Emphasis on underlying theory. Random variate generation, input and output analysis, variance reduction, selection of current research topics.

[ORIE 728-729] **Selected Topics in Applied Operations Research**  
Fall; spring. Credit TBA.  
Current research topics dealing with applications of operations research.

[ORIE 738-739] **Selected Topics in Mathematical Programming**  
Fall; spring. Credit TBA.  
Current research topics in mathematical programming.

[ORIE 768-769] **Selected Topics in Applied Probability**  
Fall; spring. Credit TBA.  
Topics are chosen from current literature and research areas of the staff.

[ORIE 777-779] **Selected Topics in Applied Statistics**  
Fall; spring. Credit TBA.  
Topics chosen from current literature and research of the staff.

[ORIE 790] **Special Investigations**  
Fall; spring. Credit TBA.  
For individuals doing thesis research for master's or doctoral degrees.

[ORIE 799] **Thesis Research**  
Fall; spring. Credit TBA.  
For individuals doing thesis research for master's or doctoral degrees.

[ORIE 891] **Operations Research Graduate Colloquium**  
Fall. Spring. 1 credit. B. Turnbull.  
Weekly 1–1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

[SYSN 510] **Applied Systems Engineering**  
(Also CEE 504, COM 504, ECE 512, M&AE 591, ORIE 512)  
Fall; spring. 3 credits. S-U grades only. Not offered 2003–2004.  
A weekly meeting for Master of Engineering students. Discussion with industry speakers and faculty members on the uses of engineering in the economic design, manufacturing, marketing, and distribution of goods and services.

[SYSN 710] **Selected Topics in Systems Engineering**  
Fall; Spring. Credit TBA.  
Current research topics dealing with applications of operations research.

[SYSN 711] **Fundamentals**  
Fall; Spring. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor. Staff.  
Fundamental ideas of systems engineering and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle. Students majoring in Systems Engineering enroll in SYSN 510. Students in Continuing Education enroll in SYSN 511. Students taking optional Systems Engineering enroll in M&AE 491, CEE 504, COM 504, ECE 512, or ORIE 512. Lectures are identical for all versions.

[SYSN 511] **Applied Systems Engineering**  
Fall; spring. Credit TBA.  
Current research topics dealing with applications of operations research.

[SYSN 712] **Advanced Topics**  
Fall; spring. Credit TBA.  
Current research topics dealing with applications of operations research.

[SYSN 713] **Graduate Research**  
Fall; spring. Credit TBA.  
Current research topics dealing with applications of operations research.

[SYSN 714] **Independent Study**  
Fall; spring. Credit TBA.  
Current research topics dealing with applications of operations research.

[SYSN 715] **Seminar**  
Fall; spring. Credit TBA.  
Current research topics dealing with applications of operations research.

[SYSN 716] **Colloquium**  
Fall; spring. Credit TBA.  
Current research topics dealing with applications of operations research.

[SYSN 891] **Graduate Colloquium**  
Fall; spring. Credit TBA.  
Current research topics dealing with applications of operations research.
Theoretical and Applied Mechanics

Basics in Engineering Mathematics and Mechanics

T&AM 202 Mechanics of Solids (also ENGRD 202)  
Fall, spring. 4 credits. Prerequisite: PHYS 112, coregistration in MATH 192 or permission of instructor. 
For description, see ENGRD 202.

T&AM 203 Dynamics (also ENGRD 203)  
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 293, or permission of instructor. 
For description, see ENGRD 203.

Engineering Mathematics

T&AM 190 Calculus for Engineers (also MATH 190)  
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms. 
For description, see MATH 190.

T&AM 191 Calculus for Engineers (also MATH 191)  
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry. 
For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)  
Spring, fall, or summer. 4 credits. Prerequisite: MATH/TA&AM 191. 
For description, see MATH 192.

T&AM 293 Engineering Mathematics (also MATH 293)  
Fall, spring. 4 credits. Prerequisite: MATH/TA&AM 192 plus a knowledge of computer programming equivalent to that taught in COM S 100. 
For description, see MATH 293.

T&AM 294 Engineering Mathematics (also MATH 294)  
Fall, spring. 4 credits. Prerequisite: MATH/TA&AM 293. 
For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I  
Fall, spring. 3 credits. Prerequisite: MATH/TA&AM 294 or equivalent. 
Course covers: initial value problems, boundary value problems, and eigenvalue problems in linear ordinary differential equations. Also covers: special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

T&AM 311/511 Advanced Engineering Analysis II  
Spring. 3 credits. Prerequisite: MATH/TA&AM 294 or equivalent T&AM 310. 
Mathematical modeling of physical and biological systems. Examples range from molecular diffusion, bacteria swimmers, chemotaxis, and physiological flows, to bird flight. The mathematics necessary to understand these phenomena is discussed in depth. They include probability theory, PDEs, stability analysis, complex variable analysis, and numerical analysis. Students from all fields are encouraged to take the course.

T&AM 610 Methods of Applied Mathematics I  
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates. (see T&AM 310-311) but open to exceptional undergraduates with permission of instructor. 
Emphasis is on applications. Course covers: linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

T&AM 611 Methods of Applied Mathematics II  
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent. 
Emphasis is on applications. Course covers: partial differential equations, transform techniques, tensor analysis, calculus of variations.

T&AM 612 Methods of Applied Mathematics III  
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. 
Course topics include: integral transforms, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations. Problems are drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

T&AM 613 Methods of Applied Mathematics IV  
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. 
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g. the WKB boundary layer and multi-scale methods) and symotptic expansion of integrals (method of steepest descent, stationary phase, and Laplace methods). Also covers regular and singular perturbation methods for PDE (e.g. method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, and Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

T&AM 614 Methods of Applied Math V  

T&AM 617 Advanced Mathematical Modeling  
Spring. 3 credits. Offered alternate years.

T&AM 718 Topics in Bifurcation Theory  
Spring. 3 credits. Offered every third year. 
Provides a basic, rigorous introduction to certain aspects of nonlinear analysis, with an emphasis on techniques based on differential calculus. Applications to nonlinear elasticity and nonlinear oscillations of mechanical systems (including Liapunov Center Theorem, Hopf Bifurcation, and Hamiltonian-Hopf bifurcation) will be presented throughout. The course is intended for students in the physical and mathematical sciences. The minimal prerequisites are linear algebra, advanced calculus, differential equations, and eigenvalue problems. Exposure to nonlinear problems of engineering science or mathematical physics and some background in basic functional analysis is helpful but not required.
Continuum Mechanics

T&AM 455 Introduction to Composite Materials (also CEE 475, M&E 455 and M&AE 555)
Spring. 4 credits.
Course topics include introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates, including computer software for design, and manufacturing methods and applications for composites. There is a group component: design and manufacturing paper required, and a group laboratory on laminated component fabrication.

T&AM 591 Master of Engineering Design Project I
Fall. 3-10 credits.

T&AM 592 Master of Engineering Design Project II
Spring. 3-10 credits.

T&AM 655 Composite Materials (also M&AE 655 and M&AE 655)
Spring. 4 credits.
Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homework through additional lectures. Additional material includes shear-lag models of stress transfer around arrays of fiber breaks, including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; and compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I
Fall. 4 credits.
Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theories of elastostatics; and boundary-value problems, e.g., plates, St. Venant's solutions.

T&AM 664 Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663 or equivalent.
Preparation for advanced courses in solid mechanics. Topics include singular solutions in linear elasticity, plane stress, plane strain, anti-plane shear, airy stress functions; linear viscoelasticity, cracks and dislocations; classical plasticity; thermoelasticity; and three-dimensional elasticity.

T&AM 666 Finite Element Analysis (also M&AE 660 and CEE 772)
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent.
For description, see M&AE 660.

T&AM 751 Continuum Mechanics and Thermodynamics
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.
Course topics include kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752 Nonlinear Elasticity
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Offered alternate years.
Review of governing equations. Topics include linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear string and rod theories; phase transformations and crystal defects.

T&AM 753 Fracture
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents.
Offered alternate years.
Course covers fundamentals of linear elastic fracture mechanics: K, small-scale yielding, solutions of elastic crack problems, energy concepts, J-integral. Also covers nonlinear, rate-independent, small-deformation, fracture mechanics: plastic fracture, J-integral, small-scale yielding, fields for stationary and growing cracks; failure mechanisms of polymers, ceramics, composites, and metals: void growth, load transfer between fibers, crazing, fracture testing, fatigue fracture, computation of stress intensity factors; and plate theory and fracture.

T&AM 757 Inelasticity
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.
Course covers plasticity: dislocation slip systems; early experimental observations; general principles; limit analysis; and solution of boundary-value problems, plastic waves, one- and three-dimensional. Also covers viscoelasticity: general principles, solution of boundary-value problems.

T&AM 759 Boundary Element Methods
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.
Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material, and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary contour methods, sensitivity analysis.

Dynamics and Space Mechanics

T&AM 570 Intermediate Dynamics
Fall. 3 credits.
Course topics include Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Lagrangian mechanics; Hamilton's principle; small vibrations and stability theory. Newtonian-Eulerian mechanics of rigid bodies; and gyroscopes.

T&AM 578 Nonlinear Dynamics and Chaos
Fall. 3 credits. Prerequisites: MATH/T&AM 295 or equivalent.
Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics: one-dimensional systems, bifurcations; phase plane; nonlinear oscillators, and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 671 Hamiltonian Dynamics
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years.
Course topics include review of Lagrangian mechanics, Kane's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory; and Melnikov's method.

T&AM 672 Celestial Mechanics (also ASTRO 570)
Spring. 3 credits. Offered alternate years.
Course topics include description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems; oscillating orbital elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; and secular perturbations, resonances, mechanics of planetary rings.

T&AM 673 Mechanics of the Solar System (also ASTRO 571)
Spring. 3 credits. Prerequisite: an advanced undergraduate course in dynamics. Offered alternate years; offered 2003-2004.
Course topics include gravitational potentials, planetary gravity fields; free and forced rotations; Chandler wobble, polar wander, and damping of nutation; equilibrium tidal theory, tidal heating; orbital evolution of natural satellites, resonances, spin-orbit coupling, Cassini states; long-term variations in planetary orbits; dust dynamics; dynamics of ring systems; and physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.

T&AM 675 Nonlinear Vibrations
Spring. 3 credits. Prerequisite: T&AM 578 or equivalent. Offered alternate years.
Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology. Additional topics may include Hopf bifurcation, Invariant manifolds, coupled oscillators, vibrations in continuous media, normal forms, and exploitation of symmetry.

T&AM 678 Complex Systems
Spring. 3 credits. Prerequisites: T&AM 578 or equivalent. Offered alternate years; Not offered 2003-2004.

T&AM 776 Applied Dynamical Systems (also MATH 717)
For description, see MATH 717.
Special Courses, Projects, and Thesis Research

**T&AM 491-492 Project in Engineering Science**

Fall, 491, spring, 492. 1-4 credits, as arranged. Projects for undergraduates under the guidance of a faculty member.

**T&AM 796-800 Topics in Theoretical and Applied Mechanics**

Fall, spring, 1–3 credits, as arranged. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

**T&AM 909 Master's Degree Research in Theoretical and Applied Mechanics**

Fall, spring, 1–15 credits, as arranged. S-U grades optional. Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

**T&AM 990 Doctoral Research in Theoretical and Applied Mechanics**

Fall, spring, 1–15 credits, as arranged. S-U grades optional. Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

**FACULTY ROSTER**

Abel, John F., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering

Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Biological and Environmental Engineering

Allbright, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering

Allmendinger, Richard, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences

Anesians, Daniel J., Ph.D., Cornell U. Prof., Biological and Environmental Engineering

Anton, A. Brad, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering

Apsel, Alyssa B., Ph.D., Johns Hopkins U. Clare Boothe Luce Assistant Professor of Electrical and Computer Engineering

Aquino, Wilkins, Ph.D., U. of Illinois. Assoc. Prof., Electrical and Computer Engineering

Arch, Lynden A., Ph.D., Stanford U. Assoc. Prof., Chemical and Biomolecular Engineering

Armstrong, William, Ph.D., U. of Sussex. Prof., Computer Science

Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering

Atreya, Krishna B., Ph.D., Stanford U. Prof., Operations Research and Industrial Engineering

Aviv, Thomas, Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering

Bae, Minhyung, Ph.D., Universitat Stuttgart. Asst. Prof., Biological and Environmental Engineering

Baker, Graeme, Ph.D., U. of Birmingham. Prof., Computer Science

Baker, Shefford P., Ph.D., Stanford U. Asst. Prof., Materials Science and Engineering

Bala, Kavita, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Mechanical Science

Ballantyne, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical and Computer Engineering

Baranzangi, Muawia, Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences

Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering

Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Biological and Environmental Engineering

Berger, Toby, Ph.D., Harvard U. Irwin and Joan Jacobs Professor of Engineering, Electrical and Computer Engineering

Berndt, Antje, Ph.D., Stanford U. Asst. Prof., Operations Research and Industrial Engineering

Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Earth and Atmospheric Sciences

Birman, Kenneth P., Ph.D., U. of California at Berkeley. Prof., Computer Science

Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering

Blaikley, John M., Ph.D., Glasgow U. (Scotland). Herbert Fisk Johnson Professor of Engineering, Materials Science and Engineering

Bland, Robert G., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering

Bohanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering

Bonassar, Lawrence J., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering

Boozer, John F., Ph.D., Cornell U. Prof., Emeritus, Mechanical and Aerospace Engineering

Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences

Brutsaert, Willfried H., Ph.D., U. of California at Davis. William L. Lewis Professor of Engineering, Civil and Environmental Engineering

Buhman, Robert A., Ph.D., Cornell U. John Edson Sweet Professor of Engineering, Applied and Engineering Physics

Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Astronomy and Theoretical and Applied Mechanics

Burtscher, Martin, Ph.D., U. of Colorado at Boulder. Asst. Prof., Electrical and Computer Engineering

Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics; Nuclear Science and Engineering

Calijon, John R., Ph.D., Cornell U. Kinzelberg Director of Entrepreneurship in Engineering

Campbell, Mark E., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Mechanical and Aerospace Engineering

Carriquiry, Claire T., Ph.D., U. of Massachusetts at Amherst. Assoc. Prof., Computer Science

Cardoza, Richard, Ph.D., Carnegie Mellon U. Asst. Prof., Computer Science

Castello-Chavez, Carlos, Ph.D., U. of Wisconsin at Madison. Prof., Theoretical and Applied Mechanics, Biometry, Applied Mathematics, Ecology and Evolutionary Biology, Statistics, Epidemiology, Latin American Studies

Cathles, Lawrence M., Ph.D., Princeton U. Prof., Earth and Atmospheric Sciences

Caughley, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering

Chiang, Hsiao-Dong, Ph.D., U. of California at Berkeley. Prof., Electrical and Computer Engineering

Clare Boothe Luce Assistant Professor of Engineering, Electrical and Computer Engineering

Collins, Lance R., Ph.D., U. of Pennsylvania. Prof., Mechanical and Aerospace Engineering

Conley, Stephen J., Ph.D., SUNY. Prof., Earth and Atmospheric Sciences

Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science

Conway, Harry D., Ph.D., London U. Prof., Emeritus, Theoretical and Applied Mechanics

Cook, Jerry H., Ph.D., North Carolina State U. Asst. Prof., Earth and Atmospheric Sciences

Cook, John R., Ph.D., North Carolina State U. Prof., Biological and Environmental Engineering

Cool, T. R., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics

Datta, Ashim K., Ph.D., U. of Florida. Prof., Biological and Environmental Engineering

DeAngelo, David F., Ph.D., Harvard U. Assoc. Prof., Electrical and Computer Engineering

Delisa, Matthew, Ph.D., U. of Maryland. Asst. Prof., Chemical and Biomolecular Engineering

Demers, Alan, Ph.D., Princeton U. Prof., Computer Science

Derrett, Nicholas, Ph.D., U. of Pennsylvania. Assoc. Prof., Earth and Atmospheric Sciences

Dieckmann, Rudiger, Ph.D., U. Hannover. Prof., Materials Science and Engineering

Duncan, T. Michael, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering

Eastman, Lester F., Ph.D., Cornell U. Given Foundation Professor of Engineering, Electrical and Computer Engineering

Elber, Robert A., Ph.D., Hebrew U. (Israel). Prof., Computer Science

Engstrom, James R., Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering

Escobedo, Fernando A., Ph.D., U. of Wisconsin at Madison. Asst. Prof., Chemical and Biomolecular Engineering

Fan, K-Y Daisy, Ph.D., Cornell U. Asst. Prof., Computer Science
Warhaft, Zellman, Ph.D., U. of London (England). Prof., Mechanical and Aerospace Engineering
Weber-Shirk, Monroe, Ph.D., Cornell U. Lecturer, Civil and Environmental Engineering
White, William M., Ph.D., U. of Rhode Island. Prof., Earth and Atmospheric Sciences
Wickam, Lisa, Ph.D., Cornell U. Instructor, Applied and Engineering Physics
Wicker, Stephen B., Ph.D., U. of So. California. Prof., Electrical and Computer Engineering
Wiesner, Ulrich B., Ph.D., U. of Mainz (Germany). Assoc. Prof., Materials Science and Engineering
Wilks, Daniel S., Ph.D., Oregon State U. Prof., Earth and Atmospheric Sciences
Wise, Frank W., Ph.D., Cornell U. Prof., Applied and Engineering Physics
Xu, Chris, Ph.D., Cornell U. Asst. Prof., Applied and Engineering Physics
Yona, Golan, Ph.D., Hebrew U. Asst. Prof., Computer Science
Zabaras, Nicholas, Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Zabih, Ramin, Ph.D., Stanford U. Assoc. Prof., Computer Science
Zehnder, Alan, Ph.D., California Inst. of Technology. Assoc. Prof., Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering
The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee and usually has the primary responsibility for directing the student’s thesis or dissertation research.

REQUIREMENTS FOR ADMISSION
To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test, or other specific examinations for those fields that require these examinations.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be:

1) a minimum Test of English as a Foreign Language (TOEFL) score of 213 (higher for some fields);
2) evidence of two or more years' study in, or a degree from, a college or university in a country where both the language of instruction and the native language are English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, NJ 08541, U.S.A.

Applications for fall admission to the Graduate School should be received by the deadline of the field to which one applies. The earliest deadline is December 1. Many fields, however, have different deadlines. Applicants should consult the Graduate School’s application booklet for the specific closing date for each field.

Inquiries regarding admission should be addressed to the specific graduate field office or to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, N.Y. 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for fellowships and teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the Graduate School Catalog. Both may be viewed on the web at <www.gradschool.cornell.edu/>. An interactive application is available through this site, and application forms may be downloaded and printed directly from the web. The application may be received through the mail by contacting either the individual graduate field office or the Graduate School, Caldwell Hall, Cornell University, Ithaca, NY 14853-2602.

Note: Programs leading to the degrees of Doctor of Law (J.D.), Master of Laws (LL.M.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Weill Medical College of Cornell University (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management, respectively.
ADMISSION
David W. Butler, dean
Leo Renaghan, associate dean for academic affairs
Margaret H. Ferguson, associate dean for business administration
Steven A. Carvell, assistant dean
Gary M. Thompson, executive director, Center for Hospitality Research
Sheryl E. Kimes, Richard J. and Monene Philippus Miller III, director of alumni affairs
Millie Reed, director of career services
Timothy J. Durnford, director of information technologies
Cheryl S. Farrell, director of student services
Brad Walp, director of enrollment management
Cheryl S. Farrell, director of student services
Neoma Mullens, director of multicultural programs
Walter C. Williams, director of alumni affairs and development

FACILITIES
Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school’s academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration’s Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 23,000 books, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library’s collections. Among the library’s special features are numerous computerized information resources, including NEXIS, Dow Jones, ABI/INFORM, and The International Hospitality and Tourism Database, an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library’s HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the School Hotel library extends quality service to every student.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university’s faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the local community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 300 students each semester with preference given to students in the hotel school.

UNDERGRADUATE CURRICULUM
The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in operations, management, and organizational behavior, human resources management, finance/accounting, real estate development, food and beverage management, marketing, tourism, strategy, facilities management planning and design, communications, information systems, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school’s student handbook or course supplement (available in room 178 Statler Hall).

Requirements for Graduation
Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;
2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits, as set forth in the table on the following page;
3) qualification in one language other than English. This requirement may be met by any one of the following: (1) three years of high school study of one foreign language; (2) score of 560 on Cornell Placement Test; (3) pass language 121 and 122 (eight credits) or the equivalent, and attain a minimum grade of at least C or “Satisfactory” in each (C or above for transfer credit from other institutions); or (4) pass 123 or the equivalent;
4) completion of two units of practice credit;
5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 72 of the 120 credits needed for graduation, the hotel electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 18 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for “00”-level courses, such as EDUC 005.

Transfer Credit Policy
Transfer students are required to complete all degree requirements with at least 75 credits at Cornell University, of which a minimum of 60 must be in courses offered by the School of Hotel Administration, and nine must be in distributive electives. The remaining 18 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for "00"-level courses, such as EDUC 005.

Transfer Credit Policy
Transfer students are required to complete all degree requirements with at least 75 credits at Cornell University, of which a minimum of 60 must be in courses offered by the School of Hotel Administration, and nine must be in distributive electives. The remaining 18 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for "00"-level courses, such as EDUC 005.
Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Hotel elective courses may not transfer.

Distributive electives ensure that hotel students are exposed to other courses at Cornell, and, thus, only nine credits may transfer. The remaining nine must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three credits are taken (at Cornell or transferred from elsewhere) in each area. A maximum of six credits, but no more than four per semester, of distributive electives may be taken on an S-U basis. For more information on the distribution requirement, see the handout available in the student services office, room 178 Statler Hall.

Eighteen credits in free electives may transfer.

**Concentration**

While completing the hotel elective courses, undergraduates in the school may select a concentration.

Before selecting a field of concentration, students should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

**Foreign Languages**

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section, and also under the section Advanced Placement for Freshmen.

**Independent Study**

Students may conduct independent study projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H ADM 499 or 699 for more details.

**Practice-Credit Requirement**

As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the school's career services office, room 255 Statler Hall.

**Management-Intern Program**

Hotel school juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management-intern program. Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Spotters include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493 and 494 for more details. More information about the management-intern program also is available in the career services office, 255 Statler Hall.

**Study Abroad**

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study. Programs providing an opportunity to study in a foreign country and develop an awareness of the international components of the hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, England, Australia, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad office (in Uris Hall).

Students should discuss their plans with the school's director of student services so that all application and credit-evaluation procedures are followed.

**Part-Time Study**

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 178 Statler Hall).

**Grading System**

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student be allowed to enroll on a part-time basis. A maximum of four credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 178 Statler Hall).

**Course Requirements for Graduation**

Note: The curriculum is under review and subject to change. For the most up-to-date information on the curriculum and graduation requirements, check with the Student Services Office, Room 178 Statler Hall.

Course Schedule Information

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

Organizational Management, Communication, and Law

Management and Organizational Behavior

H ADM 110 Distinguished Lectures in Hospitality Management

Fall. 1 credit. Elective. Dean David Butler. The Dean’s Distinguished Lecture Series is a long-standing hotel school tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean’s Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

H ADM 115 Organizational Behavior and Interpersonal Skills

Fall, spring. 3 credits. Required. C. Lundberg, T. Simons, K. Walsh. Focuses on managing people in the workplace. Students develop theoretical lenses for understanding people and organizations, and practical tools for accomplishing personal and organizational goals. Topics include: individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Students learn through the case method, self-assessments, experiential exercises, readings, discussions, papers, and group activities.

H ADM 410 Hospitality Management Seminar

Fall. 1 credit. Co-registration in H ADM 110 required. Limited to 30 seniors and graduate students. Elective. Dean David Butler.

Complements H ADM 110 by giving students the opportunity to interact with guest speakers, and to participate in roundtable discussions on issues relating to the hospitality industry. The dialogue can give students a better understanding of industry trends, challenges, and opportunities.

H ADM 411 Negotiations in the Hospitality Industry

Spring. 3 credits. Prerequisite: H ADM 115 or equivalent. Limited to 30 undergraduate students. Elective. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play exercises, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

H ADM 412 Managing Organizational Change

Spring. 3 credits. Prerequisite: H ADM 211 or equivalent elective. C. Lundberg.

Organizations are continually being influenced by internal and environment factors that represent the need and opportunity to change. Organizational and member success is often dependent on changing in a timely and appropriate manner. In general, organizations have shown an astonishing inability to change themselves, even when change is clearly required. Consequently, organizations need more people who know about change and how to accomplish it. This course covers ways to facilitate and manage change in organizations. Topics include: change processes, organizational diagnosis, action planning, and consultancy.

H ADM 414 Quality Planning in the Hospitality Industry

Spring. 3 credits. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Limited to 25 seniors and graduate students. Elective. T. Hinck.

Covers the analysis of work processes and examines organizations from three perspectives: the external customer, the internal customer, and management. This course is designed to provide students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes. Students learn to use the tools of quality management including cost of quality, flowcharting, statistical process control, and collecting, organizing, and presenting data. A major component of the course is HOTTS, an interactive hotel simulation that is conducted as a group activity. This is a seminar course, requiring active participation in discussion of readings and case analysis.

H ADM 415 Managerial Leadership in the 21st Century

Spring. 1 credit. Elective. A $25.00 fee for the required notebook will be charged to student's bursar bill; notebook distributed on the first day of class. Friday, January 30 (1:00 P.M.-7:00 P.M.), Saturday, January 31 (9:00 A.M.-12:00 P.M.), Sunday, February 1 (9:00 A.M.-5:00 P.M.), 2004 in the Statler Auditorium. K. Blanchard.

Helps students become participant observers in their own lives through studying the field...
of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (their boss, staff, peers/associates, and customers). When quality relationships exist, organizations tend to be characterized by high levels of integrity, customer satisfaction, employee empowerment, and organizational effectiveness. The concepts learned will also help students create quality friendships and family relationships. A final exam is given in the last day of class. Attendance is mandatory for credit.

Due to the popularity of the class, priority is given in the following order: seniors/second-semester grads, juniors/first-semester grads, non-employee, extramural students, sophomores, freshmen, and Cornell employees. Space permitting, the class may be added up to the first day, but the absolute deadline for dropping the course is noon on Friday, January 23, 2004.

H ADM 513 Strategic Human Resources Management for the Hospitality Industry
Fall. 2 credits. Second seven weeks of the semester. Note: the deadline to drop a seven-week course is the midpoint of the course. Prerequisite: H ADM 211 or equivalent. T. Tracey.

Over the past several years, the HR function has taken on a broader role in helping organizations to create and sustain a competitive advantage. The primary focus of this course is to examine the ways in which HR policies, practices, and systems can enhance the competitive capabilities of hospitality organizations. This seminar-style course will be conducted using hospitality case studies and current business problems as a basis for learning. The course also will include the opportunity to conduct a live case study and on-premises HRM problems with a real hospitality firm.

H ADM 611 Negotiations in the Hospitality Industry
Spring. 3 credits. Prerequisite: H ADM 710 or equivalent. Limited to 30 graduate students. Elective. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play exercises, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

H ADM 614 Leadership and Small Group Processes
Fall. 3 credits. Limited to 30 hotel senior students. Elective. C. Lundberg.

Theoretical and practical applications of organizational behavior are explored through lectures, case studies, and exercises. Students participate in several experiential labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision-making, motivation, power, and change within the small-group context.

H ADM 710 Human Behavior in Organizations
Fall. 5 credits. Open to M.M.H. students only, except by written permission of the instructor in advance of pre-enrollment. M.M.H. requirement. T. Hinkin.

This course focuses on manager and member behavior in organizations. Ideas and models about persons, interpersonal relationships, small groups, and organizations provide the basis for understanding the dynamics of effective organizational behavior. Learning occurs primarily through readings, case discussions, and self-reflective teamwork.

Human Resources Management
H ADM 210 The Management of Human Resources
Fall, summer. 3 credits. Limited to 40 non-hotel students. Open to freshmen. Elective. M. Tews.

A practically oriented examination of the role of human resources management (HRM), starting with an introduction to the personnel function and an analysis of the social, legal, international, and competitive factors influencing HRM. The course examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. The course assumes a managerial perspective and emphasizes class discussion and case analysis.

H ADM 211 Human Resources Management
Fall, spring. 3 credits. Prerequisite: H ADM 115. Limited to 60 hotel students per lecture; not open to freshmen or graduate students. Required. B. Tracey.

Provides students with a broad yet in-depth overview of the policies, practices, and procedures that can be used to attract, select, develop, and retain quality employees. A number of factors will be considered that influence HRM policies and practices and provide opportunities to apply course topics to substantiate situations that students will face as future hospitality professionals. Lectures, discussions, cases, and videos.

H ADM 313 Training in the Hospitality Industry
Fall. 2 credits. First seven weeks of the semester. Note: the deadline to drop a seven-week course is the midpoint of the course. Prerequisite: H ADM 211. Limited to 24 students. Elective. B. Tracey.

How to design, implement, and evaluate both formal and informal training programs. Factors beyond design and implementation that may influence training effectiveness will be examined. A variety of instructional techniques will be used throughout the course, including experiential activities that will enliven the learning process. The course also will include the opportunity to conduct a live case study of one or more training problems with a real hospitality firm.

H ADM 513 Strategic Human Resources Management for the Hospitality Industry
Fall. 2 credits. Second seven weeks of the semester. Note: the deadline to drop a seven-week course is the midpoint of the course. Prerequisite: H ADM 211 or equivalent. Elective. B. Tracey.

The primary focus is to examine the ways in which HRM policies, practices, and systems can enhance the competitive capabilities of hospitality organizations. This seminar-style course will be conducted using hospitality case studies and current business problems as a basis for learning. Includes the opportunity to conduct a live case study of one or more strategic HRM problems with a real hospitality firm.

H ADM 711 Human Resource Management
Spring. 3 credits. Open to M.M.H. students only, except by written permission of the instructor in advance of pre-enrollment. M.M.H. requirement. M. Sturman.

This course addresses human resource business strategies that enable companies to attract, develop, and retain high-quality employees. Attention is given to topics such as selection, compensation, performance appraisal, and career management, and the focus is on considering the return on the human resource investment in each of the areas covered. Students learn human resource issues and strategies through a variety of methodologies and have the opportunity to apply their knowledge and skills in a semester-long group project.

Managerial Communication
H ADM 164 Leadership through Managerial Communication
Summer. 3 credits. Limited to students enrolled in the three-week Summer Honors Program. Students are enrolled in the course by the School of Continuing Education and Summer Sessions upon acceptance to the Summer Honors Program. Elective. R. Steinauer.

The role and importance of effective communication in managerial work, especially in the hospitality industry, are considered. Subjects include managerial communication, business writing, techniques in persuasion, and identification of cultural issues that may make communication difficult. Students develop abilities in analytical thinking and clear expression. This course focuses on the process of planning, preparing, and executing professional communications in the hospitality industry. Students will write a series of business documents and give several oral presentations. In preparation for their oral presentations and formal business documents, the students attend weekly microcomputer lab sessions that teach Microsoft PowerPoint, Microsoft Word, and basic web page design.

H ADM 165 Managerial Communication I
Fall, spring. 3 credits. Note: students required to take this course generally may not delay it. If extenuating circumstances exist, the student must petition to drop the course by the end of the first week of classes. This course must be taken within the first two semesters in the school, including any semesters in the Internal Transfer Division (ITD). Add/drop and section exchange must be approved by the chairperson. Prior to the 2013-2014 semester, limited to 16 students per lecture. Required. N. Dahl, D. Jameson, D. Lennox, C. Snow, R. Steinacher.

An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.
This course focuses on communicating challenging messages in business contexts. Writing assignments emphasize delivering persuasive messages with tone and style, and developing different types of documents in professional contexts. Different kinds of assignments are offered from semester to semester. Assignments often include business letters and memos written for various contexts, procedures and policy statements, promotional materials, negative messages, and analytical reports requiring research.

**H ADM 364 Advanced Business Writing**  
Fall, spring. 3 credits. Priority given to hotel students. Prerequisite: junior, senior, or graduate standing or written permission of the instructor. Hotel undergraduates must have completed the H ADM 165 requirement or had it waived. Non-hotel undergraduates must have completed their college's writing requirement. Limited to 20 students per lecture. Elective. L. Arliss.  

This course focuses on communicating challenging messages in business contexts. Writing assignments emphasize delivering persuasive messages with tone and style, and developing different types of documents in professional contexts. Different kinds of assignments are offered from semester to semester. Assignments often include business letters and memos written for various contexts, procedures and policy statements, promotional materials, negative messages, and analytical reports requiring research.

**H ADM 365 Managerial Communication II**  
Fall, spring. 3 credits. Priority given to hotel students. Prerequisites: Hotel undergraduates must have completed H ADM 165 and H ADM 115. Limited to 22 juniors and seniors per lecture. Required. J. Brownell, N. Dahl.  

A broad study of communication in a management context. This course emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of persuasive communication that allow managers to influence professional audiences. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

**H ADM 661 Organizational Communication for Managers**  
Spring. 3 credits. Priority given to hotel students. Elective. D. Jameson.  

Organizational communication focusing on the complex interactions that occur when people communicate in hospitality and other work organizations. Using business cases and examples, students explore the political, sociological, ethical, and psychological dimensions of business communication; analyze communication problems and barriers; and design organizational strategies to communicate effectively. Elective. D. Sherwyn.  

Anti-discrimination statutes and union management relations are two of the most pervasive legal issues affecting the hospitality industry. Managers must take these issues into account whenever they make a personnel decision. This course provides students with an understanding of the discrimination law, a framework for complying with law, a method using the law to maintain positive employment relations, and an understanding of how to negotiate and administer a union contract.

**H ADM 487 Real Estate Law**  
Fall, spring. 3 credits. From completion of H ADM 387 preferred but not mandatory. Limited to juniors, seniors, and graduate students. Elective. A. Klausner.  

Provides students with an understanding of the legal issues surrounding the ownership, transfer, and development of real estate. Students learn to recognize and evaluate legal issues in order to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

**H ADM 489 The Law of the Internet and e-Commerce**  
Fall, spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. A. Klausner.  

The Internet has changed how business is done in the hospitality industry. The change has raised numerous issues that courts and legislatures are trying to decide on or enact. The purpose of this course is to allow students to identify and understand the rapid developments of the law of e-commerce. The course topics are: consumer protection; intellectual property (patent, trademark and copyright); personal jurisdiction in cyberspace; and online contracts and legal disclaimers. This course introduces students to this emerging area of the law and enables them to identify issues so that they can intelligently seek counsel and understand the law as it continues to evolve.

**H ADM 436 Culinary Theory and Practice**  
Fall, spring. 4 credits. Prerequisite: H ADM 106. Required. Note: preregistered students who do not attend the first class are automatically dropped from the instructor's record. Because of the group nature of the course, the absolute deadline to drop the course in the fall is September 12, 2003, and the deadline in the spring is January 30, 2004. R. Spies, R. White, T. O'Conner.  

Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety. Students prepare recipes, menus, and production schedules. Students develop the ability to recognize properly prepared foods through preparing, tasting, and evaluating foods. They also plan menus, develop recipes, and produce them in a final project. Completion of work experience in the Statler Hotel is a required course activity.

**H ADM 434 Wine and Food Pairing Principles and Promotion**  
Spring. 2 credits. Prerequisite: H ADM 430. Limited to 20 hotel juniors, seniors, and graduate students. Elective. G. Pezzotti.  

Focuses on the pairing and creative marketing of wine and food. Students develop an understanding of regional and varietal wine styles, how food flavors can change a wine's flavor, and the principles of wine and food. Topics include: wine and food pairing principles, cuisines and their flavor components, food trends in restaurant and in the home, special event planning, and wine list development. Students design and present wine and food tastings to industry guests.

**H ADM 339 Wine in Culture and History—I**  
Fall, spring. 2 credits. Non-hotel students may not add the course after the second lecture. Elective. A. Nash.  

Regions: Germany and Champagne. Through lectures, videos, guided discussions, and readings (but not tastings!), students examine the history, people, culture, and production of wine in the world's great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies. Different regions are covered in the fall and spring (H ADM 439) so the course may be taken both terms in either sequence. Neither term is a prerequisite for the other, nor are H ADM 430 Introduction to Wines and H ADM 339 and 439 prerequisites for the others.

**H ADM 430 Introduction to Wines**  
Fall, spring. 3 credits. Limited to juniors and seniors in the hotel school and seniors and graduate students in all other colleges. Hotel students are strongly encouraged to enroll in the fall semester. Students are exempt from the 21-year old age requirement under Section 65 of New York State law. Preregistered students who do not attend the first class and fail to notify the secretary in 274 Statler of their absence before the first class are automatically dropped from the instructor's record. Because of the high demand for this course and because a product is
consumed, the absolute drop deadline in the fall for all students is Friday, September 12, 2003, and the drop deadline in the spring is Friday, February 6, 2004. Course fee of $30.00 includes the cost of a wine glass kit. No auditing allowed. Elective. S. Mutkoski, A. Nash.

An introduction to the major wine-producing regions of the world, and what the consumer needs to know to purchase wine at retail outlets and in a restaurant setting. Lecture topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wine, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

H ADM 432 Contemporary Healthy Foods
Fall. 3 credits. Prerequisite: H ADM 305 or equivalent. Limited to 20 seniors and graduate students, or by permission of the instructor. One field trip is required (cost $10). Elective. M. Tabachnick.

Designed to build a greater awareness and understanding among nutrition and foodservice professionals of the origins and manifestations of today’s health conscious and educated foodservice patron. The course addresses the movement of food and supplies from the producer to the hospitality operator, and the role of the distributor in the movement of food and supplies. Key topics include the preparation, marketing, merchandising, and selling of healthy menus in Statler’s outlets.

H ADM 435 Selection, Procurement, and Supply Management
Fall. 2 credits. Second seven weeks of the semester. Limited to 20 hotel juniors, seniors, and graduate students, others by permission. Drop deadline is October 23, 2003.

This course deals with contemporary management issues related to the procurement activities of the hospitality industry. The course focuses on both the food distribution industry and the hospitality industry so that students understand the role the distributor plays in the supply chain, food distributor financial statement analysis, evaluation and selection of suppliers, developing buying strategies, purchasing and inventory management, merchandising. Guest lecturers provide students with insight into various career opportunities in the operations- or rooms-related areas.

H ADM 105 Introduction to Lodging
Fall, spring. 3 credits. Limited to 60 hotel students per section. Required. R. Reynolds, A. Susskind.

An introduction to the principles of food and beverage management, beginning with an overview of the foodservice industry at large. Attention is focused on major industry segments, business practices, and trends. Subsequently, detailed consideration is given to the components of the foodservice system: marketing, menu planning, logistical support, production, service, and controls and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout. Completion of a work experience in the Statler Hotel is a required course activity.

H ADM 301 Service Operations Management
Fall, spring. 3 credits. Limited to 20 students per section. Required. Faculty. Introduces statistical and operations research methods appropriate for the hospitality industry. The goal of the class is to provide students with the skills and understanding necessary for decision making using quantitative data. Students use computer spreadsheet software extensively. A key requirement of the course is an ability to communicate the results of the analyses in a clear manner. Topics include: probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, project management.

H ADM 437 Anheuser Busch Seminar in Quality Brewing and Fine Beer
Fall. 2 credits. Prerequisite: H ADM 430. Offered during the first seven weeks of the semester. Elective. G. Pezzotti.

Anheuser-Busch seminars are held for upper-level students who intend to pursue food and beverage careers. The course serves to advance one’s knowledge about beers in terms of managing such products in various retail settings or other foodservice outlets. Lecture topics include the brewing process, sensory aspects of beer, international beer types and styles, marketing malt products, purchasing and distribution, beer and food pairings, staff training and education, cost controls and third-party liability issues. There is one required field trip.

H ADM 438 Seminar in Culture and Cuisine
Fall. 3 credits. Prerequisites: H ADM 165 and H ADM 290 236 or permission of the instructor. Limited to 20 students. Elective. R. Spies.

This seminar explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines enabling students to make comparisons and draw relationships among foodways of different cultures. Possible incorporation of each cuisine into restaurant menu consideration is also discussed. Each student is involved in doing research reports, oral presentations, and designing and orchestrating the preparation of menus.

H ADM 439 Wine in Culture and History—II
Spring. 2 credits. Elective. Note: students may not add the course after the second lecture. A. Nash.

Regions: Bordeaux, Burgundy, and California. Provides students a cultural and historical perspective on wine and its place in society. Through lectures, discussions, and readings students examine the history, people, culture, and production of wine in the world’s great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies.

H ADM 634 Food and Beverage Marketing Strategy
Spring. 3 credits. Prerequisite: completion of at least one three-credit marketing course. Limited to graduate students (seniors by permission). Elective. Faculty. Teaches students how to apply marketing, sales, and merchandising techniques to the commercial food and beverage industry. The course addresses: developing a market segment based upon understanding the needs and wants of potential target markets; translating needs and wants into a viable foodservice concept positioning strategy; and marketing strategies used to maintain and increase sales and market share. Course recitation work and analysis involve substantial use of the Consumer Report on Eating Share Trends (CREST) database as provided to Cornell through a special agreement with National Purchase Dairy Group, Inc. (NPFD).
for-profit organizations. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and resource consideration; and marketing, pricing policies, and quality standards.

**H ADM 305 Restaurant Management**

Fall, spring. Prequisites: H ADM 106 and H ADM 236. Limited to 27 hotel students per lab. Approximate cost of lab manual, certification for alcohol service, utensils for front and back of house is $85.00. Required. Because of the group nature of the course, the absolute deadline to drop the course in the fall is September 12, 2003, and the deadline to drop in the spring is January 30, 2004. B. Lang.

Offers the opportunity to synthesize the skills, concepts, and theories students have learned in other classes and practically apply them in an actual restaurant setting. Lecture topics cover pertinent issues and principles relevant to the restaurant industry. As a class, the principles are incorporated into actions that occur in the student-run operation. Linking theoretical topics to an existing business creates a challenging and compelling learning environment.

**H ADM 401 Seminar in Independent Corporate Restaurant Operations Management**

Fall, spring. 3 credits. Limited to 20 hotel students with written permission of the instructor. Students can expect to incur expenses over the term of the semester of no more than $350.00 due to five required field trips. Elective. G. Pezzotti.

Designed for students who have a strong interest in food and beverage operations and may be considering a career as an entrepreneur. Under the supervision of the instructor and utilizing student-developed case studies, the students visit and analyze various independently owned restaurant operations. Analysis covers, but is not limited to: the restaurant's concept (market), organization, ownership, management, physical structure, staff, front-of-the-house operations, back-of-the-house operations, and fiscal integrity. Readings relative to current topics in the restaurant industry are required. Classes alternate weekly between field trips (2:30 through dinner) and seminar/case presentation.

**H ADM 402 Contract Foodservice Management**

Fall. 3 credits. Prerequisites: H ADM 106 and H ADM 236. Limited to 30 juniors, seniors, and graduate students. Elective: D. Reynolds.

Operations in business and industry, healthcare, sports complexes, and education, as well as other on-site segments, represent more than one fourth of total restaurant-industry sales. This course addresses the major differences between onsite foodservice management and traditional restaurant management with particular focus on organizational structure, operational configuration, controls, labor issues, systems design and implementation, contractual issues, and revenue enhancement/cost containment. Related topics such as event planning and senior living are also discussed. Includes readings, discussions with industry leaders, cases, site visits, and an integrated research project.

**H ADM 403 Specialty Food and Beverage Operations: Guest Chefs**

Spring. 3 credits. Prerequisites: H ADM 305 or H ADM 702 with permission of the instructor. Limited to 20 hotel juniors, seniors, and graduate students with permission of the instructor. Elective: G. Pezzotti.

Designed for students focusing in food and beverage preparation. Students considering a career in the hotel or restaurant food and beverage environment or those who anticipate interacting with present-day culinary trends will find the course especially beneficial. Over the course of the semester, the class, working in groups, is responsible for the marketing, organization, planning, production, service, financial analysis, and accounting relative to three guest-chef specialty production nights. The chef will be asked to recommend the evening's menu reflecting his/her culinary creativity and producing the meal for the Cornell community using the hotel facility. A final project is required analyzing the relative degree of success experienced by each guest-chef event. The analysis is to be presented in a case as well as proper application of food and beverage management principles.

**H ADM 404 Catering and Special Events Management**

Fall. 3 credits. Prerequisites: H ADM 236, or permission of instructor. Limited to 30 students. One required field trip to New York City, approximate cost $250. Elective: R. Spies.

The catering and special events industries are among the fastest growing segments of the hospitality industry. This course focuses on off-premise catering principles, catering for social and business functions, and the management of large-scale independent events, such as sporting events, artistic performances, and product launches. Topics include: organizational structure, legal aspects of catering and special events management, product and service development, marketing and sales, catered function and special event planning and execution, staff recruitment and training, post event analysis and profitability analysis, and production and planning of special events businesses.

**H ADM 407 Seminar in Hotel Operations**

Spring. 3 credits. Limited to 30 juniors and seniors. The estimated cost of the field trips is $250. Elective: R. McCarthy.

In this seminar-style class students develop their leadership abilities through a series of hands-on projects for the Statler and Waldorf-Astoria hotels. Students gain experience by identifying the requirements and challenges of a project, creating a plan, and carrying out the leadership responsibilities that will result in the successful implementation of their recommendations. Drawing on their specific knowledge and skills in all the academic disciplines students take a broader perspective on the hotel as a business organization. They investigate the combination of human and technical forces that make a hospitality business succeed or fail. Emphasis is on reconciling the real or apparent conflicts between theory, as learned in the students' college courses, and practice, as observed in actual hotel operations. Upon completion of the course, students will be able to evaluate issues and formulate cogent strategies for managing hotel operations.

**H ADM 408 Introduction to Casino Operations**

Fall. 2 credits. Limited to hotel students. There is one required field trip to Atlantic City at the cost of approximately $200. Elective: R. McCarthy.

A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest growing industries. In this course we focus primarily on the operation and ownership of commercial casinos and the hotels attached to them. The course is designed to introduce students to the internal and external casino environment. We look at the historical development of gaming in America to understand how the industry has evolved to its present form. Students learn the organizational structure of a casino hotel, how it operates, and how it makes money. Students also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Topics include: casino marketing strategies and player rating systems; the social and economic impact of gaming and the various regulatory environments within which casinos operate; and how common casino games are played and the mathematics of the various games. Students build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

**H ADM 602 Spa and Spa Hotel and Resort Development and Management**

Fall and spring. 3 credits. Limited to 35 hotel school seniors and graduate students, others by permission. Two field trips are required, approximate cost $75–100. Elective: M. Tabacchi.

Emphasizes the development, management, and marketing of spas, spas in hotels and resorts, and spa restaurants. Day spas, resort spas, and destination spas are studied in depth. The feasibility of success for new spas and marketing research necessary to establish new spas is discussed. The design of menus, mental and physical fitness programs, stress management, spa marketing, and success of catering, and special events businesses.

**H ADM 604 Service Operations Management**

Spring. 3 credits. Prerequisite: H ADM 775, or equivalent. Limited to 25 graduate students. Elective: G. Thompson.

Improves the understanding of the operations function of service organizations. The course focuses on the role and nature of service operations and the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics covered include service design, bottleneck and layout analysis, capacity management, work force management, and quality management. This course is intended for any graduate student interested in services management.
H ADM 605 Yield Management
Spring. 3 credits. Prerequisite: H ADM 301, H ADM 701, or equivalent. Limited to 30 seniors and graduate students. Elective. S. Kimes.

Helps students learn how to effectively apply the principles of yield management. The course focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics covered include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 606 Restaurant Revenue Management
Fall. 2 credits. First seven weeks of the semester. Prerequisites: H ADM 701 and H ADM 702. Limited to 30 graduate students, or by permission of the instructor. Note: the deadline to drop a seven-week course is the midpoint of the course. Elective. S. Kimes.

Revenue management is a method for profitably managing capacity. The objective of this course is to help students learn how to apply the principles of revenue management to restaurants. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics covered include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

H ADM 609 Airline In-Flight Management and Food Services
Spring. 3 credits. Limited to 30 seniors and graduate students, others by permission of the instructor. The cost of this field trip is approximately $75.00. Elective. M. Tahiri.

A must for those who are interested in careers in the airlines industry. The impact of 9/11 upon the industry will be investigated. Airline service and on-board services are used as competitive advantages by airline carriers. In fact, names such as Singapore Airlines and Virgin Atlantic have become synonymous with service excellence in a service economy. The strategies of developing competitive and superior service in today's era of intense economic climate will be a major part of class discussion. Guest speakers from American Airlines, Singapore Airlines, US Airways, Delta, Continental Airlines, Virgin Atlantic, and SkyChefs will be featured. In addition to service strategies both on the ground and in the air, students will study the challenge of serving meals on international flights. Strategies, planning, and forecasting by these executives will be examined. Case studies based upon national and international airline business will be an integral part of the course. A field trip to an airline's hub city enables students to observe first-hand the industry and its personnel in action.

H ADM 701 Quantitative Methods
Fall. 3 credits. Open to M.M.H. students only, except by written permission of the instructor in advance of preenrollment. M.M.H. requirement. S. Kimes.

Covers statistical and operations research techniques which can be applied to the hospitality industry. Topics covered include descriptive statistics, probability, sampling, correlation and regression, forecasting, and yield management. The emphasis is on hands-on application to hospitality problems.

H ADM 702 Food and Beverage Management
Spring. 3 credits. Open to M.M.H. students only, except by written permission of the instructor in advance of preenrollment. M.M.H. requirement. A field trip costing approximately $600 is required. A. Suskind.

Focuses on the technical, managerial, and human resources skills needed to be successful in foodservice management. Topics such as market-based analysis, concept development, menu planning, operations management, and customer service processes are addressed in seminar format. Current and future issues affecting the foodservice industry are discussed.

Facilities Management, Planning, and Design

H ADM 255 Hospitality Development and Planning
Fall, spring. 3 credits. Limited to 20 per section. Limited to sophomores, juniors, and seniors. Required. S. Robson.

An introduction to the issues and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include the project development sequence, conceptual and space planning, architectural design criteria, construction management, and the interpretation of architectural design and consultant drawings. The emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 351 Hospitality Facilities Design
Fall. 4 credits. Prerequisite: H ADM 251 or H ADM 751, or permission of instructor. Limited to 36 students. Elective. R. Penner, S. Robson.

This intensive studio course provides the graphic skills important for design and experience in different hospitality planning and design situations. Students will prepare a number of design projects using both hand drafting and computer-aided design (CAD) software. These assignments consist of graphic and space allocations for the front and back of house areas, develop production work flow in the preparation and service areas, and select equipment using standards for production capability, quality of construction, and the ease of maintenance. All documentation is produced on CAD, which is taught as part of the weekly studio. Students also use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 354 Computer-Aided Design
Fall, spring. 3 credits. Attendance at first class meeting is mandatory! Some computer experience is highly recommended. Prerequisite: H ADM 351 or equivalent studio experience. Limited to 24 students in each studio. Elective. S. Curtis.

Develops an understanding of the features, limitations, and considerations associated with the operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids and other characteristics of CAD. Students spend time learning the program in the school's computing center and develop a complete graphic presentation. Emphasis is placed on the use and operation of CAD systems in a commercial document production environment.

H ADM 355 Hospitality Facilities Operations
Fall, spring. 3 credits. Prerequisite: H ADM 255. Limited to 18 students per section. Required. R. Penner.

An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the ins and outs of the engineering-maintenance department. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

H ADM 356 Security and Loss Prevention Management
Spring. 3 credits. Limited to sophomores, juniors, seniors, and graduate students. Elective. D. Stipanuk.

A comprehensive look at risk management within the hospitality environment. The course addresses issues of loss control for hospitality firms. Using a risk management framework, issues in fire protection, customer and workplace safety, OSHA, and corporate security are analyzed.

H ADM 452 Sustainable Development and the Global Hospitality Industry
Fall. 3 credits. Limited to juniors, seniors, and graduate students. An overnight field trip is a required course activity. Cost for lodging and transportation estimated at the main interior spaces, modifying the architectural plan as necessary, lay out furniture and fixtures, select finishes and FF&E, and prepare a full design presentation.

H ADM 353 Foodservice Facilities Design
Spring. 3 credits. Prerequisites: H ADM 351 and H ADM 305 (coregistration or other commercial food production experience is acceptable) or permission of the instructor. Limited to 12 students in each section. Elective. S. Robson.

An introduction to the basic concepts of food-service facilities design and planning with an emphasis on restaurants. The course focuses on determining space allocations for the front and back of house areas, development production work flow in the preparation and service areas, and select equipment using standards for production capability, quality of construction, and the ease of maintenance. All documentation is produced on CAD, which is taught as part of the weekly studio. Students also use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 452 Sustainable Development and the Global Hospitality Industry
Fall. 3 credits. Limited to juniors, seniors, and graduate students. An overnight field trip is a required course activity. Cost for lodging and transportation estimated at the main interior spaces, modifying the architectural plan as necessary, lay out furniture and fixtures, select finishes and FF&E, and prepare a full design presentation.
A multi-dimensional course introducing the global sustainability and environmental movement, with an emphasis on its impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings are drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course.

H ADM 454 Advanced Computer-Aided Design and 3-D Visualization
Spring. 3 credits. Prerequisite: H ADM 354 or equivalent introductory AutoCAD course. Limited 24 students. Elective. S. Curtis.

Computer-aided design has grown beyond its traditional use as a tool to draw contract documents. This course gives students an understanding of the more advanced capabilities of AutoCAD as they apply to 3D surface and solid modeling. The course also explores the use of 3D Studio VIZ, a 3D modeling and animation program from AutoDesk, in creating 3D models that can be used to produce photo-realistic renderings and animations. Course material is learned by completing weekly project assignments and a final project.

H ADM 456 Hospitality Facilities Management
Spring. 3 credits. Prerequisite: H ADM 355, H ADM 751, or permission of instructor. Overnight field trip required. Cost for lodging and transportation estimated at $100, meals are additional. Elective. D. Stipanuk.

Takes a managerial approach to hospitality facilities addressing issues of owning and operating cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. This year there will be a particular emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the World Wide Web is anticipated.

H ADM 457 Hotel Development
Fall. 3 credits. Limited to juniors with permission, seniors and graduate students. Overnight field trip required. Cost for lodging and transportation estimated at $100, meals are additional. Elective. D. Stipanuk.

Focuses on the management structure and systems, laws and regulations, and industry practices that most influence the successful development of hospitality real estate, including lodging and eating facilities. Topics include: market studies, franchise requirements, governmental approvals, design construction contracts, the construction process, scheduling, budgeting, and emerging issues and opportunities. Guest speakers in present case studies of actual development projects.

H ADM 459 International Hotel Development
Spring. 3 credits. Limited to juniors, seniors and graduate students. Elective. R. Penner.
The seminar course includes discussion of corporate expansion strategies, the international development process, viewpoints of different stakeholders, and development challenges such as technology, infrastructure, environmental concerns, and public policy issues. Students research a variety of international destinations and the strategies of emerging management companies. Guest lecturers will present and discuss new projects in Europe, Middle East, South America, and Asia and current opportunities for development in the United States.

H ADM 458 Hospitality Facilities Management
Spring. 3 credits. Open to M.M.H. students only, except by written permission of the instructor in advance of preenrollment. Limited 30 students per section. M.M.H. requirement. M. Redlin.

Provides an overview of project development, hotel planning, and the construction process including the role of the development team, feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, construction management, contracts, and scheduling. In conjunction with other (M.M.H.) core courses, student teams prepare the program documentation for a new hotel or one undergoing major rehabilitation.

H ADM 465 Hospitality Marketing and Finance
Fall. 3 credits. Limited to 50 hotel students per section. Required. B. Carroll.

Introduces students to microeconomic principles and theories in the context of applications and solutions associated with the service industry with a focus on hospitality and travel. Topics include principles of production, supply and demand, firm behavior, costs, pricing and topics specifically associated with the travel and hospitality industry. Includes readings, lectures, discussions, problem sets, and guest speakers.

H ADM 468 Hospitality Management
Fall. 3 credits. Limited to 60 hotel students per lecture, not open to freshmen. Required. Faculty. R. Kwortnik.

Develops an understanding of marketing management, the process through which organizations analyze, plan, implement and control programs to develop and maintain beneficial exchanges with target buyers. Students will learn about marketing management through a mix of readings, lectures, class discussions, in-class group exercises, industry guest speakers, and exams. A key element of the course involves working as part of a small team to complete a marketing plan for a business organization. The plan provides a road map of an organization’s future marketing strategies and programs.

H ADM 470 International Hotel Development
Spring. 3 credits. Limited to 45 juniors and seniors. Elective. M. Lynn.

Deals with relationships between the franchisor and the franchisee, advantages and disadvantages of franchising, structure of and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. There are also guest speakers from the franchising industry.

H ADM 471 Marketing Research
Fall. 3 credits. Prerequisite: H ADM 243. Elective. M. Lynn.

Helps students become better consumers of marketing research. Topics include issues involved in designing, conducting, and interpreting focus groups, depth interviews, surveys, experiments, and choice models. Special emphasis will be placed on what each method should and should not be used for and why.

H ADM 472 Tourism I
Fall. 2 credits. Not open to freshmen. Offered during the second seven weeks of the semester. Note: the deadline to drop a seven-week course is the midpoint of the course. Elective. M. Noden.

An introductory course in the study of tourism. The origins and evolution of contemporary tourism are carefully examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass volume tourist demand on destination development are explored through the use of selected limited case studies. A series of guest lectures by well-known experts from the travel industry highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 473 Hospitality Sales
Spring. 3 credits. Prerequisite: H ADM 243, H ADM 741 or equivalent. Limited to 24 students. Elective. Faculty.

Involves an extensive study of personal selling to encourage the use of intuition, judgment, logic, problem-solving methodology, and other tools as part of the overall sales mix. The course is very interactive. Students will be involved in numerous sales role-plays, some of which will be videotaped. Guest speakers will sometimes serve as the buyers in these role-plays. Students will be required to critique the role-play performances of classmates, develop written sales presentations, and shadow a professional salesperson.

H ADM 474 Consumer Behavior
Fall. 3 credits. Prerequisite: H ADM 243. Limited to 45 juniors and seniors. Elective. M. Lynn.

Helps students become better at understanding, predicting, and influencing consumer behavior. Topics include motivation, perception, learning, decision making, attitudes, non-verbal communication, persuasion, compliance, geo-demographics, and psychographics. The practical implications of psychological principles will be emphasized. Specific applications will involve such areas as guest frequency programs, menu design, promotional strategy, personal selling, sales and marketing planning, and marketing research. Class time will be used for discussions and application exercises as well as for the presentation of relevant information.
H ADM 441  Strategic Management  
Fall, spring. 3 credits. Prerequisites: at least one course in accounting, finance, marketing, economics, and information systems. Limited to seniors.  
Because of the group nature of the course, the absolute drop deadlines are September 11 (fall) and January 10 (spring). Required. Bergh, J. Harrison.  
Students will learn to evaluate firms, industries, and the broader environments in which they exist. Since this is a capstone course, a part of the analysis process will involve integrating material learned in all of the functional disciplines. Students will also evaluate specific firm strategies and their impact on competitiveness and performance. Using all of this information, students will be trained to select strategies for firms and develop plans for implementing them. Topics include environmental analysis, firm resource analysis, competitive analysis, strategy formulation, strategy implementation, international strategy, and strategic control.

H ADM 442  Strategic Marketing  
Fall. 3 credits. Prerequisite: a previous marketing course. Limited to seniors. Elective. C. Dev.  
Offers innovative, practical, and profitable knowledge and insights to improve revenue, profit, and customer loyalty. Concepts include underlying strategic marketing, best-practice examples, and challenges facing hospitality brands. The unique benefits of this course come from the extensive use of detailed cases in which students break into competing teams to formulate strategies and tactics in a realistic marketing environment. Students will be examined include Hilton, Marriott, Accor, Choice, Four Seasons, Club Med, Harrah's, Shangri-La, Yum Brands, Starbuck, Disney, and Southwest Airlines. Learning will be assessed via in-class contributions, written analysis of cases, a midterm and a final exam.

H ADM 445  Services Marketing  
Fall. 3 credits. Prerequisite: a previous marketing course or permission of the instructor. Limited to 40 students. Elective. R. Kwontnik.  
Students preparing for management positions will develop a deeper understanding of the marketing principles and challenges unique to services firms, especially those in the hospitality industry. The main course goal is to develop critical analytic skills and knowledge needed to create and implement service strategies for competitive advantage. Course content includes key differences in goods vs. services marketing and service gaps analysis, services consumer behavior and satisfaction, service quality, marketing, service recovery, service design (including analysis of service as theater), service blueprinting and the "servicescape," and services pricing, promotion, and distribution. Lectures, discussion, cases, and guest-speaker presentations.

H ADM 447  Managing Hospitality Distribution Strategies  
Spring. 3 credits. Prerequisites: H ADM 141 and H ADM 243. Elective. B. Carroll.  
Provides a framework for managing marketing distribution strategies. Presents and analyzes the structure and interrelationships among distribution channels within the travel and hospitality industry. Theories of marketing distribution management and analysis are evaluated and applied within the context of that system. Topics include dimensions of hospitality marketing distribution, economics of the major hospitality distribution segments, managing hospitality distribution strategies, and the role of convention and visitors bureaus, national business organizations, and associations in distribution management.

H ADM 448  Marketing Communications  
Spring. 3 credits. Prerequisite: a previous marketing course. Seniors only. Elective. C. Dev.  
Applied perspective on correctly managing communication programs for brands in the hospitality industry. Includes advertising, promotion, direct marketing, public relations, and Internet marketing. Key elements of marketing communications and how to use them effectively and efficiently will be examined. Learning will be assessed via in-class contributions, written analysis of cases, a midterm and a final exam.

H ADM 449  Services Marketing  
Spring. 3 credits. Prerequisite: a previous marketing course or permission of the instructor. Limited to 40 students. Elective. C. Dev.  
Develops a deep understanding of the basic concepts of marketing management, experience with the techniques, analyses, and frameworks necessary for solving marketing management problems. Topics include competing in the hospitality industry, economics of hospitality, marketing management, competitive advantage, and service-related marketing. One approach is to manage for value, deliver the quality level the customer is willing to pay for, and produce it at a cost that allows a firm to prosper. This course covers the concepts, complexity and management practices necessary to deliver consistent value in the hospitality industry (determining customer expectations, integrating marketing into operations, managing customer satisfaction, and measuring and controlling results). Also used will be a variety of individual written projects and presentations, including a services-marketing audit.

H ADM 470  Competitive Strategies for the Hospitality Industry  
Fall. 3 credits. Open to M.M.H. students only, or permission of the instructor. M.M.H. requirement. J. Harrison.  
Provides students with an understanding of the basic concepts of marketing management and experience with the techniques, analyses, and frameworks necessary for solving marketing management problems. Theories and concepts that draw on customer, competitor, and core capability analyses in marketing planning and implementation, with appropriate criteria for choosing among alternatives, and deriving actionable implementation plans.

H ADM 471  Service Excellence  
Fall. 3 credits. Open to M.M.H. students only, except by written permission of the instructor in advance of preenrollment. M.M.H. requirement. R. Kwontnik.  
How do you maintain profitability in an increasingly competitive environment? One approach is to manage for value, deliver the quality level the customer is willing to pay for, and produce it at a cost that allows a firm to prosper. This course covers the concepts, complexity and management practices necessary to deliver consistent value in the hospitality industry (determining customer expectations, integrating marketing into operations, managing customer satisfaction, and measuring and controlling results). Also used will be a variety of individual written projects and presentations, including a services-marketing audit.

H ADM 174  Microcomputing  
Fall, spring. 3 credits. Open to M.M.H. students only, limited to hotel freshmen and transfers in the fall. Open enrollment in the spring. Limited to 30 students per section. Required. P. Clark, M. McCarthy, G. Piccoli.  
Provides a foundation in information technology (IT) and how it relates to everyday business computing. Teaches IT concepts during lectures and reinforces these concepts.
in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts, proficiency in Microsoft Office, and understanding the issues of standardization, efficiency, and recognizing the importance of good computer management.

H ADM 274 Microcomputing
Spring. 3 credits. Limited to 30 non-hotel students per lecture. Elective. P. Clark.
An introduction to business computing to develop a computer literacy. Students develop their skills in the areas of: text, spreadsheets, presentation, and file management, and website management. The course is entirely lab-oriented and students work using Windows 2000. Software used is the latest in word processing, spreadsheet, presentation, database and web design.

H ADM 275 Information Technology for Hospitality Managers
Fall, spring. 3 credits. Prerequisite: H ADM 174. Limited to hotel students. Required. R. Alvarez, E. Wagner.
Composed of two blocks. Block 1: lecture. the goal of this block is to provide the students with a broad-base knowledge of information technology (IT) management issues. Block 2: lab. the goal of this block is to provide the students with advanced Microsoft Excel model-building skills and concepts.

H ADM 374 End-user Business Computing Tools
Fall. 3 credits. Limited to 30 students. Elective. E. Wagner.
Prepares students to create and manage information in a knowledge-based organization. The design and use of database and spreadsheet functionality will be used to perform analyses and make decisions. Students will gain a conceptual foundation and then practice applying these ideas through project activities and course readings. Topics include information and information management in organizations, fundamentals of relational database design and implementation, SQL queries, how to work in a database design team and as an individual research analyst, database design and management using Microsoft Access, how to normalize a database design to ensure effective use of the technology, analysis of the managerial decision-making process functionality within Microsoft Access and Excel, the conversion of data into information and knowledge that can be leveraged for particular business goals, the role of data and information management in contemporary society, and data management opportunities in the hospitality industry.

H ADM 476 Visual Basic for Applications: End-user Programming
Fall. Spring. 3 credits. Limited to 30 students per lecture. Elective. M. Talbert.
This is an introductory programming course for end-users (business managers, consultants, and so on). Students develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also develop custom information systems using Microsoft Office applications as programmable building blocks. Secondary objectives of the course are to cover fundamental design and programming principles. The course is entirely lab based. Note: due to capacity restraints in the Binenkorb lab, the following restrictions apply: attendance at the first class meeting is mandatory; no-show students will be dropped from the course to make room for stand-by students; students may not drop the course after the second week of class.

H ADM 477 Advanced Business Modeling
Fall and spring. 2 credits. Second seven weeks of the semester. Note: the deadline to drop a seven-week course is the mid-point of the course. Limited to 21 seniors and graduate students, with preference given to M.M.H. students. Prerequisite: H ADM 174. M. Talbert.
This course is focused on organizational systems, planning, and decision process, and how information is used for decision support in organizations. The course provides students with practical skills in developing spreadsheet computer models using Microsoft Excel. Topics covered include: business planning and forecasting, numerical methods, advanced formulas and functions, user-interface design, data protection and validation, importing external data, and output presentation.

H ADM 574 Strategic Information Systems
Spring. 3 credits. Elective. G. Piccoli.
This course is targeted to those students contemplating careers in general management and operations, marketing, or information systems. Managerial in nature, the course is designed to help students think strategically about IT (and by extension about any organizational resource) and will provide students with analytical tools that can help them make effective decisions about (or not) of IT in organizations. Students will learn the managerial implications of recent technology trends, the economic premises of the new competitive landscape dominated by pervasive networks (e.g., the Internet), how information technologies can be leveraged to create shareholder value and service customers, how information and advanced IT can create competitive advantage, and when and how a competitive IT advantage can be sustained. Course includes lectures, case study discussions, guest presentations, and project work. Much of the class activities center around analysis and discussion of readings and case studies. Class meetings are very interactive.

H ADM 575 Internet Technologies
Spring. 3 credits. Prerequisite: H ADM 174 or equivalent. Elective. M. Talbert.
Introduces students to the technical underpinnings of the Internet, with an emphasis on the World Wide Web. Students survey many of the key technologies that form the mechanism of the Web, including HTML, DHTML, XML, Javascript, VBScript, Java, Style Sheets, Browsers, Servers, ActiveX, and Active Server Pages. The goal is a managerial familiarity with a broad range of important technologies, rather than proficiency in any single technology. This is an implementation course, in other words, programming. Students should expect a considerable demand on outside time for practice necessary to gain programming fluency in the languages introduced. Note: due to capacity restraints in the Binenkorb lab, the following restrictions apply: attendance at the first class meeting is mandatory; no-show students will be dropped from the course to make room for stand-by students; students may not drop the course after the second week of class.

H ADM 772 Information Technology for Hospitality Managers
Fall. 3 credits. M.M.H. requirement. Open to M.M.H. students by written permission of the instructor. G. Piccoli.
This course takes a managerial approach and focuses on the concepts and terminology that functional and general managers must command to be effective and competent users of information systems (IS) resource. Students will have the opportunity to learn about the following: the concept of IS and its component parts; the fundamentals of information technology, including appropriate language and fundamental concepts; the major hospitality-specific information systems and enterprise information systems, as well as their appropriate design, deployment, and management; the systems development and selection process; IS resource assessments, planning, and management. This course assumes no IT- or IS-specific knowledge and aims at building such a knowledge base. Lectures, case-study discussions, guest presentations, and project work will be used to accomplish the course objectives and to evaluate students' understanding of the concepts and analytical techniques covered.

FINANCE AND REAL ESTATE

Finance/Accounting

H ADM 120 Personal Financial Management
Fall, spring. 2 credits. Limited to 50 non-hotel students. Elective. I. HERSHEY.
An overview of personal financial planning including money management, tax planning, use of credit, insurance, investing, retirement planning, and estate planning.

H ADM 121 Financial Accounting
Fall, spring. 3 credits. Limited to hotel students. Required. D. Dittman.
An introduction to the basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 123 Financial Accounting Principles
Fall, spring. 3 credits. Limited to non-hotel students. Elective. Faculty.
An in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 125 Finance
Fall. Spring. 3 credits. Limited to undergraduates. Non-hotel students only. Elective. Faculty.
Students are exposed to a wide variety of corporate finance topics including: time value of money, risk and return, valuation models, cost of capital, capital budgeting, capital structure, and dividend policy.

H ADM 221 Managerial Accounting
Fall. 3 credits. Prerequisites: H ADM 121 and H ADM 174, or equivalents. Required. G. Potter.
Focuses on the use of accounting information for management decision making and control. Topics include product costing, budgeting,
management decision making, and control systems. There is one common exam at the end of the semester.

H ADM 222 Finance
Spring. 3 credits. Prerequisites: H ADM 121, H ADM 221, or equivalents, or permission of instructor. Limited to hotel students, others by permission. Required. St. Gibson.
Provides students with accounting cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and short-term and long-term financial decision models. Covers current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.

H ADM 321 Hospitality Financial Management
Fall, spring. 3 credits. Restrictions: H ADM 121, H ADM 221, and H ADM 222, or permission of instructor. Each section limited to 54 hotel students. Required. A. N. Geller.
Integrates the areas of financial accounting, managerial accounting, and finance and applies the theoretical and analytical skills of each to hospitality industry situations. Course topics provide an understanding of: the analysis and interpretation of financial statements and operating reports, the budgeting and forecasting process, the application of C-V-P and other decision models to hospitality operations, operating agreements, capital investment analysis, financial feasibility, project and general financing, valuation techniques, and measuring value for important stakeholders.

H ADM 322 Principles of Investment Management
Fall, spring. 3 credits. Prerequisites: H ADM 125 or H ADM 222. Limited to students outside the School of Hotel Administration. Students with background in economics, quantitative analysis, and computers are advised to consider H ADM 424: Security Analysis and Portfolio Management. Elective. Faculty. Covers basic institutional and analytical aspects of investment management. Topics include: financial markets, sources of investment information, risk-return analysis, bond and stock valuation, behavior of security prices, portfolio analysis and portfolio management, asset allocation, and mutual fund investment. While newcomers to investment management commonly believe that investing is about how to make money in the markets, this course instead focuses on analyzing and managing to reasonable and manageable investment objectives in general and in today's highly competitive investment markets. To that end, students are required to apply concepts and tools to managing a simulated investment portfolio (the Investment Management Game) during the course of the semester.
