Cornell University Calendar

**Fall Semester**
Residence halls open
New undergraduate student registration
New student orientation begins
New graduate student registration
Course add/drop begins
Instruction begins
Fall break: instruction suspended
Instruction resumes
Pre-course enrollment for spring
Homecoming
First-Year Family Weekend
Thanksgiving recess:
instruction suspended, 1:10 p.m.
Instruction resumes
Instruction ends
Study period
Final examinations begin
Final examinations end
Residence halls close

**Winter Session Period Begins**
Three-week classes begin
Winter session period ends

**Spring Semester**
Residence halls open
Course add/drop begins
Instruction begins
Spring break: instruction suspended
Instruction resumes
Pre-course enrollment for fall
Instruction ends
Study period
Final examinations begin
Final examinations end
Residence halls close (students who are graduating
may stay through Commencement Day)
Senior Week
Commencement

**Summer Session**
Three-week session classes begin
Eight-week session classes begin
Six-week session classes begin

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Communication and Marketing Services at Cornell University.

Introduction

Courses of Study (cuinfo.cornell.edu/Academic/Courses/), a catalogue of Cornell University’s many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Additionally, a student handbook, distributed to all incoming students, describes life at Cornell. The Policy Notebook (www.univco.cornell.edu/policy/policies.html) is also distributed to each new student, summarizing pertinent university policies, including the campus Code of Conduct and the Code of Academic Integrity. Students should consult with their college’s advising office for specific information on their college’s academic policies and procedures, degree programs, and requirements.

All these publications are also available for viewing on CUINFO, the university’s electronic information system, and in print at the various university libraries, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 607-255-5241.

Graduate School, 143 Caldwell Hall, Ithaca, NY 14853-2602, 607-255-4884.

College of Veterinary Medicine, Admissions Office, Cornell University, Schumman Hall, Ithaca, NY 14853-8401, 607-255-3700.

Medical College and Graduate School of Medical Sciences, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-1067/212-746-6565.

CUINFO ON THE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell’s electronic information source. The Course and Time Roster and the Course and Room Roster, published each semester by the Office of the University Registrar, may also be accessed through the web. The URL is: cuinfo.cornell.edu. Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND COURSE PREFIXES

The course levels have been assigned as follows:

- 100-level course—introductory course, open to all qualified students
- 200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites
- 300-level course—upper-division course, open to juniors and seniors, prerequisites
- 400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent
- 500-level course—professional level (e.g., management, law, veterinary medicine)
- 600-level course—graduate-level course, open to upper-division students
- 700-level course—graduate-level course
- 800-level course—master’s level, thesis, research
- 900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate and graduate-level courses

- Agriculture and Life Sciences
- Architecture, Art, and Planning
- Arts and Sciences
- Biology
- Chemical and Atmospheric Sciences
- Civil and Environmental Engineering
- Earth and Environmental Sciences
- Economics
- Engineering
- Human Ecology
- Industrial and Labor Relations
- Information Science
- Law
- Medicine
- Veterinary Medicine

Group 2: Graduate professional divisions

- Management
- Information Science
- Law
- Management
- Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses 0-999 are briefly described for those divisions (Group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (Group 2) are designated by number and title only.

### ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell's accreditation can be found at dpb.cornell.edu/trp/accreditation.htm. Requests to review additional documentation supporting Cornell's accreditation should be addressed to Michael Matier, Director, Institutional Research and Planning, Cornell University, 440 Day Hall, Ithaca, NY 14853-2801, mmwm5@cornell.edu.

### Advanced Placement

**Definition and Purpose of Advanced Placement Credit**

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their course of study.

**Sources of Advanced Placement Credit**

Advanced placement credit may be earned from the following:

- a. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, N.J. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 7-9.
- b. Acceptable performance on a Cornell department exam (offered only in some subjects, usually during orientation).
- c. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.
- d. International credentials from "A" level or IB Examinations are listed on page 9.

**Please note:** Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described in paragraph a or b above. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject, recommends Advanced Placement credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell and applying it to degree requirements rests with each individual college (consult the relevant college sections of Courses of Study). Students need not accept advanced placement, although forfeiting the advantage of moving quickly into advanced courses affects one's overall education. If they take the Cornell...
course they have placed out of, they relinquish the advanced placement credit.

**Advanced placement examinations.** Entering first-year students should have their scores from CEEB Advanced Placement Examinations sent to their college or school registrar's office (see list below).

**Departmental advanced standing examinations.** In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during Orientation Week. A schedule of these examinations appears in the orientation booklet mailed in late summer to entering students. The departments that award advanced placement and credit on the basis of departmental examinations are shown on pages 7–10. Students need to register for those examinations in the relevant department.

**Transfer of credit.** Entering first-year students who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list below).

**Written inquiries.** Students can address questions to departments, schools, or college offices by adding Ithaca, NY 14853 to the addresses given in the following sections.

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zubal, 183 Goldwin Smith Hall, for German.
International Credentials

The policies currently in effect for General Certificate of Education (GCE) "A" Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table below. Students may submit results of the French Baccalaureat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

SUPPLEMENTARY INFORMATION

Chemistry and Chemical Biology

The Department of Chemistry and Chemical Biology offers two eight-credit sequences that satisfy prerequisites for further work in the department: Chemistry 207–208 and Chemistry 215–216. Chemistry 215–216 is the sequence intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in the Chemistry and Chemical Biology Instructional Office, 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in 760A S. T. Olin Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 215–216 and should consult the CHEM 215 instructor or department staff.

Computer Science

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the A exam, or a score of 6 or 7 on the IB exam will receive four advanced placement credits and may take COM S 211. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn four credits by satisfactory performance on a departmental examination to be given during Orientation Week. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

4 additional credits for PHYS 213 are granted for a combination of grades of A or B and a minimum of 8 advanced placement or advanced standing credits in mathematics. Students planning to major in physics are encouraged to enroll in PHYS 116. If students take 116, they do not receive 4 credits for 112. If students take 217, they do not receive credit for 213.
English
Separate from AP credit for a high score on the CEEB SAT II examination in English, students who have taken an AP English Literature exam and receive scores of 700 or better on the CEEB SAT II examination in literature, or 4 or 5 on either CEEB Advanced Placement English Literature or CEEB Advanced Placement English Composition exams, are eligible to enroll, pass the placement examination in English Composition, and be placed into ENGL 111 or 112, the first course of the sequence.

Modern Foreign Languages
Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests and Advanced Placement Credit" under "Foreign Language Requirements" in the Arts and Sciences section of this catalog. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:
1) Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, earn three credits, and are eligible to take the Cornell Advanced Standing Examination (CASE).
2) Students who achieve a minimum score of 55 on the Cornell language placement test given during orientation week are eligible to take the Cornell Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of three credits.
3) For formal language work at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript. Sometimes an exam score or the CASE is also required.
4) Native speakers of languages other than English may, if an examination by the appropriate department is available, be granted a maximum of three credits for proficiency equivalent to that required in English for a first-year writing seminar.

Information about times and places of placement tests is available in the orientation booklet and from Academic and Career Counseling Services on the web at sac.cornell.edu/orientation.htm. For more information, see the College of Arts and Sciences section on language course placement, or contact Gallean Hille, 303 Morrill Hall, for French, Italian, and Spanish; Miriam Zubiil, 185 Goldwin Smith Hall, for German; Doreen Silva, 226 Morrill Hall, for Russian; Munther Younes, 409 White Hall, for Arabic. English for a first-year writing seminar.

Music
Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music; that is, credit cannot be earned on the basis of the AP IB, or other examinations from outside Cornell, nor on the basis of course work done elsewhere. Outstanding performance on the departmental examination will earn students three credits and placement directly into MUSIC 152 Tonal Theory II. In rare instances students may place into MUSIC 251, in which case they will earn six credits. The placement examination is normally administered on the Sunday during fall orientation week. For more information about the examination, see the departmental web site.

Physics
Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (offered during orientation week. Full semester appointment required). For information about the departmental examination, students should contact the director of undergraduate studies, 101 Clark Hall, or the department chair, 109 Clark Hall.

Physics B—Students earning a score of 5 may receive eight credits for noncalculus-based PHYS 101 and 102. Those earning a score of 5 in the CEEB AP test, students who receive scores in PHYS 112 or 207 instead of eight credits in PHYS 101 and 102. Those earning a score of 4 will receive four credits in PHYS 101.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive four credits for PHYS 112 or 207, or placement into PHYS 116, a more analytic first-semester course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive four credits for PHYS 215.

Students may not accept credit for an advanced placement course if they receive credit for a Cornell course with similar content. Students may receive credit for only one of the courses in each group:

PHYS 101, 112, 116, 207
PHYS 102, 208, 213, 217

A student planning a major in physics or applied and engineering physics and who is eligible for AP credit should consult with his/her adviser or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

University Registration
University registration is the official recognition of a student's relationship with the university and is the basis for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unregistered, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility...
to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must:

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, Gannett: Cornell University Health Services, or the Bursar.

Individuals must become registered students by the end of the third week of the semester or they will be subject to a financial penalty. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

### COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

### COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. Courses may be added, dropped, or changed online through "Just the Facts." Permission-only courses and courses with specific add/drop procedures will be handled using a written add/drop form. The form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, the School of Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

</tr>
</tbody>
</table>

*Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.
*Consult the college office for special considerations and requirements.

### AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

### LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return. Students may withdraw from the university at their own discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave. Medical leaves are granted by the student's college upon recommendation by Gannett: Cornell University Health Services.

### Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted, and may decide to transfer from one college to another within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Sponsorship is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

### Bursar Information

#### Tuition, Fees, and Expenses

**Tuition for Academic Year 2004-2005**

- **Endowed Divisions**
  - Undergraduate: $30,000
  - Graduate: $34,400

- **Professional**
  - Law School: $35,280
  - New York resident: $34,590
  - Nonresident: $34,430
  - Contract Divisions (tuition rates are tentative)
    - Undergraduate: $17,970
    - Veterinary Medicine: $20,500
    - New York State resident DVM: $29,000
    - Nonresident DVM: $18,000

- **Graduate and Professional Students**
  - Graduate School (with chair in a contract college): $17,970
  - Veterinary Medicine: $20,500
  - New York State resident DVM: $29,000
  - Nonresident DVM: $18,000

- **Student Activities Fee**
  - Undergraduate students: $167
  - Graduate and professional students: $62

- **Summer Session (2004)**
  - per credit: $760

Excess-Hours Tuition

$664.23 per credit hour

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

Residency status is determined by the time of admission by the college. Change in residency status is determined by the University Bursar following matriculation. The deadline for submission of requests for the Fall 2004 semester is June 1, 2004. The deadline for the Spring 2005 semester is November 1, 2004. Further information and an application can be found on our web site at www.bursar.cornell.edu.

New contract college undergraduate nonresident students are defined as:

- new entering students (i.e., freshmen).
- new transfers from external colleges (including transfers from two-year institutions with which Cornell has transfer agreements).
- new transfers from an endowed Cornell college to a contract college.
- students who have deferred entry of more than one semester.
- returning students who had withdrawn from the university.
- graduates who are returning for additional degrees.
- students who have taken a leave of absence for more than one year.

**Regular session rate.** Special program rates may vary.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $65 application fee when submitting an application for admission. The Graduate and Law School application fee is $65. Application to the Johnson Graduate School of Management costs $200 for MBA applicants and $65 for Ph.D. applicants.

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. All students refer to the “Proration Schedule for Withdrawals and Leaves of Absence” below.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. Cornell is authorized to offset any credit balances against any debts owed by the student to the university.

BILLING AND PAYMENT

**Billing**

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to registration day. All other charges, credits, and payments will appear on monthly statements mailed before the middle of the month. It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark. Please inform the Office of the Bursar of any change in billing address. Address changes made at other offices will not change the billing address. The address initially used on billing statements will be the home address as listed on each student’s application for admission.

**Payments**

An individual who has outstanding indebtedness to the university will not be allowed to register or reenroll in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student’s bill by several departments and offices of the university. Because the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

E-mail: uco-bursar@cornell.edu; web site: www.bursar.cornell.edu.

**Student Health Insurance**

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage.

The Student Health Insurance Plan (SHIP) is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and population-specific material for undergraduates, graduate students, and professional students are mailed to each student in July. Undergraduates, graduate students, and professional students each have separate deadlines and guidelines. Please be sure to check the July mailing for complete details.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Graduates leaving mid-year may be eligible to purchase a five-month plan. Students enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, contact the:

Cornell Student Health Insurance Office
409 College Avenue, Suite 211
Ithaca, NY 14850, USA
Telephone: 607-255-6363
E-mail: sicu@cornell.edu
Web site: www.gannett.cornell.edu/student_insurance

**Class Attendance, Meeting Times, and Examinations**

CLASS ATTENDANCE AND ABSENCES

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

<td><strong>(Mon. and Wed.)</strong> 07:30 P.M.</td>
</tr>
<tr>
<td>10:30 P.M.</td>
</tr>
</tbody>
</table>

No classes or laboratory exercises are to be held between the hours of 4:25 P.M. and 7:30 P.M. Monday through Thursday, after 4:25 P.M. on Friday, and after 12:20 P.M. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 P.M. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 P.M. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (e.g., athletic, musical, theatrical, or employment).

Any exception to the above regulations, other than for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

### Final Examinations

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the Course and Time Roster and the Course and Room Roster, both of which are published through the Office of the University Registrar each semester and on the web at www.cornell.edu/Academic/class.html.

#### General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) during the final examination period.
5. Papers may be required of students during the study period if announced sufficiently in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

#### The university policies governing study period and final examinations are:

- **a)** Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.
- **b)** Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.
- **c)** Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

#### Evening Preliminary Examinations

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M. An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more
Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-. F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

<table>
<thead>
<tr>

</tbody>
</table>

Courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option. (d) Only one optional S-U course is allowed per semester.

Architecture, Art, and Planning. (a) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (b) If a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may be elected during Pre-Course Enrollment or with the written permission of the instructor and advisor on an add/drop form in the first three weeks of classes. (c) Decision is irrevocable after first three weeks of term.

Graduate School. (a) Seminars and Thesis Research courses are usually graded S-U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

Hotel. (a) Maximum of four free-elective credit hours per term. (b) Exceptions are by petition only.

Human Ecology. (a) Not part of student's major. (b) May be used in the 19 credit hours required outside the major in Human Ecology courses. (c) Not part of hours required in humanities, natural sciences, and social sciences. (d) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (e) Freshmen enrolled in ENGL 137 and 138, which are only offered for S-U credit, are permitted to apply these courses to the freshman seminar requirements. (f) Total of 12 credits in S-U courses (not counting physical education) may be counted towards degree requirements during a student's college career.

Industrial and Labor Relations. (a) This option may be elected, if available in ILR electives, or in out-of-college electives but not including directed studies. (b) Degree requirements include a minimum of 105 lettergrade (A+ to D-) credits. (c) Student must also be in good standing. (d) A "U" is considered the equivalent of an "F" in determining a student's academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

Internal Transfer. (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

Resolved, that:

a. the S-U system have symbol equivalents which are uniform within the university: "S" means C- or above; "U" means D+, D, D-, or failure.

b. S-U options be chosen by the student during the first three weeks of the term.

c. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U.

Any change in grading options must be announced by the instructor within the first two weeks of the term.

d. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades.

The rules for the S-U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences. (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those

Veterinary Medicine. (a) There is one foundation course in the veterinary curriculum that is offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor.

INCOMPLETE

The grade of incomplete is appropriate only when both basic conditions are met:

1. the student has a substantial equity at a passing level in the course with respect to work completed; and

2. the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up before the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, B7 Day Hall.

University Requirements for Graduation

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.
PHYSICAL EDUCATION

Classes

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours per week). Gannett Cornell University Health Services can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

Student Records Policy

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of the right to inspect and review their education records. Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The university may not disclose such records unless the student has given written consent.

Student or administrative committees

The most recent student educational records from previous educational agency or institution

Financial arrangements between the student and the university

Any other education record containing personally identifiable information

For further information, please refer to the revised Policy on Access to and Release of Student Education Records on the web at www.univco.cornell.edu/policy/asi.html.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the Code of Academic Integrity and Acknowledging the Work of Others is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy is published in the Policy Notebook, available free of charge from the office of the dean of students.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board for all university projects that use humans as research subjects, assuring compliance to federal regulations protecting human subjects in research at universities. A human subject is defined by federal regulations as "a living individual about whom an investigator obtains data through intervention or interaction with the individual, or identifiable private information." Projects affected by regulation include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. All proposals involving human subjects in any category, including those initiated by students, must be submitted to the University Committee on Human Subjects for review before the research project begins. The guidelines for the use of human subjects in research are available at www.osp.cornell.edu/Compliance/UCHS/homepageUCHS.htm. Inquiries and communications about the guidelines should be directed to the committee's coordinator, 115 Day Hall (255-5138).
USE OF ANIMALS FOR COURSES

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC).

Students should contact the Occidental Medicine Office of Gannett, Cornell University Health Services, or their personal health care provider, prior to working with animals or entering an animal facility, if they may have any medical conditions that may increase their risk.

Guidelines for Faculty and Students with Respect to the Use of Animals in Instruction

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.
2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in Courses of Study should alert students to this fact.
3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.
4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.
5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor of the course.
6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.
7. When students object on ethical or other valid grounds to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives for learning the same material.
8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the chair of the Institutional Animal Care and Use Committee (IACUC) at 253-3735 or by e-mail at iacuc@cornell.edu.
9. Faculty members should instruct students in the responsible use of animals. For more information, see www.univc.edu/policy/CURA.for.html.

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832)

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visited the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Andrew D. White Professors-at-Large engage in a variety of activities including public lectures, ongoing courses, and collaborative research, as well as leading office hours for undergraduate and graduate students. They serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2005

Jimison, Mae, astronaut
McDonough, William, architect
O'Brien, Stephen J., geneticist
Schechner, Richard, director of performance studies

Term Ending in 2006

Cleese, John, writer and actor
Goldworthy, Andy, sculptor
Sacks, Oliver, physician and writer

Term Ending in 2007

Pretty, Jules, sustainable agriculture ecologist
Short, Roger, reproductive physiologist

Term Ending in 2008

Hölldobler, Bert, zoologist
Subrahmanyan, Sanjay, economic historian

Term Ending in 2009

Behrends, Okko, legal historian
Butler, Judith, cultural theorist
Went, Craig, geneticist

Term Ending in 2010

Aldous, David, statistician
Leeson, Lynn Hershey, digital artist
Peskin, Charles, mathematician
Sala, Osvaldo, ecologist
Tibi, Bassam, Islamic

FRANK H. T. RHODES CLASS OF '56 UNIVERSITY PROFESSORSHIP

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Professorship of University Professorship in honor of Cornell's ninth president (1977-'95). The purpose of the Rhodes Class of '56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of '56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of '56 Professors visit the campus for a minimum of two weeks to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Term Ending in 2005

Meier, Richard, architect
Reno, Janet, attorney
Scollinck, Edward M., biomedical scientist

Term Ending in 2006

McKinney, Cynthia, educator and politician
Nye, Bill, science guy
Pilgrin, John, journalist and documentary filmmaker

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-1355)

The Center for Applied Mathematics administers a broad-based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

### Interdisciplinary Centers, Programs, and Studies
- THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES
- 170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies, established in 1961, aims to encourage and support comparative and interdisciplinary research on international subjects. It is one of the largest and most diverse centers of its kind in the United States. Currently, it includes five U.S. Department of Education Title VI National Resource Centers and 16 other area, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center's programs with well over 300 graduate students involved directly in its international programs. Undergraduate students may choose concentrations in international relations, Latin American studies, modern European studies, East Asian studies, South Asian studies, or Southeast Asian studies. (See also Africana Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

Cornell's international programs are poised to anticipate and respond to changing global circumstances and perspectives. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot activities that bring faculty members and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry E. and
Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty members and students. Together with the Peace Studies Program, the center hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty members in discussion of key world events.

The center promotes graduate students’ overseas field research through an annual competition for travel grants and assistance with other fellowship programs. The Fulbright fellowship program, administered by the center, is available to graduating seniors as well as graduate students.

Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system that houses 2,500,000 volumes related to international and comparative studies.

CENTER FOR THE STUDY OF INEQUALITY
Office: 363 Uris Hall
Telephone: 607–254–8674
Fax: 607–254–8672
E-mail: inequality@cornell.edu
web site: www.inequality.com

The Center for the Study of Inequality (CSI) fosters basic and applied research on social, economic, and cultural inequalities and the processes by which such inequalities change and persist. The study of inequality lies at the heart of current debates about welfare reform, affirmative action, the “glass ceiling,” globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways. The mission of CSI is to support research and teaching relevant to issues of inequality, to disseminate research findings coming out of this research, and to otherwise facilitate the study of inequality in the United States and throughout the world.

Symposia and Lecture Series
The CSI regularly sponsors symposia, workshops, and lecture series that draw attention to the most pressing problems and controversies in the field. The current schedule of symposia and lecture series is listed on the center’s web site (www.inequality.com).

Research Support
For faculty affiliates of CSI, small seed grants for inequality-related research are available, especially for research that has the potential to attract external funding. The CSI also runs a small grant program that supports graduate and undergraduate research on poverty or inequality. The application deadline for all grants is May 1, 2006 (for further details, see www.inequality.com/support/index.shtml).

Internships
The CSI serves as a clearinghouse for student internships that are relevant to the study of inequality. For a full listing of possible internships, please consult the center’s web site at www.inequality.com/academics/index.shtml.

Dissemination
The working paper series on the center web site assists in disseminating research findings, opinion pieces, and related scholarship from some of the top scholars of inequality in the world. This series can be found at www.inequality.com/publications/index.shtml.

Awards
The CSI presents a Distinguished Book Award and Distinguished Paper Award for publications that significantly advance our understanding of inequality. The recipients are invited each year to Cornell University to present their research (see www.inequality.com/publications/awards.shtml).

Undergraduate Concentration
The inequality concentration allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. The concentration is organized into tracks examining such topics as globalization and inequality; social policy, the ethics of inequality; poverty and economic development; social movements; education and inequality; race and ethnicity in comparative perspective; the family and inequality; and literature, postmodernism, and inequality. The concentration is open to students enrolled in any of the seven Cornell undergraduate colleges. If the requirements of the concentration are met, a special notation to this effect will be recorded on the transcript (see www.inequality.com/academics/undergraduate.shtml for further information).

For more information about CSI, please contact Liz Heitner, executive administrator of CSI (254-8674 or inequality@cornell.edu).

COGNITIVE STUDIES
282 Uris Hall
Telephone: 255–6431
E-mail: cogst@cornell.edu
web site: www.cogstud.cornell.edu

Cognitive studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim
of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty members in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Electrical and Computer Engineering, Human Development, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs
An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Program" in the College of Arts and Sciences section. Contact Linda LeVan (255-6431 or cogst@cornell.edu)

Graduate Programs
Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as philosophy, computer science, linguistics, psychology, or neurobiology and behavior on common committees. For further information on the graduate field of cognitive studies, contact Shimon Edelman, director of graduate studies, (255-6365, se37@cornell.edu), or Linda LeVan, executive staff assistant, 282 Uris Hall, Office of Cognitive Studies (255-6431, cogst@cornell.edu)

Courses
Courses from across the university that are relevant to the Cognitive Studies Program are listed in this catalog in the Cognitive Studies Program section under Arts and Sciences.

CORNELL ABROAD
300 Caldwell Hall
Telephone: 607-255-0224, Fax: 607-255-8700
E-mail: cuabroad@cornell.edu
web site: www.cuabroad.cornell.edu
Study abroad is an integral part of a Cornell education. Recent events have made us aware that those aspiring to lead in this century need, more than ever before, knowledge and experience of the diverse world beyond the boundaries of their home country. To help students develop the knowledge, skills, and attitudes necessary for informed citizenship in a transnational world, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff members assist in the planning and application process.

LOCATIONS ABROAD
Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in more than forty countries. The following list includes programs chosen frequently by students with college approval; these locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA
Botswana, Cameroon, Ghana, Kenya, Madagascar, Tanzania, Uganda: School for International Training
Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE)
Kenya: Wildlife Management (School for Field Studies)
South Africa: Universities of Cape Town and Natal, Organization for Tropical Studies

ASIA
China: Chinese University of Hong Kong; *Cornell FALCON for the spring semester or full year at the Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing and East China Normal Universities (CIEE); International Chinese Language Program at National Taiwan University, IES Beijing; CET in Harbin
India: School for International Training; St. Stephen's College Delhi (through Brown or Rutgers Universities); CIEE at University of Hyderabad
Japan: *Kyoto Center for Japanese Studies; International Christian University and other universities; IES Tokyo
Korea: Yonsei University; Ewha University
Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University
Thailand: Khon Kaen University (CIEE)
Vietnam: University of Hanoi (CIEE)

AUSTRALIA AND NEW ZEALAND
Australia: Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, School for International Training; Sydney Internship (Boston University);
New Zealand: Otago and Lincoln Universities in New Zealand

EUROPE
Czech Republic: CERGE at Charles University, CET porogram in Jewish Studies
Denmark: *Denmark's International Study Program (DIS)
France: *EDUCO (Cornell, Duke, and Emory in Paris)
France VII, Paris IV, Paris I Institut d'Etudes Politiques de Paris ('Sciences Po'); Critical Studies Program at the University of Paris (CJEE); Paris Internship (Boston University); IES Omon Business Program
Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg
Greece: College Year in Athens
Ireland: Trinity College Dublin and the National University Colleges of Dublin
Galway, and Cork
Italy: *Bologna Cooperative Studies Program; *Cornell College of Art, Architecture, and Planning Program in Rome; Cornell at Universita di Roma; IES Florence
Netherlands: University of Amsterdam; Leiden University
Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian)
Spain: *Cornell-Michigan-Penn program at the University of Seville; various language and culture programs
Sweden: *Swedish Practicum in Childhood, Family, and Social Policy at the University of Gotteborg; The Swedish Program at the University of Stockholm
United Kingdom: *Direct enrollment at: the University of Birmingham; University of Bristol; Cambridge University; City University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Manchester; University of Oxford; University of St. Andrews; University of Sussex; University of Warwick; University of York; University of London: King's College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science, and the School of Oriental and African Studies, as well as other universities of choice.

Exterally sponsored programs in the UK include the British American Drama Academy, the Arcadia University, Boston, and Rochester University internships; the Marymount College Program at the London College of Fashion; and the Honsard Parliamentary Internship Programme.
Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell-Brown-Penn UK Centre in London.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN

Argentina and Chile: various university-based study abroad programs, through the Coordinating Programs in the Americas (COPA) of Butler University and the University of Illinois

Belize, Brazil, Chile, Ecuador: School for International Training

Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology; School for Field Study

Cuba: the University of Havana through COPA; School for International Training

Ecuador and Jamaica: Partnership for Service Learning

Honduras: Escuela Agrícola Panamericana (Zamorano)

Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California

MIDDLE EAST AND NORTH AFRICA

Egypt: American University in Cairo

Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University

Jordan: University of Jordan (JIEE)

Lebanon: American University of Beirut

Morocco: School for International Training

Other Locations

Cornell students are by no means limited to the locations listed above or the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Dominican Republic, Finland, Hungary, Mongolia, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere. Although Hawaii is not “abroad,” Cornell Abroad also administers a semester program in Earth and Environmental Systems on the “Big Island” of Hawaii.

Who Studies Abroad

Students from all seven undergraduate colleges and from all major fields study abroad; they are expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long

Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second-semester sophomore year or first-semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic-year programs are highly recommended.

Application Process

Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 200 Caldwell Hall, where students are encouraged to consult the library of study abroad materials, talk with staff members, and attend information meetings. The Cornell Abroad web site is an excellent resource for program offerings and links to universities and programs worldwide, as well as for applications to download and comprehensive information on all aspects of study abroad. Students meet with the study abroad advisers in their colleges to discuss how they will meet college degree requirements.

Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty adviser and the college study abroad adviser. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad. Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering, and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The application deadline for study abroad in the fall 2005 semester and the 2005-2006 academic year is February 15, 2005, for all programs except Oxford and Cambridge, for which the deadline to study at those universities for the full year in 2005-2006 is November 1, 2004. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution or program overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements

Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries. For example, Belgium, Denmark, Egypt, France, Hong Kong, Hungary, Israel, Italy, Japan, Korea, Netherlands, People’s Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language coursework are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad adviser about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.

Housing Arrangements

Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs

Students studying abroad in Cornell programs pay a fixed Cornell Abroad tuition per semester, which covers tuition, housing during term (except in U.K. universities), orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation insurance. It may include other items (e.g., meals, commuter passes) depending on the program. Students pay other costs (e.g., airfare and personal expenses) directly. Different fee levels for Cornell programs reflect the relative cost of operating the programs.

Pending approval by the Board of Trustees, in 2004-2005, the Cornell Abroad tuition for students participating in the Berlin Consortium for German Studies, the Cornell Nepal Study Program, EDUCO (Ennory, Duke, and Cornell in Paris), the Michigan-Cornell-Penn Program in Seville, and the Swedish Practicum at the University of Goteborg is $17,650. The Cornell Field Program in Earth and Environmental Systems in Hawaii is $20,000.

There are three tiers of Cornell Abroad tuition for universities in the United Kingdom: Group 1, University of Cambridge, Oxford, and the King’s College pre-med program, at $16,170 per semester; Group 2, University of Edinburgh, St. Andrews, Imperial College, King’s College, London School of Economics, School of Oriental and African Studies, and University College London, at $14,250; and Group 3, University of Birmingham, Bristol, East Anglia, Glasgow, Manchester, Sussex, Warwick, and York, at $11,000 per semester.

For Denmark’s International Studies Program (DIS), the Cornell Abroad tuition is $16,995 per semester, and for the Kyoto Center for Japanese Studies (KCJS), the tuition is $23,225.
per semester. For the Bologna Cooperative Studies Program (BCSP) the tuition is $13,200 per semester.

Students studying in all other programs in 2004–2005 pay the tuition and other costs charged by their programs and a Cornell international program tuition of $4,090 per semester. The international program tuition covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students.

Financial Aid

Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships and there are also external aid sources.

Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations worldwide through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not normally recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions’ policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded, will be reviewed by Cornell administrators on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (300 Caldwell Hall): Richard Gaulton, Ph.D., director; Kristen Grace, Ph.D., associate director; Libby Okihiro, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site, which incorporates linkages to universities, programs, and resources worldwide as well as a database of cost estimates. In the early weeks of every semester, students and faculty and staff members discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web site (www.cuabroad.cornell.edu). The director and associate directors are available at Cornell Abroad for walk-in advising.

College Study Abroad Advisers

Agriculture and Life Sciences: Bonnie Shelley, 140 Roberts Hall; Architecture, Art, and Planning: Jayne LeGro, B-1 West Sibley Hall; Arts and Sciences: Dean Pat Wasylw, 55 Goldwin Smith Hall; Engineering: Dan Maloney Hahn, 167 Olin Hall; Hotel Administration: Cheryl Farrell, 174B Statler Hall; History: Leeann O’Donnell, 101 Ives Hall; Human Ecology: Paul Fisher, 172 Martha Van Rensselaer Hall; Industrial and Labor Relations: Kevin Harris, 101 Ives Hall.

CORNELL IN WASHINGTON PROGRAM

M101 McGraw Hall
Telephone: 255–4090
web site: http://ciw.cornell.edu

Cornell in Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation’s political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, both collections of libraries, museums, theaters, and art galleries offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition. Washington’s vast high-technology sector, concentrated in both telecommunications and bio-technology, creates endless opportunities for the study of recent developments and future prospects in those arenas, as well. Cornell in Washington students enroll in one of two core courses—Studies in Public Policy or Studies in the American Experience—take one or two elective courses, conduct individual research projects, and choose externships from more than a thousand positions in government agencies, research institutes, non-profit organizations, and private professional firms and businesses.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students are on the upper floors.

The Cornell in Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

Tuition

Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing

Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels, and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of $150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the center, and street parking is not permissible.

Applications

Application forms are available from the Cornell in Washington program office at M101 McGraw Hall. Students may also apply on the Web at ciw.cornell.edu. Applications should be submitted the semester prior to participation.

Information

The Cornell in Washington program web site is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and early March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing, and other features of the program may be obtained at either the Cornell in Washington program office at M101 McGraw Hall, 607–255–4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037, 202-466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

294 Caldwell Hall
Telephone: 607–255–8018
Fax: 607–255–5240
E-mail: cipa@cornell.edu
web site: www.cipa.cornell.edu

The Cornell Institute for Public Affairs (CIPA) offers a university-wide two-year program of graduate professional studies leading to a Master of Public Administration (M.P.A.) degree. CIPA prepares leaders for government, for nonprofit organizations, and for institutions in the private sector that interact with both.

CIPA Fellows (graduate students) have the opportunity to study public policy and program management from a cross-disciplinary
perspective. Students gain an understanding of the political and administrative processes through which issues, problems, and policies are formulated; the economic and fiscal basis for government action in a market economy; and the analytical tools for assessing policy implications. They study the behavior of both public and private organizations and their management. They also develop sensitivity to the moral and ethical dimensions of policy issues.

Faculty

The depth and flexibility of the program is reflected in the growing number of affiliated faculty members. CIPA is not confined within a single school or college, but spans the entire university. More than 100 field faculty members, representing twenty-five departments, welcome CIPA Fellows into their course and design thesis committees. About thirty members of this group, known as the Program Faculty, teach courses taken most frequently by CIPA Fellows. Within this group, the Core Faculty provides instruction in the foundation courses. Core Faculty members include David B. Lewis, CIPA director; City and Regional Planning; Nancy Chau, Applied Economics and Management; Matthew Drennan, City and Regional Planning; Theodore J. Lowi, the John L. Senior Professor of American Institutions in the Department of Government; Kathryn S. March, Anthropology; and Jerome Ziegler, in the Department of Policy Analysis and Management.

M.P.A. Program Flexibility

The two-year Master of Public Administration (M.P.A.) degree program consists of sixteen courses; CIPA Fellows typically take four courses per term for four semesters. Although the M.P.A. program offers a basic structure for study, each CIPA Fellow works closely with a faculty advisor to design an individualized program based on his/her specific area of interest. Courses may be taken through the program in any department or college in the university.

Advising

Upon entering the M.P.A. program, each Fellow is assigned a program advisor based on his/her area of interest. These advisors are drawn from the CIPA Core Faculty. They assist Fellows in designing their individual program of study and selecting their courses. The assignment of advisors is meant to assist new students in getting a strong start with their studies. Once familiar with the resources available, students are welcome to ask another Core Faculty member to be their program advisor.

Toward the end of their first year, when they select their thesis topic, CIPA Fellows choose a thesis advisor from among the more than 100 faculty members in the Field of Public Affairs. The thesis advisor guides the Fellow in thesis research and writing.

Foundation Course Work

To develop a foundation of basic concepts and capabilities for the study of Public Policy, CIPA Fellows take three courses in each of the following three subject areas:

• Administration, Politics, and Public Policy
• Economics and Public Finance
• Quantitative Analysis

At least one of the three courses in each subject area must be a core foundation course—a course taught by a CIPA Core Faculty member.

Concentration Course Work

The M.P.A. program offers eight concentration options:

• Environmental Policy
• Finance and Fiscal Policy
• Government, Politics, and Policy Studies
• Human Rights and Social Justice
• International Development Studies
• Public and Non-Profit Management
• Science and Technology Policy
• Social Policy

During the latter half of the first year of course work, CIPA Fellows select a concentration. Concentrations are designed to help students organize and develop a particular area of study. Fellows are encouraged to pursue a broad range of interests within their choice of a concentration.

Internships and/or Off-Campus Study Options

CIPA Fellows are expected to engage in public-affairs work related to their respective areas of concentration during the summer between their first and second years of study. The objective is to gain pragmatic professional experience that will complement a student's formal academic study. CIPA's assistant director for professional development provides assistance to Fellows in finding placements that match their interests, expertise, and professional goals. Appropriate internships are available in public policy- or public-affairs-related organizations in both the public and private sector. Examples of placements include the following:

• the International Monetary Fund
• the Organization of American States
• the United Nations
• the United States Agency for International Development
• the United States Congress and Senate
• the World Bank
• state, local, and urban municipal governments
• nongovernmental organizations worldwide
• private sector consulting firms

CIPA Fellows have the opportunity to gain professional experience off-campus, while taking a semester of courses for credit, through the following three programs:

• Rome Program
• Cornell in Washington
• Cornell in Nepal Study Program.

Thesis

As a culmination of studies in the M.P.A. program, each Fellow develops and submits a thesis. Typically, the thesis grows out of a Fellow's specific area of concentration, and often incorporates work done during the summer internship or an off-campus study program. It should include conceptual formulation of important policy issues, analysis of these issues and effective professional explanations of alternative response strategies. The level of work expected for the M.P.A. thesis is equivalent to one or two semester-long courses.

Professional Student Activities

CIPA Fellows gain practical skills by organizing, managing, and participating in a variety of professional development activities. These provide Fellows with opportunities to share work experience with other Fellows, and to meet practitioners and distinguished faculty members in the Field of Public Affairs. Fellows participate in one or more of the following activities for at least two semesters.

These initiatives include:

• Colloquium and Conference Committee: This student group sets the agenda for the weekly Colloquium Series and makes arrangements for the chosen guest lecturer to come to campus.
• Point of View (POV): The CIPA Public Affairs television program. POV is a part talk show and part debate show. Fellows work in all aspects of TV production and presentation, gaining invaluable experience for the media exposure they will encounter as public-policy professionals.
• The Current: CIPA Fellows publish a journal of student policy research. Working on The Current offers Fellows a firsthand view of the rigorous publishing academic work, and also provides a foundation in professional writing and editing—necessary skills for preparing reports and position papers, and publishing research findings.

Complementary Degrees

CIPA Fellows may elect to combine their M.P.A. program with study for a complementary degree such as a J.D. from the Cornell Law School, an M.B.A. from the Graduate School of Management, an M.M.H. from the Hotel School, or an M.R.P. in the Field of City and Regional Planning. Admission to the complementary degree program is independent from admission into CIPA.

Accelerated Master's Program

An accelerated program for Cornell undergraduates allows students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the M.P.A. in just one year beyond their undergraduate studies.

Residence Requirement

Fellows are required to spend four semesters of study in residence to complete the M.P.A. Those who enroll in the Cornell Accelerated Master's program can earn the equivalent of two semesters in residence during their senior year.

Admission

The CIPA program seeks diversity in its student body, drawing from a pool of applicants who have studied in a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in
policy making or implementation are strongly encouraged to apply. Admission to CIPA is selective.

Decisions are based on:
- potential for public-policy leadership as evidenced by professional work, community, extracurricular, or other relevant experience
- an evaluation of the applicant's overall academic record
- GRE scores
- letters of recommendation
- an extensive written statement of purpose

Applicants for whom English is a second language will need to achieve a minimal TOEFL score of 250 (computer based) or 600 (paper based).

CIPA has a policy of rolling admission. For an application or for more information, contact the Cornell Institute for Public Affairs, 294 Caldwell Hall (telephone: 607–255–8018; fax: 607–255–5240; e-mail: cipa@cornell.edu; web site: www.cipa.cornell.edu).

Financial Aid
CIPA students fund their education by drawing on a variety of sources. Although the institute provides some partial fellowships, it is unable to provide full support for any individual student. Fellows often win support from Fulbright, Truman, or World Bank fellowships. In addition, Cornell offers numerous assistantship and employment opportunities for graduate students. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers. Decisions concerning CIPA funding are made in March, so those wishing to be considered should complete their application by March 1.

CORNELL PLANTATIONS
One Plantations Road
Telephone: 255–2400
E-mail: plantations@cornell.edu
web site: www.plantations.cornell.edu

Introduction
Cornell Plantations is Cornell University’s arboretum, botanic garden, natural areas, and many on-campus gardens—places of exceptional beauty, diversity, and learning opportunities. Areas managed include over 4,000 acres of natural areas on and off campus in addition to the 150 acres in the F. R. Newman Arboretum and the fifty acres of botanical gardens in and around central campus.

Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell’s academic programs and research in disciplines such as ecology and evolutionary biology, landscape architecture, ornamental horticulture, and bioengineering. While many of Cornell Plantations’ resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations.

Cornell Plantations has something for everyone! We’re also the many places that non-horticultural students and faculty members visit for classes ranging from art, literature, and women’s issues, to nutrition.

Credit Courses
Cornell Plantations offers two for-credit courses, HORT 480 (Plantations Fall Lecture Series) and HORT 485 (Public Garden Management). HORT 480 is a 1-credit S/U seminar series offered each fall. HORT 485 is a 3-credit course offered every other spring semester. Cornell Plantations also offers non-credit classes and workshops such as botanical illustration, arts and crafts, gardening techniques, and ecology walks, visit our web site at www.plantations.cornell.edu or call 607–255–2400 for more information.

Internships
Cornell Plantations’ internship program is just for you, the Cornell University student! Since the 1990s, more than sixty university students have been working side by side with Plantations’ knowledgeable staff, learning and having fun. A number of positions in various areas are available each year, beginning after finals in May. All positions strive to build on classroom learning through hands-on work, encouraging students’ interests in horticulture and the natural world. Call 255–2401.

Master’s Program
Cornell Plantations’ Master of Professional Studies program offers fully funded fellowships in public garden management. Visit our web site for program details or call 255–2406.

Planning a Visit
To discover all that is Cornell Plantations, visit our web site at www.plantations.cornell.edu or pick up a map or a copy of the Cornell Plantations Path Guide at the Visitor Resource Center and Garden Gift Shop in the Lewis Education Center just below Tower Road (607–255–2400). The Path Guide and accompanying video are also available at The Cornell Store.

PROGRAM ON ETHICS & PUBLIC LIFE
240 Goldwin Smith Hall
Telephone: 607–255–8515

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about rights, freedom of speech, and privacy. And in politics and government, we wrestle with questions about campaign, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics & Public Life (EPL) is Cornell’s initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character. EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under “Special Programs and Interdisciplinary Studies”).

For information regarding content or availability of EPL core/related courses, contact the academic department listed.

EPL Core Courses

PHIL 194/GOVT 294 Global Thinking
PHIL 242/GOVT 260 Social and Political Philosophy
PHIL 246/BSOC 206/S&T 206 Ethics and the Environment
PHIL 247 Ethics and Public Life
PHIL 342 Law, Society, and Morality
GOVT 469/PHIL 369 Limiting War: The Morality of Modern State Violence
GOVT 412 Voting and Political Participation
GOVT 460/FGSS 466/LAW 648 Feminism and Gender Discrimination
GOVT 468/PHIL 368 Global Climate and Global Justice
GOVT 491/691 Normative Elements of International Relations

Related Courses
AN SC 414 Ethics and Animal Science
CRP 549 Ethics and Practical Judgment in Planning
ENGRG 360/S&T 360 Ethical and Social Issues in Engineering
GOVT 474/PHIL 446 Topics in Social and Political Philosophy
ILRHB 366 Women at Work
ILRCH 401 My Brother’s Keeper: Volunteering and Philanthropy
ILRCH 482 Ethics at Work
ILRCH 488 Liberty and Justice for All
ILRCH 604 Theories of Equality and Their Application in the Workplace
LAW 655 International Human Rights
LAW 667 Law and Ethics of Lawyering
LAW 718 Ethnic Conflict and International Law
LAW 748 Legal Ethics and Professionalism
MIL S 441 Leadership, Management, and Ethics for Junior Military Officers
NAV S 402 Leadership and Ethics
NBA 578 Business Ethics
NTRES 407 Religion, Ethics, and the Environment
NTRES 411 Seminar in Environmental Ethics
PAM 567 Health and Welfare Policy
PHIL 145 Contemporary Moral Issues
PHIL 151 Philosophy of Sport
PHIL 241 Ethics
PHIL 245 Ethics and Health Care
PHIL 341 Ethical Theory
PHIL 344 History of Ethics: Ancient and Medieval
PHIL 345 History of Ethics: Modern
PHIL 346 Modern Political Philosophy
PHIL 447 Contemporary Ethical Theory

Michele M. Moody-Adams, Wyn and William Y. Hutchinson Professor of Ethics and Public Life, and professor of philosophy; Burke Hendrix, assistant professor of government;
and assistant professor of ethics and public life; Henry Shue, professor of ethics and public life and professor of philosophy.

PROGRAM IN REAL ESTATE
114 West Shelby Hall
Telephone: 607-255-7110

The two-year Master of Professional Studies in Real Estate (M.P.S./R.E) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate exists at Cornell University to serve as the integrating organizational unit for the management and administration of academic and industry-related real estate activities on and off campus. The Field of Real Estate is a committee of faculty members selected from several different colleges that is directly involved in and responsible for the design, delivery, and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also contribute an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, the real estate development process, real estate finance and investments, managerial finance, residential development, real estate law, construction planning and operations, design in real estate development, and real estate marketing and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration, and there is a leadership and management distribution requirement. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate development, and many other aspects of the real estate business).

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

1. Basic Math and Sciences
   a. MATH 111 and 112, or MATH 191 and 192
   b. PHYS 207 and 208, or PHYS 112 and 213 if PHYS 214 will also be taken (see below)
   c. CHEM 207 and 208
   d. BIO G 101/105 and 102/104 (or 105-106) or BIO G 100 and 110
   e. THREE ADDITIONAL 3-4 credit courses in basic science and math, generally 100-200-level classes. One or two of the following may be included in the selection:
      EAS 201 Physics and Chemistry of the Earth
      EAS 240 Field Study of the Earth System
      BIOE 261 Ecology and the Environment
   Other examples are MATH 293, MATH 294, MATH 213, biochemistry, organic chemistry (e.g., CHEM 257), PHYS 214, and introductory statistics. With the exception of an introductory statistics course, the additional basic courses should require at least one of the classes listed in 1-4 above as a prerequisite.

2. Science of Earth Systems Core Courses
   EAS 302 Evolution of the Earth System
   EAS 331/ASTRO 331 Climate Dynamics
   EAS 321/NRES 321 Introduction to Biogeochemistry

3. Concentration Courses
   Four intermediate to advanced-level courses (300-level and up) that build on the core courses and have prerequisites among the "Basic Math and Sciences" courses listed above. These classes build depth and provide the student with a specific expertise in some facet of earth system science. Possible areas of concentration include, but are not limited to, Ocean Sciences, Environmental Geology, Climate Dynamics, Biogeochemistry, Ecological Systems, Environmental Biophysics, Hydrological Systems, and Soil Science.

The SES major is available for students in the College of Agriculture and Life Sciences and the College of Arts and Sciences. In the College of Engineering, the SES curriculum may be completed by choosing the SES option in the Department of Earth and Atmospheric Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences but relies on the collaboration of several departments across the university.

The SES Curriculum

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate studies leading to the M.S. and/or Ph.D. in any of the earth science subdisciplines (e.g., atmospheric science, geology, geophysics, biogeochemistry, hydrology, oceanography).
- Employment in environmentally oriented careers in both the private and public sector at the B.S. or M.A. level such as environmental consulting and science writing.
- Graduate degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.
Department of Statistical Science

301 Malott Hall (255–8066)

M. T. Wells (chair); R. L. Strawderman (director of graduate studies); J. A. Bunge (director of professional programs); K. Atheyea; T. Berger; C. Bustamante; T. DiCiccio; R. Durrett; E. Dyrkin; T. Fine; Y. Hong; J. T. G. Hwang; H. Kesten; N. Kiefer; G. Lawler; M. Nussbaum; P. Proctor; S. Resnick; D. Ruppert; G. Samorodnisky; S. Schwager; B. Turnbull; P. Velleman; T. Vogelsang.

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Students interested in graduate study in statistics and probability can apply to the Graduate Field of Statistics or to one of the other graduate fields of study that offer related coursework. Students in the Field of Statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study, students should contact the Director of Graduate Studies, 301 Malott Hall.

The department also offers an undergraduate program through Biological Statistics and Computational Biology (BSCB) in the College of Agriculture and Life Sciences and an Engineering Statistics minor in the College of Engineering. Undergraduate majors and certificate programs are currently under development for other colleges. For information, contact the Undergraduate Coordinator (301 Malott Hall, 255–8066).

Statistics courses offered by the departments listed below will fill distribution requirements in many of the colleges.

A free consulting service is offered through BSCB in the College of Agriculture and Life Sciences. Statistical computing consulting is available through the Office of Statistical Consulting, B21 Savage Hall, 255–1926.

The department is organized into four units: Biological Statistics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural statistics, biostatistics, economic and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

Course Designations

The following course identifiers are used to designate the courses offered by the separate units: Biological Statistics, Engineering Statistics Unit (ENGR); STENGR; Mathematical Statistics Unit (ARTS); STMATH; Social Statistics Unit (ILR and ARTS), STSOC. To enroll in one of the courses, see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

Department of Statistical Science

ST 501–502 Applied Statistical Analysis

This is the two-semester core course for students in the Master of Professional Studies (M.P.S.) degree program in applied statistics in the Department of Statistical Science. Enrollment is limited to students enrolled in the M.P.S. program. The course consists of a series of modules on various topics in applied statistics. Some modules will include guest lectures from practitioners. Parallel with the course, students complete a year-long, in-depth data analysis project.

ST 501 Applied Statistical Analysis

Letter only. Topics include, but are not limited to: statistical computing systems, statistical software packages, statistical graphics, and simulation methods and algorithms.

ST 502 Applied Statistical Analysis

Letter only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

[ST 578 Statistical Methods for Reliability Survival Data]

Prerequisites: OR 270 or equivalent, plus some senior elective-level course in applied statistics such as regression, data mining, or time series. This course provides an introduction to probabilistic and statistical methodology for the analysis of lifetime data. Because of the presence of such features as censoring, skewed distributions, and time-varying covariates, special statistical techniques are required. Topics include: life distributions, life tables, truncation and censoring, Kaplan–Meier estimate, accelerated life tests, Weibull and lognormal regression models, Cox proportional hazards model, regression diagnostics, system reliability, repairable systems reliability, repeated events. Use of statistical computing packages, such as SAS and Splus, is stressed to perform data analyses, although no previous experience is assumed.

ST 600 Statistics Seminar

Fall and spring. I credit. S/U only. Prerequisite or corequisite: BTRY 409 or permission of instructor.

Biological Statistics Unit

S155 401 Biological Statistics I (enroll in BTRY 401)
S155 402 Biological Statistics II (enroll in BTRY 402)
S155 382 Introduction to Statistical Genomics and Bioinformatics (enroll in BTRY 382)
S155 400 Biometry Seminar (enroll in BTRY 400)
S155 408 Theory and Probability (enroll in BTRY 408)
S155 409 Theory of Statistics (enroll in BTRY 409)
S155 482 Statistical Genetics (enroll in BTRY 482)
S155 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)
S155 495 Statistical Consulting (enroll in BTRY 495)
S155 497 Undergraduate Individual Study in Biometry and Statistics (enroll in BTRY 497)
S155 498 Undergraduate Supervised Teaching (enroll in BTRY 498)
S155 499 Undergraduate Research (enroll in BTRY 499)
S155 601 Statistical Methods I (enroll in BTRY 601)
S155 602 Statistical Methods II (enroll in BTRY 602)
S155 603 Statistical Methods III (enroll in BTRY 603)
S155 604 Statistical Methods IV: Applied Design (enroll in BTRY 604)
S155 652 Computationally Intensive Statistical Inference
S155 672 Topics in Environmental Statistics (BTRY 672)
S155 682 Statistical Genomics (enroll in BTRY 682)
S155 694 Graduate Special Topics in Survival Analysis (enroll in BTRY 694)
S155 697 Individual Graduate Study in Biometry and Statistics (enroll in BTRY 697)
S155 717 Linear and Generalized Linear Models (enroll in BTRY 717)
S155 795 Statistical Consulting (enroll in BTRY 795)
S155 798 Graduate Supervised Teaching (enroll in BTRY 798)

Engineering Statistics Unit

S156 310 Introduction to Probability and Random Signals (enroll in ECE 310)
S156 360 Engineering Probability and Statistics II (enroll in OR&E 360)
S156 361 Introductory Engineering Stochastic Processes I (enroll in OR&E 361)
S156 411 Random Signals in Communications and Signal Processing (enroll in ECE 411)
S156 436 A Mathematical Examination of Fair Representation (enroll in OR&E 436)
S156 467 Telecommunication Systems I (enroll in ECE 467)
S156 473 Operations Research Tools for Financial Engineering (enroll in OR&E 473)
S156 474 Statistical Data Mining (enroll in OR&E 474)
S156 476 Applied Linear Statistical Models (enroll in OR&E 476)
S156 512 Fundamental Information Theory (enroll in ECE 562)
S156 517 Feedforward Neural Networks (enroll in ECE 577)
S156 523 Introductory Engineering Stochastic Processes I (enroll in OR&E 523)
S156 560 Engineering Probability and Statistics II (enroll in OR&E 560)
S156 561 Queuing Theory and Its Applications (enroll in OR&E 561)
S156 580 Simulation Modeling and Analysis (enroll in OR&E 580)
S156 650 Applied Stochastic Processes (enroll in OR&E 650)
S156 651 Probability (enroll in OR&E 651)
S156 665 Storage Data Communication Models (enroll in OR&E 665)
S156 670 Statistical Principles (enroll in OR&E 670)
S156 677 Statistical Learning Theory for Data Mining (enroll in OR&E 677)
S156 703 Selected Topics in Applied Probability (enroll in OR&E 703)
S156 778 Selected Topics in Applied Statistics (enroll in OR&E 778)

Mathematical Statistics and Probability Unit

S158 171 Statistical Theory and Application in the Real World (enroll in MATH 171)
S158 311 Introduction to Analysis (enroll in MATH 311)
S158 471 Basic Probability (enroll in MATH 471)
S158 472 Statistics (enroll in MATH 472)
S158 621 Measure Theory and Lebesgue Integration (enroll in MATH 621)
STMATH 671-672 Probability Theory (enroll in MATH 671-672)
STMATH 674 Introduction to Mathematical Statistics (enroll in MATH 674)
STMATH 771-772 Seminar in Probability and Statistics (enroll in MATH 771-772)
STMATH 777-778 Stochastic Processes (enroll in MATH 777-778)

Social Statistics Unit
STSOC 210 Statistical Reasoning I (enroll in ILRST 210)
STSOC 211 Statistical Reasoning II (enroll in ILRST 211)
STSOC 310 Statistical Sampling (enroll in ILRST 310)
STSOC 312 Applied Regression Methods (enroll in ILRST 312)
STSOC 319 Introduction to Statistics and Probability (enroll in ECON 319)
STSOC 320 Introduction to Econometrics I (enroll in ECON 320)
STSOC 321 Applied Econometrics I (enroll in ECON 321)
STSOC 411 Statistical Analysis of Qualitative Data (enroll in ILRST 411)
STSOC 499 Directed Studies (undergraduate) (enroll in ILRST 499)
STSOC 510 Statistical Methods for the Social Sciences I (enroll in ILRST 510)
STSOC 511 Statistical Methods for the Social Sciences II (enroll in ILRST 511)
STSOC 630 Econometrics II (enroll in ECON 630)
STSOC 639 Econometrics I (enroll in ECON 639)
STSOC 721 Time Series Econometrics (enroll in ECON 721)
STSOC 722 Semi/Nonparametric Econometrics (enroll in ECON 722)
ISTSOC 710 Applied Econometrics (enroll in ECON 710)
ISTSOC 711 Time Series Econometrics (enroll in ECON 711)
ISTSOC 739 Advanced Topics in Economics I (enroll in ECON 739)
ISTSOC 799 Directed Studies (Graduate) (enroll in ILRST 799)

PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY
Department of Food Science
116 Stocking Hall (255-8008)
The Cornell Program in Comparative and Environmental Toxicology is a broadly based intercollege program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

Graduate Studies
The graduate field of environmental toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry, and risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

Courses
Courses in environmental toxicology are cosponsored by the university's academic departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 116 Stocking Hall, telephone: 255-8008, e-mail: envtox@cornell.edu, web site: instruct1.cs.cornell.edu/research/envtox/

UNDERGRADUATE BUSINESS STUDY
Cornell offers an accredited general undergraduate business degree program as well as world-renowned business-related programs in five other colleges and schools. Because the choices are so broad, students are encouraged to explore the offerings carefully to identify the program that best matches their business career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields associated with each of the undergraduate options.)

Applied economics and management
The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell's general undergraduate business degree. Accredited by AACSB International—The Association to Advance Collegiate Schools of Business, AEM's undergraduate business program offers courses that prepare students for careers in finance, marketing, management, and business strategy. Students also may participate in AEM's specialized programs focusing on entrepreneurship, agribusiness, small business, and food industry management. Courses reflect the program's analytical, applied economics focus. (web site: www.aem.cornell.edu)

Arts and sciences
Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular, arts majors in economics, mathematics, sociology, and psychology. Economics focuses on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science, operations research, or economics to prepare for careers in areas such as actuarial science or finance. (web site: www.arts.cornell.edu)

Engineering
Many of today's business managers hold engineering degrees. Each of the College of Engineering's 10 major fields prepares students for business careers. Operations research and engineering is the most business-oriented engineering field, preparing graduates for careers such as investment banking and process engineering. Engineering students in any field can take a business-oriented minor in areas such as industrial systems and information technology, and operations research and management science. (web site: www.engineering.cornell.edu)

Hotel administration
The School of Hotel Administration, the world's leading hospitality management program, prepares students for management and entrepreneurial careers in businesses such as hotels, resorts, restaurants, amusement parks, sports arenas, cruise lines, and airlines. The school offers a rigorous business curriculum with courses in finance and real estate; hospitality facilities and operations; marketing, tourism, strategy, and information systems; and organizational management, communication, and law. The school's 150-room conference hotel gives students the opportunity to apply what they learn in a real-world business. (web site: www.hotelschool.cornell.edu)

Human ecology
The College of Human Ecology offers three business-oriented majors. The textiles and apparel major prepares students for careers in the fashion industry, for example, as a retail executive or merchandise buyer. Students majoring in facility planning and management study interior design, management, environmental psychology, and real estate to pursue careers as facility planners and consultants. The policy analysis and management major offers concentrations focusing on health, consumers, and policy, and its graduates pursue careers as nonprofit managers, consumer advocates, and policy researchers. (web site: www.humec.cornell.edu)

Industrial and labor relations
The School of Industrial and Labor Relations (ILR) focuses on the "people" side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior, human resource management, labor law, labor economics, history, and statistics. Students can then develop special interests in management, dispute resolution, negotiation, employee relations, labor unions, collective bargaining, public policy, and international labor issues. Most ILR graduates begin careers in areas such as management, consulting, and public policy, but about one-third go directly into law school. (web site: www.ilr.cornell.edu)

Related Areas
Entrepreneurship and Personal Enterprise Program
This university-wide program is open to all Cornell students interested in eventually starting their own businesses or working for venture capital firms. A series of almost 50 linked entrepreneurship-related courses are offered by the above six colleges and schools as well as by the Johnson Graduate School of Management, the Law School, and the School of Veterinary Science. (web site: epe.cornell.edu)

International programs
Several additional programs allow business students to focus on a particular geographic area. Concentrations are offered in Latin American Studies, Modern European Studies, East Asian Studies, South Asian Studies, Southeast Asian Studies, and African Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an interdepartmental program in international agriculture.

COMBINED DEGREE PROGRAMS
Highly qualified undergraduates may co-register with the Johnson Graduate School of Management during their senior year, thereby earning their M.B.A. degree in less than the usual time. Students in all Cornell undergraduate colleges may explore this option. The College of Engineering allows qualified students to earn a B.S., M.B.A., and M.Eng. degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the course work.

SELECTED BUSINESS AND MANAGEMENT COURSES

Accounting
AEM 221 Financial Accounting
AEM 323 Managerial Accounting
H ADM 123 Financial Accounting Principles
H ADM 422 Taxation and Management Decisions
OR&IE 350 Financial and Managerial Accounting

Agribusiness Management
AEM 302 Farm Business Management
AEM 329 International Agribusiness Study Trip
AEM 346 Dairy Markets and Policy
AEM 403 Farm Management Study Trip
AEM 404 Advanced Agricultural Finance Seminar
AEM 405 Agricultural Finance
AEM 427 Agribusiness Strategy
AEM 431 Food and Agricultural Policies

Communication
COMM 201 Oral Communication
COMM 263 Organizational Writing
COMM 301 Business and Professional Speaking
ENGRC 335 Communications for Engineering Managers
H ADM 165 Managerial Communication I
H ADM 364 Advanced Business Writing

Economics
AEM 200 Contemporary Controversies in the Global Economy
AEM 230 International Trade and Finance (also ECON 230)
ECON 101 Introductory Microeconomics
ECON 102 Introductory Macroeconomics
ECON 313 Intermediate Microeconomic Theory
ECON 331 Money and Credit
ECON 351 Industrial Organization I
ILRLE 240 Economics of Wages and Employment
ILRLE 443 Personnel Economics for Managers (also ECON 443)
PAM 200 Intermediate Microeconomics

Entrepreneurship
AEM 325 Personal Enterprise and Small Business Management
AEM 425 Small Business Management Workshop
CHEM 404 Entrepreneurship in Chemical Enterprise
ENGRI 127 Introduction to Entrepreneurship and Enterprise Engineering (also M&AE 127)
M&AE 461 Entrepreneurship for Engineers (also ENGRG 461 and OR&IE 452)
NBA 300 Entrepreneurship and Enterprise
Finance and Real Estate
AEM 324  Financial Management
AEM 420  Investments
AEM 421  Derivatives and Risk Management
AEM 423  Risk Management in Business
AEM 428  Valuation of Capital Investment
AEM 429  International Finance
ECON 333  Financial Economics
H ADM 125  Finance
H ADM 322  Principles of Investment Management
H ADM 420  Principles of Real Estate
H ADM 424  Securities Analysis and Portfolio Management
ILRLE 240  Economics of Wages and Employment
OR&IE 451  Economic Analysis of Engineering Systems

Hospitality Management
H ADM 105  Introduction to Lodging
H ADM 106  Introduction to Food Service Operations
H ADM 236  Culinary Theory and Practice
H ADM 255  Hotel Development and Planning
H ADM 275  Information Technology for Hospitality Managers
H ADM 305  Restaurant Management
H ADM 321  Hospitality Financial Management
H ADM 387  Business and Hospitality Law

International Business
AEM 335  International Technology Marketing of Biotechnology
AEM 430  International Trade Policy
AEM 432  Business and Governments in a Global Marketplace
AEM 442  Emerging Markets
AEM 449  Global Marketing Strategy
ECON 362  International Monetary Theory and Policy
ILRHR 456  International Human Resource Management

Law and Regulation
AEM 320  Business Law I
AEM 321  Business Law II
AEM 422  Estate Planning (also NBA 562)
COMM 428  Communication Law
ECON 354  Economics of Regulation
GOVT 389  International Law
H ADM 422  Taxation and Management Decisions
H ADM 487  Real Estate Law
H ADM 489  The Law of the Internet and e-Commerce
ILRCB 201  Labor and Employment Law
PAM 204  Economics of the Public Sector
PAM 340  The Economics of Consumer Policy
PAM 341  Economics of Consumer Law and Protection

Management
AEM 220  Introduction to Business Management
AEM 322  Technology, Information, and Business Strategy
AEM 327  Technological Change and Innovation Strategy
AEM 328  Innovation and Dynamic Management (also H ADM 449)
AEM 424  Management Strategy
AEM 443  Food Industry Strategy
AEM 555  Environmental Management and Policy
ENGRC 323  Engineering Economics and Management
H ADM 412  Managing Organizational Change
H ADM 441  Strategic Management
ILRHR 464  Business Strategy
PAM 220  Introduction to Management: Principles and Differences among Sectors
PAM 334  Corporations, Shareholders, and Policy
PAM 423  Risk Management and Policy

Marketing
AEM 240  Marketing
AEM 448  Food Merchandising
COMM 272  Principles of Public Relations and Advertising
H ADM 343  Marketing Research
H ADM 347  Consumer Behavior
H ADM 448  Marketing Communications
PAM 223  Consumer Markets
PAM 323  Consumer Markets II
NCC 503  Marketing Management

Organizational Behavior, Human Resource Management, and Sociology
H ADM 115  Organizational Behavior and Interpersonal Skills
H ADM 210  The Management of Human Resources
H ADM 412  Managing Organizational Change
ILRRCB 300  Collective Bargaining
ILRHR 260  Human Resource Management
ILRHR 362  Career Development: Theory and Practice
ILRHR 462  Staffing and Organizations
ILRHR 463  Diversity and Employee Relations
ILROB 170  Introduction to Micro Organizational Behavior and Analysis
ILROB 171  Introduction to Macro Organizational Behavior and Analysis
ILROB 329  Organizational Cultures
ILROB 370  The Study of Work Motivation
SOC 203  Work and Family (also FGSS 203)

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their direct relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.
3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The College of Human Ecology offers a program that allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program, Cornell Career Services, 103 Barnes Hall, Ithaca, New York 14853-1601.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, and physics, and all must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochures Admissions Information, obtained by writing to the Office of DVM Admissions, College of Veterinary Medicine, Cornell University, S2-009 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program, Cornell Career Services, 103 Barnes Hall, Ithaca, New York 14853-1601.
ADMINISTRATION
Susan A. Henry, dean
William E. Fry, senior associate dean
John M. Finamore, associate dean for financial affairs
Mary Lou Doyle, assistant dean for human resources
Michael P. Riley, assistant dean for alumni affairs, development, and communications
Donald R. Viands, associate dean and director of academic programs
Mark W. Wysocki, associate director of academic programs
Jeffrey J. Doyle, director of undergraduate biology
Daniel J. Decker, associate dean and director of the Cornell University Agricultural Experiment Station
Max J. Pfeffer, associate director of the Cornell University Agricultural Experiment Station
Susan J. Riha, director for sponsored research in the senior associate dean’s office
Helene R. Dillard, associate dean and director of cooperative extension
Edward D. Harwood, associate director of cooperative extension
Michael P. Hoffmann, associate director of cooperative extension
W. Ronnie Coffman, director of international programs
Norman T. Uphoff, director of Cornell International Institute for Food, Agriculture, and Development
James E. Haldeman, associate director of international agriculture
Terry W. Tucker, associate director of international agriculture

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley, Pamela Torelli
Registrar: Melanie Holland, Amy Paolangeli, Cheryl Boyer, Elisa Rufferty
Admissions: Ann LiFave, Tara Weaver, Lorie Fessenden, Missy Salmi
Career development: Amy Benedict-Augustine, Laurie Gillespie, Pamela Dusseau, Sharon Radcliffe
Multicultural and diversity programs: Catherine Thompson

Department Chairs
Applied economics and management: W. H. Lesser, Warren Hall
Animal science: A. W. Bell, Morrison Hall
Atmospheric science unit (part of Earth and Atmospheric Sciences): S. J. Golucci, Bradfield Hall

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture (M.P.S. [Agr.]): D. R. Viands, Roberts Hall
Agricultural and Biological Engineering: D. J. Aneshansley, Riley-Robb Hall
Agricultural Economics: D. R. Lee, Warren Hall
Animal Breeding: E. J. Pollak, Morrison Hall
Animal Science: R. L. Quaas, Morrison Hall
Atmospheric Sciences: D. S. Wilks, Bradford Hall
Biochemistry, Molecular, and Cell Biology: W. J. Brown, Biotechnology Building
Biometry: M. Wells, Warren Hall
Communication: B. V. Lewenstein, Kennedy Hall
Development Sociology: C. C. Geisler, Warren Hall
Ecology and Evolutionary Biology: D. W. Winkler, Corson Hall
Education (also M.A.T.): D. E. Schrader, Kennedy Hall
Entomology: E. Shields, Comstock Hall
Environmental Toxicology: A. Yen, Rice Hall
Food Science and Technology: H. T. Lawless, Storck Hall
Genetics and Development: K. J. Kemphues, Biotechnology Building
Horticulture: N. L. Bassuk, Plant Science Building
International Agriculture and Rural Development (M.P.S. Agr.): S. C. Kyle, Warren Hall
International Development: N. T. Uphoff, Warren Hall
Landscape Architecture (M.A.L.): D. W. Krall, Kennedy Hall
M.P.S. Agriculture with Peace Corps Option (offered by most agriculture fields with M.P.S. programs): J. Haldeman, Warren Hall or see director of graduate studies for chosen field
Microbiology: S. C. Winans, Wing Hall
Natural Resources: M. E. Krasny, Fenow Hall
Neurobiology and Behavior: C. D. Hopkins, Seeley-Mudd Hall
Nutritional Sciences: M. N. Kazarinoff, Martha Van Rensselaer Hall
Physiology: M. S. Roberson, Vet Research Tower
Plant Biology: J. B. Nasrallah, Plant Science Building
Plant Breeding: E. D. Earle, Bradfield Hall
Plant Pathology: E. B. Nelson, Plant Science Building
Plant Protection (M.P.S. Agr.): W. H. Reissig, Geneva Campus
Soil and Crop Sciences: H. van Es, Bradfield Hall
Statistics: R. Strawderman, Malott Hall
Zoology: J. W. Hermanson, Vet Research Tower

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in twenty-one major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major, but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences. Students need an adviser in each major. Course requirements for double majors may overlap. The Counseling and Advising office (140 Roberts Hall) and department representatives have a form for students to complete to officially recognize the double major. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major.

Animal Sciences: W. Bruce Currie, 434 Morrison Hall
Atmospheric Science: Mark Wysocki, 1114 Bradfield Hall
Biological Engineering: James Bartsch, 314 Riley-Robb Hall
Biological Sciences: Jeffrey Doyle, 216 Stimson Hall; Bonnie Cornella, 216 Stimson Hall
Biology and Society: Douglas Gurak, 234 Warren Hall
Biometry and Statistics: Steven Schwager, 424 Warren Hall
Communication: Brian Earle, 328 Kennedy Hall
Crop and Soil Sciences: Gary Fick, 507 Bradfield Hall
Development Sociology: Tom Hirschl, 333 Warren Hall
Education: Leigh Henshey, 418 Kennedy Hall
Entomology: Bobbi Peckarsky, 3134 Comstock Hall
Food Science: Janice Brown, 107 Storck Hall
Information Science: Dana Brown, 303 Upson Hall
International Agriculture and Rural Development: Terry Tucker, 35 Warren Hall
Landscape Architecture: Peter Trowbridge, 440 Kennedy Hall
Natural Resources: Tim Fahey, 12 Fenow Hall
Nutrition, Food, and Agriculture: J. Thomas Brenna, B38 Savage Hall; Elise West, 334 MVR Hall
Plant Sciences (Plant Biology, Plant Genetics and Breeding, Horticulture, Pathology, Protection): Don Vardar, 140 Roberts Hall
Science of Earth Systems: Susan Riba, 1110 Bradfield Hall
Science of Natural and Environmental Systems: Tim Fahey, 12 Fenow Hall
Special Programs in Agriculture and Life Sciences: Lisa Ryan, 140 Roberts Hall

Minors

Students in the College of Agriculture and Life Sciences may pursue one or more minor fields of study. Minor fields of study do not require an academic adviser, but each minor field will have a contact person who will provide information and verify on the Application to Graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors offer minors. Minors available at the printing of this catalog are listed below with contact person and e-mail address:

Animal Science: Deloris Bevins, dgb1@cornell.edu
Atmospheric Science: Mark Wysocki, mw3@cornell.edu

Communication

Linda Van Buskirk
lpw1@cornell.edu
Brian Earle
boe1@cornell.edu

Development Sociology

Tom Hirschl
tah1@cornell.edu
Renee Hoffman
rnh6@cornell.edu

Education

Betty Heath-Camp
bh76@cornell.edu

Entomology

Bobbi Peckarsky
bp1@cornell.edu

Food Science

Janice Brown
jmbl4@cornell.edu

Information Science

Geri Gay
ggki@cornell.edu

International Studies

Kenna Morehouse
km2@cornell.edu

Natural Resources

Martin Hovencamp
mth6@cornell.edu

Nutrition and Health

Elise West
agd2@cornell.edu

Soil Science

Gary Fick
gw2@cornell.edu
Sue Murphy
sm17@cornell.edu

Summary of Basic College Requirements for Graduation

1. Credit Hours
   a. Minimum: 120
   Exception: Credit for tutorial courses (MATH 109, EDUC 005, and 00 level) increase the number of credits required for graduation by the number of credits in the course. The credits do count toward the minimum 12 credits for full-time status.
   b. Minimum at Cornell: 60; maximum transferred in (C- or higher): 60.
   c. Minimum from College of Agriculture and Life Sciences: 55 (includes credit used in the distribution and appropriate transfer credit).
   d. Maximum from endowed colleges (Arts and Sciences; Architecture, Art, and Planning; Engineering; and Hotel School) without additional charge: 55 (includes credit used in the distribution AND failed courses). Summer session courses taken in endowed colleges do not count.
   e. Minimum with letter grade: 100; maximum with S-U grade based on 120 credits: 55 (includes credit used in the distribution and appropriate transfer credit).
   f. Maximum independent study, research, and special study credits: 55 (excludes credit used in the distribution and appropriate transfer credit).
   g. Maximum maximum independent study, research, and special study credits: 55 (includes credit used in the distribution and appropriate transfer credit).
   h. Credit for physical education does not count toward the 120 credits or the minimum 12 credits for full-time status (see #6).

2. Residence
   a. Students are entitled to enroll eight full-time semesters (prorated for transfer students). A full-time semester requires
a minimum of 12 credits per semester (not counting physical education. Tutorial courses (see #1A) are counted).

b. A minimum of seven semesters is expected; graduation in fewer than seven requires a petition. Transfer students are credited with one semester in residence for each 15 credits from another institution.

c. Internal transfer students must be enrolled in CALS for at least two semesters, not including residency in Internal Transfer Division.

d. The final semester before graduation must be in residence at Cornell as a full-time student in good academic standing.

**Exception:** Students with eight or fewer credits remaining for graduation and with circumstances that prevent full-time study may petition for approval to complete remaining credits at another institution or part-time in CALS. A petition must be submitted the semester prior to graduation. Contact CALS Registrar's Office for additional information.

### 3. Grade-Point Average (GPA)

Cumulative GPA 2.00 or above must be maintained. Includes only grades earned at Cornell after matriculation to CALS.

For students matriculated prior to 8/01: Cumulative GPA 1.70 or above must be maintained. Includes only grades earned at Cornell after matriculation to CALS.

### 4. Distribution

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.

Credits received for independent study, field, teaching, research, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be asleep in their discipline, such as Education 005, will not be counted.

In 2002, the CALS Faculty Senate approved a proposal from the CALS Curriculum Committee to combine Groups A (Physical Sciences) and B (Biological Sciences) into one group to provide more flexibility for students to fulfill the physical and life sciences distribution requirement. This policy applies to both new and current students in CALS. Letter designations no longer will be used for the groups described below.

### Physical and Life Sciences

18 credits in at least three disciplines of which 6 credits must be introductory biology and 3 credits in chemistry or physics.

| Intro Biology: BLOG 101-104, 105-106, 107-108, or 109-110 |
| Biology Sciences (except BLOG 200 and 499 unless permission of the director of undergraduate biology is obtained): BLOG 209, BLOG 498, and BIOSM 204 |
| CHEM |
| PHYS |
| AN SC 100, 110, 111, 215, 221, 280, 300, 301 |
| AEM 209, 210 (310 if taken before: fall 1997) |
| ALS 115 |
| ASTRO |
| BEE 454, 456, 458, 459 |
| BTRY |
| CSS 190, 260, 311, 312, 314, 315, 317, 366, 415, 455, 473, 483 |
| EAS (except 121, 150) |
| EDUC 115 |
| ENTO 201, 210, 212, 213, 215, 241, 260, 277, 325, 344, 370, 463 |
| FD SC (FOOD) 200 |
| ILRST 210 |
| MATH* |
| NS 115, 222, 262, 300, 331, 332, 341, 347, 361, 431, 441, 452 |
| NTRES 210, 420 (301), 310 (305), 313 (315), 413 (316), 523 (320), 522 (350), 514 (370) |
| PL BR 201, 225, 401, 402, 403, 404 |
| PL PA 201, 241, 309, 401 |

* The college mathematics requirement is described below.

### Social Sciences and Humanities

12 credits (in each of the following two categories):

Social Sciences: 100- through 400-level courses in the following departments (excluding Freshman Seminars):

- AIS 312, 340, 353, 401
- AJS 481
- ANTHR
- ARKEO
- AEM 416
- COMM 116, 120, 410, 418, 420, 422
- ECON (excluding all AEM courses)
- EDUC 271, 317, 378, 411 (311), 451, 471, 571
- GOVT
- HD 250 (cannot receive credit for this course and SOC 251)
- LA-GRP/AIS 261, 260 (300), 263 (363)
- NTRES 351 (314) (401)
- PSYCH (exceeded 111)
- S&TS 324, 354, 359, 391, 400, 401, 403, 406, 407, 427, 442, 467, 483
- SOC (excludes D SOC except D SOC 100, 175, 305, 311, 318, 325, 333, 442)

Humanities: 100- through 400-level courses in the following departments (excluding Freshman Seminars and language courses):

- AS&RC (literature and history)
- AJS
- AAN
- ASIAN (literature and history)
- CLASS (literature and history)
- COM 1
- D SOC 100, 175, 318, 442
- EDUC 473
- ENGL (literature only)

**Written and Oral Expression.** Nine credits, of which at least six must be in written expression, selected from the following:

**Written Expression**

- Freshman Seminars
  - COMM 117, 260, 263, 350, 352, 365
  - CSS 200
  - ENGL 280-281, 288-289, 382-385, 388-390
  - FD SC/NS 230
  - LA 215

**Oral Expression**

- COMM 201, 203

Note: This requirement may be fulfilled by completing 1) 9 credits of written expression or 2) 6 credits of written plus 3 credits of oral expression.

Students scoring 4 or 5 on the English advanced placement exam may be awarded three credits which will be recorded in Written and Oral Expression.

### 5. Math Requirement

Faculty legislation requires minimum competency in mathematics to complete a degree in the College of Agriculture and Life Sciences. As a measure of competency in mathematics, all entering undergraduates, including those with advanced placement or transfer credit in calculus, must take the college math proficiency exam (administered during orientation). The following students are exempt from the CALS Math Placement Exam: 1) internal transfer students who already have passed one math course listed below under Group II, section 1, and 2) entering BEE students (who take the placement exam in the College of Engineering).

The CALS exam score determines the college math graduation requirement, and provides placement information. The exam has two components. Cut-off scores divide students into three groups, each with specific graduation requirements.

#### Mathematics requirements and placement suggestions:

**Group I** Students in this group are considered proficient in math for college graduation requirements. If further math is needed for the major, placement score suggests calculus skill level (e.g., MATH 111, 190, 191).

**Group II** Placement score suggests precalculus skill level, and students in this group must satisfy one of the following:

- Successfully complete an approved mathematics course at Cornell. EDUC 115 is recommended. Other approved courses are any mathematics course (except MATH 100, 103, 109, 171).
b. Successfully complete or have completed an approved calculus course at another college or university with a final grade of B- or better.

c. Receive AP credit for calculus (4 or 5 on MATH AB or BC) or statistics.

Group III Students who score in Group III must successfully complete an approved non-statistics mathematics course at Cornell. Approved math courses are EDUC 005 or EDUC 115 or any mathematics course (except for MATH 105, 109, and 171).

Transfer and AP math credit (up to 6 credits) will be recorded in the Physical and Life Sciences group of the college distribution requirements. Additional transfer credit in math will be recorded as general electives. BIE students typically receive fewer AP credits than other CALS students with the same scores. BIE students also may receive AP credits based on the Engineering Mathematics Placement Exam.

6. Physical Education
a. Pass a required swim test, administered during orientation.

b. Pass two courses with a satisfactory grade (courses do not count toward 120 credits for graduation or the minimum 12 credits for full-time study).

c. Students are expected to complete the physical education requirement in their first two semesters at Cornell.

d. Transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college.

Faculty Advising
a. Each student is assigned to a faculty adviser when admitted to the college. The faculty adviser will help the student plan a program of study of courses appropriate to the major.

b. Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by entering through CourseEnroll, under courses, classes, and exams on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or adviser key, is provided to the student by the faculty adviser after approval of the choice of courses.

c. All academic plans, such as acceleration programs, must be approved by a faculty member in the proposed area of study. Academic achievement is considered in all cases, a student may be referred to trial semester, the student must achieve a predetermined average (usually 2.7) and take certain courses.

d. Students must meet the graduation requirements in fewer semesters. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.

c. Application to graduate. In the first semester of their senior year, students must complete and submit an Application to Graduate to the college registrar's office by the end of the eighth week of class. The adviser must first sign the application verifying that the student will be able to satisfy all major requirements. Students with two majors or a minor must obtain signatures for each major and/or minor. Students must meet with the college registrar, who signs the application after verifying that the college requirements will be fulfilled after successful completion of the student's final semester. Note: It is the student's responsibility to meet all graduation requirements. The student must resolve all problems, even if discovered late in the term, before the degree can be awarded.

d. A student's classification is based on the number of credits completed. It does not include the number of "in progress" credits. The classifications are as follows: Freshman = 1-30 credits Sophomore = 31-60 credits Junior = 61-90 credits Senior = 91 and more credits

Credit Earned While in High School
Transfer credit will not be accepted for the successful completion of the student's high school senior and/or minor. Students must meet the graduation requirements in fewer semesters. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.

Admission
The CALS Admissions Office selects applicants who are academically well prepared and appear most likely to benefit from the college's various curricula.

While most students come from New York State, about 35 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are self-identified as members of minority ethnic groups. The CALS Admissions Office is in 177 Roberts Hall (607-255-2036; web site: www.cals.cornell.edu/admissions/).

Transfer Students

All accepted transfer credit must be from a regionally accredited college/university. Transfer credit is awarded on a case-by-case basis. Additional course information may be required. Contact CALS Registrar's Office for information. A maximum of 60 external credits is allowed.

Approximately 20 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, agricultural and technical colleges, or four-year institutions. Many of them hold an associate degree. Detailed information on transfer admission is available from the CALS Admissions Office.

Intra-University Transfer

A Cornell student in good standing may apply for an intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the CALS Admissions Office. The procedure involves filing a transfer request, meeting with a faculty member in the proposed area of study, and submitting a letter of interest in the new area.

Each student must be prepared for transfer during their freshman year. In certain cases, a student may be transferred to the Internal Transfer Division (ITD) to study for one semester before entering the college. A second semester in ITD is considered only in unusual circumstances. During this trial semester, the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students

A limited number of non-degree candidates who want to take courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience, and a list of the courses in which they are interested. For more information and guidance on the special student program, contact the CALS Admissions Office.

Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA Program, field study in human ecology or industrial and labor relations, Albany
programs, Cornell in Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

Off-Campus Courses
Students in CALS must be registered for at least 12 credits of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS. Two exceptions to enrollment elsewhere while being a full-time student at Cornell are the joint enrollment agreements between Cornell and Ithaca College and Wells College. Other exceptions must be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The committee may approve such petitions only when there are compelling circumstances or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Cornell is not permitted.

Leave of Absence
A student wishing to take a break from studies in a future semester, or those who find it necessary to leave the university before the end of a semester, should submit a written petition for a leave of absence. Such action is necessary to clear the record for the semester and if not taken may adversely affect the student's subsequent readmission to the university.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring reapplication to the university. Voluntary leaves are issued two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave, or activities pursued), or restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Petitions Committee).

A database is maintained by the Counseling and Advising Office to assist participation in pre-registration the semester before a student's return.

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

Withdrawal
A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

Graduation and Diplomas
Graduating seniors must complete the Application to Graduate (see the details in Part C of "Progress toward the Degree"). Diplomas are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field in May, graduates return to the Ag Quad to obtain their diplomas. For January and August graduates, diplomas are mailed.

ADVISING AND COUNSELING SERVICES
Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while in college. They believe that personal contact is the best way to provide information and advice on both academic and personal matters; they consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student's academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with expertise in college policies and guidelines. Counseling is framed as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment.

Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all minority students in the College of Agriculture and Life Sciences. This population is defined as encompassing all African American, Latin American, Asian American, and Native American people. In the past academic year, MDP represented approximately 20 percent of the college's undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP) and Prehealth Collegiate Science and Technology Entry Program (CSTEP). EOP and CSTEP are state-supported programs intended to assist New York State students who meet academic criteria set by the college, the State Programs Office, and the New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, Multicultural and Diversity Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, the Learning Strategies Center, and the State Programs Office. Other university connections regarding the college's minority student population include the University Career Center and the Office of Financial Aid. The director and 7 to 10 peer advisers

primarily carry out the duties of Multicultural and Diversity Programs. Together, the staff acts as the major advocacy group as well as an informational and referral center. The director provides support for the Academic Human Diversity and Resources Committee. Its constituency includes students, faculty, and the general public.

Given the college's policy on non-exclusionary programming, Multicultural and Diversity Programs is also responsible for some functions that serve the college's entire population. Presently, that includes general college diversity activities and serving as the Prehealth Program authorization and providing ongoing support at all levels for the Office of Counseling and Advising. The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of more than 350 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search topics include résumé writing, cover letter writing, and interview skills are presented throughout the library and are available on videotape. An active on-campus recruiting program brings more than 90 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine and the staff in 177 Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations in the college provide supplemental aid for students who are eligible for financial aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university's Office of Financial Aid.

Academic Integrity Policy
The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute academic integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the
provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.

2. Students are guilty of violating the code if they
   • knowingly represent the work of others as their own
   • use or obtain unauthorized assistance in any academic work
   • give fraudulent assistance to another student
   • fabricate data in support of laboratory or field work
   • forge a signature to certify completion or approval
   • submit the same work for two different courses without advance permission
   • knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids
   • in any other manner violate the principle of absolute integrity

3. Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

4. Faculty members fulfill their responsibility to
   • maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
   • make clear the conditions under which examinations are to be given
   • make clear the consequences of violating any aspects of the code
   • provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
   • state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
   • approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
   • monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated the code are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

ACADEMIC POLICIES AND PROCEDURES

Records
The office of the college registrar maintains a complete academic record for each matriculated student. The registrar and assistant registrars are available to consult with students regarding the assignment of credit toward meeting distribution and elective requirements as listed on the Graduation Summary form. Petitions Procedures

Registration Procedures
All students must register with the university and check in with this college at the beginning of each fall semester. Check-in materials are available in 140 Roberts Hall.

Course Enrollment Procedures
Students will receive course enrollment information from the university registrar. After planning a schedule of courses in consultation with their faculty adviser, students pre-enroll by computer through CourseEnroll in "Just the Facts" located in the Bear Access menu. Pre-enrollment is not valid until the student enters the adviser key code, received from their faculty adviser, into the computer. The adviser key code changes each semester to ensure ongoing contact between student and faculty adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar's Office, 140 Roberts Hall. Students who will be off campus should notify the Registrar's Office to ensure that proper registration will occur.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, the second time will be for no credit.

Students must not enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form with the college Registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the R grade.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student using the on-line add/drop through "Just the Facts" or the official course drop and add form at the Registrar's Office, 140 Roberts Hall. Approval of the faculty adviser is required to change course enrollment. Department or course instructor approval may be required on select courses.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the term, and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions (also see Petitions Procedures below). Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for "withdrawal") is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than 12 credits.

Petitions Procedures
The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee

• reviews, at the end of each semester and at other times as shall seem appropriate to the committees, records of students toward meeting graduation requirements
• receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
• acts upon readmission requests from persons whose previous enrollment was terminated by the committee
• notifies the petitioner in writing of the action taken by the committee

A petition for exemption from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in Counseling and Advising, 140 Roberts Hall. Counselors are available to assist with the process.
A petition is usually prepared with the assistance of a student's faculty adviser, whose signature is required. The adviser's recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action. Petitions for withdrawing from a course are discussed above.

Academic Deficiency Policies

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 2.0*
- cumulative GPA of at least 2.0*
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C (2.0) or higher are prima facie evidence of satisfactory progress and good academic standing.

*For those students matriculating 8/01 or later. Requirements are 1.70 for those who matriculated prior to 8/01.

Grade Reports

Grade reports for the fall semester are available on "just the Facts" in January, grade reports for the spring semester are mailed by the Office of the University Registrar to students at their home addresses unless alternative addresses are reported to the university registrar by mid-May.

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways:

Dean's List. Each semester, students are recognized for academic excellence by inclusion in the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:

1. a minimum course load for the semester of 12 letter-graded credits;
2. achievement of a semester GPA of at least 3.50; and
3. achievement of an "S" grade, or a "C-" or better grade in each course (including physical education), with no Incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

Bachelor of Science with Honors. Students receiving a cumulative GPA of 4.0 or greater (based on the last four full-time residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "summa cum laude."

Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.0 (based on the last four full-time residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "magna cum laude."

Students receiving a cumulative GPA of greater than or equal to 3.5 and less than 3.75 (based on the last four full-time residential semesters of Cornell credits, with a minimum of 48 letter-graded credits) will graduate "cum laude."

Bachelor of Science with Distinction in Research. Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.

Ho-Nun-De-Kah. Founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.

Gamma Sigma Delta is an honor society of faculty members and students in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life as it relates to agriculture and the related sciences. The Cornell chapter recognizes the academic achievements of students, faculty members, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated. Gamma Sigma Delta also promotes academic excellence through sponsorship of special programs in the three colleges.

Golden Key is an international honor society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors in the top 15 percent of their class are invited to membership. Visit Golden Key's web site at www.nso.cornell.edu/gkhs.

RESEARCH HONORS PROGRAM

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion of this program requires a thesis written in the style of a master's thesis or a professional journal article in that area of research. Original honors research may be published in a professional journal. Students are required to send an electronic version of their thesis title, abstract, student's name, and the research advisor's name to Ann Gantner, amg28@cornell.edu, by the end of the spring semester. During the summer of each year, the CALS Research Honors Abstracts is published as a compilation of abstracts of the honors theses. In addition to copies of the entire thesis requested by the program area, one copy is required by the Office of Academic Programs (140 Roberts Hall). This copy is made available in Mann Library. Students may volunteer to publish their theses in the Internet-First University Press if it does not interfere with other plans, such as patenting or publishing in another journal.

The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the requirements for the B.S. degree, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

Research may be done under the appropriate program area: Animal Sciences, Biological Sciences, Biology & Society, Entomology, Information Science, Landscape Studies, Natural Resources, Nutritional Sciences, Physical Sciences, Plant Sciences, and Social Sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area (below), students' questions may be directed toward the appropriate program area chair.

Consult "Undergraduate Research Opportunities" on the web (www.cals.cornell.edu/oap/admin/undergrad/research_opportunities.htm) for information about identifying a research topic, conferring with a faculty member, and undergraduate funding opportunities.

College Requirements

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of those 55 at Cornell. Also, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must make written application to the CALS Registrar's Office no later than the end of the sixth week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year (or earlier if required by the program area). Earlier application deadlines to program area committees are noted in the sections below. For most of the program areas, an application form is available from the college registrar in 140 Roberts Hall. The application form also can be printed from the web at www.cals.cornell.edu/oap/registrar/req_hon_main.htm. Applications for Biological Sciences students can be picked up at 200 Stimson Hall, and for Biology & Society students, at 306 Rockefeller Hall.
Before the completed application is returned to the registrar, signatures of approval are required in the following order: faculty research mentor, academic adviser, and the research honors program area chair. After the college registrar verifies the student's GPA, the student will be officially enrolled in the honors program. Additional requirements for application and completion of the program are described under each particular program area.

Academic credit also may be earned by enrolling in an appropriate independent research course (required by some program areas). When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds (up to $350) to cover some of the costs incurred in doing the research. If approved, the funding will be transferred from an account in the CALS Office of Academic Programs to a departmental account of the student's research adviser to support the student's research. This funding is not to be used as a student salary. Additional funding opportunities are described on the Undergraduate Research Opportunities website at www.cals.cornell.edu/oap/admin/undergrad_res_oppor.htm.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the Research Honors Program must be accepted in one of the program areas approved by the faculty. Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The research honors committee for each program recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with "distinction in research."

At or near the completion of their research, students are required to give an oral presentation during any event at Cornell. Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research Board (CURB) Forum is another venue for presentations. For more information, consult the web at www.cals.cornell.edu/oap/registr/res_hon_main.htm.

Animal Sciences
Faculty committee: S. M. Quirk, chair; Y. R. Boisclair, J. R. Giles, P. A. Johnson, R. E. Austin.

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require a high level of careful and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisers by their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished by the second semester of the junior year. Students are encouraged to implement some research during the junior year and/or summer before the senior year.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results (see exceptions under particular program areas).
- Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the research committee.

Details pertaining to the specific requirements of the program can be obtained from the administrative area of the student's major.

Prerequisites
- Application forms for the Research Honors Program submitted to 306 Rockefeller Hall.
- April 15: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 29: Thesis defense accomplished.
- May 13: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

RESEARCH HONORS PROGRAM 37

Important Deadlines
(Note: If the following dates fall on a weekend, the deadline is the preceding Friday).
- Last week of second semester of the junior year: Application for honors program submitted to 306 Rockefeller Hall.
- April 15: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 29: Thesis defense accomplished.
- May 13: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

Entomology
Faculty committee: B. L. Peckarsky, chair

The Program
A Research Honors Program in entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiological and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

Prerequisites
An undergraduate wishing to enroll in the Research Honors Program must have completed at least 55 credits, at least 30 of which must be at Cornell. Also, the student must have attained a cumulative GPA of at least 3.0 at the time of entry and maintain this GPA to graduate with distinction in research. The CALS registrar will verify GPAs of applicants before officially enrolling them in the Research Honors Program. Research honors students have the option of earning academic credit by enrolling in Independent Study (ENTOM 497) during any semester while working toward a research honors thesis. Credits and grade option for satisfying requirements of ENTOM 497 should be discussed with the thesis adviser (following page.) Note: Enrolling in independent study is not a requirement for
graduating with distinction in research honors in entomology.

**Sequence of Requirements**

The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.
- Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student's academic adviser. The academic adviser will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Submit a completed application and proposal (approved by the honors project supervisor and the chair of the Entomology Research Honors Committee) no later than the end of the sixth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available and should be submitted to the CALS registrar, 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only one time per year (in late fall).
- Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by mid-semester in which the student will complete his or her graduation requirements.
- Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a Juggate seminar) in the last semester of the senior year.
- Submit two copies of the final honors thesis (as approved by the thesis supervisor) to the chair of the Entomology Research Honors Committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee selected by the chair of the honors committee.
- Referees will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the Entomology Research Honors Committee chair no later than three days before the last day of classes. Referees should include a recommendation to the Entomology Research Honors Committee chair regarding acceptability of the honors thesis. The approved honors theses will be bound and housed in the Entomology Library in Comstock Hall.

**Information Science**

Students should follow the CALS Social Sciences guidelines to obtain research honors in Information Science.

**Landscape Studies**

Faculty committee: K. Gleason, chair

The Research Honors Program in landscape studies offers outstanding undergraduates in CALS the opportunity to work with a member of the landscape architecture faculty to pursue supervised independent research in design, the cultural landscape, landscape archaeology, environmental design, and community-based planning and design. The student need not be a major in the landscape architecture professional design curriculum. The subject matter and nature of the research experience may be quite varied. Students participating should find the experience intellectually stimulating and rewarding. They may not intend to pursue a research career. The guidance and supervision of a faculty member with substantial interest and expertise in the subject is essential to the success of the project. It is expected that the research will require significant effort and creative input by the student in its design and execution and in reporting the results.

Students who consider this option should be aware that honors research is undertaken above and beyond any of the requirements for graduation in landscape architecture. It involves a number of deadlines and a considerable time commitment. Before signing on for research honors, students need to consult with their academic adviser to make sure that honors research projects will not interfere with other academic or professional objectives, such as job applications, preparation of portfolios, or application to graduate school. These may need to be deferred until the thesis is complete. Students are responsible for meeting deadlines and being prepared for presentations and other meetings.

Although honors research credits for spring semester junior year and both semesters senior year are designated a letter grade, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student's mentor. The designation of "distinction in research" on the diploma is awarded at the recommendation of the faculty advisor and other referees to the honors committee chair. An outline of activities for both years is given below.

The Landscape Studies Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

**Junior year:** Identify a potential research honors project sponsor and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year and be finalized by the end of the spring semester. Pre-register during the spring for the research honors program (LA 499).

- Work with a faculty adviser to identify and formulate a research problem. If the faculty adviser is not in the Department of Landscape Architecture, select a co-adviser from the department to ensure that the research is consistent with the field.
- Submit a completed application and proposal (approved by the honors project supervisor and the chair of the research honors committee) no later than the end of the fourth week of the first semester of the senior year. Earlier submission is encouraged. These will be reviewed by ad hoc committee members, and successful thesis proposals will be submitted to the college honors committee by the sixth week.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Submit an outline of the thesis to the chair of the committee by the end of January for a May graduation.
- Submit a draft to the readers by April 15. Describe and summarize the work within the range of format of the student's thesis program or professional journals in design or research. This version will be reviewed by the faculty supervisor and two ad hoc reviewers, and the student will be able to incorporate the committee's comments and suggestions into the final version, which will be due the last day of classes. Referees prepare a recommendation to the honors committee chair regarding the acceptability of the honors thesis.
- Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student's senior year.
- Send two bound copies of the completed and defended thesis to the honors committee chair by May 13. These copies are in addition to the unbound copy required for Mann Library. A 250-word abstract must be provided electronically to the CALS Office of Academic Programs and must appear at the front of the thesis (see CALS Requirements for Honors Thesis).

**Natural Resources**

Faculty director: J. B. Yavitt, chair

The Research Honors Program in Natural Resources involves original, independent research that generates novel findings in applied ecology and resource policy and management. Students learn how to design and carry out research under the direct supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research prior to the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 495) during their honors research. The research findings are presented in a written thesis that is reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant
is accepted into a faculty member's research program and 2) submits a research proposal abstract that is approved by the director of the Research Honors Program.

Students interested in the program typically spend the spring sophomore term and fall junior term exploring honors project opportunities with prospective faculty mentors. Students are responsible for contacting faculty members and applying to their research programs, although the guidance in this process will be provided in NS 398. By the fall of the junior year, the student is expected to have identified their faculty mentor and be working with him/her on a proposal abstract, which is due early in the spring junior term.

Students receive academic credit for work on their honors project under NS 499. The six required credits may be taken over several semesters. How much time is spent on the project each term will be the decision of the student and the faculty mentor. For each three to four hours of work per week, the faculty mentor usually will assign one hour of academic credit. This applies to the preparation of the research plan and necessary library research (usually completed during the junior year) as well as the carrying out of the research itself and preparation of the thesis.

The Research Honors Project is the major component of the Research Honors Program. It should be well defined and sufficiently circumscribed to give the student the opportunity to develop the research plan, execute the research, and write an acceptable thesis within the limited time available to students carrying full academic loads. Typically, the project is designed early in the junior year and conducted in the spring junior term and fall senior term. Students may arrange with their faculty mentor to work on the project during the summer. The spring senior term is usually devoted to writing the thesis (at least 25 pages). The student works with the faculty mentor to prepare a draft of the thesis, which is submitted before spring break to a second faculty member for evaluation. When the comments are received from the reader, the student must revise the thesis to meet the criteria for acceptance. The student presents the thesis at the Honors Student Symposium at the end of the term.

**Physical Sciences**
Faculty committee: A. T. DeGaetano, chair

The Research Honors Program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Sciences, or Biological Statistics and Computational Biology.

In addition to meeting the requirements of the college, the student is expected to:

- Identify a thesis adviser and thesis topic before the end of junior year.
- Work with the thesis adviser, prepare a budget and application form (due by the sixth week of senior year).
- Enroll in the program for a minimum of two semesters.
- Enroll in the appropriate departmental undergraduate research course for a total of at least six credits.
- Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
- Submit a draft of the thesis to the thesis adviser with sufficient lead-time for a revision to be prepared.
- Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by three weeks before the end of classes in the semester in which graduation is expected.

There is no required format but the thesis is usually written in the form of a research journal article or a master's thesis.

Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

**Plant Sciences**
Faculty committee: R. L. Ohendoff, chair; I. A. Merwin, E. B. Nelson, F. S. Rossi

Students perform independent scientific research under the guidance of faculty members in the fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Research Honors Committee a project proposal (two to three pages) that includes a title; a brief background of the problem (justification and literature review); a clear statement of objective(s) and hypothesis to be tested; methodology and experimental plan, necessary space, equipment and supplies, and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible.

Successful completion of the Research Honors Program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication appropriate to the scientific field. The acceptable report must have been reviewed and corrected according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate dean and director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.
Social Sciences
Faculty committee: J. B. Walther, chair; J. D. Francis, N. Chau, S. C. Piliero

Research projects in this program area include Applied Economics and Management, Communication, Development Sociology, Education Policy, and International Studies. Students are accepted into the Social Sciences Research Honors Program of the College of Agriculture and Life Sciences after meeting all the college criteria described above, after evaluation of the student's written proposal, and on approval of a detailed thesis proposal. The application and proposal are due to the program area chair no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

- **Research Topic:** State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.

- **Research Questions/Empirical Hypotheses:** Specify the proposed questions or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.

- **Research Methods:** Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.

- **Expected Significance:** State what new knowledge or information is likely to be forthcoming and why it is important. State any practical applications expected as a result of the research.

Faculty advisers must be members of the graduate faculty. Exceptions may be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions may be granted pending petition to the Social Science Honors Committee. Students must register for honors credit directed by the faculty research honors project adviser.

Distinction in research is awarded upon approval of the research honors thesis by the Social Science Research Honors Committee. The research should deal with a substantive issue in one of the fields in the social sciences. Both the results of the research and the methodology (or the logical argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate field. The recommender submits a copy of the thesis draft to the student's research advisor by the beginning of the month two months prior to graduation, for revision suggestions. Two copies of the thesis must be submitted to the chair of the social science committee no later than the middle of the second-to-last month prior to graduation (i.e., April or November). A supporting letter from the faculty member supervising the work also must be submitted. The thesis will be independently reviewed, and further revisions may be required before the thesis is accepted. Final approval of the thesis requires a majority vote of the honors committee.

**INTERCOLLEGE PROGRAMS**

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty adviser as part of their undergraduate program. These courses count toward the endowed college credits (maximum 15 without additional tuition charge). Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

Students in the Engineering Program in Biological and Environmental Engineering (BEE) are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and jointly enrolled in this college and the College of Engineering in the junior and senior years. All BEE engineering students pay the engineering college tuition differential and graduate from the College of Engineering. The B.S. degree is awarded in cooperation with the College of Engineering. The program is accredited by the Accreditation Board for Engineering and Technology.

The Department of Landscape Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate (BLSA) and graduate levels (MLA I). As well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board, LAAB. The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

The Division of Nutritional Sciences is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences, food, and agriculture major offers students in the College of Agriculture and Life Sciences the opportunity to focus their studies in human nutrition while obtaining a strong background in courses related to agriculture and the life sciences. Students in the biological sciences major may complete the program of study in human nutrition. Courses offered by the Division of Nutritional Sciences support many undergraduate programs in the College of Agriculture and Life Sciences including animal sciences, biological sciences, communication, food science, international agriculture, plant sciences, and rural sociology.

Nutritional science courses count toward the undergraduate degree requirement for 55 credit hours of courses in agriculture and life sciences.

The American Indian Program (AIP) is a multidisciplinary program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students tackle such challenging topics as the sovereign rights of Indian nations and the contemporary relevance of Indian culture to the environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present, and feature the perspectives of Native American people.

Research among faculty active in the program include American Indian education, social and economic development, agriculture, environmental issues, anthropology, history, sociology, language, literature, law, and the arts and cultural preservation. Extension and outreach efforts within the program seek to develop solutions to problems identified by American Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs. Akwe:kon, the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration is earned upon completion of five courses: AIS 100, Indian American Studies; AIS 101, Contemporary American Indian Issues; plus three other courses selected from the AIS course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies must obtain application materials from the AIP office in 450 Caldwell. AIP also offers a graduate minor.

Science and Earth Systems (SES) The SES major emphasizes the basic study of the Earth system. Under the increasing pressure of public concerns about air and water pollution, nuclear-waste disposal, the ozone hole, and global warming, the scientific community has realized the importance of the connections among the Earth's spheres that are usually studied as separate parts of the Earth system. While the major components—the biosphere, hydrosphere, atmosphere, and lithosphere—are studied in detail within the boundaries of traditional disciplines, the components interact is key to understanding how our home planet works, its past history, and its likely future.
The Science of Earth Systems (SES) major at Cornell offers an interdisciplinary approach to understanding and managing the Earth. The major is a collaborative effort among faculty members from the following departments: Earth and Atmospheric Sciences, Astronomy, Natural Resources, Ecology and Evolutionary Biology, Biological and Environmental Engineering, and the School of Civil and Environmental Engineering.

The major offers several concentrations, including biogeochemistry, ocean sciences, ecological systems, environmental geology, hydrologic and climate dynamics, planetary sciences, and soil science. All concentrations require students to take at least two courses in calculus, physics, chemistry, and biology, as well as three additional courses in basic science and math, three courses emphasizing the interconnectedness of the Earth system (Climate Dynamics, Evolution of the Earth System, Biogeochemistry), and four courses in one of the areas of concentration. Recommended courses for the major are the following:

- Hydrological systems, climate dynamics, ecological systems, environmental geology, of the Earth System, Biogeochemistry,
- Two courses in calculus, physics, chemistry, planetary sciences, and soil science. All
- The major provides an excellent background for students wishing to pursue careers in environmental law, policy, and consulting. SES is also a good major for students wishing to teach earth and environmental science at the high school level.

See the Science of Earth Systems listing in the section “Major Fields of Study” or visit www.geo.cornell.edu/ses/SES_home.html for more detailed directions of the major. For more information, contact Professor Stephen Colucci, Department of Earth and Atmospheric Sciences, sjc25@cornell.edu.

The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and Cooperative Extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 213 Rice Hall, or on the web at inters.earth.cornell.edu/ research/ctoxtoto. See also the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.

The Cornell Institute for Resource Information Systems (Cornell IRIS) is an interdisciplinary, intercollege unit affiliated with the Department of Crop and Soil Sciences. The mission of Cornell IRIS is to advance the development and use of spectral and spatial information science and technology to benefit the environment. The institute comprises three program areas: environmental resource inventory, remote sensing, and geographic information systems. A description of these programs and general information is available from the institute director, Cornell IRIS office, 302 Rice Hall.

OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: 1) credit may be earned at another institution and transferred to Cornell, or 2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. Each program has an academic component as well. Check the individual folders in the internship files in the CALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the CALS Career Development Office, 177 Roberts Hall, in the spring prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least 12 credits must be carried to meet the residency requirement. To receive academic credit for the internship, students enroll in ALS 400 for an S-U grade only.

Information and applications are available in the CALS Career Development Office, 177 Roberts Hall.

Cornell in Washington

The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty members, conduct individual research projects, and work as externs. Students participate in a public policy forum that includes externs as well as in federal agencies, congressional offices, or on environmental organizations, and carry out individual research projects under the supervision of Cornell faculty members. The required externships and all course enrollments are arranged through, and approved by, the Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 21, inquire at M101 McGraw Hall, 255-4090, or visit the Cornell in Washington web site at ciw.cornell.edu.

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personalized classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, and the following six weeks are spent on either one of SEA’s two sailing vessels, the SV Robert Seamans or the SV Cornell Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall (607-255-3717) or visit SEA’s web site: www.sea.edu. CALS students should file an Intent to Study Off Campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory (SML)

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, New Hampshire. SML offers undergraduates and other interested adults a unique opportunity to combine marine science in a setting noted for its biota, geology, and history. Please refer to “Courses in Marine Science,” under the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717 or visit their web site: www.sml.cornell.edu.

Internships

Several departments in the college offer supervised internships for academic credit. Internships may be granted for paid and/or credit with a limit of up to three credits per internship and no more than six credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge gained per internship and/or following the CALS guidelines for assigning credits. The internship should be purposeful, work oriented and approved by the student’s faculty adviser. Before a student begins the internship, the student should bring to the college or to a professor a description of a past experience and requests credit. Note that a maximum of 15 credits is required (for transfer students) of the 120 credits required for the degree, may be taken in internships, independent study courses, and undergraduate teaching or research. For internships not governed by an established internship course, the student must enroll in a 497-level course for the number of credits assigned.

To ensure a fair and manageable system to deal with internships, the College of Agricultural and Life Sciences has set forth guidelines to serve as minimum requirements for a student to receive internship credit.

- Credit will only be assigned or accepted in cases where a Cornell faculty member is directly involved in determining both the course content and in evaluating the student’s work.
- The internship should be purposeful, provide opportunities for reflection, present a continual challenge to the student and incorporate active learning, with the student an active participant in all stages of the experience from planning to evaluation.
- Before a student begins the internship, a learning contract needs to be written between the student, the internship advisor on campus, the supervisor at the location, and the student. This contract should state the conditions of the work
assignments, supervisor, learning goals, number of credits, and methods of evaluation of the work. A contract form can be obtained from the college Registrar's Office, or departments may have their own.

• Students should further develop the internship experience based on the college Experiential Learning Criteria, which can be obtained from the Registrar's Office in 140 Roberts Hall.

• Students need to keep their faculty internship adviser updated on the progress of the internship while away from campus.

Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work, and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workloads, and the relationship of the internship to the goals of the department. The specific terms of the contract should be recorded, using the Independent Study, Research, Teaching, and Internship form, available in the Registrar's Office in 140 Roberts Hall.

Undergraduate Research

A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university. You may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members; departmental offices; the CALS Career Development Office, in 177 Roberts Hall; or Cornell Career Services, in 103 Barnes Hall. Another option is to receive credit through a 499-level course within a department by conducting your own research project under a faculty mentor. More than 600 students each year conduct research for credit. Upperclass students usually have the course background to engage in research, but freshmen and sophomores also may be equipped to do some types of research. Off-campus research experiences are also available for pay or as internships.

The following web sites provide information about research and internships.

CALS Career Development Office:
www.cals.cornell.edu/oap/careers/

Study Abroad

Each year close to 200 CALS undergraduates spend a semester or year studying abroad. Students study at a university in Australia, participate in fieldwork in Africa, or explore the wonders of the ocean while learning to sail a tall ship on the Sea Semester program. CALS students have many opportunities available to them. They can:

• participate in a college one-to-one exchange program in Australia, Brazil, Denmark, Mexico, New Zealand, Singapore, Sweden, Switzerland, Turkey, or the United Kingdom;

• apply for a study-abroad program through the Cornell Abroad office;

• participate in a study tour as part of a CALS course, or take part in a summer program designed especially for CALS students.

CALS exchange programs are exciting opportunities created specifically for CALS students. Students participating in a college-exchange program pay only their Cornell tuition, with no additional administrative fees. To learn more about the exchange programs and other college opportunities, please visit www.cals.cornell.edu/oap/advising/international/index.html.

The opportunities offered through the Cornell Abroad office are vast, and can be traditional classroom study or conducting research in the rainforests of Costa Rica. Students wanting to participate in these study-abroad programs apply through the Cornell Abroad office. The application requirements and program costs vary based on the program. Check the Cornell Abroad web site (www.cuabroad.cornell.edu) for information about the application process, specific program and cost information, and visit their office in 300 Caldwell Hall.

All CALS students interested in studying abroad, whether on a CALS exchange or through Cornell Abroad, must have the approval of their faculty adviser and meet with the college Study Abroad Adviser to review the college policies and to receive college approval. College policies can be viewed at www.cals.cornell.edu/oap/advising/international/policies.html.

Study-abroad walk-in hours are held in 140 Roberts Hall on Tuesdays and Thursdays, 9:00 A.M.–noon and Wednesdays 1:00–3:00 P.M.

MAJOR FIELDS OF STUDY

The college curriculum consists of 22 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students majoring in the area. Courses of study are designed to provide systematic development of basic skills and concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each major area are different, but all students must meet the minimum distribution requirements of the college.

Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Department of Animal Science has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry industry, animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it, may, by arrangement with individual faculty members, engage in research (either for credit or honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a highly select group of students.

Students declaring a minor in animal science will arrange for a formal academic adviser in animal science at least three semesters before graduating. It is expected that the minor will be satisfied by completing at least 12 credit hours of animal science courses (at least six of which must be taken at Cornell), the makeup of which will be determined in consultation with the adviser. For example, it is recommended that students...
completing the minor will assemble courses (or demonstrate having the equivalent from elsewhere) including some basic and applied biology of animals (anatomy, physiology, nutrition, genetics) along with a selection of intermediate or advanced offerings from the animal science curriculum. Satisfactory completion of minor requirements will be verified by the minor adviser’s signature on the Petition to Graduate.

For information, contact Deloris Bevins in 149 Morrison, db11@cornell.edu.

Applied Economics and Management

The Department of Applied Economics and Management (AEM) offers undergraduate programs of study in three broad areas: Business, agribusiness, and Applied Economics.

AEM is home to Cornell’s undergraduate general business degree. Here students can immerse themselves in finance, marketing, management, and business strategy courses, as well as take specialized courses in entrepreneurship, food industry management, and agribusiness. This highly selective program is accredited by AACSB International, the accrediting body for general business degree programs.

AEM also includes undergraduate specializations that focus on the economics of agriculture and the environment. All AEM courses stress the application of analytical skills, critical thinking, and economic theory to real-world business and public-policy issues.

The six areas of specialization offered in AEM are:

Business, one of the largest undergraduate majors at Cornell University, offers students a broad array of courses in the fields of finance, marketing, management, accounting, and entrepreneurship.

Food industry management is a specialized business program for students interested in management positions in the retailing, manufacturing, and distribution sectors of the food industry.

Agribusiness management students study general business and take courses tailored to agricultural businesses.

Farm business management and finance is for students interested in working for firms with ties to farming and agriculture, such as cooperatives, banks, horticultural businesses, and family farms.

Agricultural and applied economics is a broad-based specialization that focuses on such important national and international issues as the economics of policy, markets, production, international trade, and international development.

Environmental and resource economics students study the economics of water and air quality, waste management, rural-urban land use, the sustainability of natural resources, energy use, and global climate change. AEM graduates are actively recruited by elite businesses for positions in finance, marketing, investment banking, and management consulting, as well as by federal and international agencies. Many graduates go on for advanced professional and academic degrees, often after several years in a challenging career position in business or government.

Atmospheric Science

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). The requirements for the B.S. in atmospheric science through the College of Agriculture and Life Sciences are as follows:

1. Mathematics, Computer Science, and Statistics:
   a. MATH 111, 112, 213, or equivalent
   b. EAS 121/150 or equivalent
   c. AEM 210 or equivalent
   d. MATH 293 or MATH 294 or EAS 435

2. Basic Physical Sciences:
   a. PHYS 207, 208, or equivalent
   b. CHEM 206 or 211

3. Atmospheric Science:
   a. EAS 131, 250, 341, 342, 352, 447, 451
   b. At least two atmospheric science electives

It is recommended that students who are interested in graduate study in atmospheric science should take additional courses in mathematics and physics.

Students interested in becoming secondary-school earth science teachers should complete a minor in education and take introductory courses in geology and astronomy.

Students interested in careers in private sector or commercial meteorology should take business courses such as marketing, management principles, management-information systems, and organizational behavior.

A student may minor in atmospheric science by completing any four of the following EAS courses: 131, 250, 268, 351, 354, 341, 342, 352, 455, 465, 451, 466, 457, 470, 651, 652 or 660.

Courses satisfying the requirements for a major or minor in atmospheric science may not be taken S/U.

Biological Sciences

Biology is a popular subject at many universities for a variety of reasons— it is a science that is in an exciting phase of development, it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology, and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology in 216 Stimson Hall provides student services that are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology. The undergraduate engineering major in Biological and Environmental Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a bachelor of science degree in Biological Engineering, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology, Inc. (ABET). All students in the joint administered BEE major enroll in the College of Engineering and pay endowed tuition their last two semesters.

Biological Engineering students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. They may select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students further strengthen their programs by completing minors in a second engineering major. Students planning for medical school
take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communication and teamwork skills, and all Biological Engineering students complete a capstone design project. Students in the engineering program may pursue minors and options in specialized areas as noted in the engineering section of this publication. Biological Engineering majors interested in the environment may complete a formal program of courses in the Environmental Engineering Option. Specific course requirements and other information for the Biological Engineering program and the Environmental Engineering Option are described in the College of Engineering section of this publication. Further information is also available at the undergraduate program office in BEE Student Services, 207 Riley-Robb Hall, or on the web at www.bee.cornell.edu. The department also offers two technology programs: Biological Engineering Technology and Environmental Engineering Technology. The technology programs emphasize applied and technical aspects of biological, environmental, physical, and life sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies. Many engineering and technology undergraduate students participate in honors programs, undergraduate teaching and research, internships, and senior design teams, and study abroad. Students in the engineering program are also eligible to participate in the Engineering Cooperative Education Program. Students pursuing majors offered in the BEE department should have a strong aptitude for the physical and life sciences and mathematics and an interest in the complex social issues that surround technology. Career opportunities for engineers and technologists cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate programs in engineering and science, as well as the professional fields like medicine, business, and law. In recent years graduates have pursued careers in environmental consulting, biotechnology, pharmaceutical industries, biomedical engineering, management, sustainable technologies, consulting, and international development. The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is educating the next generation of engineers to meet these challenges. Specific course requirements for the accredited engineering programs are found in the College of Engineering section of this book.

Specific course distribution requirements for the academic programs in Biological Engineering Technology and Environmental Engineering Technology include

**A. Basic Subjects**

<table>
<thead>
<tr>
<th>Subject</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Calculus</td>
<td>8</td>
</tr>
<tr>
<td>2. Chemistry</td>
<td>7</td>

<tr>
<td>7. Written and oral expression</td>
<td>9</td>
</tr>
</tbody>
</table>

**B. Advanced and Applied Subjects**

1. Five courses in the biological, environmental, or life sciences
2. Five engineering or technology courses at the 300 level or above; including at least 9 credits in Biological and Environmental Engineering

**C. Electives**

Additional courses to complete College of Agriculture and Life Sciences requirements

**D. Total (minimum)** 120

For further details on the Biological and Environmental Engineering and Technology Programs, see the BEE Undergraduate Program Handbook, available at 207 Riley-Robb Hall or on the web at www.bee.cornell.edu. Contact Professor Jim Bartosh at 255-2800, jab35@cornell.edu, or visit the department’s web site for more information.

**Biology & Society**

The Biology & Society program area is designed for students who wish to combine the study of biology with perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see the section on Biology & Society under the College of Arts and Sciences in this publication or visit the web site at www.sts.cornell.edu. Students who elect Biology & Society as their major field of study graduate from Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

**Admissions**

Students in CALS may be admitted provisionally into this field of study when they apply to the college. Full admission depends on completing introductory biology and completing an application. Students transferring into this field of study will need to complete introductory biology and to submit an application during their sophomore year. The application includes:

- A one- to two-page statement explaining your intellectual interests in Biology & Society and why it is consistent with your academic goals and interests.
- A selected theme.
- A tentative plan of courses fulfilling Biology & Society requirements, including courses you have taken and those you plan to take.
- A transcript of work taken at Cornell University, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty adviser is assigned on admittance to the field. Approximately 60 faculty members from four colleges serve as advisers to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty and student advisers are available to discuss the Biology & Society requirements with you.

**Requirements for the program** are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall or on the web at www.sts.cornell.edu. Also refer to the section on Biology & Society under the College of Arts and Sciences in this publication.

**Biology & Society Requirements:**

- College calculus (one course)
- Ethics (one course)
- Two social sciences/humanities foundation courses
- Three biology foundation courses
- One biology depth course
- Statistics (one course)
- Core course
- Five theme courses (a coherent group of five courses relevant to the student’s special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of the faculty is available in 306 Rockefeller Hall. Further information may be obtained by logging onto the departmental web site: www.sts.cornell.edu.
Biometry and Statistics

The Biometry and Statistics major in the Department of Biological Statistics and Computational Biology focuses on the application of mathematical and statistical techniques to the life sciences. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and drawing conclusions based on probability statements. The work of an applied statistician or mathematician can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent.

While satisfying course requirements for the major, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, business, computer science, economics, and the social sciences that involve numerical data and their interpretation.

Students majoring in this area are required to take a computer science course (e.g., COM $100$), mathematics courses (at least three semesters of calculus), BTRY 301–302 or 601–602, and 408–409, as well as a number of electives. Experience gained through summer employment or work as an undergraduate research assistant is highly recommended. Students should contact Professor Steven J. Schwager for information.

Communication

Communication majors at Cornell study communication in three main areas: science, media, and technology. They gain a strong core in the theory of communication processes, including attitude, knowledge, and behavior change, public opinion, and information systems. They develop applied oral and written communication skills, and learn how communication systems work in society and in their personal and professional lives. How to apply their understanding of communication to solving problems, sustaining the environment, reaching the public with new knowledge, and managing the intricate networks of technologies at our fingertips.

Communication majors learn:

• How communication influences attitudes, opinions, and behaviors.
• How mass media work in our society.
• How to use, evaluate, and design communication technologies.
• How to apply their understanding of communication to solving problems in science, the environment, government, industry, health, and education.

Communication is a program with a strong core of contemporary communication knowledge, theory, and practice. Required freshman courses are:

Fall semester:

COMM 120 Contemporary Mass Communication

Spring semester:

COMM 116 Communication in Social Relationships

COMM 117 Writing about Communication

This set of courses provides students with a basic understanding of communication and the communication process.

During the sophomore year, students take:

Fall semester:

COMM 201 Oral Communication

COMM 282 Communication Industry Research

Spring semester:

COMM 230 Visual Communication

After completing the courses in the core curriculum, all majors take an additional 18 credits in communication. Students can choose to concentrate in one of four predefined focus areas—consultation with adviser—or may plan an independent focus area that is appropriate to specific educational and career goals.

• Communication in the Life Sciences (CILS)—Students focusing in CILS will understand the nature of life, health, and environmental communication, learn specific skills for communicating in the life sciences, and explore conceptual and theoretical issues in science communication.

• Communication Media Studies (CMS)—Students focusing in CMS will analyze and understand the social processes that are affected by media in contemporary society.

• Communication and Information Technology (CIT)—Students focusing in CIT will explore the nature of communication systems and technologies, their social and organizational uses and impacts, and their social design.

• Communication Planning and Evaluation (CPE)—Students focusing in CPE will develop skills in identifying audiences and in preparing and implementing communication programs to meet the needs of those particular audiences.

Courses in this focus area stress the positive, ethical, and effective uses of communication in human affairs.

• Independent Concentration—The Undergraduate Program Committee will review proposed independent focus areas and authorize students to proceed with approved independent concentrations.

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has kept in mind the need for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may complete a minor program of study in communication or a minor program of study in information science or both. The minor in communication consists of four required courses (COMM 116, 120, 201, 230), one advanced communication course (chosen from COMM 203, 260, 263, 301, 350, 352), and two elective courses totaling six credit hours at the 300–400 level, excluding COMM 456 and 498.

The minor program of study in information science is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the information systems component area (primarily computer science), two courses from the human-centered systems component area (human-computer interaction and cognitive science), one course from the social systems component area (social, economic, political, and legal issues), and one additional course from any component area.

A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

Crop and Soil Sciences

The Department of Crop and Soil Sciences provides instruction in three specializations: agronomy, crop science, and soil science. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development Office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in these specializations.

Agronomy combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming. Graduate school is also possible after a well-planned program. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of their curriculum to meet specific interests and goals. Some students pursue a major in agronomy with a concentration in international agriculture. Agronomy is also offered as a specialization within the plant sciences major field of study.

Crop science is the application of basic biological and ecological science to the improvement and management of the world's main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor's degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics. Crop science is also offered as a specialization within the plant sciences major field of study.

Soil science is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 18 credits in soil science, including four credits in the introductory...
course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as six credits of crop science to satisfy the major. Soil science is also offered as a specialization within the Science of Earth Systems major and will become a specialization in the Science of Natural and Environmental Science major.

**Development Sociology**

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, sociology students study these and other facets of social change in both domestic and international settings. The Development Sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and technological contexts, demographic structures and processes, and the institutionalized and grassroots social movements through which people seek change. Courses offered by the department cover topics such as: the impact of changes in agricultural systems on rural development; community and regional development; environmental sociology; rural livelihoods; labor markets; technology and social change; the implications of the genomic revolution for agriculture and communities; the linkages between population dynamics, the environment, and development; the economic and political economy of globalization; women in development; and ethnic competition and stratification. Most courses provide background in both domestic and international aspects of the subject matter. Students can specialize with a domestic, international, or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

Majors in Development Sociology are required to successfully complete seven core courses: introductory sociology (D SOC 101), international development (D SOC 205), population dynamics (D SOC 201), methods (D SOC 213 or D SOC 214), theory, (D SOC 301), social stratification (D SOC 370), and a course in statistics. Four additional Development Sociology courses are also required of all majors, at least two of which must be at the 300 level or higher. The elective courses allow students to focus their major on particular themes such as the sociology of development, the social processes linking the environment, population, and development; and more general areas such as ethnic and class stratification, social movements, social policy, and gender and development. In each of these focus areas, students can choose to concentrate on domestic or international situations. Students are encouraged to work with one or more faculty members in the Department of Sociology and social science units located in other colleges at Cornell. Students are encouraged to supplement their Development Sociology course work by electing courses in these other departments.

**Education**

Building on strong academic disciplines and grounding in sociopolitical, psychological, empirical, and theoretical bases of educational practice, the program has two foci to meet societal demands for teachers of mathematics, science, and agriculture, and for leaders in nonformal educational settings. Learning, Teaching, and Social Policy (LTSP), which includes the Cornell Teacher Education Program and Adult and Extension Education (AEE). These two programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through research, practice, and scholarship. Our undergraduate program leads to provisional certification in agricultural education. The latest information on program developments may be found on our web site, http://education.cornell.edu.

**Adult and Extension Education (AEE)**

Creating a livable world requires more than just new knowledge and technology; it also requires sustained and expert practice in learning and education. The Adult and Extension Education (AEE) program provides opportunities for graduate students to investigate participatory educational and organizing practices that link learning to the global challenge of facilitating sustainability. As public universities focus on their research, teaching, and extension on critical domestic and global environmental, political, and social problems, AEE graduate students conduct reflective analyses of their own and others' educational and organizing work to ask "who benefits from such efforts in what ways?" Graduate students are expected to develop interdisciplinary perspectives and professional roles that involve them in study that investigate practical, political, social, and ethical issues through empirical and theoretical inquiries of adult and extension education.

The program prepares scholars and practitioners for adult and extension educational leadership and professional roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of inquiry include participatory practices in research, community development, educational evaluation; international adult and extension education programs: domestic extension and community organizing; learning in adulthood; professional and staff development; and health issues related to the education of adults.

**Learning, Teaching, and Social Policy (LTSP)**: This program is designed to foster the development of educational leaders, researchers, and practitioners who approach issues and challenges in education from multiple perspectives, and seek to construct an integrated knowledge base upon which the practice of teaching, learning, and social policy is based. The impacts of implementation and practice are explored for creating new theories, approaches, and policies to improve teaching, learning, and community life.

Drawing on the dynamic nature of teaching and learning, this program challenges students to create and apply research-based, critically reflective analysis of cognitive, intellectual, personal, social, moral, and institutional dimensions of learning. Students engage in critically reflective practice to address pressing problems and issues in formal and nonformal educational contexts across a variety of national and cultural settings.

The program is philosophically grounded in the perspective that learning and teaching is a lifelong process vital to individual development, the development of democratic communities, and the implementation of democratic values in educational policy. The program prepares scholars and practitioners for adult and extension educational leadership and professional roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of inquiry include participatory practices in research, community development, educational evaluation; international adult and extension education programs; domestic extension and community organizing; learning in adulthood; professional and staff development; and health issues related to the education of adults.

**The Cornell Teacher Education (CTE)** program is a unique interdisciplinary cohort-based program that certifies teachers for secondary teaching in agriculture, science, and...
mathematics. Students in the CTE program each other. Each of the certification areas education, and interact with and learn from understanding contemporary agriculture requires knowledge of how principles are and is developing. Understanding science fully the changes in the way agriculture is practiced offers a series of courses, both credit and and graduate students who are either currently and graduate students who have, or will have, classroom dynamics, language, and teaching practice. the entomology curriculum provides students environmental sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology, including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes a common core of requirements allowing flexibility in electives selected by students in consultation with their advisors. Specific requirements Basic Sciences One year of college mathematics, including a course in calculus; may substitute statistics and biometry One semester of physics CHEM 206–208 or 207–208 (General Chemistry) CHEM 257 (Organic and Biological Chemistry) General Biology Introductory Biology BIOG 241 (Genetics) or Plant Breeding 225 (Plant Genetics) BIOEE 278 (Evolutionary Biology) A choice of one: BIOEE 261 (Ecology and the Environment) or BIOBM 350 or 351 (Principles of Biochemistry) Entomology ENTEM 212 (Insect Biology) A choice of two: ENTEM 322 (Insect Morphology) ENTEM 331 (Insect Systematics) ENTEM 483 (Insect Physiology) Students must also enroll in at least two additional entomology courses offered at the 300–400 level on more specialized topics. Food Science The Food Science Program prepares students for careers in the food industry or research organizations and for graduate study in food science or related disciplines. Food scientists enjoy satisfying careers that help ensure the sustainable availability of a safe, nutritious, affordable, and high-quality food supply for people throughout New York State, the nation, and the world. Students in the Food Science Program can choose from one of four specialization options in the major: 1) Food Science; 2) Food Operations and Management; 3) Food Biotechnology; or 4) Enology. The first option meets the curriculum standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for IFT scholarships and awards. Students choose an option based on their individual interests and career goals. The first two years of the undergraduate Food Science Program are intended to establish a solid background in the physical and biological sciences, math and statistics, and communication skills. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, introductory food science courses, and nutrition. The last two years emphasize the application of these basic sciences and technology to the manufacturing, processing, quality evaluation, storage, distribution, and safety of foods and food ingredients. Examples of food science core courses include Food Engineering Principles, Physical Principles of Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, and Food Microbiology, with many elective courses offered as well. Students choose electives to both satisfy college distribution requirements and their individual interests within the major and beyond. Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member and/or complete an internship in a food company during their program of study. Most teaching faculty in the department also have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies offer interns on campus for their internship programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates. Enology and Viticulture. Students with primary interest in viticulture and secondary interest in enology (E/V) can enroll in the Plant Sciences degree program, with a concentration in Horticulture and a specialization in Viticulture. For these students, Plant Sciences will be their "major," and their required courses in enology (offered within the Food Science program) will constitute a "minor" in Food Science with a concentration in enology. Students with primary interest in enology and secondary interest in viticulture (E/V) can "major" in Food Science Program (with a concentration in enology) and a "minor" in Plant Sciences (with a concentration in Horticulture). Students in either track will take many of the same courses during their two years and must satisfy the core degree-program requirements of their major and minor program, as well as the general requirements of the college. The curriculum will consist of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students will be expected to participate in internships at vineyards and/or with wine makers. The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major. Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.
Information Science

Information Science (IS) is an interdisciplinary field that studies the design and use of information systems in a social context: the field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their use, rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

The Information Science major organizes its courses into three area-based tracks:

- **Human-Centered Systems.** This area examines the relationship between humans and information, drawing from human–computer interaction and cognitive science.

- **Information Systems.** This area examines the computer-sciences problems of representing, organizing, storing, manipulating, and accessing digital information.

- **Social Systems.** This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of eleven core courses, one introductory course, four courses in math and statistics, and two courses from each of the three IS areas. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

### Requirements

**Core (eleven courses):**

1. Introductory (one course):
   - INFO 130 Introductory Design and Programming for the Web

2. Math and Statistics (four courses):
   - MATH 111 Calculus I
     - one course chosen from MATH 171 Statistical Theory and Application in the Real World; AEM 210 Introductory Statistics; BTRY 301 Statistical Methods I; and PAM 210 Introduction to Statistics
   - either MATH 231 Linear Algebra or MATH 221 Linear Algebra and Differential Equations
   - INFO 295 Mathematical Models for Information Science

3. Human-Centered Systems (two courses):
   - INFO 214 Cognitive Psychology
   - INFO 245 Psychology of Social Computing

4. Information Systems (two courses):
   - COM S 211 Computers and Programming
   - INFO 230 Intermediate Design and Programming for the Web

5. Social Systems (two courses):
   - either ECON 301 Microeconomics or ECON 313 Intermediate Microeconomic Theory
   - either INFO 292 Inventing an Information Society or INFO 355 Computers: From Babbage to Gates

Where options in the core courses exist, the choice will depend on the student's interests and planned advanced courses for the selected primary and secondary tracks.

**Tracks**

Students must complete four advanced courses in their selected primary track and three advanced courses in their selected secondary track. The Human-centered Systems and Information Systems tracks can be used as primary or secondary tracks. The Social Systems track can be used only as a secondary track.

Courses taken to satisfy the core-course requirements may not be used to fulfill the track requirements.

Additional information on Information Science courses can be found below and in the GIS section of Courses of Study. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, COM S, and S&TS).

1. **Human-centered Systems**
   - PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display*
   - INFO 345 Human–Computer Interaction Design
   - PSYCH 347 Psychology of Visual Communications
   - PSYCH 380 Social Cognition*
   - PSYCH 413 Information Processing: Conscious and Unconscious
   - PSYCH 416 Modeling Perception and Cognition
   - INFO 440 Advanced Human–Computer Interaction Design
   - INFO 450 Language and Technology
   - DEA 470 Applied Ergonomic Methods
   - *Students who take PSYCH 342 may also count its prerequisite, PSYCH 205, toward the Human-centered Systems primary/secondary track requirements. Similarly, students who take PSYCH 380 may also count PSYCH 280 toward the Human-Centered Systems primary/secondary track requirements. At most, one of PSYCH 205 or PSYCH 280 can be counted toward the primary/secondary track requirements.

2. **Information Systems**
   - INFO 330 Applied Database Systems
   - LING 424 Computational Linguistic
   - INFO 430 Information Retrieval
   - INFO 431 Web Information Systems
   - COM S 432 Introduction to Database Systems
   - COM S 465 Computer Graphics I
   - COM S 472 Foundations of Artificial Intelligence
   - LING 474 Introduction to Natural Language Processing
   - OR&IE 474 Statistical Data Mining
   - COM S 478 Machine Learning
   - OR&IE 480 Information Technology

3. **Social Systems**
   - SOC 304 Social Networks and Social Processes
   - AEM 322 Technology, Information, and Business Strategy
   - INFO 349 Media Technologies
   - INFO 355 Computers: From Babbage to Gates
   - ECON 368 Game Theory (formerly ECON 467)*
   - INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
   - LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors
   - S&TS 411 Knowledge, Technology, and Property
   - ECON 419 Economic Decisions Under Uncertainty
   - COMM 428 Communication Law
   - INFO 435 Seminar on Applications of Information Science
   - OR&IE 435 Introduction to Game Theory*
   - S&TS 438 Minds, Machines, and Intelligence
   - INFO 447 Social and Economic Data
   - ECON 477 Decision Theory I and II
   - *Only one of OR&IE 435 and ECON 368 can be taken for IS credit.

### The Minor

A minor in Information Science is also available to students in CALS. The minor has been designed to ensure that students have substantial grounding in all three of the Human-centered Systems, Information Systems, and Social Systems areas. Detailed information about the minor can be found in the GIS section of Courses of Study. Students are also referred to www.infosci.cornell.edu/ugrad/concentrations.html for the most up-to-date description of the concentration and its requirements.

### International Agriculture and Rural Development

International Agriculture and Rural Development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture and Rural Development are designed to acquaint students with the socioeconomic factors in agricultural development, the physical and biological nature of tropical crops and animals, and the various world areas for which study programs exist.
### Requirements

In addition to the college distribution requirements, students in International Agriculture and Rural Development must take a minimum of 36 credits toward the major. A minimum of seven credits in International Agriculture and Rural Development (IARD) are required. The foreign language requirement for the IARD major is identical to that of the College of Arts and Sciences (see page 416). Students are expected to complete an overseas field experience of a minimum of six weeks. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

### International Studies Minor

Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills, and attitudes that build “global competencies.” The minor for CALS students not majoring in International Agriculture and Rural Development will recognize an international concentration of course work and experiences.

### Requirements for the Minor

Four courses with significant international content, as recommended by students’ major departments (two should be from CALS).

One semester of the Global Seminar, IARD 480.

The foreign language requirement for the International Studies Minor is identical to that of the College of Arts and Sciences (see page 416).

An approved overseas experience (exchange, study abroad program, internship, or faculty-led short course).

For more information, contact the Academic Programs Coordinator in the International Programs Office, 607-255-3037.

### Landscape Architecture

Landscape Architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program’s unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects may include garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape theory, and urban design.

In addition, an undergraduate minor in Cultural Landscape Studies is available for nonmajors.

### Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

### Study Abroad

The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third-year graduate students in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

### Bachelor of Science Landscape Architecture Degree Sequence

(please note that each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.)

Master of Landscape Architecture
Advanced Degree Program. The two-year Master of Landscape Architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants must hold a bachelor's degree in landscape architecture or architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of coursework as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a seminar, a concentration, and a thesis. For architects, the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

Undergraduate Minor for Nonmajors
Students outside the professional program may choose the undergraduate minor (five courses, 15 credits) in Cultural Landscape Studies to complement their major. A variety of courses consider the cultural landscape as an object, something to be studied for its own sake, and as a subject, as means to understand society's relationship to natural systems. The study of cultural landscapes also includes perceptions of landscapes, cultural ideas and values, and visible elements. Direct inquiries to Professor A. Hammer, Landscape Architecture, 440 Kennedy Hall.

Courses: choose five for a total of 15 credits
- **LA 140**, The Symbols of New York State's Cultural Landscape (3 credits)
- **LA 155**, American Indian Cultural Landscapes: Changes in Time (3 credits)
- **LA 260**, Pre-Industrial Cities and Towns of North America (3 credits) offered alternate years
- **LA 261**, Urban Archaeology (4 credits)
- **LA 262**, Laboratory in Landscape Archaeology (3 credits)
- **LA 263**, American Indians, Planners, and Public Policy (3 credits), offered alternate years
- **LA 282**, The American Landscape (3 credits)
- **LA 483**, Seminar in Landscape Studies (3 credits)
- **LA 497**, Independent Study (1-5 credits)
- **LANAR 524**, History of European Landscape Architecture (3 credits)
- **LANAR 525**, History of American Landscape Architecture (3 credits)

Natural Resources
As the number of humans living on the Earth surpassed six billion at the start of the twenty-first century, knowing how to conserve and manage well our Earth's remaining biological resources and natural environments takes on increasing importance and urgency. The field of Natural Resources sits squarely at the interface of science and policy, applied to these important conservation and environmental challenges. This is a biologically based major that focuses on the interface of nature (species, populations, communities, and ecosystems) with the human institutions involved in environmental conservation and management. The major's focus on biological resources (e.g., fisheries, wildlife, forests, and wetlands) includes issues of conservation and restoration of scarce species and their habitats, sustainable harvest of species of economic importance, management of invasive species and overabundant species, population dynamics in aquatic and terrestrial environments, ecosystem and watershed management, and mitigating the effects of human-induced changes on the environment.

The mission of the Department of Natural Resources, home of the major, is "to develop knowledge and facilitate learning to improve society's stewardship of natural resources and the environment." A commitment to undergraduate education is a vital component of that mission. For more information see www.dnr.cornell.edu. The curriculum emphasizes the biology and ecology of natural systems, as well as the social science/human aspects of conservation challenges. The major allows students flexibility to pursue a variety of paths to understand the scientific, ethical, and societal basis for management and protection of natural resources and environments through the application of ecological principles and knowledge of societal needs.

The Future for Natural Resources Majors
Most students entering the major have a strong interest in the natural world and in contributing to greater harmony between humans and the environment. An undergraduate degree in natural resources gives students the concepts and tools needed to participate intelligently and effectively in decisions that determine the future of our environment, either as natural resources professionals or as informed citizens.

Career opportunities in natural resources are diverse. The major prepares students for graduate school or entry-level positions in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting firms) or nonprofit sectors. Many students ultimately pursue graduate studies in environmentally related fields including the biological, physical, and chemical sciences; forest, wetland, stream, wildlife, or fisheries.
management, and environmental law and public policy. Graduates often assume leadership positions in government, colleges and universities, conservation organizations, environmental consulting firms, environmental divisions of private industry, and organizations involved in environmental education or communication.

**Curriculum**

Natural Resources is a flexible major, and free electives can account for as many as 40 credits out of the total of 120 required for graduation. You complete a set of courses in biology, ecology, chemistry, mathematics, economics, ethics, and written and oral expression; many of these courses also meet the college's distribution requirements for graduation. Freshmen and sophomores complete a series of four foundation courses in the major, "Introduction to the Field of Natural Resources," "Environmental Conservation," "Introductory Field Biology," and "Population, Values, and Natural Resources." Juniors complete three core courses, "Applied Population Ecology," "Applied Ecosystems Analysis," and "Natural Resources Management and Planning." These foundation and core courses emphasize the science-based conservation and natural-resource issues confronting society, and develop the conceptual and methodological tools that students will use in upper-division courses.

**Areas of Concentration**

The concentration in **Applied Ecology** provides students with advanced study of (i) species and population biology and (ii) ecosystem functions, with an emphasis on the conservation or management of organisms and their habitats. Course work in the department emphasizes the science-based conservation of fish and wildlife populations and their habitats, conservation biology, quantitative resource management, global ecology, and wetland and landscape management. Electives include a broad list of courses offered in the department and in other departments (such as in Crop and Soil Sciences, Earth and Atmospheric Sciences, Ecology and Evolutionary Biology, and Plant Biology).

The concentration in **Resource Policy and Management** provides students with advanced study in the institutions and policy that humans apply to resource management, providing a foundation for students who wish to pursue careers or advanced study in natural resources and environmental policy, law, or environmental education and communication. Course work in the department focuses on human dimensions of natural resources and ethics and values. Electives include a broad list of courses offered in the department and in other departments (such as in Applied Economics and Management Planning, Ecology and Evolutionary Biology, Government, and Development Sociology), including topics such as environmental governance and environmental law.

The concentration in **Environmental Studies** is intended for those students desiring a broad program of study regarding the interactions of humans and their environment. The concentration emphasizes the ability to think critically about those interactions. Each student, with help from his/her departmental adviser, designs a cohesive sequence of five upper-division courses in the social sciences, natural sciences, and/or humanities related to the environment. The sequence constitutes a theme that identifies a specific set of interactions between humans and their environment that the student wishes to pursue in depth. Some examples are: (i) the legal and economic incentives for species conservation, or (ii) studying human views of the environment as expressed in literature or history.

**Research and Work Opportunities for Undergraduates**

The department offers many opportunities for field-oriented student research, internships, and jobs. These include several field-based courses and access for research at the Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondack Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. Part-time jobs in the research and extension programs of many faculty members offer students opportunities for career-related work experience. A Research Honors Program is available for qualified students.

For a comparison of the Natural Resources major with other environmental majors, see www.ner.cornell.edu/teaching/ugrad/lac_cal_env.pdf.

**Nutrition, Food, and Agriculture**

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships among human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work with specialists in areas such as agricultural economics, for human nutrition, and development sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115, Nutrition, Health and Society; NS 245, Social Science Perspectives on Food and Nutrition; NS 345, Nutritional and Physiological Aspects of Foods; NS 351, Physiological and Biochemical Bases of Nutrition; and NS 352, Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisers in the Division of Natural Resources with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The Research Honors Program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students engage in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Savage-Kinzelsberg Hall and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607-255-2628, e-mail: aadns@cornell.edu.

The minor in **Nutrition and Health** in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and public health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 115, Nutrition, Health, and Society, plus nine credits of 200-level or above didactic NS courses. Enrollment is limited in some courses. Please check www.nutrition.cornell.edu/undergrad/calsminr.html for details.

**Plant Sciences**

Plant Sciences prepares students for careers that meet the challenges of providing a safe, nutritious, and abundant food supply for a growing world population and to use plants to enhance the beauty of our landscapes. It is a multidisciplinary program administered
by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding, and Plant Pathology, representing the strongest groups of plant scientists in the world. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, but beyond that common thread, individual career goals vary widely. Some have their sights set on careers in applied agriculture, others plan to contribute to advancements of our knowledge by way of teaching or research, and still others see study in plant science as a stepping-stone to specialized training in business, government, or law. In addition to the college distribution requirements, Plant Science majors must take at least one course in each of several areas including botany, plant physiology, ecology, taxonomy/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science, for a total of 40 credits.

Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work may choose a specialization within one of the five cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study in Plant Sciences without declaring a specialization. Those students develop a strong background in plant science but have fewer required courses so that they can explore other areas of interest.

More than one hundred courses that deal directly with some area of plant science are offered by the cooperating departments, and other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for internships, undergraduate teaching, and research experience. Qualified students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities. Students who are planning to enter the work force immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant-related or maintenance-related industry such as a lawn and tree care company, commercial greenhouse, nursery, orchard, vineyard or winery, botanical garden or arboretum, crop production farm, or with Cooperative Extension. Plant Sciences faculty members also encourage students to avail themselves of opportunities to work and study abroad. In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the Cornell campus are freely available to students for hands-on practice, technical training, independent research projects, and internships. These facilities include research orchards and vineyards, golf courses and a range of facilities for golf study, the Cornell Plantations (including arboretum and natural areas) and vegetable and field crop farms. Demonstration/research facilities in Aurora (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Essex County), Middletown (Orange County), Odessa (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Sciences consortium and are available for undergraduate and graduate field study.

**Crop Science and Agronomy** are specializations that focus on the science and management of the major food and feed crops of the world such as wheat, corn, rice, soybeans, and alfalfa. In addition to several courses in crop science, students in this program also take courses in the sister disciplines of weed science and soil science. At present, the specialization is described in detail under the major field of study called Crop and Soil Sciences, but it will become a part of the Plant Sciences major field of study in the near future.

**Enology and Viticulture.** The College of Agriculture and Life Sciences announces a curriculum in viticulture and enology within existing undergraduate B.S. degree programs in Plant Sciences and Food Science.

Students with primary interest in viticulture and secondary interest in enology (E/V) can enroll in the Plant Sciences degree program, with a concentration in Horticulture and a specialization in Viticulture. For these students, Plant Sciences will be their "major," and their required courses in enology (offered within the Food Science program) will constitute a "minor" in Food Science with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) will "major" in Food Science (with a concentration in enology) and a "minor" in Plant Sciences (with a concentration in Horticulture).

Students in either track will take many of the same courses during their two years and must satisfy the core degree-program requirements of their major and minor programs, as well as the general requirements of the college. The curriculum will consist of core coursework in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students will be expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences, as applied in viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major. Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

**Horticulture.** Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants in farms and gardens, parks and landscapes, and athletic and recreational facilities; indoor plants; greenhouse and nursery plant production; and crops used for wines, herbs and spices, medicinal purposes, and coffee and teas. The knowledge and skills essential to grow, maintain, propagate, and manage horticultural crops are high in demand in a world increasingly concerned with environmental quality, recreation, and health.

There are about 40 faculty members in horticulture—specializing in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally and internationally.

Students choosing a concentration in Horticulture must complete a minimum of 40 credits of core courses for the Plant Sciences major, plus the following courses:

- **HORT 101 Horticulural Science and Systems** (4 credits)
- **HORT 400 Plant Propagation** (3 credits)

Two HORT courses in plant production or management at the 400 level (6 credits)

One additional course of integrated pest management (plant pathology, entomology, or weed science) beyond the 3 credit Plant Sciences core requirement (3 credits)

Students transferring into Cornell from other colleges have the option to pursue an additional degree or major in Plant Sciences, supplemented by more advanced courses in plant biology. Students specializing in Plant Biology within the Plant Sciences major should take a minimum of four courses beyond the core of Plant Sciences courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnobotany, and further courses in the function, growth, genetics, systematics, ecology, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within Plant Biology afford a flexible curriculum.

**Plant Genetics and Breeding** relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agricultural crops of economic importance are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas to create crops that meet the needs of modern society. In addition to the core Plant Sciences courses, students should take PL BR 201, 403, 404, and BIOP 343. Other courses may be included after consultation with the adviser. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

**Plant Pathology** is the study of plant diseases caused either by microorganisms or by chronic exposure to toxic elements in air and water. At the very least, specialists in the field must learn how to identify plant diseases and to design management strategies that will limit their overall impact. However, by employing contemporary tools from molecular biology, plant pathologists are also well positioned to answer fundamental questions about the nature of host-pathogen interactions and the genes that control these. These new tools has already led to rapid deployment of disease-resistant crop varieties and it promises to offer much more in the future. For most students, a concentration in plant pathology as
an undergraduate is preparation for graduate study in the field. However, graduates may also be employed as representatives with agrimines, regulatory, and laboratory technicians. Suggested courses beyond the Plant Sciences core include organic chemistry, biochemistry, calculus, introduction plant pathology, mycology, entomology, and plant breeding.

**Plant Protection** is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a terminal program for students desiring practical preparation for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

**Science of Earth Systems (SES)**

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the destruction of the ozone layer, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the basic study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell’s strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the twenty-first century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, and biogeochemistry. These classes emphasize the interconnectedness of the Earth system, and are treated as a discipline from different traditional disciplines. The selection of upper-level “concentration” courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Possible areas of concentration include biogeochemistry, ecological systems, environmental geology, ocean sciences, climate dynamics, hydrological systems, and soil science.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geology/geophysics, oceanography, hydrology, ecology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of environmentally oriented careers in both the private sector and government. Students with the strong science background provided by the SES major can also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

The requirements for the major are as follows:

1. **Basic Math and Sciences**
   - MATH 190 or 191, and MATH 192 (or MATH 111, 112)
   - PHYS 207 and 208 (or PHYS 112, 213)
   - CHEM 207 and 208
   - BIOGD 101/103/102/104 (or 105-106) or BIOGD 109/110
   - Three additional 3-4 credit courses in basic science and math, generally at the 100 and 200 level. At least one of the following courses must be included in the selection:
     - GEOL 201 Physics and Chemistry of the Earth
     - BIOEE 261 Ecology and the Environment
   - Other examples are MATH 293 and MATH 294, biochemistry, organic chemistry, PHYS 214, and introductory statistics. With the exception of the introductory statistics course, the additional basic courses will require at least one of the classes listed above as a prerequisite.

2. **Science of Earth Systems Core Courses**
   - Three 4-credit courses that emphasize the interconnectedness of the Earth system are required. These courses are focused on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science.
   - EAS 302 Evolution of the Earth System
   - EAS 351/ASTRO 331 Climate Dynamics
   - EAS 321/NATRES 321 Biogeochemistry

3. **Concentration Courses**

   Four intermediate to advanced-level courses (300-level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses are required. These build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen before the junior year in consultation with an SES adviser whose interests match those of the student.

   Freshmen are encouraged to enroll in EAS 103, the SES Freshman colloquium offered in the fall semester. For more information, contact Stephen Colucci, Department of Earth and Atmospheric Science, sjc25@cornell.edu, and visit the web site: www.geo.cornell.edu/ses.

**Science of Natural and Environmental Systems**

Environmental stewardship and sustainability are increasingly recognized as human and planetary imperatives. Graduates who understand how people both generate and can resolve environmental problems will contribute significantly to creating a sustainable environment for our own and future generations. This new major in environmental science provides a broad-based, integrative program in the physical, biological, social, and economic sciences, as well as disciplinary strengths in one or more subjects suitable for entry-level professional positions or post-baccalaureate studies.

The curriculum comprises an intensive foundation in the sciences; an environmental core with courses covering earth, biotic, social, and economic systems; and several disciplinary programs of study. This major emphasizes inter- and multidisciplinary work, independent thinking and analysis, and development of competency in writing and speaking throughout the curriculum.

**Foundation Courses**

The foundation courses, listed here, can be used to fulfill many of the CALS distribution requirements. The purpose of this component of the program is to provide a strong foundation in the basic sciences and an introduction to the relationships between the biophysical and social sciences.

- two semesters of college-level biology
- two semesters of college-level calculus
- four semesters of college-level chemistry and physics (at least one semester of each)
- one semester of college-level statistics

**NTRES 201 Environmental Conservation**

**DEA 150 Introduction to Human-Environment Relationships**

The freshman and sophomore years are designed to provide foundation courses and meet CALS requirements at the outset. The freshman year provides engagement with environmental study through DEA 150 and NTRES 201, with major-specific sections for these two courses. Depending on student interest and available time, other courses in environmental study may be taken as electives early in the schedule.

Advanced Placement credit will be accommodated in the program through consultation with the student's faculty adviser.

**Environmental Core**

The environmental core consists of five courses. Its purpose is to provide a rigorous, integrated understanding of the environment, broadly defined. This core recognizes that knowledge of the environment encompasses physical and biological sciences, social sciences, and human behavior. DEA 150 will provide the required core understanding of human behavior related to environmental issues. AES 115, required in the freshman year, provides a unifying overview of the goals, facts, depth, and breadth of the major.

Core courses are to provide integration (among areas, disciplines, methodologies, topics, and issues); systems emphasis, basic, rigorous presentation of core material; root competencies for understanding the
environment, a framework for further advanced courses; and a new way of thinking that enables innovative solutions to difficult problems.

Environmental Science: ALS 115 Environmental Science: Core Principles
Earth systems: CSS 365 Environmental Chemistry: Soil, Air, and Water
Biotic systems: BIOE 261 Ecology and the Environment
Economic systems: AEM 250 Environmental and Resource Economics
Social systems: D SOC 324 (STS 324, SOC 324) Environment and Society

Programs of Study
Programs of study that focus in one or more areas of environmental science are being established to provide disciplinary expertise sufficient for entry-level proficiency. Each student in the major will be required to take four courses at the 300-level or above in at least one program of study.

Programs of study will not replace or duplicate current majors. Rather, they will provide the basic core of knowledge essential for an introductory understanding of the area—the concepts, basic science, methodologies, and major applications.

Proposed programs of study are:
- Environmental Biology
- Environmental Information Science
- Sustainable Development
- Agroecosystem Science
- Environmental Economics

If established programs of study do not meet the student’s interests and needs, the student may propose a program of study, in collaboration with a faculty mentor and subject to approval by the Faculty Program Committee.

Freshmen are encouraged to enroll in the introductory Environmental Science course. For more information about this major, see the website at http://snes.cas.cornell.edu or visit the undergraduate program office in 12 Fernow Hall, or send e-mail to sw38@cornell.edu.

Special Programs in Agriculture and Life Sciences

General Studies. The opportunity to develop an independent major in General Studies is available for students interested in pursuing a general education in Agriculture and Life Sciences. In consultation with a faculty adviser, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, and the analytical ability that a general education fosters.

General Studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology graduates deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic coursework in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agroonomic sciences, biophysical sciences, and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspiration. A course of study for a special program must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

Agricultural Science Program

Many students wish to pursue a general education in agriculture to prepare for careers that require knowledge of food systems and natural resources, such as production and marketing of foods (animals and plants) and ornamental plants, agricultural education in secondary schools, cooperative extension, food systems, and crop consultants. The Agricultural Science program is designed to allow students to work with their adviser in developing a curriculum that best meets the needs of each individual student. In this program, students can gain a broad exposure to the agricultural courses across the college. The program is very flexible and allows students to develop a general course of study or to select one or two areas of concentration.

All students are required to take the core courses. Concentrations requiring at least 12 credits are available in Animal Science, Applied Economics and Management, Education and Communication, and Plant Sciences/Agronomy.

Students will gain practical experience through special projects, extracurricular activities, and/or internships. Opportunities are available in research and outreach experiences, and in summer employment, which enrich the practical experience. Students will engage in group activities and will participate in discussions with faculty and other experts in various sectors of the agricultural industry.

AIS 100 Introduction to American Indian Studies

Fall. 3 credits. T R 1:25-2:40 plus sections. L. Elm

Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Africa, Asia, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. The course begins with a survey of Indian America before Columbus and ends at the Wounded Knee in 1890, the event that marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

AIS 175 Issues in Contemporary American Indian Society (also D SOC 175)

Spring. 3 credits. M W 11:15-12:05 plus sections. L. Elm

This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways American Indians pursued strategies to sway the process of social change. American Indian political, social, and cultural issues are examined through history, literature, art, and film. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current events are discussed, and the implications for American Indians in the twenty-first century are explored. Guest lecturers, including American Indian scholars and leaders, provide additional perspectives.
AIS 230  Cultures of Native North America (also ANTHR 230)  
Fall. 3 or 4 credits. M W F 11:15-12:05. B. Lambert.  
A survey of the principal Inuit and American Indian culture area north of Mexico. Selected readings are examined to bring out the distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

AIS 236  Native Peoples of the Northeast, Pre-Contact to the Present (also HIST 236 and AM ST 236)  
After an initial, hostile series of economic and military exchanges with Europeans beginning off the coast of Maine in 1524, the native peoples of northeastern North America have undergone a fascinating and dramatic series of transformations. Adopting an interdisciplinary perspective, this course will analyze the history of Native Americans in the Northeast from a variety of perspectives. Readings and discussions will be drawn from a wide range of secondary and primary sources, including historical documents, traditional narratives, archaeological reports, the Internet, and museum exhibits of material culture. The class will emphasize critical reading of texts and discussion.

AIS 260  Survey of American Indian Literatures in the United States (also ENGL 260)  
The purpose of this course is to provide an introduction to U.S. American Indian literatures, both oral and written. The method of studying these literatures will emphasize historical, legal, and cultural contexts as well as current critical debates over methodological approaches. In addition to examples of the oral tradition and primary sources, including historical documents, traditional narratives, archaeological reports, the Internet, and museum exhibits of material culture. The class will emphasize critical reading of texts and discussion.

AIS 266  Introduction to Native American History (also HIST 266 and AM ST 266)  
With the abandonment of earlier perspectives grounded in romantic and evolutionary stereotypes, Native American history represents today one of the most exciting, dynamic, and contentious fields of inquiry into America's past. This course introduces students to the key themes and trends in the history of North America's indigenous peoples by taking an issues-oriented approach. The course stresses the ongoing complexity and change in Native American societies and will emphasize the theme of Native peoples' creative adaptations to historical change. Additionally, the course will provide numerous opportunities for students to develop their critical thinking and reading skills.

AIS 311  Social Movements (also D SOC 311 and LSP 311)  
Social movements are collective efforts by relatively powerless groups of people to change society. Typically conceptualized as political activity outside the institutional framework, social movements are "politics by other means." This course examines the transnational dimensions of social movements to assess the implications of globalization for political mobilization and the ways that social movement actors engage the global political process to effect social change. Under what circumstances do movements emerge? How do global processes shape both domestic and transnational political mobilization? How do movements internally organize and choose political tactics and strategies to achieve their goals? How have social movements changed history, identities, society, and politics? This course addresses these and related questions through an examination of indigenous peoples movements in the United States, Canada, and Latin America.

AIS 340  Contested Terrain: Hawaii  
Spring. 3 credits. Prerequisite: one introductory level course in the social sciences or history. F 8-11; one Saturday a month 8-11. M. M. Hanahata.  
This course draws from the fields of history, political science, and cultural studies to present an historical understanding of contemporary Hawaiian society. Topics include Western contact, establishment of Western institutions, overthrow of a sovereign government, annexation, integration into the United States. Direct experience with Hawaiian leaders and institutions are incorporated to address contemporary issues: sovereignty, economic development/dependency, social change, and land use as a sociopolitical and cultural struggle.

AIS 353  Anthropology of Colonialism (also ANTHR 353)  
Spring. 4 credits. A. Simpson.  
This course examines the relationship between colonialism and anthropology and the ways in which the discipline has engaged this global process locally. One of our aims in this course is to gain an appreciation of colonialism both as a theory of political legitimacy and as a set of governmental practices. As such, we will re-imagine North America in light of the colonial project and its technologies of rule such as education, law, policy—that worked to transform indigenous notions of gender, property, and territory. We will come to appreciate the ways in which these forms of knowledge and practice advanced the settlement of space and place and both settled and unsettled peoples. This course will be comparative in scope but will be grounded within the literature from Native North America.

AIS 361  Sociology of American Indians (also D SOC 360)  

AIS 367  American Indian Politics and Policy (also GOVT 357 and D SOC 357)  

AIS 368  Contemporary American Indian Fiction (also ENGL 367)  
This course will look at contemporary American Indian fiction as a response to the colonial structure of federal Indian law. Beginning with Dorothy Rogers' Cora, a novel of the Allotment Era, we will read works by a range of Native fiction writers (from a list that includes McNickle, Welch, Silko, Vizenor, Hogan, Alexie, Walters, Glancy, and Red Corn) that respond critically to U.S. federal Indian policy.

AIS 435/635  Indigenous Peoples and Globalization (also D SOC 435/465)  
Fall. 3 credits. Prerequisite: undergraduate, permission of instructor. S-U grades optional. Limited to 25 students. R 1:25-4:45. A. Gonzales.  
Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those pressures. Globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the NAFTA or the deterritorialization of social and political arrangements contemporaneous with modernization or the expansion of communication technology and its impact on traditional knowledge systems, have had profound social, cultural, and economic impacts on indigenous peoples. At issue are the lands, resources, traditional knowledge, intellectual and cultural property, and indigenous struggles for recognition and self-determination.

AIS 450  Practicum in American Indian Studies  

AIS 486  American Indian Women's Literature (also ENGL 486)  
Spring. 4 credits. R 10:10-12:05. L. Donaldson.  
This course explores the development of women's literature in a variety of different American Indian cultures. We attend to native paradigms of cultural production such as women's songmaking, weaving, basketmaking, and storytelling, as well as the appropriation of European literary forms such as the novel. We read a diverse range of materials including novels, autobiography, poetry, drama, and short stories.

AIS 490  New World Encounters, 1500-1800 (also HIST 490 and AM ST 499)  
The discovery of the Americas, wrote Francisco Lopez de Gomara in 1552, was "the greatest event since the creation of the world, excepting the Incarnation and Death of Him who created it." Five centuries have not diminished either the overwhelming importance or the strangeness of the early encounter between Europeans and the indigenous peoples of the Americas. Taking a comparative approach, this course will conceptually early European encounters as the product of reciprocal cultural encounters by assessing the various experiences of Spanish, French, and English newcomers in different regions of the Americas. Critical interpretation of primary source material will be emphasized in the course, as will the development of students' ability to reflect critically on these documents, taking into account the perspective of both the colonizers and the colonized.

AIS 497  Independent Study  
Fall or spring. 1-4 credits. Staff.  
Topic and credit hours to be mutually arranged between faculty member and student. The American Indian Program Office must approve Independent Study forms.

AIS 600  American Indian Studies  
4 credits. Staff.
AIS 726 Federal Indian Law: The Legal Construction of Indian Country (also LAW 726)
Spring. 3 credits. S-U option unavailable. Limited enrollment. Students who have taken LAW 608, American Indian Law, are not precluded from taking this seminar as well. E. Cheyfitz. For description, see LAW 726.

Department of Statistical Science
The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found at the front of this catalog (see p. 25).

NONDEPARTMENTAL COURSES

ALS 101 Transition and Success at Cornell
Fall. 1 credit. Prerequisites: must be an entering student in CALS. Letter grade only. B. O. Earle and CALS Career Development Office.

Discussion-oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Lecture, discussion, guest speakers, student panels, and assignments that explore Cornell's history, academic opportunities, services, and organizations are used. Emphasis on role of Agriculture and Life Sciences in future of all related careers.

ALS 115 Environmental Science: Core Principles
Spring. 3 credits. Letter grade only. Lec: T R 10:10-11:00, lab: R 1:00-4:00. E. L. Madsen.

Environmental science is the multidisciplinary study of how the Earth works, how to contend with environmental change, and how humans influence and manage the Earth's life-support systems. This course highlights facts and principles from the physical, chemical, biological, social, and economic sciences. The readings, case studies, discussions, field/labory experiences, and research topics are designed to unify the curriculum for students majoring in the Science of Natural and Environmental Systems (SNES).

ALS 134 Emergency Medical Technician
Fall and spring. 3 credits each semester. Two-semester course. S-U grades optional. Prerequisite: none—but basic or advanced first aid is recommended. Lec: M 1:30-4:30; lab: W 1:30-4:30, D. A. Grossman, P. Rach, and A. E. Gantort.

This is an intensive 140-hour course taught throughout the fall and spring semesters. Enrollment, therefore, occurs in the fall term only. Course includes training in C.P.R. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, the use of medical antishock trousers, and defibrillation. Students will qualify for the New York State E.M.T. Certification Exam upon successful completion of the course.

ALS 135 Advanced Emergency Medical Technician, Critical Care
Fall and spring. 4 credits each term. Two-semester course. S-U grades optional. Prerequisite: must be currently certified as a N.Y.S. Basic E.M.T., or have applied for reciprocity. Lec: T 1:30-4:30, lab: R 1:30-4:30. Sat 9:00-12:00. D. Grossman, P. Rach, D. Spaulding.

Advanced Emergency Medical Training includes topics such as Emergency Pharmacology, Principles of Advanced Cardiac Life Support, Emergency Hypoperfusion Management and Basic Trauma Life Support. Classroom, lab, hospital, and field sessions are used to teach skills such as intubation, emergency IV access, electrocardiography and defibrillation, and patient assessment and pharmacological intervention. Extensive out of classroom (exceeds 140 hours) time is required.

ALS 400 Internship
Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades optional. Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

ALS 402 Agricultural Study Tour to Burgundy, France
Spring. 2 credits. Prerequisite: must be a registered CALS student. S-U grades optional. L. A. Weston and P. Durand.

A two-week study tour held in the month of May in Burgundy, France. Students experience French agriculture, history, and cuisine. Tour includes wine, fruit, vegetable, cheese, dairy, beef, and poultry production, and French university facilities featuring modern agricultural research. Ten- to 20-page paper requirement. Students travel throughout Burgundy and eastern France with Pascal Durand, professor at ENESAD in Dijon France.

ALS 403 Internship Opportunities in Burgundy, France

Six to eight-week internship experiences in Burgundy, France. In agriculture, related subject areas including viticulture, agribusiness, agronomy, food science, and biotechnology. Final paper documenting internship experience required.

ALS 477 Environmental Stewardship in the Cornell Community

Each student undertakes an original project to improve the environment at Cornell while working with a faculty adviser and the Cornell infrastructure (generally campus life and/or facilities). Through class discussions, students learn how to be more effective at developing environmental programs in the future, both during and after college. The final written project report is also presented orally at a public forum. (Note: If students prefer to take one or two credits of independent research in a department in the College of Agriculture and Life Sciences, this can be arranged. Assistance in finding a faculty adviser is provided. This course may be taken more than once.)

ALS 481 Global Conflict and Terrorism
Spring. 3 credits. Lec: M 7:30-9:30, sec, R 2:30-4:30, J. Shanahan.

Reviews and discusses issues concerning global development and its relationship to conflict and terrorism. Each class session focuses on a specific topic presented by either a faculty member or a guest speaker. The course is designed to be interactive and allows the class to actively engage the students. The weekly discussion section focuses on discussing in greater depth the readings assigned.

ALS 494 Special Topics in Agriculture and Life Sciences
Fall or spring. 4 credits maximum. S-U grades optional.

The college teaches "trial" or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 500 Politics and Policy: Theory, Research, and Practice (also AM ST 501, PAM 406, and GOVT 500)
Students in the College of Agriculture and Life Sciences must register for ALS 500.

S. Jackson and staff.

This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: 1) weekly lectures providing background on the structures and processes of national politics and policy; 2) field experience; and 3) individual research papers or projects. All three components are based learning, field experience, and individual research. Applications are made through the Cornell in Washington office, M101 McGraw Hall.

ALS 661 Environmental Policy (also B&SOC 461 and BioEE 661)
Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, R 2:30-4:30. D. Prinn.

This course focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.
APPLIED ECONOMICS AND MANAGEMENT

Courses by Subject

Farm management, agricultural finance, and production economics: 302, 403, 404, 405, 608, 708

Statistics, quantitative methods, and analytical economics: 210, 410, 411, 412, 415, 417, 419, 711, 712, 713, 714, 717

Policy and international trade: 230, 335, 336, 341, 342, 433, 434, 436, 630, 632, 633, 634, 730, 735

Environmental and resource economics: 250, 450, 451, 555, 651, 655, 750

Economics of development: 464, 660, 667, 762, 765

Consumer economics: 670

General, contemporary issues, research, and other: 101, 200, 380, 494, 497, 499, 609, 698, 699, 700, 800, 900, 901

AEM 101 Introduction to Applied Economics and Management

Fall. 3 credits. Required of and limited to freshmen in Applied Economics and Management. S-U grades only.

This freshman transition course explores the major courses of study available to AEM students, including a discussion of "hot topics," research, and career paths in each field. Numerous AEM faculty members are guest preservers. Students are introduced to campus resources such as the library system, study abroad opportunities, course planning, career planning, and learning strategies. Short written assignments and acrive group participation are required.

AEM 120 Foundations of Entrepreneurship and Business

Fall. 3 credits. P. D. Perez.

An introductory course, providing a sound base to both the understanding of entrepreneurial activity and possibilities and the study and practice of entrepreneurship at Cornell. The course will include lectures, selected guest appearances by successful entrepreneurs, and extensive use of IT-based learning and presentation tools.

AEM 222 Business Management Case Analysis

Spring. 1 credit. Required of and limited to AEM majors in AEM 220; others admitted by permission of instructor. P. D. Perez.

The course offers students, working in teams, the opportunity for hands-on application of general business management concepts through discussion and analysis of a series of cases. Additional students may be accommodated on a space-available basis with permission of the instructor. Case topics are closely coordinated with both the content and sequencing of material presented in AEM 220.

AEM 230 International Trade and Finance [also ECON 230]

Spring. 3 credits. Prerequisites: ECON 101 or equivalent required; ECON 102 or equivalent recommended. 1 evening prelim. S-U grades optional. D. R. Lee.

This course provides a one-semester introduction to international economic principles and issues. The course first surveys key topics such as the elements of comparative advantage, tariff and non-tariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Current issues such as the effects of trade liberalization, trade and economic growth, and the viability of international capital markets are discussed throughout. This course is designed as a less technical introduction to concepts developed at a more advanced level in AEM 430 and ECON 361-362.

AEM 240 Marketing

Fall. 3 credits. E. W. McLaughlin.

This course provides a broad introduction to the fundamentals of marketing. The components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services to people are explored. Industry guest lectures and current marketing applications from various companies are presented and analyzed. Concurrent enrollment in AEM 241 is required for AEM majors.

AEM 241 Marketing Plan Development

Fall. 1 credit. Required of and limited to AEM majors. D. J. Perosio.

The course offers students, working in teams, the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local business.

AEM 250 Environmental and Resource Economics

Spring. 3 credits. S-U grades optional. G. L. Poe.

The objectives of this course are to introduce fundamental economic principles and the "economic approach" to policy issues, and to demonstrate how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Subjects include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. These tools are used to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and non-renewable resources, and global warming.
AEM 302 Business Law I (also NBA 560)
Fall and summer. 3 credits. Limited to seniors, juniors, and graduate students.
Prerequisite: a course in business law or permission of instructor. D. A. Grossman.
Examines legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law of contracts, sales, agency, and property.

AEM 320 Business Law II (also NBA 561)
Spring. 3 credits. Limited to juniors, seniors, and graduate students.
Prerequisite: a course in business law or permission of instructor. D. A. Grossman.
The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course reviews selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

AEM 321 Information Technology Management (also H ADM 449)
Fall. 3 credits. Priority given to juniors and seniors. Staff.
This class explores international technology marketing from an economics perspective using biotechnology as an example. Topics include technology theories, products, risk (health and environmental) regulation, public technology policy, and international conventions. The class is of interest to students of biotechnology, public technology policy, and international technology marketing.

AEM 322 Information Technology Strategy
Spring. 3 credits. Limited to juniors and seniors. Staff.
For description, see H ADM 449.

AEM 327 Technological Change and Innovation Strategy
Spring. 3 credits. Limited to juniors and seniors. Staff.
This course explores innovation and technological change. We will study how technological change affects economies and industries, and how innovation of new products, processes, and services takes place in firms. The focus is on the creation, management, and exchange of knowledge within and across organizational boundaries.

AEM 330 Managerial Economics and Decision Making
Spring. 3 credits. Limited to juniors and seniors. Staff.
This course focuses on the theories of buyer behavior, with specific emphasis on the tools of managerial analysis and decision making, in the context of the microeconomic theories of demand and cost functions. Students will consider issues such as how to estimate a firm’s demand and cost functions as considered in making such decisions. The course compares standard microeconomic models with more realistic approaches to marketing decisions. The emphasis is on considering decisions that are less stylized and more similar to those managers face on a regular basis.

AEM 334 Women, Leadership, and Entrepreneurship
Fall. 1 credit. D. Streeter.
This seminar makes use of lectures, guest panels, and readings to focus on issues facing women in both business and their business careers. Sessions include topics such as: status of women in business leadership, pathways and strategies for leadership development, family/life balance issues, gender issues in the workplace, and resources for emerging leaders.

AEM 340 Futures and Options Trading
Fall. 3 credits. Limited to juniors and seniors. Priority given to CALS juniors and seniors, then out of college seniors.
Prerequisites: ECON 101, EDUC 115, and AEM 210 or equivalent. Staff.
The focus of the course is on the use of futures and options as risk management tools. Commodities, exchange rate, and interest rate derivatives are covered from the perspective of the hedger, but those interested in arbitrage and speculation are provided some insights as well. Students participate in a simulated trading exercise in which they use price and market information and input from industry experts to manage a hedge position.

AEM 342 Integrated Marketing Communications
Fall. 3 credits. Staff.
This course introduces students to the psychological, sociological, and cultural theories of buyer behavior, with specific attention to consumer information processing and decision making, in the context of the microeconomic theories of demand and cost functions. Students will consider issues such as how to estimate a firm’s demand and cost functions as considered in making such decisions. The course compares standard microeconomic models with more realistic approaches to marketing decisions. The emphasis is on considering decisions that are less stylized and more similar to those managers face on a regular basis.

AEM 344 Consumer Behavior
Fall. 3 credits. Staff.
This course introduces students to the psychological, sociological, and cultural theories of buyer behavior, with specific attention to consumer information processing and decision making, in the context of the microeconomic theories of demand and cost functions. Students will consider issues such as how to estimate a firm’s demand and cost functions as considered in making such decisions. The course compares standard microeconomic models with more realistic approaches to marketing decisions. The emphasis is on considering decisions that are less stylized and more similar to those managers face on a regular basis.
projects are used to illustrate behavioral concepts and their application to marketing practice. The role of research in understanding and explaining consumer behavior is emphasized.

**AEM 346 Dairy Markets and Policy**
Spring. 2 credits. Limited to juniors, seniors, and graduate students.
Prerequisites: ECON 101 or equivalent. S-U grades optional. A. Novakovic.
A survey of topics related to the structure and performance of U.S. dairy markets and federal and state policies that regulate market activities. Emphasis will be placed on learning both the origin and characteristics of dairy policies and methods for analyzing their impacts on market performance.

**AEM 380 Independent Honors Research in Social Science**
Fall or spring. 1-6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in AEM Undergrad Program Office in Warren Hall.

**AEM 403 Farm Management Study Trip**
Spring. 1 credit. Prerequisite: AEM 302. Open by application only.
W. A. Knoblauch.
This is a special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

**AEM 404 Advanced Agricultural Finance Seminar**
Spring. 3 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. Staff.
A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall term, a two- to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring term.

**AEM 405 Agricultural Finance**
Spring. 4 credits. Prerequisite: AEM 302 or equivalent. Staff.
The principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

**AEM 410 Business Statistics**
Fall. 3 credits. Prerequisite: AEM 210 or equivalent. C. van Es.
This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied are experimental design and ANOVA, contingency-table analysis, quality-control methods, time-series analysis and forecasting. Brief introductions to non-parametric methods and multivariate analysis are also included. The course will involve a research project designed by the student in collecting and interpreting data.

**AEM 411 Introduction to Econometrics**
Fall. 3 credits. Prerequisite: AEM 210 and either ECON 313 or PAM 200, or equivalents. D. Just.
The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression are discussed, and simultaneous equation models, simulation, and forecasting techniques are introduced.

**AEM 412 Introduction to Mathematical Programming**
Spring. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: AEM 210 or equivalent. C. Gomes.
This is a course in applied mathematical programming. Emphasis is on formulation of and interpretation of solutions to mathematical models of problems in economics and business. Blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management are studied. Integer and nonlinear programming are introduced.

**AEM 414 Behavioral Economics and Managerial Decisions**
Spring. 3 credits. Prerequisites: ECON 313 or PAM 200. Limited to juniors and seniors. Payment of $40 lab fee required. D. Just.
Behavioral economics integrates psychology and economics by identifying systematic anomalies in decision-making. These are now recognized to be an important source of error in business decisions, and provide the foundation for both behavioral marketing and finance. The course compares rational choice theory with behavior both in lecture and through a series of economics experiments in which students face situations that are likely to lead to anomalies such as "the winner's curse," the status quo bias, hyperbolic discounting, and bias in assessing risks. Students have the opportunity to evaluate their own decision-making.

**AEM 415 Price Analysis (also ECON 415)**
Fall. 3 credits. Prerequisite: AEM 210 or equivalent. ECON 313 or PAM 200 or equivalent. H. M. Kaiser.
The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

**AEM 416 Consumer Demographics and Market Dynamics (also D SOC 331)**
Summer. 3 credits. Prerequisite: AEM 210 or equivalent. W. Brown.
For description, see D SOC 331.

**AEM 417 Decision Models for Small and Large Businesses**
Fall. 3 credits. Limited to juniors and seniors. Preference given to AEM majors.
Prerequisites: AEM 210 or equivalent. In weeks labs will be no Friday lecture: C. L. van Es.
The course focuses on economic and statistical models of decision analysis and their applications in large and small business settings. The course demonstrates how use of models can improve the decision-making process by helping the decision maker: understand the structure of the decision, incorporate subjective probabilities as a way to carry risk, measure outcomes in a way that is consistent with attitudes toward risk, and understand the value of information. The importance of sensitivity analysis is emphasized, as is the need to combine both quantitative and qualitative considerations in decision making. Cases are drawn from small business scenarios, the public policy arena, and corporate settings. Implementing decision models with computers is the focus of lab sessions.

**AEM 419 Strategic Thinking**
Fall. 3 credits. Prerequisite: immediate microeconomics (PAM 200 or ECON 313). S-U grades optional. N. H. Chau.
The art of thinking strategically puts outgoing your adversary at the core of your decision-making process, while anticipating that your adversary is doing exactly the same thing. Businesses make investment decisions and innovate products in anticipation of the reaction of their rivals; managers make pay contingent on peer performance, taking into account the reaction of their subordinates and superiors; national trade policies are formulated based on whether trading partners are committed to make credible concessions. How often is your decision to pay attention in class based on whether or not someone else is paying attention? This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students' ability to think strategically on firm level issues (e.g., pricing, advertising wars, product differentiation, and entry deterrence), and strategic policy interaction in international economic relations (e.g., trade wars, and the arms race).

**AEM 420 Investments**
Fall. 3 credits. Prerequisites: AEM 210 or equivalent and AEM 324. Recommended: ECON 313 and a calculus course. Preference given to students in AEM. S-U grades optional. A. Wang.
This course covers theories and empirical data in the field of financial investments. Descriptions of financial institutions, markets, and instruments are also covered. Topics include: equilibrium models of security prices (CAPM, APT), fixed-income markets, performance evaluation, efficient market hypothesis, and behavioral finance. A portion of this course involves the use of a spreadsheet or other computer programs.
AEM 421 Derivatives and Risk Management  
Fall. 3 credits. Prerequisites: AEM 210 and AEM 324 or equivalents. Recommended: ECON 313 or equivalent and a calculus course. To AEM majors and other students in AEM. S-U grades optional. H. Daouk.  
This course covers the pricing of derivatives and how derivatives can be used for the purpose of risk management and speculation. While no prior knowledge of futures and options is necessary, familiarity with calculus and probability and statistics will be helpful. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 422 Estate Planning (also NBA 562)  
Fall. 1 credit. Limited to juniors, seniors, and graduate students.  S-U grades only.  D. A. Grossman.  
Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures are covered.

AEM 424 Management Strategy  
Fall and spring. 3 credits. Limited to AEM seniors in Business. Fall, G. Blalock; spring, D. Simon.  
This is a capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Issues are approached from the standpoint of the board of directors, chief executive officer, and business unit managers. What should be considered and how strategic decisions should be made are the focus of the course.

AEM 425 Small Business Management Workshop  
Fall. 4 credits. Limited to seniors.  Prerequisite: AEM 325 or NBA 300 and permission of instructor.  Term project work costs will amount to approximately $100 per team.  D. Streeter.  
Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles and the business management of existing businesses and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff members at arranged times during the semester.

AEM 427 Agribusiness Strategy  
Fall. 3 credits. Prerequisites: AEM 220 or AEM 502. B. A. Gloy.  
The course is intended for students with an interest in agribusiness and is designed to integrate previous course work and enhance problem identification and solving skills. The focus is on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. The course covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, and organization, and leadership for agribusiness firms. This course is designed as a capstone course for the agribusiness management specialization.

AEM 428 Valuation of Capital Investment  
Spring. 3 credits. Prerequisites: AEM 210 and AEM 324 or equivalents. D. T.-C. Ng.  
This course is about the analysis of financial information—particularly firms' financial reports—for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given to credit analysis. Various valuation models are examined in detail and applied in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, growth, and valuation generation in a firm, forecasting earnings and cash flows, pro forma analysis for strategy and planning, analysis of risk, and the determination of price-earnings and market-to-book ratios.

AEM 429 International Finance  
Spring. 3 credits. Prerequisites: AEM 210 and AEM 324. S-U grades optional. D. T.-C. Ng.  
The purpose of this course is to learn about issues in international financial management and international investment. The major issues that are discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

AEM 430 International Trade Policy  
Spring. 3 credits. Prerequisites: ECON 101–102 or equivalents and intermediate microeconomics. Recommended: AEM 230. Optional section TBA. N. H. Chau.  
This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are also emphasized.

AEM 431 Agricultural and Food Policy  
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: PAM 200, ECON 313, or equivalent. S-U grades optional. A. Novakovski.  
This course will acquaint students with current and historically important U.S. policies related to agriculture and food, including subsidies and regulations related to markets, production, and the environment. Methods of policy analysis will be explored, and students will learn to critique policies and write policy briefs.

AEM 432 Business and Governments in a Global Marketplace  
Fall. 3 credits. Prerequisite: AEM 240 or equivalents. S-U grades optional. S. P. Raj.  
A sound marketing strategy is essential for the long-term success of a firm. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, and appropriate resource allocations made, and strategies developed to ensure sustained growth. The course is designed to provide opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.

AEM 433 Devolution, Privatization, and the New Public Management (also CRP 412 and FGSS 411)  
Fall. 4 credits. Prerequisite: ECON 101. S-U grades optional. M. E. Warner.  
For description, see CRP 412.

AEM 434 Government Policy Workshop (also CRP 418 and FGSS 420)  
Spring. 4 credits. S-U grades optional. M. E. Warner.  
For description, see CRP 418.

AEM 442 Emerging Markets  
Fall. 3 credits. Prerequisites: AEM 240 and PAM 200 or ECON 313. Limited to seniors and graduate students. R. D. Christy.  
This course provides a basic framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. The risk of entering markets in low-income economies is appraised and assessment of the political, legal, cultural, and economic forces is conducted. Case studies of companies are analyzed and discussed.

AEM 443 Food-Industry Strategy  
Fall. 3 credits. Restricted to AEM juniors, seniors, and grad students. Others by permission of instructor. Prerequisite: AEM 240 or 448 or permission of instructor. J. M. Hagen.  
A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday afternoon session.

AEM 444 Marketing Strategy and Brand Management  
Fall. 3 credits. Prerequisite: AEM 240. S. P. Raj.  
A sound marketing strategy is essential for the long-term success of a firm. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, and appropriate resource allocations made, and strategies developed to ensure sustained growth. The course is designed to provide opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.
weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A number of field trips are taken. Students participate in research topics on various aspects of the food industry.

AEM 447 Food Marketing Colloquium
Spring. 1 credit. Limited to food marketing fellows. D. J. Perosio.
AEM 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A number of field trips are taken. Students participate in research topics on various aspects of the food industry.

AEM 448 Food Merchandising
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: AEM 240. D. J. Perosio.
Covers merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

AEM 449 Global Marketing Strategy
Spring. 3 credits. Prerequisite: a previous marketing course. Limited to juniors, seniors, and graduate students. J. M. Hagen.
This course examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. The course includes case analysis and discussion.

AEM 450 Resource Economics (also ECON 450)
Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and a familiarity with EXCEL. J. M. Conrad.
Dynamic models of renewable, nonrenewable, and environmental resources are constructed to examine market allocation and optimal resource management.

AEM 451 Environmental Economics (also ECON 409)
Spring. 3 credits. Prerequisites: ECON 313, or intermediate microeconomics course, and calculus. Limited to undergraduate students. S-U grades optional. G. L. Poe.
This course explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasis is placed on the welfare economic approach for allocating public goods, with specific emphasis on market failure, internalities, benefit-cost analysis, and the use of nonmarket valuation techniques. Property rights/institutional perspectives and ecological economic concepts are also examined.

AEM 464 Economics of Agricultural Development (also ECON 464)
Fall. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. R. D. Cline.
This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more detailed issues of economic development beyond the agricultural sector are covered to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries are used to illustrate the basis for economic analysis.

AEM 494 Undergraduate Special Topics in Applied Economics and Management
Fall or spring. Variable credit. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 497 Individual Study in Applied Economics and Management
Fall or spring. Variable credit. S-U grades optional. Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). Staff.
Use for special projects designed by faculty members.

AEM 498 Supervised Teaching Experience
Fall or spring. 1-4 credits. Total of 4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 555 Environmental Management and Policy
Fall. 3 credits. Prerequisites: ECON 101 and 102 or equivalent and calculus. L. D. Chapman.
The seminar is an inside look at implementation and evaluation of environmental policy in a business or organization. We will examine the effectiveness of the new market-based regulatory changes and the operational significance of sustainability in a business context and come to understand the economic basis for government's role in environmental protection. HBS case studies are used, and each seminar participant prepares a case study of environmental management in a business or organization. Extensive use is made of guest speakers from finance, electricity, forest products, construction, and manufacturing.

AEM 605 Agricultural Finance
Fall. 3 credits. Prerequisite: AEM 324 or 405 or equivalent. Not offered fall 2005. B. A. Gloy.
Advanced topics in agricultural finance. Topics include investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

AEM 608 Production Economics (also ECON 408)
Fall. 3 credits. Prerequisite: ECON 313 and MATH 111 or equivalents. L. W. Tauer.
The theory of production economics with emphasis on applications to agriculture and natural resources is studied. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions. The concepts of efficiency and productivity are discussed. Production response over time and under risk is introduced.

AEM 611 Global Modeling
Spring. 3 credits. Prerequisite: a course in graduate micro theory. T. D. Mount, R. N. Boisvert.
This course is taught over the Internet by Tom Hertel at Purdue University. It is designed to teach people how to use a global general equilibrium model (GTAP) for research on trade and environment policies. Weekly assignments start with the components of a single-country model and end with a full global model. A final project and the assignments are the primary course requirements.

AEM 612 Applied Econometrics
Fall. 1 credit. Prerequisite: concurrent enrollment in AEM 608, or permission of instructor. Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. AEM 612 complements AEM 411, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Course work focuses on preparing students to conduct their own applied econometric research.

AEM 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 430)
Spring. 4 credits. Prerequisites: AEM 608 or PAM 603, ECON 313, or equivalent intermediate micro theory incorporating calculus. H. de Gorter.
The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market versus nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer surplus, and producer surplus, willingness-to-pay
measures, externalities, and the general theory of second-best optima. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

**AEM 632 Open Economy Analysis: Theory and Applications**
Spring. 3 credits. Prerequisites: ECON 313 and ECON 314. S-U grades optional.
N. Chau and S. Kyle.
This course explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economies. It brings together research methods pertinent to open economy macroeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

**AEM 633 Devolution, Privatization, and the New Public Management (also CRP 612 and FGSS 611)**
Fall. 4 credits. S-U grades optional.
M. E. Warner.
For description, see CRP 612.

**AEM 634 Government Policy Workshop (also CRP 618 and FGSS 620)**
Spring. 4 credits. S-U grades optional.
M. E. Warner.
For description, see CRP 618.

**AEM 640 Analysis of Agricultural Markets (also ECON 440)**
Fall. 3 credits. Prerequisites: AEM 411 and 415 or equivalents. H. M. Kaiser.
This course focuses on the unique features of agricultural commodity markets. Focus is placed on government and private institutions impacting these markets, as well as on models of price behavior including marketing margins and imperfect competition. Empirical tools to evaluate market characteristics are also covered.

**AEM 641 Commodity Futures Markets (also ECON 441)**
Spring. weeks 8-14. 2 credits.
Prerequisites: AEM 411 and 415 or equivalents. Recommended: AEM 640.
W. G. Tomek.
This course is about markets for agricultural futures contracts. Emphasis is placed on models of price behavior on futures markets including long and short positions among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

**AEM 651 Environmental and Resource Economics**
Spring. 4 credits. Limited to graduate students. W. T. Parziale.
A review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and costs—including property value and wage hedonic approaches, travel cost models, and contingent valuation—are covered. Survey/data collection methods are described in detail. Innovative market mechanisms for resolving public good, common property, and externality problems are explored. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. Open to graduate students outside of economics. AEM 651 is a core course for the Environmental Management concentration option.

**AEM 652 Land Economics Problems**
Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. Staff. Special work on any subject in the field of land and resource economics.

**AEM 655 Electric Systems Engineering and Economics (also ECE 551)**
Fall. 2 credits. Prerequisites: basic calculus and microeconomics. T. D. Mount and R. Thomas.
For description, see ECE 551.

**AEM 660 Agroecosystems, Economic Development, and the Environment**
Spring. 3-4 credits. Limited to graduate students. An additional section will be arranged for economics majors. S-U grades optional. D. R. Lee.
This course examines selected topics in agricultural and economic development, technology assessment, ecosystem management and the environment, with a focus on developing countries. Topics covered include production, poverty, and environmental tradeoffs; sustainable technology development; trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences. This course opens to graduate students outside of economics.

**AEM 667 Topics in Economic Development (also ECON 770)**
Fall. 3 credits. Prerequisite: basic first-year courses in ECON or AEM, or instructor's permission. S-U grades optional.
R. Kanbur.
This course is targeted to second-year graduate students. Topics covered vary from year to year but may include: poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

**AEM 670 Economics of Consumer Demand (also PAM 608)**
Fall. 3 credits. Prerequisites: ECON 311 or 315 and 2 semesters of calculus. S-U grades optional. C. K. Ramney.
A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be introduced.

**AEM 694 Graduate Special Topics in Applied Economics and Management**
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the beginning of the semester.

**AEM 698 Supervised Graduate Teaching Experience**
Fall or spring. 1-4 credits. Total of 4 credits maximum during graduate program. Students must register using an Independent Study form (available in the Undergraduate Program Office in Warren Hall). Open only to graduate students. Undergraduates should enroll in AEM 498. Prerequisite: permission of instructor. S-U grades optional. Staff.
Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

**AEM 699 M.P.S. Research**
1-6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report. Staff.

**AEM 700 Individual Study in Applied Economics and Management**
Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff.
This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

**AEM 708 Advanced Production Economics**
Fall. 3 credits. Prerequisite: AEM 408, 710, or equivalents; ECON 609 is highly recommended. Offered alternate years. Not offered 2004-2005. R. N. Boisvert.
Covers theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, and factor substitution. Developments in flexible functional forms, duality, and dynamic adjustment models are emphasized. Considerable emphasis is given to empirical specification and estimation. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

**AEM 710 Econometrics I**
Spring. 3 credits. Prerequisites: matrix algebra and statistical methods at the level of ILRST 311 or ECON 619. H. Daouk.
This course, together with AEM 711, provides a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. Covers linear regression models and the associated estimation and testing procedures.
This course examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, internationalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.

AEM 735 Public Finance: Resource Allocation and Fiscal Policy (also ECON 735)
Fall. 4 credits. R. Karbuz.
For description, see ECON 735.

AEM 740 Agricultural Markets and Public Policy
Spring, weeks 1-7. 2 credits. Limited to graduate students. Prerequisites: familiarity with multiple regression techniques at the AEM 411 level or higher. Recommended: AEM 640. W. H. Lessar.
Develops the concepts and methodology for applying and analyzing the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture. Topics may be adjusted to students' interests.

AEM 750 Resource Economics
Fall. 3 credits. Prerequisites: ECON 609 and 618, or AEM 713. S-U grades optional.
R. N. Boisvert.
This course is concerned with the solution of dynamic allocation problems. Course objectives are to 1) pose prototype optimization problems in discrete and continuous time, 2) introduce the common methods for solving prototype problems, 3) present a set of numerical problems, and thereby 4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

AEM 758A Agricultural Economics
Fall. 4 credits. Prerequisite: ECON 609. S-U only. J. M. Conrad.
A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium, and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

AEM 714 Experimental Economics
Fall. 4 credits. Prerequisite: ECON 609.
Offered in alternate years. W. D. Schulze.
The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods. Topics covered include experimental methods, decisions and games; markets; (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation, and performance; public goods; externalities and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

AEM 713 Dynamic Optimization
Spring. 3 credits. Prerequisite: ECON 609. S-U only. J. M. Conrad.
This course is concerned with the solution of dynamic allocation problems. Course objectives are to 1) pose prototype optimization problems in discrete and continuous time, 2) introduce the common methods for solving prototype problems, 3) present a set of numerical problems, and thereby 4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

AEM 717 Research Methods in Agricultural Economics
Spring. 2 credits. Limited to graduate students. R. N. Boisvert.
Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester, each student develops a research proposal that may be associated with his or her thesis.

AEM 730 Seminar on International Trade Policy: Agriculture, Resources and Development
Spring. 3 credits. Limited to graduate students. Prerequisites: AEM 630 or equivalent. Not offered spring 2005. D. R. Lee.
domestication and origins of animal science, anatomy, quantitative cell biology, regulatory mechanisms, public domain genetic databases, major life support systems, and digestion. Students undertake the care and management of several species of farm animals and Japanese quail. Laboratory exercises include animal handling and examining aspects of growth and development. Living farm animals are used noninvasively, and fresh organs from dead animals are examined.

AN SC 105 Contemporary Perspectives of Animal Science
A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

AN SC 110 Animals and the People Who Live with Them: Lecture
Students completing this course understand the importance of the symbiosis between humans and domestic animals, and learn how animal enterprises can be ethically, environmentally, and economically sound.

AN SC 111 Animals and the People Who Live with Them: Lab
Students completing this course are able to restrain and care for several species of domestic animals, including cats, dogs, sheep, cattle, goats, fish, and horses. Other species may be added according to student interest. Associated with AN SC 110, but may be taken separately.

AN SC 150 Domestic Animal Biology II
Spring. 4 credits. S-U grades optional. Lecs, M W F 9:05; lab/disc T W or R 2:00–4:25. W. R. Butler and staff.
Second of a two-semester sequence (100/150), applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Fresh tissues and organs from dead animals along with preserved specimens are used in laboratories, exercises, and demonstrations. A quail colony will be used for growth exercises and data collection.

AN SC 212 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. Lecs, M W F 10:10; lab, M W T R or F 1:25–4:25. A. W. Bell and D. J. R. Cherney.
An introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

AN SC 213 Nutrition of the Dog
Nutrition of the dog. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

AN SC 214 Nutrition of Exotic Animals
Principles of nutrition for exotic animals. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation are discussed. Signs of nutrient deficiencies and excesses are described.

AN SC 215 Exotic Avian Husbandry and Propagation
Fall. 2 credits. Limited to 100 students.
Prerequisites: AN SC 100, 150, or one year of introductory biology. Lecs, M 2:30–4:25. J. Parks and D. Mucarella.
Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and local field trips.

AN SC 216 Nutrition of the Cat
Fall. weeks 1–7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Not offered fall 2005. Lecs, W 7:30–9:25 P.M. H. F. Hintz.
Nutrition of the cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

AN SC 221 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: a year of college biology. Lecs, T R 9:05; sec, T W R or F 2:00–4:25. E. P. Pollak.
An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 222 Introduction to Canine Genetics
Winter or summer. 1 credit. Prerequisites: introductory biology or permission of instructor. S-U grades only. To receive credit, register through the School of Continuing Education. www.sce.cornell.edu/DL/html/caninegenetics.html. F. J. Pollak.
Introduction to basic Mendelian genetics and simply inherited characteristics in the dog. This distance-education course delivered by CD and web interaction for residents and nonresidents consists of lectures on basic genetic principles, probabilities, linkage and genetic testing, and seminars on genome mapping, inherited sexual disorders, bleeding disorders, and eye defects. This course cannot be taken for credit by students who have successfully completed AN SC 221.

AN SC 250 Dairy Cattle Principles
Fall. 3 credits. S-U grades optional. Lecs, T R 10:10; lab, R or F 1:25–4:25. D. M. Galton and T. Batchelder.
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351, 354, and 355.

AN SC 251 Dairy Cattle Selection
Fall. 2 credits. Prerequisite: open only to seniors or permission of instructor. S-U grades optional. Lecs, W 11:15–12:05, disc, W 12:20–1:10. D. M. Galton.
Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis is on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horses
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lecs, T R 9:05; lab, R 1:25–4:25. C. Collyer.
Selection, management, feeding, breeding, and training of light horses.

AN SC 280 Molecular Biology in Agriculture and Medicine
Fall. 3 credits. Prerequisite: one year of introductory biology. Lec, T R 10:10–11:25. S. M. Quirk.
The applications of molecular biology to animal research, animal agriculture, industry and medicine are discussed. An introduction of basic recombinant DNA techniques is followed by topics such as genome projects, comparative and functional genomics, genetic screening, gene therapy, transgenic animal production, and mammalian cloning. Ethical issues raised by the use of these technologies are explored in class discussions.

AN SC 290 Meat Science (also FD SC 290)
Fall. 2 or 3 credits. Lecs, T R 11:15; lab, M or R 12:20–3:20. Lecture only, 2 credits; lecture plus lab, 3 credits; lab cannot be taken without lecture. D. Shaw.
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to commercial meat plant may be taken.

AN SC 300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 100–150 or equivalent and 1 year of introductory biology. Lecs, M W F 10:10. J. E. Parks.
Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: AN SC 100–150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register. Labs, M W or F 1:25–4:25. Each lab limited to 30 students. J. E. Parks.
Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.
AN SC 305 Farm Animal Behavior (also BIOAP 312)
Spring. 2 credits. Prerequisites: one year of introductory biology and introductory animal physiology (AN SC 100 and 150 or equivalent is sufficient or BIOAP 311); at least 1 animal production course or equivalent experience is recommended. S-U grades optional. Lec., T R 11:15. Staff. The behaviors that occur in animals (avian and mammalian) influence the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic and non-domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 323 Equine Genetics Seminar
Fall. 2 credits. S-U grades only. Prerequisite: AN SC 221 or equivalent. Disc., T 1:25–2:15. P. A. Olfenboum. Topics of equine genetics are presented and discussed. Students are also required to view one seminar each week. These seminars are animated PowerPoint presentations available in computer lab and can be viewed at flexible times during the week.

AN SC 341 Biology of Lactation
Spring. 2 credits. Prerequisites: AN SC 100–150 or Animal Physiology. Offered alternate years; next offered spring 2005, 2007. Not offered spring 2006. Lec., T R 9:05. Y. R. Boisclair and staff. A comprehensive survey of the biology of the mammary gland. Lectures cover: 1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; 2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context to the course; but examples from other mammals, including humans, are used.

AN SC 351 Dairy Herd Management

AN SC 354 Dairy Cattle Health
Fall. 3 credits. Prerequisite: AN SC 250 or permission of instructor. Lecs., T R 9:05–9:55; lab, R 1:25–4:25. D. M. Galton and W. Stone. Application of scientific principles to practical herd management with emphasis on herd health and animal well-being. Laboratory emphasizes practical applications of herd health management including on-farm herd health analysis.

AN SC 355 Dairy Cattle Nutrition
Spring. 3 credits. Prerequisite: AN SC 250 or permission of instructor. Letter grade only. Lecs., M W 10:10. T. L. Batchelder and J. E. Chase. Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

AN SC 360 Beef Cattle

AN SC 365 Equine Nutrition
Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U grades optional. Lesc., M W F 9:05–9:55. H. F. Hintz. The principles of nutrition for horses are presented. Digestive physiology, sources of nutrients, feeding programs for various classes of horses and interactions of nutrition and diseases are discussed.

AN SC 370 Swine Nutrition and Management
Fall. 3 credits. Recommended: AN SC 212. Lec., T R 11:15; lab, T 2:00–4:25. Offered alternate years. Next offered fall 2004; not offered fall 2005. X. G. Lei and K. Roneker. This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry, and physiology of impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratory practice, animal projects, and problem troubleshooting are offered.

AN SC 380 Sheep
Spring. 3 credits. Lec., T R 10:10; sec, W 2:00–4:25. Offered alternate years. Next offered spring 2005, 2007; not offered spring 2006. M. L. Thomey. Emphasis is on the breeding, feeding, and management of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.

[AN SC 400 Livestock in Tropical Farming Systems]

AN SC 401 Dairy Production Seminar
Spring. 1 credit. Limited to juniors and seniors. Disc., M 7:30 P.M. T. R. Overton. Capstone course where students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

AN SC 402 Seminar in Animal Sciences
Spring. 1 credit. Limited to students engaged in undergraduate honors research projects. S-U grades optional. Disc., M 4:30. S. Quirk. Reports of undergraduate research and honors projects. Students present oral reports of their work for class discussion.

[AN SC 403 Tropical Forages]
Spring. 2 credits. Limited to seniors and graduate students except by permission of instructor. Prerequisites: crop production and livestock nutrition. Offered alternate years. Next offered spring 2006; not offered spring 2005, 2007. Lees, T 10:10. A. N. Pel. An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value of forages and crop residues; physiology of digestion of ruminants that affects feeding behavior; problems of chemical inhibitors in plants; and preservation of tropical forages as hay or silage.

AN SC 410 Nutritional Physiology and Metabolism
Fall. 3 credits. Prerequisites: biochemistry and physiology. M. W. 11:15. R. E. Austin and D. E. Haun.
A fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

AN SC 411 Applied Cattle Nutrition
Fall. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent); AN SC 355 is strongly encouraged. Lecs., M W F 10:10. Lab., M 1:25–4:25. M. E. Van Amburgh. An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms. Course is designed for juniors, seniors, and entering graduate students.

AN SC 412 Whole Farm Nutrient Management (also CSS 412)
Spring. 2 or 4 credit option. Open to juniors, seniors, and graduate students only. Course offered as two modules. Enrollment in Module 1 for the first half of the semester is required (2 credits). Module 1 consists of the crop and manure nutrient management planning; no prerequisites for CALS students. Enrollment in Module 2 for the second half of the semester is optional (additional 2 credits). This module builds on the crop and manure nutrient management planning module by integrating agronomic nutrient management planning with herd nutrient management planning. AN SC 411
This course provides students with an understanding of the concepts underlying whole farm nutrient management planning to improve profitability while protecting the environment. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for a Concentrated Animal Feeding Operation plan to meet environmental regulations. Students develop components of a CNMP using the Cornell University Nutrient Management Planning System (CnMPS) and other tools. All students enrolled learn the concepts and processes of developing the crop and manure nutrient management plan component of a CNMP during the first half of the semester in Module 1. Students opting to continue through the end of the semester in Module 2 (4 credit option) build upon knowledge gained in the first half of the semester by using the knowledge and skills necessary to integrate crop production and herd feeding management for reducing nutrient imports on farms.

AN SC 413 Contemporary Issues in Animal Science
Spring. 1 credit. Open to juniors, seniors, and graduate students only. Lect and disc. M 12:20; disc, W 12:20-1:10; D. J. R. Cherney. Exploration of the place of humans in the biological world, origins of ethics and morality, specieism, the use of animals for research and agricultural purposes, transgenic animals. A book review, participation in discussion in class and on-line, and a project of the student's choice used to evaluate the performance of each student.

AN SC 420 Quantitative Animal Genetics
Spring. 2 credits. S-U grades only. Prerequisites: AN SC 221 or equivalent. Limited to 30 students. Lect, M 12:20; sec, M 2:00-4:25; F. J. Pollak. A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra programs for problem solving.

AN SC 425 Gamete Physiology and Fertilization (also BIOAP 425)
Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Next offered fall 2005; not offered fall 2004, 2006. Lect, R 2:50-3:45; F. E. Parks. Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

AN SC 427 Fundamentals of Endocrinology (also BIOAP 427)
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lect, M W F 9:05; P. A. Johnson. Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 451 Dairy Herd Business Management
Fall. 3 credits. Prerequisite: enrollment in AN SC 456. Lect, W 1:25-2:15; disc, W 2:30-3:20; lab, F 1:25-4:25; D. M. Galton. Emphasis on dairy herd business management with application to herd management analysis. Laboratory includes farm tours and analysis.

AN SC 456 Dairy Management Fellowship
Spring. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and permission of instructor. S-U grades only. Hours TBA; D. M. Galton. The program is designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

AN SC 494 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: undergraduate standing. S-U grades optional. Staff. The department teaches the "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee; and the same course is not offered more than twice under this number.

AN SC 496 Internship in Animal Science
Fall or spring. 1-3 credits; limited to 6 credits maximum during undergraduate career. Students must register using an Independent Study form (available in 140 Roberts Hall). S-U grades only. Limited to 30 students. Staff. Structured, on-the-job learning experience under supervision of qualified professionals in a cooperating organization (e.g., farm, agribusiness, pharmaceutical company, zoo, educational institution). Internships are arranged by the student and must be approved in advance by the student's academic adviser. The internship should provide a supervised experience with at least 60 hours on the job per credit required.

AN SC 497 Individual Study in Animal Science
Fall or spring. 1-3 credits; may be repeated for credit. Intended for individual study in animal sciences. Prerequisite: permission of instructor. Students must register using an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

AN SC 498 Undergraduate Teaching
Fall or spring. 1, 2, or 3 credits, limited to 2 experiences during undergraduate career. Limited to students with a GPA of at least 2.7. Students must register using an Independent Study form (available in 140 Roberts Hall). Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with a GPA of at least 2.7. Students must register using an Independent Study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)
Fall. 3 credits. Limited to graduate students only. Prerequisites: biochemistry, physiology, and nutrition. T 2:00-4:00. Offered alternate years. Next offered fall 2004, 2006; not offered fall 2005. X. G. Lei and C. C. McCormick. An advanced course that emphasizes metabolism, mineral regulation, oxidation, and genetic defects related to mineral nutrition. Team-taught lectures cover topics ranging from single gene mutation to social and environmental aspects of mineral nutrition and mineral-related disorders. Effective approaches to improve global mineral nutrition by agriculture and food systems are discussed.

AN SC 606 Ruminant Nutrition: Microbial Ecology and Forage Chemistry
Spring. 4 credits. Prerequisites: AN SC 212, Biochemistry. S-U grades only. Lect, M W F 9:05; disc, W 8:00. Offered alternate years. Next offered spring 2005, 2007; not offered 2006. A. N. Penner. This course provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.

AN SC 610 Animal Science Seminar
Fall and spring. 1 credit. Registration limited to graduate students. S-U grades only. Lect T 12:20-1:10; D. J. R. Cherney.
Students attend a weekly seminar on topics related to animal science. The requirement for an S grade is to regularly attend seminars during the semester.

**AN SC 619 Field of Nutrition Seminar (also NS 619)**
Fall and spring. No credit. No grades given.
For description, see NS 619.

**AN SC 620 Seminar in Animal Breeding**
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours TBA. E. J. Pollak.
Seminar on current topics in animal breeding and statistics as applied to genetic evaluation and selection of domestic animals.

**AN SC 621 Reproductive Physiology/Endocrinology Seminar**
Fall and spring. 1 credit. Prerequisites: permission of instructor. Registration limited to graduate students. S-U grades only. Lec, W 4:00; W. R. Butler and staff.
Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

**AN SC 625 Nutritional Toxicology (also TOX 625)**
Spring. 2 credits. Prerequisites: biochemistry and nutrition courses. S-U grades optional. Offered alternate years.
Exploration of toxicological principles and a selective survey of natural food and feed toxicants. At the end of this course, students understand relationships between nutrition and toxicology, are prepared to conduct research concerning the effects of naturally occurring toxicants; and are able to use multimedia to present their understanding of a class of toxicants. Occasionally, the class takes walking field trips. In addition, students read printed and electronic communications and create STELLA simulation models and a system of web pages related to a specific family of toxicants.

**AN SC 640 Individual Study in Animal Science**
Fall or spring. 1 or more credits. S-U grades optional. Staff.
Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

**AN SC 650 Molecular Techniques for Animal Biologists**
Spring. 2 credits. Prerequisites: BIOBM 330 or BIOBM 332 or BIOBM 333 or equivalents and permission of instructors. Enrollment limited to 15 students. Offered alternate years. Next offered spring 2006; not offered spring 2005, 2007. Lec, T 11:15; labs, T and R 1:25-4:25. Y. Boisclair and staff.
A laboratory course designed for students who have little or no experience with techniques in molecular biology. Emphasis is on modern techniques used in conducting research in animal-related sciences such as nutrition, physiology, pharmacology, and immunology (e.g., subcloning, mutagenesis of DNA, RT-PCR analysis of gene and protein expression, overexpression of proteins, and study of protein-DNA interactions). Lectures introduce laboratory exercises and supplement laboratory topics. Students perform an independent project requiring time outside scheduled laboratories and give a scientific presentation.

**AN SC 694 Special Topics in Animal Science**
Fall or spring. 4 credits maximum.
Prerequisite: graduate standing. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**AN SC 720 Advanced Quantitative Genetics**
Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. S-U grades optional. Hours TBA.
This course covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial focus is on the estimation of breeding values for purposes of ranking animals for selection. The core of the course is the mixed linear model; linear estimators and predictors are treated extensively. The importance of appropriate modeling is emphasized. Generalizations to nonlinear models, via Bayesian principles, are made, i.e., inferences from posterior distributions.

**AN SC 800 Master's-Level Thesis Research**
Fall or spring. Credit TBA, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.
For students admitted specifically to a master's program.

**AN SC 900 Graduate-Level Thesis Research**
Fall or spring. Credit TBA, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.
For students in a Ph.D. program only before the "A" exam has been passed.

**AN SC 901 Doctoral-Level Thesis Research**
Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only.
Graduate faculty.
For students admitted to candidacy after the "A" exam has been passed.

**Related Courses in Other Departments**

- Introductory Animal Physiology (BIOAP 311)
- Introductory Animal Physiology Laboratory (BIOAP 319)
- Milk Quality (FD SC 351)
- Agriculture in the Developing Nations (IARD 602)
- Lipids (NS 602)
- Basic Immunology Lectures (BIO G 305)

**BIOLOGICAL AND ENVIRONMENTAL ENGINEERING**

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

**BEE 102 Introduction to Microcomputer Applications**
Fall or spring. 3 credits. Letter only. All students, including graduating seniors and pre-enrolled students, must attend the first lecture to guarantee admittance and to select a laboratory section. Lec, fall: T R 12:20-1:10, spring: M 12:20-1:10; labs, M 1:25-4:25 or 7:30-10:30 P.M. or T 1:25-4:25 or W 1:25-4:25 or 7:30-10:30 or R 1:25-4:25 P.M. Fee, $25. P. E. Hillman.
Introduction to application packages on microcomputers. Laboratories provide experience with word processing, object-oriented and bit-mapped graphics, spreadsheets, visual basic macros, database management, presentation graphics, and web page authoring. An independent project using spreadsheets, presentation graphics, and word processing is required. These packages and others such as anti-virus software and those used for searching the Internet for information are discussed and demonstrated in the lectures, along with an overview of computer hardware and health hazards and social issues of computing.

**BEE 110 Introduction to Metal Fabrication Techniques**
Spring. 3 credits. Each lab limited to 18 students. Lec, T R 9:05; labs, M T or R 1:25-4:25, M or T 7:30-10:30. T. J. Cook.
Emphasis is on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. Covers hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxyacetylene cutting, and arc welding.

**BEE 132 Introduction to Wood Construction**
Fall. 3 credits. Each lab limited to 15 students. Lec, T R 9:05; labs, T R 1:25-4:25, T or W 7:30-10:30. T. J. Cook.
Principles and practice of wood construction. Covers site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and block construction. Each student plans and constructs an approved carpentry project.

**BEE 151 Introduction to Computer Programming**
Fall. 4 credits. Lecs, M W F 11:15-12:05; labs, W R 12-20:2-15, 2:30-4-25, F 1:25-2:30. Each lab and recitation section limited to 22 students. L. D. Allbright.
An introduction to computer programming and concepts of problem solution, algorithm development, and data structure in an engineering context. The programming language MATLAB with Simulink is implemented on personal computers and applied to problems of interest in biological and environmental engineering. No previous programming experience is assumed.

**BEE 200 The BEE Experience**  
Spring. 1 credit. Letter grade only.  
Prerequisite: nonmajors by permission of instructor.  
N. R. Scott.  
A required course for freshman majors in Biological and Environmental Engineering. A forum covering the career opportunities for engineering students and the activities and curricula that lead to these opportunities. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career services offices, and students. Students develop their undergraduate course web search assignment to locate jobs and internships, and select future courses to meet their academic objectives and career goals. Not required for students who have completed ENGRG 150.

**BEE 222 Bioengineering**  
Thermodynamics and Kinetics  
Spring. 3 credits. Prerequisite: MATH 192, BIO SCI 110 or equivalent. PHTS 213 and one course in chemistry completed or concurrent.  
L. J. Hunter.  
Living systems rely on chemical and phase equilibria, precise coordination of biochemical pathways, and the release of chemical energy as heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, work, heat, and chemical reactions; and reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

**BEE 251 Engineering for a Sustainable Society (also ENGRD 251)**  
Fall. 3 credits. Prerequisite: MATH 293 (coregistration permissible).  
B. A. Ahner.  
Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and mass balances in environmental sciences. The students will be introduced to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 251 or BEE 260 according to their academic plan. BEE students who complete both BEE 251 and BEE 260 will receive engineering credit for only one of these courses.

**BEE 260 Principles of Biological Engineering (also ENGRD 260)**  
Fall. 3 credits. Prerequisite: MATH 293 (coregistration permissible).  
Focuses on the integration of biological principles with engineering, math, and physical principles. Students learn how to formulate costs and design biological systems in class and practice in homework sets. Topic areas range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 251 or BEE 260 according to their academic plan. BEE students who complete both BEE 251 and BEE 260 will receive engineering credit for only one of these courses.

**BEE 299 Sustainable Development: A Web-Based Course**  
Spring. 3 credits. Prerequisite: sophomore standing and above. S-U grades optional.  
N. R. Scott.  
Sustainable development is the dominant economic, environmental, and social issue of the twenty-first century. This web-based course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.

**BEE 301 Renewable Energy Systems**  
Spring. 3 credits. Prerequisite: college physics.  
L. D. Albright.  
Introduction to energy systems with emphasis on quantification, design, and programming renewable energy systems to convert environmental inputs into useful forms of energy. Course covers solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances. Focus is on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

**BEE 305 Principles of Navigation (also NAV S 301)**  
Fall. 4 credits. 4 classes each week (lecture-recitation-project work).  
L. J. Hunter.  
An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, compass observations, time, star identification, use of the nautical almanac, tides, and currents. Electronic navigation systems are also briefly discussed.

**BEE 310 Advanced Metal Fabrication Techniques**  
Spring. 1 credit. 2 credit option available.  
T. J. Cook.  
Principles and practices beyond the scope of BEE 110. Includes out-of-position, high-carbon steel and cast iron welding. Topics such as soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, and plasma arc and oxy cutting of metals are covered. Planning, development, and fabrication of a metal construction project is required for the two-credit option.

**BEE 325 Environmental Management**  
Fall. 3 credits.  
W. J. Jewell.  
Explores the decline in environmental quality caused by human activities and the limits of scientific and technology solutions. Understanding complex issues such as global warming and deriving sustainable solutions are emphasized and illustrated with case studies. Field trips to water supply and waste treatment facilities are included. Emphasis is on water, energy, air quality, and soil evaluations used to illustrate environmental quality problems. (BEE 325 and BEE 625 meet together). BEE 625 students will complete a semester-long design-oriented project.

**BEE 350 Biological and Environmental Transport Processes**  
Fall. 3 credits. Prerequisites: MATH 293 and fluid mechanics (co-registration permissible).  
Focus is on understanding the principles of heat and mass transfer in the context of biological, biomedical, and environmental systems. Physical understanding of transport processes and simple reaction rates with application examples from plant, animal, and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials are emphasized.

**BEE 360 Molecular and Cellular Bioengineering (also BMEM 360)**  
Spring. 3 credits. Prerequisites: biochemistry or AEP 252 or permission of instructor.  
Biological engineering at the molecular and cellular level focusing on different organisms (viruses, bacteria, cells, animals, and plants) and different scales (nano, molecular, cellular, tissue, and environment) with two underlying themes: DNA and cancer; and introduction of quantitative analysis and measurement as well as ethics in molecular and cellular bioengineering with emphasis on integration of molecular and cell biology with engineering.

**BEE 365 Properties of Biological Materials**  
Spring. 3 credits. Prerequisites: ENGRD 250 (coregistration permissible).  
Mechanics and structural properties of biological materials. Mechanical testing of animal, plant, and food products. Laboratory exercises in quasistatic and dynamic testing of materials and interpretation of test results. Experimental techniques for determining engineering properties of these materials. This course satisfies the BEE laboratory experience requirement.

**BEE 368 Biotechnology Applications: Animal Bioreactors**  
Fall. 3 credits. Prerequisite: biochemistry or permission of instructor.  
M. W. 10:10–11:00. R. Gorewit.  
This course introduces students to the biotechnological applications of animals; their organs, tissues, and cells as bioreactors for the production of substances such as pharmaceuticals, growth factors, anti-tumor proteins, antibodies, and vaccines. Students will be exposed to various design issues, technical constraints, societal concerns, and ethical considerations of this biotechnology.

**BEE 371 Physical Hydrology for Ecosystems**  
Spring. 3 credits. Prerequisite: MATH 192 or permission of instructor.  
Physical hydrological processes and their interaction with ecological systems and human activities. Surface and near-surface processes and interaction to deep groundwater.
hydrology. Topics include hydrologic cycles, watershed hydrology, ecosystem–watershed interactions, runoff generation, physical and biophysical vadose-zone processes, soil erosion, ecohydrology, biogeochemical–watershed budgets. Assignments and lab activities provide opportunities to manipulate, and analyze hydrological data in various contexts.

BEE 427 Water Sampling and Analysis
Fall. 3 credits. Prerequisites: fluids or a hydrology course and MATH 191. Lec, T 9:05–9:55; lab, T 12:20–1:10. D. L. Geohring and T. S. Steenhusen.

Get your feet wet in this course on water sampling methods where science and engineering technologies are integrated to quantify, characterize, and analyze environmental engineering problems. This field-based laboratory course focuses on quantification of surface and subsurface flow and quality, and includes sampling techniques of soils and sediment. Standard environmental site characterization and monitoring methods, quality assurance and control protocols, and interpretation of watershed loading of contaminants are addressed. This course satisfies the BEE laboratory experience requirement.

BEE 435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: must be at least a junior. Lec, W 1:25–2:15. M. R. Timmons.

An in-depth treatment of the principles of aquacultural engineering; mass balances, raceway and raceway systems, fish sickness, nutrition and feed control, and fish health in the context of global and local demand is presented. Course builds upon previous biology and engineering course work and emphasizes fish-production system design. Course includes "hands-on" experiences and field trips. BEE students who wish to take this course to satisfy the BEE capstone design requirement must co-register in BEE 496 for 1 credit hour.

BEE 450 Bioinstrumentation
Spring. 4 credits. Prerequisites: MATH 294, BEE 151, PHYS 213, or permission of instructor. Lec, M W 8:40–9:50; lab, M or W 2:30–4:25. D. Aneshansley.

Biological and biomedical applications are emphasized in this laboratory-based course. The electronic instrument from sensor to computer is considered. Static and dynamic characteristics of components and systems are determined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. This course satisfies both the BEE laboratory experience and the BEE capstone design requirement. This course satisfies the College of Engineering technical writing requirement when co-registered in BEE 493.

BEE 453 Computer-Aided Engineering: Applications to Biomedical Processes (also MSE 453)
Spring. 3 credits. Prerequisite: heat and mass transfer (BEE 350 or equivalent). Lec, M W 10:10–11:00; computer disc/ lab, F 10:10 A. K. Datta.

Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes using industry-standard physics-based computational software on a supercomputer or on high-end personal computers. Biomedical heat and mass transfer processes are covered, including cryosurgery, hyperthermia treatment, laser eye surgery, detection of breast cancer, and drug delivery. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students select their own term project, which is the major component of the course (no final exam). This course satisfies the BEE capstone design requirement.

BEE 454 Physiological Engineering

Engineering analysis and design in the physiology of animals and humans. Covers the use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: signal processing as related to neural conduction, sound processing, vision, and image processing; and systems as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratory and term project involves experiments, computing applications, field trips, and live animal demonstrations. This course satisfies the BEE laboratory experience requirement.

BEE 456 Biomechanics of Plants (also BIO PL 456)
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. Lec, T R 11:15–12:15; disc, W 11:40–12:50. J. R. Cooke and K. J. Niklas.

An engineering approach is taken to plant biomechanics. Topics include: mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, mechanical attributes of organs, the plant body, fluid mechanics and biomechanics, and plant evolution.

BEE 459 Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisites: biochemistry or physiology of instructor. Lec, W 8:40–9:55; lab, M 12:20–1:25 and 7:30–10:30 P.M. A. J. Bauman.

This course provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. The course addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in food analysis, food safety, and medical diagnostics are explored. Students gain an understanding of the course through presentation by the instructor in the laboratory, and prepare a poster in a biosensor workshop at the end of the semester. Undergraduate students work together in teams of 2 to 4 students. This course satisfies the BEE capstone design requirement and the BEE laboratory experience requirement for engineering students.

BEE 464 Bioseparation Processes
Fall. 3 credits. Prerequisites: biochemistry and physics, MATH 112 or 192, BEE 260 or equivalent, or permission of instructor. Not offered fall 2004. Lec, M W F 12:20–1:10. J. B. Hunter.

Bioseparation is the science and engineering of fractionating and purifying biological materials: DNA, proteins, living cells, antibiotics, biofuels, and even foods. The course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving bioseparation performance, and the special challenges of scale-up. Key topics (centrifugation, filtration, extraction, membrane methods, ion exchange, chromatography, electrophoresis) will be supplemented with student presentations. Intended for seniors and graduate students in engineering, chemistry, biology, and food science.

BEE 471 Introduction to Groundwater (also CEE 431 and EAS 445)
Spring. 3 credits. Prerequisites: MATH 293, fluid mechanics or hydrology course. 2 lecs, 1 disc, lecture, field trip. L. M. Cathles, T. S. Steenhusen.

Intermediate-level study of aquifer geology, groundwater flow, and contamination of aquifers and cleanup methods. Includes descriptions of transport of pesticides, nutrients and toxicants through the unsaturated zone and aquifers. Theoretical applications and case studies are discussed. Short field trips are included.

BEE 473 Watershed Engineering
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology. Lecs, T R 10:10–11:00; disc, R 12:25–1:30. M. F. Walter.

Engineering principles are applied to the design of management strategies for solving natural resource problems in the context of watersheds. Emphasis is placed on rural systems and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supply. BEE students who wish to take this course to satisfy the BEE capstone design requirement, must co-register in BEE 496 for one credit hour. This course satisfies the College of Engineering technical writing requirement when co-registered in BEE 493.

BEE 474 Water and Landscape Engineering Applications
Spring. 3 credits. Prerequisites: fluid mechanics or hydrology or permission of instructor. Lecs, M W F 10:10–11:00. T. R 11:15–12:05. T. S. Steenhusen and L. D. Geohring.

This course addresses water–soil interactions and methods to solve water management problems in humid and arid ecosystems. The main focus is on drainage and irrigation systems. Emphasis is placed on the practical application of hydrology and hydraulics for solving problems in agriculture and nonagricultural settings. A major design project is required and all course requirements are evaluated. This course satisfies the BEE capstone design requirement.

BEE 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming, and 1 year of calculus. Lecs, T R 11:10–12:55. D. A. Haith.

Applications of mathematical modeling, simulation, and optimization to environmental-qualtiy management. Fate and transport models for contaminants in air, water, and soil. Optimization methods (e.g., linear programming) to evaluate alternatives for solid-waste management and water and air-pollution control. Introduction to hydrologic simulation (runoff and streamflow).
offer a systems approach to understanding renewable energy systems (solar, wind, and biomass) and their conversion processes, from various aspects of biology, physics, engineering, environmental impacts, economics, and sustainable development.

**BEE 489 Engineering Entrepreneurship, Management, and Ethics**
The course focuses on engineering entrepreneurship, economics, management, and professional ethics. Course objectives include coverage of: prediction/probability of net returns; financial calculations (internal rate of return, time value of money, pro forma statements); legal structures of businesses; project management; developing an awareness of issues related to professional ethics; and technical writing and communication. Group project required to produce a business plan for a technology-driven concept suitable for a venture fair audience. This course satisfies the College of Engineering technical writing requirement.

**BEE 493 Technical Writing for Engineers**
Fall or spring. 1 credit. Prerequisites: co-registration with BEE 473 (fall), BEE 450 (spring). Lec. M 7:30--9:25 (5 evenings in first half of semester). Staff.
This course meets the College of Engineering technical writing requirement when taken concurrently with BEE 473 in the fall or BEE 450 in the spring. Class meets for five evening sessions and covers writing skills necessary for technical project reports. Also considered: outlines, style, audience, and general writing mechanics.

**BEE 494 Special Topics in Biological and Environmental Engineering**
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches "trials" courses under this number. Offerings vary by semester and are advertised by the course number. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**BEE 495 BEE Honors Research**
Fall or spring. 1-6 variable credits. Prerequisite: enrollment in the BEE Research Honors program. Letter grade. Staff.
Intended for students pursuing the Research Honors Program in BEE. Students must complete the Honors program application by the 3rd week of the fall semester, senior year.

**BEE 496 Capstone Design in Biological and Environmental Engineering**
Fall and spring. 1-6 credits. credits. Prerequisites:

**BEE 497 Individual Study in Biological and Environmental Engineering**
Fall and spring. 1-4 credits. S-U option. Prerequisites: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in the upper two-fifths of their class. Students must register using an independent study form (available in 140 Roberts Hall). Staff.
Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

**BEE 498 Undergraduate Teaching**
Fall and spring. 1 credit. Prerequisite: written permission of instructor. Students must register using an Independent Study form (available in 140 Roberts Hall). Staff.
The student assists in teaching a biological and environmental engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

**BEE 499 Undergraduate Research**
Fall and spring. 1-4 credits. Prerequisite: normally reserved for seniors in the upper two-fifths of their class; adequate training for work proposed; and written permission of instructor. Students must register using an Independent Study form (available in 140 Roberts Hall). Staff.
Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

**BEE 501 Bioengineering Seminar (also BMEP 501)**
Fall, spring. 1 credit. For juniors, seniors, and graduate students only. D. Luo and D. Putnam. Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations for discussions. Sessions may occasionally be held outside of scheduled times.

**BEE 520 M.P.S. Project**
Fall and spring. 1-6 credits. Required of each M.P.S. candidate in the field. BEE graduate faculty. A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

**BEE 551-552 Agricultural and Biological Engineering Design Project**
Fall and spring. 4-6 credits. Prerequisite: admission to the M.Eng. degree program. ABEN graduate students only. Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economic, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. There is, however, a formal orientation
during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551-552 is required for the M. Eng. degree. Students should register for 551 their first semester and complete any additional design project credits with 552. If more than six design project credits are desired in one semester, both 551 and 552 may be taken.

BEE 625 Environmental Management
Fall. 3 credits. Lec., T'R 2:55-4:10. W. J. Jewell
For description, see BEE 325.

[BEE 647 Water Transport in Plants (also BIOPL 651)]
Fall. 2 credits. Lec., T'R 10:10-11:00.
Topics include water relations of plant cells and tissues using water potential terminology; permeability of plant cells to water and the role of aquaporins; transport of water through whole plants, including transpiration, stomatal physiology, and the modifications due to plant communities; water status and plant growth in relation to water stress.

BEE 649 Solute Transport in Plants (also BIOPL 649)
Fall. 3 credits. Lec., T'R 10:10-11:25.
Offered alternate years. R. M. Spanwick.
A fundamental treatment of the transport of ions and small organic molecules in plants. Topics will include: electrophysiology of cell membranes, including ion channels and electrogenic ion pumps; transport mechanisms for the major ions; intercellular and long-distance ion transport; excretory systems for sugars and amino acids; phloem transport; ABC-type transporters.

BEE 651 Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOMI 290 or BIOIM 498 or BIOMI 531 or permission of instructor. Lec., T'R 10:10-11:00.
B. Ahner
This course examines ways in which organisms may be used to remove or metabolize pollutants in the environment, including bacterial degradation of organics and phytoremediation of heavy metals. Through lectures and current literature, students evaluate the benefits as well as the current obstacles. The current efforts to genetically engineer organisms for bio remediation and the potential risks of releasing them into the environment are examined.

BEE 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry, and introductory physics, or permission of instructor. Lec., T'R 12:20-1:10; lab, 2:00-4:25.
D. J. Anstee
Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers is emphasized. Image processing techniques are introduced. A final project is required.

BEE 655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: MATH 295 or equivalent. Lec., R 2:30-4:30.
J.-Y. Parlange
Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, and structure of organizations).

BEE 659 Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisites: BIOMI 398 or permission of instructor. Lec., T'R 8:40-9:55; lab, M 1:25-4:25 and 7:30-10:30 P.M. A. J. Baeumner.
This course provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. The course addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, prepare a biosensor of their choice in the laboratory, and present a poster in a biosensor workshop at the end of the semester. Graduate students work independently on individual biosensor projects.

BEE 671 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics. Lec., R 3:35-4:50 (first meeting—TBA). J.-Y. Parlange.
The course encompasses a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered alternately with CEE 653—a complementary, but not identical, course.

BEE 672 Drainage
Theory of water and solute flow in aquifers, hill slopes, and the vadose zone and as it relates to natural and artificial drainage is discussed. Drainage design as it relates to agricultural land, landslides, and land application sites is critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined. Laboratory are used for hands-on experience with measuring soil parameters and for actual drainage design. This course satisfies the BEE capstone design experience requirement.

BEE 673 Sustainable Development Seminar (also NBA 573)
Spring. 1-3 credits. Prerequisites: upper-division undergraduate and graduate students or permission of instructor. Lec., F'1:30-3:30. N. R. Scott.
Sustainable development is the most beneficial concept to environmental movement in years. The concept of a sustainable world, however, is not a constant. There are many aspects of sustainability involving economics, environment, and political, social, scientific, and technological developments. This seminar explores topics such as energy, agricultural and food systems, green buildings and ecological design, corporate sustainability, and other contemporary issues.

BEE 678 Nonpoint Source Models
Spring. 3 credits. Prerequisites: computer programming and calculus. Lec., T'R 8:40-9:55. D. A. Haith.
Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include watershed hydrology, sediment yield, urban and rural runoff, lake eutrophication, waste disposal sites, and pesticides, nutrients, and salts in drainage.

BEE 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisites: TRAM 310 or permission of instructor. Lecs., M W F 11:15-12:05. J. R. Cooke.
Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

BEE 687 The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries
Fall. 1 credit. Prerequisite: graduate standing. Lec., R 12:20-1:10; disc, R 1:25-2:15. B. Ahner.
Environmentally sustainable alternatives for our energy and chemical needs are critical. This seminar explores challenges facing the development of industries that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of biological systems for environmental bioremediation.

BEE 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum. S-U grades optional. ABEN graduate faculty. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

BEE 697 Graduate Individual Study in Agricultural and Biological Engineering
Fall or spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional. ABEN graduate faculty. Topics are arranged by the staff at the beginning of the term.
BEE 700 General Seminar  Fall. 1 credit. S-U grades only. Staff. Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

BEE 740 Veterinary Perspectives on Pathogen Control in Animal Manure (also VF MED 740 and BIOM 740)  Spring. 2 credits. Prerequisite: graduate standing or permission of instructor. Lect. M T W R 3:00–4:00, March 24–May 16. D. D. Bowman. Presents an in-depth look at the management of pathogens in animal manures. It reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. The course discusses commercial methods of manure processing for the control of pathogens for the protection of other animals and the human population. The course concludes with class discussions with major stakeholder groups representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

BEE 750 Orientation to Graduate Study  Fall. 1 credit. Limited to new graduate students. S-U grades only. Lecs. first 7 weeks, M 3:35–4:25. D. J. Aneshansley. An introduction to ABEN research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

BEE 754 Watershed Management  Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructors. Lect. W 2:30–4:25, T. S. Steenhuis and M. J. Pfeffer. Traditional top-down approaches to watershed management have been challenged by advocates of public participation. These challenges have raised questions about how to effectively integrate science, policy, and public participation. This course reviews different management approaches and evaluates their usefulness in dealing with different watershed management problems. Case examples from watersheds in the United States and overseas are considered.

BEE 760 Nucleic Acid Engineering (also BMEP 760)  Spring. 3 credits. Prerequisites: BEE 360 or permission of instructor. Lect. T R 2:30–3:20; lab, W 12:20–2:15. D. Luo. Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the "genetic engineering" sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic acid engineering are introduced, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine. A design project and formal project presentation are required.

BEE 771 Soil and Water Engineering Seminar  Fall and spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades only. J. Y. Parlange and M. F. Walter. Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

BEE 771 Structures and Related Topics Seminar  Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only: TBA. Staff. Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations.

BEE 775 Biological Engineering Seminar  Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. J. R. Cooke. The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined to improve communication between engineers and biologists.

BEE 778 Industrial Ecology of Agriculture and Biobased Industries  Spring. 3 credits. Prerequisites: one year of calculus, some knowledge of Matlab. BEE 687 limited to graduate students. L. P. Walker. Input/output modeling methods are used to explore the use of the industrial ecology perspective for the design and analysis of sustainable bio-based industries.

BEE 788 Biomass Conversion of Energy and Chemicals  Fall. 3 credits. Prerequisite: one year of college calculus and chemistry. Minimum of one course in thermodynamics and computer programming. Lect. M W F 1:25–2:15. L. P. Walker. Biological and physical conversion of biomass to bioenergy and bioproducts. Biological and engineering concepts associated with microbial and enzymatic conversion of biomass to useful products, physical and chemical concepts associated with the pretreatment of biomass and the separation of key biomolecules. Using mass and energy balances and mathematical models (with Matlab) to simulate process behavior.

BEE 800 Master's-Level Thesis Research  Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

BEE 900 Doctoral-Level Thesis Research  Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research.

BIOMETRIC AND STATISTICS

BIOMETRY AND STATISTICS

M. Wells, chair, J. Booth, C. Bustamante, R. Nielsen, S. J. Schwager, R. Strawderman

The Department of Biological Statistics and Computational Biology in the Statistical Science offers the following courses in Biometry and Statistics. Students need to register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

BTRY 301 Biological Statistics I (also NTRES 313 and STBTRY 301)  Fall and summer. 4 credits. Prerequisite: BTRY 301 or BTRY 601. Statistical methods are developed and applied to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the S-Plus statistical computing environment.

BTRY 302 Biological Statistics II (also NTRES 413 and STBTRY 302)  Spring. 4 credits. Prerequisite: BTRY 301 or BTRY 601. Linear statistical methods are applied to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactore analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the S-Plus statistical computing environment.

BTRY 382 Introduction to Statistical Genomics and Bioinformatics (also STBTRY 382)  Fall. 4 credits. Prerequisite: BTRY 101, MATH 111, BIO G 102, or equivalent. Survey course focusing on the statistical analysis of genomic data. The course includes an introduction to probability and statistics and application to DNA sequence analysis, phylogenetic inference, population genetics, genetic mapping, molecular evolution, and macromolecular structure prediction. The course is intended for undergraduates and beginning graduate students in the mathematical and biological sciences. Evaluation is based on weekly problem sets and computer assignments as well as a midterm and final examination.

BTRY 408 Theory and Probability (also STBTRY 408)  Fall. 4 credits. Prerequisites: MATH 111, 112, at least concurrent enrollment in 213 or 222 or equivalents. An introduction to probability theory: axiomatic foundations; both discrete and continuous equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations; extension of probability problems involving two or more random variables; random samples. Can serve as either one-semester introduction or a foundation for a course in statistical theory. At least one introductory course in statistical methods is additionally recommended but not required.

BTRY 409 Theory of Statistics (also STBTRY 409)  Spring. 4 credits. Prerequisites: BTRY 408 or equivalent and at least one introductory course in statistics.
An introduction to classical theory of parametric statistical inference that builds on the material covered in BTRY 408. Topics include sampling distributions, principles of data reduction, likelihood, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

**BTRY 421 Matrix Computation**

Fall. 4 credits. Prerequisite: Calculus. Not offered 2004–2005.

Introductory course in matrix computations that reviews linear algebra (vector spaces, linear independence) and emphasizes a matrix approach to solving systems (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Positive definite matrices, eigenvalues, and their applications in mathematical modeling and statistics are discussed.

**BTRY 482 Statistical Genomics (also STBTRY 482)**

Spring. 4 credits. S-U grades optional. Prerequisite: BTRY 382 or equivalent.

This course covers topics in the statistical analysis of genetic, molecular, and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of comparative molecular data, QTL mapping, and association mapping. Topics may vary from year to year. This course will be co-taught with BTRY 482. However, undergraduate students will be evaluated on the basis of a final exam and a term paper instead of a research project.

**BTRY 494 Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494)**

Fall or spring. 1–3 credits. S-U grades optional.

A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 495 Statistical Consulting (also STBTRY 495)**

Fall and spring. 2–3 credits. Prerequisites or corequisites: BTRY 302 or BTRY 600 and BTRY 409 or permission of instructor. S-U grades optional.

Participation in the Department of Biological Statistics and Computational Biology consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

**BTRY 497 Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497)**

Fall and spring. 1–3 credits. S-U grades optional. Students must register using an Independent Study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 498 Undergraduate Supervised Teaching (also STBTRY 498)**

Fall and spring. 2 credits. S-U grades optional. Students must register using an Independent Study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 499 Undergraduate Research (also STBTRY 499)**

Fall or spring. 1–3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research. Students register using an Independent Study form (available in 140 Roberts Hall).

**BTRY 600 Statistics Seminar (also STBTRY 600)**

Fall and spring. 1 credit. S-U grades optional. Prerequisite or concurrent: BTRY 409 or permission of instructor.

**BTRY 601 Statistical Methods I (also STBTRY 601)**

Fall and summer. 4 credits. Limited to graduate students; others by permission of instructor.

Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, and related techniques including generalized estimating equations and robust estimation. Programming will be done in MATLAB. The focus of the course is on the use of numerical analysis methods for solving problems in statistical inference and estimation.

**BTRY 672 Topics in Environmental Statistics (also STBTRY 672)**

Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor. Not offered 2004–2005.

This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

**BTRY 682 Statistical Genomics (also STBTRY 682)**

Spring. 4 credits. S-U grades optional. Prerequisite: BTRY 382 or equivalent.

This course covers topics in the statistical analysis of genetic, molecular, and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of comparative molecular data, QTL mapping, and association mapping. Topics may vary from year to year. All students are expected to participate in small research projects.

**BTRY 694 Graduate Special Topics in Biometry and Statistics (also STBTRY 694)**

Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 697 Individual Graduate Study in Biometry and Statistics (also STBTRY 697)**

Fall, spring, or summer. 1–3 credits. S-U grades optional.

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis is stressed, with emphasis on solutions of real data problems.
BTRY 717 Linear and Generalized Linear Models (also STBTRY 717)

Fall. 3 credits. S-U grades optional. Prerequisites: BTRY 409, BTRY 421, and BTRY 602 or equivalents. Offered alternate years.

Statistical modeling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, quasi-likelihood, and generalized estimating equations. Covers the use of link functions and generalized linear models to accommodate nonlinear models and nonnormally distributed data. Also covers the use of random effects to accommodate a hierarchy of random effects in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.

BTRY 726 Problems and Perspectives in Computational Molecular Biology (also PL BR 726 and COM S 726)

Fall and spring. 1 credit. S-U grades only. Prerequisite: permission of instructor. This is a weekly seminar series discussing timely topics of computational molecular biology. These methodological approaches to sequence annotation, protein structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.

BTRY 795 Statistical Consulting (also STBTRY 795)

Fall and spring. 2-3 credits. Prerequisites or corequisites: BTRY 602 and BTRY 409 and permission of instructor. S-U grades optional. Participation in the Department of Biological Statistics and Computational Biology consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 798 Graduate Supervised Teaching (also STBTRY 798)

Fall and spring. 2-4 credits. S-U grades only. Permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry. Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 800 Master's-Level Thesis Research

Fall or spring. Credit TBA. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the M.S. level.

BTRY 900 Graduate-Level Dissertation Research

Fall or spring. Credit TBA. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the Ph.D. level.

BTRY 901 Doctoral-Level Dissertation Research

Fall or spring. Credit TBA. S-U grades only.

COMM 100 Communication in Social Relationships

Spring or summer. 3 credits. Spring: lecs, M W F 11:15-12:05. K. McComas. An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, and organizations.

COMM 116 Communication in Social Relationships

Spring or summer. 3 credits. Spring: lecs, M W F 11:15-12:05. K. McComas. An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, and organizations.

COMM 117 Writing about Communication

COMM 120 Contemporary Mass Communication

Fall or summer. Fall: lecs, M W F 12:20-1:10. J. Shanahan. The processes and effects of mass communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues.

COMM 201 Oral Communication

Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. K. Berggren, T. Russo, and staff. Through theory and practice, students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203 Argumentation and Debate

Fall, spring, and summer. 3 credits. Fall: T R 11:40-12:55; spring: T R 11:40-12:55. J. Hayman. Students learn the principles of argumentation and debate. Topics emphasize Internet database research, synthesis of collected data, analysis of evidentiary quality, refutation of counter claims, identification of logical fallacies, risk evaluation, framing of issues, and coherent storytelling. Students are prepared to work with a great range of opinion and evidence. The course emphasizes different viewpoints, including those of different cultures. Assumptions are questioned and interrogated.

COMM 220 Mass Media and Society

Spring. 3 credits. T R 11:40-12:55. T. Gillespie. This course provides an overview of the influence of mass media on and in democratic societies. We begin by examining social theories that formed the bases for the emerging discipline of mass-communication research around the turn of the century. Then, we trace the evolution of mass-media research across four dominant paradigms: hypodermic needle, limited effects, return to powerful effects, and negotiated meaning/social construction models. Finally, media effects on social institutions are assessed.

COMM 230 Introduction to Computer-Mediated Communication

Fall. 3 credits. Not offered 2004-2005. T R 10:10-11:25. Staff. Explores the nature of communication and how it is affected by technologies. Topics include a history of communication technologies and function, types of Internet communication systems, barriers and benefits, and descriptions of uses and impacts in cultural, professional, community, and personal social systems.

COMM 235 Psychology and Social Computing (also INFO 235)

Fall. 3 credits. T R 10:10-11:00. J. Walther. The course offers an in-depth examination of several social aspects of computing, drawing upon recent and classical social psychology and social-cognition research. A small number of topics will be closely examined and may include impression formation/management, group behavior, deception and trust, disinhibition, and online relationships.
COMM 260 Science Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Fall: Lec 01, M W F 9:05-9:55, Lec 02, M W F 10:10-11:00. Spring: Lec 01, M W F 9:05-9:55 or Lec 02, M W F 1:25-2:15. S. Connar.
An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis is emphasized. Not oriented to the mass media.

COMM 263 Organizational Writing
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Fall: Lec 01, M W F 9:05-9:55, Lec 02, M W F 10:10-11:00, Lec 03, M W F 11:15-12:05. Spring: Lec 01, M W F 10:10-11:00, Lec 02, M W F 11:15-12:05. L. Van Buskirk and staff.
Students write from the point of view of various organizations, including businesses, government agencies, and nonprofit organizations. Emphasis is on appropriate representation of the writer's organization, audience analysis, and clear and effective written presentation of detailed content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.

COMM 272 Principles of Public Relations and Advertising
Summer. 3 credits. Not open to freshmen. Staff.
Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the economic system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

COMM 282 Communication Industry Research
Fall. 3 credits. Prerequisite or concurrent enrollment. COMM 116, 120. Lec. M W F 11:15-12:05. R. Ostman.
Public opinion polls, readership/viewership studies, audience segmentation techniques, and media and message effect evaluation are all widely used in communication industries. This course covers the use of basic research design, measurement, sampling, and simple descriptive and inferential statistics in conducting these studies.

COMM 284 Sex, Gender, and Communication
Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. Van Buskirk.
The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285 Communication in Life Sciences (also S&TS 285)
Spring. 3 credits. M W F 10:10-11:05. B. Lewenstein.
Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from notes to the web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301 Business and Professional Presentation
The study and practice of written and oral communication skills used in formal and informal organizations. This includes interviews; informative, persuasive, and special-occasion speeches; reports; discussions; and PowerPoint presentations. Students study and practice the organizational, analytical, and presentational skills needed in contexts suited to their own business and professional career goals.

COMM 303 Speech and Debate Practicum
Fall and spring. 2 credits. Program in Speech and Debate members only; permission of instructor and completion of 1-year trial basis. J. Hayman.
Students learn preparation for practice in intercollegiate speech and debate (e.g., Lincoln-Douglas, debate, Lincoln-Douglas debate, or individual speaking events). The class is divided into four groups according to level of experience; therefore, it may be repeated to a maximum of eight credits.

COMM 345 Human-Computer Interaction Design (also INFO 345)
Covers key issues of the design of the interaction between computers and people. Students develop the ability to evaluate solutions to design problems and a familiarity with implementing HCI designs.

COMM 349 Media Technologies (also S&TS 349)
Commonplace notions of communication and media regularly overlook the role of the material technologies. Yet how and why we communicate shape the technologies we design. There are technologies that make our efforts to communicate and the consequences of those efforts. This course considers technologies of media as an opportunity to analyze the intersection of technology and its social context.

COMM 350 Writing for Magazines
Fall, spring, and summer. 3 credits. Prerequisite: any college-level writing course. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments. Fall: M 1:25-2:45, spring: lec, T R 8:40-9:55, lab, R 1:25-2:15. S. Conopre.
A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed; all articles are analyzed and returned to the student to rewrite and submit to a magazine.

COMM 352 Science Writing for the Mass Media (also S&TS 352)
How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

COMM 353 Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 200, COMM/S&TS 352, ENGRD 350, or permission of instructor. Limited to 25 even-numbered years. B. Lewenstein.
Students cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting, students review science writing techniques and issues. At the meeting, students meet with science writers and attend press conferences and scientific sessions. Students write at least two stories. Students are responsible for all costs of travel, lodging, and meals.

COMM 376 Planning Communication Campaigns
Fall. 3 credits. Prerequisites: COMM 282 or equivalent social research course (may be taken concurrently). T R 10:10-12:25. K. McComas.
This course provides a theoretical and practical overview of the audiences, messages, and evaluation of communication campaigns. Principles of planning and evaluation relevant to several kinds of campaigns are included. Topics include discussion of campaign goals, objectives, strategies, and tactics; research design and implementation; audience segmentation; message construction; and techniques of evaluation. Common methods of data collection (e.g., focus groups, experiments, surveys) and analysis of campaign-related data sources are considered.

COMM 382 Advanced Communication Research
Fall. 3 credits. Prerequisites: COMM 282 or equivalent social research course. TBA. J. Walther.
Advanced approaches to methods of data collection and analysis in communication research for students who intend to complete advanced research projects such as honors research or other independent studies and who have preliminary research under way. Every week we examine one or two research situations in detail, analyze specific problems connected to the method used, and discuss strategies for data analysis and presentation. This format provides all students—indeed, independent of their specific thesis topic—with an in-depth understanding of the methods used in communication research and how they are applied to specific projects.
COMM 398 Issues in Teaching Communication
Fall and spring. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for 201, 204, or 301. Alternate M 7:30-9:10 p.m. K. Berggren. This seminar brings together novice educators to discuss ideas, experiences, and practice. Emphasis is on offering and receiving feedback on one another's teaching efforts and offering challenges for professional educators to discuss ideas, experiences, and practice. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405 Community Service Practicum
Fall and spring. 2 credits. May be repeated for credit. Meeting times TBA. J. Hayman. Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 410 Organizational Communication: Theory and Practice
Fall. 3 credits. Labs limited to 15 juniors, senior, or graduate students. Prerequisite: COMM 116 or permission of instructor. Lect. M W 11:15-12:05, lab 01, W 12:20-2:15; lab 02, W 2:30-4:15; lab 03, R 12:20-2:15; lab 04, C. Yuan. Study of management communication processes in formal organizations. Application of relevant organizational behavior and communication principles in today's business environment, examination of formal and informal communication networks, and exploration into the craft of consulting. Case studies analyzed in lab.

COMM 418 Communication and Persuasion
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: COMM 282 or equivalent social science research methods course; and COMM 116 and 120 or introductory psychology or social psychology. T R 10:10-11:20. C. Yuan. Focuses on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. These theories are applied to a variety of communication situations, including mass communication, advertising, public relations, public information, and interpersonal communication.

COMM 420 Public Opinion and Social Processes
Fall. 3 credits. M W 2:55-4:10. Staff. Provides an overview of the concept of "public opinion" and its implications for macrosocial processes—from both a scientific and an applied angle. The course examines the historical development of the concept in fields such as political science, social psychology, and communication science, and then takes a look at how we measure public opinion. The course is based on "public opinion," and we will focus on the importance of public opinion and public opinion perception for different aspects of democratic societies, such as policymaking, risk perceptions, or political participation.

COMM 421 Communication and the Environment
Spring. 3 credits. Offered odd-numbered years. K. McComas. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment. How the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television (and Beyond)
Fall. 3 credits. Prerequisites: introductory psychology or HD 120 or COMM 120 or COMM 116. Lect. M W F 12:20-1:10. M. Shapiro. A survey of knowledge about how people mentally process television and other audiovisual communication technologies—including movies, virtual reality, and the Internet. Topics include why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.

COMM 424 Communication in the Developing Nations
Fall. 3 credits. Limited to juniors and seniors. Lect. T 1:25-2:35; Lab, T 2:35-4:25. R. Collie. The role of communication in development programs, particularly in the Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning, and community development and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication.

COMM 428 Communication Law
Spring. 3 credits. Limited to juniors, seniors, and graduate students; others by permission of the instructor. Lect. M W F 11:15-12:05. J. Walther. This course deals with the law governing communication media. Topics covered include First Amendment concepts, restraints on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.

COMM 440 Advanced Human-Computer Interaction Design (also INFO 440)
Fall. 3 credits. Prerequisite: COMM 240 or COMM 245 or permission of instructor. T R 10:10-11:25. G. Gay and J. Hancock. Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 445 Seminar in Computer-Mediated Communication
Spring. 3 credits. Prerequisites: COMM 240 or 245. T R 11:40-12:55. K. McComas. Focuses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student collaborations using electronic conferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual teams, videoconferencing, and others as they emerge.

COMM 450 Language and Technology (also INF 450)
Spring. 3 credits. T R 10:10-11:25. J. Hancock. Examines how new communication technologies affect the ways we produce and understand language and modify interaction with one another. Attention will focus on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 466 Public Communication of Science and Technology (also S AT S 466)
Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 260 or 352, or ENGR 350, or permission of instructor. Offered odd-numbered years. M W 2:55-4:10. B. Lewenstein. Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, and analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop and disseminate knowledge about PCST. Course format is primarily seminar/discussion.

COMM 476 Communication Fellows Program
Spring. 2 credits. Prerequisites: permission of instructor; limited to communication seniors selected based on goals and academic preparation. M W 2:55-4:10. B. O. Earle. A series of lectures, seminars, and guest speakers exploring the planning, evaluation, and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers. Fee of $150 charged.

COMM 480 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to undergraduates who have met the requirements for the honors program. Meeting times TBA. J. Walther. Students who have successfully completed COMM 382 will register for no more than 3 credits. Students who have not completed an advanced research methods course must register for up to 6 credit hours.

COMM 486 Risk Communication
Spring. 3 credits. T R 1:25-2:15; Lab, R 2:30-4:25. C. Scherer. An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health,
and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories.

**COMM 494 Special Topics in Communication**

Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

**COMM 496 Communication Internship**

2 credits (sec. 1) or 1 credit (sec. 2) Communication majors only. K. Berggren. Students who register for section 1 will receive a structured, on-the-job learning experience under the supervision of communication professionals in a cooperating organization. Requirements include mandatory participation in two pre-internship symposiums (spring semester; will receive an “R” grade) and two post-internship discussions (fall semester) plus a minimum of 120 hours of work experience in communication (summer or fall) and a final paper that analyzes the work experience according to communication theories. The preparatory symposiums and summary evaluation sessions may be done by distance education technologies. The preliminary symposiums may be taken by students who are still seeking a specific internship. Students may register in a subsequent semester for one additional hour (section 2) for an internship with an organization that requires interns to receive academic credit. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required for section 2. All internships must be approved prior to the work experience segment by the internship coordinator.

**COMM 497 Individual Study in Communication**

Fall or spring. 1-3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register using an Independent Study form (available in 140 Roberts Hall). Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. At the end of the term, the student should submit a written report that demonstrates the value and importance of the work performed. The report should be approved by the instructor.

**COMM 498 Communication Teaching Experience**

Fall or spring. 1-3 credits; may be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduate desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skills development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register using an Independent Study form (available in 140 Roberts Hall). Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

**COMM 499 Independent Research**

Fall or spring. 1-3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register using an Independent Study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

**COMM 610 Seminar in Communication and Social Networks**

**COMM 618 Communication and Persuasion**

Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course. T R 10:10-11:25. C. Yuan. The course focuses on theories of communication's influence on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories are also applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.

**COMM 621 Advanced Communication and the Environment**

Spring 3 credits. M W 2:25-4:10. Offered odd-numbered years. K. McComas. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion of the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content. Lectures concurrent with COMM 421; graduate students should enroll in COMM 621.

**COMM 622 Advanced Psychology of Television (and Beyond)**

Fall. 3 credits. Prerequisites: graduate student status and permission of instructor. Meeting times TBA. M. Shapiro. A survey of how people mentally process television and other audiovisual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include: why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.

**COMM 624 Communication in the Developing Nations**

Fall. 3 credits. Open to juniors, seniors, and graduate students. Lect. T 1:25-2:35; Lab. T 2:30-4:25. J. Hancock. The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning, and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

**COMM 640 Human-Computer Interaction Design (also INFO 640)**

Fall. 3 credits. Prerequisites: graduate standing or permission of instructor. T R 10:10-11:25. J. Hancock. Graduate-level readings and research supplementing COMM 440. This course focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach students that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

**COMM 645 MC Graduate Seminar**

Spring. 3 credits. Prerequisites: graduate standing or permission of instructor. T R 11:40-1:25. J. Walther and J. Hancock. Graduate-level readings and research supplementing COMM 445. Through close reading and research in communication and technology, and participation in projects using these technologies, students enhance experiential, theoretical, and critical understanding of contemporary computer-mediated communication systems and uses. Topics include virtual teams, videoconferencing, and others.

**COMM 650 Language and Technology**

Fall. 3 credits. T R 11:40-12:55. J. Hancock. Graduate-level readings and research supplementing COMM 450. The course examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Attention will focus on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

**COMM 656 Communication Planning for Social and Behavioral Change**

**COMM 660 Studies in Communication**

Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W 8:40-9:55. J. Shanahan. A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.
An analysis of the methods used in processing.

Development of, and contemporary issues in, communication theory. Discussion includes the interaction between communication and society, social groupings, and mental processing.

COMM 681 Advanced Communication Theory
Spring, 3 credits. Offered odd-numbered years. Prerequisite: COMM 680 or graduate standing and permission of instructor. M W 2:55-4:10 with additional meetings TBA. M. Shapiro.

An analysis of the methods used in communication research. Emphasis is on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 682 Methods of Communication Research
Spring, 3 credits. Loc, M W F 12:20.
R. Ostman

An examination of the methods related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories of risk communication.

COMM 683 Qualitative Research Methods in Communication

COMM 686 Risk Communication
Spring, 3 credits. T R 1:25-2:15; lab, R 2:30-3:25, C. Sherer.

An examination of the theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories of risk communication.

COMM 691 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only.

Some weeks scholars from a wide variety of fields present varied topics in theory or research as it relates to communication; other weeks graduate students present thesis (project) proposals to faculty members and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1–3 credits variable. S-U grades only. Prerequisite: permission of instructor. Study of topics in communication not otherwise provided by a department course and determined by the interest of faculty members and students.

COMM 698 Seminar in Communication Issues
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor.

Small group study of theoretical issues in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor.

Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory
Fall and spring. 1–3 credits each semester. Letter grade only. May be repeated once.

Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.

Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799 Graduate Research
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of committee chair.

Graduate research individual project for M.S. (Communication) students.

COMM 800 Master's-Level Thesis Research
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.

Thesis research for M.S. (Communication) students.

COMM 901 Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: completion of "A" exam; permission of committee chair.

Dissertation research for Ph.D. candidates.

CROP AND SOIL SCIENCES

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Courses by Subject

Crop Science: 311, 312, 314, 315, 317, 415, 444, 455, 608, 610, 612, 613, 614, 642, 691, 820, 920, 921

Environmental Information Science: 398, 410, 411, 420, 456, 485, 486, 620, 660, 675, 694, 860, 960, 961

Soil Science: 200, 260, 363, 365, 372, 373, 412, 421, 467, 471, 472, 473, 483, 621, 663, 666, 667, 669, 671, 672, 693, 880, 980, 981

General Courses

CSS 190 Sustainable Agriculture
Fall. Credits variable. 3 or 4. Limited to 60 students. S-U grades only. Prerequisite: junior standing. M T 2:00-4:25, G. W. Fick and C. J. Peters.

This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, livestock, and climates), and it emphasizes scientific principles of management that conserve or renew those resources for continuing benefit to society. The information is of general value for nonmajors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and farms. One extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

CSS 494 Special Topics in Crop and Soil Sciences (undergraduate level)
Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

CSS 497 Individual Study in Crop and Soil Sciences
Fall or spring. 1–6 credits. S-U grades optional. Students must register using an Independent Study form (available in 140 Roberts Hall).

The topics in soil science, crop science, or environmental information science are arranged at the beginning of the term for individual study or for group discussions.

CSS 498 Teaching Experience in Crop and Soil Sciences
Fall or spring. 1–5 credits. S-U grades optional. Students must register using an Independent Study form (available in 140 Roberts Hall).

Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course.

CSS 499 Undergraduate Research
Fall or spring. Credit TBA. S-U grades optional. Students must register using an Independent Study form (available in 140 Roberts Hall).

Independent research on current problems selected from any phase of crop science or soil science.
CSS 695 Planning and Reporting Research

Spring. 2 credits. First meeting the first T of the semester in 102 Bradford. Next offered spring 2006. G. W. Fick.
New graduate students and students starting to write their theses have found this course very helpful. Topics covered include: scientific writing, reviewing, seminar presentations, and poster presentations. The nature of science and the scientific method are also discussed along with professional ethics in the conduct and communication of science.

CSS 696 Seminar in Crop and Soil Sciences

Fall and spring. 1 credit. S-U grades only.

Seminars cover current research and selected topics in the crop and soil sciences and related fields.

Crop Science

CSS 311 Grains and Nutraceuticals

Fall. 4 credits. Prerequisite: CSS 260 or BIOL 241. Lecs, M W F 10:10; lab, M 1:25-4:25. One or two field trips during lab periods (usually 5 p.m. or on weekends). R. L. Obendorf.

Globally, six seed crops provide 75 percent of the caloric and protein needs of mankind: wheat, rice, maize, soybeans, and roots and tubers. These crops are grown in intensive agriculture systems for improved health. Laboratory uses selected species diversity and domestication, conservation of protein and legume uses, and implications for various kinds of agricultural seeds. Hands-on laboratory experience.

CSS 312 Forage Crops

Spring. 4 credits. Prerequisites: introductory course in crop and/or soil science. Lecs and recitation in animal nutrition. Lecs, M W F 11:15; lab, M or W 1:25-4:25. G. W. Fick.

The production and management of crops used for livestock feed are considered in terms of biotic and abiotic factors, both on-farm and off-farm. Forage crops, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

CSS 314 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also IARD 314)

Fall. 3 credits. Prerequisite: an introductory course in crop science or soil science or biology or permission of instructor. Lecs, T R 8:40-9:55. P. Hobbs.

Characterization and discussion of traditional shifting cultivation; lowland rice-based systems; upland cereal-based systems; smallholder mixed farming including root crops and livestock; plantation fruit and oil crops; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The impact of tropical cropping systems on the environment are evaluated.

CSS 315 Weed Science

Fall. 4 credits. Prerequisite: introductory course in biology or botany. Lecs, T R 10:10-11:25; lab, T or W 2:00-4:25. A. DiTommaso.

Principles of weed science are examined. Emphasis is on: a) weed biology and ecology; b) weed-management strategies used in agricultural and natural ecosystems; and c) the chemistry of herbicides in relation to effects on plant growth and the environment. Hands-on laboratory sessions cover weed identification and ecology, herbicide application, selectivity, and symptomology.

CSS 317 Seed Science and Technology (also HORT 317)

Fall. 3 credits. Prerequisite: BIOL 241 or equivalent. Lecs, T R 11:15-12:05; lab, R. Two all-day field trips will be scheduled during the semester. Offered alternate years. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.)

The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

CSS 426 Practicum in Forest Farming as an Agroforestry System (also HORT 426 and NTRES 426)

Fall. 2 credits. Lab, W 1:25-4:25. R. W. Mudge, L. E. Buck, and P. Hobbs.

Students will actively take part in the development and management of a seventy-year-old nut grove originally planted at Cornell in the 1930s. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities will include all or most of the following: temperate-nut harvest and variety evaluation, mushroom culture, small-fruited and fruit-tree culture, medicinal-herb culture, site evaluation and planning, and field trips to other agroforestry-related sites. Outdoor activities will be integrated with selected readings via an online discussion board.

CSS 444 Integrated Pest Management (also ENTOM 444)

Fall. 4 credits. Prerequisites: one course in biology or permission of instructor. Lecs, M W F 9:05; labs, M 1:25-4:25, J. E. Losey and A. DiTommaso.

Courses integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

CSS 455 Mineral Nutrition of Crops and Landscape Plants (also MINE 455)

Spring. 3–5 credits. Prerequisite: CSS 260 or BIOL 242, or equivalent. Lecs, M W F 9:05; lab, R 1:30-4:00. Offered alternate years. A. DiTommaso.

A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on mineral nutrition, soil chemistry, floriculture, and fruit crops. Each module carries one credit: a minimum of three credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, and are able to diagnose deficiencies by symptoms and tissue tests and devise organic and conventional nutrient management strategies that maximize productivity and mineral nutrient quality.

CSS 608 Water Status in Plants and Soils

Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lecs, lab, R 1:25-4:25, first class meeting R. Offered alternate years. T. L. Setter.

Covers techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

CSS 610 Physiology of Environmental Stresses

Fall. 3 credits. Prerequisite: plant physiology, BIOL 242 or 341, or permission of instructor. Offered every other year. Lecs, M W F 1:25-4:25. T. L. Setter.

A study of the responses of plants to environmental stresses, including chilling, freezing, high temperature, salinity, drought, hypoxia, and toxic elements. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

CSS 612 Seed Biology

Spring. 3 credits. Prerequisite: plant physiology, TR 8:30-9:55. R. L. Obendorf.

This course in seed biology describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events, including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

CSS 613 Physiology and Ecology of Yield

Spring. 3 credits. Prerequisite: plant physiology, M W F 1:25-4:25. T. L. Setter.

A study of environmental constraints on crop productivity from the perspective of key biological processes. Acclimation responses and genetic adaptation are examined for temperature, light, water, compacted soil, and mineral nutrient environments. Topics include photosynthesis and nitrogen assimilation, translocation, and partitioning; canopy-scale influences on solar radiation use efficiency, regulation of growth processes in leaf, root, and floral sinks in response to environment; seed set, water transport and stomatal regulation; root growth in flooded and compacted soils; and drought responses. Emphasis is on growth processes of vegetative plant organs.

CSS 614 Weed Ecology and Management

Spring. 3 credits. Prerequisite: CSS 315 or equivalent. Lecs, T R 10:10-11:25. Offered alternate years. A. DiTommaso.

An examination of plant ecological principles governing weed population dynamics and weed-crop competitive interactions in different crop and noncrop ecosystems. Application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies is explored. Topics include seed biology and seedbank dynamics, weed demography and spatial variation, weed-crop interference, invasive-weed biology,
biological weed control, and site-specific weed management.

[CSS 642 Plant Mineral Nutrition (also BIO PL 642)]
A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate the above topics.

[CSS 691 Special Topics in Crop Science]
Fall or spring. 1-6 credits. S-U grades optional. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

[CSS 820 Master’s-Level Thesis Research in Crop Science]
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master’s program.

[CSS 920 Graduate-Level Thesis Research in Crop Science]
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted for candidacy. After the “A” exam has been passed.

Environmental Information Science

[CSS 398 Environmental Microbiology (also BIOMI 398)]
Spring. 3 credits. Prerequisite: BIOEE 261 or BIOMI 260 or CSS 260 or permission of instructor. Offered alternate years. Not offered in 2005. Lect. M W F 10:10-11:00. E. L. Madsen. The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutants, wastewater treatment, and environmental biotechnology.

[CSS 410 Environmental Impact of Agricultural Technology]
Spring. 3 credits. Prerequisite: BIO G 109 or equivalent. Lect. M W 12:25-1:15; lab, W 2:30-4:25. Staff. Outlines how changes in agricultural practice associated with the introduction of genetically modified (GM) crops might impact the environment. Current knowledge of the different kinds of environmental problems caused by some GM crops will be discussed, as well as the principles and questions that have emerged from studies of environmental impact so far.

[CSS 411 Resource Inventory Methods (also CEE 411)]
Spring. 3 credits. Prerequisite: permission of instructor. Lect. M W 9:05-9:55; lab, M R 1:25-4:25. A. Lembo. A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

[CSS 420 Geographic Information Systems]
Fall. 4 credits. Prerequisite: CSS 411 or permission of instructor. Lect. T R 9:05-9:55; lab, T 10:10-11:10; M W R F 1:25-4:25. A. Lembo. Principles and applications of geographic information systems for the characterization and assessment of agronomic and environmental resources. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment are considered.

[CSS 455 Global Positioning System]
Fall and spring. 1 credit. Prerequisite: CSS 411 or CSS 420, or equivalent, or consent of instructor. Offered the last five weeks of the semester. Lect. F 1:25-4:25. A. Lembo. Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization, field-data collection and processing, real-time and post-differential correction, and GPS-GIS integration.

[CSS 485 Problem Solving in Environmental and Agroecosystem Science]
Fall. 4 credits. Prerequisite: CSS 260 or equivalent. Limited to seniors. Lect. 1st meeting F 1:25; lab, at least one 4-hour afternoon per week plus additional time as needed. P. Ravey. Capstone experience for seniors, centering on the problem-solving analysis of a specific problem (e.g., a brownfield in Ithaca in fall 2004), with a number of faculty members serving as technical resources and lecturing as needed. This course involves field trips, in-depth discussions of data assembled prior to the course, gathering of relevant scientific information (in groups), and report writing. Students will be expected to work approximately 15 hours per week on a range of assignments. The course is conceived as the first of a sequence of two complementary courses, but it can be taken alone.

[CSS 486 Problem Solving in Environmental and Agroecosystem Science III]
Spring. 4 credits. Prerequisite: CSS 485. Limited to seniors. Lect. TBA; lab, at least one 4-hour afternoon per week plus additional time as needed. P. Ravey. Capstone experience for seniors, in continuation of CSS 485. Students work in groups to carry out the laboratory measurements identified in the fall, with faculty members serving as technical support and lecturing as needed. Students are expected to work approximately 15 hours per week on a range of laboratory measurements. The results of these measurements are discussed as they become available and are combined with the rest of the assembled information to come up with recommendations about the management of the targeted problem (e.g., in spring 2005, a brownfield in Ithaca).

[CSS 620 Spatial Modeling and Analysis]
Spring. 3 credits. Prerequisites: CSS 420, CSS 461, or permission of instructor. Lect. T R 9:05-9:55; lab, T W 1:25-4:25. A. Lembo. Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification, and evaluation. Application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

[CSS 660 Remote Sensing Fundamentals (also CEE 610)]
Fall. 3 credits. Prerequisite: permission of instructor. Lect. M W 12:20-1:10; lab, F 12:20-1:10. 1:25-2:15. W. D. Philpot. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

[CSS 675 Modeling the Soil-Plant-Atmosphere System (also EAS 675)]
Spring. 3 credits. Prerequisite: CSS 483 or equivalent. Offered alternate years. Next offered spring 2006. Lect. T R 8:40-9:55. S. J. Riba. Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability, plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation are discussed.

[CSS 694 Special Topics in Environmental Information Science]
Fall or spring. 1-6 credits. S-U grades optional. Staff. Study of topics in environmental science that are more specialized or different from other courses. Special topics to be offered will depend on staff and student interests.

[CSS 860 Master’s-Level Thesis Research in Environmental Information Science]
Fall or spring. Credit by arrangement. S-U grades only. Graduate faculty. Limited to students specifically in a master’s program.

[CSS 960 Graduate-Level Dissertation Research in Environmental Information Science]
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only before the “A” exam has been passed.
The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

CSS 363 Soil Genesis, Classification, and Survey
Fall. 4 credits. Prerequisite: CSS 260, Lecs, M W F 1:15-1:25. Lab, W 1:25-4:25. One all day field trip is required. J. Russell-Anelli.

Factors and processes of soil formation on which soil survey is based are discussed. Principles of field identification, classification, survey, and interpretation are practiced in a field setting. An overview of soil databases, their content, development, and use for site evaluation and land classification is provided.

CSS 365 Environmental Chemistry: Soil, Air, and Water
Spring. 3 credits. Prerequisites: CHEM 207-208, Lecs, M W F 10:10-11:00. M. B. McHirtle.

An overview of the chemical processes that control the concentrations and bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil's function as a filter for contaminants. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

CSS 372 Nutrient Management in Agro-Ecosystems
Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. Lecs, T R M 4:40-5:55; lab, R 1:25-4:25. J. Lehmann.

Students become familiar with the basic concepts of soil biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agro-ecosystems. Emphasis placed on how nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion moderated through oral as well as poster presentations. Graduate students should enroll in CSS 472.

CSS 412 Whole Farm Nutrient Management (also AN SC 412)
Spring. 2 or 4 credit option. Open to juniors, seniors, and graduate students only. Course offered as two modules. Enrollment in Module 1 for the first half of the semester is required (2 credits). Module 1 consists of crop and manure nutrient management planning; no prerequisites for CASL students. Enrollment in Module 2 for the second half of the semester is optional (additional 2 credits). AN SC 411 required. Lecs, T R 11:15 and lab T 1:25-4:25 for both modules, with work on case studies outside of lab. M. E. VanAmburgh, Q. M. Ketterings, and G. L. Albrecht.

This course provides students with an understanding of the concepts underlying whole farm nutrient management planning to improve soil fertility while protecting water and air quality. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for a Concentrated Animal Feeding Operation (CAFO) to meet environmental regulations. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning System (CNMPS) and other tools. All students enrolled learn the concepts and processes of developing the crop and manure nutrient management plan component of a CNMP (Program 3). Students opting to continue through the end of the semester in Module 2 (4 credit option) build upon knowledge gained in the first half of the semester by learning the knowledge and skills necessary to interpret crop production and herd feeding management for reducing nutrient imports on farms.

CSS 421 Soil and Water Management
Fall. 4 credits. Prerequisites: CSS 260, S-U grades optional. Lecs, R 11:40-12:55; lab, R 2:30-4:30. H. M. van Es.

Introduces students to the principles of soil and water management and to the effects of human intervention on these processes. Aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, soil compaction, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

CSS 466 Soil Ecology (also HORT 466)
Spring. 4 credits, with laboratory. Prerequisite: one year of biology or ecology with one of CSS 260 or permission of instructor. Lecs, T R 10:10-11:25; lab, W 1:25-4:25. J. E. Thies and I. Drinkwater.

Discover the wonder of life underground. In this course, you will study the amazing diversity of soil organisms along with their functions and interactions in terrestrial ecosystems.
CSS 472 Nutrient Management and Research in Agro-Ecosystems  
Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. Lecs, TR 8:40-9:55; lab, R 1:25-4:25. J. Lehmann.  
Students become familiar with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agro-ecosystems. Emphasis is placed on the way nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations. The laboratory experiments conclude with a final paper.

CSS 473 Ecology of Agricultural Systems (also BIOEE 473)  
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. Lect and disc, TR. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips. TR 2:30-3:45. Not offered fall 2004-2005. A. G. Power and E. C. Fernandes.  
Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, nutrient cycling, and evolution of invasive species. Applications to pest control and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

CSS 483 Environmental Biophysics (also EAS 483)  
Spring. 3 credits. Prerequisite: CSS 260 or equivalent or permission of instructor. Offered alternate years. Lecs, M W F 11:15. S. J. Riba.  
Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets; soil heat flow; water movement in saturated and unsaturated soils; evapotranspiration; and water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum are covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

CSS 621 Applications of Space-Time Statistics  
Spring. 2 credits. Prerequisite: STBTRY 601 or equivalent. S-U grades only. Offered alternate years. Offered after spring break 2005. M W F 2:30-4:25. H. Van Es.  
An introduction to space-time statistics with applications in agriculture and environmental management. Topics include geostatistics (including use of ArcView's Geostatistical Analyst), temporal statistics, sampling, experimental design, state-space analysis, data mining, and fuzzy logic. The focus is on landscape-scale processes and a user's perspective.

CSS 663 Pedology  
Spring. 3 credits. Prerequisite: CSS 361 or permission of instructor. M W F 11:15-12:05. S-U grades only. Not offered 2005. J. Russell-Anelli.  

CSS 666 Applied Plant-Microbe Interactions  
Fall. 4 credits. Prerequisite: CSS 466 or equivalent, or permission of instructor. Lecs, T R 10:10-11:25; lab, F 1:25-4:25. Offered alternate years. Not offered fall 2004. J. E. Thies.  
This discussion and laboratory-based course focuses on the nature of microbial interactions with plants, concentrating largely on bacterial and fungal associations. Symbiotic associations and pathogenic interactions are all investigated. Improving professional practice, within the content area, is a main aim of this subject. Students learn to examine the primary literature, present research reports, write and refine research proposals, conduct a small independent-research project, and report on the outcomes in conference and journal formats. Class discussions explore the nature of the rhizosphere environment as a habitat for microorganisms, the physiology of the organisms residing there through readings in the primary literature. In laboratory, all students conduct an independent research project, aligned with their interests, in which they develop testable hypotheses and conduct experiments using relevant, modern methods.

CSS 667 Advanced Soil Physics  
Spring. 3 credits. Prerequisite: one year of college physics and CSS 483 or permission of instructor. S-U grades optional. Offered alternate years. M W F 11:15-12:05. P. C. Baveye.  
This course is meant to acquaint students to advanced topics in soil physics in a number of areas, including the statics and thermodynamics of soil water, the physics of swelling-shrinking soils, the transport of water and solutes in heterogeneous soils, the measurement of soil physical parameters, and the effect of spatial/temporal heterogeneity of soils on their physical characteristics. The format of the course, based in most part on weekly, individual tutorials, allows different topics to be covered, depending on the interest(s) of the students. If a group of students expresses interest in it, the course can also involve reflection on the detailed design of one or more laboratory or field experiments related to soil physics.

CSS 669 Organic Matter—Soils, Sediments, and Waters  
Spring. 3 credits. Prerequisite: CSS 260 and CHEM 357-358 or equivalent. M W F 10:10-11:00. J. M. Duxbury.  
A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Includes a modeling project of soil carbon dynamics in natural or agricultural ecosystems.

CSS 671 Soil Chemistry  
Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Lecs, M W F 10:10. Offered alternate years. M. B. McBride.  
A detailed examination of the structure and surface chemistry of colloidal particles common to soils. Ion exchange; mineral-solution equilibria; and adsorption reactions of silicate clays, oxides, and organic matter are emphasized. The behavior of environmental contaminants in soils, particularly metals and toxic organics, is described.

CSS 672 Nutrient Cycling in Natural and Managed Ecosystems  
Fall. 3 credits. Prerequisite: CSS 372 or NTR 321 or BIOEE 478, or permission of instructor. Lecs, T R 10:10-11:00; lab, F 1:25-4:25. J. Lehmann.  
Nutrient cycling in soil and the interface between the soil and the vegetation, atmosphere, and ground water are covered. We examine the biogeochemistry of nutrient elements in natural ecosystems, disturbed or degraded ecosystems, and agricultural systems, including pollution in watersheds. Students develop independent projects, present a research proposal, and conduct field research that culminates in a presentation and a paper in publishable format.

CSS 693 Special Topics in Soil Science  
Fall, spring, or summer. 1–6 credits. S-U grades optional. Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

CSS 696 Seminar: Organic Inputs in Tropical Soils and Agroforestry (also NTR 696 and IARD 696)  
Fall, spring. 1 credit Section 2. S-U grades only. Lecs, T R 12:10-1:20; E. Fernandes and L. Fisher.  
A variety of speakers present seminars on organic inputs in the tropics and agroforestry. Students are required to prepare a synopsis of each seminar.

CSS 880 Master's-Level Thesis Research in Soil Science  
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

CSS 980 Graduate-Level Dissertation Research in Soil Science  
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only before the "A" exam has been passed.

CSS 981 Doctoral-Level Dissertation Research in Soil Science  
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the "A" exam has been passed.
DEVELOPMENT SOCIOLOGY

Note: the prefixes for courses in this department were listed as R SOC in previous years.

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

D SOC 101 Introduction to Sociology
Fall, spring, or summer. 3 credits
Enrollment limited to 300 students in the fall, 400 in the spring. Lecs, T R 10:10-11:00, sec, various times. Fall, T. Hirschl; spring, staff.

This course provides an introduction to theory and research in sociology. It demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. The course provides "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

[D SOC 103 Self and Society (also SOC 103)]

D SOC 112 Development Sociology First-Year Writing Seminar
Fall, spring. 3 credits. Lec.; M W 2:55-4:10. R. Kreider.

In this course we read three contemporary novels to examine the dynamic link between the 'self' and society. These novels are juxtaposed with sociological writings to examine how the narratives can confirm, challenge, or refute sociological concepts such as identity, gender, race, community, and social/economic exclusion.

D SOC 175 Issues in Contemporary American Indian Society (also AIS 250)

This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways in which American Indians pursued strategies to sway the process of social change. American Indian political, economic, and cultural issues are examined through history, literature, music/art, and film/documentary. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians in the twenty-first century are explored. Guest lecturers, including American Indian scholars, leaders, and activists, provide additional perspectives.

[D SOC 200 Social Problems (also SOC 200)]

D SOC 201 Population Dynamics (also SOC 202)
Spring. 3 credits. S-U optional. Enrollment limited to 25 students. ALS students must register for this course as D SOC 201. T R 2:55-4:10. L. Williams.

This course provides an introduction to population studies. After reviewing basic concepts and demographic principles and techniques, the course focuses on how demographic processes (fertility, mortality, and migration) affect social and economic outcomes. Discussions cover special topics related to population growth and distribution, including mass education, marriage and family formation, labor force participation, inequality and poverty, women's status, resource allocation, and the environment.

D SOC 205 International Development (also SOC 206)
Spring. 3 credits. Enrollment limited to 74 students. M W F 10:10-11:00. P. McMichael.

New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, Western sociocultural (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies.

Also examined are the new global justice movements, such as environmentalism, feminism, and landless workers, peasant, and grass-roots activism.

D SOC 206 Gender and Society (also FGSS 206)
Spring. 3 credits. Enrollment limited to 100 students. Lecs. M W 11:15-12:05; sec, various times. Staff.

Course familiarizes students with the origins of gender hierarchies, social behavioral similarities/differences between females and males, and the degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality are a major focus of the course. Objectives are met through lectures, readings, films, participant observation, and personal experiences.

[D SOC 208 Technology and Society]

D SOC 210 Race in America and at Cornell (also GOVT 210)
Fall. 3 credits. Offered alternate years (complement of D SOC 214). T R 11:40-12:55. P. Eloundou-Enyegue.

A survey of definitions of social indicators and general principles of social indicators research is illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, and so on, based on census data, household surveys, and key-informant and other low-cost techniques, are examined using personal computers.

[D SOC 214 Research Methods for the Social Sciences]

D SOC 215 Introduction to Organizations (also SOC 215)

D SOC 220 Sociology of Health of Ethnic Minorities (also LSP 220)
Fall. 3 credits. S-U optional. Enrollment is limited to 15 students. T R 10:10-11:25. J. A. Parra.

Discusses the health status of minorities in the United States. This course explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

[D SOC 261 Sociology of Sustainable Development]

D SOC 275 Immigration and a Changing America

Immigration helped America become the nation that it is today. While many experts thought that immigration's contribution to American history ended in the early 1900s, immigration surged to historic highs in the second half of the twentieth century and shows no signs of diminishing in the twenty-first century. This course examines the economic, social, and policy forces that underlie contemporary U.S. immigration and the impacts that immigrants are having on the American economy and society today. It looks in detail at how the new immigrants are, why they come to America, where they live, and what roles they fill in America.

D SOC 301 Theories of Society (also SOC 375)

D SOC 302 Evaluating Statistical Evidence (also SOC 301)
Fall. 4 credits. S-U option. Lec.; M W 11:15-12:05. S. Szelenyi.

A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

D SOC 305 Education, Inequality and Development

Spring. 3 credits. Letter grade. Prerequisite: introductory social science course or permission of instructor. T R 10:10-11:00. P. Eloundou-Enyegue.

Improvements in formal schooling are often advocated as solutions for a variety of socioeconomic problems in nonindustrial and industrial nations alike. This course
critically assesses human capital approaches to development. Topics include 1) the variety and functions of school systems, 2) the individual and macro-level determinants of educational and socioeconomic stratification, 4) the effects of education on development, and 5) tools for evaluating education projects.

D SOC 311 Social Movements (also AIS 311 and LSP 311)
Spring. 3 credits. Prerequisites: D SOC 101, SOC 101 or permission of instructor. S-U grades optional. T R 1:25-2:40. A. Gonzales.
Social movements are collective efforts by relatively powerless groups of people to change society. Typically conceptualized as political activity outside the institutional framework, social movements are politics by other means. This course examines the transnational dimensions of social movements to assess the implications of globalization for political mobilization and the ways that social movement actors engage global political process to effect social change. Under what circumstances do movements emerge? How do global processes shape both domestic and transnational political mobilization? How do movements internally organize and choose political tactics and strategies to achieve their goals? How have social movements changed over time? This course examines these questions through an examination of indigenous peoples movements in the United States, Canada, and Latin America.

D SOC 318 Ethnohistory of the Northern Iroquois (also AIS 318)
Fall or spring. 3 credits. Enrolment limited to 100 students. T R 2:55-4:10. C. Geisler.
The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought, like preservationism, conservationism, deep ecology, sociocultural theories of NIMBYism, risk assessment, ecological modernization, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate relationships of substantive and philosophical/theoretical issues.

D SOC 320 Genomics and Society
This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on adaptation of rural communities and populations to major trends, including increased societal differentiation and complexity; increased societal interdependence; and rapid social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered. Students participate in group research projects in rural communities.

D SOC 340 Sociology of Food Systems
Spring. 3 credits. T R 1:25-2:40. G. W. Gillespie.
Our changing food and agricultural systems are examined sociologically, with attention to how these reflect the social organization of an increasingly global society. This course addresses such questions as: What are the major trends? What drives them? What do these trends imply for people, communities, and the environment? What are the social, human-health, and environmental issues? What might be better alternatives and what strategies of development might achieve them?

D SOC 354 Sociology of Contemporary Culture (also S&T 354 and SOC 552)
Fall. 4 credits. M W F 11:15-12:05. C. Leuenberger.
This course introduces students to the rapidly expanding body of work at the intersection of sociology, cultural studies, and science and technology studies. It provides an introduction to theoretical debates in cultural studies and to sociological studies of culture. We discuss the emergence of the tourist industry; the significance of consumption and advertisements in modern life; the cultures of music, art, and television, the use of rhetoric in politics and science; cultural and feminist analyses of knowledge, science, and technology; as well as the social construction of self, bodies, and identities.

D SOC 355 Latinos, Law, and Identity
(also LSP 355 and AM ST 357)
Spring. 3 credits. Prerequisite: D SOC 101 or permission from instructor. Letter only. M W F 11:15-12:05. R. L. Mize.
Critical exploration of the critical-justice movement and Latina/o identities. Legal cases, federal and state laws, and constitutional issues that impact Latina/os residing in the United States are highlighted. Theoretical contributions of law and society, critical race theory, LatinCrit, and outsider-jurisprudence perspectives applied to historical precedent and current attempts at marginalizing/empowering Latina/o communities.

D SOC 360 Sociology of American Indians
(also AIS 361)

D SOC 367 American Indian Politics and Policy
(also AIS 367)

D SOC 370 Comparative Issues in Social Stratification (also SOC 371)
Fall. 3 credits. Prerequisite: an introductory social science course. T R 8:40-9:55. S. Feldman.
This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning, and experiences of inequality. Throughout the course special attention is given to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

D SOC 375 Comparative U.S. Racial and Ethnic Relations
(also AM ST 375)
Fall. 3 credits. Prerequisite: D SOC 101 or permission from instructor. Letter only. M W F 11:15-12:05. R. L. Mize.
Comparative historical study of the social construction of race. Examines structures of racism as they influence Latina/o, African American, Native American, and Asian American experiences. Critical interrogation of whiteness and ethnic identities. Focus on historical legacy of institutional and interpersonal racism and its contemporary relevance in terms of political, economic, residential, legal, educational, cultural, health, and social-psychological inequalities.

D SOC 380 Independent Honors Research in Social Science
Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. J. Francis.
Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

D SOC 410 Health and Survival Inequalities (also SOC 410)
Historical and contemporary health inequalities and survival continue to exist today. This course covers some of the markers of such inequalities, including region, class, race, gender, and age, and examines some of the biological, socioeconomic, and political determinants of these differences. Macro as well as individual and family-level determinants are examined. Policy prescriptions are evaluated and new innovative approaches proposed.

D SOC 418 Population Policy (also B&S SOC 414)

D SOC 421 Theories of Reproduction (also SOC 421)
Examines the contentious debate on what makes women have any, few, and many children. It covers theories of population growth and changing fertility in both historical and contemporary populations. Demographic concepts like "the demographic transition" and "natural fertility" are discussed. Primary attention is given to "sociocultural" and "gender-based" explanations of reproductive behavior. The course also looks at theories about the place of the state in women's lives.

D SOC 430/629 Human Migration: Internal and International

D SOC 431/631 Comparative Ethnic Stratification: Demographic Perspectives
Spring. 3 credits. S-U grades optional. Prerequisite: Intro to Sociology or permission of instructor. T R 11:40-12:55. D. Gurak.
A comparative examination of ethnic stratification and mobility that focuses principally on dimensions of social groups that can be empirically measured using readily available demographic sources. These include residential segregation, occupational status and mobility, marriage and family formation, patterns, health and mortality, family structure, mobility, and intermarriage. The role of migration in shaping ethnic stratification systems is also examined. About half of the course examines the U.S. situation. Other societies receiving significant attention include...
India, Brazil, Nigeria, and several European societies. For D SOC 631, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.)

D SOC 435/635 Indigenous Peoples and Globalization (also AIS 435/635)
Fall. 3 credits. Limited to 23 students.
Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with these pressures. Globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the NAFTA or the de-agrarianization of the social and political arrangements contemporaneous with modernization or the expansion of communication technology and its impact on traditional knowledge systems, has had profound social, cultural, and economic impacts on indigenous peoples. At issue are the lands, resources, traditional knowledge, intellectual and cultural property, and indigenous struggles for recognition and self-determination.

D SOC 437 Aging and Aging Social Policy in the 1990s
D SOC 438/638 Population and Development
Fall. 3 credits. S-U grades optional.
Prerequisite: permission of instructor. T R 11:40-12:55. D. Gurak.
Examines major historical and recent demographic transitions in mortality, fertility, age structure, and composition, and explores the relationships between these transitions and the social, or economic, and cultural changes being experienced by diverse societies prior to, during, and following the onset and conclusions of the demographic shifts. Case studies from diverse historical periods and geographic locations are used. Graduate students also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

D SOC 494 Special Topics in Development Sociology
Fall or spring. 3 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

D SOC 495/695 Population and Development in Sub-Saharan Africa
D SOC 497 Independent Study in Development Sociology
Fall or spring. 3 credits variable (may be repeated for credit). Students must register using an Independent Study form (available at 140 Roberts Hall). S-U grades optional.
Informal study may include a reading course, research experience, or public service experience.

D SOC 560 Managing Local Environmental Systems: Social Perspectives and Research Bases
Fall. 3 credits. W 1:25-4:25. J. Francis.
Course is for students with diverse backgrounds: undergrads, grads, people in professional careers, others with interesting environmental-issue identification, resolution, and management. Course discussions include ecological, social, economic, and local government perspectives. Via lab exercises throughout the semester, students have opportunities to apply the concepts and principles of these perspectives to analysis of specific local environmental-management problems. Readings, lectures, and a course project are mandatory.

D SOC 601 Theoretical and Methodological Approaches to Community and Rural Development
Fall. 3 credits. Letter grade only.
Prerequisite: graduate student. Lec, W 7:30-10:00 P.M. P. Eberts.
A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: 1) community structural changes and policymaking; 2) participatory processes for generating community development; and 3) planning strategies as mechanisms for creating community development opportunities.

D SOC 602 Community Development Seminar
Spring. 1 credit. Prerequisite: D SOC 601.
Letter only. W 7:30-10:00 P.M. P. Eberts.
A participatory seminar for feedback, collective learning, and guidance as M.P.S. students apply community and rural development theory and methods in the thesis project work with local and regional communities.

D SOC 603 Classical Sociological Theory
Fall. 4 credits. Prerequisites: open to graduate students only. R 1:25-4:25.
M. J. Pfeiffer.
Students review the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives of the course are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

D SOC 606 Sociological Theories of Development
Spring. 3 credits. T 2:30-5:30. Staff.
This course is a critical examination of a historical range of theories and research in the sociology of development from the post-war period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous, and other social movements.

D SOC 607 Sociology of Natural Resources and Development (also ASIAN 603)
D SOC 608 Demographic Techniques (also PAM 606)
Fall. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U grades optional. W 4:30-7:30 P.M. D. Gurak or K. Joyner.
This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, survival vs. availability of demographic data, population estimation and projection, and stable population models.

D SOC 611 Globalization and Social Movements
D SOC 612 Population and Development in Asia (also FGSS 612)
D SOC 615 Qualitative Research Methods
Fall. 3 credits. Letter grades only.
Lec, T 1:25-4:25. L. Williams.
This seminar introduces students to a number of qualitative methods of field research in the social sciences. We discuss field observation, archival research, in-depth individual interviews, and focus group interviews. We assess the strengths and weaknesses of various strategies of field research and consider a range of practical matters such as choice of research site (and sample where appropriate), choice of questions, and issues of validity and reliability. Ethical considerations are highlighted.

D SOC 617 Foundations in Social Research: Comparative Epistemologies
Fall. 3 credits. Letter grades only.
This seminar is designed to introduce graduate students in the social sciences to the variety of epistemological approaches used by social scientists to analyze social change and development. Both positivist and non-positivist approaches are examined. The relationship of quantitative and qualitative methodologies are related to different epistemologies.

D SOC 618 Research Design I
D SOC 619 Quantitative Research Methods
Graduate-level course in measurement and analysis of survey, demographic, and observational data. Topics include: linear regression, analysis of variance, and analysis of covariance with both continuous and categorically coded variables. Introduction to logistic regression and some nonlinear models. Special attention is given to handling ordered and unordered categorical data as these are prevalent in social demographic data sets. Data from real surveys like the American National Election Studies and the General Social Surveys will be analyzed using programs like SAS and SPSS. Includes labs and writing projects to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting, and other data handling procedures.
D SOC 620 Sociology of the Community
Fall. 3 credits. W 1:25-4:25. D. Brown. This graduate seminar critically analyzes the intellectual core of community sociology and its theoretical development over time. "Community" as a concept is often reified and rarely critically examined, hence the course begins by clarifying the various ways in which "community" has been conceptualized and operationalized by sociologists. The course provides students with both a grounded conceptual foundation and an overview of multiple strategies for conducting research on community structure and change in the United States and internationally. The course includes a critical examination of the forms and shapes of sociological research on the community assumes. A case study approach is used to test the assumptions driving the methods and analysis of both contemporary and historical research.

[D SOC 621 Foundations of Environmental Sociology]
[D SOC 625 State, Economy, and Society]
[D SOC 630 Field Research Methods and Strategies]
[D SOC 640 Community and Changing Property Institutions]
[D SOC 641 Politics and Economics of Rural and Regional Development Fall. 3 credits. Prerequisite: upper-level or graduate students only. M 12:20-2:50. T. A. Lyson. A survey of social, political, and economic factors in local and regional development. Theories of community and regional development and underdevelopment are explored. Neoclassical, Marxist, and civil society theories are examined within local and global contexts.]
[D SOC 643 Land Reform Old and New]
[D SOC 645 Rural Economy and Society]
[D SOC 655 Advanced Techniques of Demographic Analysis]
[D SOC 661 Sustainable Agriculture and Development Spring. 3 credits. W 1:25-4:25. T. A. Lyson. This course examines the relationship between local agriculture and development as these are embedded in a globalizing economy.
[D SOC 666 Genomics, Agriculture, Food Systems, and Development]
[D SOC 671 Epistemological Challenges to Social Science Paradigms: A Feminist Inquiry (also FGSS 671)]
[D SOC 675 Global Patterns of International Migration]
[D SOC 694 Special Topics in Development Sociology Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.
[D SOC 715 Comparative Research Methods]
[D SOC 718 Multidimensional Measurement and Classification]
[D SOC 719 Logistic and Log Linear Models]
[D SOC 725 Theories of State, States of Theory Spring. 5 credits. W 1:25-4:25. S. Feldman. This course examines how processes of political, economic, and social restructuring reshape state capacities and processes of state formation. The animating question: How have new patterns of "globalization"—transnational corporatist alliances, social movements, and new hegemonic relations—altered how we understand the meanings, activities, and power of rule? Critical to these discussions are the fundamentalisms as these emerge and reconfigure national, regional, and global alliances and practices, as well as the reification of current processes of resistance, change, and terms of intervention and exchange. The course engages historical, poststructural, postcolonial, and comparative theories particularly as these have emerged and been refined by current debates in South Asia, Latin America, and Africa.
[D SOC 730 Sociology of Global Change Fall. 3 credits. R 1:25-4:25. P. D. McMichael. Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multilayered entity anchored in an evolving international division of labor and the systems, nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, and reconfiguration of localizing). The seminar examines the substantive and methodological questions more sensitive to global processes, including questions of relevant units of analysis, situating global processes in local contexts and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.
[D SOC 791 Teaching Experience Fall or spring. 1-3 credits. Limited to graduate students. S-U grades only. Graduate faculty. Participation in the ongoing teaching program of the department.
[D SOC 800 Master's-Level Thesis Research Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted specifically to a Master's program.
[D SOC 872 Development Sociology Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional. Graduate faculty.
[D SOC 900 Graduate-Level Thesis Research Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only before the "A" exam has been passed.

Field Study in Hawaii
Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program is offered during the spring semester and emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the SES major include EAS 240, 322, and 351. EAS 322 and 351 may also be used to fulfill requirements of the Geological Sciences major. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically students participate in the EES program during their junior year, although exceptions are possible. The EES program is administered by Cornell Abroad. For further information on the EES program see www.geo.cornell.edu/geoLOGY/classes/hawaii/course.html.
General Courses

EAS 121 Introduction to Computer Programming
Fall. 2 credits. Prerequisites: MATH 111, 112 (Corequisite). D. Schwartz

EAS 151 FORTRAN Applications in Earth Science
Spring. 2 credits. Prerequisite: CIS/EAS 121 or equivalent. Letter grade only. Lee, T R 9:05-9:55, lab, T 12:55-3:25, A. J. Pershing. This seven-week course emphasizes the application of computing in the Earth sciences, including data processing and modeling of the Earth, its atmosphere, and oceans. This course extends the procedural programming concepts developed in CIS 121. EAS 121 and considers their implementation in high-performance, compiled languages. Topics include the structure and syntax of a FORTRAN program, data input/output, compilation, and debugging.

EAS 240 Field Study of the Earth System
Spring. 5 credits. Prerequisites: one semester of calculus (MATH 190/191/192 or MATH 111/112) and two semesters of any of the following: PHYS 207/208 or 112/213; CHEM 207/208; BIO G 101-103-102/104 or 105/106 or 109/110. Lec, M T W R F 7:00 A.M.-7:00 P.M. A. Moore and M. Wysoki. This is an interdisciplinary field course covering fundamental concepts of the Earth system. Topics include global circulation patterns in the solid Earth, atmosphere and oceans, and their transfer; change and variability of Earth’s atmosphere and ocean systems; the temporal record of change preserved in the geologic record; Earth/ocean/atmospheric controls on ecosystems processes. The course is project-based with students engaged in hands-on, active learning that takes advantage of local resources in Hawaii.

EAS 322 Biogeochemistry of the Hawaiian Islands
Spring. 4 credits. Prerequisites: BIOEE 261 or EAS 321 or EAS 455 or permission of instructor. Lec, M T W R F 9:00-5:00. T. Derry. A field-oriented study of biogeochemical processes and ecosystem interactions across the Hawaiian Islands. Field, class, and laboratory work will focus on how landscape age and climate strongly control biogeochemical cycling and ecosystem development in Hawaii. Other topics include succession of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The class will be structured around field projects, carried out both as groups and individually.

EAS 351 Marine Ecosystems Field Course
Spring. 4 credits. Prerequisite: one semester of biology, one year of calculus; EAS 194 or 349, or permission of instructor. Lec, M T W R F 9:00-5:00. C. Greene and B. Monger. This field course will cover the interactions of physical and biological processes in marine ecosystems. It will start by looking at these processes on ocean basin to regional scales and work down to the smaller scales relevant to individual organisms. Students will be introduced to modern techniques of marine ecosystems research, including remote sensing, oceanographic-survey methods, and experimental marine ecology. This course is field and laboratory intensive with students engaged in hands-on, active learning that takes advantage of local resources in Hawaii.

EAS 496 Internship Experience
Fall or spring. 1-2 credits. S-U grades only. Staff.

EAS 498 Teaching Experience in Earth and Atmospheric Sciences
Fall, spring. 1-4 credits. S-U grades only. Students must register using an Independent Study Form. Staff. The student assists in teaching an EAS course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

Atmospheric Science

EAS 131 Basic Principles of Meteorology
Fall. 3 credits. Lec, M W F 9:05. M. W. Wysocki. A simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, and cyclones; hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

EAS 133 Basic Meteorology Lab
Fall. 1 credit. Prerequisite: concurrent enrollment in EAS 131. T W R 12:25-1:25 or M W 7:00-9:30, M. W. Wysocki. Laboratory course covering topics presented in EAS 131.

EAS 250 Meteorological Observations and Instruments
Fall. 3 credits. Prerequisite: EAS 131. Lec, M W 12:20, lab, R 1:25. M. W. Wysocki. This course covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covered are: instrument sting, mounting, and protection; instrument response characteristics, calibration, and standardization; recorders and data logging systems. Laboratory exercises are in observation and data analysis. The course is intended to serve as preparation for Observers Examination. Lab fee $50.

EAS 268 Climate and Global Warming
Spring. 3 credits. Prerequisite: basic college math, S-U grades optional. Lec, M W F 10:10-11:00. A. T. DeGaetano. Students from a range of disciplines become familiarized with such contemporary issues in climatology as global warming and El Niño. Introductions to the natural greenhouse effect, past climates, and observed and projected climate changes and impacts. Also natural climate variations (e.g. El Niño) and their consequences and predictability. Weekly student-led discussions of issues appearing in journals such as Nature.

EAS 296 Forecast Competition
Fall and spring. 1 credit. S-U grades only. Prerequisite: sophomore undergraduate standing in atmospheric science, or permission of instructor. D. S. Wilks. This two-semester course provides daily exercise in professional forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded after the second semester. May be repeated for credit.

EAS 331 Climate Dynamics (also ASTRO 331)
Fall. 4 credits. Prerequisites: two semesters of calculus and one semester of physics. Lecs, M W F 12:20-1:10; disc, T 1:25-2:15. K. H. Cook and P. J. Gierasch. Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

EAS 334 Microclimatology
Spring. 3 credits. Prerequisite: A course in physics. T R 10:10-11:25. Offered alternate years. Next offered 2006. S. J. Riba and D. S. Wilks. The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 341 Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M W F 9:05-9:55. A. T. DeGaetano. Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor, and moist air, and concepts of hydrostatics and stability.

EAS 342 Atmospheric Dynamics (also ASTRO 342)
Spring. 3 credits. Prerequisites: one year each of calculus and physics. Lecs, M W F 10:10-11:00. K. H. Cook and P. J. Gierasch. An introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). The governing equations of atmospheric flow are derived from first principles and applied to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

EAS 352 Synoptic Meteorology I
Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. Lecs, T R 9:05; lab, M 1:25. M. W. Wysocki. Weather map analysis and forecasting techniques are studied from the principles of fluid and heat flow. This course strengthens previously introduced meteorological concepts which are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 435 Statistical Methods in Meteorology and Climatology
Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 210) and calculus. T R 10:10-11:25. D. S. Wilks. Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes some statistical characteristics of
metereological data including probability distributions and operational structures. Covers operational forecasts derived from multiple regression models, including the MOS system. Also covers forecast verification techniques and scoring rules, time series analysis, EOFs, and other research topics as time permits.

[EAS 447 Physical Meteorology]
Fall. 3 credits. Prerequisites: one year each of calculus and MWP 9:05–9:55. Offered alternate years; next offered 2005. A. T. DeGaetano.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere; atmospheric optics, acoustics and electricity; microphysical cloud processes; and principles of radar probing of the atmosphere.

[EAS 451 Synoptic Meteorology II]
Spring. 3 credits. Prerequisites: EAS 451 and S. J. Colucci. Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes at these scales. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

[EAS 456 Mesoscale Meteorology]
Fall. 3 credits. Prerequisites: EAS 451 and S. J. Colucci. Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jet streams, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. The course also considers tropical weather systems and mesoscale modeling.

[EAS 457 Atmospheric Air Pollution]
Fall. 3 credits. Prerequisites: EAS 341 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. M W F 9:05–9:55. Offered alternate years; next offered 2006. S. J. Colucci. Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jet streams, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. The course also considers tropical weather systems and mesoscale modeling.

[EAS 483 Environmental Biophysics (also CSS 483)]
Spring. 3 credits. Prerequisite: EAS 341 or EAS 342. Course covers quasigeostrophic theory, atmospheric waves, hydrodynamic stability, the general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

[EAS 487 Introduction to Radar Remote Sensing (also ECE 487)]
Fall. 3 credits. Prerequisite: PHY 208 or equivalent, or permission of instructor. T R 10:10–11:25. Offered alternate years. D. L. Hysell.
Course fundamentals of radar, antennas, and remote sensing. Students are exposed to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. They also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds will be able to take the course. Emphasis placed on radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space science.

[EAS 494 Special Topics in Atmospheric Science (undergraduate level)]
Fall or spring. 8 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offered by semester, and are advertised by the department before the semester starts. The course is not offered more than twice.

[EAS 497 Individual Study in Atmospheric Science]
Fall or spring. 1–6 credits. S-U grades optional. Students must register using an Independent Study form. Staff.
Topics are arranged at the beginning of the term for individual study or for group discussions.

[EAS 499 Undergraduate Research in Atmospheric Science]
Fall or spring. Credit by arrangement. S-U grades only. Students must register using an Independent Study form. Staff.
Independent research on current problems in atmospheric science.

[EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652)]
Spring. 3 credits. Prerequisites: EAS 341 or equivalent. T R 11:40–12:55. Offered alternate years. S. J. Colucci and P. J. Gierasch.
Course covers quasigeostrophic theory, atmospheric waves, hydrodynamic stability, the general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

[EAS 666 Applied Multivariate Statistics]
Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. T R 8:30–9:55. Offered alternate years; next offered 2006. S. J. Riha.
Statistical techniques for multivariable data. Topics include multivariate exploratory data analysis, the multivariate normal distribution, parametric and nonparametric inference about multivariate means, principal component analysis, canonical correlation analysis, discriminant analysis, and cluster analysis. Geophysical applications are emphasized, primarily using atmospheric and oceanographic data as examples, but the development is general enough to be of broader interest.

[EAS 675 Modeling the Soil-Plant-Atmosphere System (also CSS 675)]
Fall or spring. 1–6 credits. S–U grades optional. Hours by arrangement. S-U grades only. Staff.
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation is discussed. (Course covers quasigeostrophic theory, atmospheric waves, hydrodynamic stability, the general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.)

[EAS 692 Special Topics in Atmospheric Science]}
Fall or spring. 1–6 credits. S–U grades optional. Staff.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered depend on staff and student interests.

[EAS 711 Upper Atmospheric and Space Physics]}
Fall or spring. Credit by arrangement. S–U grades only. Hours by arrangement. S–U grades only. Graduate faculty.
Limited to students specifically in the master's program in atmospheric science.

[EAS 850 Master's-Level Thesis Research in Atmospheric Science]}
Fall or spring. Credit by arrangement. S–U grades only. Hours by arrangement. Graduate faculty.
Limited to students specifically in the master's program in atmospheric science.

[EAS 950 Graduate-Level Dissertation Research in Atmospheric Science]}
Fall or spring. Credit by arrangement. S–U grades only. Hours by arrangement. Graduate faculty.
Limited to students in the atmospheric science Ph.D. program only before the “A” exam has been passed.

**EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science**
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.
Limited to students admitted to candidacy in the atmospheric science Ph.D. program after the “A” exam has been passed.

**Geological Science**

**EAS 101 Introductory Geological Sciences**
Fall. 3 credits. T R 11:15–12:05. Staff. Designed to enhance an appreciation of the physical world. Natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems are emphasized. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth System Science) are covered. Water, mineral, and fossil resources and environmental concerns are also examined. Field trips in the Ithaca region.

**EAS 102 Evolution of the Earth and Life (also BIO G 170)**
Spring. 3 credits. Lecs., T R 9:05–9:55 or 11:15–12:05; labs, T W or R 2:00–4:25. J. L. Cisne.
This course covers: Earth systems and their evolution; Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; forerunners for ongoing global change; and dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography and fossil-collecting field trips.

**EAS 103 Science of Earth Systems (SES) Freshman Colloquium**
Fall. 1 credit. Lec. F 2:30–3:20. Staff. Students meet weekly to discuss topics in the science of Earth systems and develop skills that will help them meet their academic and career goals. Topics will include an overview of the Science of Earth Systems, the various areas of study open to students in this major, possible career paths, and active areas of research. Study, computer, and research skills useful for SES students will be reviewed, along with opportunities for working in earth system-related areas. The colloquium will include guest speakers and several field trips.

**EAS 107 How the Earth Works**
A user-friendly introduction to the workings and interactions of solid Earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

**EAS 108 Earth in the News**
Summer. 3 credits. S. L. Losh.
Provides an introduction to physical geology and Earth system science and explores the scientific basis for informed decision making regarding many timely environmental issues including global warming, water pollution and use; geologic hazards such as floods, earthquakes, and volcanoes; fossil fuel distribution and use; and land use.

**EAS 109 Dinosaurs**
Fall. 1 credit. Lecs., T W or R 12:20–1:10. J. L. Cisne.
An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

**EAS 111 To Know the Earth**
Fall. 3 credits. Lecs., T R 10:10–11:25. Staff. Acquaints the nonscientist with Earth, its major features, how the Earth has evolved, Earth system science, and holding a habitable planet. Covers the effects of human activity on geologic environments, mitigating environment damage, and living with natural hazards. Also covers mineral resource use in the twenty-first century and an environmentally sound fossil-fuels-minerals cycle.

**EAS 122 Earthquake! (also ENGR 122)**
Spring. 3 credits. Lecs., T R 1:25–2:40. I. D. Hirn.
The science of natural hazards and strategic resources is explored. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

**EAS 154 The Sea: An Introduction to Oceanography—Lecture (also BIOEE 154)**
Spring, summer. 3 credits. The optional one-credit laboratory for this course is offered as EAS/BIOEE 155. S-U grades optional. Lecs., T R 11:40–12:55. Spring, T R 1:25–2:40.
C. H. Greene, W. M. White; summer, B. C. Mungor.
A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include seawater properties, and tides; ocean circulation; ocean floor; and sediment processes.

**EAS 155 The Sea: An Introduction to Oceanography—Laboratory (also BIOEE 155)**
Laboratory course covering topics presented in EAS/BIOEE 154.

**EAS 200 Art, Archaeology, and Analysis**
An interdisciplinary course on the use of techniques of science and engineering in cultural research. Applies physical and physiological principles to the study of archaeological artifacts and works of art. Covers historical and technical aspects of artistic creation. Includes analyses by modern methods to deduce geographic origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for engineering.

**EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)**
Fall. 3 credits. Prerequisites: PHYS 112 or 207 Lecs., T R 10:10–11:00, lab. R 2:00–4:25 or W 7:30–9:55. L. M. Cathles and J. Phipps Morgan.
This course covers: formation of the solar system; accretion and evolution of the Earth; the rock cycle: radioactive isotopes and the geological time scale; plate tectonics, rocks and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport; and the weathering cycle: chemical cycles, CO_2 (weathering), controls on global temperature (CO_2 or ocean currents), and oil and mineral resources.

**EAS 210 Introduction to Field Methods in Geological Sciences**
1 lec, Saturday field trips. 3 credits. Prerequisite: EAS 101 or EAS 201 or permission of instructor. R. Allmendinger.
Considers methods by which rocks are used as a geological database. Covers field methods used in the construction of geologic maps and cross sections; systematic description of stratigraphic sections. Field and laboratory sessions meet on Saturdays until Thanksgiving. There is also one additional lecture during most of these weeks. There is one weekend field trip to eastern New York.

**EAS 213 Marine and Coastal Geology**
Summer. 4 credits. Prerequisite: an introductory course in geology or biology, or permission of instructor. Staff.
A special two-week course offered at Cornell's Shools Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. For more details, including estimated cost and an application, contact the SML office, G14 Stimson Hall, or visit www.sml.cornell.edu.

**EAS 302 Evolution of the Earth System**
Spring. 4 credits. Prerequisite: MATH 112 or 192 and CHEM 207 or equivalent. Lecs., M W F 10:10–11:00, disc., W 2:30–3:20. W. White and staff.
Co-evolution of life and the Earth system: Earth's early history; plates, continental drift, and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.

**EAS 315 Geomorphology**
Fall. 4 credits. Prerequisite: one course in either geology, hydrology, or soil science. Lecs., T R 8:40–9:55; lab, M 2:00–4:25. Two Saturday field trips. B. I. Isacks.
A study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure, as we examine their modification by physical interaction with the atmosphere and oceans. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field methods and computer analysis of satellite images and Digital Elevation Models of examples from around the globe.
EAS 321 Introduction to Biogeochemistry (also NTRES 321)
Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus one course in biology and/or geology. Lecs, T R 12:00-1:10; disc, W 2:00-4:25. L. A. Derry and J. Yavitt. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bioactive metals, the use of isotope tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 326 Structural Geology
Spring. 4 credits. Prerequisite: one semester calculus plus an introductory geology course, or permission of instructor. One weekend fieldtrip. Lecs, M W F 11:15-12:05, lab, T 2:00-4:25. R. W. Allmendinger. Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, and structural families.

EAS 355 Mineralogy
Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207. Lecs, T R 10:10-11:25; lab, W 2:00-4:25. S. Mahlburg Kay. Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals are covered. X-ray diffraction is introduced. Includes an independent research project.

EAS 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: EAS 355. Lecs, T R 12:20-1:35; lab, W 2:00-4:25. R. W. Kay. Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. Also covers the petrological evolution of the planets.

EAS 375 Sedimentology and Stratigraphy
Fall. 4 credits. Prerequisite: EAS 101 or 201. Lecs, M W F 11:15-12:05, lab, T 2:00-4:25. J. L. Cisne. Covers formation of sedimentary rocks, depositional processes and environments; correlation of strata in relation to time and environment; petrology of sandstones and limestones; geological age determination; reconstruction of paleogeography and interpretation of Earth history from stratigraphic evidence and organization of strata in stratigraphic sequences.

EAS 389 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: MATH 192 or (112) and PHYS 208 or 213. Lecs, M W F 12:20-1:10; lab, M 2:00-4:25. B. L. Isacks. Covers global tectonics and the deep structure of the solid Earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

EAS 401 Fundamentals of Energy and Mineral Resources
Spring. 3 credits. Prerequisites: math through differential equations, physics through and Magnetism. CHEM 207, or equivalent. Recommended: introduction to geology. L. M. Cathles. Fossil fuels will continue to be the prime source of energy for the foreseeable future, and society depends upon mineral resources. This course describes and quantitatively analyzes energy and mineral resources on the earth. The distribution and nature of earth resources are described, focusing on U.S. examples. Quantitative tools are then developed and used to understand the processes that accumulate resources to economic levels.

EAS 417 Field Mapping in Argentina
Summer. 3 credits. Prerequisites: EAS 210 and 325; Spanish desirable, but not required. S. Mahlburg Kay. Modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precorriñera (San Juan River section), intensely deformed Proterozoic metamorphic rocks of the Punpane Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullan).

EAS 424 Reflection Seismology
Fall. 3 credits. Prerequisites: MATH 192 and PHY 208, 213, or equivalent. Lecs, T R 1:25-2:40; labs, TBA. L. D. Brown. Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground-penetrating radar. Lab is keyed to state-of-the-art seismic software from LandMark.

EAS 437 Geophysical Field Methods (also ARKEO 437)
Fall. 3 credits. Prerequisites: PHYS 213 or 208, or permission of instructor. Alternate years. Not offered 2004-2005. L. D. Brown. Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis is on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted.

EAS 445 Introduction to Groundwater (also BEE 471 and CEE 431)
Spring. 3 credits. Prerequisite: MATH 293, fluid mechanics or hydrology course. Lec, T R 10:10-11:25. T. S. Steenhuis and E. M. Cathles. Intermediate-level study of aquifer geology, groundwater flow, and contamination of aquifers and cleanup methods. Includes description of transport of pesticides, nutrients and toxic through the unsaturated zone and aquifers. Theoretical and practical applications are discussed. Short field trips are included.

EAS 453 Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. Next offered 2005-2006. R. W. Kay. Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

EAS 454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. M. Kay.

EAS 455 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years. Next offered 2005-2006. W. M. White. The Earth from a chemical perspective. Covers the formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochronology; thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemical of rivers and the oceans; hydrothermal systems; and ore deposition.

EAS 458 Volcanology

EAS 460 Late Quaternary Paleogeology
Fall. 3 credits. Prerequisites: one or more of the following: introductory geology, introductory archaeology, and introductory ecology. Lec, two 50-minute meetings per week; lab, 2.5-hour lab per week. M. Goman.
This course explores topics in late Quaternary palaeoecology. The course is broadly divided into three sections: 1) introductory topics; 2) research techniques; and 3) field- and lab-based research.

EAS 462 Marine Ecology (also BIOEE 462)  
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years. Lec, M W F 11:15-12:05. C. D. Harvell and C. H. Greene. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

EAS 475 Special Topics in Oceanography  
Fall, spring, summer. 2-6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger. Undergraduate instruction and participation in advanced areas of oceanographic research. Topics will change from term to term. Contact instructor for further information.

EAS 476 Sedimentary Basins: Tectonics and Mechanics  
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan. Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Course covers interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Also covers stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Uses modern and ancient examples.

EAS 478 Advanced Stratigraphy  
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Next offered 2005-2006. T. E. Jordan. Course covers modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks are considered as are physical controls on the stratigraphic record and numerical modeling.

EAS 479 Paleobiology (also BIOEE 479)  
Fall. 4 credits. Prerequisites: one year of introductory biology and BIOEE 274 or 373 or EAS 575, or permission of instructor. Lec, T R 10:10-11:25; lab, W 2:00-4:25. Offered alternate years. Not offered 2004-2005. W. M. Allmon. A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

EAS 481 Senior Survey of Earth Systems  
Spring. 3 credits. Limited to seniors majoring in geological science. Not offered 2004-2005. Staff. A survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis is on current models of Earth's dynamic systems (e.g., global climate change: mantle evolution). Utilizes guest lectures, synthesis and review of literature; scientific literature readings; discussions; and student presentations.

EAS 491-492 Undergraduate Research  
Fall, spring. 1 to 4 credits. Staff. Introduction to the techniques and philosophy of research in geological sciences and an opportunity for undergraduates to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.

EAS 500 Design Project in Geohydrology  
Fall, spring. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters. L. M. Cathles. The project must address one of the many aspects of groundwater flow and contamination, and must involve a significant geologic component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

EAS 502 Case Histories in Groundwater Analysis  
Spring. 4 credits. L. M. Cathles. Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

EAS 512 Advanced Structural Geology I  
Spring. 3 credits. R. W. Allmendinger. Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement: microstructure, preferred orientation, and TEM analysis; and pressure solution and cleavage development; and experimental deformation. Applications to deformation of regional and Proterozoic rocks. Kinematic analysis of shear zones and folds in these regimes.

EAS 524 Advanced Structural Geology II  
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger. Geometry, kinematics, and mechanics of structural provinces. Concentration is on thrust belts, orogenic belts, or strike-slip provinces. Covers techniques of balanced cross sections.

EAS 528 Geology of Orogenic Belts  
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2004-2005. Staff. A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term.

EAS 534 Advanced Geophysics I  
Fall. 3 credits. Prerequisite: EAS 388 or permission of instructor. Not offered 2004-2005.

EAS 536 Advanced Geophysics II: Quantitative Geodynamics  
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. TBA. J. Phinney Morgan. Stress and strain in the Earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.

EAS 611 Analysis of Biogeochemical Systems  
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. T. A. Derry. Covers dynamics of biogeochemical systems; genetic treatment of biogeochemical cycles; box models, residence time, response time; analytical and numerical solutions of model systems; Eigen-analysis of linear systems; feedback and nonlinear cases, problems of uncertainties in natural modeling software such as Stella II and MATLAB; and applications to current research of participants or from recent literature.

EAS 656 Isotope Geochemistry  
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White. Nucleosynthetic processes and the isotopic abundance of the elements. Geochronology and cosmochemistry using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 14C and 3Cl. Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.

EAS 695 Computer Methods in Geological Sciences  
Fall, spring. 3 credits. L. Brown and B. L. Ibsen. Independent research projects using modern computational resources in the Department of Earth and Atmospheric Sciences. Possibilities include: image and seismic processing, seismic and geomechanical modeling, GIS; use of interpretational workshops for 3-D seismic and satellite imagery; modeling fluid flow through complex media.

EAS 700-799 Seminars and Special Work  
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Advanced work on original investigations in earth and atmospheric sciences. Topics change from term to term. Contact appropriate professor for more information.

EAS 722 Advanced Topics in Structural Geology  
R. W. Allmendinger.

EAS 731 Planetary Geodynamics, Active Tectonics, Volcanology, Earthquakes, and Geodesy  
M. Pritchard.
EDUC 100.2 Writing Through Action: Scholarly Discourse in the University
Fall, spring. 3 credits. Disc, T R 10:10-11:25. C. Shaefer.

The challenge for this highly interactive course is to create a model community of inquiry within which we can explore the links between research, writing, and thinking in the university. Readings will introduce fearless explorers and careful scholars of digital discourse and action research whose work like challenges the status quo of academic culture. Their respective views of educational transformation and its associated issues of validity, property, space, reality, community, power, and identity will inform our own writing about the future of knowledge making. For more information see http://ca-ed100.com.

EDUC 100.3 Re-creating the World: Education and Social Change

How do we build respectful, just, democratic communities in which all can participate and flourish? How do we help others participate in such change processes? Through a cooperative inquiry process, we explore the work of educators and community organizers, including Dewey, Freire, Hooks, Horton, Shor, and Baker, and critically examine our own experiences as members of a powerful social and institutional community: the American university.

EDUC 115 Introductory College Mathematics
Fall. 4 credits. M W F 11:15-12:05; labs, TBA, S. Piliero.

Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. This course offers a multi-representational approach to college-level precalculus mathematics, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical, and symbolic representations of functions and their transformations. Students use graphing calculators in a collaborative lab setting. EDUC 115 will not count toward graduation credit in the College of Arts and Sciences.

EDUC 120 Education for Empowerment

Common themes running through the modules include human learning, teaching strategies, and political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

EDUC 151 Engaging Diversity: Multicultural Issues in Education and Society
Fall or spring. 3 credits. S-U grades optional. T R 12:25-2:40. S. K. Kroma.
The course explores diversity issues that affect students: for example, race, culture, gender, and class in the context of modern American society. Through selected readings and course activities, students recognize the strengths of a diverse community and acquire the knowledge and skills necessary for living and working in it. The focus is on critical thinking about the differences in our society, and the strategies we need for cross-cultural interactions.

EDUC 211 Psychological Foundations of Education
Spring and fall. 3 credits. Limited to 20 students. S-U option available. Prerequisite: introductory psychology. W 2:00-4:25 plus other times THA.

A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

EDUC 220 Community Learning and Service Partnership (CLASP)

In this service-learning course, students partner with Cornell service workers to accomplish a variety of learning goals selected by the employees. In addition to facilitating adult learning, students critically observe their own experiential learning. Class discussions focus on interpersonal communication, diversity, empowerment, and critical reflection. For the fourth credit, students agree to provide additional service through GLASP.

EDUC 240 The Art of Teaching

The Art of Teaching is an exploratory course designed for students of all backgrounds and interests who have a desire to learn more about teaching. Teaching takes place in a variety of contexts from the family to the workplace and this course endeavors to examine the elements of teaching that transcend the typical school-teaching environment. This course is designed to guide students in reflecting upon their experiences to help them better understand the decisions they make as teachers. Students have the opportunity to pursue their own interests through a teaching fieldwork assignment. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. The course work and readings are designed to build on these experiences throughout the semester and provide concepts and skills to apply in the field.
EDUC 271 Social and Political Context of American Education  
Fall. 3 credits. Disc. TR 1:25-2:40.  
J. W. Sipple  
This course examines the goals, roles, inputs, and outcomes of schooling in American society and the policy environment in which schools operate. We analyze controversies and tensions (e.g., equity, market forces, state control, public education at local, state, and federal levels. The course will include current and historical, urban and rural issues and problems.

EDUC 317 Psychology of Adolescence  
Spring. 3 credits. Prerequisite: Introductory psychology. S-U grades optional. TR 11:15-12:05; F morning section TBA. Not offered 2004-2005. D. E. Schrader  
This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications are discussed for both formal and informal settings.

EDUC 331 Careers in Agriculture, Extension, and Adult Education  
Fall. 1-3 credits. Letter grade only. F 1:25-4:20; 2:00-4:25. G. J. Applebee  
This course offers modules in three areas of teaching: adult education, cooperative extension, and agricultural education. Each module offers one hour of credit, and students may take one or more of the modules. The course provides an historical perspective and an introduction to the organization and scope of programs for each module. Students examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

EDUC 332 Instructional Methods in Agricultural Science Education  
Spring. 1-3 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. R 2:00-4:25. Not offered 2004-2005. W. Camp  
Selection, practice, and evaluation of methods in agricultural science education are stressed. The course offers an opportunity to explore teaching strategies and methodology unique to teaching agriculture, mathematics, or science and develop their skills and knowledge as teachers through furthering their study of the processes of learning, planning (in relation to state and national standards), assessment, and teaching. Forty hours of fieldwork is required.

EDUC 405 Learning and Teaching I  
Spring. 4 credits. Prerequisite: Admission to Cornell Teacher Education Program, or permission of instructor. Letter grade. Lec., TR 8:40-9:55, F. Fieldwork, TBA. D. E. Schrader  
This course is designed to foster development of pedagogical and reflective understandings crucial to good teaching. Students explore what it means to understand and teach through examination of topics which require rethinking disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on learners' understandings and classroom structures.

EDUC 404 Learning and Teaching II  
Fall. 4 credits. Prerequisite: Admission to Cornell Teacher Education Program, or permission of instructor. Letter grade. Lec., TR 8:49-9:55; fieldwork, TBA. W. Camp, R. Crawford, A. Solomon  
Students analyze the art and science of teaching agriculture, mathematics, or science and develop their skills and knowledge as teachers through furthering their study of the processes of learning, planning (in relation to state and national standards), assessment, and teaching. Forty hours of fieldwork is required.
EDUC 459 Education in Africa and the Diaspora (also AS&R 459)
Fall. 3 credits (4 in College of Arts and Sciences). T 10:15-12:15. N. Assié-Lumumba. This course deals with educational innovations geared to promoting equal opportunity based on gender, race, and class in Africa and the African Diaspora. After an introduction on this concept and innovations and the stages of innovation as planned change, the course focuses on concrete cases and different types of educational innovations. The selected case studies, in the United States, include the creation and expansion of historically black institutions with a focus on Tuskegee Institute (now Tuskegee University). Lincoln University, Spelman College, and the Westside Preparatory School in Chicago. The African cases to be studied include African languages for instruction in Nigeria and science education in Uganda. It is geared to promote equal opportunity based on gender, race, and class in Africa and the African Diaspora.

EDUC 463 Policies, Practices, and Critical Issues of Distance Learning in Developing Countries
Spring. 3 credits. S-U grades optional. T 2:00-4:25. N. Assié-Lumumba. Distance learning is increasingly adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (Information and Communication Technologies) used and the different forms of virtual learning institutions are examined.

EDUC 468 Comparative Studies in Adult Education
Spring. 3 credits. S-U grades optional. T R 3:35-5:00. M. Kroma. Focuses on the history and philosophy of adult education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

EDUC 498 Undergraduate Teaching
Fall or spring. 1 or 2 credits. 4 credits maximum during undergraduate career. Limited to students with GPA of at least 2.7. S-U grades optional. Students must register using an Independent Study form (available in 140 Roberts Hall). Staff. Participating students assist in teaching a course, usually one in the laboratory section, to gain teaching experience, and regularly discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Limited to juniors and seniors with GPAs of at least 2.7. Students must register using an Independent Study form (available in 140 Roberts Hall). Staff. This research affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, develop a project outline, conduct the research, and prepare a report.

EDUC 502 Education and Development in Africa (also AS&R 502)
Spring. 3 credits (4 in College of Arts and Sciences). S-U grades optional. T 2:00-4:25. N. Assié-Lumumba. In the 1950s and 1960s, human capital theory that emphasizes the importance of formal education for achievement of full productive potential of individuals and economic growth and development of countries enjoyed a renewed popularity. African countries promote education in terms with the expectation that it would lead to socioeconomic development. The initial euphoria, however, was followed by skepticism and then disillusion. Education, as it was being organized, delivered, received, and utilized began to be perceived even as a hindrance to development. This course examines the relationship between formal education and individual and national development. Different patterns of development, including modernization and dependency theories, and Third World Forum are examined. Issues discussed include education and schooling; the role of primary, secondary, and higher education in development, the problems of employment, language, equity in access; and results based on social class, ethnicity, race, and gender. Endogenous knowledge, new perspectives for relevant education, and the role of international cooperation and cooperation are also discussed.

EDUC 503 Diversity in the Classroom
Fall, spring, or summer. 1 credit for each seminar. Prerequisite: admission to the CTE program. S-U grades optional. Discussion, TBA. S. Kroma. This course builds on knowledge of literacy and diversity gained from course work and field activities in the CTE program. Students will review literacy development, cultural diversity, learning style preferences, fieldwork experiences, and strategies for accommodating difference in teaching.

EDUC 504 Research Experience for Teachers (also PL BR 504 and BIO G 504)
Spring. 3 credits. S-U letter grade. Prerequisites: appropriate study and major, 6 credits education or educational psychology course work, and permission of instructor. T. Fulton. This course is intended for, but not restricted to, students in the M.A.T. degree program, practicing teachers, and students who are considering becoming teachers. Students will work in a laboratory with a research team for the semester. Research experiences will be accompanied by weekly discussions and readings. Students will explore how research is conducted, how formal scientific discourse and informal communication occur and differ, and how these topics can be conveyed during classroom teaching.

EDUC 523 Food and Fiber Across the Curriculum
Summer. 1-3 credits. July 19-23, M-F (four overnights, on the road). The course is offered at the graduate level for 1-3 credits. 1 credit is granted for satisfactorily completing the course. Additional credits require completion of a special project agreed upon by the instructor. Expenses for food and incidentals are the responsibility of the participants. Lodging, course materials, and transportation are provided. J. Hawkes. This intensive five-day course focuses on agriculture and food systems as a classroom on wheels. The course is designed to help teachers, administrators, graduate students, extension agents, and other educators understand the complexity of the agriculture and food system. The course travels throughout upstate New York visiting farms of all types, forests, food processors, food retailers, and agriculture research and education centers. Participants explore agriculture, global and local food systems, environmental health, physical education, technology, and career exploration—while meeting all the State Learning Standards at the local level—is a course priority.

EDUC 548 Effective College Teaching
Spring. 1-3 credits. S-U grade option. T 7:00-9:40. D. Way. This course is designed to help participants become more effective college teachers. It examines the basic principles of learning, identifies different learning styles, and explores a variety of teaching techniques, methods, and technologies. Participants also learn how to design a course and improve their effectiveness as teachers.

EDUC 571 Social and Political Context of American Education
Fall. 3 credits. Prerequisites: admission to the Cornell Teacher Education Program or permission of instructor. T R 1:25-2:40. J. W. Sipple. This course examines the goals, roles, inputs, and outcomes of schooling in American society, and the policy environment in which schools operate. We analyze controversies
and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. The course will include current and historical, urban and rural issues and problems.

EDUC 578 International Teaching Assistant Development Program (ITADP) Training Course: Cross-Cultural Classroom Dynamics, Pronunciation, and Language, Video Teaching Practicum
Fall and spring. 2 credits. S-U only. TBA. ITADP staff.

Designed for first-time international teaching assistants from countries in which English is not the primary language, the ITADP course focuses on three areas: cross-cultural classroom dynamics, video-teaching practicum, and language—enhancing communicative competence in English. Through small-group seminars and individual conferences, the ITADP helps international teaching assistants develop their linguistic and pedagogical skills as they gain sensitivity to the dynamics of U.S. classrooms.

EDUC 579 Further Training for International Teaching Assistants
Fall, spring, summer. 1–2 credits.
Prerequisite: EDUC 578. S-U grades optional. Lec, TBA: 3 contact hours per week. ITADP staff.

Designed for international teaching assistants from countries in which English is not the primary language and who have completed EDUC 578, the ITADP follow-up course provides further instruction and practice in oral English and pedagogical skills. Students participating in the course through mid-term receive one credit; those who are enrolled throughout the semester receive two credits.

EDUC 601 Secondary Agriculture, Science, and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: permission of instructor. S-U grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics Program. MT W R F 8:00–3:00. S. C. Piliero, A. Solomon, and D. J. Trumbull and staff.

Supervised student teaching in agriculture, mathematics, or science at the secondary level. Program includes teaching in a local school for fourteen weeks.

EDUC 602 Practicum Seminar
Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. MT W R F 9:00–3:00. Staff.

The course begins with full-day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and an on-line seminar during the semester require students to use those theories to develop and evaluate teaching materials and practices. Students complete an extensive portfolio documenting their work.

EDUC 603 Inquiry Science Outreach in Secondary Schools (also NTRES 603)
Fall or spring. 1 credit. Prerequisite: must be a fellow of a fellowship from Cornell Science Inquiry Partnerships (CSIP) program. S-U grades. N. Trautmann, L. Tompkins, and M. Kransky.

This course prepares graduate students who receive Cornell Science Inquiry Partnerships fellowships for outreach work in high school and middle school science classes. Participants explore effective strategies for inquiry-based learning and review core educational issues such as learning standards, working with students of various ability levels, and assessing student learning.

EDUC 611 Educational Psychology
Fall. 3 credits. Prerequisite: graduate student status, and either introductory psychology or permission of instructor. S-U grades optional. T R 11:15–12:15, F sec TBA. Offered concurrently with EDUC 411. D. E. Schrader.

This course examines psychological concepts of learning and teaching in schools and other learning environments. It examines education as a social, moral, intrapersonal, and interpersonal enterprise that promotes individual, social and community development.

EDUC 614 Gender, Context, and Epistemological Development (also FGSS 624)
Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of personal epistemology and their implications for teaching. Development of the life span. Particular emphasis is placed on the role of gender and contextual influences on the development of thought and on metacognitive development.

EDUC 620 Internship In Education
Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff.

An opportunity for practical experience in educational professions development.

EDUC 621 Work-Experience Coordinator Certification Course I
Summer. 3 credits. Fall or spring. 2 credits. Letter grade only. Disc, R 2:00–5:00. Not offered 2004–2005. A. Wilson.

Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 622 Work-Experience Coordinator Certification Course II

The second course for certification as a work-experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval are required.

EDUC 630 Special Problems in Agricultural, Extension, and Adult Education
Fall or spring. May also be offered in summer. 1–3 credits. S-U grades optional. Staff.

The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural, extension, and adult education.

EDUC 632 Teaching Agricultural, Extension, and Adult Education
Summer. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. Staff.

The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

EDUC 633 Program Planning in Agricultural, Extension, and Adult Education

Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 635 Experiential Learning

Participants explore various dimensions of scholar and practitioner thinking about the understanding and practice of experiential learning. Theoretical perspectives on experiential education, reflective practice, and a critical learning systems perspective are explored through readings and applied assignments. The instructor introduces methods of facilitation designed to encourage inquiry and dialogue for improvement of both nonformal and formal educational activities. The course process is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.

EDUC 645 Curriculum for a Diverse and Technological Society
Spring. 3 credits. Letter grade only. Disc, TBA. Staff.

Basic curriculum concepts, principles, and theories are examined. Special emphasis is given to the ways that diversity and technology drive changes in the development of curriculum. Each student chooses a particular curriculum for analysis as a project. Within that context, theoretical perspectives in curriculum and the basic elements of any curriculum are discussed.

EDUC 661 Administration Leadership and Organizational Change
Fall. 3 credits. T 3:35–6:00. J. W. Sipple.
Perspectives on the administration of educational organizations. Consideration of
social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 671 American School Reform: Organizational and Sociological Perspectives
For individuals interested in the role of schools in society and in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization given the long history of policy initiatives designed to reform schools. The focus is American K–12 public education, as well as pre-K, private, and post-secondary education are covered.

EDUC 680 Foundations of Extension Adult Education
An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions are examined through a seminar approach.

EDUC 682 Community Education and Development
Fall. 3 credits. Limited to 25 students. Letter grade only. W 1:25–4:25 S. Peters.
A critical study of the democratic purposes and practices of educators in community and economic development with a special focus on the role of education in community organizing. Key philosophies and traditions of community education and development are analyzed in their historical, cultural, social, and political contexts with an eye toward implications for contemporary practice.

EDUC 685 Training and Development: Theory and Practice (also IARD 685)
Spring. 4 credits. S-U grades optional. F 9:05–12:05; lab, TBA. M. Kroma.
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

EDUC 694 Special Topics in Education
Fall, spring, or summer. 1–3 credits.
Prerequisite: permission of instructor. S-U grades optional. Staff.
Topics to be announced.

EDUC 704 Research Assistantship
Fall or spring. Variable. 6 credits. Limited to graduate students with permission of instructor. S-U grades optional. Staff.
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

EDUC 705 Extension Assistantship
Fall or spring. Variable. 6 credits. Limited to graduate students with permission of instructor. S-U grades optional. Staff.
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

EDUC 711 Contemporary Issues in Educational Psychology
Fall and spring. Variable. 3 credits. TBA. Not offered 2004–2005. Staff.
This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics vary from semester to semester. Students may take the course more than once.

EDUC 714 Moral Development and Education
This seminar focuses on current topics in moral psychology and research. Topics include the development of moral reasoning, the relationship between moral judgment and moral action, moral climate of schools and workplaces, moral education in secondary schools and universities, and professional ethics in educational settings.

EDUC 718 Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:00–4:25. Staff.
Deals with adult development and learning from points of view of educational psychology, sociology, and adult education. Inferences are drawn from theory and research to the practice of adult and extension education. Appropriate for graduate students in adult and extension education and community service education, and for others interested in adult learning and development.

EDUC 720 Seminar in Agricultural, Extension, and Adult Education
Spring. 3 credits. S-U grades optional. R 8:00–9:55 S. Peters.
Includes discussion and analysis of student and staff research.

EDUC 762 Comparative and International Education
Fall. 3 credits. S-U grades optional. M 2:00–4:25. N. Assie-Lumumba.
This seminar critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics in the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies, and developing countries. Specific case studies are drawn from different countries.

EDUC 783 Farmer-Centered Research and Extension (also IARD 783)
Fall. 3 credits. S-U option. M. Kroma.
This course provides an introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extension is its potential to legitimate people's knowledge by enhancing their capacity to analyze and improve their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

EDUC 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

EDUC 900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

ENTOMOLOGY

Courses by Subject

Agriculture: 260, 264
Behavior: 215, 325, 394, 471, 662
Conservation: 344
Ecology: 452, 455, 456, 470, 471, 672
Introductory courses: 201, 210, 212, 215, 241
Medical entomology and veterinary entomology: 3, 522, 562
Morphology: 328
Pathology: 463, 670
Pest management: 241, 277, 441, 443, 444, 477, 644, 670
Physiology, development, and toxicology: 370, 485, 490, 685
Systematics: 331, 333, 453, 634, 635
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.
Check the web site for updates.

[ENTOM 201 Alien Empire: Bizarre Biology of Bugs]
Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects by examining their evolutionary history, anatomy, development, feeding habits, life-history strategies, behavior, and their interactions with humans (both positive and negative) through history. Optional field trips and one open lab provide hands-on opportunities for examining these amazing animals.

[ENTOM 210 Plagues and People]
Fall. 2 or 3 credits. Prerequisites: introductory biology or permission of instructor. Lecs, M W 2:30. Offered alternate years. Not offered 2004; next offered fall 2005. L. C. Harrington.
Human diseases transmitted by insects and related forms (arthropods) have impacted human lives and society through history. This course focuses on the pathogens, parasites, and arthropods causing human plagues. Special attention is paid to those plagues that have had the greatest impact on human culture and expression. Lectures are supplemented with readings and films. Emerging diseases, bioterrorism, and future plagues also are addressed. Students taking the course for 3 credits will participate in reading and preparation of discussion each week (on Fridays), weekly readings quizzes, and will have a comprehensive final project.

[ENTOM 212 Insect Biology]
Fall. 4 credits. Prerequisites: BIO G 101-102 (may be taken concurrently) or equivalent. Lecs, T R 11:15-12:05; labs, T W or R 1:25-4:25. Lab fee $38. Q. D. Wheeler.
Introduces the science of entomology by focusing on basic principles of systematic, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral, and taxonomic categories is required.

[ENTOM 215 Spider Biology: Life on a Silken Thread]
Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U grades optional. Lecs, W F 1:25-2:15. L. S. Rayor.
An introduction to the fascinating world of spiders. Evolution, behavior, and physiology of spiders and their close kin are explored from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predation behavior, diverse life styles, social spiders, and potential use in IPM.

[ENTOM 241 Insect Pest Management for Practitioners]
An introduction to insect pest management in plant or animal protection for those preparing for careers in extension, service, and production. Emphasis on pest monitoring, sight identification, diagnosis, decision-making, and management tactics for the major groups of insect and arthropod pests affecting field, forage, and vegetable crops; floriculture; woody ornamentals, and turf; urban environments and public health; veterinary, dairy, livestock, and poultry. Five off-campus laboratory field trips with demonstrations of pest management decision-making, pest-monitoring tools, and pesticide-application equipment.

[ENTOM 260 Introductory Beekeeping]
Introduces students to the life history, physiology, and behavior of honey bees, as well as to the fundamentals of practical beekeeping. Classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior are reviewed. Lectures on pollination of agricultural crops, honey and beekeeping, bees in ancient and modern rituals, Africanized honey bees, and insect politics are also included.

[ENTOM 264 Practical Beekeeping]
Fall. 1 credit. Limited to 20 students. Prerequisite: ENTOM 260 (may be taken concurrently). Lab, R 2:00-4:25. Offered alternate years. Not offered fall 2004; next offered fall 2005. N. W. Caldecote.
This course consists of 14 laboratory sessions that acquaint students with practical methods of colony management. Laboratories involve harvesting work with honey bee colonies and equipment. Program topics covered include management of bees for apple pollination, honey harvesting and processing, and disease identification/control. The class makes a number of field trips to commercial beekeeping operations. Students conduct simple experiments to demonstrate color perception by bees, as well as the chemical basis for swarming, nest guarding, and mating.

[ENTOM 277 Natural Enemies Managing Pests: An Introduction to Biological Control]
An introduction to the dynamic field of biological control. What is it and when should it be used? This course covers a diversity of types of biological control including use of parasites, predators, pathogens, and competitors as agents of control. Concepts and techniques to control pests from microbes to weeds to invertebrates and vertebrates. This course is intended for students curious about safely protecting pest.

[ENTOM 292 Comparative Insect Morphology]
Spring. 5 credits. Prerequisite: ENTOM 212 or 241. Lects, M W F 9:05; labs, M W 1:25–4:25. Offered alternate years. B. N. Danforth.
This course provides a detailed introduction to the external and internal anatomy of insects. Lectures introduce basic concepts in insect morphology, such as the organization of the insect body plan and organ systems. Functional morphology, homology, phylogeny, modularity, and development. The laboratory portion of the course introduces students to the basic methods of insect microdissection, specimen preparation, and scientific illustration. High-quality, publishable illustrations are produced based on student artwork.

[ENTOM 295 Insect Behavior]
Spring. 3 credits. Prerequisite: introductory biology or introductory entomology or permission of instructor. Lecs, T R 10:10–11:25. Offered alternate years. L. S. Rayor.
Insects are the most diverse organisms on earth, with equally diverse behaviors. This course explores the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, and social behavior. Topics include insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.

[ENTOM 331 Introductory Insect Systematics]
An introduction to the classification, evolutionary history, and distribution of insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practical insect systematics and major features of insect evolution. Insect collections are required.

[ENTOM 333 Maggots, Grubs, and Cutworms: Larval Insect Biology]
Fall. 3 credits. Prerequisites: ENTOM 212 or permission of instructor. S-U grades optional. Lecs, T R 11:15; lab, T 1:25–4:25. Offered alternate years. J. K. Liebherr.
The evolutionary history of the Holometabola has been greatly informed by attributes of their larvae. This course introduces students to the biology, anatomy, and natural history of holometabolous insect larvae. The laboratory includes field sampling, curation of field-collected specimens, and identification of unknowns. Development of a small larval collection is required.

[ENTOM 344 Insect Conservation Biology]
Spring. 3 credits. Prerequisite: one course in either entomology or conservation biology or permission of instructor. S-U grades optional. Lecs, T R 10:10–11:25. Offered alternate years. Not offered spring 2005; next offered spring 2006. J. E. Losey.
Provides an in-depth look at the conservation of insects and other invertebrates. Topics covered include sampling rare populations; insect conservation genetics; the role of phylogeny.
in determining conservation priorities; refuge design; saving individual species; plus the unique political, social, and ethical aspects of insect conservation and preservation of their ecological services (i.e., pollination, decomposition, pest suppression, and insectivore food sources.)

**ENTOM 352 Medical and Veterinary Entomology**

Fall. 3 credits. Prerequisites: BIOG 101–102 or permission of instructor. S-U grades optional. Lecs, T R 10:10; lab, R 1:25–4:25. Offered alternate years. L. C. Harrington.

Diseases resulting from arthropod-borne pathogens (such as malaria, dengue, and yellow fever) cause considerable human suffering and death worldwide. Diseases resulting from arthropod-borne pathogens (such as malaria, dengue, and yellow fever) cause considerable human suffering and death worldwide. This course explores the impact of vector-borne disease and provides a comprehensive overview of the fields of medical and veterinary entomology. The goal of the course is to encourage an understanding of evolutionary and ecological issues associated with disease transmission. The laboratory includes field trips, collection, and identification of medical/ veterinary interest, and hands-on experience with modern laboratory research methods. Undergraduate and graduate students from entomology as well as other disciplines including pre-medical and veterinary study are encouraged to enroll.

**ENTOM 370 Pesticides, the Environment, and Human Health (also TOX 370)**

Fall. 2 credits. Prerequisites: BIOG 101–102 or equivalent. Lecs, T, R 9:05. Offered alternate years. J. G. Scott.

A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use and genetically modified crops.

**ENTOM 394 Circadian Rhythms (also BIOG 394, BIONB 394, and PL PA 394)**

Fall. 2 credits. Prerequisite: 200-level biology course. S-U grades optional. Lecs, T 10:10–11:50; K. Lee (fall, even years) and J. Ewer (fall, odd years).

This course explores a fundamental feature of living organisms from all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. The course covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms, including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans).

**ENTOM 400 Insect Development (also BIOG 402)**

The course emphasizes the mechanisms that underlie embryonic and post-embryonic developmental processes of insects. The portion of the course on embryonic development leans heavily on knowledge obtained from Drosophila, but also covers more classical studies as well as recent advances exploring the molecular basis for the evolution of body plan. The post-embryonic development portion covers the control of growth, molting, and metamorphosis. The laboratory uses modern techniques to illustrate developmental events at the organismal and cellular level. The discussion section involves the analysis and presentation of primary research papers.

**ENTOM 443 Entomology and Pathology of Trees and Shrubs (also PL PA 443)**

Fall. 4 credits. Prerequisites: ENTOM 212 or equivalent and PL PA 241 or equivalent. S-U grades optional. Lecs, M W F 11:15; lab, F 1:25–4:25. Offered alternate years. P. A. Weston and G. W. Hudler.

For students preparing for careers in horticulture, urban forestry, pest management, and natural history/science education. Deals with the nature, diagnosis, assessment, and management of insect and disease pests on trees and shrubs in forests, urban landscapes, Christmas tree plantations, and other sites where intensive pest management is practiced.

**ENTOM 444 Integrated Pest Management (also CSS 444)**

Fall. 4 credits. Prerequisites: introductory biology or permission of instructor. Lecs, M W F 9:05; labs, M 1:25–4:25. J. E. Losey and A. Ditomasso.

Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lectures and to demonstrate pest monitoring techniques and the application of computer technology to management problems.

**ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution (also BIOE 452)**

Spring. 3 credits. Prerequisites: 1 year of introductory biology; BIOE 261; CHEM 257 or 357/358 and 251 or 301; or permission of instructor. Lecs, M W F 11:15. Offered alternate years. P. P. Feeny.

Significance of plant chemistry in mediating interactions between plants and herbivorous animals. Mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

**ENTOM 453 Principles and Practice of Historical Biogeography (also BIOPL 453)**

A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological, and phylogeographic analytical methods. Geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. Laboratories focus on computer applications and discussion of controversial issues.

**ENTOM 455 Insect Ecology (also BIOEE 455)**

Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. S-U grades optional. Lecs, M W F 11:15. Offered alternate years. Not offered fall 2004; next offered fall 2005. Staff.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

**ENTOM 456 Stream Ecology (also BIOEE 456 and NTRES 456)**

Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation; water chemistry; watershed influences; plant, invertebrate, and fish community structure; nutrient cycling; trophic dynamics; colonization and succession; community dynamics; conservation; and the impacts of disturbances. Field projects include descriptive and experimental techniques, hypothesis testing, and writing of scientific papers related to environmental assessment.

**ENTOM 463 Invertebrate Pathology**

Lecture presents principles of pathology as applied to invertebrates. Topics explored include infectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epidemiology of insect diseases, and use of pathogens for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microinjection, electrophoresis, immunassay, density gradient centrifugation, soil extraction, and computer simulation.

**ENTOM 470 Ecological Genetics**

Spring. 3 credits. Prerequisites: BIOE 278 or permission of instructor. S-U grades optional. Lecs, T R 11:40. B. P. Lazzaro.

This course focuses on the application of population genetic concepts in ecological, or applied contexts. Emphasis is placed on measuring adaptation in natural populations, detecting the effects of population demography, and determining the genetic basis of quantitative traits. Examples are drawn from primary research on animals and plants to illustrate experimental techniques and methods of data analysis on single-gene, multi-locus and genome-wide scales.

**ENTOM 471 Freshwater Invertebrate Biology and Biomonitoring**

collections and identification of invertebrates. Laboratory involves field gathering of terrestrial insects. The use of taxonomic keys.

**ENTOM 477 Biological Control**

Lectures present case studies exploring classical biological control, augmented by selected topics in the control of arthropods and weeds. Labs focus on selected concepts of the field. Students prepare a collection of freshwater invertebrates and accompany laboratory studies on identifying aquatic and terrestrial insects. The course stresses the use of taxonomic keys.

**ENTOM 483 Insect Physiology**
Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Lecs. M W F 11:15; lab. W 12:25-4:25. TBA. Offered alternate years. C. Gilbert.

This course introduces students to the biology of insects, emphasizing the study of structure and function in insects. A major focus is on the current state of insect physiology, with an emphasis on physiological responses to environmental stimuli. Students are introduced to some common physiological research and to the critical reading of scientific literature.

**ENTOM 490 Toxicology of Insecticides (also TOX 490)**

Lectures explore the morphology, physiology, phylogeny, life histories, behavior, feeding ecology, and evolution of macroscopic freshwater invertebrates with an emphasis on understanding the attributes of aquatic and terrestrial insects. Laboratory involves field collections and identification of invertebrates and stresses the use of taxonomic keys.

**ENTOM 497 Individual Study in Entomology**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students may register using an Independent Study form (available in 140 Roberts Hall). Staff.

This advanced course in integrated pest management (IPM) consists of a rotating series of four-week intensive modules on specialized topics. Topics range from basic ecology and genetics of pests and their natural enemies to specific strategies for pest management implementation. Each module is a unique unit and students may take any or all modules each time the course is offered. Prerequisites and grading procedures are determined by the instructor(s) of each module. Potential modules include: Insecticide Resistance and Resistance Management—J. Scott; Entomology (Ithaca); Crop Protection Decision Making—J. Nyrop; Entomology (Geneva); Greenhouse and Floriculture IPM—J. Sanderson; Entomology (Ithaca); Agricultural Acarology—J. Sanderson; Entomology (Ithaca); Fruit Arthropod IPM Methods in New York—A. Agnello; Entomology (Geneva); Plant Resistance—W. Tinsley; Entomology (Ithaca); Aerial Sampling in Pest Management—E. Shields; Entomology (Ithaca); Conservation Biological Control—J. Nyrop and G. English-Loeb; Entomology (Geneva); Insect Population Ecology—J. Losey; Entomology (Ithaca); Veterinary Entomology—IPM Methods for New York—P. Kaufman and D. Rutz; Entomology (Ithaca); Chemical Conversations and Integrated Pest Management—C. Linn; Entomology (Geneva).

**ENTOM 652 Seminar in Medical Entomology**
Fall. 1 credit. Prerequisite: permission of instructor or ENTOM 352. Disc. TBA. C. Gilbert.

**ENTOM 653 Special Topics in Systematic Entomology**
Fall or spring. Taught on demand. 2-4 credits. Prerequisite: permission of instructor. Staff.

Lectures on the classification, evolution, and biogeography of selected taxa, with accompanying laboratory studies on identifying representative morphological characters. Collections sometimes required.

**ENTOM 655 Insect Molecular Systematics**
Spring. 2 credits. Prerequisite: permission of instructor. TBA. Offered alternate years. Not offered spring 2005; next offered spring 2006. Hours, TBA. C. Gilbert.

**ENTOM 670 Seminar on Biological Control**
Fall or spring. 4 credits maximum. S-U grades optional. Staff.

This is an upper level seminar series in biological control covering topics chosen by participating students and faculty. The course format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading or research focusing on a central theme for the semester.

**ENTOM 672 Seminar in Aquatic Ecology**
Spring. 1 credit. Generally appropriate for graduate students only. Interested undergraduates must contact the instructor. Prerequisites: permission of instructor or either ENTOM 456 or 471, or BIOEE 261, 462. S-U grades optional. Hours, TBA. Offered alternate years. Not offered spring 2005; next offered spring 2006. B. L. Peckarsky.

**ENTOM 676 Seminar in Insect Physiology**
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. TBA. Offered alternate years. C. Gilbert.

**ENTOM 707 Individual Study for Graduate Students**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

**ENTOM 709 Teaching Entomology**
Credit TBA. Staff.

Teaching entomology or for extension training.

**ENTOM 767 Current Topics in Entomology**
Fall. 1 credit. Required of graduate students pursuing a degree in the field of Entomology. Lecs and disc. TBA. Coordinator: E. J. Shields.

This course provides lectures, readings, and discussion to introduce first-year graduate students to the research activities of faculty members in the graduate field of Entomology. Class meets weekly for one hour.
ENTOM 800 Master’s-Level Thesis Research
Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff.

ENTOM 900 Doctoral-Level Thesis Research
Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff.

Jugatee Seminar
Fall and spring.
A seminar conducted by Jugatee, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

Entomology 900 Doctoral-Level Thesis Research
This is a discussion-based course designed to explore current issues and controversies that involve relationships between food and health. A required reading from the popular press or the scientific literature will be assigned each week. S-U grades will be based on attendance, overall participation, and the oral presentation. Topics may include but are not limited to: the obesity epidemic, food irradiation, food safety, plant sterols, heart disease, eating disorders, functional foods, dietary supplements, food regulations, genetically modified foods and other current issues. Several classes will be held at a Cornell dining facility on selected Wednesday evenings during the semester.

FD SC 200 Introductory Food Science
Fall. 3 credits. Prerequisite: college-level courses in chemistry and biology. Letter grades only. M W F 11:15–12:05. J. H. Hotchkiss.
A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods; nutritional significance; food formulation, preservation, and processing; microbiology and food safety; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging are stressed.

FD SC 210 Food Analysis
Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods: gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry are discussed.

FD SC 230 Sophomore Seminar: Functional Foods; Where Food Science and Nutrition Meet (also NS 230)
Spring. 2 credits. Limited to 15 students. Lec, TBA (2 one-hour meetings per week). S. J. Mulvany and J. J. M. Brown.
Functional foods are those whose nutrient composition has been modified to achieve targeted health outcomes. This course explores the interface where nutritional science and food science can work together to design and produce foods to meet certain health goals using a case study approach. Each case study involves interdisciplinary discussion, and a writing assignment that includes both technical (e.g., scientific basis for diet-health claims) and nontechnical (e.g., personal experience and opinions related to functional foods) content.

FD SC 250 Kosher and Halal Food Regulations
A comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. The kosher food laws, their origin, and their application in modern food processing are examined. The nature of the kosher supervision industry in America is described. Halal laws are also examined and the interactions between the two communities explored. Current food-related issues in both communities are reviewed, including recent court decisions. Some aspects of ethnic foods may also be considered.

FD SC 290 Meat Science (also AN SC 290)
Fall. 2 or 3 credits. Letter grades only. Lecs, T R 11:15; lab, M or R 12:20–3:20. Lab cannot be taken without lecture. D. E. Shaw.
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservations, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants may be taken.

FD SC 300 Food Engineering Principles
Fall. 3 credits. Prerequisites: FD SC 290 and introductory physics. Letter grades only. M W F 9:05–9:55; disc, TBA. S. H. Rizvi.
Introduces the engineering principles underlying food processing systems. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, heat and mass transport, and refrigeration and psychrometrics.

FD SC 351 Milk Quality
Fall. 1 credit. Prerequisite: AN SCI 250 or equivalent or permission of instructor. Letter grades only. M W F 12:20–1:10. M. Wiedmann. This course focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FD SC 394 Applied and Food Microbiology (also BIOMI 394)
Fall. 3 credits. Prerequisites: BIOMI 290–291. M W F 12:20–1:10. C. A. Batt. Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes are reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.
FD SC 395 Food Microbiology Laboratory
Fall. 2 credits. Prerequisite: BIOMI 291 or equivalent. Letter grades only. M W 2:00-4:25. J. M. Brown.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

FD SC 396 Food Safety Assurance
Spring. 2 credits. Prerequisite: BIOMI 290 or permission of instructor. T R 9:05-9:55. Offered alternate years; not offered spring 2006. R. B. Gravani.
This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Case studies and class projects are used to demonstrate and apply the key principles that are discussed.

FD SC 400 Current Topics in Food Science and Technology
Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

FD SC 401 Concepts of Product Development
A discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, taste panels, market testing, marketing and promotion.

FD SC 402 Agriculture in the Developing Nations I (also IARD 402)
Fall. 2 credits. Prerequisite: upper-class or graduate-student standing. K. V. Raman and W. R. Coffman.
The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and nongovernmental organizations. The lectures/discussions attempt to establish the global context for sustainable agricultural development and focus on agriculture and rural development in the tropics, using case studies. This course may be taken as a stand-alone survey course in international agriculture, but it is also the preparatory course for participation in Agriculture in the Developing Nations II (FD SC 602), which includes a trip to a developing country during the intersession.

FD SC 405 Managing Food Waste Without Trashing the Environment
Spring. 2 credits. Prerequisite: FD SC 200 or its equivalent. Letter grades only. Lec, M 12:30-2:15, lab, M 2:30-4:25. Offered alternate years; not offered spring 2006. J. M. Regenstein.
A look at the various waste streams generated by food plants, institutional feeders, supermarkets, and nongovernment agencies. The course addresses how various food waste processes are covered as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.

FD SC 406 Dairy and Food Fermentations
This lecture course covers the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of microorganisms), starter cultures and their preparations and applications, as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.

FD SC 410 Sensory Evaluation of Food
Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research; and product development. The psychological principles in sensory testing and statistical methods for sensory data analysis are presented. The laboratory provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis. Undergraduate Food Science majors are required to take both the lecture and the laboratory.

FD SC 415 Principles of Food Packaging
The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

FD SC 417-418 Food Chemistry I and II
A course on the chemistry of foods and food ingredients. The chemical and physical properties of water, proteins, lipids, and carbohydrates, and other food components and additives are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on the quality and nutritional aspects of several food commodity groups (dairy, meat, fruits and vegetables, cereals, and legumes) are described.

FD SC 419 Food Chemistry Laboratory
Spring. 2 credits. Prerequisites: biochemistry (BIOM 350 or 351 or CHEM 257 or equivalent) and concurrent registration in food chemistry (FD SC 417). R 12:20-4:25. D. D. Miller.
Laboratory exercises dealing with the chemical properties of food components and changes they undergo in processing and storage. Relationships between the chemical composition of foods and functional, nutritional, and organoleptic properties are stressed. Laboratory techniques commonly used in food research are introduced. A laboratory research project is required. This involves writing a research proposal for the project, conducting laboratory research to test hypotheses and analyzing the data, and writing a proposal following the format used by the Journal of Food Science.

FD SC 423 Physical Principles of Food Preservation and Manufacturing
This course emphasizes the fundamental principles that underlie much of food preservation and manufacturing. A systems analysis approach is used to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration, and drying. Selected products serve as case studies for more complex manufactured foods.

FD SC 425 Dairy Foods Processing
A lecture/laboratory course focused on principles and practices fundamental to the manufacture, evaluation, and storage of dairy foods. A variety of common food processing unit operations are discussed and demonstrated using dairy foods as examples. Students develop an understanding of the science and technology that underpins modern dairy foods processing and gain hands-on experience in the manufacture of safe, high-quality dairy products. Laboratories are conducted in a food processing pilot plant facility. One field trip to operating dairy plants in the area will be scheduled during the semester.

FD SC 430 Understanding Wine and Beer
Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor. Students must be 21 years old by the first day of class (Jan. 24, 2005) to enroll. S-U grades optional. T R 12:20-2:30. T. A. Acree, T. Henick-Kling, and K. J. Siebert.
An introduction to wine and beer appreciation through the study of fermentation biology, product composition, and sensory perception. Sampling of wineries and breweries is used to illustrate the sensory properties, microbiological processes, and chemical
components that determine quality. Students learn to recognize the major features of wine and beer that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; the sensory properties of wines from different grape varieties, viticultural practices, and winemaking techniques; and the effects of brewing raw materials and processing procedures on beer quality.

**FD SC 450 Fundamentals of Food Law**
Spring. 2 credits. Letter grades only.LEC M 1:25-3:20. Offered alternate years; next offered spring 2006. J. M. Regenstein. Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis is on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also refers to other regulatory agencies. Emphasis is placed on how a food or agricultural professional interacts with the U.S. legal system during legislative action, regulatory rule making, and with respect to compliance.

**FD SC 456 Advanced Concepts in Sensory Evaluation**
Spring. 2 credits. Prerequisite: FD SC 410. S-U grades optional. Offered alternate years; not offered spring 2006. F 1:25-3:20. H. T. Lawless. Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. A major independent research project is conducted on a current issue in sensory evaluation.

**FD SC 480 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also NTRES 480, IARD 480)**
Spring. 3 credits. Prerequisites: junior, senior, or graduate-student standing. J. Lassioe and D. Miller. Modernization has led to development pressures that have increasingly disrupted natural systems, leading to widespread concerns about the long-term viability of important environmental services, including those critical to food security worldwide. This multidisciplinary course uses case studies to explore interrelationships among social, economic, and environmental factors basic to sustainable development. Cases include population growth, genetically modified foods, biodiversity, sustainable tourism, global warming, and global responsibility. Cornell faculty members lead discussions in each of the major topic areas. In addition, students participate in discussions and debates with students from Sweden, Costa Rica, Honduras, South Africa, and Australia through live interactive videoconferences and electronic discussion boards.

**FD SC 494 Special Topics in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. Staff. Departmental approval required. The dependence of all teaching "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**FD SC 497 Individual Study in Food Science**
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register using an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study, a special topic selected by a professor or a group of students, or topics lectures of a course already offered. Since topics vary, the course may be repeated for credit.

**FD SC 498 Undergraduate Teaching Experience**
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register using an Independent Study Form (available in 140 Roberts Hall). S-U grades only. Staff. Students assist in teaching a course appropriate to their previous training and experience. Credit is for a discussion or laboratory section and regularly discuss objectives with the course instructor.

**FD SC 499 Undergraduate Research in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. Students must register using an Independent Study Form (available in 140 Roberts Hall). This course may be repeated for credit. Staff. Students conduct original research directed by a food science faculty member. Graduate students in the field of Food Science and Technology. Directed research.

**FD SC 599 Research for Lausanne Exchange Students**
Fall or spring. 10 credits maximum. Prerequisite: permission of instructor. S-U grades optional. Staff. Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member. A final report is written and presented to the faculty of both Cornell University and the University of Lausanne.

**FD SC 600 Seminar in Food Science**
Fall and spring. 1 credit. S-U grades only. Required for all graduate students in the field of Food Science and Technology. T 1:00-5:00 Staff. A weekly seminar series on contemporary topics and issues in the field of Food Science and Technology. Open to graduate students in Food Science and Technology.

**FD SC 602 Agriculture in the Developing Nations II (also IARD 602)**
Spring. 3 credits. Prerequisites: FD SC 402 and (or) permission of instructor. Field trip to India during January. Note: cost of January 2005 field-study trip is approx. $2,500, which includes airfare, board, and lodging (some merit- and need-based financial aid may be available). T 2:30-4:25 until midterm only. K. V. Raman and W. R. Coffman. Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among students. The two-week experiential field-study trip to India is followed, during January, by discussions and assignments dealing with problems in food, agriculture, and livestock production in the context of social and economic conditions.

**FD SC 604 Chemistry of Dairy Products**
Fall. 2 credits. Limited to students introductory organic and biochemistry, food chemistry, and a dairy foods processing course. Permission of instructor required, if lacking prerequisites. Letter grades only. Offered alternate years; not offered fall 2005. F 1:25-3:20. D. M. Barbanon. A detailed study of milk constituents and their properties. The chemical and physical changes that occur in dairy products prior to, during, and after processing. This course emphasizes current research in dairy chemistry.

**FD SC 607 Advanced Food Microbiology**
Spring. 2 credits. Prerequisites: Microbiology (BIOMI 290), Food Microbiology (FD SC 394). Letter grades only. Offered alternate years; next offered spring 2006. M W 11:15, M. Wiedmann. This two-credit course explores advanced topics in food microbiology. A major emphasis is placed on critical evaluation of current literature and on microbial concepts that affect food microbiology. Specific areas that are covered include microbial ecology of foods, rapid detection and typing methods for foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment).

**FD SC 608 Chemometric Methods in Food Science**
Fall. 2 credits. Prerequisites: basic statistics and chemistry or permission of instructor. S-U grades optional. W 1:25-3:20. Offered alternate years; not offered fall 2005. K. J. Siebert. Food science applications using quantitative statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.

**FD SC 616 Flavors—Analysis and Applications**
Spring. 2 credits. S-U grades optional. LEC, F 1:25; disc, F 2:30. Offered alternate years; next offered 2006. H. T. Lawless and T. E. Acree. An advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. The course surveys taste, aroma, and volatile flavors, and emphasizes issues from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems.
FD SC 620 Food Carbohydrates (also NS 620)
Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: BIOM 350 or equivalent. T R 10:10-11:00. Offered alternate years; next offered spring 2006. B. A. Lewis and J. W. Brady.
A consideration of the chemistry of food processing and storage systems and the changes occurring during the metabolism of complex carbohydrates. Emphasis is on the carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

FD SC 621 Food Lipids
Spring. 2 credits. Letter grade only. Prerequisite: a basic biochemistry course.
An advanced course in food lipids. Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasis is on lipid oxidation, emulsions, and functional foods associated with lipids.

FD SC 622 Nutraceuticals and Functional Foods
Spring. 2 credits. Prerequisites: a course in biochemistry equivalent to BIOM 350 and one year of college biology or permission of the instructor. Letter grade only. Offered alternate years; next offered spring 2006. M W 2:30-3:20. R. H. Liu.
This course covers nutraceuticals and functional foods. Natural bioactive compounds, antioxidants, and dietary supplements, botanicals and herbs in disease prevention and health promotion. Emphasis areas will include the mechanisms of action and scientific evidence of efficacy of nutraceuticals and functional foods. Safety and efficacy testing, and regulations for nutraceuticals and functional foods will also be discussed.

FD SC 644 Food Polymer Science: Principles and Applications
Integration of polymer science, chemistry, and materials science principles as the basis for characterization of the physical properties of biopolymer materials of interest to the food industry. Emphasis is on unique aspects of food materials, e.g., plasticization by water, physical gelation, transient networks, and effects of thermal treatments on material properties. Problems and case studies based on proteins, starches, gelatin, and other hydrocolloids relevant to food systems.

FD SC 665 Food and Bioprocessing Systems
Fundamental and quantitative analyses of processes for manufacture of foods and related biological products. Topics covered include crystallization, membranes, supercritical fluids, extrusion, high pressure, pulsed electric field, thermal processing, drying, and crystallization.

FD SC 694 Special Topics in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee; and the same course is not offered more than twice under this number.

FD SC 695 Current Readings in Food Science
Fall and spring. 1 credit. Prerequisite: 500-level course or permission of the instructor. Letter grades only. Lect., 1 hour per week. Staff.
A seminar series on current topics chosen by participating faculty members and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include (but are not limited to) Food Microbiology and Food Safety; Food Chemistry; Packaging; Food Engineering. This course can be taken multiple times. Graduate students in Food Science are strongly encouraged to enroll in this course. Undergraduates should contact the designated instructor(s) for each term.

FD SC 698 Graduate Teaching Experience
Fall and spring. 1 to 3 credits. S-U grades only. Staff.
Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring.

FD SC 800 Masters-Level Thesis Research
Fall or spring. Credit. TBA. Maximum of 12 credits. Limited to master's candidates; by permission of Special Committee chair. S-U grades only. Graduate faculty.

FD SC 900 Graduate-Level Thesis Research
Fall or spring. Credit. TBA. Maximum of 12 credits. Limited to doctoral students who have not passed the "A" exam; by permission of Special Committee chair. S-U grades only. Graduate faculty.

FD SC 901 Doctoral-Level Thesis Research
Fall or spring. Credit. TBA. Maximum of 12 credits. Limited to doctoral students who have not passed the "A" exam; by permission of Special Committee chair. S-U grades only. Graduate faculty.

HORT 101 Horticultural Science and Systems
Fall. 4 credits. Lec., M W F 9:05; lab, W 1:25-4:25, T. A. M. Merwin.
The science and technology of horticultural plants grown for foods and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

HORT 201 The Art of Horticulture I: Plants and Gardens as a Subject of Art
Fall. 2 credits. Studio, T 1:25-4:25. M. Eames-Sheavy.
Part of a HORT 201 and 203 sequence, this experiential course will consider plants and gardens as a subject of art. Students will explore basic drawing techniques, botanical-illustration methods, watercolor, and photography. The course will address the natural history and symbolic use of plants in fine art. Students will critically reflect on course content in journals and explore the work of garden writers.

HORT 203 The Art of Horticulture II: Plants Used in Art or as Artforms
Part of a HORT 201 and 203 sequence, this experiential course will focus on plant materials used to create art or manipulated as artforms. It will acquaint students with a range of topics such as the use of plants in fibers and dyes, floral design, and living-sculpture practices such as topiary, bonsai, turfworks, and tree sculpture. Students will create a final project focused on these or related methods.

HORT 215 Sophomore Seminar: Nonfiction Adventure Writing: Reclaiming the Scientist's Voice
Spring. 4 credits. Lec., TBA. Letter only. T. H. Whitlow.
Using juxtaposed readings drawn from the published chronicles of scientific and nonscientific adventures, the class discovers strategies for conveying excitement in their own writing. In addition to classroom discussion, group adventures in the field and lab provide raw material for writing individual narratives. Each student has opportunities to cultivate individual awareness of natural processes and recount their discoveries in writing.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating...
HORT 225 Vegetable Production
Fall. 4 credits. Prerequisite: BIOPL 241 or an equivalent course approved by instructor. Letter grade only. Offered odd years. Lec, T R 11:00–12:30; lab, R 1:25–4:25. A. G. Taylor, Geneva Experiment Station. Study of the principles and practices involved in seed production, conditioning, storage, quality management, seed enhancements, and stand establishment. Information is applicable to various kinds of agricultural and horticultural seeds. Hands-on laboratory experience.

HORT 230 Turfgrass Management
Fall. 4 credits. Prerequisite: CSS 260 or permission of instructor. Lab, M W F 11:15; lab, F 1:25–4:25. A. M. Petrovic. Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, pest management, and nutrition in the management of turfgrass sites.

HORT 243 Taxonomy of Cultivated Plants
Fall. 4 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lec, M W F 10:10–11:00; lab, M or W 2:00–4:25. Offered even years. A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing taxa used in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

HORT 300 Herbaceous Plant Materials
Fall. 3 credits. Fee for field trip $57. Lec, T R 10:10, lab, T 2:00–4:25. W. B. Miller. Identification characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

HORT 301 Plants for Interiors
Spring. 3 credits. Lec, M W F, lab, M W F. Offered even years. T. C. Weiler. Study of plants for interiors: identification, design characteristics, and cultural requirements; use of plants as elements of planting design (trees, shrubs, groundcovers, and other herbaceous flowering plants and cut flowers); the interior landscape industry (organization, bidding, installation, maintenance). Required three-day field trip: estimated cost, $130.

HORT 310 Production and Marketing of Greenhouse Crops
Spring. 4 credits. Letter grade only. Lec, T R 10:10–11:20; lab, R 1:25–4:25. Offered odd years. T. C. Weiler. Covers basics of establishing a greenhouse operation, growing crops in optimized environments, and serving niche or mass markets. The course discusses technology basics including structures and equipment, systems for heating and cooling, lighting, irrigating and fertilizing, materials handling; environmental control and integrated pest management; and production management. Also covered are world centers of greenhouse crop production; culture of cut, pot, bedding, vegetable, and fruit crops in greenhouses, emphasizing productive harvesting through environmental, physical, and chemical management of growth and development. Each student grows one or more crops. Required three-day field trip, estimated cost, $130.

HORT 317 Seed Science and Technology
Fall. 3 credits. Prerequisites: BIOPL 241 or an equivalent course approved by instructor. Letter grade only. Offered odd years. Lec, T R 11:40–12:30; lab, R 1:25–4:25. A. G. Taylor, Geneva Experiment Station. Study of the principles and practices involved in seed production, conditioning, storage, quality management, seed enhancements, and stand establishment. Information is applicable to various kinds of agricultural and horticultural seeds. Hands-on laboratory experience.

HORT 320 Woody Plant Identification and Use I
Fall. 2 credits. Prerequisite: permission of instructor. Letter grade only. Lab, R 12:20–1:10; lab, R 1:25–4:25. N. L. Bassuk. This course module of HORT/LA 491 covers the identification of approximately 200 woody trees, shrubs, and vines in leaf and their use in the landscape. Students desiring a more comprehensive course that covers site assessment, soil modification, design, plant specifications and landscape establishment: principals and techniques should take HORT/LA 491 or the 491–492 sequence. Limited number of places available.

HORT 322 Woody Plant Identification and Use II
Spring. 2 credits. Prerequisite: permission of instructor. Letter grade only. Lab, R 12:20–1:10; lab, R 1:25–4:25. N. L. Bassuk. This module of HORT/LA 492 covers the identification of approximately 160 evergreen trees and shrubs and deciduous plants using winter identification. HORT 391 (fall module) need not be taken before taking HORT 392 (spring module). Students also assist in the establishment of a new landscape on campus. Limited number of places available.

HORT 400 Principles of Plant Propagation
Fall. 3 credits. Prerequisites: BIOPL 242 and 244 or another course in plant physiology. Lec, T R 9:05; lab, R 1:25–4:25. K. W. Mudge. Sexual (seed) propagation and asexual (vegetative) propagation including cut, grafting, tissue culture, layering, and specialized vegetative reproductive structures. Physiological, environmental, and anatomical principles and industry applications are stressed in lecture, and hands-on skills in laboratories on campus and at the Grove. Students will actively take part in the extension site. Hands-on activities will include all or most of the following: temperate-nut harvest and variety evaluation, mushroom cultivation, small fruit and herb culture, medicinal-herb culture, site evaluation and planning, and field trips to other agroforestry-related sites. Outdoor activities will be integrated with selected readings via an online discussion board.

HORT 401 The How, When, and Why of Grafting—A Distance Learning Approach
Spring. 2 credits. Lec: autotutorial (web); lab: greenhouse/autotutorial (web/cd); discussion: web. One introductory face-to-face meeting. TBA. K. W. Mudge. A ten-week, web/CD-based autotutorial approach to the principles and practices of grafting and budding as applied to plant propagation. Emphasis is on the role of grafting in modern horticultural practice and on student development of hands-on grafting skills. Instruction involves web-based asynchronous presentation of lecture and lab materials (web/CD-ROM), asynchronous discussion, and autotutorial hands-on grafting lab exercises.

HORT 420 Principles of Nursery-Crop Production
Fall. 4 credits. Prerequisite: HORT 400. Lec, M W F 9:05–9:55; lab, M 2:00–4:25. Field trips. Offered odd years. G. L. Good. Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.

HORT 425 Postharvest Biology of Horticultural Crops
Fall. 3 credits. Lec, M W F 9:05–9:55; lab, W 1:25–4:25. Offered even years. S. Gan. A study of the biological processes controlling physical and chemical changes in harvested yet living horticultural crops or their parts. The theoretical principles and fundamental processes underlying these changes will be discussed. Strategies and practical handling requirements/conditions for storage, transportation, and quality monitoring of harvested horticultural crops will also be discussed.

HORT 426 Practicum in Forest Farming as an Agroforestry System
Fall. 2 credits. Prerequisite: junior, senior, or graduate standing; or permission of instructor. Lab, W 1:25–4:25. K. W. Mudge and L. E. Buck. Students will actively take part in the development and management of a seventy-year-old nut grove originally planted at Cornell in the 1930s. The MacDaniels Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities will include all or most of the following: temperate-nut harvest and variety evaluation, mushroom cultivation, small fruit and herb culture, medicinal-herb culture, site evaluation and planning, and field trips to other agroforestry-related sites. Outdoor activities will be integrated with selected readings via an online discussion board.

HORT 435 The Care of Woody and Herbaceous Plants in the Landscape
Fall. Weeks 1–10. 5 credits. Prerequisites: upper division or graduate standing and permission of instructor. Letter grade only. Lec, T R 8:40–9:55; lab, F 12:30–4:45, plus several weekends. T. H. Whillow.
This course draws concepts from ecology, hydrology, soil science, and conservation biology and applies these in both principle and practice to the rapidly evolving field of restoration ecology. Through lectures, reading, and discussion, site visits to active restoration sites, and a real world class project, students learn and practice skills needed to develop restoration plans for a variety of situations.

HORT 442 Berry Crops: Culture and Management
Fall. 3 credits. Lecs, M W 9:05; lab, M 1:25–4:25. Offered even years. M. P. Pruits. This course draws concepts from ecology, hydrology, soil science and conservation biology and applies these in both principle and practice to the rapidly evolving field of restoration ecology. Through lectures, reading and discussion, site visits to active restoration sites and a real world class project, students learn and practice skills needed to develop restoration plans for a variety of situations.

HORT 443 Viticulture and Vineyard Management-I
Fall. 3 credits. Prerequisites: BIOG 101/103, BIOG 102/104, BIOL 241, CSS 200, WRT 111, or equivalents. Letter grade only. Lecs, T R 9:05; lab, R 1:25–4:25. R. M. Pool, A. N. Lakso, and M. C. Gottlin. First-quarter course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine environmental factors favoring production and quality, soils, and the anatomical and physiological basis for vineyard management decisions. Laboratory exercises and field trips offer hands-on experience.

HORT 444 Viticulture and Vineyard Management—II
Spring. 3 credits. Prerequisites: HORT 443 and BIOL 242 (may be taken concurrently) or equivalent. Letter grade only. Lecs, T R 9:05; lab, R 1:25–4:25. R. M. Pool, B. I. Reichs, P. Cousins, and C. Owens. Second-quarter course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine the genetics of the vine, and learn principles of vineyard establishment, propagation, pruning and training, and conservation. Laboratory exercises and field trips offer hands-on experience.

HORT 445 Ecological Orchard Management
Spring. 3 credits. Prerequisite: introductory biology. S-U grades optional. Lecs, T R 10:10; lab, T 1:25–4:25. Offered every years. J. A. Merwin. The ecology and technology of deciduous tree-fruit production. Topics include basic tree and fruit physiology, orchard renovation and design systems; nutrition, irrigation, and freeze protection practices; tree pruning and training, post-harvest fruit storage; marketing and economic spreadsheet models; monitoring and decision-making systems for integrated pest management; and efficient use of orchard equipment. Emphasis is on the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management. Previous coursework in horticulture and other plant sciences is suggested.

HORT 449 Green Signals and Triggers—The Plant Hormones (also BIOL 449)
Fall. 1 credit. Prerequisites: introductory biology course and BIOL 242 or S-U grades optional. Lecs, F 1:25–2:15. Offered odd years. P. J. Davies. A study of the plant hormones and how they regulate plant growth and development. Topics included: discovery role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

HORT 455 Mineral Nutrition of Crops and Landscape Plants (also CSS 455)
Spring. 3–5 credits. Prerequisite: CSS 260 and BIOL 242, or equivalent. Lecs, M W F 9:05, lab, R 2:00–4:25. Offered every years. H. C. Wien and staff. A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students develop an understanding of principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and can devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

HORT 460 Plant-Plant Interactions
Spring. 3 credits. Prerequisite: any crop production or plant ecology course or permission of instructor. Lecs, T R 9:05; lab/disc, M 2:00–4:25. Offered every years. D. W. Wolfe. This course utilizes our basic understanding of plant ecology and physiology to evaluate the mechanisms by which plants perceive "neighbors" and compete or positively interact with each other in natural and managed ecosystems. This is done by first-hand experience in techniques such as isolation of allelochemicals and determination of weed thresholds.

HORT 462 Physiology of Vegetables and Flowers
Spring. 4 credits. Prerequisite: BIOL 242 or its equivalent. Lecs, M W F 9:05; lab/disc, M 2:00–4:25. Offered odd years. H. C. Wien. Study of the physiological principles that govern growth, development, and production of reproductive structures of vegetable crops and herbaceous ornamental plants. Processes of flower induction, fruit and seed set, and the balance of vegetative and reproductive growth, especially in perennials, are emphasized. Practical hands-on greenhouse experiments and small group discussions illustrate the lecture material.

HORT 466 Soil Ecology (also CSS 466)
Spring. 4 credits. Prerequisites: one year of biology, ecology, and CSS 260 or permission of instructor. Lecs, T R 10:10–11:25; lab, W 1:25–4:25. J. E. Thies and L. F. Drinkwater. Surveys the diversity of soil organisms and their roles in terrestrial ecosystems. The course covers the fundamental principles and features of biologically mediated processes in the soil and the function of soil organisms in the wider context of both managed and unmanaged ecosystems. The role of plant-microbe interactions in shaping the larger ecosystem will serve as the basis for comparing soil community structure and function across a variety of ecosystems. The class investigating the consequences of anthropogenic activities from local soil management to global change on soil biodiversity and microbially mediated soil processes. In the laboratory, students explore an array of methods for assessing soil biological community composition and microbially mediated processes in soil.

HORT 475 Golf Course Management
Fall. 2 credits. Prerequisite: HORT 330 or equivalent. Lecs, F 1:25–4:25. Offered odd years. A. M. Petrovic. Advanced study in the management of golf course operations including watersheds on root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmentally based decision making, personnel management, and financial operations. Analysis of a central New York golf course provides the basis for discussion.

HORT 476 Practical Problem Solving Skills in Horticulture
Fall. 2 credits. Prerequisite: permission of instructor. Minimum class size for semester is 8 students. Lecs, W 1:25–4:25. Offered every years. C. P. Mazza. Foundation for extension or similar career-oriented students. Application of horticultural science principles to practical situations faced primarily by home gardeners. Techniques of synthesizing information from various scientific disciplines and strong emphasis on communications skills. Classes led by staff members in several departments. Topics are interdisciplinary and oriented to students majoring in horticultural science (landscape and food), entomology, plant pathology, natural resources, and Cornell Plantations.

HORT 480 Plantations Lecture Series
Fall. 1 credit. S-U grade only. W 7:30-8:45. D. A. Rikowsky. A twelve-week course consisting of an introductory class, ten lectures, and a final evaluation session. Each week, lectures feature prominent speakers on a broad range of popular horticultural, natural-science, and human-cultural themes.

HORT 485 Public Garden Management
Spring. 3 credits. Prerequisites: HORT 300 or HORT 301. Lecs, T R 10:10–11:00; lab, R 11:15–12:05. Two-and-a-half-day field trip to visit other botanical gardens and arboretum. Offered odd years. D. A. Rikowsky and S. M. Skelley. The course explores the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboretum. Included are separate units on: collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.
HORT 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491)
Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Limited to 48 students. Preregistration required. Lec, T R 12:20-1:10; Lab, T R 1:25-4:25. N. L. Bassuk and P. J. Trowbridge.
This course focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project where students implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices. No prior design experience necessary.

HORT 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 492)
The second half of this course continues focus on the winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites, and select appropriate trees, shrubs, vines, and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site preparation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course. Attendance limited to horticulture and landscape architecture majors or permission of the instructors.

HORT 494 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings may vary by semester, and will be advertised before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 495 Undergraduate Seminar—Current Topics in Horticulture
Fall or spring. 4 credits. S-U grades only. M 11:15-12:05. L. Cheng.
Undergraduate participation in weekly departmental seminar series. Graduate students should enroll in HORT 600. May be taken four times for one credit per semester.

HORT 496 Internship in Horticulture
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's advisor in advance of participation in internship programs. Students must register using an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Staff.

HORT 497 Independent Study in Horticulture
Fall or spring. Credit variable. S-U grades optional. Prerequisites: permission of instructor(s). Students must register using an Independent Study form (available in 140 Roberts Hall). Independent study in horticultural sciences under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 498 Undergraduate Teaching Experience
Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register using an Independent Study form (available in 140 Roberts Hall). Design the course to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 499 Undergraduate Research
Fall or spring. Credit variable. S-U grades optional. Prerequisites: permission of instructor. Students must register using an Independent Study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in horticultural sciences.

HORT 500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1-6 credits. 6 credits maximum toward M.P.S. (Agriculture) degree. S-U grades optional. Staff. A comprehensive research project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of M.P.S. (Agriculture) candidates in the respective graduate fields of horticulture.

HORT 600 Seminar in Horticulture
Fall and spring. 1 credit. S-U grades only. M 11:15-12:05. L. Cheng.
Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring or minoring in horticulture. Undergraduate students register under HORT 495.

HORT 615 Quantitative Methods in Horticultural Research
Spring. Weeks 1-7. 2 credits. Prerequisite: BTRY 601, BTRY 602 or permission of instructor. S-U grades only. W F 2:30-4:25. D. W. Wolfe.
This course provides experience in applying statistical principles to real-world agricultural research problems. Examples of lab, greenhouse, and field studies from the published literature are utilized. Other quantitative methods are explored. Topics include approaches to controlling and analyzing variation; common block and incomplete block designs; selecting an appropriate significance level; designing on-farm experiments and demonstration plots; regression methods in relation to mechanistic models and path and principal components analysis; and plant growth analysis techniques.

HORT 617 Advanced Analytical Methods for Plant Systems
Spring. 3 credits. Prerequisite: one year of general chemistry, organic chemistry, plant physiology. Letter grade only. Lec, T R 12:20-3:20, lab, T R 1:25-4:25. Offered every year. L. A. Weston and staff.
Principles and practical applications of selected laboratory methods in the plant and environmental sciences. Enhancement of laboratory techniques and problem-solving skills will be emphasized. Suitability of various procedures for measuring important plant and soil components will be discussed. Analytical techniques will be chosen from: ICP spectroscopy, elemental analysis by combustion or flow analysis, gas chromatography, HPLC, electrophoresis, chemical assay, biochemical assays, and mass spectrometry.

HORT 618 Breeding for Pest Resistance (also PL BR 618)
Fall. 2 credits. Letter grade only. Prerequisites: BIOGD 281 and PL HR 403 or equivalents. An introductory course in plant pathology and/or entomology also highly recommended. Offered every year. Lec, M 2:30-4:25. P. D. Griffiths.
For description, see PL BR 618.

HORT 620 Woody Plant Physiology
Spring. 4 credits. BIOP 331, BIOP 337, or equivalent, or permission of instructor. Letter grade only. Lecs, T R 8:40-9:55, lab, T 1:25-4:25. T. H. Whitlow.
An introduction to the physiological and biochemical aspects of growth and maturation in woody plants emphasizing whole plant integration and how these processes affect plant growth under both natural and cropping systems. Topics include evolution of woody plant form, structure and function, the root and shoot, growth periodicity, dormancy, growth analysis, carbon balance and allocation, root symbioses, and physiological responses to biotic and abiotic stress. Faculty members from the Geneva Experiment Station and the Department of Horticulture collaborate in teaching.

HORT 625 Advanced Postharvest Biology
Fall. Variable 1-3 credits. TBA.
Section 01 Advanced Postharvest Physiology. 1 credit. (12 lecs); S. Gan.
Emphasis on the physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts.

Section 02 Plant Senescence (also BIO PL 653,06). 1 credit. (12 lecs); S. Gan.
Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes will also be discussed.
INTERNATIONAL AGRICULTURE AND RURAL DEVELOPMENT

Note: the course prefixes were previously listed as INTAG.

IARD 300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits. R. W. Everett. A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

IARD 314 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS 314)
Fall. 3 credits. Prerequisite: an introductory course in crop science, soil science, or biology or permission of instructor. P. Hobbs. Characterization and discussion of traditional shifting cultivation, lowland rice-based systems, upland rice-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The effect of tropical cropping systems on the environment is evaluated.

IARD 402 Agriculture in the Developing Nations I (also FD SC 402)
Fall. 2 credits. K. V. Raman and W. R. Coffman. The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and nongovernment agencies. The lectures/discussions attempt to establish the global context for sustainable agricultural development and focus on agriculture and rural development in the tropics, using case studies. This course may be taken as a stand-alone survey course in international agriculture, but it is also the preparatory course for participation in Agriculture in the Developing Nations II (IARD 602), which includes a trip to a developing country during the intersession.

IARD 403 Traditional Agriculture in Developing Countries
Fall. 1 credit. S-U only. Staff. Today, perhaps more than half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices that allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course examines traditional systems from several disciplinary points of view.

IARD 404 Crop Evolution, Domestication, and Diversity (also PL BR 404, BIOPL 404)
Spring. 2 credits. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor. S. Kresovich. Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Underlying ethical, legal, and social issues affecting conservation and use also are addressed.

IARD 480 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also NTRES 480 and FD SC 480)
Spring. 1-3 credits. For juniors, seniors, and graduate students. Letter grade. J. Lassoe and D. Miller. For description, see NTRES 480.

IARD 494 Special Topics in International Agriculture (also IARD 694)
Fall, spring. 1-3 credits. S-U grades optional. Staff. The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level. Under this number, offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 496 International Internship
Fall, spring. 1-6 credits. See CALS internship policy guidelines and submit approved internship form prior to enrollment. S-U grades optional. Staff. An international internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student's work. The student researching and initiates an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting.

IARD 497 Independent Study in IARD
Fall and spring. 1-3 credits. S-U or letter grade. Prerequisites: permission of instructor and signed Independent Study form. Staff. Independent Study in IARD allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

IARD 598 International Development M.P.S. Project Paper
Fall and spring. 1-6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the field of International Development (ID). S-U grades only. N. Uphoff. A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

IARD 599 International Agriculture and Rural Development M.P.S. Project Paper
Fall and spring. 1-6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the field of International Agriculture and Rural Development (IARD). S-U grades only. S. Kyle. A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem...
related to a substantive area of international agriculture and rural development.

IARD 602 Agriculture in the Developing Nations II (also FD SC 602)
Spring. 3 credits. Prerequisites: IARD 402 and (or) permission of instructors. Field trip to India during January intersession. Note: cost of January 2005 field-study trip is approx. $2,500, which includes airfare, board, and lodging (some merit- and need-based financial aid may be available). T R 2:30-4:25 until midterm only. K. V. Raman and W. R. Coffman. Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff members and students. The two-week overseas field-study trip to India, during January, is followed by discussions and assignments dealing with problems in food, agriculture and livestock production in the context of social and economic conditions.

IARD 603 Administration of Agricultural and Rural Development (also GOVT 692)
Spring. 4 credits. N. T. Uphoff and T. W. Tucker. An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities during their professional careers.

IARD 612 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also PL BR 612)
Spring. 2 credits. Prerequisite: open to graduate students and to senior undergraduates. S-U grades optional. A. F. Katttiger, M. A. Mutschler, R. Potter, and R. D. Kryder. For description, see PL BR 612.

IARD 620 Rural Livelihoods and Biological Resources: Technologies and Institutions
Fall, spring. 2 credits. Biweekly, TBA. C. Barrett, A. Pell, and E. Fernandes. This seminar explores issues that straddle the boundaries of the biological and social sciences as they relate to rural livelihoods, food security, and the management of biological resources. Students taking the 1-credit option participate in seminars and panels. Students taking the 2-credit option must also participate in a group project.

IARD 685 Training and Development: Theory and Practice (also EDUC 685)
Spring. 4 credits. S-U grades optional. M. Kroma. Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

IARD 694 Graduate Special Topics in IARD
Fall or spring. 1-4 credits. S-U or letter option. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 696 Agroecological Perspectives for Sustainable Development (also NTR E 698 and CSS 696)
Fall, spring. 1 credit. S-U grades only. E. Fernandes, L. Fisher, L. Buck. A variety of speakers present seminars on agroecological topics relating to sustainable development throughout the world. Students are required to prepare a synopsis of each seminar.

IARD 697-698 International Development M.P.S. Seminar
Fall, spring. 1 credit. S-U only. N. Uphoff. A seminar for M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

IARD 699 International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. S-U grade only. Required for, and limited to, M.P.S. IARD students or with permission of instructor. S. C. Kyle. The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

IARD 783 Farmer-Centered Research and Extension (also EDUC 783)
Fall. 3 credits. S-U or letter option. M. Kroma and T. Tucker. This course provides an introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people's knowledge by enhancing their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

Related Courses in Other Departments
In addition to International Agriculture and Rural Development (IARD) courses, many other courses have an international focus. The following are suggested relevant courses:

Applied Economics and Management
International Trade and Monetary Economics (AEM 230)
*Global Agribusiness Management (AEM 329)
International Trade Policy (AEM 430)
*Food Marketing Colloquium (AEM 446/447)

Global Marketing Strategy (AEM 449)
Seminar on Agricultural Trade Policy (AEM 730)

Agriculture and Life Sciences
*Agroecology Study Tour to Burgundy, France (ALS 402)
*Internship Opportunities in Burgundy, France (ALS 403)
Global Seminar (NTRES 480/FD SC 480/IARD 480)

Animal Science
Tropical Livestock Production (AN SC 400)
Tropical Forages (AN SC 403)

Asian Studies
Southeast Asia Seminar: Country Seminar (ASIAN 601)

Biology
*Biological Neotropics (BIOEE 405)
Food, Agriculture, and Society (BIOEE 469)
The Healing Forest (BI0EE 348)

Communication
Communication in the Developing Nations (COMM 424)

City and Regional Planning
Seminar in International Planning (CRP 671)
Seminar in Project Planning in Developing Countries (CRP 675)

Crop and Soil Science
Properties and Appraisal of Soils of the Tropics (CSS 471)
Ecology of Agricultural Systems (CSS 473)
Tropical Cropping Systems (CSS/IARD 314)

Development Sociology
Comparative Issues in Social Stratification (D SOC 370)
Education, Inequality, and Development (D SOC 305)
International Development (D SOC 205)
Population Dynamics (D SOC 201)
Population, Environment, and Development in Sub-Saharan Africa (D SOC 495)
Population Policy (D SOC 418)
Migration and Population Redistribution (D SOC 430)
Social Impact of Resource Development (D SOC 440)
Social Indicators, Data Management, and Analysis (D SOC 213)
Sociological Theories of Development (D SOC 606)
Sustainable Development (D SOC 261)
The Sociology of "Third World" States (D SOC 725)
INFO 295 Mathematical Models for Information Science
Fall. 4 credits. Corequisite: MATH 231 or equivalent.

INFO 330 Applied Database Systems (also COM S 330)
Fall. 3 credits. Prerequisites: COM S 211/ENGRD 211.

INFO 345 Human-Computer Interaction Design (also COMM 345)
Spring. 3 credits.

INFO 349 Media Technologies (also S&TS 349)
Spring. 3 credits.

INFO 355 Computers: From Babbage to Gates (also S&TS 355)
Spring. 4 credits.

INFO 387 The Automatic Lifestyle: Consumer Culture and Technology (also S&TS 387)
Spring. 4 credits. Not offered spring 2005.

INFO 430 Information Retrieval (also COM S 430)
Fall. 3 credits. Prerequisite: COM S 211/ENGRD 211 or equivalent.

INFO 431 Web Information Systems (also COM S 431)
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with the technology of web sites.

INFO 435 Seminar on Applications of Information Science (also INFO 635)
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at the level of COM S 211 or equivalent, and experience in using information systems.

INFO 440 Advanced Human-Computer Interaction Design (also COMM 440)
Fall. 3 credits.

INFO 447 Social and Economic Data (also ILR 447)
Spring. 4 credits. Prerequisites: one semester of calculus, the IS statistics requirement, at least one upper-level social science course, or permission of the instructor.

INFO 450 Language and Technology (also COMM 450)
Spring. 3 credits.

INFO 490 Independent Reading and Research
Fall, spring 1–4 credits. Independent reading and research for undergraduates.

INFO 491 Teaching in Information Science, Systems, and Technology
Fall, spring. Variable credit.
This course involves working as a TA in a course in the Information Science, Systems, and Technology major.

INFO 515 Culture, Law, and Politics of the Internet
Fall. 4 credits.

INFO 530 The Architecture of Large-Scale Information Systems (also COM S 530)
Fall. 4 credits. Prerequisites: COM S/INFO 330 or COM S 432.

INFO 614 Cognitive Psychology (also PSYCH 614)
Fall. 5 credits. S. Edelman.
This course consists of two components: PSYCH 214 (3 credits) and COGST 501 (2 credits). It is intended for graduate students; undergraduates opting for 5 credits should enroll simultaneously in PSYCH 214 and COGST 501.

INFO 630 Representing and Accessing Digital Information (also COM S 630)
Fall. 4 credits. Prerequisites: COM S 472 or 478 or 578 or the equivalent.

INFO 634 Information Technology in Sociocultural Context (also S&TS 634)
Fall. 4 credits. Prerequisite: permission of instructor.

INFO 635 Seminar on Applications of Information Science (also INFO 435)
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at the level of COM S 211 or equivalent, and experience in using information systems. Undergraduates and master's students should register for INFO 435. Ph.D. students should register for INFO 635.

INFO 640 Human-Computer Interaction Design (also COMM 640)
Fall. 3 credits. Prerequisites: graduate standing or permission of instructor.

INFO 685 The Structure of Information Networks (also COM S 685)
Spring. 4 credits. Prerequisite: COM S 482.

LANDSCAPE ARCHITECTURE

LA 140 The Symbols of New York State's Cultural Landscape
Spring. 3 credits.
Lectures with slides and other media illustrate how successive waves of New Yorkers continually defined and redefined their sense of place and “the power of place” by references to natural symbols such as Niagara Falls and to human constructions such as towns of Iroquois long houses and cities of skyscrapers.

LA 141 Grounding in Landscape Architecture
Fall. 4 credits. Limited to 15 students. Letter grade only. Required drafting equipment plus materials for projects will cost about $250.
Introductions to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawing, and model making are used to understand design principles of the changing landscape.

LA 142 Grounding in Landscape Architecture
Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor. Required drafting equipment and project supplies will cost about $250.
Fundamentals of landscape design applied to small-scale site-planning projects. Work in...
the studio introduces students to the design process, design principles, construction materials, planting design, and graphics.

LA 155 American Indian Cultural Landscapes: Changes in Time
Fall. 3 credits. Lectures with videos and other media illustrate American Indian cultures and philosophies both before and after 1492. A major focus is how all Indian societies, from hunting societies to agricultural communities, continually transformed their cultural landscapes. Lectures also include how European expansion forcefully transformed American Indian cultural landscapes.

LA 201 Medium of the Landscape
Fall. 5 credits. Limited to landscape architecture majors. Required drafting equipment, supplies, and fees will cost about $250; expenses for the field trip will be about $250.

This studio course emphasizes the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthforms, water, and vegetation.

LA 202 Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 201 with a grade of C or better. The cost of supplies and fees will be about $250; expenses for the field trip will be about $250.

This course focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architecture projects.

LA 215 Sophomore Seminar: Engaging Places
Fall. 4 credits. Lec., M W 2:55-4:10.

A. Hammer.

Engaging Places explores how places come to be what they are, how they shape—and are shaped by—the people who live in them, how they become coordinates for plotting both a culture's biography and the meaning of a life. Within the course serves as an introduction to cultural landscape studies, or the interaction of people and place, its focus is on writing: how do we represent the complexity of a place and our relation to it?

LA 260 Pre-Industrial Cities and Towns of North America (also CRP 360 and LA 366)
Fall. 3 credits. Offered fall 2005.

Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. The course considers how each culture has altered the landscape in its own unique way as it created its own built environments.

LA 261 Fieldwork in Urban Archaeology (also CRP 261 and AIS 261)
Fall. 4 credits.

Urban archaeologists study American Indian, colonial, and nineteenth-century sites that now lie within the boundaries of modern cities. This course explores how urban centers evolve: what lies beneath today's cities; and how various cultures have altered the urban landscape. Students participate in a local archaeological excavation. Three 8-hour Saturday field labs are required; students choose three labs from seven that are offered.

LA 262 Laboratory in Landscape Archaeology (also CRP 262)
Spring. 3 credits. Prerequisites: LA 261 or CRP 261 with consent of instructor.

Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 263/547 American Indians, Planners, and Public Policy (also CRP 363/547)
Spring. 3 credits. Offered in alternate years. Offered spring 2006.

Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of this course is how to address urban and regional problems without imperiling the cultural survival of minorities.

LA 266 Jerusalem through the Ages (also NES 266, JST 266, ARKEO 266, RELST 266)
Fall. 5 credits.

Explores the history, archaeology, and natural topography of Jerusalem throughout its long life, from its earliest remains in the Chalcolithic period (ca. 4000 B.C.E.) to the 19th century, including Jewish, Hasmonean, Roman, Byzantine, Umayyad, Seljuk, Crusader, Mamluk, and Ottoman eras. Students examine the original historical sources (e.g., Bible, Josephus, and the Madaba map) that pertain to Jerusalem. Slides and videos will be used to illustrate the natural features, human-built monuments, and artifacts that flesh out the textual material, providing a fuller image of the world's most prominent spiritual and secular capital.

LA 282 The American Landscape
Fall. 3 credits.

An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature.

LA 301 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.

Course participants are engaged in the art and science of design. This includes relating construction and planting details to concepts and program. The studio focuses on site-scale projects that consider significant cultural and natural landscapes. Theories of landscape restoration, sustainable design, and landscape representation are explored through projects that derive form from site and place.

LA 302 Integrating Theory and Practice II
Spring. 5 credits. Cost of supplies and fees, about $250; basic expenses for field trip, about $250.

The studio focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationships to site planning and planning are critically explored through theory and practice in this studio.

LA 315 Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316 Site Engineering II
Fall. 2 credits. Prerequisite: LA 315 or permission of instructor.

Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 318 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor.

The emphasis of this course is detail design and use of landscape materials in project implementation. Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project.

Students develop a process of self criticism related to measured drawings specific to the comprehensive project. Course participants fabricate material prototypes in wood and metal.

LA 402 Integrating Theory and Practice: Community Design Studio
Spring. 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.

This course engages the theory and practice of participatory community design through a real community service project. Participants gain an understanding of how to integrate meaningful public service with design invention and creativity. Engage in rigorous design research methods, and understand how institutional and community contexts influence design problem-solving. Students will be expected to work independently and collaboratively on team projects in a community. One class period per week will be designated for community fieldwork. Studio theme to be announced.

LA 403 Directed Study: The Concentration
Fall, spring. 1 credit. Offered to landscape architecture undergraduate students in their final year of study.

Working with their adviser, students create a written and visual paper that documents the concentration intent.

LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students.

This course is designed to develop a working knowledge of various computer software applications with emphasis on AutoCad. The course explores other applications relative to land-use planning and the profession of landscape architecture.

LA 412 Professional Practice
Spring. 1 credit.
Discussed include practice diversity, marketing or in other professional situations. Topics opportunities one may encounter in an office, A topical seminar with a different subject and method each time it is offered. Subject and schedule include "Landscape and Visual Culture," fall 2005—an inquiry into the visual construction of landscape and landscape representation in visual (painting, photography, film, graphic design) and written texts; "Understanding Ordinary Landscapes," fall 2006—a study of common places, including their spatial and visual patterns, uses, and material culture. "Landscape and Critical Thinking," fall 2007 dealing with landscape as a tool for studying social and artistic issues, landscape as a basis for social order, and landscape as a critique.

LA 486 Placemaking by Design
Fall. 3 credits. Preference given to juniors, seniors, and graduate students. Limited to 20 students. S-U grades optional.

This seminar provides an understanding of contemporary planning and landscape architecture design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. The seminar addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

LA 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491)
Fall. 4 credits. Limited to majors in horticulture or landscape architecture or by permission of the instructors. Limited to 48 students. Prerequisites required. Cost of supplies, about $50; expenses for field trips, about $90.

This course focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites; select appropriate trees, shrubs, vines, and ground covers for a given site; and learn about the principles and practices of site amelioration and plant establishment. Design follows by written specifications and graphic details is produced to implement these practices.

LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492)
Spring. 4 credits. Prerequisites: a passing grade in HORT/LA 491. Limited to majors in horticulture and landscape architecture or by permission of the instructors. Limited to 48 students. Prerequisites required. Cost of supplies about $50; expenses for field trips $50.

The second half of this course continues to focus on the winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detail, and planting techniques. Students critically assess potential planting sites; and select appropriate trees, shrubs, vines and ground covers for a given site. Designs for specific sites are followed by written specifications, and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together with HORT/LA 491 and 492 constitute an integrated course.

LA 494 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional.

Topical subjects in landscape architectural design, theory, use and history. Group study of topics not considered in other courses.

LA 495 Green Cities: The Future of Urban Ecology (also CRP 495)
Fall. 4 credits. Explores the history and future of the ecology of cities and their role in solving the present global ecological crises. The politics, design, and economics of "green cities" are examined in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

LA 497 Individual Study in Landscape Architecture
Fall or spring. 1–5 credits; may be repeated for credit. Students must register using an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Work on special topics by individuals or small groups.

LA 498 Undergraduate Teaching
Fall or spring. 1–2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register using an Independent Study form (available in 140 Roberts Hall).

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty members.

LA 499 Undergraduate Research
Fall or spring. 1–5 credits. Students must register using an Independent Study form (available in 140 Roberts Hall).

Permits outstanding undergraduates to carry out independent research in landscape architecture under appropriate faculty supervision. Research goals should include description, prediction, and explanation, and should generate new knowledge in the field of landscape architecture.

LA 501 Composition and Theory
Fall. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250. The field trip will cost about $250.

Basic principles of natural and cultural processes that form "places" in the landscape. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.
The studio focuses on site-scaled projects that consider significant cultural and environmental and cultural history of the States. Topics include the recent history of historic landscapes, and important practitioners and notable projects. Format for the class is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

LA 582 The American Landscape
Fall. 3 credits.
An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature. Graduate students complete additional outside work and attend an additional class session.

LA 590 Theory Seminar
Spring. 3 credits. For seniors and graduate students.
Seminar in landscape design theory.

LA 598 Graduate Teaching
Fall or spring. 1–3 credits. Prerequisite: permission of instructor. Students must register using an Independent Study form. Staff.
Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the term. (Credit hours are determined by the formula: 2 hours per week = 1 credit hour).

LA 601 Integrating Theory and Practice I
Fall. 5 credits. Limited to graduate students or by permission of instructor. Cost of supplies and fees, about $250.
The studio focuses on site-scaled projects that consider significant cultural and natural landscapes. Theories of landscape restoration, sustainable design, and landscape representation are explored through projects that derive form from site and place. The integration of site history, ecology, and site construction supports an understanding and relationship between design and site.

LA 602 Integrating Theory and Practice II
Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for the field trip, about $250.
The studio builds upon prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. The course focuses on the expression of design solutions that grow from and affirm an explicit understanding of place, social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

LA 603 Directed Study: The Concentration
Fall, spring. 1 credit. Open to landscape architecture graduate students in their final year of study. Working with their adviser, students create a written and visual paper that documents the concentration intent.

LA 615 Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 616 Site Engineering II
Fall. 2 credits. Prerequisite: LA 615 or permission of instructor. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 618 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. The emphasis of this course is detail design and use of landscape materials in project implementation. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants fabricate material prototypes in wood and metal.

LA 619 Advanced Site Graduating
Fall. 2 credits. Limited to 10 students. Prerequisite: LA 619 or LA 615. Grading skills and knowledge applied as a design component of site planning projects.

LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)
Fall. 3 credits. Offered alternate years. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. This course considers how each culture has altered the landscape in its unique way as it created its own built environments.

LA 680 Graduate Seminar in Landscape Architecture
Fall or spring. 1–3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional.
Topical subjects in landscape architectural design, theory, history, or technology. Includes seminar topics and group study not considered in other courses.

LA 694 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits. May be repeated for credit. S-U grades optional.
Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)
Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for the required field trip, about $250.
Application of urban design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. Three-dimensional computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

LA 702 Advanced Design Studio
Spring. 5 credits.
A capstone studio that provides the opportunity to explore issues in contemporary landscape architecture and to integrate related skills. Topics include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

LA 800 Master's Thesis in Landscape Architecture
Fall or spring. 9 credits. Independent research, under faculty guidance: leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES
B. L. Bedford, B. Blasyee, T. Brown.
L. E. Buck. F. Couch, P. Curtis, D. J. Decke.
R. Jackson, C. Kraft, L. E. Krasny.
J. P. Lassoie, B. Lauber, R. A. Malecki, E. Mills.
S. Morreale, M. Musksrud, M. E. Richmond.
L. Rudstrom, R. Schneider, R. Sherman.
T. Tantillo, S. Wolf, J. B. Xavir.
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

NTRES 100 Introduction to Environmental Studies
Summer. 3 credits. S-U grades optional.
R. J. McNeil.
This discussion-centered course examines the interrelationships between the sciences, arts, and humanities as they relate to our environment. Students explore how we manage nature and negotiate with each other to meet our needs. Emphasis is on principles of ecology, economics, aesthetics, ethics, and law.

NTRES 101 Introduction to the Field of Natural Resources
Fall. 3 credits. Limited to first-year students in the Natural Resources Department.
The course provides a comprehensive overview of the modern natural resource and environment to new students. The course focuses on identifying the components of knowledge required to understand the Earth's natural resources and ecological systems, and to participate intelligently in their conservation and management. Local case studies are used to introduce students to the scientific, ethical, and societal basis for protection and management of natural resources and environments. Students become actively engaged in data collection and analysis, use quantitative models to analyze and interpret data, explore the human dimensions of natural resource issues, and come to understand the complexities of the policy process and management strategies.
NTRES 201 Environmental Conservation
Spring. 3 credits. T. Fahey.
At the beginning of the twenty-first century, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portrayals of the environmental dilemmas offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

NTRES 210 Introductory Field Biology
Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an advisor in natural resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. Two overnight weekend field trips required. Cost of field trips, approximately $12. T. Gavvin and C. Smith.
Introduction to methods of inventorying, identifying plants and animals. Students are required to learn taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of those events are emphasized.

NTRES 220 People, Values, and Natural Resources
Spring. 3 credits. J. Tantillo.
Cultural and political context for natural resource conservation and management in North America. Historical basis is explored through analysis of North American environmental history, examining shifts in attitudes and conceptions of human relationships to natural resources and the environment. Key laws guiding policy, conservation, and management of natural resources are reviewed. Concepts underlying the study of human attitudes, behaviors, institutions, and decision-making processes related to natural resource conservation and management are introduced.

NTRES 306 Coastal and Oceanic Law and Policy
Summer. 2 credits. A special 1-week course offered at Cornell's Shallows Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Staff.
Intended for students interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore drilling, production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

NTRES 310 Applied Population Ecology
Fall. 3 credits. Letter grade only. Prerequisite: background in biology or ecology strongly recommended; completion of Calc II or equivalent. E. Cooch.
An in-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. The course examines models of single- and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and the subsequent dynamics at the population level. Significant emphasis is placed on principles as applied to conservation and management.

NTRES 311 Fish Ecology, Conservation, and Management
Spring. 3 credits. Prerequisites: NTRES 210 or permission of instructor; NTRES 310 or a general ecology course recommended. E. Mills and L. Rudstam.
Basic principles of fish ecology at the individual, population, and community level are covered, particularly as they relate to interactions between fish and the aquatic environment. Emphasis is placed on the application of these principles to the conservation and management of fisheries resources and aquatic ecosystems. Illustrative examples are provided from current literature and case studies.

NTRES 312 Fish Ecology Laboratory
Spring. 1 credit. Prerequisite: NTRES 311 or concurrent enrollment. Two weekend field trips. E. Mills and L. Rudstam.
Two overnight weekend field trips to the Cornell Biological Field Station and the Adirondack Field Station. Activities include experiences with various fish sampling gear and analysis of collected samples. Discussions about sampling considerations and inferences we can make by contrasting the ecology of fish in lakes of different productivity. Includes visit to a state of the art fish hatchery and evening discussion session during the field trips. Written reports required.

NTRES 313 Biological Statistics I (also BTRY 301)
Fall. 4 credits. Prerequisite: one semester of calculus. P. J. Sullivan.
Statistical methods are developed and applied to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus statistical computing environment.

NTRES 314 Conservation of Birds
Spring or summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. Offered alternate odd years. C. R. Smith.
A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds are explored in the contexts of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change; and the economic importance of bird study as an outdoor recreational activity.

NTRES 315 Conservation of Birds Laboratory
Spring or summer. 1 credit. Concurrent enrollment in NTRES 314 required. Saturday mornings, THA. Offered alternate odd years. C. R. Smith.
A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered include the choice and effective use of field guides, binoculars, and other tools for bird identification; procedures for taking and organizing field notes; and strategies for attracting and observing birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations.

NTRES 321 Introduction to Biogeochemistry (also EAS 321)
Fall. 4 credits. Prerequisites: college-level chemistry; plus a course in biology and/or geology. J. B. Yavitt and L. A. Derry.
For description, see EAS 321.

NTRES 322 Global Ecology and Management
Spring. 3 credits. Prerequisites: college-level biology and general ecology. J. Yavitt.
The subjects of biogeography, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community ecology, island biogeography, and ramifications of global climatic change.

NTRES 323 Principles of Toxicology (also TOX 323)
Spring. 3 credits. Prerequisites: one year each of chemistry and biology with labs; one semester of organic chemistry lecture or permission of instructor. J. W. Gillett.
This introductory lecture course in human and environmental toxicology emphasizes basic principles (exposure, dose-response, effects) involved with pesticides, hazardous wastes, and natural products. Science-based assessments for risk analysis and policy are integrated with other considerations. Guest speakers and extensive case studies augment lectures and student team exercises applied to management.

NTRES 324 Ecological Management of Water Resources
Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. R. Schneider.
In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include limnology, seasonal variability and communities, groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

NTRES 325 Forest Management and Maple Syrup Production
Spring. 3 credits. Prerequisites: one year of college-level biology. Offered alternate even years. P. J. Smallidge.
A practical, field-oriented course emphasizing principles and practices of stewardship and multiple purpose utilization of soils and nonindustrial, private forest land in the northeastern United States, including the production of maple syrup.
NTRES 330 Natural Resources Planning and Management
Fall. 3 credits. Prerequisite: junior standing. B. L. Bedford.
Focus is on terrestrial and aquatic resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 331 Environmental Governance (also S&Ts 314 and B&SOC 314)
Spring. 3 credits. S. Wolf.
This course considers the question of environmental governance, defined as the assembly of social institutions that regulate natural resource use and shape environmental outcomes. Participants will explore the roles of public policy, market exchange, and collective action in resource (mis)management. Theoretical concepts from a variety of social science perspectives will be introduced to support case studies and student-led discussions. Comparative analysis of how governance is pursued in different countries, historical periods, and ecological contexts (forestry, endangered species, water quality) will highlight scope for institutional innovation. Students who wish to take the course for graduate credit should see NTRES 631.

NTRES 406 Ecology Risk Assessment (also TOX 406)
Fall. 3 credits. Prerequisites: BIOEE 26l or equivalent; permission of instructor if not an advanced student in natural sciences or engineering. J. W. Gillett.
This course strives to develop understanding of and competence in the different types of ecological (nonhuman health) risk assessment based on USEPA principles and methods. Focus is on cases for chemical, physical, and biological stressed species and in a variety of circumstances.

NTRES 410 Conservation Biology: Concepts and Techniques
Fall. 4 credits. Prerequisite: NTRES 210. E. G. Couch and T. A. Gavish.
A thorough analysis of the ecological and quantitative dimensions for decision making in modern conservation biology and management. Emphasis is on analysis of variation and maintenance of biological diversity, and will focus on principles and techniques, including demographic viability analysis of populations, genetic analysis, as well as aspects of the human dimensions of conservation biology.

NTRES 411 Quantitative Ecology and Management of Fisheries Resources
Spring. 4 credits. S-U grades optional. Prerequisites: NTRES 313 or BTRY 301. P. Sullivan.
The dynamics of marine and freshwater fisheries resources are examined with a view toward observation, analysis, and decision making within a quantitative framework. Growing pressure on fisheries' resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries' issues. Quantitative models are useful for integrating information needed by decision makers in addressing these issues. The course develops analytical methods to assess the dynamics and status of fisheries' resources and then demonstrates how the information may be transformed into useful information for decision makers.

NTRES 412 Wildlife Population Analysis: Techniques and Models
Spring. 3 credits. Prerequisites: NTRES 310 (or equivalent, or by permission of instructor). M. T. W. R. morning lectures; afternoon labs) in January with follow-up meetings in the spring semester. E. Cooch.
This course will explore the theory and application of a variety of statistical estimation and modeling techniques used in the study of wildlife population dynamics. The course will focus on exploration of a selection of the tools needed for wildlife conservation and management, including (possibly) analysis of mark-recapture data, population viability analysis, decision theory, and matrix modeling.

NTRES 413 Biological Statistics II (also BTRY 302)
Spring. 4 credits. Prerequisite: NTRES 313 or BTRY 301. P. Sullivan.
Linear statistical methods are applied to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactors analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the Splus statistical computing environment.

NTRES 420 Forest Ecology
Fall. 3 credits. Prerequisite: introductory biology. T. J. Fahey.
A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests; ecophysiology of forest trees; disturbance, succession, and community dynamics; primary productivity, and nutrient cycling.

NTRES 421 Forest Ecology Laboratory
Fall. 1 credit. Cost of weekend trip approximately $30. T. J. Fahey.
Field trip designs to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Acadia National Park, Vermont, or New Hampshire. Includes group research projects in local forests.

NTRES 422 Wetland Ecology and Management—Lecture
Fall. 3 credits. Prerequisite: BEOEE 261. B. L. Bedford.
Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on methods needed to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered.

NTRES 423 Wetland Ecology and Management—Laboratory
Fall. 1 credit. Optional. Concurrent enrollment in NTRES 422 is required. B. L. Bedford.
An integrated set of field and laboratory exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands; and methods of sampling wetlands vegetation, soils, and water; and methods of wetland identification and delineation.

NTRES 424 Landscape Impact Analysis
Fall. 3 credits. Prerequisites: one introductory and one advanced course in ecology or the equivalents, and junior standing. B. L. Bedford.
This course presents ecological concepts and analytical tools needed to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the landscape in which these resources occur. It explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

NTRES 426 Practicum in Forest Farming as an Agroforestry System (also HORT 426 and CSS 426)
Students will actively take part in the development and management of a seventy-year-old nut grove originally planted at Cornell in the 1930s. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities will include all or most of the following: temperate-nut harvest and variety evaluation, mushroom culture, small-fruit and fruit-tree culture, medicinal-herb culture, site evaluation and planning, and field trips to other agroforestry-related sites. Outdoor activities will be integrated with selected readings via an online discussion board.

NTRES 427 Ecoregions: Ecology and Conservation
Spring. 2 credits. Letter grade only. Prerequisites: NTRES 210, 310; statistics recommended; junior standing or above. C. R. Smith.
Approaches to characterizing and classifying terrestrial habitats and ecoregions at a variety of spatial scales are reviewed and discussed. A landscape approach is used to introduce habitat management concepts and land cover classifications. Legislation guiding federal land management decisions is discussed, and field trips may go to areas managed by public and private land management organizations.

NTRES 430 Environmental and Natural Resources Policy Processes
Spring. 3 credits. Prerequisites: junior standing; special application process, and course fee (approx. $400). Lec.; two 3-hour orientation sessions in fall semester and four 2-hour sessions in February and March. Completed applications due by October 14. Applications are available by contacting map10@cornell.edu or at www.dnr.cornell.edu/courses/NR402/402info.htm. B. A. Knuth.
An intensive exploration of the environmental policy process and its conceptual framework.
Recognizing and defining natural resource or environmental problems and issues; aggregating interests; agenda-setting; formulating and selecting alternative solutions; implementation and evaluation; roles of lobbyists, legislature, executive branch, and other actors. Case studies: presentations by and discussions with about twenty prominent Washington policymakers who appear as guest lecturers. Required: interviews, term paper, and oral reports. Includes 11 days in January in Washington, D.C.

NTRES 431 Environmental Strategies
Fall. 3 credits. Prerequisite: AEM 250 or permission of instructor. S. Wolf.
How is conservation of natural resources pursued in today's institutional environment? The course focuses on opportunities to mobilize market mechanisms and competitive strategies of firms to harmonize social and ecological demands on environmental systems. Through production of a portfolio of analyses of real-world integrated environmental management schemes, students explore the mechanics of this general class of policy tools and develop a critique as to why the market does not represent a comprehensive approach to sustainability.

NTRES 432 Human Dimensions of Natural Resource Management
Spring. 3 credits. S-U grades optional. Limited to juniors and seniors. J. Enck.
This course focuses on how a social science-based understanding of human attitudes, values, and behaviors can be incorporated in natural resource management decisions and actions. Examples from federal, state, and nongovernmental fish, wildlife, and forest management programs are used to illustrate the importance of socioeconomic considerations in problem solving and decision making.

NTRES 434 International Conservation: Communities and the Management of the World's Natural Resources
Spring. 3 credits. Letter grade only. J. Lassoie.
Lectures, readings, and multimedia information, including the Internet, build a multidisciplinary understanding of the principles underpinning conservation and natural-resource management. Specific attention is given to the role of local communities in developing sustainable land-use strategies. Case studies from Africa, Latin America, China, and the United States examine particular conservation and management issues from widely different geopolitical perspectives. Stakeholder analyses are used to base discussions of each case, followed by a synthesis and discussion of key contrasts and comparisons centered on common themes identified during the course.

NTRES 444 Resource Management and Environmental Law (also CRP 444)
Spring. 3 credits. For juniors, seniors, and graduate students. S-U grades optional. R. Booth.
For description, see CRP 444.

NTRES 456 Stream Ecology (also ENTERM 456, BIOEE 456)
Spring. 4 credits. Limited to 60 students. Prerequisite: BIOEE 201 recommended. Offered alternate even years. Next offered spring 2006. B. Peckarsky.
For description, see ENTERM 456.

NTRES 480 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also FD SC 480, IARD 480)
Spring. 4 credits. Prerequisites: junior, senior, or graduate student standing. J. Lassoie and D. Miller.
Modernization has lead to development pressures that have increasingly disrupted natural systems leading to widespread concern about the long-term viability of important environmental services, including those critical to food security worldwide. This multidisciplinary course uses case studies to explore interactions among social, economic, and environmental factors basic to sustainable development. Cases include population growth, genetically modified foods, biodiversity, sustainable tourism, global warming, and global responsibility. Cornell faculty members lead discussions in each of the major topic areas. In addition, students participate in discussions and debates with students from Sweden, Costa Rica, Honduras, South Africa, and Australia through live interactive videoconferences and electronic discussion boards.

NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions
Fall, spring, or winter. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. R. A. Baer, T. Brown, L. E. Buck, D. J. Decker, J. Enck, J. Gillett, B. Knuth, T. B. Lauber, M. Muskett, J. Tanilillo, and S. Wolf.
Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff. Students must register using an Independent Study form (available in 140 Roberts Hall).

NTRES 494 Special Topics in Natural Resources
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Students who register under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 495 Individual Study in Fish and Wildlife Biology and Management
Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register using an Independent Study form (available in 140 Roberts Hall).

NTRES 496 Individual Study in Ecology and Management of Landscapes
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, B. Blossey, T. Faihey, J. Krauny, J. Lassoie, R. Schneider, J. Tantillo, and J. Yuett.
Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register using an Independent Study form (available in 140 Roberts Hall).

NTRES 498 Teaching in Natural Resources
Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register using an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

NTRES 500 Professional Projects—M.P.S.
Fall and spring. Credit TBA. Limited to graduate students working on professional master's projects. S-U grades only.

NTRES 600 Introduction to Graduate Study in Natural Resources
Fall or spring. 2 credits. This course is open to beginning graduate students whose faculty advisers are in Natural Resources. S-U grades. Lec TBA.
Designed for beginning Natural Resources graduate students, this course includes faculty-led discussions of key natural resource issues, student discussions of research ideas, and skill building sessions on proposal writing and giving research presentations. Students are required to complete a research proposal.

NTRES 601 Seminar on Selected Topics in Natural Resources
Fall or spring. 1 credit. S-U grades only. TBA. Check with department for availability. Staff.
Selected readings and discussions of research and/or current problems in natural resources. Offering varies by semester and is subject to availability of staff.

NTRES 603 Inquiry Science Outreach in Secondary Schools (also EDUC 603)
Fall or spring. 1 credit. Prerequisite: must be a recipient of a fellowship from Cornell Science Inquiry Partnerships (CSIP) program. S-U grades. N. Trautmann, I. Tompkins, and M. Krasy.
This course prepares graduate students who receive Cornell Science Inquiry Partnerships fellowships for outreach work in high school and middle school science classes. Participants explore effective strategies for inquiry-based learning and review core educational issues such as learning standards, working with students of various ability levels, and assessing student learning.

NTRES 604 Seminar on Selected Topics in Resource Policy and Management
Fall. 2 credits. S-U grades only. TBA.
Check with department for availability.
Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

NTRES 605 Issues in Risk Analysis Seminar (also CEE 605)
Fall. 1 credit. Prerequisite: calculus, advanced course in statistics and basic natural sciences (Chemistry, Biology, Earth Systems). S-U only. Lec. TBA. J. Gillett and R. Davidson.
Discussion of current issues and ongoing research on risk analysis issues from
many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risks, communication issues, and challenges to risk assessment. Some sessions held jointly with other seminar series. Enrollment in seminar requires short reports and participation in two required discussion meetings for class members designed to integrate the issues raised during the semester.

**NTRES 607 Ecotoxicology (also TOX 607)**
Spring. 3 credits. Prerequisites: graduate or senior status, or permission of instructor. Offered alternate odd years. Next offered spring 2006. J. W. Gillett. Lectures, readings, and special guest focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

**NTRES 611 Quantitative Ecology and Management of Fisheries Resources**
Spring. 4 credits. S-U grades optional. Prerequisites: NTRES 315 recommended or permission of instructor. Offered even years. Next offered spring 2006. P. J. Sullivan. This course is taught in conjunction with NTRES 411 (see description above). Students taking the course for graduate credit are asked, in addition to the 400-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

**NTRES 612 Wildlife Population Analysis: Techniques and Models**
Spring. 3 credits. Prerequisites: NTRES 310 (or equivalent, or by permission of instructor), a college-level math and statistics class. Lecture/lab: 2-week all-day (Monday through Friday) course in January with follow-up meetings during the spring semester. For description, see NTRES 412.

**NTRES 614 Fish and Wildlife Ecology Seminar**
Fall and spring. 1 credit. Prerequisite: permission of instructor. Check with Department. Staff discussion of individual research, current problems, and current literature in fish and wildlife ecology. Offering varies by semester and subject to availability.

**NTRES 615 Case Studies and Special Topics in Agroforestry**
Spring. 2 credits. Prerequisites: graduate standing or permission of instructor. S-U grades optional. J. P. Lassoie.

**NTRES 616 Forest Science and Management Seminar**
Fall. 1 credit. For graduate students and upper-level undergraduates. J. B. Yavitt. This seminar course includes review of current literature, student research, and selected topics of interest. Topics include biogeography, ecology, and human use of forests located in boreal, temperate, and/or tropical environments.

**NTRES 631 Environmental Governance**
Spring. 4 credits. S. Wolf. For description, see NTRFS 331. Students taking the course for graduate credit will be required to read supplemental materials, undertake more complex research assignments, and participate in seminar discussion section.

**NTRES 670 Spatial Statistics**
Spring. 3 credits. Prerequisites: BTRY 601 and 602; an intro GIS course strongly recommended. S-U grades optional. Offered alternate odd years. P. J. Sullivan. Spatial statistical concepts and techniques are developed and applied to ecological and natural resource issues. Topics include visualizing spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. Students should consider taking this course simultaneously with CSS 620.

**NTRES 694 Special Topics In Natural Resources**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**NTRES 696 Agroecological Perspectives for Sustainable Development (also IARD 696 and CSS 696)**
Fall and spring. 1 credit. S-U grades only. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

**NTRES 698 Current Topics: Environmental Toxicology (also TOX 699)**
Fall, spring. 1-3 credits. Prerequisites: graduate experience in toxicology. Students should consider taking this course simultaneously with CSS 620.

**NTRES 699 Graduate Individual Study in Natural Resources**
Fall or spring. Credit TBA. S-U grades only. Prerequisites: permission of instructor. NTRFS graduate faculty. Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

**NTRES 800 Master's Thesis Research**
Fall and spring. Credit TBA. Limited to graduate students working on master's thesis research. S-U grades only.

**NTRES 900 Graduate-Level Thesis Research**
Fall and spring. Credit TBA. Limited to graduate students in a Ph.D. program only before the "A" exam has been passed. S-U grades only.

**NTRES 901 Doctoral-Level Thesis Research**
Fall and spring. Credit TBA. For students admitted to candidacy after the "A" exam has been passed. S-U grades only.

**NTRES 411 Animal Production**
Fall and spring. 2 credits. Prerequisites: one year of introductory biology or permission of instructor. Lecs, M W 11:15-12:05; lab, R or F 1:25-4:25. M. A. Mutschler. This course surveys the fundamentals of plant genetics. It shows how this information...
is used in plant biology and allied agricultural sciences and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance, linkage analysis, polyploidy, analysis of nuclear, chloroplast and mitochondrial genomes, pollination controls; and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

**PL BR 299 Introduction to Research Methods in Plant Breeding and Genetics**

Fall, spring, or summer. 1–3 variable credits. Lec., TBA. S-U grades. Staff. This course is intended for students who are new to undergraduate research. Students enrolled in PL BR 299 may be reading scientific literature, learning research techniques or assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

**PL BR 401 Plant Cell and Tissue Culture**

Fall. 3 credits. Prerequisites: a course in plant biology or genetics, or permission of instructor. Lecs., T R 10:10. E. D. Earle. This course provides broad coverage of techniques of plant tissue culture, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Examples used include horticultural, agronomic, and endangered species. Genetic modification of plants via gene transfer and other manipulations of cultured cells is a major topic.

**PL BR 402 Plant Tissue Culture Laboratory**

Fall. 1 credit. Enrollment limited. Prerequisites: PL BR 401 (may be taken concurrently) or permission of instructor. W or R 1:25–4:25 (alternating weeks) plus 1 hour TBA. E. D. Earle. This course provides hands-on experience in plant tissue culture and complements PL BR 401. Lab work includes cell, tissue and organ culture techniques related to plant propagation, germplasm storage, and genetic manipulations. Experiments use a broad range of plant materials and include protoplast culture and Agrobacterium-mediated gene transfer.

**PL BR 403 Genetic Improvement of Crop Plants**

Fall. 3 credits. Prerequisites: genetics (BIOGD 281, PL BR 225, or other standard genetics course), and a course in crops or horticulture. M W F 9:05–9:55. V. Gracen. Genetic enhancement of crop value to humans began with domestication and continues with farmers' variety development and scientifically trained plant breeders' applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

**PL BR 404 Crop Evolution, Domestication and Diversity (also BIOPL 404, IARD 404)**

Fall. 2 credits. S-U or letter grade. Prerequisites: PL BR 225 or permission of the instructor. Lecs., T R 9:05. S. Kresovich. Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Underlying ethical, legal, and social issues affecting conservation and use are addressed.

**PL BR 446 Plant Cyto genetics Laboratory**

Spring. 1 credit. S-U only. Prerequisites: a course in genetics or permission of instructor. Will be offered as a 2-week module at a time to be arranged. Check with department for further information. K. N. Watanabe. This course aims to provide fundamental knowledge and techniques in plant cyto genetics. Emphasis is on applications to research on plant genetics and plant breeding. Plant materials include a wide range of crop species. Basic techniques for examination of plant chromosomes are covered.

**PL BR 494 Special Topics in Plant Breeding**

Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL BR 496 Internship in Plant Breeding**

Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Faculty supervisor and student may consult to arrange the enrollment period. Prerequisites: permission of instructor and enrollment during the pre-enrollment period of the semester before the internship. Students must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a CAES Independent Study form (available in Roberts Hall). Staff.

**PL BR 497 Individual Study in Plant Breeding**

Fall or spring. Credits variable. Prerequisites: 2 credits, S-U or letter grade. Students enrolled in PL BR 497 may be reading scientific literature, learning research techniques or assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

**PL BR 498 Undergraduate Teaching**

Fall or spring. Credits variable. S-U grades. Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register using an Independent Study form (available in Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

**PL BR 499 Undergraduate Research**

Fall or spring. Credits variable. S-U grades. Prerequisites: permission of instructor. Students must register using an Independent Study form (available in Roberts Hall). Staff. Undergraduate research projects in plant breeding.

**PL BR 504 Research Experience for Teachers (also EDUC 504 and BIO G 504)**

Spring. 3 credits. S-U or letter grade. Prerequisites: appropriate science major, 6 credits education or psychology course work, and permission of instructor. T. Fulton. This course is intended for, but not restricted to, students in the M.A.T. degree program, practicing teachers, and students considering becoming teachers. Students will work in a laboratory with a research team for the semester. Research experiences will be accompanied by weekly discussions and readings. Students will explore how research is conducted, how formal scientific discourse and informal communication occur and differ, and how these concepts can be conveyed during classroom teaching.

**PL BR 604 Methods of Plant Breeding Laboratory**

Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Faculty supervisor and student may consult to arrange the enrollment period. Prerequisites: permission of instructor, and enrollment during the pre-enrollment period of the semester before the internship. Students must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a CAES Independent Study form (available in Roberts Hall). Staff.

**PL BR 606 Advanced Plant Genetics**

Spring. 3 credits. S-U grades optional. Prerequisites: BIOLG 281 or equivalent and instructor's permission. Lecs., T R 1:25–4:20. M. Jahn. Provides an advanced survey of genetics in higher plants including selected topics in Mendelian genetics, plant reproductive biology, chromosomal biology, cyto genetics, and epigenetics. The development of critical analytical skills is stressed through case studies, in-class exercises, and the course project.

**PL BR 607 Analysis of Sequence Similarity**

Spring. 1 credit. Enrollment limited. S-U grades only. Prerequisites: basic biology, basic genetics, familiarity with computers. Permission of instructor required. M W F 11:15–12:05 for 4 weeks. Dates TBA. Check with plant breeding office after June for details.
This course focuses on the tools available for accessing nucleotide and protein sequence similarity in plants, animals, and microbes and the strengths and limitations of these approaches for answering biological questions. The mathematical and statistical background of the algorithms is presented in lectures, and weekly on-line projects provide students with experience in addressing a range of biological problems involving sequence analysis.

**PL BR 612 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs** (also IARD 612)
The course covers statutory protection (copyright, trademarks, patents, plant variety protection), contracts (from material transfer to licensing), management of IP (e.g., freedom-to-operate, genetic resources, trade, and marketing), and negotiation. Emphasis is on technology transfer and international aspects. The course is particularly relevant to students interested in science management, technology transfer, international agriculture, and business.

**PL BR 618 Breeding for Pest Resistance** (also HORT 618)
Fall. 2 credits. Prerequisites: BIOGD 281 and PL BR 403 or equivalents. An introductory course in plant pathology and/or entomology also highly recommended. Lec.s, M 2:30-4:25. Offered alternate even years. P. Griffiths.
A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include natural and international germplasm collections, germplasm evaluation and enhancement, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance, stability of genetic resistance mechanisms, and the use of biochemical, physiological, and molecular tools in breeding for pest resistance.

**PL BR 622 Seminar**
Fall or spring. 1 credit. S-U grades only. T 12:20-1:10. Staff and graduate students.

**PL BR 650 Special Problems in Research and Teaching**
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff.

**PL BR 652 Plant Biotechnology** (also PL PA 662.2 and BIOPH 652.6)
Spring. 1 credit. S-U grades optional. Prerequisite: BIOPH 653.1 or permission of instructor. Lec.s, M W F 10:10-12:15 (12 lecs). E. D. Earle and M. Zaitlin.
This course deals with current and proposed use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, or have improved nutritional or processing characteristics. Other topics are use of transgenic plants for production of valuable products and for environmental remediation. Biosafety, social, legal, and international issues relating to plant biotechnology are discussed.

**PL BR 653.1 Concepts and Techniques in Plant Molecular Biology** (also BIOPH 653.1, PL PA 663.01)
This introductory module provides a broad overview of molecular biology concepts relevant to the plant sciences. This section serves as a prerequisite to other modules in the BIOPH 653 (fall) and BIOPH 652 (spring) series. The course is divided into three sections: 1) gene discovery: covers genetic, molecular, and genomics approaches to the isolation of plant genes; 2) gene characterization: covers DNA sequence analysis, assessment of gene expression, functional genomics approaches, and production of transgenic plants; 3) analysis and characterization of proteins and metabolites: includes metabolomic techniques. This course consists of two lectures and one day of discussion/week. Course material is coordinated with BIOPH 641 (lab). Emphasis is on understanding concepts, techniques, and strategies that are appropriate for different experiments and objectives.

**PL BR 653.2 Plant Genome Organization** (also BIOPH 653.2)
Fall. 1 credit. S-U grade or letter option. Prerequisites: BIOPH 653.1. M W F 10:10-11:00 (12 lecs). Offered alternate years. S. D. Tanksley.
The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing, and comparative genomics.

**PL BR 653.6 Molecular Breeding** (also BIOPH 653.6)
Fall. 1 credit. S-U grade or letter option. Lecs, M W F 10:10-11:00 (12 lecs). Offered alternate years. S. Tanksley.
Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

**PL BR 694 Special Topics in Plant Breeding**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL BR 716 Perspectives in Plant Breeding Strategies**
M. E. Sorrells.
Emphasis is on critical discussion and evaluation of selected benchmark papers and current literature. Conventional and molecular selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required. Grades are based on 4 papers demonstrating creative thinking and analysis of plant breeding concepts.

**PL BR 717 Quantitative Genetics in Plant Breeding**
Discussion of quantitative genetics and quantitative trait loci (QTLs) for more efficient plant breeding. Specific topics include: population genetics, linkage, components of variance (estimated from various mating designs), theory and computer analysis for QTL, population structure, multiple locus regressions, and interval analysis. Heritability, theoretical gain from selection; and genotypic and phenotypic correlation coefficients. Due to these differences, the genetic and environmental components of variance are measured. These differences are evaluated to provide data for computing quantitative genetic parameters.

**PL BR 726 Problems and Perspectives in Computational Molecular Biology** (also COM S 726 and BTRY 726)
Fall and spring. 1 credit. S-U only. Prerequisite: permission of instructor. Lec. M 1:25-2:15.
This is a weekly seminar series discussing timely topics of computational molecular biology. The course addresses methodological approaches to sequence annotation, protein structure and function relationships, and evolutionary relationships. Statistical and deterministic computational approaches are covered and specific and detailed biological examples are discussed. Topics of interest are discussed in relation to papers prepared by teams of students and/or faculty members. We pair students/faculty members from biology backgrounds with students from math, computer science, and statistics for paper preparation. Students summarize the salient questions addressed by the paper, the research methods used, and the results obtained. At the end of the presentation, questions are listed on an overhead slide to initiate discussion in the group.

**PL BR 800 Master's-Level Thesis Research**
Fall or spring. Credits variable. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students working on a master's thesis.

**PL BR 900 Graduate-Level Dissertation**
Fall or spring. Credits variable. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students in a Ph.D. program only before the "A" exam has been passed.

**PL BR 901 Doctoral-Level Dissertation Research**
Fall or spring. Credits variable. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students admitted to candidacy after the "A" exam has been passed.
PL AN PATHOLOGY

G. W. Hudler, chair; S. V. Beer,
G. C. Bergstrom, S. Cartinour, A. R. Collmer,
W. E. Fry, S. M. Gray, K. T. Hodge,
S. G. Laziak, K. Lee, J. W. Lorbeer,
R. Loria, G. B. Martin, M. T. McGrath,
M. G. Milgroom, E. B. Nelson, R. J. Nelson,
K. L. Perry, B. G. Tucegon, M. Zaitlin,
T. A. Zitter

Note: class meeting times are accurate at
the time of publication. If changes are
necessary, the department will provide
new information as soon as possible.

PL PA 201 Magical Mushrooms,
Mycorrhizal Fungi, and the
Mycorrhizal Mycology
Spring. 2 credits. S-U optional. Lecs. T R
11:15. G. W. Hudler.
A presentation of the fungi and their roles
in nature and in shaping past and present
civilizations. The historical and practical
significance of fungi as decayers of organic
matter, as pathogens of plants and animals,
as food, and as sources of mind-altering
chemicals are emphasized.

PL PA 301 Plant Diseases and Disease
Management
Fall. 3 credits. Prerequisite: one year of
biology. Lecs. M W F 11:15; lab. T or W
1:25. Lectures co-meet with PL PA 401;
laboratories and exams are separate. Credit
can only be earned for one of these courses.
M. G. Milgroom.
An introduction to plant diseases, their
diagnosis, and their management. Topics
covered include: fungi, bacteria, viruses,
viruses and bacteria, other plant pathogens,
disease cycles, plant disease epidemiology,
disease forecasting, and the principles and
practices of plant disease management. This
course is intended for students who want a
practical knowledge of plant diseases and
their control.

PL PA 309 Introductory Mycology
Fall. 3 credits. Prerequisite: one year of
biology. Concurrent registration in PL PA
319 is recommended. Lecs. T R 9:05-9:55;
A survey of the astounding kingdom of fungi,
including mushrooms, moulds, yeasts, athlete’s
foot, fairy rings, and the blue stuff in blue
cheese. The course covers fungal biodiversity
and systematics, fungi as food, and fungi in
their roles in the environment and human affairs.
Students work with preserved and living fungi
and learn basic identification skills. Grades
are based on two prelims, a final exam, and a
culture collection project.

PL PA 319 Field Mycology
Fall, weeks 1-8. 1 credit. Letter grades
only. Lab. W 12:55-2:55 and W 7:30-9:25
F.M. K. T. Hodge.
Learn to identify mushrooms and other
macrofungi on a series of eight afternoon
field trips followed by evening lab sessions. Fungi
are collected during afternoon trips to sites
around Ithaca. In the evenings, students use
technical keys and microscopes to identify
the fungi and learn about their ecology. The
course runs only the first eight Wednesdays of
fall semester. Grades are based on a collection
project and a final laboratory examination.

PL PA 394 Circadian Rhythms (also
ENTOM 394, BIOGD 394, and BION
384)
Fall. 2 credits. Prerequisite: 200-level
biology course. S-U grades optional. Lec. T
10:10-11:50. K. Lee (fall, even years) and
J. Eweer (fall, odd years)
This course explores a fundamental feature
of living organisms from all kingdoms: how
the cellular 24-hour biological clock operates
and influences biological activities. The course
covers fundamental properties of biological
rhythms and circadian rhythms, including the
structure of circadian oscillators in many organisms
including cyanobacteria, fungi, insects, plants,
reptiles, birds, and mammals (including humans).

PL PA 401 Basic Plant Pathology
Fall. 4 credits. Prerequisite: one year of
biology and BIO PL 241 or equivalent.
Recommends: general microbiology, plant
R 1:25. Lectures co-meet with PL PA 241;
laboratories and exams are separate. Credit
can only be earned for one of these courses.
M. G. Milgroom.
An introduction to plant diseases, their
diagnosis, and their management. Topics
covered include: fungi, bacteria, viruses,
viruses and other plant pathogens;
disease cycles, plant disease epidemiology,
disease forecasting, and the principles and
practices of plant disease management.
This course shares lectures with PL PA 241;
laboratories and exams are separate. The
laboratory is similar to that of PL PA 241,
but more basic principles in plant pathology
are emphasized. This course is intended for
students who want preparation for graduate-
level studies in plant pathology.

PL PA 411 Plant Disease Diagnosis
Fall. 3 credits. Limited to 18 students.
Prerequisites: PL PA 241 or equivalent and
permission of instructor. Lec. T R 10:10;
G. W. Hudler.
A method of diagnosing plant diseases
caused by infectious and noninfectious agents
is taught with emphasis on application of
contemporary laboratory techniques and
effective use of the literature. After seven
weeks of formal lecture and laboratory
sessions, students spend the rest of the
semester working on their own to determine
the causes of plant diseases on samples
that have either been received by the Plant
Disease Diagnostic Lab or that have been
prepared by instructors.

PL PA 419 Agricultural Application of
Plant Disease Concepts
Fall. 2 credits. Prerequisite: PL PA 401
or permission of instructor. S-U or letter
option. Lec. M 8:30-10:30; lab. M 10:30-
4:30.
Addressing real-world problems in plant
pathology through the application of
research. Students will tour production fields
of a diversity of major fruit and vegetable
plants that have been impacted by diseases.
Methods for managing diseases based on
research findings as well as the interface
between Research and Extension will be
emphasized. Seven sessions.

PL PA 443 Pathology and Entomology of
Trees and Shrubs (also ENTOM 443)
Fall. 4 credits. Limited to 30 students.
Prerequisites: PL PA 319 or equivalent.
ENTOM 212 or equivalent. Lec. M W F
11:15; lab. F 12:55-2:45. Offered alternate
years. Next offered fall 2004. G. W. Hudler,
P. A. Weston.
For students preparing for careers in
horticulture, urban forestry, natural
resources, and pest management. Deals with
identification, impact, assessment, biology,
and management of insects and diseases
that damage trees and shrubs. Emphasis is
on pests of northeastern flora but examples
from other parts of the country and the world
are also used. Forest, shade, and ornamental
plants are considered.

PL PA 470 Professional Skills in Plant
Science
Spring. 2 credits. S-U grades only. Lec.
R 12:5-4:25. Graduate faculty.
Provides students who are aspiring to careers
as research plant scientists with an overview
of the art and science of the profession.
Topics include: 1) what it means to be a
scientist and plant pathologist; 2) preparation
required of graduate students in plant
pathology programs; 3) ethical considerations
important to plant pathologists; 4) how to
seek funding to support research activities; 5)
managing the scientific literature; 6) funneling
curiosity into scientific inquiry; and 7) how
to read a scientific paper. Students in related
disciplines (e.g., horticulture, plant breeding,
plant biology) will also benefit from concepts
presented in this course.

PL PA 494 Special Topics in Plant
Pathology
Fall or spring. 4 credits maximum. S-U
grades optional.
The department teaches "trial" courses under
this number. Offerings vary by semester, and
are advertised by the department before the
semester starts. Courses offered under the
number will be approved by the department
curriculum committee, and the same course
is not offered more than twice under this
number.

PL PA 497 Independent Study
Fall or spring. 1-5 credits. Students must
register using an Independent Study form
available in 140 Roberts Hall. S-U grades
optional.
An opportunity for independent study of a
special topic in mycology or plant pathology
under the direction of a faculty member.

PL PA 498 Teaching Experience
Fall or spring. 1-5 credits. Students must
register using an Independent Study form
available in 140 Roberts Hall. S-U grades
optional.
Undergraduate teaching assistance in a
mycology or plant pathology course by
mutual agreement with the instructor.

PL PA 499 Undergraduate Research
Fall or spring. 3-5 credits. Students must
register using an Independent Study form
available in 140 Roberts Hall. S-U grades
optional.
An opportunity for research experience under
the direction of a faculty member.
PL PA 601 Concepts of Plant Pathology
Spring. 3 credits. Prerequisites: PL PA 401 or equivalent. S-U grades optional. Lec. T R 8:40-9:55; lab, T 2:00-4:25. A. R. Collmer and staff.

Concepts in plant-pathogen relationships uniting molecular and population biology approaches, with emphases on molecular/cellular investigations of model pathosystems and population biology studies integrating host-pathogen evolution, genetics, and ecology. The discussion section is used for examination of literature and other exercises complementary to lecture topics; emphasis is on critical thinking in science. Students prepare and review mock grant proposals.

PL PA 605 Viral Plant Diseases
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec, M W 11:15 (7 weeks, 2nd half of semester). Offered alternate years. S. M. Gray.

Introduces students to plant viruses and the diseases they cause. Addresses nomenclature, taxonomy, epidemiology, ecology and epidemiology, transmission, and disease control. A virtual laboratory is used to introduce students to virus disease diagnosis.

PL PA 606 Molecular Plant Virology (also BIOMI 650)
Spring. 1 credit. S-U grades optional. Prerequisites: BIOMI 409 (Principles of Virology), a course in cell biology, or permission of instructor. Lec. M W 11:15 (7 wks. 1st half of semester). Offered alternate years. S. G. Lazarowitz.

Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Material covered includes virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.

PL PA 607 Bacterial Plant Diseases
Fall. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec. W 9:05 (7 weeks, 1st half of semester only); lab, W 1:25-4:25 (7 weeks, 1st half of semester only). Offered alternate years. S. V. Beer.

This course emphasizes bacterial disease of plants, their occurrence in the field, isolation of bacterial pathogens, and their identification by traditional and contemporary techniques. Bacterial culture and plant inoculation, epidemiology, and control.

PL PA 608 Genomics of Bacterium-Host Interactions (also BIOMI 651)
Fall. 1 credit. S-U grades optional. Prerequisites: BIOMI 290 or equivalent or permission of instructor. Lec. M W 9:05 (2nd half of semester). Offered alternate years. A. Collmer and S. Winans.

Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Campbellbacterium and Resource and Artemis tools, the pathogens Yersinia pestis, V. enterococcalica, Pseudomonas syringae, Rabdiola solanaeae, and Agrobacterium tumefaciens, and the symbiont Sinorhizobium meliloti.

PL PA 609 Fungal Plant Diseases
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401, or equivalents, or permission of instructor. Lec. F 12:15-2:15 (7 weeks, 2nd half of semester); lab, F 2:30-4:25 (7 weeks, 2nd half of semester). Offered alternate years.

A team-taught course providing basic information on the biology of fungal pathogens and the diseases they cause. The life cycles and disease cycles of representative fungi and diseases they cause are emphasized along with etiological and epidemiological aspects of the diseases covered.

PL PA 610 Oomycete Biology and Pathology
Spring. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec. M W 9:05-9:55 (7 weeks, 1st half of semester). Offered alternate years. E. B. Nelson.

This course is intended to provide students with a broad exposure to the oomycete pathogens. The basic attributes of this important group and animal, plant, and invertebrate parasites are detailed in lectures and demonstration sessions. Emphasis is placed on biological characteristics important to the pathogenesis of oomycetes. Topics address evolutionary biology, systematics, genetics, developmental biology, mechanisms of pathogenesis, unique aspects of oomycete metabolism and reproduction, and dormancy. Key ecological aspects of the interaction of oomycetes with plants and other microbes are covered. Practical aspects of oomycete biology, including isolation from environmental samples, epidemiology and disease control are also addressed.

PL PA 620 Ecology of Plant Pathogens

The basic ecological concepts, principles, methods, and literature important to the understanding of the interactions of plant pathogens with their physical, biochemical, and microbial environments are covered. Ecological processes that regulate the pre-infection behavior of plant pathogens are emphasized in both aboveground and belowground habitats. Topics include the nature and behavior of pathogen inoculum, population and community biology, pathogen interactions with plant-associated microbial populations and communities, rhizosphere and phyllosphere dynamics, and more.

PL PA 621 Chemical and Biological Disease Control

A discussion of the principles and methods used for the control of plant diseases. Emphasis is placed on chemical and biological strategies for disease control. Topics include historical aspects of disease management in plant pathology; the discovery, use, and mode of action of major fungicide groups; pathogen resistance to fungicides; microbial strategies for biological control, regulation, and commercialization of microorganisms, transgenic microorganisms; and strategies for integrating biological and chemical control strategies.

PL PA 622 Plant Disease Epidemiology
Fall. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec. M W 9:05 (7 weeks, 1st half of semester). Offered alternate years. Next offered spring 2006. M. G. Milgroom.

An introduction to basic concepts of population dynamics of plant pathogens and plant diseases in time and space. Emphasis is on the interplay between theory and empirical studies on disease progress, spatial patterns and spread, forecasting and risk assessment for plant pathogens.

PL PA 623 Pathogen Population Genetics
Fall. 1 credit. S-U grades optional. Prerequisites: PL PA 401 or permission of instructor. Lec. M W 9:05 (7 weeks, 2nd half of semester). Offered alternate years. Next offered spring 2006. M. G. Milgroom.

Introduction to basic principles of population genetics and evolution as they relate to plant pathogens. Topics include pathogen genetic diversity, population structure, reproductive systems, and migration. Special emphasis is on the applications of population genetics to answering questions about the biology and epidemiology of plant pathogens. Exposure from fungi, oomycetes, bacteria, and viruses are included.

PL PA 638 Filamentous Fungal Genomics and Development (also BIOMI 638)
Spring. 1 credit. S-U grades optional. Prerequisite: BIOMI 281 or equivalent. Lec. M W F 10:10 (last 4 weeks of the semester). Next offered spring 2005. B. G. Turgeon.

Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity) and reproduction, both sexual and asexual, are described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as Cochliobolus heterostrophus, Magnaporthe grisea, and Glioidum maydis and from well known genetic models such as Aspergillus nidulans and Neurospora crassa.

PL PA 642-659 Special Topics Series
Unless otherwise indicated, the following description applies to PL PA 642-661. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PL PA 642 Pathogen Population Biology
Fall. TBA. M. G. Milgroom.

PL PA 644 Current Topics in Oomycete Biology

PL PA 645 Plant Virology
The text contains a list of courses offered, with details such as course codes, titles, credit hours, prerequisites, and instructors. The courses cover a range of topics including plant biology, pathology, biochemistry, and molecular biology. Each course description includes important details like the number of credits, prerequisites, and the instructor's name. The courses are organized alphabetically by title, and each entry includes information about the course's focus, the semester(s) it is offered, and any additional remarks or requirements.
Hatchkiss, Joseph H., Ph.D., Oregon State U. Prof., Food Science

ADMINISTRATION
Mostafavi Mohsen, dean
W. Stanley Taft, associate dean
Nasrine Seraji, chair, department of architecture
Buzz Spector, chair, department of art
Kenneth M. Reardon, chair, department of city and regional planning
John McKeown, interim director, administration and finance
TBA, director, admissions and student services
TBA, director, alumni affairs and development
M. Susan Lewis, director, career services
Leon Lawrence, director, multicultural affairs
Margaret N. Webser, director, visual resources facility
Jayne A. LeGro, registrar

FACULTY ADVISERS
Architecture students are assigned faculty advisers and are also invited to share concerns with and seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

Students in the fine arts department are assigned a faculty adviser for the first year. After the first year, students may select their advisers. Students are required to have an adviser throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share concerns and seek advice from the volunteer student advisers (EARS) at anytime.

</table>

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural science, history of architecture, and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in most of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 670 students and a full-time teaching staff of over sixty, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university.

The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curricula, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES
The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and architecture design studios and shop facilities are in Rand and Sibley. The Green Dragon Café, a student eatery and lounge, is located in the lower level of Sibley Dome. There are darkrooms in the Department of Art that are available for general use by students in the college and are primarily used as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries
The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 177,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,200 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from Ernest and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 450,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries
The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall.

Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Rome Program
The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored seventeenth-century Palazzo Lazzaroni in the center of the eternal city near such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, fine arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see
individual department listings or contact the Rome Program Office, 149 East Sibley Hall.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olve Tiaden Gallery and the John Harratt Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty members, students, and visitors.

Scholastic Standards
Term by term, a candidate for an undergraduate degree in this college is required to successfully complete a minimum of 12 credit hours with a grade point average for the term of not less than C (2.0). The record of each student who fails below the standard will be reviewed by the college's Academic Records Committee for appropriate action, among those described below:

1) The student is issued a WARNING. This means the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on FINAL WARNING or given a REQUIRED LEAVE OF ABSENCE from the college.

2) The student is issued a FINAL WARNING. This indicates the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student may be given a REQUIRED LEAVE OF ABSENCE from the college.

3) The student is placed on a REQUIRED LEAVE OF ABSENCE. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may request to resume studies after a leave of absence of at least two semesters. This request is made by letter addressed to the dean of the college, Chair, of the Academic Records Committee, 129 Sibley Hall, Ithaca, NY 14853-6702. The student must submit evidence that time has been well used, and if employed, the student must submit a letter from the employer(s). Students on required leave are not allowed to register extramurally at Cornell, as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on a required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department to request credit for courses taken while on leave. A student's return to study in the college following a required leave of absence is at the discretion of the college's Academic Records Committee. Requests

for spring term return must be made by November 15 and requests for fall term return must be made by April 15. The second required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college.

4) The student is placed on a REQUIRED WITHDRAWAL. The student may not reregister in the College of Architecture, Art, and Planning and is dismissed from the college and is permanently prohibited from continuing studies in it.

The required withdrawal action does not prevent the student from applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence at the end of the next term if the performance during that term is deemed to be grossly deficient.

It is necessary to have a cumulative average of at least 1.7 (C-1.7) for graduation.

ARCHITECTURE

Professional Degree Programs
Cornell offers two professional degrees in architecture: the undergraduate Bachelor of Architecture and the graduate Master of Architecture. These degrees count toward the professional registration requirements established by the various states. The National Architectural Accrediting Board, and the National Council of Architectural Registration Boards.

B. Arch.

The undergraduate professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental design, structures, construction, and computer applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the Bachelor of Architecture degree to the post-professional M.Arch. I program. Some students are then able to complete the requirements for the master's degree in one additional year.

M. Arch. I

Cornell's graduate professional program is normally three and one-half years long and is intended for students who already have a bachelor's degree in any subject. Information on this professional graduate program may be found on the architecture web site (www.architecture.cornell.edu).

Note on Professional Accreditation

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes two types of degrees: the Bachelor of Architecture and the Master of Architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on its degree of conformity to established educational standards.

Master's degree programs may consist of a preprofessional undergraduate degree and a professional graduate degree, which, when earned sequentially, comprise an accredited professional education. The preprofessional degree, however, is not, by itself, recognized as an accredited degree.

Rome Program

The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, art, city and regional planning and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of inspiration and innovation.

Overlap Program

For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the post-professional Master of Architecture program. In the fall of the fourth undergraduate year, interested student petition the department to substitute ARCH 601-602 or 603-604 for ARCH 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall
of their fifth year and, once enrolled, may not transfer back into the 501–502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including ARCH 601–602 or 603–604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students. It is often advantageous for undergraduates to concentrate in specific subdisciplines of architecture, especially if they anticipate application to specialized graduate programs; therefore, the following concentrations in architecture are offered within the department for B.Arch. and B.F.A. in Architecture candidates only:

Architecture, Culture, and Society 342 (or equivalent), plus 9 credits in this area.

Architectural Science and Technology 261, 262, 263, 264, 361, 362, 363, distribution requirement (3 credits), plus 6 credits in this area.

History of Architecture 181, 182, distribution requirements (9 credits), plus 7 credits (including a 4 credit seminar course) in this area.

Theory of Architecture 231, 232, distribution requirements (6 credits), plus 6 credits in this area.
Visual Studies in Architecture 151, 152, distribution requirement (3 credits), plus 9 credits in this area.

Students wishing to receive recognition for a concentration must submit a Concentration Request form to the Architecture Department Office. For a course to count toward a concentration, the student must receive a grade of C or better.

Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree may apply to the professional M.Arch. I program.

Transfer students are responsible for completing that portion of the curriculum which has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the ten-term design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant’s case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint participants with opportunities, issues, and methods in the field of architecture.

Alternative Programs

Bachelor of Fine Arts

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

Bachelor of Science in History of Architecture

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program.

The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

Admission requirements. Two years of undergraduate study, ARCH 181 and 182 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal-transfer students. Before applying, all prospective internal-transfer students must meet with a History of Architecture faculty member to discuss scheduling for the program.

All students who wish to enter the program, either from Cornell or other institutions, must apply by November 15 for spring admission, or by March 31 for fall admission. Applications for both internal and external transfer students are available from the Admissions Office, College of Architecture, Art, and Planning, Cornell University, B-1 West Sibley Hall, Ithaca, NY 14853-6702. Completed applications must be submitted to the Admissions Office.

Curriculum. A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 24 credits of 300-level courses in architectural history: ARCH 380 through ARCH 399

2) 12 credits in 600-level architectural history seminars: ARCH 681 through ARCH 699; or 8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only

3) One 300-, 400-, or 600-level course in architectural theory

4) 24 credits in electives selected in consultation with the student’s adviser

5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students graduate with honors if, during their two years of study in the program, they have achieved a cumulative average of B or better in all courses, have no grade lower than A— in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual Degree Options

Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the Colleges of Sciences. Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor’s degree: with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

Concentration in Architecture for Non-Majors

A special concentration has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in completing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Non-Majors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students meeting the requirements for this concentration should complete a concentration form, which is available in the architecture department office. This form, when validated by the architecture department and the AAP college registrar, serves as evidence of completion of the concentration requirements. Students should consult their individual college registrars for information about whether their home college recognizes and notes such concentrations on transcripts or diplomas.

The curriculum for students in the Concentration in Architecture Program totals 14 credit hours minimum, including 8 credits of required courses and 6 credits of elective courses. Grades earned must be C or better in all courses.

Required courses. A minimum of 8 credits, including one design studio, one visual studies course (e.g., drawing), and one history of architecture course. For example, ARCH 110 Concentration in Architecture Design Studio (offered fall only, not offered every year) 3 credits or ARCH 103 Elective Design Studio (offered fall only, not offered every year) 6 credits
(ARCH 103 may substitute for ARCH 110; students who complete ARCH 103 must
take all other course requirements for the
concentration.)

ARCH 151 Drawing I (fall only) 2 credits
ARCH 181 or 182 History of
Architecture I or II (ARCH 181,
fall; ARCH 182, spring) 3 credits

Departmental elective courses: A minimum of six credits, including two departmental
elective courses, are required.

Architectural Design

Courses in brackets are not offered this year.
Each student in the architecture program (undergraduate, graduate, and in the Rome
Program) is charged a fee each semester to
help defray the continuing costs of refurbishing
and replacing equipment.

Sequence Courses

ARCH 101 Design I
Fall, spring. 6 credits. Limited to depart-
ment students. Staff.

An introduction to design as a conceptual
discipline directed at the analysis,
interpretation, synthesis, and transformation
of the physical environment. Exercises
are aimed at developing an understanding
of the issues, elements, and processes of
environmental design.

ARCH 102 Design II
Spring. 6 credits. Limited to depart-
ment students. Prerequisite: ARCH 101 and
Staff.

Human, social, technical, and aesthetic
factors related to space and form. Design
problems range from those of the immediate
environment of the individual to that of small
social groups.

ARCH 201-202 Design III and IV
Fall and spring. 6 credits each term.
Coregistration in ARCH 231–232 and com-
pletion of ARCH 151–152 required. Limited
to department students. Prerequisite for
ARCH 201 is ARCH 102 and ARCH 152.
Prerequisite for ARCH 202 is ARCH 201.
Staff.

Special Design Courses

ARCH 301-302 Design V and VI
Fall and spring. 6 credits each term.
Limited to department students.
Prerequisite for ARCH 301 is ARCH 203.
Prerequisite for ARCH 302 is ARCH 301.
Staff.

ARCH 401-402 Design VII and VIII
Fall and spring. 6 credits each term.
Limited to department students.
Prerequisite for ARCH 401 is ARCH 203.
Prerequisite for ARCH 402 is ARCH 401 or
ARCH 309. Staff.

Programs in architectural design, urban
design, or architectural technology and
environmental science, and other topics.

ARCH 501 Design IX
Fall or spring. 6 credits. Limited to depart-
ment students. Prerequisite: ARCH 402.
Staff.

Programs in architectural design, building
typology investigations, and research leading
to complete development of the student's
thesis program. General instruction in
the definition, programming, and development of
a thesis.

ARCH 502 Design X—Thesis
Fall or spring. 8 credits. Prerequisite: ARCH
501 or ARCH 500 and ARCH 510. Required
of all M.Arch. students who have satisfac-
torily completed a thesis. Students accepted
for admission to the Overlap Program are
exempt from the thesis requirement. Staff.

ARCH 601-602 Special Program in
Architectural Design
Fall and spring. 9 credits each term.
Limited to students who have been
accepted into the Overlap Program.
Registration by petition only. Staff.

ARCH 603-604 Special Program in Urban
Design
Fall and spring. 9 credits each term.
Limited to students who have been
accepted into the Overlap Program.
Registration by petition only. Staff.

Graduate Courses

ARCH 511-512 Core Design Studios
Fall and spring. 6 credits. Prerequisites:
ARCH 511 and ARCH 512 for ARCH 512:
limited to M.Arch.I students. Staff.

A two-semester sequence in which
fundamental design skills are taught.
The core studios integrate a broad range
of architectural territories, and students
acquire a command of techniques of design
and representation through a number of
complex architectural problems.

ARCH 513-516 Vertical Design Studios
Fall and spring. 6 credits. Prerequisites:
ARCH 512 and ARCH 513; ARCH 513–516
must be taken in sequence; limited to M.Arch.I students. Staff.

Vertical studios investigate a variety of
programs and project types, from individual
buildings to urban districts. Students will
examine topics of architectural production—
such as building technology, landscape,
urbanism, history, and theory—and their roles
in analysis and design.

ARCH 701-702 Problems in Architectural
Design
Fall and spring. 9 credits each term. Staff.
Basic first-year design course for M.Arch.II
students whose major concentration is
architectural design.

ARCH 703-704 Problems in Urban Design
Fall and spring. 9 credits each term. Staff.
Basic first-year design course for M.Arch.II
students whose major concentration is urban
design.

ARCH 801 Thesis or Research in
Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH
701 and ARCH 702. Staff.

Second-year design course for M.Arch.II
students whose major concentration is architectural design.

ARCH 802 Thesis or Research in Urban
Design
Fall or spring. 9 credits. Prerequisite: ARCH
703 and ARCH 704. Staff.

Second-year design course for M.Arch.II
students whose major concentration is urban
design.

ARCH 811 Graduate Thesis Proseminar
Fall. 3 credits. Prerequisites: ARCH 515;
limited to M.Arch.I students. Staff.
The first half of the year-long thesis in
architecture, this course covers research
methods and other subjects students employ
in the development of their individual thesis
topics. Emphasis will be placed on learning
different types of theses and developing
specific programmatic design, and site
definition techniques.

ARCH 812 Independent Design Thesis
Spring. 9 credits. Prerequisites: ARCH 516;
limited to M.Arch.I students. Staff.

The Master of Architecture thesis is an
independent design project on a topic
selected by the student and researched in
ARCH 811. The student develops a
thesis statement outlining an area of study
or a problem that has consequences for
contemporary architectural production and
produces a design project that examines it.
Marking the transition between the academic
and professional worlds, the thesis project is
an opportunity for each student to define an
individual position with regard to a specific
aspect of architectural practice.

Elective Design Courses

ARCH 103-104 Elective Design Studio
Fall, spring. 6 credits each term.
Limited to students from outside the
department. Prerequisite for ARCH
103: permission of instructor required.
Prerequisite for ARCH 104: ARCH 103 and
permission of instructor. Staff.

ARCH 200, 300, 400 Elective Design Studio
Fall, spring, or summer. 6 credits. Foreign
summer and Rome Programs only.
Prerequisite: C or better in ARCH 202.
Staff.

ARCH 309 Elective Design Studio
Fall, spring, or summer. 6 credits. Foreign
summer and Rome Programs only.
Prerequisite: C or better in ARCH 202.
Staff.

ARCH 500 Design IX—Alternate Studio
Fall, spring, or summer. 6 credits. Foreign
summer and Rome Programs only.
Prerequisite: C or better in ARCH 402.
Corequisite: ARCH 510. ARCH 500 will be
considered equivalent to ARCH 501 when
taken concurrently with ARCH 510. To
take ARCH 502, one must have a grade
of C or better in ARCH 500 and a passing
grade in ARCH 510. Staff.

For description, see ARCH 401–402.

ARCH 503 Design X
Fall and spring. 6 credits. Limited to depart-
ment students. Prerequisites: ARCH 402 and a passing, but non-advancing,
grade in ARCH 501.

A structured studio for those needing to
retake ARCH 501. The course operates within
the fourth-year design studios. If only ARCH
502 is taken in conjunction with ARCH 503
it can be followed by ARCH 502.

ARCH 504 Design Xa
Fall or spring. 6 credits. Limited to depart-
ment students. Prerequisite: ARCH 503 or
a passing, but non-advancing, grade in
ARCH 502.

A structured studio for those needing to take
an alternative to design thesis. This course
operates within the fourth-year design studios.
The course grade is based on the overall via highly personalized critiques of individual architectural problems in a studio setting. Through a graduated sequence of exercises, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty members, as well as periodic reviews of the group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 111 Concentration in Architecture: Design Studio
Summer only. 3 credits. Subject to enrollment. Limited to students not in architecture degree programs. Staff. A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as periodic reviews by guest critics.

ARCH 111 Concentration in Architecture: Design Studio
Fall or spring. 3 credits. Prerequisite: permission of instructor and approved independent study form. Staff.

ARCH 303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Not offered every year. F. Davis.

ARCH 306 Praxis: Community Design Workshop (also ARCH 606)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. G. Hascup. Praxis is a workshop-based, hands-on course directed to underserved local and global communities who seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork, as well as written, verbal, and graphic communication skills to negotiate the public realm.

ARCH 313.02 Furniture Design (Technology)
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn architecture technology credit must enroll in this section. Prerequisite: Permission of instructor. Not offered every year.

ARCH 313.03 Furniture Design (Free Elective)
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn in-college elective credit must enroll in this section. Prerequisite: permission of instructor. Not offered every year.

ARCH 317 Contemporary Italian Culture
Fall or spring. Variable credit (maximum 3). For students in the Rome Program only. Staff.

ARCH 510 Thesis Introduction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Not offered every year. F. Davis.

ARCH 510 Thesis Introduction
Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with ARCH 500. Prerequisite for ARCH 500 is ARCH 402. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510 during a foreign summer program or in Rome. Staff. Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 521 Professional Practice
Fall or spring. 3 credits. Staff. An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

ARCH 522 Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 411 Staff. Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

ARCH 605 Special Problems in Design
Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Staff.

ARCH 606 Praxis: Community Design Workshop (also ARCH 306)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis.

ARCH 610 Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in the Architectural Design and Urban Design Program. Not offered every year. Staff.

ARCH 611-612 Urban Housing Developments
Fall, 611; spring, 612. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisite: permission of instructor. Not offered every year. Staff.

Architectural Theory

ARCH 130 An Introduction to Architecture: Lectures
Summer. 3 credits. Open to nonarchitecture majors in college, high school students in eleventh and twelfth grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. S-U option. Not offered every year.

ARCH 231 Architectural Analysis I
Fall or spring. 2 credits. Architecture students must register concurrently with ARCH 201. Staff. Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 334 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 634)
Fall or spring. 3 credits. Limited to third-year level students and above. J. Wells. Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.
ARCH 337 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 338 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic is announced before preregistration.

ARCH 339 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. L. Minn and C. Pearson.
An examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 341 Theory of Architecture

ARCH 342 Architecture as a Cultural System
Spring. 3 credits. Can substitute ARCH 445, 446, 447, or 448 with permission of instructor. B. MacDougall.
What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course deals with concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideal and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society
Fall and spring. Variable credit (maximum 5). Prerequisite: permission of instructor and approved independent study form. B. MacDougall. Independent study.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each term. Prerequisite: permission of instructor. B. MacDougall. Topic to be announced before preregistration.

ARCH 445 Architecture and the Mythic Imagination

ARCH 447 Architectural Design and the Utopian Tradition

ARCH 467-468 Architecture in Its Cultural Context I and II

ARCH 469 Graduate investigations in Architecture, Culture, and Society
Fall and spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. B. MacDougall. Independent study.

Visual Studies

ARCH 151 Drawing I
Fall. 2 credits. Staff. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151. Staff. Freehand drawing as a means of conceiving and expressing spatial form, line weight, shades and shadows, and figure drawing.

ARCH 450 Architectural Publications

ARCH 456 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 551-552 Techniques in Visual Representation I and II
Fall and spring. 3 credits. Prerequisite: M.Arch I students or permission of the instructor. Staff. These courses explore the practice of drawing through analog and digital methods. They serve as an introduction to visualization and representation skills necessary to the development of architectural thought. Students will learn a broad range of techniques and tools in relation to one another.

ARCH 565 Special Investigations in Visual Studies II
Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 569 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff. Topics announced before preregistration.

ARCHITECTURE 131
[ARCH 364 Vertigo Structures (also ARCH 664)]

ARCH 365 Bridge Design (also ARCH 665)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. M. Gravellier.

There can be no denying the major visual impact of bridges on the built environment. And yet, during the past century, architects have virtually abandoned the role that they have historically had in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of Structural Art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students in this course examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 366 The Tectonic Articulation of Structure (also ARCH 666)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

Through a series of readings, exercises, and case studies, students investigate ways in which structural forces can be expressed in works of architecture. Both the structural basis of form as well as the formal articulation of structure are considered. Course objectives include: gaining insight into the behavior of structure; investigating the cultural meaning of structure and technology; and exploring the interaction of structure and form.

ARCH 463 Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, and 363 or permission of instructor. Not offered every year. Staff.

Topics announced before preregistration.

ARCH 473 Special Investigations in Structures
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 563 Structural Concepts
Fall or spring. 3 credits. Prerequisite: M.Arch. 1 students or permission of the instructor. Staff.

For description, see ARCH 263.

ARCH 564 Structural Elements
Fall or spring. 3 credits. Prerequisite: M.Arch. 1 students or permission of the instructor. Staff.

For description, see ARCH 264.

ARCH 663 Structural Systems
Fall or spring. 3 credits. Prerequisite: M.Arch. 1 students or permission of the instructor. Staff.

For description, see ARCH 363.

ARCH 664 The Tectonic Articulation of Structure (also ARCH 366)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

For description, see ARCH 366.

ARCH 665 Bridge Design (also ARCH 365)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. Staff.

For description, see ARCH 365.

ARCH 666 The Tectonic Articulation of Structure (also ARCH 366)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

For description, see ARCH 366.

ARCH 667 Working Drawings (also ARCH 667)

ARCH 668 The Tectonic Articulation of Structure (also ARCH 666)
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 262 or permission of instructor. Not offered every year. Staff.

Topics announced before preregistration.

ARCH 674 Special Investigations in Construction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 675 Special Investigations in Construction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 676 Building Technology, Materials, and Methods
Fall or spring. 3 credits. Prerequisite: M.Arch 1 students or permission of the instructor. Staff.

For description, see ARCH 262.

ARCH 677 Working Drawings (also ARCH 367)

Environmental Control

ARCH 261 Environmental Control—Site Planning
Spring. 3 credits. Staff.

The basic principles involved in design in the outdoor environment. A brief historical perspective; A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361 Environmental Control II—Lighting and Acoustics
Fall. 3 credits. Staff.

Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design; light, color, and form. Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

ARCH 362 Environmental Control II—Mechanical and Passive Solar Systems
Spring. 3 credits. Staff.

Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems, and plumbing.

ARCH 464 Special Topics in Environmental Control
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year. Staff.

Topics announced before preregistration.

ARCH 474 Special Investigations in Environmental Control
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 661 Environmental Control I—Lighting and Acoustics
Fall or spring. 3 credits. Prerequisite: M.Arch.1 students or permission of the instructor. Staff.

For description, see ARCH 361.

ARCH 662 Environmental Control II—Mechanical and Passive Solar Systems
Fall or spring. 3 credits. Prerequisite: M.Arch.1 students or permission of the instructor. Staff.

For description, see ARCH 362.

Computer Applications

ARCH 374 Computer Graphics I (also COM S 465)
Fall. 3 credits. Prerequisite: COM S/ENGRD 211. Staff.

For description, see COM S 465.

ARCH 476 Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 374 or 379 or permission of instructor. Not offered every year. Staff.

Topics announced before preregistration.

ARCH 477-478 Special Projects in Computer Graphics

ARCH 479 Advanced Computer Graphics: Virtual Reality (also ARCH 679)
Fall. 3 credits. Prerequisite: an introductory course in computer graphics or computer science, or permission of instructor; upper-level undergraduate or graduate status. H. Richardson.

The course explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course is devoted to examining the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second part of the course explores the uses of information technologies to model and simulate the creative design process. These explorations include: developing a library of design ideas as building blocks for design,
Directed Electives

[ARCH 380 History of Theory
Not offered 2004-2005.]

[ARCH 381 From Eutopia to the Gheto:
Renaissance Urban Form
Fall or spring. 3 credits. Prerequisites:
ARCH 181–182 or permission of instructor.
Not offered every year. M. Lasansky.

Significant developments in European urban
design from 1300-1600. Particular attention
will be awarded to Italy and Spain. The
course focuses on a series of case studies:
entire towns, specific urban spaces, and
individual building types. Weekly discussions
contextualize the city within a larger
cultural framework. We will consider how
civic, economic, social, political, legislative,
technical, and material concerns have had a
significant impact on the form, function,
and patronage of these places, spaces, and
structures. The relevance of Renaissance
theory to contemporary practice is also
emphasized through the discussion of several
twentieth-century urban plans and built
projects.

[ARCH 384 The Urban Landscape of
Renaissance Rome: 1450–1600
Fall or spring. 3 credits. Prerequisites:
ARCH 181–182 or permission of instructor.
Not offered every year. M. Lasansky.

This class is an exploration into the urban
morphology, architecture, and civic life of
Renaissance Rome. The city was a thriving
center for architectural practice. It drew
practitioners from throughout the peninsula
and served as an important theoretical model
for architects elsewhere. We survey the
important issues, individuals, and building
projects of the city between 1450 and 1600
with particular emphasis on the intellectual
and physical rediscovery and re-appropriation
of Antiquity; the role of the Vatican with its
large population of pilgrims, tourists,
resident church officials, foreign bankers, and
dignitaries that made specific demands of the
built environment; and their unique topography
and natural resources of the city’s location.
The last portion of the course addresses the
legacy of the Renaissance during the period of
Italian unification and the Fascist regime.

[ARCH 391 American Architecture and
Building II (also AM ST 391)
Fall or spring. 3 credits. Prerequisites:
ARCH 181–182 or permission of instructor.
Not offered every year. M. Woods.

A continuation of ARCH 390 but may be
taken independently. An account of American
architecture, building, and responses to the
environment from the post-Civil War period
to the present day. Particular attention is
paid to the processes of industrialization,
professionalization, and urbanization as well
as to the manifestations of gender, class, race,
and ethnicity in the built and architectural
environments.

[ARCH 392 Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites:
ARCH 181–182 or permission of instructor.
Not offered every year. M. Woods.

An exploration of certain themes deemed
critical to modern architecture and urbanism
through their representation in both
commercial and avant-garde films from the
medium’s birth until the present day. The
focus varies each semester with particular
emphasizes to include the modern house and
housing, the modern city, technology and
visions of the future, and finally the image of
the architect. Representations of these themes
in other forms such as painting, photography,
theater, literature, and advertising also are
examined. The course includes readings in modern architecture and film,
screenings in class, class discussions,
presentations, and papers.

[ARCH 393 The Cumulative City
Not offered 2004–2005.]

[ARCH 396 Special Topics in the History
of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites:
ARCH 181–182 or permission of instructor.
Not offered every year. Staff.
Topics to be announced.

[ARCH 397 Special Topics in the History
of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites:
ARCH 181–182 or permission of instructor.
Not offered every year. Staff.
Topics to be announced.

[ARCH 399 Special Topics in the History
of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites:
ARCH 181–182 or permission of instructor.
Not offered every year. Staff.
Topics to be announced.

Graduate Seminars in the History of
Architecture and Urbanism
All topics for ARCH 682 to ARCH 699 will be
announced prior to the start of the semester.

ARCH 680 Seminar in Historiography
Fall. 4 credits. Prerequisite: permission of
instructor. Staff.

Historiographic and methodological issues
are examined in relation to the history of
architecture and urbanism. Taught by different
faculty members in successive years, the
seminar is required of all first- and second-
year graduate students in the History of
Architecture and Urbanism Program.
ARCHITECTURE, ART, AND PLANNING 2004–2005

[ARCH 668 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism
Not offered 2004–2005.]

[ARCH 669 Seminar in Twentieth-Century Architecture and Urbanism
Not offered 2004–2005.]

[ARCH 690 Seminar in American Architecture, Building, and Urbanism

ARCH 691 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 692 Seminar in Nineteenth-Century Architecture, Building, and Urbanism

ARCH 693 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 694 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 695 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

Independent Study, Dissertation

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 5). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements. Staff. Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. For B.S. honors candidates in history only. Staff.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Prerequisite: permission of instructor. Staff. Independent study for graduate students only.

ARCH 899 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 4 credits. Staff. Independent preparation of the M.A. essay, often developed from topics investigated in ARCH 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Staff. Independent study for the doctoral degree.

ART

Undergraduate Program

The curriculum in art is a program of study within the College of Architecture, Art, and Planning, as well as other colleges at Cornell. The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it to be an excellent preparation for a career in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell: the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression. All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression. All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression. All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, or a Bachelor of Science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an adviser in both colleges of their dual degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met.

It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution

130 credits are required for the B.F.A. degree. A minimum of 62 are taken in the Department of Art. A minimum of 57 are taken outside the Department. The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (Senior Thesis)

Sculpture: ART 141, 241, 341, 342, 441, 442 (Senior Thesis)

Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 (Senior Thesis)

Photography: ART 161, 261, 263; 264, 265, 361 (1 of 3); 461, 462 (Senior Thesis)

Dual Concentration

Students interested in studying in more than one area may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

First Area of Concentration

Painting: ART 121, 221, 321, 421, 422

Sculpture: ART 141, 241, 341, 441, 442

Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432

Photography: ART 161, 261, 263/264/265/361 (1 of 4); 461, 462

Credits and Distribution

130 credits are required for the B.F.A. degree. A minimum of 62 are taken in the Department of Art. A minimum of 57 are taken outside the department.

Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. If a student wishes to take more than three studio courses in any one semester they must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned to the department prior to the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.

Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, photography, or printmaking (26 credits). Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved project course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in printmaking)

The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (Senior Thesis)

Sculpture: ART 141, 241, 341, 342, 441, 442 (Senior Thesis)

Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 (Senior Thesis)

Photography: ART 161, 261, 263; 264, 265, 361 (1 of 3); 461, 462 (Senior Thesis)
The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music and theatre, film, and dance.

Students must file an approved "Area of Concentration" form. In addition to the courses required of all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studio courses at a 200 level or 300 level, a minimum of two "Out of College" studio electives (OCE Studio) of 3-4 credits each, ART 483 Pre-Thesis in Combined Media and ART 492 Thesis in Combined Media.

Note: the total number of in/out-of-college elective credits required will be adjusted to allow for additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music and theatre, film, and dance.

Students must file an approved "Area of Concentration" form. In addition to the courses required of all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studio courses at a 200 level or 300 level, a minimum of two "Out of College" studio electives (OCE Studio) of 3-4 credits each, ART 483 Pre-Thesis in Combined Media and ART 492 Thesis in Combined Media.

Note: the total number of in/out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. (Under special circumstances, seniors may petition to attend the Rome Program.) Only under special circumstances, and with prior petition and approval, are seniors allowed to attend the Rome program. Students wishing to spend two consecutive semesters in Rome must submit a petition, which should include the proposed course schedule for both semesters and must have appropriate faculty approval.

**Students may add by approved petition to take 19 credits in Rome.**

### Out-of-College Requirements

A minimum of 57 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include physical and biological sciences (minimum of two courses, of at least 3 credits each); social sciences (minimum of three courses, of at least 3 credits each); and humanities and expressive arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the history of art. One course must be taken in each of the following areas:

- **Modern:** for example, 260, 265, 270, 360, 362, 365, 366, 367, 370, 477, 464.
- **Non-Western:** for example, 290, 339, 378, 380, 383, 384, 385, 386, 395, 396, 470, 490, 571.

Three electives: any art history elective at the 300-level or above or any architectural history elective. (Note: course offerings may vary each semester. Students are encouraged to consult with their adviser. Students may petition to substitute courses of similar content.)

The university requirement of two terms in physical education must be met.

For those students matriculating in fall of 2004:

- Students are required to take ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture, Art History elective; and a Freshman Writing Seminar during the fall semester of the freshman year. ART 131/132/133/134, Introductory Printmaking, Art History elective; and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in theory and criticism must be taken sometime during the junior or senior year.

Courses that will fulfill the theory and criticism requirement (note: offerings may change from year to year. Check the current course catalog):

- ARCH 447
- ART 170
- ART 312 (Rome students only)
- ART H 367, 370, 377, 422, 463, 464, 466, 494, 571, 594
- ENGL 395
- GERST 660
- GOVT 375
- HS&SC 304, 503
- ANTH 320, 322, 453
- THETR 376
The M.F.A. Program

The Master of Fine Arts program requires four terms of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs. Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each term; of these, nine credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 623, 624). Students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Fees are charged for all studio courses. See the specific course description for course fees. To take advantage of the special opportunities afforded by summer study, there are several course offerings during summer session.

Guidelines for Independent Study

A student who wishes to undertake an independent study must be a junior and in good academic standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell art department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of four.

Courses in Theory and Criticism

ART 111 Introductory Art Seminar
Fall. 1 credit. Limited to B.F.A. students. S.U. only. Staff.
Students meet each week with a different member of the faculty. The varying art interests of the faculty are presented and discussed. A maximum of two absences are allowed except by permission of chairman.

ART 170 Visual Imaging in the Electronic Age
Fall or spring. 3 credits. D. Greenberg.
This is an interdisciplinary survey course designed to introduce students in the creative arts, science, and engineering to the concepts of digital pictorial representation and display. It is a concept and theory course, which concentrates on "why" rather than "how." Topics will include: perspective representations, display technology, how television works, bandwidth concepts, digital photography, computer graphics modeling and rendering, matting and composing, color perception, data acquisition, volumetric imaging, and historical precursors, primarily from the art world. Also included are other modes of imaging.

Related Courses

ART 209 Site Specific Processes
Fall or spring. 3 credits. Prerequisite: ART 251 or permission of instructor. Staff. This studio course will investigate materials, methods, and processes specific to Rome. The Italian experience and specifically the city of Rome will be used to engage in artistic practices not readily available on the Ithaca campus. The methods to be studied in workshop settings could include fresco, painting, egg tempera, watercolor, paper making, wood carving, stone carving, mosaics, and ceramics. The final project will involve the use of one or more processes presented in a site-specific installation.

ART 214 Art and the Multicultural Experience
Fall. 3 credits. R. Dalton. This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. Students question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

ART 312 Modern Art in Italy
Fall or spring. 3 credits. Rome Program only. Staff. This course introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, critics, and others. Traces art from idea to realization and explores the gallery and its relationship to artists and to promotion of art, the role of the art critic and museum, and art collecting. Fulfills the 300-level theory and criticism requirement for fine arts majors.

ART 317 History of Art in Rome: Early Christian to the Baroque Age

ART 318 History of Art in Rome: Renaissance in Rome and Florence
Not offered every year. Staff. This course surveys art from the beginning of the fifteenth century to Michaelangelo's death (1564) with field trips to important churches, collections, and villas. Emphasis is given to sculpture and painting, and in the case of fresco, mosaics, and stucco decoration, the relationship with architecture and environment is a key element.

ART 419 Independent Study/Supervised Readings in Art
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

ART 570 Theory Seminar
Fall and spring. 4 credits. Priority given to AAP and Art History graduate students. F. M. Spector and M. Fernandez. This seminar will introduce students in art, art history, and architecture to diverse theoretical texts of relevance to the three fields. Readings will include classic texts in post-structural theory and more recent writings in new areas of theory and artistic practice, including digital...
ART 611 Professional Skills for the Visual Artist
Spring. 3 credits. Limited to M.F.A. students. Staff.
This seminar will help fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students will complete a resource notebook that will be useful to them in the years after they graduate. Topics include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612 Recent Practice in the Visual Arts
Fall. 3 credits. Limited to M.F.A. students. Staff.
This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual art community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial are discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

ART 613 On-Line Publication for the Visual Artist
Fall. 3 credits. Limited to M.F.A. students. Staff.
This seminar is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally each student learns to create a home page on the web.

ART 614 Contemporary Theory in the Visual Arts
Spring. 3 credits. Limited to M.F.A. students. Staff.
This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

ART 623 Contemporary Theory and Visual Criticism
Fall. 3 credits. Limited to M.F.A. students. Staff.
This seminar explores selected writings on current issues in the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary practice in the visual arts. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

ART 624 Current Criticism in the Visual Arts
Spring. 3 credits. Limited to M.F.A. students. Staff.
This seminar is designed to introduce graduate students to critical writing in the visual arts, both in print and in digital format. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

Studio Courses in Painting

ART 121 Introductory Painting
Fall, spring, or summer. 3 credits. Staff.
This course studies the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

ART 221 Painting II
Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor. Staff.
This course is an introduction to painting through color, form, space, and light. Projects are developed within the context of historical and contemporary artistic expression.

ART 321 Painting III
Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor. Staff.
This course is an advanced study of painting media and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic, and oil. In addition, paints and associated techniques developed in the twentieth century are used as well as developing technologies applicable to the painting process.

ART 322 Painting IV
Fall or spring. 4 credits. Prerequisite: ART 321 or permission of instructor. Staff.
This course is an advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

ART 421 Pre-Thesis in Painting
Fall or spring. 6 credits. Prerequisite: ART 422. Staff.
This course is an advanced study of painting through assigned and independent projects using a variety of materials leading to the formulation of a thesis project.

ART 422 Thesis in Painting
Fall or spring. 6 credits. Prerequisite: ART 421. Staff.
This course is an independent study of painting through assigned and independent projects using a variety of materials leading to the formulation of a thesis project.

ART 429 Independent Studio in Painting
Fall, spring, or summer. 4 credits, variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Staff.
This course is an independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.
ART 233 Lithography II  
Spring. 4 credits. Prerequisite: ART 133. Staff.  
The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

ART 234 Large Format Digital Printing  
Fall and spring. 4 credits. Prerequisites: ART 161, 171, and one of the following: ART 131, 132, 133 or permission of instructor. Staff.  
This course will focus on the use of digital printing and its use in combination with traditional forms of printmaking. Students will explore various approaches to image making while also utilizing traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photomechanical processes. Students will use appropriate software, including Adobe Photoshop, Quarkexpress, Final Cut Pro, and Adobe illustrator to draw from both still and video base sources. Students will work with large format inkjet printers.

ART 331 Printmaking III  
Fall or spring. 4 credits. Prerequisite: ART 231, 232, or 233 or permission of instructor. Staff.  
The course is the study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 332 Printmaking IV  
Fall. 4 credits. Prerequisite: ART 331 or permission of instructor. Staff.  
This course is a continuation and expansion of ART 331.

ART 431 Pre-Thesis in Printmaking  
Fall or spring. 6 credits. Prerequisite: ART 332. Staff.  
This course is a further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 432 Thesis in Printmaking  
Fall or spring. 6 credits. Prerequisite: ART 431. Staff.  
Advanced printmaking project to demonstrate creative ability and technical proficiency.

ART 439 Independent Studio in Printmaking  
Fall, spring, or summer. 4 credits, variable. Prerequisites: student must be a junior in good academic standing and have the written permission of the instructor. Staff.  
This course is an independent studio in printmaking that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 731-732, 831-832 Graduate Printmaking  
Fall, 731, fall; 732, spring; first-year M.F.A. students. 9 credits. 831, fall; 832, spring; second-year M.F.A. students. 9 credits. Staff.  
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

ART 141 Introductory Sculpture  
Fall, spring, or summer. 3 credits. Staff.  
A series of studio projects introduce the student to the basic principles of artistic expression in three-dimensions, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

ART 241 Sculpture I  
Fall or spring. 4 credits. Prerequisite: ART 141 or an architecture design studio, or permission of instructor. Staff.  
Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze/metal casting processes.

ART 341 Sculpture II  
Fall or spring. 4 credits. Prerequisite: ART 241 or permission of instructor. Staff.  
This course is a continued study of the principles of sculpture and conceptual development. Each student chooses the selection and expressive use of materials, media, scale, and content. Group discussions and individual criticism. Experimentation is encouraged.

ART 342 Sculpture IV  
Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor. Staff.  
This course is a continuation and expansion of ART 341. Special projects may include site-specific and/or large-scale installations.

ART 343 Sculpture V  
Fall or spring. 4 credits. Prerequisite: ART 342 or permission of instructor. Staff.  
This course is a continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 441 Pre-Thesis in Sculpture  
Fall or spring. 6 credits. Prerequisite: ART 342. Staff.  
This course is a further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism. Students complete a body of work through an approved statement of purpose and proposed schedule.

ART 442 Thesis in Sculpture  
Fall or spring. 6 credits. Prerequisite: ART 441. Staff.  
Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

ART 449 Independent Studio in Sculpture  
Fall, spring, or summer. 4 credits variable. Prerequisites: student must be a junior in good academic standing and have the written permission of the instructor. Staff.  
This course is an independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 741-742, 841-842 Graduate Sculpture  
741, fall; 742, spring; first-year M.F.A. students. 9 credits. 841, fall; 842, spring; second-year M.F.A. students. 9 credits. Staff.  
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

Studio Courses in Photography  
Darkroom fees for photography courses:
Fee for black-and-white courses: $135
Fee for color courses: $215
Fee for an additional black-and-white course taken the same term: $55
Fee for an additional color course taken the same term: $135

ART 161 Photography I  
Fall, spring, or summer. 3 credits. Staff.  
This course is a basic lecture-studio course in black-and-white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photographic imagery.

ART 168 Black-and-White Photography  
Summer. 3 credits. 3-week session only. Staff.  
This course is intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 169 Color Photography  
Summer. 3 credits. 3-week session only. Staff.  
This course is intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261 Photography II  
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.  
This course is a continuation of Photography I concentrating on black-and-white photographic processes, history and theory of creative practice, and individual projects.

ART 263 Color Photography  
Fall and summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.  
This course is a studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.
This course is an independent studio in
nonsilver photographic processes. Emphasis
is on camera skills, basic techniques and
processes, image content, and creative use of
photo processes.

ART 265 Studio Photography
Fall or spring. 4 credits. Prerequisite: ART
161 or ARCH 251, or permission of instruc-
tors.
A course in the use of medium- and large-
format cameras that explores technique,
lighting, and the use of larger-format cameras
for personal expression both in the studio and
outdoors.

ART 361 Photography III
Fall, spring, or summer. 4 credits.
Prerequisite: ART 360, 261, or permission of
instructor. Staff.
This course is the continued study of creative
use of photography, with emphasis on
specialized individual projects.

ART 461 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART
261, 263, Staff.
This is a studio course intended for
photography majors and other qualified
students.

ART 462 Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART
461. Staff.
This is a studio course intended for
photography majors and other qualified
students. Advisor for a photography project to
demonstrate creative ability and technical
proficiency.

ART 469 Independent Studio in
Photography
Fall, spring, or summer. 4 credits, variable.
Prerequisites: student must be in senior
standing and have the written permission of the
instructor. Staff.
This course is an independent studio in
photography that allows the student the
opportunity to pursue special interests not
treated in regularly scheduled courses. The
student plans study and projects under the
supervision of a faculty member selected to
guide their progress and evaluate their results.

ART 761-762, 861-862 Graduate
Photography
761, fall; 762, spring; first-year M.F.A.
students. 9 credits. 861, fall; 862, spring;
second-year M.F.A. students, 9 credits.
Staff.
Students are responsible, under faculty
direction, for planning their own projects
and selecting the media in which they will
work. Members of the faculty are available for
consultation. Discussion sessions of work in
progress are held.

Studio Courses in Drawing

Fee for all drawing courses: $25

ART 151 Drawing I
Fall, spring, or summer. 3 credits. Staff.
This general course introduces students to
principles and techniques of representation.
Emphasis is on creating the illusion of space
and form through line, the rendering of light
and shade, and studies in perspective.

ART 152 Drawing II
Spring. 3 credits. Prerequisite: ART 151.
Staff.
This is a general course in drawing that
emphasizes figure study and life drawing. This
course builds on the foundation of ART 151
and concentrates on the analytical study of the
figure. Students explore a variety of materials,
traditional and contemporary.

ART 159 Conceptual Drawing
Summer. 3 credits. Six-week session only.
Staff.
This course puts emphasis on drawing from
the imagination. The generation of ideas and
their development in sketches is stressed.
The intent is not to produce finished art but
rather to experience a series of problems that
require image and design concepts different
from those of the artist working directly from
nature.

ART 251 Drawing III
Fall. 3 credits. Prerequisite: ART 152. Staff.
This course is an intermediate drawing
course where students study composition, the
articulation of form, and the illusion of space
in a variety of materials. Expressive content,
conceptualization, and the exploration of
materials are stressed.

ART 252 Drawing IV
Spring. 3 credits. Prerequisite: ART 251.
Staff.
An advanced drawing course with emphasis
on life drawing and figure composition.
Individual expression is encouraged along
with creative investigation of materials and
processes.

ART 459 Independent Studio in Drawing
Fall, spring, or summer. 4 credits, variable.
Prerequisites: student must be a junior in
good academic standing and have the
written permission of the instructor. Staff.
This course is an independent studio in
drawing that allows the student the
opportunity to pursue special interests not
paid in regularly scheduled courses. The
student plans study and projects under the
supervision of a faculty member selected to
guide their progress and evaluate their results.

Special Studio Courses

Course fees:
171, 372, 479 $250
271, 272 $105
391, 392 $ 50
481, 482, 489 $ 70

ART 162 Electronic Imaging in Art
Fall or spring. 3 credits. Staff.
This course is an introductory studio course
using the computer as a tool for making
art. Students explore various approaches to
2- and 3-D software programs and various
functions. This course is an introduction to the web.

ART 271 Electronic 3-D Modeling and
Animation
Fall or spring. 4 credits. Prerequisite: ART
171. Not offered every year. Staff.
This is a studio course in creating 2- and
3-D still and animated images using computers
and 3-D software for object modeling,
animation, and rendering. This course
concentrates on the web.

ART 272 Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: ART
171. Not offered every year. Staff.
This is a studio course that introduces
students to digital video including capture
devices, animation, video, and sound with an
introduction to interactive presentation and
CD-ROM production. This course concentrates
on the web.

ART 273 Computer Animation (also CIS
518)
Fall. 4 credits. D. Greenberg.
This course focuses on techniques of
computer animations. It combines critical
readings with studio projects that employ a
variety of animation software. Topics covered
are modeling, storytelling, 2-D and 3-D
keyframe animation, motion and kinematics,
lighting effect and shading, texturing and
material properties, physical simulation, and
cinematography.

ART 372 Special Topics in Art Studio
Fall, spring, or summer. 4 credits, variable.
Staff.
This course is an exploration of a particular
theme or project.

ART 372.20 Special Topics in Art History
Spring. 4 credits, variable. Rome Program
only. Staff.
Topic to be announced.

ART 379 Independent Studio in Rome
Fall and spring. 4 credits, variable.
Prerequisites: student must be in junior in
good academic standing, and have the
written permission of the instructor. Rome
Program only. Staff.
This course is an independent studio in Rome
that allows non-art majors the opportunity
to pursue special interests in fine arts not
treated in regularly scheduled courses. The
student plans a course of study or projects
that meet the approval of the faculty member
selected to guide their progress and evaluate
the results.

ART 391 Media Arts Studio I (also ARCH
498/659, FILM 391, DANCE 391)
Fall, 3 credits. Prerequisites: FILM 277 or
377. student must be a junior and have
permission of the instructor. Lab fee $50.
Staff.
For description, see FILM 391.

[ART 392 Media Arts Studio II
Not offered 2004-2005.]

ART 400 Rome Studio
Fall or spring. 4 credits. Rome Program
only. Content for the Rome studio is
determined by the instructor. Prerequisite:
permission of instructor. Fee: $60.
Additional fees apply for photography and
printmaking. Staff.
Emphasis is divided between work
accomplished in the studio and work
executed outdoors in the environs of Rome.
Media consist primarily of painting, drawing,
sculpture, and photography, or those assigned
by the instructor. ART 400 fulfills four credits of
the concentration requirement.
ART 479 Independent Studio in Electronic Imaging
Fall, spring, or summer. 4 credits, variable. Prerequisites: student must be a junior in good academic standing and have the written permission of the instructor. Staff. This course is an independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 481 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in the course. Students must enroll in the pre-thesis course in their primary area of concentration. Staff. In this course students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482 Thesis in Combined Media
Fall or spring. 6 credits. Prerequisites: ART 481 and written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in this course. Students must enroll in the thesis course in their primary area of concentration. Staff. In this course students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 499 Independent Studio in Combined Media
Fall, spring, or summer. 4 credits, variable. Prerequisites: student must be a junior in good academic standing and have the written permission of the instructor. Staff. This course is an independent studio in combined media that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies
The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements (for students in the graduating class of 2005 and earlier)
Requirements for graduation: URS requirements include: 1) eight semesters of residence; 2) 120 credits; 3) two freshman seminars; 4) qualification in one foreign language; 5) four groups of distribution requirements; 6) required courses for major; 8) free electives; 9) a minimum of 34 courses; and 10) completion of the university requirement of two one-credit nonacademic courses in physical education. Please note that physical-education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. Please note that no course may satisfy more than one requirement.

1. General education
   a. Freshman writing seminars: two courses
   b. Foreign language: three courses or qualification in one foreign language
   c. Distribution Requirement: nine courses

   Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1-4.

   Group 1: Physical and biological sciences (two to three courses required)
   Group 2: Quantitative and formal reasoning (one to two courses required)
   Group 3: Social sciences and history (two to three courses required)
   Group 4: Humanities and the arts (two to three courses required)

Advanced Placement Credit
Students in the graduating class of 2006 and earlier may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S-U courses cannot be applied to the distribution requirements.

Students in the graduating classes of 2007 and later may apply NO advanced placement or transfer credit to general education requirements in Groups 1 through 4 (sciences, quantitative reasoning, social sciences/humanities/arts).

2. Required Courses for the Major in Urban and Regional Studies: five courses

   CRP 100 The American City
   CRP 101 The Global City: People, Production, and Planning in the Third World
   Statistics (at least 3 credits from approved list below)
   AEM 210 Introduction to Statistics
   BTRY 261 Statistical Methods
   ECON 219 Introduction to Statistics and Probability
   ILRST 210 Statistical Reasoning I
   MATH 171 Statistical Theory and Application in the Real World
   SOC 301 Evaluating Statistical Evidence (II)
   microeconomics course (at least 3 credits, from an approved list)
   architecture course (at least 3 credits)

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses
Students must take one CRP course in each of the following six areas: design, economics, environment, history, politics/policy, and quantitative analysis.

The URS approved area requirements list is available in 106 W. Shelby Hall. Students must take any additional five CRP courses (of at least 3 credits each, letter grade only).

NOTE: Cornell in Washington Program: GOVT 500 Politics/Policy: Theory, Research, and Practice can be used to fulfill four credits toward additional CRP course requirement.

4. Free Electives: six to nine courses

5. Physical Education (two terms)
Required courses for graduation: 34
Required credits: 120

New requirements for students in the graduating class of 2007 and after
General Education: same as graduating class of 2006 and earlier.
Distribution Requirements: same as graduating class of 2006 and earlier
(For a complete listing of courses in Groups 1 through 4, consult the Courses of Study catalog, College of Arts and Sciences section on “Distribution Requirements.” Note that the Arts and Science distribution requirement has been changed for entering freshmen in that college (class of 2007). Rather than selecting courses from Groups 3 (social sciences and history) and 4 (humanities and the arts), as of fall semester 2004, Arts and Sciences...
students will be required to complete five courses in at least four of the following five categories: Cultural Analysis (CA); Historical Analysis (HA); Knowledge, Cognition, and Moral Reasoning (KCM); Literature and the Arts (LA); and Social and Behavioral Analysis (SBA). Social science and humanities courses are marked individually by category, and any given department may offer courses that fall into distinct categories. URS students are also encouraged to select their Group 3 and Group 4 courses from four of these five categories.)

Required Courses for the Major in Urban and Regional Studies: seven courses

CRP 100: The American City (fall, 3 credits)
CRP 101: The Global City: People, Production, and Planning in the Third World (spring, 3 credits)
CRP 106: URS First-Year Seminar (spring, 1 credit)
CRP 200: The Promise and Pitfalls of Contemporary Planning (fall, 3 credits)
CRP 201: People, Planning and Politics in the City (spring, 3 credits)
ECON 101: Microeconomics (both semesters, 3 credits)

Area Requirement: six CRP courses

A. Design and Land Use (one course)
B. Urban History, Society, and Politics (one course)
C. Environment (one course)
D. Regional Development and Globalization (one course)
E. Methods for Planning and Urban Studies (two courses)

Either CRP 331 or CRP 332
CRP 331: Preparation for Urban Fieldwork (spring, 3 credits)
CRP 332: Urban Policy Research Seminar (fall, 3 credits)

OR an equivalent research course approved by the URS Director

And one of the following:

CRP 328: Overview Quantitative Methods in Public Policy Analysis
CRP 408: Introduction to Geographic Information Systems
CRP 395.54: Regional Economic Impact Analysis
CRP 425: Quantitative Methods for Urban Analysis (4 credits)

This requirement is also satisfied by GOVT 300, Methods Research Design and Qualitative Methods (Cornell in Washington) OR an equivalent research methods course approved by the URS director.

URS-Approved Area Requirements List (available in program office).

Concentrations

Urban Studies Concentration (non-URS majors)

The Urban and Regional Studies Concentration has been formulated specifically for those students not enrolled in the Program of Urban and Regional Studies and who are interested in complementing their current academic program with an introduction to various facets of urban studies (domestic, environmental, international, professional, urban affairs).

To complete the Urban and Regional Studies Concentration, students must take at least six courses (minimum total of 18 credits) in the Department of City and Regional Planning (CRP). Courses must be completed with letter grade of C or above.

Nine (9) credits of required core courses:

CRP 100: American Cities (3 credits)
CRP 101: The Global City: People, Production, and Planning in the Third World (3 credits)
CRP 200: The Promise and Pitfalls of Contemporary Planning (3 credits)

And 9 credits of elective department courses at the 300 level or higher.

(Please consult the department course listings.)

Students meet with their home college faculty advisor. Upon completion of course requirements, students complete a URS concentration application form, available in 106 W. Sibley Hall. The AAP Registrar verifies course completion and grades for concentration requirements and signs the application form. The URS program director (URS concentration advisor) also verifies completion of the concentration, signs the form, and sends a letter (on department letterhead) to the student's home college. The home college will record completion of the URS concentration on the student's transcript.

The department recognizes concentrations earned within the university (accepting standards set by various colleges). Students may apply for concentrations in any college (e.g., Africana Studies, Architecture, Latino Studies, Southeast Asian Studies, and Feminist, Gender, and Sexuality Studies). When a student satisfies the requirements for a concentration, and formal notification is received by the AAP Registrar, the concentration will be recorded on the student's official transcript.

Off-Campus Opportunities

Cornell in Washington Program. Students in good standing may earn degree credits in the Cornell in Washington program through course work and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study-abroad opportunities are continually being developed. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Middle East, and France should be forthcoming. We encourage URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty members assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and design.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options

Linked degree options. Urban and regional studies students may earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree option. A student accepted in Cornell's College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the
time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Applicants who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 719 Thayer Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics.

Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor B. Lynch, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701 (telephone: 607-255-2186).

**The Graduate Program in City and Regional Planning**

There are five graduate degree programs in the city and regional planning department. The Master of Regional Planning program stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning: The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts.

The Master of Professional Studies in International Development (M.P.S.I.D.) degree is administered jointly with the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). It is intended to meet the specific training needs of experienced planners or mid-career professionals in related fields.

The 60-credit Master of Arts (M.A.) in Historic Preservation Planning prepares students for professional work in the creative preservation and utilization of our physical heritage.

The Master of Science (M.S.) or Master of Arts (M.A.) degrees in Regional Science is the study of regional economics and their interactions with each other. Central issues include capital flows, trade location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations.

The Doctor of Philosophy (Ph.D.) program is for those who have advanced, specialized education for a career in teaching, research, or policy making.

**Off-Campus Opportunities**

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

**Course Information**

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor. The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

**Undergraduate Program in Urban and Regional Studies**

**CRP 100** The American City

Fall. 3 credits. S-U grades optional for out-of-department students only. W. W. Goldsmith.

An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the twentieth-first century. Readings, discussions, and brief papers explore topics ranging from suburban development to downtown revitalization, and from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

**CRP 101** The Global City: People, Production, and Planning in the Third World

Spring. 3 credits. S-U grades optional for out-of-department students only. N. Kudva.

A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

**CRP 106** URS First-Year Seminar

Spring. 1 credit. S-U grades only. B. Lynch.

This seminar introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

**CRP 200** The Promise and Pitfalls of Contemporary Planning

Fall. 3 credits. Prerequisite: CRP 100. K. Reardon.

An introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners will be examined through a combination of readings, lectures, films, guest speakers, and field trips. Students will acquire a deeper understanding of professional practice by working with local officials to develop community-development profiles for several Ithaca neighborhoods.

**CRP 201** People, Planning, and Politics in the City

Spring. 3 credits. Prerequisites: CRP 100 and CRP 101. J. Forester.

This seminar examines various bases of political and professional power. What do professionals who want to public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these and others questions.

**CRP 261** Fieldwork in Urban Archaeology (also LA 261)

Fall. 3 credits. S. Baugher.

For description, see LA 261.

**CRP 293** Inequality, Diversity and Justice (also GOVT 293, PHIL 193, SOC 293)

Fall. 4 credits. R. Mitroff.

For description, see PHIL 193.

**CRP 309** Community Development Seminar (also CRP 509)

Spring. 3 credits. Letter grade: K. Reardon.

The seminar provides an introduction to the theory, method, and practice of contemporary community development. Topics examined include: the role community-based organizations are playing in promoting sustainable development in distressed communities; the contribution planners are making to enhancing the organizational capacity of community organizations; and the interactions between neighborhood-based community development activities and regional economic development policy-making.

**CRP 318** Politics of Community Development (also CRP 518)

Spring. 3 credits. Letter grade: P. Clavel.

A seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

**CRP 321** Introduction to Quantitative Methods for the Analysis of Public Policy

Spring. 3 credits. Not offered every year.

An introduction to the role and use of quantitative methods in the study of urban and regional issues. This course focuses on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, simulation, and others.
CRP 328 Overview: Quantitative Methods in Policy Planning (also CRP 528)
Fall. 3 credits. S-U grades optional. Staff.
This course introduces students to the basic tools at the heart of policy analysis. Its goal is to set the scene for the techniques presented, to understand the questions that each addresses, to be aware of their potential and limitations, their range of applicability, and the pitfalls to be avoided.

CRP 330 Neighborhood Planning Workshop (also CRP 530)
Spring. 4 credits. Letter grade. K. Reardon.
This workshop offers students the opportunity to collaborate with local residents, leaders, and officials in the development of revitalization plans that address the critical environmental, economic, and social challenges confronting their neighborhoods. A participatory action research approach is used to co-produce professional-quality development plans with local stakeholders.

CRP 331 Preparation for Urban Fieldwork
Spring. 2 credits. Letter grade only.
Prerequisite: Urban Scholars status or permission of instructor. Staff.
Students are introduced to the key theories, methods, and challenges of experiential education, service-learning, reflective practice, and urban ethnography, in preparation for field-based learning and research experiences with nonprofit organizations and local government agencies that serve distressed urban communities. Topics include principles of experiential learning, learning contracts, participant observation, informal/formal interviewing skills, creating critical-incident journals, managing field relations, professional ethics, ethnographic report-writing, and urban social science.

CRP 332 Urban Policy Research Seminar on New York City
Fall. 3 credits. Open to students who have successfully completed the Cornell Urban Scholars, Adult Literacy, or Urban Semester Programs or permission of instructor(s). S-U grades optional. Staff.
This course is designed to enhance students' organizational, analytical, research, and communication skills in producing scholarly articles of publishable quality that critically examine important urban policy issues affecting the lives of New York City's poorest children, families, and neighborhoods. Students will produce policy-oriented journal articles that address vital issues confronting the city's most vulnerable residents, whom they've identified while working in Cornell-sponsored summer internships with nonprofit organizations and public agencies that provide direct services to the poor.

CRP 343 Affordable Housing Policy and Programs (also CRP 643)
Fall. 3 credits. S-U grades optional. R. Pendall.
An overview of federal, state, and local policies and programs to deliver affordable housing to low-income people; public housing, vouchers,incluisionary zoning, rent control, and much more. Lectures, debates, short papers, and term paper.

CRP 354 Introduction to Environmental Planning (also CRP 554)
Spring. 3 credits. A-M. Esnard.
An introduction to problems facing planners and decision makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventoring, and risk analysis.

CRP 360 Pre-Industrial Cities and Towns of North America (also LA 260/546 and CRP 566 and CRP 666)

CRP 361 Seminar in American Urban History (also CRP 661)
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.
Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 363 American Indians, Planners, and Public Policy (also CRP 547 and LA 263/547/581)

CRP 368 The History of Urban Form in America (also CRP 668)
Fall. 3 credits. Letter grades. M. Tomlan.
This course covers the history of city planning in America from colonial times to the early twentieth century, including brief reviews of European influences on urban form. Lectures, discussions, and short papers.

CRP 370 The Regional Question: The Case of Italy
Spring. 4 credits. For majors in urban and regional studies only. Rome Program only. Staff.
The "regional problem" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore theoretical and practical aspects of regional inequality. The question of how Italy's integration into the European Union affects and is affected by its regional issues will be considered.

CRP 371 Cuba: The Search for Development Alternatives

CRP 372 Twentieth-Century Italy: Politics and Society
Spring. 3 credits. S-U grade option for out-of-department students only. Staff.
This is a comprehensive survey of Italian society today, starting with Italy's geography and the historical forces that shaped the nation. Discussion includes north-south tensions, and such broad features of Italian social life as community structure, urban development, and family forms. The course also reviews selected institutional issues, such as gender, the system of education, problems of criminality and justice, economic reform, social class, religion, and politics.

CRP 376 Latin American Cities (also CRP 676)

CRP 378 Recycling and Resource Management (also CRP 578)
Spring. 3 credits. S-U grades optional. Not offered every year. R. Young.
Advanced sanitation, waste recycling and management systems are critical to the development of a sustainable society. This course reviews the political, technological, and economic strategies necessary for cities and communities to achieve a closed-loop resource-management system. Drawing from readings, speakers, and field trips that examine the cutting edge of recycling-program development, the course provides students with compound practical exposure to leading practitioners and best practices in the recycling field. Open to undergraduate and graduate students. Graduate students have additional research requirements.

CRP 380 Environmental Politics
Fall. 4 credits. Letter grade. R. Booth.
Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 381 Principles of Spatial Design and Aesthetics (also CRP 581)
Fall. 3 credits. Limited to 30 students. T. Trancik.
A lecture course that introduces the spatial and visual design vocabularies of cities and regions. Students learn the basic principles and theories of design, and the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 384 Green Cities (also CRP 584 and LA 495)
Fall. 4 credits. S-U grades optional. Not offered every year. R. Young.
For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life that are ecologically sound. This course examines the history and future of urban environmental systems with a special focus on green infrastructure. Students learn about the history and future of urban environmental systems, with a special focus on green infrastructure.

CRP 395 Special Topics
Fall, spring, summer. 4 credits. Variable. Hours to be arranged. Staff.
For description, see department coordinator, 106 Wendell.

CRP 395.03 Wilderness and Wildlands: Issues in Policy and Planning (also CRP 679.03)
Fall. 2-3 credits variable. Graduate seminar open to juniors and seniors. Not offered every year. J. Thordike.
Wilderness and wildlands are under assault by the Congress, the "Wild Use" movement, property-rights activists, polluters, and the actual users. This seminar will consider historical and philosophical foundations and political factors that impact
decisions about wilderness policies, planning, acquisition, protection, and management. The role of government, professional planners, and management of special interests, the legal system, citizens, and user groups will be examined. Practical exposure to planning and policy development through readings, discussions, guest practitioners, and a field trip to the Finger Lakes National Forest. Optional weekend trip to Adirondack Park Wilderness area.

**CRP 395.60 Gender and Globalization**
(also FGSS 360)
Fall. 3 credits. L. Beneria.
For description, see FGSS 360.

**[CRP 400 Introduction to Urban and Regional Theory]**

**[CRP 401 Seminar in Urban Political Economy]**

**CRP 404 Urban Economics**
(also CRP 504)
Spring. 4 credits. Prerequisite: microeconomics. M. Drennan.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time is spent in discussing problems of cities in developing countries.

**CRP 408 Introduction to Geographic Information Systems (GIS)**
(also CRP 508)
Spring. 4 credits. A-M. Esnard.
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Topics covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

**CRP 412 Devolution, Privatization, and the New Public Management**
(also CRP 612, AEM 433/533, and FGSS 411/611)
Fall. 4 credits. Prerequisite: ECON 101 or equivalent course. S-U grades optional. M. Warner.
This course addresses devolution and decentralization of government services in a national and international context and then focuses on the local public-sector response in the United States. Privatization, intergovernmental cooperation, and internal restructuring are reviewed, including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and client involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the term.

**CRP 416 European City: The Public Sphere and Public Space**
Spring. 4 credits. Open to all juniors and seniors. S-U option available to non-majors. Enrollment may be limited by the instructor. Rome Program only. Staff.
An examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socio-economic underpinnings of the city. How are cities organized, and how do citizens relate to the state: the city to the nation; the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

**CRP 417 Economic Development: Firms, Industries, and Regions**
(also CRP 517)
Spring. 4 credits. S. Christopherson.
Economic development policy in the United States has focused historically on the provision of subsidies to individual firms. As the limitations of this strategy have become more apparent, alternative approaches including multifirm and workforce development are being implemented. This comparative course draws on cases from a variety of industries and national contexts. Particular attention is paid to economic development issues and policies in New York State.

**CRP 418 Government Policy Workshop**
(also CRP 618, AEM 434/634 and FGSS 420/620)
Students undertake research requested by clients (associations of local government, union, non-profit, federal, and international agencies) to analyze and identify alternative approaches to restructuring government-service delivery. The course requires teamwork and includes qualitative and quantitative methods of analysis in collaboration with clients.

**CRP 442 Emerging Global Environmental Trends**
(also CRP 543)

**CRP 444 Resource Management and Environmental Law**
(also CRP 544 and NTRES 444)
Spring. 4 credits. Open to juniors, seniors, and graduate students, and by permission of instructor. R. Booth.
This course introduces the application of legal concepts and principles to the management of natural resources and natural-resource areas. It explores the role of the common law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands, and to the conflicts inherent in government attempts to regulate important natural resources on private lands.

**CRP 448 Social Policy and Social Welfare**
(also CRP 548)
Spring. 3 credits. S. Christopherson.
This course addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social-welfare controversies. The first part of the course introduces principles that guide the development of social policy, including fairness and justice. Various conceptions of society are examined with reference to their influence on the nature and extent of social-welfare provision, comparing the United States with other industrialized countries. The second part of the course examines how economic change and government policy affect social provision in the United States.

**CRP 451 Environmental Law**
(also CRP 551)
Fall. 4 credits. R. Booth.
An introduction to how the legal system handles environmental problems. Study of federal environmental statutes (e.g., the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act) and important judicial decisions that have been handed down under those statutes and federal regulations. Discussions cover environmental-law topics from a policy-management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, government, environmental engineering, law, business, architecture, landscape architecture, and other topics. Course assignments for graduate students differ in some aspects from those for undergraduates.

**CRP 453 Environmental Aspects of International Planning**
(also CRP 683)
Fall. 4 credits. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences. B. Lynch.
This seminar examines the ways in which roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations—formulate environmental debates and design conservation and remediation programs and policies in the Third World.

**CRP 477 Issues in African Development**
(also CRP 677)
Fall and spring. 1 credit. S-U grades only. M. Ndulo.
This course examines a broad range of critical concerns in contemporary Africa, including food production, human resource development, migration, urbanization, environmental resource management.
economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

**CRP 490 Student-Faculty Research**
Fall or spring. 4 credits. Variable. Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only. Staff.
Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

**CRP 492 Honors Thesis Research**
Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty. Each selected student works with his or her thesis adviser.

**CRP 493 Honors Thesis Writing**
Fall or spring. 4 credits. Prerequisite: completion of CRP 492. Staff. Each selected student works with his or her thesis adviser.

**CRP 497 Supervised Readings**
Fall or spring. 4 credits. Variable. Limited to juniors and seniors. Prerequisite: permission of instructor. Staff.

**Graduate Courses and Seminars**
Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upper-level graduate courses are numbered from 800 to 899. (Undergraduates with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

**CRP 504 Urban Economics (also CRP 404)**
Spring. 4 credits. Prerequisite: microeconomics. M. Drennan. For description, see CRP 404.

**CRP 508 Introduction to Geographic Information Systems (GIS) (also CRP 408)**
Spring. 4 credits. A.-M. Esnard. For description, see CRP 408.

**CRP 509 Community Development Seminar (also CRP 309)**
Spring. 3 credits. K. Reardon. For description, see CRP 309.

**CRP 512 Public and Spatial Economics for Planners**
Fall. 3 credits. No prior knowledge of economics necessary. M. Drennan. Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics.

**CRP 513 Introduction to Planning Practice and History**
Fall. 4 credits. N. Kolda. An introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs. Topics are analyzed from the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

**CRP 517 Economic Development: Firms, Industries, and Regions (also CRP 471)**
Spring. 4 credits. S. Christopherson. For description, see CRP 417.

**CRP 518 Politics of Community Development (also CRP 318)**
Spring. 3 credits. P. Clavel. For description, see CRP 318.

**CRP 519 Urban Theory and Spatial Development**
Spring. 3 credits. W. W. Goldsmith. This course surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. We consider orthodox/conservative treatments as well as critical left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities, the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

**CRP 520 Statistical and Mathematical Concepts for Planning**
Fall. 3 or 4 credits. Not offered every year. Staff.
An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics include matrix algebra, probability, sampling, estimation, and regression, and the use of a microcomputer statistical package.

**CRP 521 Mathematical Foundation for Planning Analysis**
Fall. 1 credit. S-U grades only. Meets for two hours, once each week, for approximately half the semester. Not offered every year. Staff.
Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

**CRP 525 Introductory Methods of Planning Analysis**
Fall. 4 credits. R. Pendall. A course on quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include: descriptive and inferential statistics, mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

**CRP 528 Overview: Quantitative Methods in Policy Planning (also CRP 328)**
Fall. 3 credits. S-U grades optional. Staff. For description, see CRP 328.

**CRP 529 Mathematics for Planners**
Fall. 4 credits. Variable. S-U grades optional. Staff.
The course covers basic mathematical concepts and techniques—such as calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences, and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

**CRP 530 Neighborhood Planning Workshop (also CRP 330)**
Spring. 4 credits. K. Reardon. For description, see CRP 330.

**CRP 532 Real Estate Development Process**
Fall. 3 credits. Letter grade. Fee for case-studies packet. B. Olson.
Examination of various forms of development as well as the role of major participants in the processes. Review of issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

**CRP 533 Real Estate Marketing and Management**
Spring. 3 credits. R. Abrams.
The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

**CRP 537 Real Estate Seminar Series**
Fall and spring. 1.2 credit per term. Restricted to M.P.L./E. students. S-U grades only. B. Olson.
A one-credit course designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

**CRP 543 Emerging Global Environmental Trends (also CRP 443)**

**CRP 544 Resource Management and Environmental Law (also CRP 444 and NTRES 444)**
Spring. 4 credits. R. Booth. For description, see CRP 444.

**CRP 545 Introduction to Quantitative Methods for the Analysis of Public Policy**
Fall. 3 credits. R. Pendall. An introduction to econometrics, covering bivariate and multivariate regression. Applications include population, unemployment, and tax revenue forecasting for subnational...
CRP 546 Introduction to Community and Environmental Dispute Resolution
Fall. 3 credits. J. Forester.
This course explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public-policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

[CRP 547 American Indians, Planners, and Public Policy (also CRP 363 and LA 263/LA 547)]

CRP 548 Social Policy and Social Welfare (also CRP 448)
Spring. 4 credits. S. Christopherson.
For description, see CRP 448.

CRP 549 Ethics and Practical Judgment in Planning
Spring. 4 credits. variable. Not offered every year. Staff.
An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 481)
Fall. 4 credits. R. Booth.
For description, see CRP 451.

CRP 552 Land-Use Planning
Fall. 3 credits. A.-M. Esnard.
Course covers surveys, analyses, and planning techniques for guiding physical development of urban areas, location requirements, space needs, and interrelations of land uses. Emphasis is on residential, commercial, and industrial activities and community facilities, and housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Land-Use Regulations
Spring. 3 credits. R. Pendall.
Seminar covers the essentials of "smart growth," zoning, and subdivision, and the main tools for implementing a land-use plan. Also covers agriculture and open-space preservation, infrastructure-timing controls, redevelopment, planned-unit development, and more.

CRP 554 Introduction to Environmental Planning (also CRP 354)
Spring. 3 credit. A.-M. Esnard.
For description, see CRP 354.

CRP 555 Urban Systems Studio (also LA 701)
Fall. 5 credits. Prerequisite: permission of instructor. R. Trancik.
Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical-design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital-design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 556 Design in Real Estate Development
Spring. 3 credits. S-U grades optional. M. Schack.
This course provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs of location through project implementation. Fundamentals involved in defining, stimulating, and recognizing quality in design are addressed. The analysis of case-study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 557 City Planning Design Studio
Spring. 4 credits. Prerequisite: previous design courses or permission of instructor. Not offered every year. Staff.
A series of individual and team small-area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop
Fall or spring. 4 credits variable. S-U grades optional. R. Pendall.
Students work on urban issues, such as housing, traffic, and parking, economic development, zoning, and related planning issues with public or nonprofit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 560 Documentation for Preservation
Fall or spring. 3 credits. M. Tomlan.
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses
Fall or spring. 3 credits. M. Tomlan.
Course covers techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 562 Perspectives on Preservation
Fall. 3 credits. M. Tomlan.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563 Problems in Contemporary Preservation Practice
A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation
Spring. 3 credits. Open to juniors, seniors, and graduate students. M. Tomlan.
A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 565 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit. M. Tomlan.
Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 566 Planning and Preservation Practice
Fall. 1 credit. Prerequisite: standing in CRP programs or M.P.S./R.E. or permission of instructor. S-U grades only. R. Pendall and M. Tomlan.
Students participate in field study of city planning, historic preservation, economic and community development, and real estate issues in large Eastern U.S. cities.

CRP 567 Measured Drawing
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor. M. Tomlan.
Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

[CRP 569 Archaeology in Preservation Planning and Site Design (also LA 569)]

CRP 578 Recycling and Resource Management (also CRP 378)
Spring. 3 credits. S-U grades optional. R. Young.
For description, see CRP 378.

CRP 581 Principles of Spatial Design and Aesthetics (also CRP 381)
Fall. 3 credits. Course enrollment limited to 30 students. R. Trancik.
For description, see CRP 381.

CRP 584 Green Cities (also CRP 384 and LA 495)
Fall. 4 credits. S-U grades optional. R. Young.
For description, see CRP 384.

CRP 605 Urban Public Finance
Fall. 4 credits. Prerequisite: prior exposure to microeconomics. M. Drennan.
An overview of neoclassical public-economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public-finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

CRP 607 GIS Applications Workshop
Fall. 4 credits. Prerequisites: an introductory GIS course or permission of instructor. A.-M. Esnard.
This course is an advanced GIS class that focuses upon GIS applications and projects for one or more clients. During some semesters students will work on their own projects.
Contact the instructor directly to learn about project options for the current semester.

CRP 612 Devolution, Privatization, and the New Public Management (also CRP 412, AEM 433/633 and FGSS 411/611)
Fall. 4 credits. Prerequisite: ECON 101 or equivalent course. S-U grades optional. M. Warner.
For description, see CRP 412.

CRP 614 Gender and International Development (also FGSS 614)
Spring. 3 credits. L. Beneria.
This course has four main objectives: 1) to provide an analysis of the location of women in development processes and to understand the centrality of gender in each case; 2) to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity; 3) to reflect upon the linkages between the global economy and the macro and micro processes of development from a gender perspective and 4) to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

CRP 616 Globalization and Development
Spring. 3 credits. Not offered every year. L. Beneria.
This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the redistribution of resources. This includes the analysis of processes through which the current neoliberal model has been built, such as trade liberalization, labor-market flexibility, the erosion of nation states as economic units, and the formation of trade blocks and global institutions, and the discussion of current debates about future directions.

CRP 618 Government Policy Workshop (also CRP 418, AEM 434/634, and FGSS 420/620)
For description, see CRP 418.

CRP 621 Quantitative Techniques for Policy Analysis and Program Management
Spring. 4 credits. D. Lewis.
Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 631 Local Economic Policy—Field Workshop

CRP 632 Methods of Regional Science (also CRP 332)
Spring. 4 credits variable. Staff.
An introduction to some of the major methods and models used in regional science and planning. Topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning will be discussed. Where appropriate, computer implementation emphasizing statistical, econometric models is considered.

CRP 633 Methods of Regional Science and Planning II

CRP 635 Workshop: State Economic Development Strategies
Fall. 4 credits. S-U grades optional. S. Christopherson.
The purpose of this workshop is twofold: 1) to provide students with research tools useful in developing state-level economic-development strategies; and 2) to provide a critical understanding of the primary economic-development strategy used by U.S. state policymakers: firm-specific subsidies. The course consists of lecture and discussion meetings. The workshop sessions include exercises in qualitative information gathering on economic-development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

CRP 637 Regional Development Planning: An International Perspective
Fall. 4 credits, variable. S-U grades optional. T. Victorisz.
This course develops a broad historical and theoretical context within which urban and regional planning problems across the world are embedded: addresses aspects of the global information economy affecting economic development and cultural identity; and demonstrates how such a broad perspective can make for more viable local plans. From the perspective of commitment to an open society, the course also examines the tension between planning oriented to social equity and the polarizing forces of market fundamentalism.

CRP 638 Planning and the Global Knowledge Economy: Sustainability Issues
Spring. 4 credits, variable. S-U grades optional. T. Victorisz.
The course analyzes the current sustainability crisis in terms of major changes in the social organization of production emphasizing the worldwide economic and cultural shocks created by the emerging knowledge economy. Insight into the dynamics of this transition, in the light of similarly dramatic transitions in the past, can guide attempts to move toward sustainability and high-quality urban and regional living environments.

CRP 642 The Micro-Politics of Participatory Planning Practices
Spring. 4 credits variable.
This seminar explores issues of "practice" (rhetoric and negotiation, interpretation and judgment, narrative and recognition) as they influence democratic deliberations involving questions of ethics and argument, participation and identity, historical trauma and working-through, and resistance. The approach we take can be called a "critical pragmatism." We use practitioners' oral histories to investigate the challenges of participatory planning practices.

CRP 643 Affordable Housing Policy and Programs (also CRP 343)
Fall. 3 credits. S-U grades optional. R. Pendall.
For description, see CRP 343.

CRP 653 Legal Aspects of Land-Use Planning
Spring. 3 credits. R. Booth.
Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 655 Real Estate Project Workshop
Spring. 4 credits. Permission of instructor required. Fee for mandatory field trip.
R. Abrams and M. Schack.
Students are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field are addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, and others. Projects focus on real-world case studies and require professional-level reports suitable for oral and written presentations.

CRP 657 Real Estate Law
Spring. 3 credits. Letter grade. A. Klausner.
Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

CRP 658 Residential Development
Spring. 4 credits. Letter grade. Fee for mandatory field trip.
R. Olson.
The course explores the residential-development process from site acquisition through delivery of the finished product. Topics covered include: market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing, and sales activities. Current issues in providing competitive housing products in today's markets are also examined. The composition of the residential-development project team is discussed. Classes are supplemented by presentations from visiting professionals. The course includes a semester-long project based on an actual property and market opportunity.

CRP 661 Seminar in American Urban History (also CRP 361)
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.
For description, see CRP 361.

CRP 662 Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1–4 credits. Prerequisite: CRP 561. M. Tomlan.
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 663 Historic Preservation Law
Spring. 3 credits. Offered alternate years. R. Booth.
The course covers: law of historic district and landmark designation; tools for preservation (such as police power, taxation, eminent domain); and recent developments in state and federal historic preservation.
CRP 642 Economics and Financing of Neighborhood Conservation and Preservation  
Spring. 3 credits. M. Tomlan.  
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real-estate economics, and private financing of real-estate projects.

CRP 665 Preservation Planning and Urban Change  
Fall. 3 credits. M. Tomlan.  
An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

[CRP 666 Pre-Industrial Cities and Towns of North America (also CRP 360, LA 260 and LA 666)]  

CRP 668 The History of Urban Form in America (also CRP 368)  
Fall. 3 credits. M. Tomlan.  
For description, see CRP 368.

CRP 670 Regional Planning and Development in Developing Nations  
Fall or spring. 3 credits. Prerequisite: second-year graduate standing. Staff.  
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671 Seminar in International Planning  
Spring. 1 credit. S-U grades only. B. Lynch.  
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 672 International Institutions  
Spring. 3 credits. L. Beneria.  
The course focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the U.N. system up to the early 1970s, and how these functions have and evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

[CRP 674 Urban Transformations in the Global South (also CRP 474)]  

CRP 675 Workshop on Project Planning in Developing Countries  
Fall. 4 credits. D. Lewis.  
An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social-impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar–workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

[CRP 676 Latin American Cities (also CRP 376)]  

CRP 677 Issues in African Development (also CRP 477)  
Fall or spring. 1 credit. S-U only. M. Ndulu.  
For description, see CRP 477.

CRP 678 Infrastructure in Developing Countries  
Spring. 4 credits. S-U grades optional. B. Lynch.  
This graduate seminar examines 1) the roles of international institutions, national governments, and private-sector actors in shaping infrastructure policies and major construction projects, 2) the project process from initial proposal to construction, and 3) the implications of big projects for different social groups and economic sectors. It also discusses the intended and unintended consequences of megaprojects and the reasons they become targets of social movement activity.

CRP 679.03 Wilderness and Wildlands: Issues in Policy and Planning (also CRP 395.03)  
Fall. 2–3 credits variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thorndike.  
For description, see CRP 395.03.

CRP 683 Environmental Aspects of International Planning (also CRP 453)  
Fall. 4 credits. B. Lynch.  
For description, see CRP 453.

[CRP 703 Contemporary Theories of Regional Development]  
Fall or spring. 4 credits. Not offered 2004–2005. Staff.

[CRP 711 Planning and Organization Theory]  
Fall or spring. 4 credits. Not offered 2004–2005. P. Clavel.

CRP 714 Gender, Race, and Class in Planning  
Fall. 3 credits. L. Beneria.  
The course introduces students to the importance of gender, race, and class issues in planning theory and practice. Both domestic and international topics are covered. Discussions, short papers, and term paper required.

[CRP 732 Methods of Regional Science and Planning III]  

[CRP 733 Seminar in Regional Models]  

CRP 790 Professional Planning Colloquium I  
Fall. 1 credit. Staff.  
Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirement for the course are attendance and a brief evaluation at the semester's end.

CRP 791 Master's Thesis in Regional Science  
Fall or spring. 12 credits, variable. S-U grades optional. Hours to be arranged. Regional Science faculty. Staff.

CRP 792 Master's Thesis, Project, or Research Paper  
Fall or spring. 10 credits, variable. S-U grades optional. Staff.

CRP 794 Planning Internships  
Fall, spring, or summer. 12 credits, variable. Staff.  
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 795 Master's Thesis in Preservation Planning  
Fall or spring. 6 credits, variable. Staff.

CRP 796 Professional Writing and Publishing (Colloqu)  
Fall or spring. 2 credits. S-U grades only. Not offered every year. Staff.  
Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings  
Fall or spring. 4 credits, variable. Limited to graduate students. Prerequisites: permission of instructor. Staff.  
For description, see department coordinator, 106 West Sibley.

[CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis]  

CRP 800 Advanced Seminar in Urban and Regional Theory I  
Fall. 3 credits. S. Christopherson.  
An introduction to key conceptual and empirical literature in urban theory. The course focuses on the relationship between political and economic processes and their joint influence on urban spatial form.

[CRP 801 Advanced Seminar in Urban and Regional Theory II]  

[CRP 810 Advanced Planning Theory]  

CRP 830 Seminar in Regional Science, Planning, and Policy Analysis  
Fall or spring. 4 credits, variable. S-U grades only. Staff.  
This seminar provides an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered vary each year. Empirical and analytical research are emphasized. Students are expected to prepare and present a research paper during the semester on some aspect of the topics under review.
LANDSCAPE ARCHITECTURE

Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program

Landscape Architecture offers a three-year Master of Landscape Architecture License Qualifying Degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in Landscape Architecture; a concentration in a subject related to the core courses; and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, and six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program, administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject-matter areas such as landscape design, history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information

Note: All of the following courses are offered through the College of Agriculture and Life Sciences except LANAR 497, 524, and 525.

LA 140 The Symbols of New York State's Cultural Landscape
Fall. 3 credits.

LA 141 Grounding in Landscape Architecture
Fall. 4 credits.

LA 142 Grounding in Landscape Architecture
Spring. 4 credits.

LA 155 American Indian Cultural Landscape Changes in Time
Fall. 3 credits.

LA 201 Medium of the Landscape
Fall. 5 credits.

LA 202 Medium of the Landscape
Spring. 5 credits.

LA 260 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)

LA 261 Fieldwork in Urban Archaeology (also CRP 261)
Fall. 4 credits.

LA 262 Laboratory in Landscape Archaeology (also ARKEO 262)
Spring. 3 credits.

LA 263 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 547)

LA 266 Jerusalem through the Ages
Fall. 3 credits.

LA 282 The American Landscape
Fall. 3 credits.

LA 301 Integrating Theory and Practice I
Fall. 5 credits.

LA 302 Urban Design in Virtual Space
Spring. 5 credits.

LA 315 Site Engineering I
Spring. 3 credits.

LA 316 Site Engineering II
Fall. 2 credits.

LA 318 Site Construction
Spring. 5 credits.

LA 402 Integrating Theory and Practice: Community Design Studio
Spring. 5 credits.

LA 403 Directed Study: The Concentration (also LA 603)
Fall or spring. 1 credit.

LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits.

LA 412 Professional Practice
Spring. 1 credit.

LA 486 Placemaking by Design: Theory Seminar
Fall. 5 credits.

LA 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491)
Fall. 4 credits.

LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment
Spring. 4 credits.

LA 494 Special Topics in Landscape Architecture
Fall or spring. 1-3 credits.

LA 495 Green Cities (Also CRP 384/584)
Fall. 4 credits.

LANAR 497 Individual Study in Landscape Architecture
Spring. 1-5 credits; may be repeated for credit. S-U grades optional. L. J. Mirin.

Work on special topics by individuals or small groups.

LA 498 Undergraduate Teaching
Fall or spring. 1-2 credits.

LA 501 Composition and Theory
Fall. 5 credits.

LA 502 Composition and Theory
Spring. 5 credits.

LA 505 Graphic Communication I
Fall. 3 credits.

LA 506 Graphic Communication II
Spring. 3 credits.

LANAR 524 History of European Landscape Architecture
Fall. 3 credits. L. Mirin.

A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape-architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 525 History of American Landscape Architecture
Spring. 3 credits. L. Mirin.

Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

LA 545 The Parks and Fora of Imperial Rome
Spring. 3 credits.
[LA 547] Americans, Indians, Planners, and Public Policy (also CRP 363/547 and LA 263)

[LA 569] Archaeology in Preservation Planning and Site Design (also CRP 569)

LA 580 Landscape Preservation: Theory and Practice
Fall. 3 credits.

LA 582 The American Landscape
Fall. 3 credits.

LA 590 Theory Seminar
Spring. 3 credits.

LA 598 Graduate Teaching
Fall or spring. 1–2 credits.

LA 601 Integrating Theory and Practice I
Fall. 5 credits. Limited to graduate students.

LA 602 Integrating Theory and Practice II
Spring. 5 credits. Limited to graduate students.

LA 603 Directed Study: The Concentration (also LA 403)
Fall or spring. 1 credit.

LA 615 Site Engineering I
Spring. 3 credits.

LA 616 Site Engineering II
Fall. 2 credits.

LA 618 Site Construction
Spring. 5 credits. Weeks 8–15.

[LA 619] Advanced Site Grading

[LA 666] Pre-Industrial Cities and Towns of North America (also CRP 360/666 and LA 260)

LA 680 Graduate Seminar in Landscape Architecture
Fall or spring. 1–3 credits.

LA 694 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)
Fall. 5 credits.

LA 702 Advanced Design Studio
Spring. 5 credits.

LA 800 Master's Thesis in Landscape Architecture
Fall or spring. 9 credits.

FACULTY ROSTER
Azis, Iwan, Ph.D., Cornell U. Visiting Prof., City and Regional Planning.
Baugh, Sherene, Ph.D., SUNY at Stony Brook. Visiting Prof., City and Regional Planning.
Beneria, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning.
Bertoia, Roberto, M.F.A., Southern Illinois U. Assoc. Prof., Art
Blum, Zevi, B.Arch., Cornell U. Prof. Emeritus, Art
Booth, Richard S., J.D., George Washington U. Prof., City and Regional Planning.
Bowman, Stanley J., M.F.A., U. of New Mexico. Prof. Emeritus, Art
Briggs, Laura, M.Arch., Columbia U. Assoc. Prof., Architecture
Chi, Lily H., M.Phil., Cambridge U. Assoc. Prof., Architecture
Christopherson, Susan M., Ph.D., U. of California at Berkeley. Prof., City and Regional Planning.
Clavel, Pierre, Ph.D., Cornell U. Prof., City and Regional Planning.
Colby, Victor E., M.F.A., Cornell U. Prof., Emeritus, Art
Crump, Ralph W., B.Arch., Cornell U. Prof. Emeritus, Architecture.
Crutueller Mark R., M.Eng., Ph.D., McGill U. (Canada) Assoc. Prof., Architecture
Curry, Milton S. F., M.Arch., Harvard U. Assoc. Prof., Architecture
Czamanski, Stan, Ph.D., U. of Pennsylvania. Prof. Emeritus, City and Regional Planning.
Daly, Norman M.A., Ohio State U. Prof. Emeritus, Art
Drennan, Matthew P., Ph.D., New York U. Prof., City and Regional Planning.
Esnard, Ann-Margaret. Ph.D., U of Massachusetts-Amherst. Asst. Prof., City and Regional Planning
Evett, Kenneth W., M.A., Colorado Coll. Prof. Emeritus, Art
Forester, John, Ph.D., U. of California at Berkeley. Prof., City and Regional Planning.
Goehner, Werner H., Dipl. Ing., Technical U. Karlsruhe (Germany). M.Arch., Cornell U. Prof., Architecture
Goldsmith, William W., Ph.D., Cornell U. Prof., City and Regional Planning.
Greenberg, Donald F., Ph.D., Cornell U. Prof., Architecture
Hascup, George E., B.Arch., U. of California at Berkeley. Prof., Architecture
Hodgden, Lee C., M.Arch., Massachusetts Inst. of Technology. Prof. Emeritus, Architecture
Hubbell, Kent L., M.F.A.S., Yale U. Prof., Architecture
Isard, Walter, Ph.D., Harvard U. Prof. Emeritus, City and Regional Planning.
Kira, Alexander, M.R.P., Cornell U. Prof. Emeritus, Architecture
Kord, Victor, M.F.A., Yale U. Prof., Art
Kudva, Neema, Ph.D., U. of California at Berkeley. Asst. Prof., City and Regional Planning.
Lasansky, D. Medina, Ph.D., Brown U. Asst. Prof., Architecture
Levitte, Yael, Ph.D., U. of Toronto. Visiting Lecturer, City and Regional Planning.
Lewis, David B., Ph.D., Cornell U. Prof., City and Regional Planning.
Locey, Jean N., M.F.A., Ohio U. Prof., Art
Lynch, Barbara, Ph.D., Cornell U. Visiting Assoc. Prof., City and Regional Planning.
MacDougall, Bonnie G., Ph.D., Cornell U. Assoc. Prof., Architecture
Mikus, Eleanor, M.A., U. of Denver. Prof. Emeritus, Art
Miller, John C., M.Arch., Cornell U. Prof. Emeritus, Architecture
Olpadwala, Ponus, Ph.D., Cornell U. Prof., City and Regional Planning
Otto, Christian F., Ph.D., Columbia U. Prof., Architecture
Ovaska, Arthur, M.Arch., Cornell U. Assoc. Prof., Architecture
Pearman, Charles W., B.Arch., U. of Michigan. Prof. Emeritus, Architecture

Woods, Mary N., Ph.D., Columbia U. Assoc. Prof., Architecture
Zissovici, John, M.Arch., Cornell U. Assoc. Prof., Architecture
The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell. Graduate study in the biological sciences is administered by more than a dozen special fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION
Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.bio.cornell.edu. Located in Stimson Hall, the professional and student advisers provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisers in the OUB also follow the progress of biology majors and work closely with faculty advisers. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic and career advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Robert C. Seamans or brigantine Corwith Cramer.

DISTRIBUTION REQUIREMENT
In the College of Agriculture and Life Sciences, the Physical and Life Sciences distribution requirement is a minimum of 18 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109-110, 105-106, or 101 and 103 plus 102 and 104, or 107-108. For students in the College of Arts and Sciences, all biology (“BIO”) courses can be used toward fulfillment of the biological distribution requirement except BIO G 200 (unless permission is obtained), BIO G 209, or BIOMX 204. The following courses are especially suitable for the distribution requirement because they have no prerequisites: BIO G 101-104, 105-106, 107-108, 109-110, 170, 202, BIOAP 212, BIOEE 154, 277, 275, BIOLGD 184; BIOMI 192; BIONB 111; BIOPL 240, 241.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from BIO G 109-110, 101 and 103 plus 102 and 104, 105-106 or 107-108 or from specified courses in chemistry or physics.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged in BIO G 101-104.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY
Students wishing to enroll in biology (“BIO”) courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. “Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.”
2. Courses bearing the “BIO” description are required to provide for the care of such animals as outlined in Guiding Principles in the Care and Use of Laboratory Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals (DHHS publication 86-23, revised 1996; see p. 16, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.
3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).
4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253-3520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.
5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor’s discretion, be asked to sign copies of this statement (USE OF ANIMALS...) at the first meeting of the course.

ADVANCED PLACEMENT
For information on credit for advanced placement in Biological Sciences, please see www.bio.cornell.edu/advising/ap.cfm.

THE MAJOR
The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall. Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Biology majors should regularly monitor their progress in the major, and should assess realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology adviser and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–9 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S-U only or if the student’s adviser grants permission.

1) Introductory biology for majors (one year): BIO G 101 and 103 plus 102 and 104, or 105–106. BIO G 107–108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors.

Students majoring in biological sciences may wish to consult with their biology adviser and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.
3) **College mathematics** (one year): Calculus (MATH 106, 111, 191, or their equivalent) plus one semester selected from the following:
   a. a second semester of calculus (MATH 112, 192, or their equivalents).
   b. a course in finite mathematics (Biometry 101, 417, MATH 105, 251).
   c. a course in statistics (BTRY 301, MATH 171, AEM 210, PSYCH 350, ILR 210, ECON 319, ECON 321, SOC 301).

4) **Organic chemistry**: CHEM 257 and 251, or 357-358 and 251, or 357-358 and 301, or 359-360 and 251, or 359-360 and 301.

5) **Physics**: PHYS 101–102, 207–208,* or 112–213.* Those who take PHYS 112–213 are advised to complete PHYS 214 as well.

6) **Genetics**: BIOGD 281.

7) **Biochemistry**: BIOBM 330, or 331 and 332, or 335.

8) **Evolutionary Biology**: BIOEE 278 or BIOEE 418. Note: BIOEE 241, Botany, is a prerequisite course to BIOEE 448.

9) A program of study selected from the outline below.

10) **Foreign language**: students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement for the biology major by a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

   Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

   Note: Core courses cannot count toward the Program of Study Requirements.

**Programs of Study and Requirements**

As noted in the list of requirements above, students accepted into the biological sciences major must choose a Program of Study. Wherever they are found, the requirements of the biology curriculum provide the common foundation deemed essential for all biology majors.

The role of the Program of Study is to provide either a concentration in a particular area of biology or, in the case of the General Biology Program of Study, a survey of biology that is broad but not superficial. The Program of Study requirement in some Programs of Study can be met by participation in the independent research course (BIOG 495). The possible Programs of Study and their requirements are listed below:

1) **Animal Physiology**: BIOAP 311, Introductory Animal Physiology, BIOAP 316 Cellular Physiology, plus a minimum of 7 credit hours selected from the following lecture and laboratory courses, of which at least 4 credit hours must be a laboratory course.
   a) Lecture courses: BEE 454, Physiological Engineering; AN SC 300, Animal Reproduction and Development; AN SC 410, Nutritional Physiology and Metabolism; AN SC 427, Fundamentals of Endocrinology; BIO G 305, Basic Immunology; BIOAP 214, Biological Basis of Sex Differences; BIOAP 458, Mammalian Physiology; BIOBM 407, Nature of Sensing and Response; Signal Transduction in Biological Systems; BIOBM 437, Eukaryotic Cell Proliferation; BIOGD 365, Developmental Biology; BIOGD 463, Molecular Aspects of Development; BIOBM 322, Hormones and Behavior; BIOBM 325, Neurodiseases-Molecular Aspects; BIOBM 326, The Visual System, BIONB 492, Sensory Function, NS 331, Physiological and Biochemical Bases of Human Nutrition.

2) **Biochemistry**: CHEM 300, Quantitative Chemistry, six credits of organic chemistry (CHEM 357–358 or 359–360); a minimum of 4 credits of organic chemistry laboratory (CHEM 301–302 or 301–252); 4 credits of biochemistry laboratory courses (BIOBM 440, Laboratory in Biochemistry and Molecular Biology); and Physical Chemistry (CHEM 389–390 or 287–288 or 389–288).

   Note: CHEM 288 is designed for biologists.

   Five hours of Biochemistry are recommended (351 and 332, or 330 and 334 or 333 and 334) and students are urged to take BIOBM 432, Cell Biology, Students interested in graduate work in biochemistry PHYS 207–208 and consider taking a third semester of calculus in preparation for CHEM 389–390. Be sure to complete CHEM 207–208 or 215–216 during the freshman year.

   Note: Biology majors in the College of Agriculture and Life Sciences must also select this program of study to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.

3) **Computational Biology**: One course in computer programming (COM S 100, Introduction to Computer Programming, or BEE 151, Introduction to Computing); one course in mathematics (MATH 221, Linear Algebra and Calculus, or MATH 231, Linear Algebra; or MATH 294, Engineering Mathematics II; or MATH 420, Partial Differential Equations and Dynamical Systems; or BTRY 408, Theory of Probability; or BTRY 421, Matrix Computation); a bridging course, i.e., a course in mathematical modeling applied to biology (BIOEE 362, Dynamic Models in Biology; BIOEE 460, Theoretical Ecology; COM S/BIOEM 321, Numerical Methods in Computational Molecular Biology; or BTRY 382, Introduction to Statistical Genomics and Bioinformatics); and one course from the following list of advanced courses:

   It is strongly recommended that students complete the Core physics requirement using the PHYS 207/208 option.

   It is strongly recommended that students complete the Core organic chemistry requirement using the CHEM 257/251 option and that the time saved be used to take either COM S 211 or a second mathematics course from the list above.

   Note: MATH 112, Calculus, should be used to fulfill the core requirement for a second term of math.

   Note: Bridging courses require linear algebra (MATH 221, Linear Algebra and Calculus, or MATH 231, Linear Algebra, or MATH 294, Engineering Mathematics II; or BTRY 421, Matrix Computation). For bridging courses, BIOEE 460, Theoretical Ecology, MATH 420, Partial Differential Equations and Dynamical Systems, will also serve as a prerequisite.

   Note: BTRY 408 and MATH 420 can satisfy either the mathematics requirement or a requirement for an additional course.

   Note: Students who use BTRY 408 to fulfill the additional mathematics requirement
Note: Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station.

Note: Students may apply up to 6 credits of 300-level courses taken at the Sholes Marine Laboratory (see BIOBM) toward the 10 credits. The Ecology and Evolutionary Biology Program of study offers a specialization in Marine Biology and Oceanography (for a description, see section entitled Courses in Marine Science).

Note: Alternatively, the Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses in biology (Fundamentals of Tropical Biology and Field Research in Tropical Biology). Students may substitute credit earned for these two courses for two 3-credit courses at the 400 level from list b. Information about the OTS Program is available at Cornell Abroad, 474 Uris Hall.

5) General Biology: The Program of Study in General Biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1-8 on page 152. These 13 credits must include:

a) One course from each of three different programs of study in biology. Only those courses specifically listed as fulfilling a program of study requirement are acceptable without permission of adviser.

b) A course with a laboratory.

c) And, a minimum of two upper-level (300 and above) courses of 2 or more credits each.

100-level courses are not acceptable for meeting any of these requirements. BIO G 498 may not be used to fulfill the requirements of this program of study. BIO G 499 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOAP 413, Histology, could count in all three areas: as a course in the Animal Physiology program of study, as an upper-level course, and as a course with a lab.

6) Genetics and Development: A minimum of 15 credits, usually chosen from the following courses: BIOGD 385, Developmental Biology; BIOGD 450, Vertebrate Development; BIOGD 480, Seminar in Developmental Biology; BIOGD 481, Population Genetics; BIOGD 482, Human Genetics and Society; BIOGD 493, Advanced Developmental Biology; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOGD 487, Human Genomics; BIOGD 489, Mammalian Embryology; BIOGD 600, Development of Sensory Systems; BIOGD 662, Fertilization and the Early Embryo; BIOGD 684, Advanced Topics in Population Genetics; BIOGD 687, Developmental Genetics; BIOGD 689, Cellular Basis of Development; BIOM 420, Microbial Genomics; BIOM 485, Bacterial Genetics; ENTOM 400, Insect Development; BIOM 475, Mechanisms Underlying Mammalian Developmental Defects; BIOM 495, Developmental Neurobiology; BIOM 497, Molecular and Genetic Approaches to Neuroscience; BIOM 499, Molecular and Genetic Approaches to Neuroscience; BIOM 537, Eukaryotic Cell Proliferation; BIOM 549, Molecular Basis of Human Disease; NSW 698, Epigenetics; BIOM 633, Biosynthesis of Macromolecules; BIOM 639, The Nucleus; BIOEE 453, Speciation; PL BR 403, Genetic Improvement of Crop Plants; PL BR 606, Advanced Plant Genetics; BIOPL 454, Molecular Biology and Genetic Engineering of Plants; BIOPL 541, Laboratory in Plant Molecular Biology; BIOPL 544, Regulatory Factors in Plant Growth and Development; BIOL 652, Plant Molecular Biology I; BIOL 655, Plant Molecular Biology II. Up to 3 credits for this Program of Study may be chosen from other Biological Sciences courses, including BIO G 499, Independent Research in Biology, with approval from the faculty adviser.

7) Insect Biology: ENTOM 212, Insect Biology, plus a minimum of three additional courses totaling at least 9 credits selected from the following two groups. At least one of the three additional courses must be selected from group (a).

(a) ENTOM 322, Insect Morphology; ENTOM 331, Introductory Insect Systematics; ENTOM 483, Insect Physiology.

(b) ENTOM 215, Spider Biology; ENTOM 325, Insect Behavior; ENTOM 333, Larval Insect Biology; ENTOM 352, Medical and Veterinary Entomology; ENTOM 370, Pesticides, Environment and Human Health; ENTOM 394, Circadian Rhythms; ENTOM 400, Insect Development; ENTOM 443, Entomology and Pathology of Trees and Shrubs; ENTOM 444, Integrated Pest Management; ENTOM 452, Herbivores and Plants; ENTOM 453, Historical Biogeography; ENTOM 455, Insect Ecology; ENTOM 456, Stream Ecology; ENTOM 463, Invertebrate Pathology; ENTOM 470, Ecological Genetics; ENTOM 471, Freshwater Invertebrate Biology and Bimuritorontology; ENTOM 477, Biological Control; ENTOM 490, Insect Toxicology; ENTOM 644, Advanced IPM.

8) Microbiology: Students in the Microbiology Program of Study must complete BIOM 290, General Microbiology, Lectures; BIOM 291, General Microbiology, Laboratory. At least 8 additional credits are required, which must include at least one of the following courses: BIOM 314, Bacterial Diversity; BIOM 416, Bacterial Physiology; BIOM 418, Microbial Ecology; BIOM 485, Bacterial Genetics.

Additional approved courses are included in the list below. Students are invited to complete their requirements in one of three areas of interest (these are only recommended, and students can design their own course list as long as they meet the requirements described above): (i) Prokaryotic Biology; (ii) Molecular Microbiology and Biotechnology; and (iii) Pathogenic Microbiology. Courses acceptable to the program of study that cover topics related to a particular area of interest are:

Prokaryotic Biology: BIOM 391, Advanced Microbiology Laboratory; BIOM 414, Bacterial Diversity; BIOM 416, Bacterial Physiology; and BIOM 418, Microbial Ecology.

Molecular Microbiology and Biotechnology: BIOM 391, Advanced Microbiology Laboratory; BIOM 416, Bacterial Physiology; BIOM 420, Microbial Genomics; BIOM 485, Bacterial Genetics; and BIOM 394, Applied and Food Microbiology.

Pathogenic Microbiology: BIOM 404, Pathogenic Bacteriology and Mycology; BIOM 409, Viruses and Disease; BIOM 417, Medical Parasitology; and BIOM 485, Bacterial Genetics.

9) Molecular and Cell Biology: Chemistry 357-358 or 359-360; BIOM 432, Survey
of Cell Biology; BIOBM 440, Laboratory in Biochemistry and Molecular Biology; and at least 7 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two courses from the following list: BIOAP 416, Cellular Physiology and Genomics Laboratory; BIOBM 433, Laboratory in Cell Biology; BIOBM 434, Applications of Molecular Biology; BIOBM 435, Eukaryotic Cell Proliferation; BIOBM 439, Molecular Basis of Human Disease; BIO G 505, Immunology; BIOGD 385, Developmental Biology; BIOGD 483, Advanced Invertebrate Biology; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOMI 290, General Microbiology, Lectures; BIOMI 408, Viruses and Disease II; BIOMI 420, Microbial Genomics; BIOMI 485, Bacterial Genetics; BIOMN 222, Neurobiology and Behavior II: Introduction to Neurobiology; BIOMN 425, Molecular and Genetic Approaches to Neurosciences; BIOP 343, Molecular Biology and Genetic Engineering of Plants; BIOP 547, Laboratory Biology and Genetic Engineering of Plants; BIOP 444, Plant Cell Biology. Graduate-level courses such as BIOMI 631, Protein Structure and Function; BIOMI 635, Biosynthesis of Macromolecules; BIOMI 636, Cell Biology; and BIOMI 639, The Nucleus are also acceptable with permission of the adviser. Five hours of biochemistry are recommended (BIOM 351 and 352, or 330 and 334, or 333 and 334). CHEM 207-208 or 215-216 should be completed in the freshman year.

10) Neurobiology and Behavior: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BION 221 and 222) with discussion sections in the fall and spring terms, includes an additional 7 credits. The 7 additional credits must include at least one ADVANCED course from the BION 221 offerings. "Topics" courses (BION 320s and 720s) and independent study (BIO G 499) may not count as ADVANCED courses.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BION 221 or 222 for only 3 credits must take the 1-credit discussion section in BION 221 and 222. To arrange this, the student should consult the professors in charge of the two courses.

11) Nutrition: NS 331, Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least 9 credits of additional course work in the biological aspects of nutrition; such as NS 222, Maternal and Child Nutrition, NS 315, Obesity and the Regulation of Body Weight, NS 332, Methods in Nutritional Sciences; NS 347, Human Growth and Development; NS 361, Biology of Normal and Abnormal Behavior; NS 421, Nutrition and Exercise; NS 431, Mineral Nutrition and Chronic Disease; NS 441, Nutrition and Disease; NS 452, Molecular Epidemiology; and Dietary Markers of Chronic Diseases; NS 455, Nobel Prizes in Biomedical Research; NS 475, Mechanisms Underlying Mammalian Developmental Defects, NS 601, Proteins and Amino Acids; NS 602, Lipids; NS 603, Mineral Nutrition: Metabolic, Health, and Environmental Implications; NS 614, The Vitamins; and NS 614, Topics in Maternal and Child Nutrition. Some courses require NS 115, Nutrition Health and Society, which may be used as part of the additional nine credits. Independent study credits cannot be used toward the 13-credit minimum.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count towards the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will be granted based on 100 hours required in A&S if those credits fulfill major requirements.

12) Plant Biology: Students choose one area of study from the following two options:

Option (a) Botany: Students are required to take Introductory Botany (BIOP 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOP 242 and 244, Plant Function and Growth, Lectures and Laboratory; BIOP 243, Taxonomy of Vascular Plants; BIOP 247, Ethnobotany, BIOP 248, Taxonomy of Vascular Plants: BIOP 342 and 344, Plant Physiology, Lectures and Laboratory; BIOP 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOP 340, Methods in Biological and Biochemical Prospecting; BIOP 345, Plant Anatomy; BIOP 348, The Healing Forest; BIOP 359, Biology of Grasses; BIOP 404, Crop Evolution, Domestication, and Diversity; BIOP 422, Plant Development; BIOP 442, Current Topics in Ethnobotany; BIOP 444, Plant Cell Biology; BIOP 447, Molecular Systematics: BIOP 448, Plant Evolution and the Fossil Record; BIOP 449, Green Signals and Triggers—Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

Note: Students interested in beginning research independent study may petition the Biological Sciences Curriculum Committee for approval of the adviser, can be used in fulfillment of up to 4 credits in group (a), and can count as one laboratory course if it has a laboratory component of 2 or more credits.

b) BIOP 453, Speciation; BIOP 464, Macroevolution, BIOP 479, Paleobiology; BIOP 480, Phylogenetic Systematics; BIOP 487, Molecular Systematics: BIOP 488, Plant Evolution and the Fossil Record; BIOP 493, Historical Biogeography; BIOP 442, Current Topics in Ethnobotany.

14) Independent Option: Students who want to undertake a course of study not covered by the existing programs of study may petition the Biological Sciences Curriculum Committee. Information on independent option and Curriculum Committee petition forms are available in the Office of Undergraduate Biology, 216 Stimson Hall.

Independent Research and Honors Program

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in beginning research should contact faculty members with compatible research interests. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall, and at www.bio.cornell.edu.
Faculty members may consider the student's previous academic accomplishments, interests and career goals, and the availability of space and equipment when agreeing to supervise a student in a research program. Students conducting research for the first time must enroll in BIO G 299, which is an S/U course designed to introduce students to research. After the first semester, students enroll in BIO G 499. Registration for both of these courses is done in the Office of Undergraduate Biology in 216 Stimson Hall. Students may work with faculty in any department on campus as long as the research topic is biological. Students may not receive research credit done off campus, unless supervised by a Cornell faculty member. Up to 3 credits of research may be used to complete the program of studies in General Biology, Genetics and Development, Systematic and Biotic Diversity, as well as 4 credits in Neurobiology and Behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office of Undergraduate Biology, 216 Stimson Hall, and must be submitted in October of the senior year to the Honors Program Committee by the announced deadline. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have a cumulative Cornell grade-point average of at least 3.6. In addition, students must have at least a 3.0 cumulative Cornell grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An honors candidate usually enrolls for credit in BIO G 499. Undergraduate in Biology, section of this catalog.

Application forms, requirements, deadline dates for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall and on the web at www.bio.cornell.edu.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Committee. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

ADVISING

Students in need of academic advice are encouraged to consult their advisers or come to the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the multidisciplinary program Biology and Society should see "Special Programs and Interdisciplinary Studies" in the College of Arts and Sciences section of this catalog.

GENERAL COURSES (BIO G)

Three introductory biology course sequences are taught during the academic year: BIO G 101-104, BIO G 105-106, and BIO G 109-110; and one during the eight-week summer session: BIO G 107-108. BIO G 101-104, 105-106, and 107-108 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

BIO G 101-102 Biological Sciences, Lectures

101, Fall, 102, Spring, 2 credits each term. Prerequisite: concurrent enrollment in BIO G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. Lec, T 9:05; additional 2 lecs each week and a weekly lec for disc, M W F 1:30; rec, M W F 10:30. S-U grades optional, with permission of instructor. Lab, T R 10:20-11:10. 4 credits each term.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects in the spring semester are genetics, development, ecology, and evolution, and morphology (accompanied by preserved vertebrate dissection). Students who plan to concentrate in anatomy and physiology cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory, and discussions of plant and animal systems are integrated. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

BIO 103-104 Biological Sciences, Laboratory

103, fall, 104, spring, 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. Students registered for laboratory courses who are more than 10 minutes late for the first meeting of the laboratory will forfeit their registration in that course. No admittance after second week of class. S-U grades optional, with permission of instructor. Lab, M T W or R 1:25-4:25, M or W 7:30-10:30 P.M., or T or R or S 8-11. One 3-hour lab each week and a weekly lec for disc, special lecs, etc. P. R. Ecklund and staff.

BIO G 103-104 is designed to provide laboratory experience with major biological phenomena to support an understanding of the important concepts, principles, and theories of modern biology. A secondary objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including recording and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first semester, dissection of a doubly pithed frog is included. Dissection of several vertebrates occurs during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

BIO G 105-106 Introductory Biology

105, fall, 106, spring, 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Taking 105-106 in sequence is preferred but not required. May not be taken for credit after BIO G 103-104 or 109-110. No admittance after first week of classes. S-U grades optional, with permission of instructor. Lec, T 9:05 (first lec of fall term, R 8/26, 9:05); additional study and lab. T. G. T. Adams. Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects in the spring semester are genetics, development, ecology, evolution, and morphology (accompanied by preserved vertebrate dissection). Students who plan to concentrate in anatomy and physiology...
should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of dissected specimens, students who object to dissection should not take BIO G 101–104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

**BIO G 107–108 General Biology**
Summer (8-week session). 107, weeks 1–4; 108, weeks 5–8. 4 credits each. Prerequisite: one year of college or permission of instructor; BIO G 101, 103, 105, or 107 is a prerequisite for 108. Fee, $25 for weeks 1–4; $25 for weeks 5–8. Lecs. M–R 9–12, labs, M T R 1:30–4:30, F 9–12. Staff.

Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organism system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of genetics, developmental biology, population biology, and evolution, in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. BIO G 107–108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

**BIO G 109–110 Biological Principles**
Fall, 110; spring, 110. 3 credits each term. Limited to 600 students. Both BIO G 109 and 110, taken in either order, are required to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences and Human Ecology. Either course fulfills the College of Arts and Sciences distribution requirement; however, both are recommended since they constitute a survey. Students with transfer credit must consult with the course instructors for appropriate course placement. Due to overlap in content, BIO G 109 may not be taken after BIO G 102, or BIO G 103, or equivalent, and BIO G 110 may not be taken after BIO G 101, BIO G 105, or equivalent. BIO G 109–110 may not be used for introductory courses for majors in biological sciences or as introductory biology for premedical requirements. Note that this course satisfies the prerequisite for many but not all second-year courses in biology. Letter grade only. Students do not choose lab sections during course enrollment; lab assignments are made during the first day of classes. Evening prelims: fall, Sept. 23 and Nov. 2; spring, Feb. 24 and Apr. 7. Lecs, fall: T R 11:40, spring: M W F 9:05; lab meets alternate M T W R or F 2–4:25, or T 10:10–12:35 (spring), or W 7:30–10 P.M. D. Winkler, P. Davies, C. Eberhard, and staff.

Students who do not plan to major in biology may take this broad introductory course. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Broad goals of the course encompass an understanding of the potential benefits and limitations of science, the workings of the natural world, and the internal machinery of life—how our bodies and those of other animals and plants work. Fall semester covers biological diversity, genetics, evolution, ecology, behavior, and conservation biology; spring semester covers human physiology, plant development, genetic engineering, infectious diseases, and human health. Laboratory sections enable small groups of students to meet with course staff and to perform problem-solving experiments, demonstrations, and discussions. There are dissections of preserved vertebrate, invertebrate, and plant materials; for those students who object to dissection, alternative materials are available, and there is no grade penalty for omitting dissection or observation of animals. Testing, for students choosing to be tested on dissection labs, will involve identification of important structures in real organisms.

**BIO G 170 Evolution of the Earth and Life (also EAS 102)**
Spring. 3 credits. S–U grades optional. Lec. 01, T R 11:15–12:15; Lec. 02, T R 9:05–9:55; lab, T W or R 2–4:25; field trips during lab. J. L. Cass. For course description, see EAS 102.

**BIO G 200 Special Studies in Biology**
Fall, spring, or summer. 1–3 credits. Prerequisites: written permission from the Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S–U grades optional, with permission of instructor. Hours TBA. Staff.

A registration device for students who want to take only one of the regular courses that is to be offered during the latter portion of the semester.

**BIO G 201 Seminar; Your Future in Biology at Cornell and Beyond**
Fall. 1 credit. Limited to 40 students. Prerequisite: one year of introductory biology. Sophomores and new junior transfer students only. S–U grades optional. Lec. 2 hours each week. J. Doyle and B. Comella.

A seminar course focusing on the academic and career interests of sophomore biology majors and new junior transfer students. Biology faculty, Office of Undergraduate Biology staff, biology alumni, and upperclass students will lead weekly sessions on diverse topics that may include the biology curriculum, bioethics, burgeoning fields and careers in biology, faculty and undergraduate research, biology in the post-9/11 era, and women in science.

**BIO G 202 The Diversity of Life**

The main focus of this course is on the diversity of living and extinct species. This diversity is examined from an evolutionary perspective, with attention to the principles employed in the discovery of species and in the analysis of relationships among them. Interactions between humans and other species are examined during the latter portion of the semester.

**BIO G 209 Introduction to Natural Science Illustration**
Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: freehand drawing or permission of instructor. S–U grades optional. Lecs and labs, T R 6:30–9:30 P.M. B. S. King.

An introduction to the art of natural science illustration for publication and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

**BIO G 299 Introduction to Research Methods in Biology**
Fall, spring, or summer. Variable credit. Students must register for credit in the Office of Undergraduate Biology, 216 Stimson Hall. Applications are available in the OUB and on the web at www.bio.cornell.edu. The add deadline is three days before the university deadline. Any Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. Non-Cornell supervisors are not acceptable. S–U grades only. Recommended for freshmen and sophomores.

This course is intended for students who are not yet ready for undergraduate research. Students enrolled in BIO G 299 may be reading scientific literature, learning research techniques or assisting with ongoing research. Credit hours are variable (maximum of 3 credits is suggested) and grading is S–U only. The faculty supervisor will determine the work goals and the form of the final report.

**BIO G 305 Basic Immunology Lectures (also VETMI 315)**
Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S–U grades optional, with permission of instructor. Lecs, T R 8:30–9:55. J. A. Marsh.

A survey of immunology, with emphasis on the biological functions of the immune response.

**BIO G 400 Undergraduate Seminar in Biology**
Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings). May be repeated for credit. S–U grades optional. Staff.

Specialized seminars on topics of interest to undergraduates presented by biology faculty including visiting faculty.
BIO G 401 Introduction to Scanning Electron Microscopy
Spring, weeks 1-8. 1 credit. Limited to 8 students. S-U grades optional. Fee may be charged. Lec, M 10:10; lab, T or R 9:05-12:15 or T W or R 12:25-4:25. Offered alternate years. M. V. Parthasarathy.
An introductory course that includes the principles and use of the transmission electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, students use the scanning electron microscope to study and obtain micrographs of features that interest them.

BIO G 403 Transmission Electron Microscopy for Biologists
Fall, 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 8 students. Minimum of 4 students. Prerequisites: BIOAP 313, BIOPT 345 or 443, S-U grades optional. Two sections: Sec 01, 1 credit, weeks 1-4; sec 02, 3 credits, weeks 5-12. Students may register for one or both sections. Fee may be charged. Lec, T 11:15, lab, M W R T R 12:25-4:25. M. V. Parthasarathy.
Section 01. 1 credit, weeks 1-4, covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and the interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 3 credits, weeks 5-12, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials, this section studies chemical fixation, cryoultramicrosectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

BIO G 404 Planning for Graduate Study in Biology
Fall, 3 credits. S-U only. TBA, L. E. Southard. This course will introduce students to the variety of careers available to students who plan on pursuing a graduate degree. The course will have two parts. The first sessions will provide general information on degrees available, selecting programs to apply to, the application process and funding. Students will also receive help with their personal statements.

During the second part of the class various speakers from Cornell and outside graduate schools will lead discussions about careers in their particular field, what the future looks like, and how to be a successful graduate student. Students are expected to participate in discussions and submit reflections after each session.

BIO G 408 Presentation Skills for Biologists
Spring. 1 credit. S-U only. Prerequisites: previous research experience. Preference given to students accepted into the Biology Honors Program. L. Southard and G. Hess. This course is designed to teach communication skills used in presenting research to other scientists. Topics covered include organization and writing of scientific papers, presentation tips for research seminars, and preparation of visual aids using Microsoft Power Point. All students present a 10-minute seminar on their research and evaluate other presentations.

BIO G 410 Teaching High School Biology
Fall. 3 credits. S-U grades optional. Prerequisite: one year introductory biology; permission of instructor. Alternate years beginning 2004. L. Southard.
This course provides students with the opportunity to experience teaching high school science. Students select an important biological concept, then develop inquiry-based teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which familiarize the students with the scientific content of the course. Students then work in teams with high school teachers to develop their presentations. The final part of the course includes practice presentations and teaching at regional high schools.

BIO G 431 Frontiers in Biophysics
Fall. 0.5 credit. S-U grades only. Lec TBA. G. Feigenson and staff. A day of lectures on Saturday, Sept. 18, 9:00-4:00, Racker Room, Biotechnology Bldg., giving an overview of current research in biophysics at Cornell by faculty from different departments at the university. Designed for undergraduates who are considering a career in biophysics and for graduate students who are interested in biophysics research opportunities at Cornell.

BIO G 450 Light and Video Microscopy for Biologists
Spring. 3 credits. Limited to 12 students. Prerequisites: one year of introductory biology and permission of instructor. Lecs, T R 12:25-3:20; lab, R 2:30-4:30. R. O. Wayne.
Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living cells.

BIO G 498 Teaching Experience
Fall or spring. 1-4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent. Arts students may not count this course toward graduation. They may, however, upon petition one time only to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U grades optional, with permission of instructor. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or teaching. Biological sciences courses currently offering such experience include BIO G 105-106, BIOAP 311, 313, 319, BIOM 330, 351; BIOEE 274, 475; BIOGD 281; and BIOM 291, 292.

BIO G 499 Independent Undergraduate Research in Biology
Fall, spring, or summer. Variable credit. S-U or letter grade. Students in the Arts and Sciences College may register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor. Students in the College of Agriculture and Life Sciences may use up to 15 credits of independent study (BIO G 499, BIO G 497) toward graduation. Up to 3 credits of research may be used to complete the Programs of Study in General Biology, Genetics and Development, and Systematics and Biotic Diversity, and 4 credits of research in Neurobiology and Behavior. Prerequisite: 1 semester of BIO G 299 or equivalent. This course is for students continuing their Cornell research. Students enrolled for this credit should be doing independent work on their own project. The faculty supervisor will determine the form of the final report. Students must register for credit in the Office of Undergraduate Biology in 216 Simons Hall. Applications are available in the OUB and on the web at www.bio.cornell.edu. The add deadline is three days before the university deadline. Each student must submit a proposed research proposal description during course registration. Any Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. The faculty supervisor will determine the work goals and the form of the final report. Non-Cornell supervisors are not acceptable.

BIO G 504 Research Experience for Teachers (also EDUC 504 and PL BR 504)
Spring. 3 credits. S-U or letter. T. Fulton. For course description see EDUC 504.

BIO G 663 Nanobiotechnology (also A&EP 663)
Spring. 3 credits. Letter grade only. C. Batt. For course description see A&EP 663.

BIO G 705 Advanced Immunology Lectures (also VETMI 705)
Spring. 3 credits. Letter grade only. J. A. Marsh. Coverage of molecular and cellular immunology at an advanced level.

BIO G 706 Immunology of Infectious Diseases (also VETMI 719)
Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor. Lec, W 10:10-12:05. Offered odd alternate years. Coordinator: E. Donkers. This graduate-level course focuses on molecular and cellular mechanisms underlying immunity to infectious diseases caused by viral, bacterial, protozoan, and helminth pathogens. Topics include immune response initiation, antigen presentation pathways, Th1 and Th2 cytokines in protection and pathogenesis, mechanisms of cytotoxicity, immune evasion strategies, and vaccines. Lectures are based on recent advances in the field and are accompanied by relevant readings from the current literature.
ANIMAL PHYSIOLOGY (BIOAP)

[BIOAP 212 Human Physiology for Non-Biology Majors]

Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Agriculture and Life Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any program of study in the biological sciences major. Lecs. M W F 1:25; disc. M W or F 2:15. Not offered 2005. M. D. Baustian.

Introduction to the principles of physiology governing the function of the human body. Emphasis is placed on reproduction, pregnancy and development, and immunology and the defense of the organism against disease. Major organ systems are surveyed to illustrate how physiologists study the function of living systems, and how this knowledge has shaped man’s management of health and disease. The contribution of information-based sciences of genetics, molecular biology, and the emerging biotechnologies to the study of human physiology is covered.

[BIOAP 214 Biological Basis of Sex Differences (also B&BSC 214 and B&BS 2141A)]

The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction: where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

[BIOAP 311 Introductory Animal Physiology, Lectures (also VETPH 346)]

Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor. Evening prelims. Lecs. M W F 11:15-12:05. A. Quaroni.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

[BIOAP 312 Farm Animal Behavior (also AN SC 305)]

Spring. 2 credits. Prerequisites: one year of introductory biology, and introductory animal physiology (AN SC 100 and 150 or equivalent, or BIOAP 311), except at least 1 animal production course or equivalent experience is recommended. S-U grades optional. Lecs. T R 11:15-12:00. P. Perry and K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

[BIOAP 316 Cellular Physiology]

Spring. 3 credits. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 331 and 332 or 333. Evening prelims. Lecs. M W F 11:15-12:05. A. Quaroni.

A comprehensive course covering the general characteristics of eukaryotic cells; the structure, composition, and function of subcellular organelles; and the major signal transduction pathways regulating a variety of physiological cellular activities. Among the main subtopics covered are absorption and transport processes, mechanism of action of signaling molecules (hormones), the cell cycle and regulation of cell proliferation, cell-cell communication, extracellular matrix, and carcinogenesis.

[BIOAP 319 Animal Physiology Experimentation]

Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of two afternoon laboratory sections is limited to 20 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor. Lecs. R 12:20; lab. M or W 12:20-5:00. E. R. Loew, N. A. Lorr, and staff.

A series of student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiological research techniques, instrumentation, experimentation, design, and interpretation of results. Techniques include anesthesia, surgical procedures, dissection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues or live animals examine properties of membranes and epithelia, blood, nerves, skeletal and smooth muscle, cardiovascular, respiratory, renal, and reproductive function and their regulation by the nervous and endocrine systems. Experimental resources include frogs, rats, rabbits, and sheep, which are not always euthanized after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, laboratory performance and weekly discussions, weekly quizzes, and a midterm and final exam.

[BIOAP 413 Histology: The Biology of the Tissues]

Spring. 4 credits. Prerequisite: one year of introductory biology. Recommended. BIOBM 330 or 331, or their equivalents. S-U grades optional, with permission of instructor. Lecs. M W 1:25; labs, M W 2:30-4:25. S. Suarez and L. Mizer.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphology at the cell and tissue levels. Dynamic interrelations of structure of the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized.

[BIOAP 416 Cell Physiology and Genomics Laboratory]

Spring. 4 credits. Limited to 24 students. Designed for graduate and upper-level undergraduate students with preference for Biology majors with a Physiology concentration. Prerequisite: concurrent or previous enrollment in BIOAP 316, Cell Physiology, or BIOAP 319, Survey of Cell Biology, or permission of instructor. Lecs. M W 12:20-1:30; labs. M W 1:25-4:25. A. Quaroni, N. A. Lorr, and staff.

A laboratory course to introduce students to modern methods and technologies in cell physiology and genomics. Laboratory exercises will teach the following experimental methods: 1) primary cell culture, cell cloning, subculturing, and cell counting; 2) cell and membrane imaging using fluorescence and electron microscopy; 3) karyotyping including chromosome spreading, banding, and fluorescent in situ hybridization; 4) flow cytometry and DNA electrophoresis for the assay of cell proliferation and cell death; 5) protein electrophoresis and Western blotting; 6) recombinant DNA technology including restriction analysis, cloning, transformation of competent cells, plasmid isolation, and transcription; 7) analysis of gene expression by use of RT-PCR, real-time PCR and microarray analysis; and 8) analysis of electrogenic transport systems in cultured epithelia mounted in Ussing chambers.

[BIO AP 425 Gamete Physiology and Fertilization (also AN SC 425)]

Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Next offered fall 2005; not offered fall 2004, 2006. Lecs. R 2:30-4:25. J. E. Parks.

Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology in vitro technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

[BIOAP 427 Fundamentals of Endocrinology (also AN SC 427)]

Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs. M W F 10:00. P. A. Johnson.

For description, see AN SC 427.

[BIOAP 458 Mammalian Physiology]

Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Students not meeting this prerequisite must obtain written permission of instructor in TR 014 Vet Research Tower before the first class. Evening prelims. Lecs. M W F 10:10. K. W. Beyenbach.

The course offers an in-depth treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and a working knowledge of physiology. Selected topics include basic functional elements of biological systems: recurrent themes in physiology, design of multicellular animals; mammalian fluid compartments; homeostasis; membrane and epithelial transport; electrophysiology; cardiovascular physiology; gastrointestinal physiology; renal physiology; and acid/base physiology. The lectures incorporate clinical correlations whenever appropriate. Occasional guest lecturers talk...
about work and careers in basic research or clinical medicine. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

[BIOAP 475 Mechanisms Underlying Mammalian Developmental Defects [also NS 475]]
Spring. 3 credits. Prerequisites: BIOBM 330, 331-332, or 333 (may be taken concurrently). MWF 11:15. Offered alternate years. Next offered in spring 2006. D. M. Noden and P. Stover. Focus is on the causes of developmental defects and how genetic changes or teratogenic insults disrupt developmental regulatory and metabolic pathways.

[BIOAP 489 Mammalian Embryology (also BIOGD 489)]
Spring. 3 credits. Prerequisite: introductory biology. Lecs, T R 1-2:55; lab, T 2:30. Offered alternate years. Next offered in 2006. D. M. Noden. Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects of normal and abnormal development. (Also NS 489.)

[BIOAP 619 Lipids (also NS 602)]
Fall. 2 credits. Lecs, T R 11:15-12:30. A. Bensadoun. Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology, lipid absorption, lipoprotein secretion, molecular structure, and catabolism; molecular biology, function, and regulation of lipoprotein receptors; mechanisms of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

[BIOAP 710-718 Special Topics in Physiology]
Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

[BIOAP 711 Readings in Applied Animal Behavior]
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. Next offered in 2005-2006. 1 hour each week. K. A. Houpt.

[BIOAP 714 Cardiac Electrophysiology]
Fall. 1 credit. S-U grades only. Offered alternate years. R. Gilmour. Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasis is on nonlinear dynamics aspects of cardiac electrophysiology and cardiac arrhythmias.

[BIOAP 715 Stress Physiology: To Be Discussed as Part of Animal Welfare]
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent required. Offered alternate years. K. A. Houpt. The emphasis is on physiological assessment of stress.

[BIOAP 719 Graduate Research in Animal Physiology (also VETPM 628)]
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. S-U grades optional. Hours THA. Staff.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

[BIOAP 720 Animal Physiology and Anatomy Seminar]
Spring and fall. 1 credit each semester. Prerequisite: admission to the graduate Field of Physiology. This seminar course is designed to provide graduate students in the Field of Physiology with training to become professional scientists. Students who participate are required to give a seminar on their research. Advice and feedback are provided throughout the semester and in one special session devoted to a particular topic, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

[BIOAP 757 Current Concepts in Reproductive Biology]
Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Lec/disc, T R 10:10-12:05. Offered alternate years. Not offered 2004. J. E. Fortune, W. R. Butler, and staff. A team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function), fertilization and early embryo development; pregnancy, parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

BIOBM 132 Orientation Lectures in Molecular Biology and Genetics (also BIOGD 132)
Spring, weeks 1-3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lec, S 11:15, for first three S of semester (Jan 29, Feb 5, Feb. 12 in room 180 Biotechnology Building). Staff.

Discussions by six professors about their research and promising new areas for research in the future.

[BIOBM 233 Introduction to Biomolecular Structure (also CHEM 233)]
Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207-208 or equivalents. Lecs, T R 2:30-3:50. S. E. Falcik. This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship between the structure and function of biologically important molecules is explored.

[BIOBM 321 Numerical Methods in Computational Molecular Biology (see COM S 321)]
Fall. 3 credits. Prerequisites: at least 1 course in calculus, such as MATH 106, 111, or 151 and a course in linear algebra, such as MATH 221 or 294 or BTRY 417. No particular course in programming is required, but the student should have some familiarity with iteration, arrays, and procedures.

For course description see COM S 321.

BIOBM 330-332 Principles of Biochemistry

Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year, and lectures (333) during the summer. Individualized instruction is offered to a maximum of 250 students each semester. Lectures are given fall semester (331), spring semester (332), and summer (333).

BIOBM 330 Principles of Biochemistry, Individualized Instruction

Fall or spring. 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357-358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Concurrent registration in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 331, 332, or 333. S-U grades optional with permission of instructor. Evening prelims: fall, Sept. 30 and Nov. 2; spring, Feb. 24 and Apr. 15. J. D. Blankenship, P. C. Hinkle, and staff. Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism

Fall. 3 credits. Prerequisites: one year of introductory biology for majors, one year of general chemistry, and CHEM 257 or 357-358 (CHEM 357 should not be taken concurrently) or equivalent, or permission of instructor. Concurrent enrollment in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor. Evening prelims: Oct. 21. Lecs, M W F 10:10. G. W. Feigenson. The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.
BIOBM 332 Principles of Biochemistry: Molecular Biology
Spring. 2 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in general chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional, with permission of instructor. Lects. T R 12:20. B. K. Tye.
A comprehensive course in molecular biology that covers the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes. Topics include the structure and function of DNA, DNA replication repair, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology
Summer (6-week session). 4 credits. Prerequisites: one year of introductory biology or one year of general chemistry, and CHEM 257, or 357-358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. S. Ely or H. T. Nivison. Topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 334 Computer Graphics and Molecular Biology
Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330. Students who have completed BIOBM 333 or 332 (BIOBM 332 may be taken concurrently) will also be permitted to register. J. E. Blankenship, P. C. Hinkle, and staff. Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOBM 432 Survey of Cell Biology
Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent. Recommended: BIOGD 281. S-U grades optional for previous students only. Lects. M W 8:40-9:55. V. M. Vogt and W. J. Brown. A survey of a wide array of topics focusing on the general properties of eukaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 457, BIOGD 483; and BIOBM 632, 636, and 639.

BIOBM 433 Laboratory in Cell Biology
Spring. 1 credit. Prerequisites: concurrent enrollment in, or completion of, BIOBM 432, or equivalent. Two labs per week for the first seven weeks of the semester. T R 1:30-4:30. W. Brown. A laboratory course to introduce students to classic and modern methods in cell biology. The focus is on material not presented in the BIOBM 440 laboratory courses. Exercises include analysis of membrane protein and lipid composition, use of light, fluorescence, and electron microscopy, transfection of mammalian cells with CDNA expression vectors, live cell imaging of fluorescently labeled proteins using confocal microscopy, subcellular fractionation of organelles, and in vitro reconstitution of organelle assembly. Space is limited to 12 students. Preference given to biology majors concentrating in Molecular and Cell Biology.

BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry
Fall. 3 credits. Enrollment limited to 50 students. Prerequisites: BIOBM 330 or 333 or 331-332. Recommended: BIOGD 281. S-U grades optional. Lect. M W F 11:15-12:05. J. M. Calderwood. Lecture topics include large-scale sequencing of genomes, drug discovery based on genomics, combinational approaches to chemical libraries, pharmacogenetics, antibiotics derived from innate immune system, DNA and edible vaccines, transgenic animals, engineering plants resistant to insects, and gene therapy. About one-quarter of the course is devoted to exploring factors that are required for gene replication or altering ideas and to some social ramifications of biotechnology.

BIOBM 435-436 Undergraduate Biochemistry Seminar 435, fall; first meeting will be at 4 p.m. on Tuesday, August 31. 436, spring; first meeting will be at 4 p.m. on Tuesday, January 25, G71 Biotech Building. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisites: BIOBM 330, 333, or 331-332, or written permission of instructor. S-U grades only. Seminar time TBA. Organizational meeting first W of each semester. Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

BIOBM 437 Eukaryotic Cell Proliferation (also TOX 437)
Fall. Variable credits. Students may take lectures for 2 credits, or take both lectures and discussions for 3 credits. Enrollment for discussion section is limited to 20 students, with preference given to graduate students. Prerequisites: BIO 101-102 or BIOG 101-102 or BIO 105-106, and BIOBM 330 or BIOBM 331-332. Recommended: BIOGD 281 and BIOGD 432. S-U grades optional. Lect. T R 12:20-1:10. Disc. TBA. Not offered 2004-2005. S. Ely.
The course covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion section.

BIOBM 439 Molecular Basis of Human Disease (also BIOGD 439)
Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 330, BIOBM 331-332, or BIOBM 333) and genetics (e.g., BIOG 281) or permission of instructor. Recommended: cell biology (e.g., BIOBM 432 or BIOAP 310) and physiology (e.g., BIOAP 311 or BIOAP 450). S-U grades optional. Lects. T R 10:10-11:25. W. L. Kraus.
This course explores how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena, and environmental agents lead to human diseases. The material focuses on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics are selected from the human immune deficiency syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of infectious agents and environmental toxins. Examples of diseases are selected to emphasize various aspects of genetics, molecular biology, cell biology, physiology, immunology, and endocrinology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, are presented. A portion of each class period will be devoted to discussion and practice questions.

BIOBM 440 Laboratory in Biochemistry and Molecular Biology
Fall, spring, or summer (3-week session). 4 credits. Enrollment limited. Preference is given to undergraduate biomedical students having Biochemistry or Molecular and Cell Biology Programs of Study and to graduate students with a minor in the Field of Biochemistry. Prerequisites: BIOBM 330 or 333 or 331-332 and one completed but one may be taken concurrently). Labs, M W 12:20-4:25 (disc, F 1:25) or T R 12:20-4:25 (disc, M 3:25). Summer (3-week session): M-F 10-5:30. S. Ely and H. Nivison. Experiments related to molecular biology (includes PCR, DNA cloning, restriction mapping, and DNA sequence analysis), protein purification and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE, and immunoblotting), and determination of enzyme kinetic parameters.

BIOBM 485 Bacterial Genetics (also BIOMI 485 and BIOGD 485)
Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOMI 250 and BIOBM 331 or 332 and 333. Lects. W 7:30-9:25 p.m. J. E. Peters. Participants in this course will gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium Escherichia coli. Students will discover the processes by which bacteria evolve through different types of mutations and the exchange of genetic information. We will explore how genes are regulated efficiently through negative and positive regulation and by global regulatory mechanisms. Upon completion of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

BIOBM 631 Protein Structure and Function
Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331-332 and organic chemistry. Recommended: physical chemistry. S-U grades optional. Lects. M W F 9:05. L. Nicholson. Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution.
folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

[BIOM 632] Membranes and Bioenergetics
Spring. 2 credits. Prerequisite: BIOM 330 or 333 or 331-32 or equivalent. Lecs. TR 11:15. Offered alternate years. P. C. Hinkle. Structure and dynamics of biological membranes, physical methods, model membranes, transport, ion-transport, ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.

[BIOM 633] Biosynthesis of Macromolecules

[BIOM 636] Advanced Cell Biology
Spring. 2 credits. Prerequisites: BIOM 330 or 333 or 331-32, or their equivalents. Lecs. TR 11:15-12:05. J. Fu. These courses provide an integrated view of eukaryotic cell organization as elucidated using biochemical, molecular, genetic, and cellular biological approaches. Major topics include the cytoskeleton, membrane traffic, and cell polarity. Together with BIOM 437, 632, and 639 this course provides broad coverage of the cell biology subject area.

[BIOM 638] Macromolecular Interactions and Cell Function
Spring. 2 credits. Prerequisite: BIOM 330 or 333 or 331–32. Recommended: BIOM 631 or 635. S–U grades optional. Lecs. TR 11:15–12:05. J. Fu. These lectures focus on the principles of protein-protein and protein-nucleic acid interactions that underlie cellular processes such as signal transduction, intracellular traffic, gene regulation, and cell development. The emphasis throughout this course is on the structural basis of these processes as related to cell function. Some specific topics covered are signal amplification, nuclear import and export, transcription by RNA polymerase II, RNA processing and export, and translation of mRNAs.

[BIOM 639] The Nucleus
Spring. 2 credits. Prerequisite: BIOM 330 or 333 or 331–32, or their equivalent. Recommended: BIOD 281. Lecs. TR 10:10. T. J. Liss. Lectures on topics of eukaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the structure and movement of chromosomes, and nuclear export and import. This course covers the structure and function of the nucleus at the molecular and cell biological levels and, together with BIOM 437, 632 and 636, provides broad coverage of the cell biology subject area.

[BIOM 641] Laboratory in Plant Molecular Biology (also BIOL 641)
Fall. 4 credits. Prerequisites: BIOL 281 or equivalent. BIOM 330 or 331 or equivalent, and permission of instructor. S–U grades with permission of instructor.

Lab. T 9:05–4:30. J. B. Nasrallah, M. R. Hanson, and H. Wang. Selected experiments on gene expression, gene transfer, and reporter gene in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

[BIOM 652] (Section 05) Molecular Biology of Plant Organelles (also BIOL 652.5)

[BIOM 653] (Section 04) Molecular Aspects of Plant Development I (also BIOL 653.4)
1 credit. Lecs. M W F 10:10 (12 lecs) Nov. 1–Dec. 3. J. B. Nasrallah. This module focuses on the molecular genetics of plant development. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOL 652, Sec. 02 (Molecular Aspects of Plant Development I).

[BIOM 730] Protein NMR Spectroscopy (also VETPR 730)
Spring. 2 credits. Prerequisites: CHEM 389 and 390, or CHEM 287 and 288, or permission of instructor. S-U grades optional. Offered alternate years. Lecs. TBA. L. K. Nicholson and R. E. Oswald. The student acquires the tools necessary for in-depth understanding of macromolecules. This laboratory provides hands-on experience in the application of NMR spectroscopy to proteins for resonance assignment, structure determination, and dynamics characterization is studied.

[BIOM 732-737] Current Topics in Biochemistry
Fall or spring. 0.5 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOM 330 or 333 or 331–32 or equivalent. S–U grades only. Hours TBA. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

[BIOM 738] Macromolecular Crystallography (also CHEM 788)
Fall. 5 credits. Prerequisite: permission of instructor. Lecs. TR 10:10. Offered alternate years. S. E. Ealick. Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the three-dimensional structures of macromolecules.

[BIOM 751] Ethical Issues and Professional Responsibilities
Spring. 1 credit. Limited to graduate students beyond first year. S–U grades only. Organizational meeting will be held on the first W of the semester. Sem. W. 3:35–4:25. Additional sections may be offered. P. Hinkle. Ethical issues in research and the professional responsibilities of scientists are discussed based on readings and occasional lectures. The topics are intended to cover the requirements for ethical training of graduate students on training grants and follow the recommendations of the Office of Research Integrity.

[BIOM 761] Topics in Cancer Cell Biology (also VETMM 761)
Spring. Series of 1-credit graduate sections that reflect the cancer expertise of the Cornell faculty. (Course Director: B. U. Paul.) For description, see VETMM 761.

[BIOM 830] Biochemistry Seminar
Fall or spring. No credit. Sem. F 4:00. Staff. Lectures on current research in biochemistry, presented by distinguished visitors and Cornell faculty members. Lectures are open to everyone; but registration is limited to graduate students in Biochemistry, Molecular, and Cell Biology.

[BIOM 831] Advanced Biochemical Methods I
Fall. 6 credits. Required of, and limited to, first-year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S–U grades only. Labs and discussions 12 hours each week TBA. Organizational meeting first R of semester 10:10. T. C. Huffer. Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the Director of Graduate Studies and the research adviser.

[BIOM 832] Advanced Biochemical Methods II
Spring. 6 credits. Required of, and limited to, first-year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S–U grades only. Lab TBA. T. C. Huffer. Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the Director of Graduate Studies and the research adviser.

[BIOM 833] Research Seminar in Biochemistry
Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S–U grades only. Lab TBA. W. L. Kraus and V. M. Vogt. Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.
BIOM 836 Methods and Logic in Biochemistry, Molecular and Cell Biology, Part I
Spring; credit. Limited to first-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S/U grades only. Sem and disc TBA. G. P. Hesse
A seminar course with critical discussion by students of original research papers. A variety of topics in biochemistry, molecular and cell biology are covered.

BIOM 838 Methods and Logic in Biochemistry, Molecular and Cell Biology, Part II
Spring, 2 credits. Limited to second-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology or the Field of Genetics and Development. S/U grades only. R 5:00-7:00. D. Shalloway
An interactive seminar to develop the general skills needed to support a career in scientific research: experimental design, writing scientific papers and grants, oral presentation, basic statistical and computational methods, managing a research laboratory, etc. Exercises focus on the preparation of a mock research grant proposal.

ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)

BIOEE 154 The Sea: An Introduction to Oceanography, Lectures (also EAS 154)
Spring. 3 credits. The optional 1-credit laboratory for this course is offered as BIOEE/EAS 155. S/U grades optional. Lecs, T R 11:00-12:55. C. H. Greene and W. M. White.
See EAS 154 for full course description.

BIOEE 155 The Sea: An Introduction to Oceanography, Laboratory (also EAS 155)
Spring. 1 credit. Prerequisite: concurrent enrollment in BIOEE/EAS 154. S/U grades optional. Lab, M 2:00-4:25 or 7:30-9:55 P.M., or W 7:30-9:55 P.M. C. H. Greene.
See EAS 155 for full course description.

BIOEE 207 Evolution (also HIST 287 and S&T 287)
Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 278. Does not meet the evolutionary biology requirement for the biological sciences major. S/U grades optional. Fall, Lecs, T R 10:10, disc, 1 hour each week TBA. Summer (6-week session): Lecs and disc, M W 6:00-9:00 P.M. A. MacNeill.
Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in populations to the conflict between creationists and evolutionists.

BIOEE 261 Ecology and the Environment
Fall or summer. 4 credits. Prerequisite: one year of introductory biology, S/U grades optional. Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. A. S. Flecker and J. P. Sparks.
We explore the interactions between the environment and organisms as individuals, populations, communities, and ecosystems. The emphasis is on basic ecological principles and processes that are generally useful in understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines. Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and function, biodiversity, biogeochemistry, and productivity. Human influences on ecosystems, human-created ecosystems (agricultural and natural), and sustainable practices are covered.

BIOEE 263 Field Ecology
Fall. 3 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOEE 261. Lec, R 1:25; lab, F 12:20-4:25; 1 weekend field trip to the Hudson Valley. P. L. Marks.
Field exercises designed to give students direct experience with fieldwork, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche interactions of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

BIOEE 264 Tropical Field Ornithology
Winter, January 6-20, 2005. 3 credits.
Limited to 12 students. Minimum of 8 students. Prerequisites: permission of instructor required. Intended for students with limited or no bird knowledge. S/U grades optional. Two week, full-time course. Daily field work, disc, reading, and an individual project. The cost of tuition covers airfare, food, and lodging. A. A. Dhondt and I. J. Lovette.
This course, given during the winter session, provides students with the opportunity to study birds intensively in a neotropical environment. Students will learn observational and field techniques, participate in group research projects and in daily seminars. The group is housed in the University Center at Punta Cana. One or two field trips will be organized to national parks in the Dominican Republic.

BIOEE 265 Introduction to Conservation Biology
Fall. 3 credits. Not be offered for credit after NTRES 450. Intended for both science and non-science majors. Completion of BIOEE 267 is not required for NTRES 450. S/U grades optional. Lecs, M W 9:05, disc, F 9:05 or R 2:30; 1 Saturday field trip. Offered alternate years. Not offered 2004-2005. J. P. Fitzpatrick.
An exploration of biological concepts related to conserving the earth's biodiversity, introducing ecological and evolutionary principles important for understanding major conservation problems. Topics include patterns of species and ecosystem diversity, causes of extinction, evolutionary theories of animal and plant species, population genetics, and ways to protect endangered species, aquatic and terrestrial ecosystems, and the value of biodiversity.

BIOEE 274 The Vertebrates: Structure, Function, and Evolution
An introductory course in vertebrate organismal biology that explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratory includes dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

BIOEE 275 Human Biology and Evolution (also ANTHR 275 and NS 275)
Fall. 3 credits. S/U grades optional, with permission of either instructor. Lecs, M W F 10:10; disc, M 10:10 or TBA. Lects every W and F; occasional lectures on M. Not offered 2004-2005. K. A. R. Kennedy and J. D. Haas.
An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

BIOEE 278 Evolutionary Biology
Fall or spring, 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week; limited to 20 students per section each semester. Students may not preregister for the 4-credit option, interested students complete an application form on the first day of class.) Limited to 300 students. Prerequisite: 1 year of introductory biology or permission of instructor. First-semester freshmen must have permission of instructor. S/U grades optional. Evening prelims: spring, Mar. 3 and Apr. 5; Lecs, T R 9:05; disc, 1 hour each week TBA. Fall, I. J. Lovette; spring, M. J. Shulman.
The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.
ECOLOGY AND EVOLUTIONARY BIOLOGY

[BIOEE 350] Dynamics of Marine Ecosystems (also EAS 350)
Fall. 3 credits. Limited to 25 students. Prerequisite: one year of calculus and a semester of oceanography (e.g., BIOEE/EAS 154), or instructor's permission. S-U grades optional. Lect, T R 1:25-2:40. Offered alternate years. Not offered 2004-2005. E. H. Greene and R. W. Howarth. See EAS 350 for full course description.

[BIOEE 362] Dynamic Models in Biology (also MATH 362)
Spring. 3 credits. Prerequisites: two semesters of introductory biology (BOG-G 101-102, 105-106, 107-108, 109-110 or equivalent) and completion of the mathematics requirements for the Biological Sciences major or equivalent. S-U grades optional. Lecs, M W F 10:10-11:00. Some class meetings (during the regular lecture time) will be in computer lab. Offered alternate years. Not offered 2004-2005. S. P. Ellner and J. M. Guckenheimer.

Introductory survey of the development, computer implementation, and applications of dynamic models in biology and ecology. Case-study format, covering a broad range of current application areas such as regulatory networks, neurobiology, cardiology, infectious disease management, and conservation of endangered species. Students also learn how to construct and study biological systems models on the computer using a scripting and graphics environment.

[BIOEE 373] Biology of the Marine Invertebrates
Fall (but course must be taken in the previous summer at the Shoals Marine Laboratory). 5 credits. Limited to 24 students. Prerequisite: one year of introductory biology for majors. Permission of faculty required because it is off campus. Students in BIOEE 373 are strongly encouraged to take BIOEE 477. Three-week, full-time course. Daily and evening lectures, laboratories, and fieldwork. Course is taken during the summer; enroll for credit during the subsequent fall semester. Total cost for room, board, and overhead at SML: $1,200. Offered alternate years. Not offered 2004-2005. C. D. Harvell and J. G. Morin.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shoals Marine Laboratory exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

[BIOEE 405] Biology of the Neotropics
Spring. 2 credits. Limited to 18 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. Lec and disc, W 7:30-9:30 p.m. P. H. Wrege and A. S. Fischer.

This course is an introductory survey of the biology of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn basic characteristics and phenomena important to understanding neotropical biology, to gain firsthand knowledge of the resources in tropical biology available at Cornell, and to learn how to organize and execute a meaningful seminar presentation.

[BIOEE 452] Herbivores and Plants: Chemical Ecology and Coevolution (also ENTOM 452)
Spring. 3 credits. Prerequisites: one year of introductory biology, BIOEE 261, CHEM 257 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Field and laboratory lectures, or laboratory demonstrations may be held in place of F lecture. Lecs, M W F 11:15. Offered alternate years. P. P. Feeny.

Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; and implications for human food and agriculture.

[BIOEE 453] Speciation
Spring. 3 credits. Limited to 40 students. Prerequisites: BIOE 278 and BIOG 281 or equivalents, or permission of instructor. S-U grades optional. Lecs, T R 10:10-11:25. Some class meetings (during the regular lecture time) will be in computer lab. Offered alternate years. R. G. Harrison.

An advanced course in evolutionary biology focusing on the pattern and process of speciation and origin of intrinsic barriers to gene exchange. Topics covered in lectures include species concepts and definitions, the history of ideas about speciation, the biological basis of intrinsic barriers to gene exchange, current models for the origin of such barriers, genetic architecture of speciation, rates of speciation. Emphasis will be on developing a rigorous conceptual framework for discussing speciation and on detailed analysis of a series of case histories.

[BIOEE 455] Insect Ecology (also ENTOM 455)
Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent and ENTOM 212 or knowledge of another taxon. S-U grades optional. Lecs, M W F 11:15. Not offered 2004-2005. Staff.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

[BIOEE 456] Stream Ecology (also ENTOM 456 and NTRES 456)
Spring. 4 credits. Limited to 60 students. Prerequisites: completion of the Biological Sciences mathematics requirement or equivalent, and either one additional semester of mathematics, statistics, or modeling (e.g., BEE 260, BEE 411, NTRES 305, NTRES 460, EAS 350, EAS 456, or permission of instructor. S-U grades optional. Lecs, T R 12:50-2:20; lab, T W or R 12:50-2:25, 1 weekend field trip. Fee: $12 (for food on field trip). Offered alternate years. Not offered 2004-2005. Next offered spring 2006. N. G. Hairston, Jr. and staff.

Laboratory and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Exercises focus on understanding the freshwater environment on experimentation, and on understanding ecological processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.

[BIOEE 460] Theoretical Ecology
Spring. 4 credits. Enrollment limited. Prerequisites: completion of the Biological Sciences mathematics requirement or equivalent, and either one additional semester of mathematics, statistics, or modeling (e.g., BEE 260, BEE 411, NTRES 305, NTRES 460, or permission of instructor. S-U grades optional. Lecs, T R 10:10-11:25. Offered alternate years. S. P. Ellner.

An introduction to the models used to construct ecological theory and analyze data on ecological dynamics, and to the mathematical and computer methods used to analyze these models. Applications from individual decision-making through multispecies and spatial dynamics introduce the main themes in theoretical ecology: optimization, dynamics, and the links between process and pattern. The lab includes instruction in computer programming and review of mathematical methods.

[BIOEE 462] Marine Ecology (also EAS 462)
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Letter grade, S-U by permission only. Lecs and disc, M W F 11:15. Offered alternate years. C. D. Harvell and S. U. by D. W. Doss. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine
systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

[BIOEE 463 Plant Ecology and Population Biology, Lectures]  
Fall, 3 credits. Prerequisite: BIOEE 261 or 278 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOEE 465. Lecs, M W F 11:15. Not offered 2004-2005. M. A. Geber and P. L. Marks.

This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to relate empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

[BIOEE 464 Macровolution]  
Spring, 4 credits. Limited to 25 students. Prerequisite: BIOEE 278 or permission of instructor. Grad students interested in taking this course are encouraged to meet with instructor to preorganize prerequisites in S-U grades optional, with permission of instructor. Lecs, T R 10:10-11:25; disc. 1 hour each week TBA. Offered alternate years. Not offered 2004–2005. A. R. McCune.

An advanced course in evolutionary history centered on large-scale features of evolution. Areas of emphasis include phylogeny, reconstruction, patterns and processes of speciation, the origin of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involves data and approaches from genetics, morphology, systematics, paleoecology, development, and ecology.

[BIOEE 465 Plant Ecology and Population Biology, Laboratory]  

Field and laboratory exercises are designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

[BIOEE 466 Physiological Plant Ecology, Lectures]  
Spring, 3 credits. Limited to 30 students. Prerequisite: BIOEE 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Lecs, M W F 10:10-11:00. Offered alternate years.

A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and physiological patterning, community, and ecosystem levels. Readings draw from the primary literature and textbooks.

[BIOEE 467 Seminar in the History of Biology (also HIST 415, B&SOC 447, and S&T 447)]  
Summer (6-week session). 4 credits. Limited to 18 students. S-U grades optional. W. B. Provine. Specific topic changes each year.

[BIOEE 468 Physiological Plant Ecology, Laboratory]  
Spring, 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOEE 466. Lab, M 1:25-4:25; plus additional lab hours TBA. Offered alternate years. J. P. Sparks.

A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Labs, T R 10:10–11:25. Offered alternate years. H. W. Greene.

Field and laboratory exercises are based on primary literature and textbooks. Students in this course are strongly encouraged to bring a project to complete during the course. Readings are drawn from the primary literature.

[BIOEE 469 Food, Agriculture, and Society (also B&SOC 469 and S&TS 469)]  

A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural techniques are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

[BIOEE 470 Herpetology, Lectures]  

Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology.

[BIOEE 471 Mammalogy]  

Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematic, ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

[BIOEE 472 Herpetology, Laboratory]  
Spring, 2 credits. Limited to 35 students. Prerequisite: consent of instructor. Required: concurrent or previous enrollment in BIOEE 470. S-U grades optional, with permission of instructor. Fee: $30. Labs, T R 1:25–4:25; occasional field trips and special projects. Offered alternate years. H. W. Greene.

Field and laboratory exercises are based on primary literature and textbooks. Students in this course are strongly encouraged to bring a project to complete during the course. Readings are drawn from the primary literature.

[BIOEE 473 Ecology of Agricultural Systems (also CSS 473)]  
Fall, 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. During the first 6 weeks of class, Thursday meetings may run later because of field trips. Lecs and discs, T R 2:30–3:45. Not offered 2004–2005. A. G. Power and E. C. M. Fernandes.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important exercises.

[BIOEE 475 Ornithology]  

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

[BIOEE 476 Biology of Fishes]  
Fall, 4 credits. Limited to 24 students. Prerequisite: BIOEE 274 or equivalent experience in vertebrate zoology. S-U grades optional, with permission of instructor. A small lab fee may be required. Lecs, M W F 10:10; lab, M 1:25–4:25; with additional lab time TBA. Offered alternate years. A. R. McCune.

An introduction to the study of fishes: their structure, evolution, distribution, ecology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.
physiology, behavior, classification, and identification, with emphasis on local species. Two field trips, including one full-day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

[BIOEE 477 Marine Invertebrates Seminar] Fall. 1 credit. Prerequisite: BIOEE 373 or permission of instructor. S-U grades only. Sem, 1 hour each week TBA. Offered alternate years. Not offered 2004–2005. C. D. Harvell and J. G. Morin. Discussions and directed readings center on current research themes in Invertebrate Biology. Designed as an on-campus companion course to the field-based BIOEE 373, Biology of the Marine Invertebrates. Students will write individual research essays based on projects done in the field.

[BIOEE 478 Ecosystem Biology] Spring. 4 credits. Prerequisite: BIOEE 261 or equivalent. S-U grades optional. Lecs and disc, T R 10:10–12:05. Offered alternate years. C. L. Goodale and R. W. Howarth. Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. We consider anthropogenic effects on ecosystems, such as acid precipitation and nitrogen pollution. Also includes analysis of climate change and regional environmental change from an ecosystem perspective.

[BIOEE 479 Paleobiology (also EAS 479)] Fall. 4 credits. Prerequisites: one year of introductory biology for majors and either BIOEE 274, EAS 375, BIOEE 373, or permission of instructor. S-U grades optional. Lecs, T R 10:10–11:25, lab W 2:00–4:25. Offered alternate years. Not offered 2004–2005. W. Allmon. See EAS 479 for full course description.

[BIOEE 490 Topics in Marine Biology] Spring. 2 credits. May be repeated for credit. Primarily for undergraduates. Limited to 15 students. Prerequisite: permission of instructor. S-U grades optional. Lec, F 1:25–3:20. Offered alternate years. Not offered 2004–2005. J. G. Morin and M. J. Shulman. Seminar courses on selected topics in marine biology, may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

[BIOEE 660 Field Studies in Ecology and Systematics] Fall or spring. Variable credit. Prerequisites: BIOEE 261, a taxon-oriented course, and permission of instructor. S-U grades optional, with permission of instructor. Lecs and field trips TBA. Estimated costs: TBA. Staff. This course provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

[Section 01: Life Histories of Marine and Freshwater Invertebrates] Spring. 2 credits. Prerequisite: undergraduates must have previous experience or course work with marine or freshwater invertebrates. Extended field trips over winter break. Fee, TBA (to cover transportation and housing). Offered alternate years. Not offered 2004–2005. C. D. Harvell and N. G. Hairston, Jr. Field trips to the Yucatan Coast of Mexico. Students employ experimental approaches to study the ecology of invertebrate life histories.

[Section 02: Graduate Field Course in Ecology] Spring. 3 credits. Restricted to graduate students. A fee will be required to help cover food and lodging for trip to Florida. Offered alternate years. Not offered 2004–2005. J. P. Sparks. The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, everglades, and coral reefs.

[BIOEE 661 Environmental Policy (also ALS 661 and B&SOC 461)] Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an “R” grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, T R 2:30–4:30. D. Pinetmel. This course focuses on complex environmental issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or Bioscience. Thus far, every study has been published.

[BIOEE 670 Graduate Seminar in Vertebrate Biology] Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Sem TBA. Staff. Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

[BIOEE 671 Palaeoanthropology of South Asia (also ANTHR 671 and ASIAN 671)] Fall. 3 credits. Limited to 15 students. Lec, M 2:30–3:20; sem, W 7:30–9:30 P.M. K. A. Kennedy. The course explores recent developments in the prehistoric archaeology, palaeoecology, and biological anthropology of the ancient peoples of India, Pakistan, Sri Lanka, and the bordering countries. Issues of origin and decline of the Indus Civilization, fossil record of early humans in the Indian subcontinent, and current research topics are discussed.

[BIOEE 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)] Spring. 3 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lec, M 2:30; sem, and disc, W 7:30–9:30 P.M. Offered alternate years. K. A. Kennedy. A survey of the historical background of present-day concepts of human evolutionary variations and adaptations in space and time. The formation of biological anthropology as a unique area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.

[BIOEE 754-760 Special Topics in Evolution and Ecology] Fall or spring. 1–3 credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor. Staff. Independent or group intensive study of special topics of current interest. Content varies each semester.

[BIOEE 761 Microsatellite DNA: Techniques] Fall. 1 credit. May be repeated for credit. Limited to 12 students. Prerequisite: Permission of instructor required. S-U grades only. Fee, TBA. Lec. and disc. TBA. R. G. Harrison and S. M. Bogdanowicz. Construct and screen genomic DNA libraries for microsatellite loci. Lectures and group discussions regarding microsatellite isolation, characterization, and evolution. Informal presentations of student research projects.
BIOGD 280 Lectures in Genetics
Fall, spring, or summer (8-week session).
3 credits. Not open to freshmen in fall semester. Lecture component of BIOGD 281. Not to be taken by students majoring in Biological Sciences; this course may not be used to fulfill the requirements for the Biological Sciences major. Prerequisites: one year of introductory biology or equivalent, or permission of instructor. Lecs. T R 10:10–12:05. Problem-solving sessions strongly recommended. T or W 8:30–9:45 (additional session by arrangement). T. D. Fox and R. J. MacIntyre.
A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions cover gene transmission, gene action and interaction, gene linkage, and recombination. gene and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed.

BIOGD 281 Genetics
Fall, spring, or summer (8-week session).
5 credits. Not open to freshmen in fall semester. Prerequisite: one year of introductory biology or equivalent. Lecs. T R 10:10–12:05; lab. Problem-solving sessions strongly recommended. T or W 8:30–10:00 (additional session by arrangement). T. D. Fox and R. J. MacIntyre.
A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions cover gene transmission, gene linkage and recombination, gene structure, gene and chromosome mutations, and gene action and regulation. Aspects of recombinant DNA technology are discussed.

BIOGD 282 Human Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Prerequisite: 1 year of introductory biology or equivalent. S-U grades optional. Lees, M W F 11:15. K. Kemphues.

BIOGD 385 Developmental Biology
Fall. 3 credits. Prerequisite: BIOGD 281. Lecs. M W F 11:15. K. Kemphues.
An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

BIOGD 394 Circadian Rhythms (also ENTOM 394, BIONB 394, PL PA 394)
Fall. 2 credits. Prerequisite: 200-level biology course. S-U grades optional. Lec. T 10:10–11:50. K. Lee (fall, even years) and J. Ewer (fall, odd years). For description, see ENTOM 394.

BIOGD 439 Molecular Basis of Human Disease (also BIOM 439)
Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOM 330, BIOM 331/332, or BIOM 335) and genetics (e.g., BIOEE 281) or permission from instructor. Recommended: cell biology (e.g., BIOM 432 or BIOP 316) and physiology (e.g., BIOP 311 or BIOP 458). S-U grades optional. Lecs. T R 10:10–11:25. W. L. Kraus.
This course will examine how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena, and environmental agents lead to human diseases. The material will focus on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics will be selected from the study of genetic mutations and the resulting physiological alterations in normal cellular processes, as well as the resulting physiological consequences. This course will examine how changes in the basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating them, will be presented. A portion of each class period will be devoted to discussion and practice questions.

**[BIOGD 450 Vertebrate Development]**
Spring. 3 credits. Prerequisite: introductory biology. S-U and letter grades. Offered alternate years. Lecs. T R 1:40-2:55. K. Whitlock. This course is designed to examine the development of characteristics that make vertebrates unique. The course starts with an introduction to recent evolutionary and molecular approaches to understanding the rise of vertebrate structures. The development of vertebrate structures, such as neural crest, specialized sense organs, and limbs, is examined in detail with emphasis on the cellular and molecular events controlling their development.

**[BIOGD 480 Seminar in Developmental Biology]**
Fall or spring. 1 or 2 credits. May be repeated for credit. Limited to juniors and seniors. Prerequisite: BIOGD 281. S-U grades only. Seminar TBA. Staff.

**[BIOGD 481 Population Genetics]**
Fall. 4 credits. Prerequisite: BIOGD 281, BIOPH 278, or equivalents. Lecs. M W F 10:10; disc. M M 2:30 or T 1:25. C. F. Aquadro. Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, genome structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

**[BIOGD 482 Human Genetics and Society]**
Fall. 4 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying genetics and molecular biology. Prerequisites: BIOGD 281 and BIOPH 330 or 333 or 331 and 332 and permission of instructor. S-U grades optional. T R 2:30-4:25. R. A. Calvo. Presentation of some of the science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Among the topics considered are assisted reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, human cloning, forensic uses of genetics, and therapy for genetic diseases. Students lead some discussions. There is a major writing component to the course.

**[BIOGD 483 Advanced Developmental Biology]**
Spring. 3 credits. Prerequisites: BIOGD 281, BIOPH 332 or 330 or 333, and BIOGD 380 or permission of instructor. Lecs. T R 2:30-4:00. Offered alternate years. Next offered spring 2007. M. E. Wolpert. An advanced course in developmental biology, with emphasis on the molecular events underlying developmental processes. Simultaneously, a molecular/cell biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational, and post-translational regulation of gene expression and cellular events such as signal transduction and cell-cell communication. Numerous developmental systems are discussed and analyzed, including development of plants, and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice, frogs, and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, and results and their interpretation.

**[BIOGD 485 Bacterial Genetics (also BIOMI 485 and BIOPH 485)]**
Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOPH 330 or 331 and 332 or 333. Lecs. W 7:30-9:25 P.M. J. E. Peters. For course description, see BIOMI 485.

**[BIOGD 486 Advanced Eukaryotic Genetics]**
Spring, 4 credits. Prerequisites: BIOMI 290 and BIOPH 333 or 332 or 331 and 332 or permission of instructor. Lecs. T R 12:20-2:15 and R 12:20-1:10; disc. R 12:25-2:15 or F 11:15-12:05. E. E. Alani. The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosone segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

**[BIOGD 487 Human Genomics]**
Fall. 3 credits. Prerequisite: BIOGD 281. Lecs. T R 9:05-10:15. A. G. Clark. Fundamental concepts of transmission, population, and molecular genetics will be applied to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Emphasis will be placed on the role of full genome knowledge in expediting this process of gene discovery. The role of statistical inference in interpreting genomic information will be stressed. Population genetics, and the central role of understanding variation in the human genome in mediating variation in disease risk, will be explored in depth. Methods such as haplotype mapping, linkage disequilibrium mapping, and admixture mapping will be examined. The course will be conducted as a series of lectures with classroom discussions. Assignments will include a series of problem sets and a term paper.

**[BIOGD 488 Mammalian Embryology (also BIOPH 489)]**

**[BIOGD 600 Development of Sensory Systems (also BIOMI 600)]**
Spring. 2 credits. Prerequisites: introductory biology, genetics, development, and neurobiology, or permission of instructor. S-U or letter grades. Lecs. M 7:00-8:40 P.M. Offered alternate years. K. Whitlock. This course explores the unique and shared mechanisms used in sensory system development of both vertebrates and invertebrates. The first class of the course provides a general introduction to the development of sensory systems in vertebrates and invertebrates. Following classes involve the reading of current and classic papers in sensory system development. Students choose a topic and articles from a list provided by the instructor. Students are responsible for an oral presentation and short paper.

**[BIOGD 638 Filamentous Fungal Genomics and Development (also PLPA 638)]**
Spring. 1 credit. S-U grades optional. Prerequisite: BIOGD 281 or equivalent, or permission of instructor. Lec. M W F 10:10 (4 weeks, last 4 of semester). B. G. Turgeson. Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis and reproduction. Examples are chosen from investigations of model plant pathogenic fungi and from well-known genetic models such as Aspergillus nidulans and Neurospora crassa.

**[BIOGD 682 Fertilization and the Early Embryo]**
Spring. 2 credits. Prerequisites: BIOGD 281; BIOPH 332, 330 or 333; and BIOGD 385 or permission of instructor. Lecs. R 2:30-4:25. Offered alternate years. Next offered spring 2008. J. E. Peters. This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental.
cell, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization (sperm, egg binding, sperm entry into egg), pronuclear fusion, egg activation, initiation and terminating the cleavage, division period, cytoplasmic determinants, and changes in nuclear and cytoplasmic architecture."

**BIOGD 684 Advanced Topics in Population Genetics**

Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. Lect. T. 2:30-4:25. Offered alternate years. A. G. Clark.

An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, presentations by students.

**BIOGD 687 Developmental Genetics**

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 and 385 or their equivalents. S-U grades optional. Lect TBA. Offered alternate years. Next offered 2005-2006. K. J. Kemphues.

Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in fruitflies, nematodes, mice, and fish. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are encouraged to discuss each topic in class.

**BIOGD 689 Cellular Basis of Development**

Fall. 2 credits. Prerequisites: BIOGD 281, BIOGD 385, and either BIOMI 330 or BIOMI 351-352. Lecs. W 2:30-4:25 P.M. S-U grades optional. Enrollment limited to 20 students. Offered alternate years. J. Liu.

This course focuses on the integration of different cellular processes in various developmental contexts. Topics include cell migration, cell adhesion and fusion, cell growth and proliferation, cell-cell communication, and cell death. Students are required to read current literature and participate in discussions in class.

**BIOGD 780 Current Topics in Genetics**

Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics. Written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades only, with permission of instructor. Seminar TBA. Staff.

**BIOGD 781 Problems in Genetics and Development**

Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc TBA. E. Alani and staff.

An introduction to the research literature in selected areas through weekly problem sets and discussions.
and other living plants. The functional role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as nutrient and toxic elemental cycles, transformation of pollutant chemicals, wastewater treatment, environmental biotechnology, and astrobiology.

**BIOMI 404 Pathogenic Bacteriology and Mycology (also VETMI 404)**

Spring. 2 or 3 credits (3 credits with lecture and seminar with permission of instructor for undergraduates). Prerequisites: BIOMI 290 and 291. Strongly recommended. BIO G 305. Lecs. M W 10:10; sem. F 10:10. Offered alternate even years. D. Debbie. This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The emphasis of this course is infection and disease pathogenesis. Topics include disease causality; interactions of host-pathogen environment, including immunity to bacteria and fungi; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular level.

**BIOMI 409 Principles of Virology (also VETMI 409)**

Fall. 3 credits. Prerequisites: BIOMI 290, 291 or permission of instructor. Recommended: BIOMI 330–332, BIOMI 432. Letter only. Lecs. T R 12:55–2:05. G. R. Whitaker and S. G. Lazzaro. The course covers the principles of virology; focused mainly on animal viruses but also including plant viruses and bacteriophage. Topics include the classification of viruses, virus entry, genome replication and assembly, and virus pathogenesis. Particular emphasis is placed on virus-host cell interactions and common themes between different viral families.

**BIOMI 414 Bacterial Diversity**

Spring. 3 credits. Prerequisites: BIOMI 290, and 291, BIOMI 330 or 331 or 333 recommended. Lecs. M W F 11:15. Offered alternate odd years. S. H. Zinder. A consideration of the evolutionary biology, physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

**BIOMI 416 Bacterial Physiology**

Spring. 3 credits. Prerequisites: BIOMI 290, 291 or BIOMI 330 or 331, or their equivalents. Lecs. M W F 11:00. Offered alternate even years. J. P. Shapleigh. The focus of the course is on physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

**BIOMI 417 Medical Parasitology (also VETMI 431)**

Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Lecs. T R 3:35–4:25. D. Bowman. A systematic study of arthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitisms.

**BIOMI 418 Microbial Ecology**

Spring. 3 credits. Prerequisites: BIOMI 290 and 291, or BIOMI 304 and instructor’s permission, and BIOMI 330 or 331 and 332, Lecs. M W 10:10–11:00; E. R. Angert. Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course introduces current biochemical and molecular techniques to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include growth and survival, population biology, and microbial interactions.

**BIOMI 420 Microbial Genomics**

Spring. 2 credits. Prerequisites: BIOMI 290, BIO G 281, BIOMI 450, or equivalent. Lecs. T R 10:10–11:00. Offered alternate odd years. J. P. Shapleigh and J. D. Helmman. Genomic information is revolutionizing biology. We discuss the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

**BIOMI 485 Bacterial Genetics (also BIOGD 485 and BIOM 485)**

Fall. 2 credits. Prerequisites: BIOGD 281. Recommended: BIOMI 290 and 330 or 331 and 332 or 333. Lecs. W 7:30–9:25 p.m. J. E. Peters. Participants in this course will gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium Escherichia coli. Students will discover the processes by which bacteria evolve through different mutations and the exchange of genetic information. We will explore how genes are regulated efficiently through negative and positive regulation and by global regulatory mechanisms. We will also examine how the composition of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

**BIOMI 610 Introduction to Chemical and Environmental Toxicology (also TOX 610)**

Fall. 3 credits. Prerequisite: graduate standing in the field or consent of the instructor. Letter grades. Lecs. M W F 11:15–12:05. A. Hay. An introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Special attention is given to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

**BIOMI 650 Molecular Plant Virology (also PL PA 606)**

Spring. 1 credit. Prerequisites: BIOMI 109, a course in cell biology, or permission of instructor. Lecs. M W 11:15 (7 weeks, 1st half of semester). Offered alternate years. S. G. Lazzaro. Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Material covered includes virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.

**BIOMI 651 Genomics of Bacterium-Host Interactions (also PL PA 608)**

Fall. 1 credit. S-U grades optional. Prerequisites: BIOMI 290 or equivalent or permission of instructor. Lecs. M W 9:05 (2nd half of semester). Offered alternate years. A. Collmer and S. Winans. Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TGCRE Comprehensive Microbial Resource and Artemis tools, the pathogens Verminia pestis, V. enterococca, Pseudomonas syringae, Raustalismis solanacearum, and Agrobacterium tumefaciens, and the symbiotin Sinorhabdus meliloti.

**BIOMI 652 (Section 02) Molecular Plant-Microbe Interactions (also BIOP 652, Sec 02, PL PA 664)**

Spring. 1 credit. Prerequisites: BIOGD 281, BIOMI 330 or 331 or 333, and BIOP 653 (section 02) or their equivalents. Lecs. M W F 12:20 (12 lecs). Offered alternate even years. S. C. Winans. For course description, see BIOP 652, Sec 02.

**BIOMI 690 Prokaryotic Biology**

Fall and spring. 4 weeks/8 lectures. 1 credit/section to be offered. T R 10:15–11:30.

**Section 1—Microbial Structure and Function**

Fall. J. P. Shapleigh. Discussion of those macromolecules and assemblies of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

**Section 2—Microbial Genetics**

Fall. J. D. Helmman. Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, repair, and mutagenesis.

**Section 3—Microbial Physiology/Diversity**

Fall. S. H. Zinder. The major energy-conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea are reviewed. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.

**Section 4—Microbial Pathogenesis**

Spring. S. C. Winans. An introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples will include bacterial pathogens of both animals and plants.
Section 5—Environmental Microbiology

Spring, E. L. Madson.

A core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. The crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere will be discussed.

BIOMI 740 Veterinary Perspectives on Pathogen Control in Animal Manure (also VETMI 700, also BIOMI 740)

Spring. 2 credits. Third- and fourth-year veterinary students. Letter grades only. Lect/Disc M W R for 8 weeks, 3:00–4:00. D. D. Bowman.

This course presents an in-depth look at the management of pathogens in animal manures. It reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. The course discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. The course concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

BIOMI 791 Advanced Topics in Microbiology

Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Sec 01 Bacterial Genetics, T 4:00–5:00, S. C. Winans; Sec 02 Environmental Microbiology, W 4:00–5:00, E. R. Angert.

Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

BIOMI 795-796 Current Topics in Microbiology

Fall. 795, spring, 796. 0.5 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lect TBA. Staff.

Lectures and seminars on special topics in microbiology.

BIOMI 797 Scientific Communication Skills

Fall and spring. 1 credit each semester. S-U grades only. F 2:30–3:20. Staff.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Taken by students in the Graduate Field of Microbiology during their first two semesters, a third semester is optional.

BIOMI 798 Graduate Research Seminar in Microbiology

Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. F 1:25–2:15. Staff.

All graduate students in the Field of Microbiology are required to attend BIOMI 798 and are required to present a seminar concerning their research at least once each year.

BIOMI 799 Microbiology Seminar

Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Sem R 4–5. Staff.

NEUROBIOLOGY AND BEHAVIOR (BIONB)

- BIONB 111 Brain Mind and Behavior (also PSYCH 111 and COGST 111)

See COGST 111 for description.

- BIONB 221 Neurobiology and Behavior I: Introduction to Behavior

Fall, 3, 4, or 5 credits (4 credits with one discussion per week). Prerequisite: 1 year of introductory college biology. S-U grades optional. Course fee: none. Six-week session. M–F 4:00–5:15. Staff.

A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

- BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology

Spring. 3 or 4 credits (4 credits with discussion and written projects). 4-credit option required of students studying neurobiology and behavior. Each discussion section limited to 15 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisite: 1 year of introductory biology for majors and 1 year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lect, M W F 12:20; disc TBA, C. D. Hopkins and staff.

A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synapses, neurotransmitters, synaptic mechanisms, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

- BIONB 322 Hormones and Behavior (also PSYCH 322)

Fall. 3 credits. Two lectures plus a section in which students read and discuss original papers in the field, give an oral presentation, and write a term paper. Limited to juniors and seniors. Prerequisite (any one of the following): PSYCH 223, or BIONB 221, or BIOMI 719, VETMI 719, or one year of introductory biology plus a course in psychology. Letter grades only. Graduate students may not use the course for credit toward major. Letter grades only. Lect, M W F 11:15. E. Adkins Regan.

See PSYCH 322 for description.

- BIONB 323 Methods in Animal Behavior

Covers methods for observing, quantifying, and analyzing behavioral interactions and communication signals. Lectures plus a series of workshops and projects designed to introduce students to commonly used field and laboratory methods. Emphasis on experimental design and basic statistical techniques. Some lab work with live insects included. Additional lab time often needed to complete projects.
This course covers the basic ideas and techniques involved in computational neuroscience. The course surveys diverse topics, including neural dynamics of small networks of cells, neural coding, learning in neural networks and in brain structures, memory models of the hippocampus, sensory coding, and others.

[BIONB 392 Drugs and the Brain
Fall. 4 credits. Prerequisites: BIONB 222 or equivalent course in neurobiology with permission of instructor. A knowledge of biochemistry is useful but not required. S-U grades optional. T R 10:10-11:15; disc. TBA. Offered alternate years. Fall 2004-2005. R. M. Harris-Warrick and L. M. Nowak.

An introduction to neuropharmacology, with an emphasis on the neural mechanisms of psychoactive drugs. Topics include a brief introduction to neuropharmacology and a discussion of the major neurotransmitter families. The rest of the course covers the major psychotropic drugs, including cocaine, heroin, psychedelics, marijuana, and alcohol, as well as pharmaceuticals for the treatment of anxiety, schizophrenia, and depression. The course includes a term paper in the form of a grant proposal to study a current problem in neuropharmacology.

[BIONB 394 Circadian Rhythms (also BIOS 394, ENTM 394, and PL PA 394)
Fall. 2 credits. Prerequisite: 200-level biology course. S-U grades optional. Lec. T R 10:10-11:15. K. Lee (fall, even years) and J. Ewer (fall, odd years).

For description, see ENTM 394.

[BIONB 396 Introduction to Sensory Systems (also PSYCH 396 and 696)
Spring. 4 credits. Limited to 25 students. Prerequisites: an introductory course in biology or biopsychology, plus a second course in behavior and cognition, perception.

Topics include: sensory coding, learning in neural networks and in brain structures, memory models of the hippocampus, sensory coding, and others.

[BIONB 420 Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. TBA.

Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. See department office (W363 Mudd Hall) for offerings.

[BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431 and 631)
Fall. 3 or 4 credits. The 4-credit option involves a term paper or creation of a relevant web site. Limited to 25 students.

Prerequisites: an introductory course in biology or psychology, plus a second course in perception, neurobiology, cognitive science, or biopsychology. T R 10:10-11:15. B. P. Halpem.

For description see PSYCH 431.

[BIONB 422 Modeling Behavioral Evolution
Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, 1 year of calculus, 1 course in probability or statistics, and permission of instructor.

This course is open to advanced undergraduates and graduate students. S-U grades optional. Lec. T R 2:55-4:10; computer lab, 1 class period per week. TBA. Offered alternate years. H. K. Reeve.

This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to critically assess recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).
A writing-intensive advanced course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, conflict and cooperation in animal societies, and Darwinian medicine.

**BIONB 417** Developmental Neurobiology Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOMG 281, BIOMB 330 or BIONB 351; co-registration in one of the two is acceptable with permission of instructor. Open to advanced undergraduates. S-U grades optional. MWF 11:10-12:05. Offered alternate years. Not offered 2004-2006. B. R. Land.

**BIONB 406** Biometric Signals in Animals and Man Fall. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: 1 year of introductory biology, PHYS 101-102 or 207-208, and permission of instructor. S-U grades optional. Lecs., M W 9:30-10:45; lab. T Th 10:50-12:05. B. R. Land.
sensing plays a critical role in predator detection and avoidance. This course teaches students about animal acoustic signaling by introducing them to various animal acoustic systems. The course presents the physical properties of sound, physiological mechanisms for sound production and hearing, and the behavioral contexts in which sounds are used. Acoustic techniques are provided in the laboratory where students learn how to record, synthesize, and analyze sounds with the aid of recorders and Mac and/or PC computers running customized software. Labs are designed around the lecture material and provide practical "real-world" exercise designed to stimulate discovery of fundamental principles described in lectures. Class research projects on a selected topic in bioacoustics are required. Engineering students with interests in music, audio analysis, digital signal processing, and computer science are encouraged. 

BION 531 Topics in Cognitive Studies
(also COGST 531, LING 531, PSYCH 531, COM S 531)
Spring. 4 credits. Prerequisites: COGST 501, PSYCH 214, or permission of instructor. Open to advanced undergraduates. S-U grades optional. M 4:30-6:30 P.M. S. Edelman and H. Segal. See COGST 501 for description.

BION 600 Development of Sensory Systems (also BIOGD 600)
Spring. 2 credits. Prerequisites: Introduction to biology (genetics, development, and neurobiology preferred, or permission of instructor). S-U grades only. M 7:00-8:40 P.M. K. Whitlock. This course will explore the unique and shared mechanisms used in sensory system development of both vertebrates and invertebrates. The first class of the course will provide a general introduction to the development of sensory systems in vertebrates and invertebrates. Following classes will involve the reading of current and classic papers in sensory system development. Students will choose a topic and articles from a list provided by the instructor. Students will be responsible for an oral presentation and short paper.

BONB 721 Introductory Graduate Survey in Neurobiology and Behavior
Fall. 2 credits. Required of graduate students majoring in neurobiology and behavior. Class meets weekly for two hours. Students also prepare a research proposal on a potential topic for their thesis research (in the formal registration or NIH grant). This proposal is prepared in consultation with one or more relevant faculty members.

PLANT BIOLOGY (BIOPL)

BIOPL 240 Green World/Blue Planet
Summer (6-week session). 3 credits. S-U grades optional. Limited to 12 students. Lecs. M-F 10:00-11:15. T. Silva. This course focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

BIOPL 241 Introductory Botany
Fall. 3 credits. Lecs. T 9:05, lab, M T W or R 12:54-2:25, or M W 7:30-8:45 P.M. K. J. Niklas. Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several superb natural areas which are available for study. Those who lack college-level biology are expected to work
BIOPL 247 Ethnobiology  
A consideration of the principles, methods, and issues of ethnobiology. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and modern societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.

BIOPL 248 Taxonomy of Vascular Plants  
An introduction to current studies involving the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory includes methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOPL 340 Methods in Biological and Biochemical Prospecting  
Student participants learn theory and methodology in ethnobotany, chemical ecology, and zoopharmacognosy as they apply in a multidisciplinary fashion to chemical prospection. The use of techniques in the chemistry of natural products and biological assays in the discovery of chemicals and their role in nature is described. Classical examples of drug development, from quinine to taxol, in the course of chemical prospection are discussed. An overall medicinal purpose is emphasized, with mention of specific worldwide spread of diseases pressing for new drugs.

BIOPL 342 Plant Physiology, Lectures  
Spring. 3 credits. Prerequisites: 1 year of introductory biology and either concurrent enrollment in BIOPL 344 or written permission of instructor. May not be taken for credit after BIOPL 342 unless written permission is obtained from instructor. Lecs, T R 10:10–11:25. T. G. Owens.  
An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

BIOPL 343 Molecular Biology and Genetic Engineering of Plants  
Spring. 2 credits. Prerequisite: 1 year of introductory biology or permission of instructor. S-U grades optional. Lecs, T R 11:15. M. E. Nasrallah.  
An introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. The course emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed toward undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

BIOPL 344 Plant Physiology, Laboratory  
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 342. May not be taken for credit after BIOPL 244. Similar to BIOPL 244 but at a more advanced level. Lab, R 1:25–4:25; disc, R 12:20. T. Silva.  
Experiments exemplify concepts covered in BIOPL 342 and offer experience in a variety of biochemical and biological techniques, from the cellular to whole plant level, with emphasis on experimental design.

BIOPL 345 Plant Anatomy  
Fall. 4 credits. Limited to 15 students. Prerequisite: 1 year of introductory biology or a semester of botany. Lecs, M W 9:05; labs, M W 2:00–4:25. Offered alternate years. Not offered 2004–2005. Staff.  
A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

BIOPL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants  
Spring. 2 credits. Limited to 24 students. Prerequisite: BIOPL 343 or permission of instructor. Concurrent enrollment is BIOPL 345 is encouraged. S-U grades optional. Lab, W 12:25–4:25. Offered alternate years. K. C. Nixon.  
A companion to BIOPL 343 with laboratory activities that focus on the practice of plant biotechnology. Students will transfer genes to plants by a variety of methods and will analyze their expression in the host genome by use of reporter gene assays, and by the preparation and analysis of nucleic acids.

BIOPL 348 The Healing Forest  
An ethnobotanical and ethnopharmaceutical consideration of the role of plants, fungi, and insects in traditional and western medicine. Studies of indigenous and lay societies illustrate the ecological, systematic, biochemical, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, human health, bioprospecting, compensation for indigenous knowledge, and sustainable development.

BIOPL 359 Biology of Grasses  
Fall. 2 credits. Prerequisite: 1 year of introductory biology or a course in plant systematics or permission of instructor. S-U grades optional. Lecs, T 1:25–2:15; lab, T 2:30–4:25. Offered alternate years. J. I. Davis.  
Systematics and related aspects of the biology of the graminoid plant families (grasses, sedges, and rushes), with the principal emphasis on grasses. Major topics include phylogenetics, taxonomy, physiology, reproductive biology, speciation, and biogeography. The roles of graminoid plants in natural and human-disturbed environments are discussed, as are the origins of cultivated species.

BIOPL 404 Crop Evolution, Domestication and Diversity (also PL BR 404, IARD 404)  
Fall. 2 credits. S-U letter. Prerequisites: Genetics 281 or Plant Breeding 225 or permission of the instructor. Lecs, T R 9:05. S. Kresovich.  
See PL BR 404, for description.

BIOPL 422 Plant Development  
Fall. 2 credits. Lecs, T R 9:05–9:55. Prerequisites: course work in molecular biology (e.g., BIOBM 330, 331, 332, or 333), or genetics (e.g., BIOGD 281), or permission of instructor. S-U grades optional. J. Hua.  
An introduction to plant development, studying the mechanisms of morphogenesis and cell fate determination at the organismal, cellular, and molecular levels.

BIOPL 440 Phylogenetic Systematics  
Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lecs, T R 10:10; labs, T R 2:00–4:25. Offered alternate years. K. C. Nixon.  
Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

BIOPL 442 Current Topics in Ethnobiology  
Explorations of the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnobiology, and the role of plants and animals in human lives, in subsistence and exchange, and in thought.

BIOPL 443 Topics and Research Methods in Systematics  
Fall or spring. 1–2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. Staff. A series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.
BIOL 444 Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisites: 1 year of introductory biology or permission of instructor. Lecs, M W F 9:05; lab, M or W 1:25–4:25 R. O. Wayne.

Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOL 447 Molecular Systematics
Fall. 3 credits. Prerequisites: BIOE 278 or BIOGD 281 or BIOBM 330, or BIOBM 332, or written permission of instructor. Lecs, T R 8:30–9:55. Offered alternate years. Not offered 2004–2005. J. J. Doyle.
The theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organelar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

BIOL 448 Plant Evolution and the Fossil Record
Spring. 3 credits. Prerequisite: BIOL 241 or equivalent, or permission of instructor. Lecs, T R 9:00; lab, R 12:20–2:15. Offered alternate years. K. J. Niklas and W. C. Crepet.

An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

BIOL 449 Green Signals and Triggers—The Plant Hormones (also MORT 449)
Fall. 3 credits. S-U grades optional. Prerequisite: 1 year of introductory biology and plant physiology (BIOL 242 or 342) or permission of instructor. F 1:25–2:15. Offered alternate years. Not offered 2004–2005. P. J. Davies.

A study of plant hormones and how they regulate plant growth and development. Topics covered include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

BIOL 452 Systematics of Tropical Plants

An intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification combined with laboratory analysis of available materials in a "whole-plant" context. Two-week field trip over winter break.

BIOL 453 Principles and Practice of Historical Biogeography (also ENTOM 453)

A survey of techniques in historical biogeography and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methodologies. Geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. Laboratories focus on computer applications and discussion of controversial issues.

BIOL 454 Systematics of Tropical Plants: Field Laboratory
Spring. 1 credit. Limited to 15 students. Prerequisite: prior enrollment in BIOL 453 or permission of instructor. Letter grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered every three years. Not offered 2004–2005. K. C. Nixon.

An intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification combined with laboratory analysis of available materials in a "whole-plant" context. Two-week field trip over winter break.

BIOL 456 Biomolecules of Plants (also BEE 456)
Fall. 3 credits. Prerequisites: upper-division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U or letter grade optional. Lecs, T R 11:15–12:05; disc, W 2:30–3:20. J. R. Cooke and K. J. Niklas. See BEE 456, for description.

BIOL 462 Plant Biochemistry
Spring. 3 credits. Prerequisites: BIOL 242 or 342 or equivalent or BIOL 330 or 331 or equivalent or permission of instructor. Letter-grade only. Lecs, M W F 9:05. J. Rose and K. Van Wijk.

This course focuses on biochemistry of plant specific processes, with the aim to obtain an integrative overview of plant biochemistry. Examples include processes such as cell wall biochemistry, pigment biosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics-based experimental tools such as proteomics and metabolomics are discussed.

BIOL 464 Laboratory in Plant Molecular Biology (also BIOBM 841)
Fall. 4 credits. Prerequisites: BIOL 281 or equivalent, or BIOL 330 or 331 or equivalent, and permission of instructor. S-U grades with permission of instructor. Lab, T R 12:20–4:25. J. B. Nasrallah, M. R. Haufler, S. G. Lizarowitz, G. Martin and B. G. Turgeman.

Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

BIOL 465 Plant Mineral Nutrition (also CSS 642)

A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes, as well as the interaction of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

BIOL 467 Seminar in Systematic Botany
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional. Sem, T 12:20. Bailey Hortorium staff.

Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

BIOL 469 Solute Transport in Plants (also BEE 469)
Fall. 3 credits. Letter only. Lecs T R 10:10–11:25. Offered alternate years. R. M. Spanswick.

See BEE 469 for description.

BIOL 471 Water Transport in Plants (also BEE 471)

See BEE 467 for description.

BIOL 472 Plant Molecular Biology II
Spring. 1–6 credits (1 credit per section). Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 351. S-U grades optional.

A series of four-week modules on specialized topics. Coordinator: J. B. Nasrallah.

Section 01 Molecular Plant-Pathogen Interactions I and II (also PL PA 662)
1 credit. Lecs, M W F 10:10 (12 lecs).

An examination of the molecular and cellular factors that control pathogen-plant interactions from the perspectives of plant biology and plant responses to pathogen infection. Beginning spring 2004, alternate years will focus on: 1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apoplastic responses that limit infection, and RNA interference; and 2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

Section 02 Molecular Plant-Microbe Interactions (also BIOM 652, PL PA 664)

Course focuses on the interactions of Agrobacterium and Rhizobium with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of Agrobacterium to produce transgenic plants. Topics on Rhizobium-plant interactions include regulation of nitrogenase activity and expression and function of the symb plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

Section 03 Light Signal Transduction in Plants
1 credit. S-U grades optional. Lecs, M W F 10:10 (12 lecs) Mar. 26-Apr. 22. T. Brinell. In addition to providing plants with energy for photosynthesis, light plays an essential role in the development of higher plants. Light quality and intensity is carefully monitored by the plant to avoid neighboring vegetation, set the circadian clock and regulate plant photosynthesis rates. This course focuses on recent studies that have illuminated the molecular basis of light signal transduction networks in higher plants. Readings will be assigned from current literature on those topics that use genomics tools such as microarray analysis to address fundamental questions in red/far-red and blue light signal transduction.

Section 04 Plant Gene Evolution and Phylogeny
1 credit. Lecs, M W F 1:25 (12 lecs). Offered alternate years. J. J. Doyle. Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of genetic relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination on gene phylogeny, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.

Section 05 Molecular Biology of Plant Organelles (also BIOBM 652-5)
1 credit. S-U grades optional. Lecs, M W F 10:10-1:25 (Mar. 19). M. R. Hanson and D. B. Stern. An in-depth examination of the molecular biology of plant mitochondria and plastids. Topics include the organization, evolution, and expression of organelle genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organelle proteins. Special topics include mitochondrially encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nuclear-organelar interactions.

Section 06 Plant Biotechnology (also PLBR 652 and PLPA 662-2)
1 credit. S-U grades optional. Lecs, M W F 10:10-1:25 (12 lecs) Mar. 28-Apr. 22. M. Zaitlin and E. D. Earle. This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Section 07 Plant Cell Walls: Structure to Proteome
1 credit. S-U grades optional. Lecs, M W F 10:10-12:15 (March 28-Apr. 22. J. Rose. This course examines the structure and function of plant cell walls, exploring their dynamic nature and fundamental contribution to numerous aspects of plant growth and development. Topics include: wall biosynthesis; wall structure and composition; regulation of cell expansion and differentiation; defense against pathogens and signaling; the apoplast as a metabolically active subcellular compartment; and analytical techniques: from biochemistry to proteomics.

BIOL 653 Plant Molecular Biology I
Fall. 1-3 credits (1 credit per section). Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331, S-U grades optional. Coordinator: J. B. Nasrallah. A series of four-week modules on specialized topics.

Section 01 Concepts and Techniques in Plant Molecular Biology (also PL PA 663.01, PL BR 653.01)
2 credits. Lecs, M W F 10:10 (24 lecs) Sept. 5-Oct. 29. S. R. McCouch, J. Giovannoni and J. Rose. This is an introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences. This course serves as a prerequisite to other modules in the BIOBM 653-656 series and BIOL 652 (spring series). The course is divided into three sections: 1) Gene discovery: covers genetic, molecular, and genomic approaches to the isolation of plant genes; 2) Gene characterization: covers DNA sequence analysis, assessment of gene expression, functional genomic approaches, and production of transgenic plants; 3) Analysis and characterization of proteins and metabolites: includes proteomics approaches to the analysis of plant proteins, protein-protein interactions, and metabolic profiling through emerging metabolomic techniques. This course will consist of two lectures and one day of discussion per week. Course material will be coordinated with BIOL 641 (lab). Emphasis is on understanding techniques and approaches that are appropriate for different experiments and objectives.

Section 02 Proteomics in Plant Biology
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Oct. 1-29. K. van Wijk. Introduction to proteomics and mass spectrometry and its application in plant biology. Course includes discussion of protein separation, protein tagging and visualization techniques; principles of biological mass spectrometry and interpretation of spectra; bioinformatics tools in proteomics; comparative proteomics; phosphoprotein mapping. We will discuss limitations and possibilities of proteomics on plants for which little sequence information is available and experimental papers involving plant proteomics.

Section 03 Plant Genome Organization and Function (also PLBR 653.5)
1 credit. S-U grades optional. Lecs, M W F 10:10-12:15 (12 lecs). Offered alternate years. S. D. Tanksley. This course covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere-telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

Section 04 Molecular Aspects of Plant Development I (also BIOBM 653.4)
1 credit. Lecs, M W F 10:10 (12 lecs) Nov. 1-Dec. J. J. B. Nasrallah. This module focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral organs and cells are discussed. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOL 652, Sec. 02 (Molecular Aspects of Plant Development I).

Section 05 Molecular Breeding (also PLBR 653.4)
1 credit. Lecs M W F 10:10-12:15 (12 lecs). Offered alternate years. Not offered 2004-2005. S. D. Tanksley. Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

Section 06 Plant Senescence (also HORT 625.02)
1 credit. S-U grades optional. (12 lecs) S. Gan. This course introduces molecular, genomics and proteomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes will also be discussed.

BIOL 654 Botanical Nomenclature
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Lec and disc TBA. Offered alternate years. Not offered 2004-2005. Staff. An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

BIOL 656 Topics in Plant Evolution
Spring. 1 credit. Prerequisite: BIOL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc TBA. Offered alternate years. K. J. Niklas. A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOL 740 Plant Biology Seminar
Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology. Sem, F 11:15. Staff. Lectures on current research in plant biology, presented by visitors and staff.
Plant Cytogenetics Laboratory (PL BR 446)
Teaching Experience (BIO G 498)
Undergraduate Research in Biology (BIO G 499)

**COURSES IN MARINE SCIENCE**

Cornell offers an extensive listing of undergraduate courses in marine science. Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology offered through the Office of Undergraduate Biology, the undergraduate specialization in Ocean Sciences offered through the Science of Earth Systems Program, and the summer program of courses offered by the Shoals Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Stimson Hall, or on their website, www.sml.cornell.edu.

**Undergraduate Specialization in Marine Biology and Oceanography**

Biological Sciences majors in the Ecology and Evolutionary Biology program of study have the option of specializing their program of study in the area of Marine Biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program requirements, students in marine biology are encouraged to enroll in the following courses:

1. BIOE 154, The Sea: An Introduction to Oceanography
2. BIOSM 364, Field Marine Science, or BIOSM 375 Field Marine Biology and Ecology, and at least one 400-level BIOSM field course at the Shoals Marine Laboratory,
3. BIOE 462, Marine Ecology.

**Undergraduate Specialization in Ocean Sciences**

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1. BIOE 573 Biology of the Marine Invertebrates
2. BIOE 457 Limnology
3. BIOE 462 Marine Ecology
4. BIOE 478 Ecosystem Biology
5. BIOE 490 Topics in Marine Biology
6. BIOSM 303 Ecology of Marine Fisheries
7. BIOSM 308 Marine Microbial Ecology
8. BIOSM 309 Climates and Ecosystems

---

**SHOALS MARINE LABORATORY (BIOSM)**

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its bio, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.
Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. Typical day consists of lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the laboratory's 47-foot research vessel, John M. Kinne. Field experience is an integral component of all courses, using Appledore's extensive intertidal and subtidal zones, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected based not only on their academic excellence but also on their teaching ability in the field. In addition, there are numerous guest lecturers including engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office. (Not all of these courses are offered each semester; consult the SML catalog for current offerings.)

**BIOSM 160 The Oceanography of the Gulf of Maine**

Summer. 4 credits. Limited to 24 students. A special 2-week course offered aboard a Sea vessel and at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for two weeks. SML faculty.

An exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend 10 days aboard the Sea Education Association’s sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.

**BIOSM 161 Introduction to Marine Science**

Summer. 4 credits. S-U grades optional. A special two-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs and fieldwork for two weeks. This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds andurchin barrens.

**BIOSM 162 Marine Environmental Science**

Summer. 3 credits. Prerequisite: open to high school students who have successfully completed two high school science courses. The special 12-day course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecture, labs, and fieldwork for 12 days. SML faculty.

Environmental studies have become an integral component of high school programs all around the country; however, opportunities to apply this course work to the marine environment are limited. Marine Environmental Science will focus on coastal marine habitats, with an emphasis on issues as they relate to global habitats and concerns. The special course will include explorations along Appledore Island’s rocky intertidal zone and excursions to neighboring islands to observe harbor seal and seabird colonies. Offshore cruises will include observing the scientific research methods and equipment will be introduced, and each student will have the opportunity to be involved in group research projects.

**BIOSM 204 Biological Illustration**

Summer. 2 credits. A special 1-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily sessions for one week. General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides an opportunity to the scientist or science student a chance to gain experience in the biological illustration. Lab and field trips to seabird and whale foraging grounds. Lectures and discussions will expose students to topics ranging from fishes to seabirds, seabirds to lobsters, and plankton to whales. Fundamental scientific research methods and equipment will be introduced, and each student will have the opportunity to be involved in group research projects.

**BIOSM 303 Ecology of Marine Fishes**

Summer. 4 credits. Prerequisite: 1 year of college-level biology. SCUBA certification recommended, not required. S-U grades optional. A special two-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for two weeks. Not offered 2005. SML staff.

This course presents principles, models, and methods for analysis of dynamics of fish populations and communities, and analysis of current research in fisheries ecology and its potential uses in fisheries management. Lab and field activities emphasize collection and analysis of data from the Gulf of Maine and adjacent estuarine habitats.

**BIOSM 308 Marine Microbial Ecology**

Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special two-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for two weeks. Not offered 2005. SML staff.

This course examines the fundamental role of marine microbial communities in the function of the biosphere. Lectures survey bacterial, protistan, and microbial diversity. Literature and case studies from Arctic to deep sea vent communities. Laboratory exercises cover several principles techniques of field microbial ecology and explore the rich marine microbial environment surrounding the Isles of Shoals.

**BIOSM 309 Climates and Ecosystems**

Summer. 4 credits. Prerequisite: 1 year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special two-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for two weeks. SML faculty.

A study of the fundamentals of organism-environment interaction through the lens of defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, Salinity, wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic factors in the life of coastal and marine plants and animals including humans.

**BIOSM 329 Ecology of Animal Behavior** (also BIONB 329)

Summer. 4 credits. Prerequisite: 1 year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special two-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for two weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

**BIOSM 364 Field Marine Science (FMS)**

Summer. 6 credits. Prerequisite: 1 year of college biology. S-U grades optional. A special four-week course offered twice each summer at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. Students may not take FMS after taking FMBE (BIOSM 375). For more details or an application, consult the SML Office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. Open to core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty.

This course emphasizes living material in
natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductions to physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a research project and the end of the course.

FMBE places an emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical), and marine geology. FMBE (BIOSM 375) places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary, and physiological adaptations of marine organisms; and field experiments.

BIOSM 365 Underwater Research
Summer. 4 credits. Prerequisites: 1 year of college-level biology, recognized scuba certification, and a medical examination. Prerequisite 2-1 grades optional. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lecs and fieldwork for 2 weeks. Team-taught by three faculty members with occasional guest lecturers. Not for recreational divers.

Course covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasis is on subtidal ecological research. Requirements include completion of critical evaluation of several journal articles and production of a research proposal.

BIOSM 374 Field Ornithology
Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lecs and fieldwork for 2 weeks. SML staff.

An introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. The course focuses on fieldwork designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 375 Field Marine Biology and Ecology (FMBE)
Summer. 6 credits. Prerequisites: 1 full year of college-level biology. S-U grades optional. A 4-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML Office, G-14 Simson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty. Designed for students seeking an introduction to the marine sciences and marine ecology; FMBE emphasizes fieldwork in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone and ecological, evolutionary, and physiological adaptations of marine organisms. Students may take FMBE after taking FMS (BIOSM 364).

BIOSM 376 Marine Invertebrate Zoology
Summer. 6 credits. Prerequisite: 1 year of introductory biology and permission of instructors. Students may not take BIOSM 376 after taking BIOSM 375. S-U grades optional. A special 3-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lecs, labs, and fieldwork for 3 weeks. Offered alternate years. SML faculty.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. Emphasis is placed on the evolution of form and function, and the ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. Applecore Island’s unique location provides an excellent venue for the study of freshly collected and in situ representatives of most of the major phyla.

BIOSM 402 Marine Pollution
Summer. 4 credits. Prerequisites: 1 year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered alternate years. Not offered 2005. SML faculty.

An introduction to marine pollutants; their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulations. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved oxygen, and toxicity.

BIOSM 413 Research in Marine Biology
Summer. 6 credits. Prerequisite: 1 year of college-level biology; experience in ecology or physiology recommended. S-U grades optional. A special 3-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lecs, labs, and fieldwork for 3 weeks. Offered alternate years. Not offered 2005. SML faculty.

An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment, respiration in invertebrate organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and adaptation of ice and cold-water habitats; and biological responses to competition and grazing. Field-level laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and in situ functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

BIOSM 418 Tropical Marine Science
Summer. 6 credits. Limited to 15 students. Prerequisites: Recognized scuba certification, a medical examination, and permission of instructor. A special 4-week course offered in Akumal, Mexico. For more details, contact Shoals Marine Laboratory, 141 Simson Hall, 525-3717. A course designed for students interested in learning about coral reef ecology and conservation in an environment where these topics are of immediate concern. Students will spend four weeks in Akumal, Mexico, a small resort town located about 60 miles south of Cancun on the Yucatan Peninsula. Housing will be provided by the Centro Ecologico Akumal, a local organization dedicated to the sustainable development of Akumal and the protection of its coral reefs. The major component of the course will be spent studying basic coral reef ecology and learning the benthic fauna of the local reefs. During the remainder of the course, students will participate in a reef-monitoring research project that will aid in the establishment of a marine park in Akumal. Akumal is a developing center for research in coral reef biology and ecology. TMS students will have the opportunity to interact with the scientists involved in this research.

BIOSM 449 Seaweeds, Plankton and Seagrass: the Ecology and Systematics of Marine Plants
Summer. 4 credits. Prerequisite: BIOSM 364 or 1 year of introductory biology. S-U grades optional. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between environment and marine environmental parameters and involve student projects.

EAS 475 Special Topics in Oceanography: Satellite Remote Sensing in Biological Oceanography
Summer. 6 credits. Prerequisites: 1 course in oceanography and or marine biology, or permission of the instructor. Strong computer skills are desired. S-U grades optional. A special 4-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H., and on campus at Cornell University. For more details or an application, consult the SML office, G14 Simson Hall. Daily lecs, labs, and fieldwork for 4 weeks. Offered alternate years. Not offered 2005. SML faculty.

“Remote Sensing” provides hands-on research experience in hydrologic optics and satellite remote sensing to advanced undergraduate and beginning graduate students. The course is comprised of two parts, each taught by a separate team of instructors at two different locations: Part I (nine days) will be conducted at Shoals Marine Laboratory and aboard the RV Kingbury in waters surrounding the Isles of Shoals. Part I will be devoted to the theory and measurement of seawater optical properties, emphasizing the dependency of apparent optical property on chlorophyll and dissolved organic matter.
concentrations. Parts 2-4 (19 days) will be conducted at the Science of Earth Systems’ computer laboratory on the Cornell campus. Part 2 will cover satellite remote sensing of the apparent optical properties of seawater with an emphasis on processing SeaWiFS data using SeaDAS software and IDL programming language. Part 3 addresses satellite remote sensing of physical oceanographic processes that influence ecosystem dynamics with an emphasis on AVHRR-derived sea-surface temperature and SST/derived ocean winds. Part 4 is devoted to independent projects: student will attempt to integrate SeaWiFS, AVHRR, and SST/ data to address questions of biogeochemical interactions.

**BIOSM 477 Marine Vertebrates**
Summer. 6 credits. Prerequisites: A course in vertebrate biology. S-U grades optional. A special 3-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lectures, labs, and fieldwork for 3 weeks. SML faculty. Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine; elasmobranch physiology; interpretation of life history and parameters from otolith microstructure; teleost skeleton and musculature; and systematics of marine mammals; diving physiology; and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

**BIOSM 495 Research Methods in Marine Biology**
Summer. 1 credit. Prerequisite: concurrent enrollment in BIOSM 499, or permission of instructor. Primarily for undergraduates. A special 8-week course offered at Shools Marine Laboratory (SML). For more details or an application, consult the SML office, G14 Simson Hall. Weekly seminars for 8 weeks. J. G. Morin and M. J. Shulman. Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 499.

**BIOSM 499 Research in Biology**
Summer. Credits variable (2 credits/7 days on site). For more details and an application, consult the SML Office, G14 Simson Hall.

**EAS 213 Marine and Coastal Geology**
Summer. 4 credits. Prerequisite: an introductory course in geology or ecology or permission of instructor. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lectures and fieldwork for 2 weeks. SML faculty. This course examines the geology of the Isles of Shoals from Paleozoic intrusion, deformation, and metamorphism to recent glaciation, sea-level change and wave erosion. Students learn basic surveying and mapping techniques using the Brunton compass, pop-level/stadia rod, autolevel, GPS, scissor and side-scan sonar, and ocean coring, dredging, and grab sampling. Comparisons and inferences between land and sea studies yield thematic maps depicting topography, bedrock geology and structure, vegetation, and land use. From these, ecological characteristics, habitat definition and occupation of habitat by organisms is also examined. This course is appropriate for students of geology, environmental science, ecology, biology, and coastal zone management.

**BIOM 650 Field Marine Ecology and Environmental Science for Teachers**
Summer. 2 credits. Prerequisites: One year of college-level biology; teaching experience recommended. A special 1-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lectures and fieldwork for one week. SML faculty. Intended for grades 6-12 teachers but also open to undergraduate junior and senior students interested in teaching. Teachers will develop hands-on, experiential approaches to the marine sciences, with an emphasis on coastal and environmental issues. Extensions to freshwater ecology also will be included. Fieldwork is emphasized, with numerous excursions to the rocky intertidal and with offshore ocean studies. Lectures will focus on biodiversity, adaptations, predator-prey interactions, environmental sustainability, and how to engage and motivate students with aquatic projects.

**BIOM 699 Research in Biology for Teachers**
Summer. 2 credits per week. Prerequisite: previous enrollment in BIOM 650. A special course offered at Shools Marine Laboratory on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. An opportunity for teachers who have taken BIOM 650 to return to Shools to pursue more indepth a topic of their choosing under the direction of the BIOM 650 faculty.

**EAS 213 Marine and Coastal Geology**
Summertime. 2 credits. Prerequisite: an introductory course in geology or ecology or permission of instructor. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lectures and fieldwork for 2 weeks. SML faculty. This course examines the geology of the Isles of Shoals from Paleozoic intrusion, deformation, and metamorphism to recent glaciation, sea-level change and wave erosion. Students learn basic surveying and mapping techniques using the Brunton compass, pop-level/stadia rod, autolevel, GPS, scissor and side-scan sonar, and ocean coring, dredging, and grab sampling. Comparisons and inferences between land and sea studies yield thematic maps depicting topography, bedrock geology and structure, vegetation, and land use. From these, ecological characteristics, habitat definition and occupation of habitat by organisms is also examined. This course is appropriate for students of geology, environmental science, ecology, biology, and coastal zone management.

**BIOM 650**
**Molecular Plant Virology (also PL PA 606)**
Spring. 1 credit. S-U grades optional. Prerequisites: BIOM 469 (Principles of Virology), BIOM 499, or a course in cell biology, or permission of instructor. Lect, M W 11:15 (7 wks, 1st half of semester). Offered alternate years. S. G. Lazarowitz. Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Material covered includes virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.

**BIOM 651**
**Genomics of Bacterium-Host Interaction** (also PL PA 609)
Fall. 1 credit. S-U grades optional. Prerequisites: BIOM 290 or equivalent or permission of instructor. Lect, M W 9:05 (2nd half of semester). Offered alternate years. A. Collmer and S. Winans. Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artemis tool (pathway tools): Yersinia pestis, V. enterocolitica, Pseudomonas syringae, Rabdosia solanacearum, and Agrobacterium tumefaciens and the symbiont Sinorhizobium meliloti.

**NTRES 306 Coastal and Oceanic Law and Policy**
Summer. 2 credits. A special 1-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Simson Hall. Daily lectures and disc for 1 week. SML faculty. Intended for people interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal tools. Lectures on policy related to ocean dumping etc. Lectures are by Robert C. Seamans or the SSV Corwith.

**BIOM 366-372**
**SEA Semester**
In cooperation with the Sea Education Association (SEA), the Shools Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, Mass., receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the SSV Robert C. Seamans or the SSV Corwith. Enrollment is open to both men and women judged capable of benefiting from SEA semester; a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence.
For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees: tuition for the entire 17-credit SEA Semester, approximately $17,000, includes room and board at SEA.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

**Shore Component (six weeks)**

**BIOSM 366 SEA Introduction to Oceanography**
3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

**BIOSM 367 SEA Introduction to Maritime Studies**
3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**BIOSM 368 SEA Introduction to Nautical Science**
3 credits. Prerequisites: concurrent enrollment in BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

**Sea Component (six weeks)**

Courses 369, 370, and 372 take place aboard the SSV Robert C. Seamans, a 134-foot steel auxiliary-powered brigantine schooner built in 2001, or the SSV Coraline Cramer, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship’s company of 34. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to 24 students round out the complement.

**BIOSM 369 SEA Practical Oceanography I**
4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

**BIOSM 370 SEA Practical Oceanography II**
4 credits. Prerequisites: BIOSM 369 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible for the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

**BIOSM 372 SEA Practical Oceanography III**
Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel. Group research projects are completed.

Raman Zabih, Computer Science

INTRODUCTION
Computing and Information Science (CIS) offers courses and programs campuswide in various academic disciplines in which computing is integral. It is home to the Department of Computer Science and interdisciplinary programs in computational biology, computational science and engineering, digital arts and graphics, and information science. The faculty associated with CIS programs hold joint appointments with CIS and another Cornell academic unit. Computing and Information Science is a rapidly changing area. Please consult the CIS web site, www.cis.cornell.edu, for the most current news of programs and courses, or visit the CIS undergraduate office in 303 Upson Hall.

ACADEMIC PROGRAMS
Computing and Information Science offers the following academic programs through their corresponding colleges. See the departmental listings for details of the programs.

Computational Biology
The program of study in computational biology is part of the biological sciences major offered through the College of Agriculture and Life Sciences and the College of Arts and Sciences and is coordinated by the Office of Undergraduate Biology. It provides core training in biology and the supporting physical and information sciences. It is designed for students who want to emphasize basic biological science.

The concentration in computational molecular biology is offered by the Department of Computer Science to students enrolled in the College of Arts and Sciences and the College of Engineering. It provides core training in computer science and biology. It is designed for students who want to emphasize computational science.

Computational Science and Engineering
Computational science and engineering is an emerging CIS program. Numerous courses are taught throughout the university. Topics include numerical methods, modeling and simulation, and real-time computing and control. CIS sponsors several "tool-based" short courses for students who anticipate that their studies will have a strong computational component (CIS 401, 402, 403, 404). A course on data structures for computational science (CIS 409) is also offered.

Computer Science
All CIS programs have connections to computer science, the study of computation in all of its forms. The curriculum covers the theory of algorithms and computing and many applications in science, engineering, and business. Students learn the algorithmic method of thinking and how to bring it to bear on a wide range of problems. They also study the elements of computing and information technology such as system design, problem specification, programming, system analysis and evaluation, and complex modeling. Research areas include programming languages, compilers, computing systems, artificial intelligence, natural language processing, computer graphics, computer vision, databases, networks, bioinformatics, the theory of algorithms, scientific computing, and computational logic.

The Department of Computer Science offers the computer science major to students in the College of Engineering, the computer science minor to students in the College of Engineering, and the master of engineering (M.Eng.) degree in computer science to students in the College of Engineering.

Digital Arts and Graphics
CIS is working to develop undergraduate and graduate research programs and curricula in the digital arts and graphics. Several courses already exist in this area (ART 372, ART 391, CIS 365, COM S 465, 467, 468; MUSIC 120). More courses in this growing field are planned for the near future.

Information Science
Information science at Cornell is an interdisciplinary program that studies the design and use of information systems in a social context. It integrates the study of three aspects of digital information systems. First, information science studies computing systems that provide people with information content; this study overlaps with parts of computer science, stressing the design, construction, and use of large information systems such as the
THE INFORMATION SCIENCE CONCENTRATION/MINOR

A concentration/minor in information science is available to students in the Colleges of Agriculture and Life Sciences (CALS), Architecture, Art, and Planning (AAP); available to Architecture, Art, and Planning students), Arts and Sciences; Engineering; and Human Ecology; and the Schools of Hotel Administration and Industrial and Labor Relations (ILR). Because of small differences in regulations between the colleges, there are sometimes slight variations in the requirements, depending on a student's college and, in a few cases, a student's major. All students interested in pursuing the information science concentration/minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation date, and (intended) major to infosci-minor@cs.cornell.edu. Students are also referred to www.infosci.cornell.edu/ugrad/concentration.html for the most up-to-date description of the concentration and its requirements.

Information science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information.

The concentration/minor has been designed to ensure that students have substantial grounding in all three of these areas. To this end, the requirements for the undergraduate concentration/minor are as follows. All courses must be chosen from the course lists below. In addition, a letter grade of C or better is required. S-U courses are not allowed.

- **Statistics**: one course.
- **Human-centered systems** (human-computer interaction and cognitive science): two courses (for all colleges except Engineering); one course (Engineering).
- **Social systems** (social, economic, political, cultural, and legal issues): one course.
- **Information systems** (primarily computer science): two courses.
- **Elective**: one additional course from any component area. (Engineering students and all Computer science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors should check with their advisers to make sure there are no special departmental restrictions or requirements.)

### Statistics

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world. Engineering students must take one of the following:

- **ENGRD 270 Basic Engineering Probability and Statistics**
- **CEE 304 Uncertainty Analysis in Engineering**
- **ECE 310 Introduction to Probability and Random Signals**

All other students can meet this requirement with any one of the following:

- **MATH 171 Statistical Theory and Application in the Real World**
- **11 ADM 201 Operations Management**
- **PAM 210 Introduction to Statistics**
- **PSYCH 261 Statistical Methods I (also STAT 261)**
- **ENGRD 270 Basic Engineering Probability and Statistics**
- **GIS 295 Mathematical Models for Information Science**
- **CEE 304 Uncertainty Analysis in Engineering**
- **ECE 310 Introduction to Probability and Random Signals**

### Social Systems

- **COGST 101 Introduction to Cognitive Science**
- **PSYCH 205 Perception**
- **INFO 214 Cognitive Psychology**
- **COMM 240 Communication and Information Technology**
- **INFO 245 Psychology of Social Computing**
- **PSYCH 280 Introduction to Social Psychology**
- **PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display**
- **INFO 345 Human-Computer Interaction Design**
- **PSYCH 347 Psychology of Visual Communications**
- **PSYCH 380 Social Cognition**
- **PSYCH 413 Information Processing: Conscious and Unconscious**
- **PSYCH 416 Modeling Perception and Cognition**
- **INFO 440 Advanced Human-Computer Interaction Design**
- **INFO 450 Language and Technology**
- **DEA 470 Applied Ergonomics Methods**

### Human-Centered Systems

- **INFO 355 Computers: From Babbage to Gates**
- **ECON 319 Economic Decisions Under Uncertainty**
- **COMM 428 Communication Law**
- **ORIE 435 Introduction to Game Theory**
- **STS 338 Media and Critical Studies of Computation**
- **PSYCH 350 Statistics and Research Design**
- **PSYCH 351 Introduction to Statistics and Probability**
- **PSYCH 352 Applied Regression Methods**
- **PSYCH 353 Psychological Measurement**
- **PSYCH 354 Statistics and Research Design**
- **PSYCH 355 Computer Applications in Psychology**
- **PSYCH 356 Technology and Social Behavior**
- **PSYCH 357 Psychology of Visual Communications**
- **PSYCH 358 Social Cognition**
- **PSYCH 359 Information Processing: Conscious and Unconscious**
- **PSYCH 360 Modeling Perception and Cognition**
- **INFO 440 Advanced Human-Computer Interaction Design**
- **INFO 450 Language and Technology**
- **DEA 470 Applied Ergonomics Methods**
COMPUTING AND INFORMATION SCIENCE (CIS) - 2004-2005

- ECON 476/477 Decision Theory I and II
- INFO 515 Culture, Law, and Politics of the Internet
*Only one of ECON 301 and ECON 313 can be taken for IS credit. Only one of OR&E 435 and ECON 368 can be taken for IS credit.

Information Systems
- INFO 130 Introductory Design and Programming for the Web*
- COM S 211 Computers and Programming*
- INFO 230 Intermediate Design and Programming for the Web*
- INFO 330 Applied Database Systems
- LING 424 Computational Linguistics
- COM S 465 Computer Graphics I
- COM S 432 Introduction to Database Systems
- OR&E 474 Statistical Data Mining
- OR&E 480 Information Technology
- COM S 501 Software Engineering
- ECE 562 Fundamental Information Theory
- COM S 578 Empirical Methods in Machine Learning and Data Mining
*INFO 150 cannot be taken for information science credit by Engineering students. Computer science majors cannot use INFO 130 or INFO 230. COM S 211 cannot be taken for information science credit by majors for which it is a required course, e.g., Computer Science (COM S) and Operations Research and Industrial Engineering (OR&E).

COMPUTING AND INFORMATION SCIENCE (CIS) COURSES

CIS 121 Introduction to MATLAB (also EAS 121)
Fall, spring. 2 credits. Corequisite: MATH 111, 191, or equivalent.
An introduction to elementary computer programming concepts using MATLAB. Topics include problem analysis, development of algorithms, selection, iteration, functions, and arrays. Examples and assignments are chosen to build an appreciation for computational science. The goal is for each student to develop a facility with MATLAB that will be useful in other courses whenever there is a need for computer problem solving or visualization. The course assumes no programming experience.

CIS 122 Application of FORTRAN in the Earth and Environmental Sciences (also EAS 150)
Spring, 2 credits. Prerequisite: CIS/EAS 121 or equivalent.
For description, see EAS 150.

CIS 165 Computing in the Arts (also COM S 165, MUSC 165)
Fall; 3 credits.
Over the centuries, artists in a wide variety of media have employed many approaches to the creative process, ranging from the philosophical to the mechanical to the virtual. This course unravels some of the mysteries going on inside software used for art and music. We look at data sets of created things, apart and sampling and ways of putting things together and resynthesising, and we explore ideas for creation. There are no formal course prerequisites (in particular, no courses in programming are assumed, or probability although a good comfort level with computers and some of the arts is helpful. This course does not teach software packages for creating art and music. The course complements ART 171+ and MUSC 120+.

CIS 167 Visual Imaging in the Electronic Age (also COM S 167, ENGR 167)
Spring; 3 credits; S-U grades optional.
The concepts and ideas behind computer imaging and computer graphics, both software and hardware. Topics include perspective representations, display technology, on-line television world, bandwidth concepts, digital photography, computer graphics modeling and rendering, matting and compositing, color perception, data acquisition, and volumetric imaging. Historical precedents, particularly from the art world, are used throughout. Other modes of imaging are discussed, including laser scanning, ultrasound, x-rays, and magnetic resonance, each of which is important to medical practice. This is not a course on how to use a particular graphics imaging program, but rather an explanation of the underlying principles.

CIS 191 Media Arts Studio I (also ART 391, THETR 391)
Fall; 5 credits. Prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSC 120, or equivalent; must be a junior and have permission of the instructor. Lab fee $50.
For description, see ART 391.

CIS 300 Introduction to Computer Game Design
Fall; 4 credits. Prerequisites: for artists, ART 251 and experience with Photoshop and Illustrator or similar software; for musicians, COM S 100, COM S/INFO 130, MUSC 120; for programmers, COM S/INFO 211, COM S 215, or equivalent experience in C++; for writers, COM S 100, COM S/INFO 120, ENGL 280/281.
This course investigates the theory and practice of developing computer games from a blend of technical, aesthetic, and cultural perspectives. Technical issues such as game architecture include software engineering, artificial intelligence, game physics, computer graphics, and networking. Aesthetic and cultural aspects of design include art and modeling, sound and music, history of games, genre analysis, role of violence, gender issues in games, game balance, and careers in the industry. Programmers, artists, musicians, and writers collaborate to produce an original computer game.

CIS 401 Introduction to Applied Scientific Computing with MATLAB
Fall; 1 credit. Usually weeks 2-5. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.
An introduction to the use of MATLAB as an aid to scientific research. The course introduces the basic syntax and features of MATLAB and develops the background necessary for the user to take specialized courses. The course covers basic MATLAB programming and vectorized operations, data input/output, and simple visualization. The course emphasizes applied issues such as managing large data sets, simulation, and visualization but also introduces fundamental ideas in scientific computing such as floating point arithmetic and algorithm efficiency. Although the course uses MATLAB, the ideas and concepts covered are common to many computational environments.

CIS 402 Scientific Visualization with MATLAB
Fall; 1 credit. Usually weeks 6-10. Prerequisites: COM S 100 or equivalent programming experience; COM S 401/CIS 401 recommended but not required. S-U grades only.
A survey of the advanced visualization features in MATLAB. The course covers MATLAB's "handle graphics" paradigm, specialized graphics routines for vectors and fields, and introduces OpenGL, lighting, and new features for controlling object transparency. Although the course is meant to introduce students to the capabilities of the MATLAB system, it also emphasizes the basic goal of visualization: producing an image that effectively communicates a scientific result.

[CIS 403 Development of Scientific Computing Programs
Spring; 1 credit. Usually weeks 1-4. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.
This course is designed for graduate students who, in their research, will develop computer programs to solve scientific or engineering problems (e.g., in Fortran, C, or Java). Approaches and tools are presented that facilitate the development of good software. The course emphasizes the tools available, in UNIX and Windows environments. Topics covered include compilers, debuggers, software design, and project management.

[CIS 404 Survey and Use of Software Libraries for Scientific Computing
Spring; 1 credit. Usually weeks 5-8. Prerequisites: COM S 100 or equivalent programming experience; COM S 403/CIS 403 recommended but not required. S-U grades only.
Many software packages and code libraries have been developed for the solution of standard problems in scientific computing. Examples of such libraries are LAPACK, IMSL, Numerical Recipes routines, MATLAB functions, and routines available in online repositories such as Netlib. This course discusses how to link to or compile standard library formats and considers the legal and ethical aspects of using other people's code (or having them use yours). The course also surveys some of the standard problems and the available libraries and discusses the issues that arise in their use (e.g., accuracy, robustness, and generality).

[CIS 409 Data Structures and Algorithms for Computational Science
Fall; 4 credits. Prerequisite: COM S 211 or equivalent programming experience. Not offered every year. Covers data structures and algorithms with emphasis on those useful for computational
CIS 490 Independent Reading and Research
Fall, spring. 1-4 credits. Independent reading and research for undergraduates.

CIS 565 Computer Animation (also ART 372, COM S 565; formerly CIS/COM S 518)
Fall. 4 credits. Prerequisite: COM S/ENGRD 211.
This course introduces students to various advanced animation techniques, including modeling, 2D key cel animation, motion and kinematics, lighting and materials, 3D key frame animation, physically based simulation, special effects, storyboarding, and cinematography. The first half of the course consists of lectures/seminars and some didactic project assignments with supplemental reading assignments. The second half consists of a final project in which students may work in groups to create an original work of computer animation.

CIS 572 Heuristic Methods for Optimization (also CEE 509, COM S 572, OR&IE 533)
Fall. 3 or 4 credits. Prerequisite: COM S/ENGRD 211 or 322, or CEE/ENGRD 241, or graduate standing, or permission of instructor. For description, see CEE 509.

CIS 576 Decision Theory I (also ECON 476, 676)
Fall. 4 credits. Prerequisites: mathematical sophistication.

CIS 577 Decision Theory II (also ECON 477, 677)
Spring. 4 credits. Prerequisites: Mathematical sophistication.

CIS 673 Integration of Artificial Intelligence and Operations Research (also COM S 673)
Spring. 3 credits. For description, see COM S 673.

CIS 750 Evolutionary Computation and Design Automation (also COM S 750, M&AE 650)
Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Not offered every year.

CIS 751 Media Research and Critical Design (also COM S 751)
Fall. 4 credits. Prerequisites: graduate standing in COM S or equivalent ability to read technical research papers. Contact instructor if unsure of qualifications. Not offered every year.

CIS 752 Seminar on Scholarly Information Architecture
Fall. 3 credits. Prerequisite: concurrent enrollment in COM S 451 or equivalent experience. S-U grades only. Not offered every year.

CIS 790 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of a CIS faculty member. Independent research or master of engineering project.

COM S 113 Introduction to C
Fall, spring, 1 credit. Usually weeks 1-4. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only. A brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. Projects may be done using any modern implementation of C. COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

COM S 114 Unix Tools
Fall. 1 credit. Usually weeks 5-8. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only. An introduction to Unix, emphasizing tools for file management, communication, process control, managing your Unix environment, and rudimentary shell scripts. Knowledge of at least one programming language is encouraged. Projects assume no previous knowledge of Unix or expertise in any particular language.

COM S 130 Introductory Design and Programming for the Web (also INFO 130)
Fall. 3 credits. No prerequisites. The World Wide Web is both a technology and a pervasive and powerful resource in our society and culture. To build functional and effective web sites, students need technical and design skills as well as analytical skills for understanding who is using the web, in what ways they are using it, and for what purposes. In this course students develop skills in all three of these areas through the use of technologies such as XHTML, Cascading StyleSheets, and PHP. Students study how web sites are deployed and used, usability issues on the web, user-centered design, and methods for visual layout and information architecture. Through the web, this course provides an introduction to the interdisciplinary field of information science. No computer background necessary.

COM S 165 Computing in the Arts (also CIS 165, MUSIC 165)
Fall. 3 credits. For description, see CIS 165.

COM S 167 Visual Imaging in the Electronic Age (also CIS 167, ENGR 167)
Spring. 3 credits. S-U grade optional. For description, see CIS 167.

COM S 172 Computation, Information, and Intelligence (also COGST 172 and ENGR 172)
Fall. 3 credits. Prerequisites: some knowledge of differentiation required; permission of instructor required for students who have completed the equivalent of COM S 100. Not offered fall 2004.
An introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, compute-intensive methods, data mining, information retrieval, the web, natural language processing, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets will be assigned. Some calculus required.
COM S 201  Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201) 
Spring, 4 credits. Limited to 24 students. Prerequisite: concurrent or prior registration in Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101/LING 170/PHL 191) is suggested but not required. Knowledge of programming language not assumed. Fall, B. Halpern and staff, spring, D. Field and staff. For description, see COGST 201.

COM S 211  Computers and Programming (also ENGRD 211) 
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

COM S 212  Java Practicum 
Fall, spring, summer. 1 credit. Letter grade only. Pre- or corequisite: COM S/ENGRD 211. A project course that introduces students to the ways of software engineering using the Java programming language: The course requires the design and implementation of several large programs.

COM S 213  C++ Programming 
Spring, 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 115 first. S-U grades only. An intermediate level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take COM S 213 normally do not need to take COM S 113, 213 includes most of the material taught in 113.

COM S 214  Advanced UNIX Programming and Tools 
Spring. 1 credit. S-U grades only. Usually weeks 5-8. Prerequisite: COM S 114 or equivalent. A focus on UNIX as a programming environment for people with a basic knowledge of UNIX and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with UNIX should take COM S 114 first.

COM S 215  Introduction to C# 
Fall, spring, 1 credit. S-U grades only. Usually weeks 5-8. Prerequisite: COM S/ ENGRD 211 or equivalent experience. Introduces students to building applications in the .NET environment using the C# language.

COM S 230  Intermediate Design and Programming for the Web (also INFO 230) 
Spring. 3 credits. Prerequisite: COM S 130 or equivalent knowledge. Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). COM S 130 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL. They then work through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web site development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability and ways of incorporating other programs. Toward the end of the course, students are shown how these development tools are working. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

COM S 280  Discrete Structures 
Fall, spring. 3 credits. Pre- or corequisite: COM S/ENGRD 211 or permission of instructor. Covers mathematical aspects of programming and computing. Topics are chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinators and discrete mathematics covering manipulation of sums, recurrence relations, and function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs; and algebraic structures.

COM S 312  Data Structures and Functional Programming 
Fall, spring. 4 credits. Prerequisite: COM S 211/212 or equivalent programming experience. Should not be taken concurrently with COM S 314. An advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include recursive and higher-order procedures, models of programming language evaluation and compilation, type systems, and polymorphism. Data structures and algorithms covered include graph algorithms, balanced trees, memory heaps, and garbage collection. Also covered are techniques for analyzing program performance and correctness.

COM S 314  Computer Organization (also ECE 314) 
Fall, spring. 4 credits. Prerequisite: COM S 211, COM S 312, or ENGRD 250 or equivalent but not required. Should not be taken concurrently with COM S 312. Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, datapath design, memory hierarchies including caches and virtual memory, I/O devices, and bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

COM S 320  Numerical Methods in Computational Molecular Biology (also BIO BM 321 and ENGRD 321) 
Fall. 3 credits. Prerequisite: concurrent or at least one course in calculus, such as MATH 106, 111, or 191 and a course in linear algebra, such as MATH 221 or 294 or BTRY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures. Not offered fall 2004. An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score field, and field equations. Students become adept at plotting, linear equation solving, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue equations are used. The goal of the course is to develop a practical computational expertise with MATLAB and to build intuition for the problems of molecular biology. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421, or 428.

COM S 322  Introduction to Scientific Computation (also ENGRD 322) 
Spring, summer. 3 credits. Prerequisites: COM S 110 and MATH 221 or MATH 294. An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on parallel computation. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421, or 428.

COM S 324  Computational Linguistics (also COGST 424, LING 424) 
Fall, spring. 4 credits. Prerequisites: LING 203; labs involve work in the UNIX environment. COM S 114 recommended. For description, see LING 424.

COM S 330  Applied Database Systems (also INFO 330) 
Fall. 3 credits. Prerequisite: COM S 211/ ENGRD 211. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

The course introduces students to modern database systems and three-tier application development with a focus on building web-based applications using database systems. Concepts covered include the relational model, relational query language, database modeling, normalization, database tuning, three-tier architectures, Internet data formats and query languages, server- and client-side technologies, and an introduction to web services. Students build a database-backed web site.

COM S 381  Introduction to Theory of Computing 
Fall, summer. 3 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Credit transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.
An introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

COM S 400 The Science of Programming
Fall. 3 credits. Prerequisite: COM S 211.
Covers the practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. In addition, related ideas in algorithmic problem solving are explored.

COM S 411 Programming Languages
Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor.
An introduction to the specification, design, and implementation of programming languages. Topics include operational semantics, type systems, higher-order function, scope, lambda calculus, laziness, exceptions, side effects, continuations, objects, and modules. Also discussed are logic programming, concurrency, and distributed and persistent programming.

COM S 412 Introduction to Compilers
Spring. 3 credits. Prerequisites: COM S 312 or permission of instructor and COM S 314. Corequisite: COM S 413.
An introduction to the specification and implementation of modern compilers. Topics covered include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages. The course entails a substantial compiler implementation project.

COM S 413 Practicum in Compilers
Spring. 2 credits. Corequisite: COM S 412.
A compiler implementation project related to COM S 412.

COM S 414 Systems Programming and Operating Systems
Fall, spring, summer. 5 credits.
Prerequisites: COM S 211, 212, 312 (or permission of instructor) and 314.
Corequisite: COM S 415 in spring only. An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 413 Practicum in Operating Systems
Fall, spring. 2 credits.
Corequisite: COM S 414.
The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 419 Computer Networks (formerly COM S 519)
Spring. 4 credits. Prerequisite: COM S 211, COM S 312, or ENGRD 230 are recommended but not required, or permission of instructor. Not offered every year.
An introduction to computer networks with an emphasis on evolving Internet standards. A detailed introduction is given to networking protocols for reliable data transfer, flow control, congestion control, naming and addressing, routing, security, management, and applications. Fundamentals of layered protocols and techniques for protocol design and implementation are discussed. The course is project oriented and requires a substantial programming experience in Java or C.

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, and knowledge of programming.
Modern algorithms for solving linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation. This course requires more mathematical sophistication than COM S 322.
COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421, or 428.

COM S 426 Introduction to Computational Biology
Fall. 3 credits. Prerequisites: COM S/ ENGRD 230.
Computational biology is a relatively new field that is rooted in two different disciplines: computer science and molecular biology. It is concerned with the study of biological systems and phenomena in search of explanations, rules, patterns, and regularities. The focus of this course is the set of algorithms, tools, and models used today to analyze biological data and recover and discover hidden information. These tools can be used to predict the function of new genes, discover hidden motifs that are biologically significant, study evolutionary processes, and aid in the development of new therapeutic agents for treatment of various diseases. Some of the topics covered are sequence analysis (alignment, multiple sequence alignment), motif detection, phylogenetic trees, secondary structure prediction, Hidden Markov Models, and analysis of gene expression data.

This course is intended mostly for students in the computational sciences because it focuses on algorithms and mathematical models. No knowledge of biology is needed (the course starts with a brief overview of the basic entities and the central dogma of molecular biology, and other relevant terms are introduced as needed).

COM S 427 Practicum in Computational Biology
Fall. 2 credits. Prerequisite: COM S 426.
In this course, students develop a system or an application to analyze biological data. Possible applications are a database system to manipulate multiple data types, a learning system to detect hidden patterns in massive biological data sets, a suite for sequence comparison or analysis of gene expression data, etc.

COM S 428 Introduction to Computational Biophysics
Fall. 3 credits. Prerequisites: COM S 100, CHEM 211 or equivalent, MATH 293 or 294, PHY 112 or 213, or permission of instructor. BIO/BIOS 330 recommended.
This course teaches the techniques that are used to simulate on the computer the structure, dynamics, and function of biological molecules. Computer models of water, proteins, membranes, and proteins are used to simulate on the computer the structure, dynamics, and function of biological molecules. Computer models of water, proteins, membranes, and others.

COM S 430 Information Retrieval (also INFO 430)
Fall. 3 credits. Prerequisite: COM S 211 or equivalent.
This course studies the methods used to search and recover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering information and the use of classification systems and thesauruses. The techniques are illustrated with examples from web searching and digital libraries.

COM S 431 Web Information Systems (also INFO 431)
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with the technology of web sites.
This course examines the architecture of web information systems, such as distributed digital libraries and electronic publishing systems. Many of the topics presented in the course are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content includes exploration of current tools for building web information systems such as XML, XSLT, and RDF with broader concepts such as technique-que for knowledge representation and retrieval, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environment and web environment, exemplified by libraries, and the distributed information environment of the web.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312, or COM S 211/212, and permission of instructor. Recommended. COM S 213 and strong programming skills in C or C++.
An introduction to modern relational database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction processing, and database design theory. The course primarily covers the internals of database systems and includes four large programming assignments in C++.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432. COM S majors must take one of the following toward their degree: COM S/INFO 330 or COM S 433.
An introduction to building web-based database applications. Students implement a small e-commerce system using Active Server Pages, Java Server Pages, Cookies, and Servlets. The practicum also introduces technologies such
as XML/XPath/XSLT and WAP. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

COM S 465 Computer Graphics I (also ARCH 374)
Fall. 4 credits. Prerequisite: COM S/ENG RD 211. May not be taken after completion of COM S 417.

An introduction to the principles of computer graphics in two and three dimensions. Topics include digital images, filtering and anti-aliasing, 2D and 3D affine geometry, ray tracing, perspective and 3D viewing, the graphics pipeline, curves and surfaces, and human visual perception. Homework assignments require programming.

COM S 467 Computer Graphics II
Spring. 3 credits. Prerequisite: COM S 465.

This course covers the principles of computer graphics including advanced topics such as the modern graphics hardware pipeline, transformations, materials and shading models, advanced texturing, shadow algorithms, hierarchical acceleration structures, global illumination, animation, and 3D surface modeling.

COM S 468 Computer Graphics Practicum
Spring. 2 credits. Prerequisite: COM S 465. Corequisite: COM S 467.
This course provides COM S 467 students with hands-on experience in computer graphics programming on modern graphics hardware with a final 3D game project. Programming assignments cover 3D transformations, modeling, shading, rendering, animation, and user interfaces. The course uses Java, OpenGL, and Cg for code development.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S/ENG RD 211 and COM S 280 (or equivalent).

A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.
Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.

COM S 474 Introduction to Natural Language Processing (also GOGST 474, LING 474)
Fall. 4 credits. Prerequisites: COM S 211.

An introduction to the natural language processing, the goal of which is to enable computers to use human languages as input, output, or both. Possible topics include parsing, grammar induction, information retrieval, and machine translation.

COM S 486 Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 512, and basic knowledge of linear algebra and probability theory.

Learning and classifying are two of our basic abilities. Machine learning is concerned with the question of how to train computers to learn from experience, to adapt and make decisions accordingly. This course introduces the set of techniques and algorithms that constitute machine learning as of today, including inductive inference of decision trees, the parametric-based Bayesian learning approach, Bayesian belief networks and Hidden Markov Models, non-parametric methods, discriminant functions and support vector machines, neural networks, stochastic methods such as genetic algorithms, unsupervised learning and clustering, and other issues in the theory of machine learning. These techniques are used today to automate procedures that were previously performed by humans as well as to explore untouched domains of science.

COM S 480 Introduction to Cryptology (also MATH 335)
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 222 or 294.
Students who take this course may not also receive credit for MATH 336. For description, see MATH 335.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.

A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 280, 312, and either 381 or 481, or permission of instructor.

Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 483 Quantum Computation (also PHYS 481 and 681)
Spring. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers. Not offered every year.

For description, see PHYS 481.

COM S 501 Software Engineering
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

An introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

COM S 504 Applied Systems Engineering (also CEE 504, ECE 512, M&A 591, OR&IE 512, SYSEN 510)
Spring. 3 credits. Prerequisite: Applied System Engineering (CEE 504, COM S 504, ECE 512, M&A 591, OR&IE 512, SYSEN 510).

For description, see SYSEN 510.

COM S 505 Systems Architecture, Behavior, and Optimization (also CEE 505, ECE 513, M&A 592, OR&IE 513, SYSEN 520)
Spring. 3 credits. Prerequisite: Applied System Engineering (CEE 504, COM S 504, ECE 512, M&A 591, OR&IE 512, SYSEN 510).

For description, see SYSEN 520.

COM S 513 Systems Security
Fall. 4 credits. Prerequisites: COM S 414 or 419 and familiarity with JAVA or C# programming languages.

This course discusses security and survivability for computers and communications network. The course includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that constitute "trustworthiness" of a computing system. Mechanisms for authorization and authentication as well as cryptographic protocols are covered.

COM S 514 Intermediate Computer Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

This course focuses on practical issues in designing and implementing distributed software. Topics vary depending upon instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by coregistering in COM S 490, 515, or 790.

COM S 522 Computational Tools and Methods for Finance
Spring. 4 credits. Prerequisites: programming experience (e.g., C, FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. Not offered every year.

This course provides a hands-on introduction to computational methods and tools used in finance. Students study both the underlying methods and efficient implementation. The MATLAB Financial Toolbox, along with additional MATLAB tools, are used

COM S 614 Advanced Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.
An advanced course in systems, emphasizing contemporary research in distributed and parallel systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

COM S 615 Peer-to-Peer Systems
Spring. 4 credits. Prerequisites: COM S 614 recommended. Peer-to-peer (P2P) is a new paradigm for distributed computing. P2P systems lack centralized servers and rely on self-organization and peer-to-peer resource sharing to accomplish their tasks. In this course, we examine the peer-to-peer paradigm, examine peer-to-peer systems, and discuss existing and new applications. Students are expected to perform an in-depth study of an existing approach or to develop new peer-to-peer systems and applications as part of the course project.

COM S 619 Advanced Computer Networks
Fall. 4 credits. Prerequisite: COM S 419 or COM S 519 or permission of instructor. Not offered every year.
This course examines advanced computer network topics such as overlay and P2P networking, reliable multicast, mobility, voice over IP, header compression, security, and extreme networking environments (fast, slow, big, long). The emphasis is on both research and the latest standards. A project with research content is required.

COM S 621 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621. Offered odd-numbered years only.
Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

COM S 624 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: previous exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations, and knowledge of MATLAB. Offered in even-numbered years.
COM S 664 Machine Vision  
Fall. 4 credits. Prerequisites: undergraduate level understanding of algorithms and MATH 221 or equivalent.  
An introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. The following topics are covered: edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

COM S 665 Advanced Rendering  
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and an undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming.  
This course covers advanced topics in realistic rendering with a focus on interactive techniques. Topics include light transport and global illumination, Monte-Carlo rendering, and image-based rendering. Students are required to implement several of the algorithms covered in the course and complete a final project.

COM S 667 Physically Based Rendering  
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and an undergraduate-level understanding of algorithms, programming, and vector calculus. Offered spring 2004.  
An advanced course in realistic image synthesis, focusing on the computation of physically accurate images. Topics include radiometry, light transport and global illumination, rendering with participating media; advanced models for material properties; and physical measurement of light sources, images, and materials.

COM S 671 Introduction to Automated Reasoning  
Fall or spring. 4 credits. Prerequisite: COM S 611 and graduate standing or permission of instructor.  
Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Special emphasis is on type theory and logic and on tactic-oriented theorem proving.

COM S 672 Advanced Artificial Intelligence  
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.  
Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

COM S 673 Integration of Artificial Intelligence and Operations Research (also CIS 673)  
Spring. 3 credits. Prerequisite: COM S 478 or equivalent.  
This course covers topics on the integration of artificial intelligence (AI) and operations research (OR) techniques for solving combinatorial problems as they appear in AI and OR applications. Application domains include AI planning, scheduling, combinatorial auctions, market mechanisms, and combinatorial designs.

COM S 674 Natural Language Processing  
Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. COM S 474 is NOT a prerequisite. Not offered every year.  
This course presents a graduate-level introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. The course covers syntactic analysis, semantic interpretation, and discourse processing, examining both symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildly context-sensitive formalisms, deductive approaches to interpretation, machine translation, and machine learning of natural language.

COM S 676 Reasoning about Knowledge  
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic.  
Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues include common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, modeling resource-bounded reasoning, and connections to game theory.

COM S 677 Reasoning about Uncertainty  
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic.  
Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logic of probability, combining knowledge and probability, probability and adversaries, conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief, and decision theory.

COM S 678 Advanced Topics in Machine Learning  
Spring. 4 credits. Prerequisites: COM S 478 or equivalent, or COM S 578 or equivalent, or permission of instructor.  
This course extends and complements COM S 478 and COM S 578, giving in-depth coverage of new and advanced methods in machine learning. In particular, we connect to open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

COM S 681 Analysis of Algorithms  
Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.  
Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, and randomized reductions. Also covers topics such as parallel algorithms and efficient data structures.

COM S 682 Theory of Computing  
Spring. 4 credits. Prerequisites: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor.  
Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

COM S 683 Advanced Design and Analysis of Algorithms  
Spring. 4 credits. Prerequisites: COM S 681 or permission of instructor. Not offered every year.

COM S 684 Algorithmic Game Theory  
Spring. 4 credits. Prerequisites: background in algorithms and game theory at the level of COM S 482. No prior knowledge of game theory or economics is assumed.  
Algorithmic game theory combines algorithmic thinking with game-theoretic or, more generally, economic concepts. The course focuses on problems arising from, and motivated by, the Internet and other decentralized computer networks. The most defining characteristic of the Internet is that it was not designed by a single central entity, but emerged from the complex interaction of many economic agents, such as network operators, service providers, designers, users, etc., in varying degrees of collaboration and competition. The course focuses on some of the many questions at the interface between algorithms and game theory that arise from this point of view. Topics include Nash equilibrium and general equilibrium, the price of anarchy, market equilibrium, social choice theory, mechanism design, multiauction pricing, and more.

COM S 685 The Structure of Information Networks (also INFO 685)  
Spring. 4 credits. Prerequisite: COM S 482.  
Information networks such as the World Wide Web are characterized by the interplay between heterogeneous content and a complex underlying link structure. This course covers recent research on algorithms for analyzing such networks and models that abstract their basic properties. Topics include combinatorial and probabilistic techniques for link analysis, centralized and decentralized search algorithms, generative models for networks, and connections with work in the areas of social networks and citation analysis.

COM S 686 Logics of Programs  
Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486. Not offered every year.

COM S 709 Computer Science Colloquium  
Fall, spring. 1 credit. S-U grades only.  
For staff, visitors, and graduate students interested in computer science. A weekly meeting for the discussion and study of important topics in the field.
COM S 711 Seminar in Advanced Programming Languages  
Fall, spring. 3 credits.

COM S 713 Seminar in Systems and Methodology  
Fall, spring. 4 credits. Prerequisite: a graduate course employing formal reasoning such as COM S 611, 613, 671, a logic course, or permission of instructor. Not offered every year.

Discussion of contemporary issues in the design and analysis of computing systems. Emphasis is on the proper use of rigor, models, and formalism.

COM S 715 Seminar in Programming Refinement Logics  
Fall, spring. 4 credits. Prerequisite: permission of instructor. Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

COM S 717 Topics in Parallel Architectures  
Fall, 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year.

Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 718 Computer Graphics Seminar  
Fall, spring. 4 credits.

COM S 719 Seminar in Programming Languages  
Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. Not offered every year.

Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 721 Topics in Numerical Analysis  
Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester BIB.

Topics are chosen at instructor's discretion.

COM S 726 Problems and Perspectives in Computational Molecular Biology (also PL BR 726)  
Fall, spring. 1 credit. S-U grades only.

This is a weekly seminar discussing timely topics in computational molecular biology. The course addresses methodological approaches to sequence and structure analysis, function prediction, study of evolutionary relationships, and analysis of large biological systems. Statistical and deterministic computational approaches are covered, and specific and detailed biological examples are discussed. In each topic, we select one or two representative papers that made significant advances in this field. The lectures are given by faculty and students. The seminar is open to all from the life sciences, computational sciences, and physics sciences. We try to bridge these disciplines by pairing students/faculty from complementary backgrounds.

COM S 732 Seminar in Database Systems  
Fall, spring. 4 credits. S-U grades only.

COM S 750 Evolutionary Computation and Design Automation (also CIS 750, M&AE 650)  
Fall. 4 credits. Prerequisite: programming experience or permission of instructor.

Seminar course in evolutionary algorithms and their application to optimization and open-ended computational design. Genetic algorithms, genetic programming, co-evolution, arms races and cooperation, developmental representations, learning, and symbiosis are covered. Topics include artificial life, evolutionary robotics, and applications in a variety of domains in science and engineering. Suitable for students interested in computational techniques for addressing open-ended design problems and in computational models of evolutionary discovery.

COM S 751 Media Research and Critical Design (also CIS 751)  
Fall. 4 credits. Prerequisite: graduate standing in COM S or equivalent ability to read technical research papers. Contact instructor if unsure of qualifications. Not offered every year.

COM S 754 Systems Research Seminar  
Fall, spring. 1 credit. S-U grades only.

COM S 772 Seminar in Artificial Intelligence  
Fall, spring. 4 credits. Prerequisites: permission of instructor. S-U grades only.

COM S 775 Seminar in Natural Language Understanding  
Fall, spring. 2 credits.

Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 786 Introduction to Kleene Algebra  
Spring. 4 credits. Prerequisites: COM S 481 required; COM S 682, elementary logic (MATH 481 or 681), algebra (MATH 432) recommended.

Kleene algebra is an algebraic system that axiomatically captures the properties of a natural class of structures arising in logic and computer science. It has appeared in various guises in relational algebra, semantics and logics of programs, automata and formal language theory, and the design and analysis of algorithms. In this course, we review the history of the development of Kleene algebra and Kleene algebra with tests (Kleene/Boolean algebra). We study models, compare axiomatizations, and derive completeness, expressiveness, and complexity results. We also discuss various applications in program schema-��ization, program verification, compiler optimization, and programming language semantics and logic.

COM S 789 Seminar in Theory of Algorithms and Computing  
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790 Special Investigations in Computer Science  
Fall. 4 credits. Prerequisite: permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

COM S 990 Special Investigations in Computer Science  
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

INFORMATION SCIENCE (INFO)  

INFO 130 Introductory Design and Programming for the Web (also COM S 130)  
Fall. 3 credits. For description, see COM S 130.

INFO 214 Cognitive Psychology (also COGST 214, PSYCH 214)  
Fall. 3 credits. Prerequisite: COM S/INFO 130 or equivalent knowledge.

INFO 230 Intermediate Design and Programming for the Web (also COM S 230)  
Spring. 3 credits. Prerequisite: COM S/INFO 130 or equivalent knowledge.

INFO 245 Psychology and Social Computing (also COMM 245)  
Fall. 3 credits. Prerequisite: COM S/INFO 130 or equivalent knowledge.

INFO 292 Inventing an Information Society (also ECE 298, ENGRG 298, HIST 292, S&T 292)  
Spring. 3 credits. Prerequisite: COM S/INFO 130 or equivalent knowledge.

INFO 295 Information Modeling  
Fall. 4 credits. Corequisite: MATH 231 or equivalent.

This course teaches basic mathematical concepts in information modeling. Topics covered include graph theory, discrete probability, finite automata, Markov models, and hidden Markov models. We use examples and applications from various areas of information science such as the structure of the web, genome sequences, natural languages, and signal processing.

INFO 330 Applied Database Systems (also COM S 330)  
Fall. 3 credits. Prerequisites: COM S 211/ENGRG 211.

For description, see COM S 330.

INFO 345 Human-Computer Interaction Design (also COMM 345)  
Spring. 3 credits.

For description, see COMM 345.

INFO 349 Media Technologies (also S&T 349)  
Spring. 3 credits. Not offered spring 2005.

For description, see S&T 349.

INFO 355 Computers: From Babbage to Gates (also S&T 355)  
Spring. 4 credits.

For description, see S&T 355.

INFO 387 The Automatic Lifestyle: Consumer Culture and Technology (also S&T 387)  
Spring. 4 credits. Not offered spring 2005.

For description, see S&T 387.

<td>Spring. Prerequisites: background in computing, data structures, and programming at the level of COM S 211 or equivalent, and experience in using information systems. Undergraduates and masters students should register for INFO 435. Ph.D. students should register for INFO 635. This seminar course examines the technological, sociological, legal, financial, and political aspects of information systems in the context of innovative applications. The course is designed as a series of case studies in information science, with presentations given by the people involved in designing or maintaining those systems. Examples include arXiv, NSDL, NuPrl, the Legal Information Institute, Protomap, Dspace, and others created or maintained at Cornell, as well as some representative exterior resources. The case studies are augmented by readings and discussions of recent articles on technical components of the information systems, including machine learning tools, link and network analysis, metadata standards, document formats and clustering, data integrity, and natural language processing. Aspects of human and social interactions with the information systems considered include copyright issues, privacy issues, public/private partnerships, and publishing models.</td>

The School of Continuing Education and Summer Sessions (SCE) is dedicated to providing outstanding educational opportunities throughout the year for people of all ages and interests.

Our programs are presented in a wide variety of formats and time frames and are offered on and off campus and via distance learning.

Join us to prepare for your future. Enhance your studies, improve your job skills, or simply have fun learning something new!

For information about the following programs, write B20 Day Hall, Ithaca, NY 14853–2801; call 255–4987; e-mail cusce@cornell.edu; or fax 255–9697; unless indicated otherwise below. You may also visit us on the web at www.sce.cornell.edu.

SCHOOL ADMINISTRATION
Glenn C. Altschuler, dean
Charles W. Jermy, Jr., associate dean, and director, Cornell University Summer Session
Diane E. Sheridan, director, finance and administration
Diane M. Douthie, assistant director, finance and administration

School Program Directors and Managers
Stuart M. Blumin, director, Cornell in Washington Program
Abby H. Eller, director, Cornell University Summer College
Christine Holmes, special programs manager
Ralph Janis, director, Cornell’s Adult University

School Support Services
Graham Dobson, manager, information technologies
Ann L. Morse, manager, media services
Cathy M. Pace, registrar, and coordinator, continuing education information service

CONTINUING EDUCATION INFORMATION SERVICE
This service provides free information, counseling, and referral to adults who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell. For information, write to Continuing Education, B20 Day Hall, Ithaca, NY 14853–2801; call 255–4987; e-mail cusce@cornell.edu; or fax 255–9697.

CORNELL IN WASHINGTON PROGRAM
Cornell in Washington offers undergraduates the opportunity to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C. Students take courses in the fall, spring, or summer for credit, work as externs, and complete substantial research projects, all the while enjoying the rich opportunities available in the nation’s capital. For information, write to Cornell in Washington, M101 McGraw Hall, Ithaca, NY 14853–4601; call 255–4090; e-mail cwash@cornell.edu; or visit www.ciw.cornell.edu.

DISTANCE LEARNING
Need a flexible schedule? Have a full-time job? Planning to travel during the summer? Don’t let any of these stop you from taking a class, earning credits, or learning something new. Wherever you are, whatever your schedule, Cornell distance learning courses are just a keyboard away.

Distance learning courses may include a web-based component, videotapes, and/or CD-ROMs. Students interact with the instructor and other students by phone or e-mail. Most assignments and examinations are completed within a scheduled time frame; just as in on-campus courses, but students have the option of getting a head start on readings and lectures. For information, visit www.sce.cornell.edu/dl/.

For faculty members interested in developing credit or noncredit distance learning courses, the school offers a broad range of services, including determining technological needs, resolving copyright issues, creating a marketing plan, and fulfilling administrative duties related to the course. Services are tailored to individual needs and ongoing support is available. Visit www.sce.cornell.edu/dl/to see what’s possible.

Distance Learning Course Roster
AM ST 202 Popular Culture in the United States, 1945 to the Present
AN SC 222 Canine Genetics
ASIAN 225 Literature, Politics, and Genocide in Cambodia
BEE 299 Sustainable Development
COMM 120 Contemporary Mass Communication
COMM 272 Principles of Public Relations and Advertising
COMM 376 Planning Communication Campaigns
ECON 101 Introductory Microeconomics
GOVT 161 Introduction to Political Philosophy
GOVT 314 Prisons: The Politics of Incarceration in America
ILRST 210 Statistical Reasoning
ILRST 510 Statistical Methods for the Social Sciences I

CyberTower: Cornell at No Cost
Cornell’s online CyberTower program is a great way to meet Cornell faculty and explore fascinating topics ranging from mastodons and wine appreciation to today’s headline news, all at no cost.

CyberTower features three online program series, with new offerings added every month:

• Study Rooms contain video-streamed lectures, links to specially selected web sites, reading lists, and discussion boards with Cornell faculty and fellow CyberTower users.

• Forums are informal video-streamed conversations with leading faculty members. Discussion boards enable you to trade comments and questions with each month’s featured guest.

• Views and Reviews are brief, unabashedly opinionated commentaries by faculty members on books, films, articles, and topics in the news.

To explore CyberTower, simply log on to cybertower.cornell.edu and follow the registration instructions. It’s all free and is a great way to see what Cornell has to offer.

EXECUTIVE AND PROFESSIONAL PROGRAMS
The school presents short, high-level professional updates, both on and off campus, in study tours and in locations worldwide via distance learning. These courses are taught by Cornell faculty and senior research staff in many fields. Programs also can be designed to respond to the specific needs and interests of corporations, professional societies, and other groups. For information, call 255–2259; e-mail cuexec@cornell.edu; fax 255–4982; or visit www.sce.cornell.edu/exec/.
EXTRAMURAL STUDY
Cornell students whose studies have been interrupted may find it useful to take classes on a part-time basis. The school is also dedicated to offering part-time study to staff, faculty, "townies," and anyone else interested in taking courses at the university, improving their job skills, continuing their education, or simply having fun learning something new.

Thanks to the school's Extramural Study program, anyone may (with few exceptions) enroll in any course in the university during the fall and spring semesters if space is available. Part-time study at Cornell is a great opportunity to take fascinating courses and study with world-renowned faculty members. If you'd like to take advantage of Cornell's extensive course offerings but don't need college credit, you may register through the Visitor's Program and receive a 90 percent discount on tuition.

For information, write to Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; or visit www.cuse.cornell.edu/exmu.

SPECIAL PROGRAMS
If you want to immerse yourself in a particular subject, consider enrolling in a special program. Programs are offered on and off campus, may include an internship, and may be combined with other courses. For information, call 255-7259; e-mail cusce@cornell.edu; fax 255-9697; or visit www.cuse.cornell.edu/sp.

On-Campus Special Programs Roster
AEM Certificate in Business Management
African Languages: Swahili
Intensive Arabic Program
Architecture
Art in the Modern World: Expressive Culture and Performance
Asian Studies Programs: Chinese, Japanese, Nepali, Sinhala, Tibetan
Biological Sciences Undergraduate Research Program
City and Regional Planning: Using GIS for Neighborhood Analysis
Cornell Institute for Biology Teachers Education
Engineering Cooperative Education Program
Summer Intensive English Program
Freshman Summer Start
School of Hotel Administration Executive Education Programs
Industrial and Labor Relations: Strategic Corporate Research
International Business Program
Japanese Teacher Training Workshop
Landscape Architecture: Site Grading
Latin American Studies Summer Program
CNS Institute for Physics Teachers
Prefreshman Summer Program

Telluride Association Summer Program
Leadership Program for Veterinary Students

Off-Campus Special Programs Roster
Indigenous Amazonian Culture
Architecture Art Studio and Creative Writing Workshop in Rome, Italy
Electronic Imaging in South Eastern Europe
Geologic Field Mapping in Argentina
Human Ecology: Urban Semester Program—The Culture of Medicine
Investment Management Program
Latin American Studies Summer Programs in Bolivia and Brazil
Marine Science: Shoals Marine Laboratory, Maine
Satellite Remote Sensing Applications in Biological Oceanography
Summer in Washington

Campus to Careers
The job market's tough. The economy's tight. You've been thinking it's time to get serious about your future . . .

The School of Continuing Education and Summer Sessions invites you to join us for one of our highly regarded programs linking classrooms and careers. No matter what your major is, you can:

• Expand your career opportunities
• Strengthen your résumé and skills
• Develop professional contacts
• Take focused, intensive classes
• Learn from distinguished professors, alumni, practitioners, and executives
• Study in Washington, D.C., New York City, or on the Cornell campus in Ithaca
• Enrich your personal, academic, and professional life

For more information, visit www.sce.cornell.edu/sp.

Campus-to-Careers Programs Roster
AEM Certificate in Business Management
Cornell University Prelaw Program
International Business Program
Investment Management Program
Summer in Washington
Practicing Medicine/Providing Health Care

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS
Cornell's award-winning programs for high school students offer one-, three-, and six-week programs for talented sophomores, juniors, and seniors from around the world. Participants live on our beautiful campus, take college classes with leading Cornell faculty, earn an average of 6 credits, and explore careers and academic majors.

The program is a wonderful opportunity for high school students to experience college life and make some great friends. At the end of the program, students often say it's been the best summer of their life.

For information, call 255-6203; e-mail summer_college@cornell.edu; fax 255-6665; or visit www.summercollege.cornell.edu.

WINTER SESSION
Cornell undergraduate and graduate students, as well as employees and area residents, can earn up to 4 credits between the fall and spring semesters by enrolling in the winter session. This quiet time on campus allows students to enjoy generally smaller classes and to concentrate on intensive study. Winter-session students may enroll in scheduled courses or design individualized study with a faculty member. For information, write to Winter Session, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mailcusce@cornell.edu; fax 255-9697; or visit www.sce.cornell.edu/ws/. If a course also is offered through distance learning, the course title will be followed by DL.

Winter Session Course Roster
ASIAN 250 Introduction to Asian Religions
AS&RC 131 Swahili (off campus)
BIOEE 264 Tropical Field Ornithology (off campus)
CRP 495.18 Introduction to Peace Science
COMM 263 Organizational Writing
EAS 305 Field Study in Hawaii (off campus)
ECON 101 Introductory Microeconomics DL
ECON 102 Introductory Macroeconomics
ECON 307 Introduction to Peace Science
ENGL 257 American Musical Theatre in New York City (off campus)
ENGL 280 Creative Writing
ENGL 288 Expository Writing
MUSIC 257 American Musical Theatre in New York City (off campus)
OR&IE 350 Financial and Managerial Accounting
RELS 250 Introduction to Asian Religions
THETR 257 American Musical Theatre in New York City (off campus)
Practicing Medicine/Providing Health Care (off campus)

CORNELL UNIVERSITY SUMMER SESSION
Summer at Cornell is an excellent time to get a world-class education while enjoying all of the pleasures of summer in the Finger Lakes. Summer Session features open admissions and an outstanding faculty, three-quarters of whom teach year round. Courses are offered on and off campus and via distance learning.
During our three-, six-, or eight-week sessions you can actually get to know your professors and are sure to be surrounded by intriguing people of all ages from all over the world. And, all with time left over for travel or a summer job.

Summer Session offers the practical benefits of fulfilling requirements, accelerating your degree, gaining personal and professional growth, or easing your fall/spring course load. It's also the perfect time to take advantage of the area's stunningly beautiful gorges, waterfalls, lakes, and parks. Hike, swim, sail, picnic, or enjoy a sunset concert on the Arts Quad.

However you look at it, spending a summer at Cornell is a great way to enjoy the best of the university and the best of summer!

For information call 255-4987; e-mail cusce@cornell.edu; or visit our web site at www.summer.cornell.edu.

**Summer Session Course Roster**

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted to the web (www.summer.cornell.edu) in the fall as the roster is developed. A preliminary course roster is available beginning in November. If a course is also offered through distance learning, the course title will be followed by **DL**.

**Africana Studies**

AS&RC 131–132 Swahili

AS&RC 205 African Cultures and Civilizations

**American Studies**

AM ST 104 Introduction to American History

AM ST 124 Democracy and Its Discontents: Political Traditions in the United States

AM ST 341 Recent American History, 1960 to the Present

**Anthropology**

ANTHR 100 Introduction to Archaeology

ANTHR 101–102 Introduction to Anthropology

ANTHR 389 Culture and Emotion: Love and Death in Cross-Cultural Perspective

**Applied Economics and Management**

AEM 209 Introduction to Business Statistics

AEM 210 Introductory Statistics

AEM 221 Financial Accounting

AEM 250 Environmental and Resource Economics

AEM 320 Business Law I

AEM 323 Managerial Accounting

AEM 416 Consumer Demographics and Market Analysis

AEM 499 Undergraduate Special Topics in Applied Economics and Management

**Archaeology**

ARKEO 100 Introduction to Archaeology

Other field study opportunities are usually available through this department.

**Architecture**

ARCH 110 Introduction to Architecture: Design Studio

ARCH 130 Introduction to Architecture: Lecture Series

ARCH 251 Photography I

ARCH 351 Photography II

Consult the Department of Architecture office for a complete list of summer design offerings including foreign study opportunities.

Near Eastern Studies
NES 280  Bosnian Literature from 1900 to the Present

Nutritional Sciences
NS 422  Exercise Physiology and Human Performance

Operations Research and Industrial Engineering
OR&IE 115  Engineering Applications of Operations Research

Philosophy
PHIL 101  Introduction to Philosophy
PHIL 145  Contemporary Moral Issues
PHIL 191  Introduction to Cognitive Science
PHIL 231  Introduction to Deductive Logic
PHIL 263  Religion and Reason

Physical Education
Consult the Physical Education office for a complete list of summer offerings for credit and recreation.

Physics
PHYS 101--102--103  General Physics
PHYS 112  Physics I: Mechanics
PHYS 213  Physics II: Heat/Electromagnetism
PHYS 214  Physics III: Optics, Waves, and Particles

Psychology
PSYCH 101  Introduction to Psychology: The Frontiers of Psychological Inquiry
PSYCH 102  Introduction to Cognitive Science
PSYCH 128  Introduction to Psychology: Personality and Social Behavior
PSYCH 199  Sports Psychology
PSYCH 280  Introduction to Social Psychology
PSYCH 325  Adult Psychopathology
PSYCH 350  Statistics and Research Design

Religious Studies
RELST 262  Religion and Reason

Romance Studies
French Language
FRROM 209  Intermediate Composition and Conversation I

Italian Language
ITALA 123  Continuing Italian

Spanish Language
SPANR 121  Elementary Spanish
SPANR 123  Continuing Spanish

Russian
RUSSA 121--122  Elementary Russian Through Film

Science and Technology Studies
S&T 205  Ethical Issues in Health and Medicine
S&T 287  Evolution
S&T 447  Seminar in the History of Biology: Evolution, Ethics, and Meaning in Life

Sociology
SOC 101  Introduction to Sociology

Textiles and Apparel
TXA 114  Introduction to Computer-Aided Design

Theatre, Film and Dance

Film Studies
FILM 324  Film Animation Workshop: Experimental and Traditional Animation on the Oxberry
FILM 383  Screenwriting

Dance
DANCE 210  Beginning Dance Composition
DANCE 303  Dance Technique Workshop

Theoretical and Applied Mechanics
T&AM 293--294  Engineering Mathematics

Writing
WRIT 134  Introduction to Writing in the University

INDIVIDUALIZED STUDY
Can’t find the course you want? Take the course independently! You’d like to study cosmic rays and high-energy electromagnetic radiation, protein structure and the nature of enzymatic catalysis, or American and European decorative arts of the Renaissance and the nineteenth century. Although there are no regularly scheduled summer courses in those areas or in other areas in which you may be interested, you may still be able to study your favorite subject. Courses that aren’t a part of the regular schedule may be offered for an individual or a group.

If you’re interested in such a course and can find a professor willing to supervise your study, pick up the application for individualized study (available on the web at www.summer.cornell.edu or from the Summer Session office). Also, please let the Summer Session office know if there are courses you would like to see offered next summer (call 255-4987 or e-mail cusce@cornell.edu).
ADMINISTRATION
W. Kent Fuchs, dean
David Gries, associate dean for undergraduate programs
Michael Spencer, associate dean for research, graduate studies, and professional education
Zellman Warhaft, associate dean for diversity
Deborah Cox, assistant dean for strategic planning, assessment, and new initiatives
Betsy East, assistant dean for student services
Cathy Long, assistant dean for administration
Marsha Pickens, assistant dean for alumni affairs and development

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. The School of Applied and Engineering Physics is located in the Engineering Quadrangle. The Department of Biological and Environmental Engineering is in Riley-Robb Hall. Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of interest in engineering include the following:

Center for Applied Mathematics: This cross-disciplinary center administers a graduate program.

Center for Nanoscale Systems in Information Technologies: The mission of this National Science Foundation Nanoscience and Technology Center is to explore new methods for creating nanoscale devices for use in information technologies. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle. The Nanoscale Systems in Information Technologies Center is an interdisciplinary facility, with substantial equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications.

Cornell Waste Management Institute: This research, teaching, and extension program is housed in the Environmental Engineering Building at Cornell.

Environmental Engineering is in the Graduate School and especially in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents: This interdisciplinary organization promotes research on the structure, composition, and evolution of the continents.

W. M. Keck Foundation in Nanobiotechnology: Facilities of this program include tools for nanoscale diagnostics of biomaterials.

Laboratory of Plasma Studies: A center for research in plasma physics.

Cornell Center for Materials Research: An interdisciplinary facility, with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment for materials research.

National Astronomy and Ionosphere Center: The world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico.

Multidisciplinary Center for Earthquake Engineering Research: A center established by the National Science Foundation and a group of universities to study response and design of structures in earthquake environments.

Nanobiotechnology Center: The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall and Kimball Hall, and the Biotechnology Center.

Nanobiotechnology Center: The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall and Kimball Hall, and the Biotechnology Center.

National Institutes of Health/National Science Foundation Developmental Resource in Structural Biology: This center provides state-of-the-art research resources and education for graduate students in structural biology.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics: This resource develops novel measurement and optical instrumentation for solving biophysical problems.

Network for Earthquake Engineering Simulation (NEES): A system of nationwide experimental facilities linked by high-performance Internet for laboratory and computational simulation of structures under earthquake loads.

Power Systems Engineering Research Center: A National Science Foundation cooperative center between university and industry in which research is centered on power systems and infrastructure networks.

Program of Computer Graphics: This interdisciplinary research center operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society. This cross-disciplinary unit sponsors courses and promotes research on the interaction of science, technology, and society.

The programs listed on this page are sponsored by College of Engineering units, and several are industry affiliated.

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of bachelor of science (B.S.), master of engineering (with field designation) (M.Eng.), master of science (M.S.), and doctor of philosophy (Ph.D.).

General academic information concerning the B.S. degree is given below in the section "Undergraduate Study." The student pursues the degree in one of 13 majors. The majors are described in the section "Engineering Majors."

Many students stay a fifth year in the College of Engineering to pursue a professional degree, the Master of Engineering (M.Eng.) degree. Joint enrollment in the B.S. and M.Eng. degrees is possible for students in their last semester who lack only 1 to 8 credits for the B.S.

M.Eng. degrees are given in most of the major areas. In addition, the following M.Eng. degrees are given: Aerospace Engineering, Biomedical Engineering, Electrical Engineering, Engineering Mechanics, Nuclear Engineering, Operations Research, and Systems Engineering. For full details on M.Eng. degrees, see the section "Master of Engineering Degree Programs."

Programs leading to the M.S. and Ph.D. degrees are administered by the Graduate School. They are described in the :

Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science.

UNDERGRADUATE STUDY
Students in the College of Engineering spend most of their first two years of undergraduate studies in the Common Curriculum, which is administered by the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. At the end of their third semester, they affiliate with one of these majors:

* Biological Engineering (BE)
Chemical Engineering (ChemE)
Civil Engineering (CE)
Computer Science (CS)
Electrical and Computer Engineering (ECE)
Engineering Physics (EP)
Environmental Engineering (EnvE) (pending)
Course Category | Credits
---|---
1. Mathematics | 16
2. Physics (major-specific) | 8-12
3. Chemistry (major-specific) | 4-8
4. First-year writing seminar | 6
5. Technical writing | 3
6. Computer programming | 4
7. Introduction to engineering (ENGRI) | 3
8. Two engineering distributions (ENGRD) | 6
9. Liberal studies distribution (6 courses min.) | 18
10. Adviser-approved electives | 6
11. Major program | 6
   a. Major-required courses | ≥ 30
   b. Major-approved electives | 9
   c. Courses outside the major | 9
12. Two terms of physical education in the freshman year and demonstration of proficiency in swimming (university requirement) | 18

Environmental Engineering, the science-of-earth-systems option in Geological Sciences, or a health-related career such as medicine should take the CHEM 207-208 sequence.

**First-Year Writing Seminars**
Each semester of their freshman year, students choose a first-year writing seminar from among more than one hundred courses offered by over thirty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

**Technical Writing**
Students can fulfill the upper-level technical-writing requirement using one of the six alternatives below. See www.engineering.cornell.edu/ECP/index.htm for more information about these alternatives.

1. ENGRD 350 or ENGRD 353, taught by the Engineering Communications Program
2. The Writing-Intensive Co-op—an opportunity to combine work and academics. Some Co-op students do a significant amount of writing on the job; under certain circumstances, this writing might satisfy the college's technical-writing requirement. More information is available at www.engineering.cornell.edu/ECP/Writing-IntensiveCoop.htm.
3. An officially designated Writing-intensive (W-I) engineering course:
   - ENGRD AEP 264
   - CHEM 452
   - MSE 403 & 404 (both)
   - MSE 405 & 406 (both)
   - M&AE 427
   - BEE 450 with co-registration in BEE 493
   - BEE 473 with co-registration in BEE 493
   - BEE 489
4. ENGRD 302, a 1-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing done in his or her course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCGS's Subcommittee on Technical Writing, the instructor may have students co-register in ENGRD 302. May be taken more than once, with different courses. By permission of engineering instructor.
5. COMM 260, 265, or 352, taught by the Department of Communication (in the College of Agriculture and Life Sciences)
6. Petition. Occasionally, a student will be doing a significant amount and variety of technical writing elsewhere in the Engineering College. It may be appropriate to petition the CCGS’s Subcommittee on Technical Writing for permission to use this experience or work (not past writing) to meet the technical-writing requirement.
Computer Programming
COM S 100, Introduction to Computer Programming, is normally taken in the freshman year to fulfill the computer programming requirement.

Before taking COM S 100, some students may take COM S 099, Fundamental Programming Concepts, offered in the fall and summer. This 2-credit S-U course is meant for students with virtually no programming experience; students with previous programming experience may not take it. Basic programming concepts and problem analysis are studied. COM S 099 may not be used as credit toward graduation.

Introduction to Engineering Course
An introduction to engineering course (designated ENGRD) must be taken during the freshman year. This course will introduce students to the engineering process and provide a substantive experience in an open-ended problem-solving context. See the Introduction to Engineering course listing for current course offerings.

Engineering Distribution
Two engineering distribution (ENGRD) courses (6-8 credits) must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1. Scientific computing
   ENGRD 211, Computers and Programming
   ENGRD 241, Engineering Computation
   ENGRD 521, Numerical Methods in Computational Molecular Biology
   ENGRD 322, Introduction to Scientific Computation

2. Materials science
   ENGRD 261, Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
   ENGRD 262, Electronic Materials for the Information Age

3. Mechanics
   ENGRD 202, Mechanics of Solids
   ENGRD 203, Dynamics
   Majors in Engineering Physics may substitute A&EP 335 for ENGRD 203.

4. Probability and statistics
   ENGRD 270, Basic Engineering Probability and Statistics
   Majors in Electrical and Computer Engineering may substitute ECE 310 for ENGRD 270. Majors in Engineering Physics may substitute ECE 310 or MATH 471 for ENGRD 270. Majors in Civil Engineering and Biological Engineering may substitute CEE 304 for ENGRD 270.

5. Electrical sciences
   ENGRD 210, Introduction to Circuits for Electrical and Computer Engineers
   ENGRD 230, Introduction to Digital Logic Design
   ENGRD 264, Computer-Instrumentation Design

6. Thermodynamics and energy balances
   ENGRD 219, Mass and Energy Balances
   ENGRD 221, Thermodynamics

7. Earth and life sciences
   ENGRD 201, Introduction to the Physics and Chemistry of the Earth
   ENGRD 251, Engineering for a Sustainable Society
   ENGRD 260, Principles of Biological Engineering

8. Biology and chemistry
   ENGRD 252/A&EP 252, The Physics of Life
   BIO G 101 and 103, Biological Sciences, Lecture and Laboratory
   BIO G 105, Introductory Biology
   BIO G 107, General Biology (summer only)
   CHEM 389, Physical Chemistry I

Some majors require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are as follows:

- Biological Engineering: ENGRD 202
- Chemical Engineering: ENGRD 219
- Civil Engineering: ENGRD 202
- Computer Science: ENGRD 211 (co-enrollment in COM S 212 strongly recommended)
- Electrical and Computer Engineering (pending): ENGRD 230
- Environmental Engineering: ENGRD 202
- Geosciences: ENGRD 201
- Information Science, Systems, and Technology: ENGRD 270
- Materials Science and Engineering: ENGRD 261
- Mechanical Engineering: ENGRD 202
- Operations Research and Engineering: ENGRD 270

Some majors require additional distribution courses after the student affiliates.

Liberal Studies Distribution
The following liberal studies distribution requirements begin with the class entering in 2003. Students who entered before that may choose to use the new requirements.

Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to work in multifaceted groups, and superior communications skills. Cornell has a rich curriculum in the humanities, arts, and social sciences, enabling every engineering student to obtain a true liberal education. At least six courses (totaling at least 18 credits) are required, and they should be chosen with as much care and foresight as courses from technical areas.

- The six courses must be chosen from at least three of the following six groups.
- At least two courses must be from the first three groups (CA, HA, LA).
- At least two of the six courses must be at the 200 level or higher.

The Engineering Advising web site (www.engineering.cornell.edu/studentServices/advising.cfm) contains a complete listing of acceptable courses in each group. A list of courses is also available in Engineering Advising, 167 Olin Hall.

Group 1. Cultural Analysis (CA)
Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), and power and politics (states, colonialism, inequality).

Group 2. Historical Analysis (HA)
Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subaltern, a specific country or region, an event, a process, or a time period.

Group 3. Literature and the Arts (LA)
Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

Group 5. Social and Behavioral Analysis (SBA)
Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or
individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

**Group 6. Foreign Languages (not literature courses)**

Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

**Electives**
- Adviser-approved electives: 6 credits required (approved by the academic adviser). Because these courses should help develop and broaden the skills of the engineer, advisers generally accept the following as approved electives:
  1. One introduction to engineering course (ENGRI)
  2. Engineering distribution courses
  3. Courses stressing written or oral communication
  4. Upper-level engineering courses
  5. Advanced courses in mathematics
  6. Rigorous courses in the biological and physical sciences
  7. Courses in business, economics, or language (when they serve the student's educational and academic objectives)
  8. Courses that expand the major or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
- Major-approved electives: 9 credits (approved by the major and faculty advisers in the major). Refer to the major curricula for descriptions of courses in this category.
- Outside-the-major electives: 9 credits of courses outside the major to ensure breadth of engineering studies

**Social Issues of Technology**

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their liberal studies distribution courses and approved electives, students are urged to consider courses listed in the “Science and Technology Studies” undergraduate area of concentration (see “Interdisciplinary Centers and Programs” section). These courses may provide students with important perspectives on their studies and their future careers.

**Engineering Advising**

Entering freshmen are assigned a faculty adviser (who may or may not be in their intended major), who remains their adviser until affiliation with a major (normally during the fourth semester). The students are also under the administration of Engineering Advising, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising serves as the primary resource center for undergraduate students in the college, offering general advising and counseling. Also located in Olin Hall are the LIFE Program, Minority Programs, and Women’s Programs, which are primary resources for counseling, support, tutoring, and networking opportunities.

**Freshman-Year Requirements**

During the freshman year, engineering students are expected to complete (or receive credit for) the following core requirements:
- MATH 191 (or 190) and MATH 192
- Two of: CHEM 211, 207, 208, PHYS 112, 213, 214*
- COM S 100
- Two first-year writing seminars
- One introduction to engineering (ENGRI) course
- Two physical education courses

*Students with an interest in pre-med (or other health-related careers). Chemical Engineering, Environmental Engineering, or the science-of-earth-systems option in Geology Sciences should enroll in the CHEM 207–208 sequence during their freshman year.

**Affiliation with a Major**

Students must apply for affiliation with a major during the first term of their sophomore year, although earlier affiliation may be granted at the discretion of the major. This is done by visiting the undergraduate major office and completing the Application for Major Affiliation Form. To affiliate, students must 1) make good progress toward completing required courses in the common curriculum, 2) have a GPA ≥ 2.0, and 3) have satisfied the major’s course and grade requirements as specified below:

(Majors may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

**Major**

<tr>
<td>MATH 192/293. Visit the CS undergraduate office or the CS undergraduate web site to learn about alternative criteria for affiliation.</td>
</tr>
</tbody>
</table>

Students must be affiliated or conditionally affiliated with a major by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

**Electrical and Computer Engineering**

At least C- in MATH 293, PHYS 213, and either ECE/ENGRD 210, ECE 220, or ENGRD 230. These courses must be taken for 4 credits. GPA ≥ 2.5 in (if completed): MATH 192, 293, 294, PHYS 213, ENGRD 211, 290, ECE/ENGRD 210, ECE 220.

**Environmental Engineering**

GPA ≥ 2.0 in engineering and science courses. At least C- in ENGRD 202 or CHEM 257.

**Geological Science**

Good academic standing in the college.

**Independent Major**

GPA ≥ 2.0

**Information Science**

At least C in two of MATH 293, COM S 211, ORIE 270. GPA ≥ 2.3 in completed required courses, which must be taken at Cornell.

**Materials Science and Engineering**

At least C- in physics and chemistry courses. At least C in ENGRD 261 or ENGRD 262.

**Mechanical Engineering**

At least C- in math and science courses and in ENGRD 202.

**Mechanical Engineering Research and Engineering**

At least C- in MATH 191, 192, ENGRD 270. GPA ≥ 2.0 in math, science, and engineering courses (both overall and in the term immediately before affiliation).

**SPECIAL PROGRAMS**

**Dual-Degree Program**

The dual-degree program, intended for superior students, allows both a bachelor of science and either a bachelor of arts (B.A.) or bachelor of fine arts (B.F.A.) degree to be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art, and Planning may apply and, after acceptance of their application, begin the dual-degree program in their second or third year. For information, contact the appropriate coordinators of dual-degree programs at 55 Goldwin Smith Hall (for Arts and Sciences), B-1 West Shirley (for Architecture, Art, and Planning), and Engineering Advising, 167 Olin Hall.

**Double Major in Engineering**

The double-major option, which makes it possible to develop expertise in two allied engineering majors, generally requires at least one semester beyond the usual four years. Students affiliate with one major following normal procedures and then petition to enter
a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Independent Major
Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of an engineering major (≥ 32 credits), which may be any subject area offered by the schools or departments of the college, and an educationally related minor (≥ 16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering of the college, and an educationally related minor (a second engineering subject area or in a logically connected nonengineering area). The combination must form an engineering major and a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Independent Major
Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of an engineering major (≥ 32 credits), which may be any subject area offered by the schools or departments of the college, and an educationally related minor (≥ 16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering major and a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Engineering Minors and Options
Most of the majors have a corresponding minor, requiring six courses (18 credits), in which the student can pursue a second interest. Besides, there are minors in Applied Mathematics, Biomedical Engineering, Civil Infrastructure, Engineering Management, Engineering Statistics, Industrial Systems and Information Technology, and Information Science. There is also the Bioengineering option, which requires only four courses (12 credits) plus a seminar. See the section “Engineering Minors and Options.”

Department of Biomedical Engineering
270 Olin Hall
The charge of the new Department of Biomedical Engineering (BME) is to bridge engineering, biology, and medicine. Students are educated to convert basic discoveries in biology and medicine into medically useful devices and therapies to improve human health. Biomedical engineers also contribute to biological discovery. The 30 faculty in the Biomedical Engineering faculty represent 12 departments and six colleges (including Weill Medical College). The BME field offers research opportunities in biomedical mechanics, biomaterials, drug delivery, design, production, and metabolism, biomedical instrumention and diagnostics, and system biology.

The Department of BME administers the undergraduate minor in Biomedical Engineering, the Biomedical Engineering graduate field, the M.S./Ph.D. degree programs, and the M.Eng. (BME) degree.

Engineering Communications Program
The Engineering Communications Program (ECP), created in 1987 at the urging of the College of Engineering faculty and employers of Cornell engineers, provides instruction in technical writing, oral presentation, and the use of graphics in both. The ECP is a recipient of the Engineering Dean’s Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences that have various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting technical information, do library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment in ECP courses is 20 students per section, like writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students’ work receives abundant written comments, and conferences are frequent.

ECP members are available to consult with the faculty teaching writing-intensive technical courses and anyone else interested in including writing in their courses. They oversee the communications component of the Writing-Intensive Co-op and occasionally give talks to alumni and student groups.

Engineering Diversity Office
146 Olin Hall, 255–0735
The Engineering Diversity Office (EDO) operates programs at all levels to facilitate the recruitment and retention of women and minority students in Engineering. EDO acts as a catalyst for the support, career placement, graduate school preparation, and overall success of women and minority students. EDO participates in a university-wide pre-freshman summer program. EDO also provides developmental and specialized instruction each semester in subjects such as math, computer science, and English composition. Field trips and recreational activities provide opportunities for getting a better understanding of how to navigate and adapt to the college. Seminars, lectures, and workshops provide a wide range of topics that are relevant to academic and extracurricular life in the university setting.

In September and April, EDO sponsors a networking event that allows company representatives from all over the United States to meet students from historically underrepresented populations. Summer internships and permanent jobs frequently result from this event.

Learning Initiatives for Future Engineers
The office of Learning Initiatives for Future Engineers, or LIFE, offers programs designed to enhance the undergraduate academic experience through peer education, cooperative learning, and research opportunities.

LIFE’s Academic Excellence Workshops (AEWs) are taken in conjunction with core engineering courses in math, computer science, and chemistry. The 1-credit AEWs are weekly two-hour peer-led learning sessions. Designed to enhance student understanding, they feature peer-facilitated group work that is at or above the level of course material.

LIFE’s Undergraduate Research program provides opportunities for students to obtain hands-on research experience with a faculty mentor. Students and faculty may apply for funding to cover student stipend and expense costs.

Through LIFE’s Tutors-on-Call program, peer tutors are available free of charge to provide one-on-one tutoring assistance for many first- and second-year core engineering courses.

Engineering Cooperative Education and Career Services
This office assists engineering students (freshmen through Ph.D.) in career development and job search issues and administers the Engineering Cooperative Education Program. Individual advising and group seminars are available, and more than 200 national employers typically visit the office annually to recruit technical students and graduates; additional job opportunities are posted electronically. Both undergraduate and graduate students can use these resources to pursue permanent, summer, or co-op employment, but students seeking co-op opportunities must meet specific requirements.

The Engineering Cooperative Education Program (Co-op) provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession—and still graduate in four years.

To be eligible, a student must have been enrolled at Cornell for four semesters, with a GPA ≥ 2.7. (Students in Computer Science and Biological and Environmental Engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants interview with participating employers. Students who receive offers and join the program usually take their fifth-term course work at Cornell during the summer after their sophomore year and begin the first co-op work period the following fall. They return to Cornell to complete the sixth semester with their classmates, complete a second work period with the same employer the following summer, and return to campus for their senior year to graduate on schedule with their class.

International Programs
An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important for today’s engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For information on these and other opportunities to add an international dimension to your undergraduate education, visit Engineering Advising, 167 Olin Hall, or information on an international co-op work experience, visit the Engineering Cooperative Education and Career Services office, 201 Carpenter Hall.
Students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

Cooperative Program with the Johnson Graduate School of Management
Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. See the section "Master of Engineering Degrees" for details.

Lester Knight Scholarship Program
The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. See the section "Master of Engineering Degrees" for details.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit
The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
2. General Certificate of Education (GCE) Advanced ("A") Level Examinations;
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell's departmental placement examinations, given during orientation week before the beginning of fall-term classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways. They may:

1. enroll in a more advanced course in the same subject right away.
2. substitute an elective course from a different area.
3. enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams
The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 (or 190), 192 are required.

First-term math (MATH 191). AP credit may be earned by:
- a score of "4" or "5" on the CEEB BC exam, or
- a passing score on the Cornell departmental exam for first-term math.

First-year math (through MATH 192). AP credit may be earned by:
- a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112 and 213 are required.

PHYS 112. AP credit may be earned by:
- a score of "4" or "5" on the mechanics portion of the CEEB C exam, or
- a score of "5" on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term math at the time of matriculation, or
- a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 may not enroll in PHYS 213 unless concurrently enrolled in MATH 293.

PHYS 213. Students receiving a "5" on the Electricity and Magnetism portion of the AP C exam may choose to accept AP credit for PHYS 213 or to enroll in PHYS 213 with no AP credit.

PHYS 116, 217, and 218 (honors sequence). This sequence is designed for students with strong experience in physics and calculus, e.g., "5"s on one or both Physics C AP tests and the equivalent of at least one semester of university calculus. Students interested in PHYS 217 or 218 are strongly advised to start with PHYS 116. Even for a student with "5"s on both Physics C AP tests, 116 will not be boring. Students cannot simultaneously receive credit for PHYS 116 and AP credit for PHYS 112, or credit for PHYS 217 and AP credit for PHYS 213. For advice or more information, contact the departmental representative at 255-6036.

Chemistry: CHEM 207 or CHEM 211 is required.

CHEM 207 or CHEM 211. AP credit may be earned by:
- a score of "5" on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for chemistry.

Note: Students who obtain AP credit for CHEM 207 and who are considering a major in Chemical Engineering or Materials Science and Engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. You may want to discuss this option with your faculty adviser.

Computing: COM S 100 is required. AP credit may be earned by:
- a score of "5" on the CEEB A or a score of "4" or "5" on the AB exam, or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required, although it is a popular elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
- 8 credits will be offered to students who receive a "5" on the CEEB AP exam;
- 6 credits will be offered to students who receive a "4" on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Sinton Hall, to discuss proper placement.

First-year writing seminar: Two first-year writing seminars are required.
- AP credit for one first-year writing seminar may be earned by a score of "5" on either of the CEEB AP English exams.

Students who earn a score of "4" on the AP English Literature and Composition exam or the AP English Language and Composition exam will be offered 3 credits, which may be applied toward the Literature and Arts (LA) category of the Liberal Studies distribution requirement.

Liberal studies distribution: Six courses beyond two first-year writing seminars are required. Students may earn AP credit toward the liberal studies distribution by taking the College Entrance Examination Board (CEEB) AP tests. AP credit earned in the liberal studies distribution cannot be used to fulfill the "upper-level" liberal studies requirements.

Modern languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to 3 credits. To qualify for the CASE exam, the student must score at least 650 on a college placement test (taken either in high school or at Cornell during Orientation Week). A score of "2" on the CASE entitles the student to 3 credits; a score of "3," 6 credits; which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

Advanced Placement and Credit for International Credentials
Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")
Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.
Transfer Credit for First-Year and Continuing Students

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, submit a Transfer Credit Form (one form for each course), accompanied by a course description. (Forms are available from Engineering Advising or the Registrar’s Office and should be submitted before enrollment.) An official transcript from the offering institution (bearing the institutional seal and registrar’s signature) must be sent to the Engineering Registrar’s office before official transfer credit will be awarded.

- Applications for transfer credit to satisfy requirements in math, science, engineering courses, or first-year writing seminars require approval from the department offering an equivalent course at Cornell. The department may require course materials, textbooks used, etc., in addition to the course description before approving the course.

- Departmental approval is not required for transfer credit that satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASAPC) in Engineering Advising.

- Cornell does not award credit for courses in which a student has earned a grade less than C. schools and departments may stipulate a higher minimum grade.

- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination, as described in the “Advanced Credit” section.

- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward B.S. degree requirements.

- At most 72 total transfer credits (taken both before and after matriculation) may be used to meet graduation requirements.

- Summer session courses taken at Cornell are not considered transfer credit.

A more detailed description of the college’s regulations governing transfer credit may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students as well as the Engineering Undergraduate Handbook, both available from Engineering Advising, 167 Olin Hall.

Transfer Credit for Transfer Students

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit is determined by the majors.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means depends on the major.

Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASAPC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from math, science, and/or engineering (phys. ed. courses and courses below the 100 level do not count)
2. At least C- in the math course
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades

Requirements for unaffiliated second-semester freshmen and sophomores to be in good standing are as follows. Failure to meet these requirements will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASAPC), a warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may result.

1. At least 14 credits passed in courses that meet B.S. degree requirements, normally at least two math, science, or engineering courses (phys. ed. courses and courses below the 100 level do not count)
2. At least C- in a math course, if one was taken
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades

Academic Progress

The total number of credits required for graduation range from 123 to 133, depending on the major. Therefore, an average semester credit load ranges from 15 to 17 credits.

Because math is pivotal to the study and practice of engineering, students must earn at least C- in their four required math courses. If at least C- is not attained, the course must be repeated immediately. Failure to achieve at least C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced math courses often have math prerequisites, and having to repeat the prerequisite course may delay progress in the physics and math curricula. Students are expected to continue the core engineering math courses each semester until completed.

Note: Advanced placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."
Dean’s List

Dean’s List citations are presented each semester to engineering students who have exemplary academic records. The dean of the college determines the criteria for this honor. For 2004-2005, the requirement is a semester GPA ≥ 3.4 (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may earn Dean’s List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean’s List status receive certificates from the Engineering Registrar’s Office, and the honor is noted on the transcript.

Graduating with Distinction and Honors

Graduating with Distinction

Meritouous students graduating with a B.S. degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude:

- Cum laude will be awarded to engineering students with a GPA ≥ 3.5. Cum laude will also be awarded to engineering students who received a semester GPA ≥ 3.5 in each of the last four semesters at Cornell; in each of these semesters, at least 12 letter-graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for pro-rated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.5 in their last semester and meet the conditions above in the prior four semesters.
- Magna cum laude will be awarded to engineering students with a GPA ≥ 3.75 (based on all credits taken at Cornell).
- Summa cum laude will be awarded to engineering students with a GPA ≥ 4.0 (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

Major Honors Program

To be eligible for major honors, a student must enter a major with and maintain a cumulative GPA ≥ 3.5. If the major has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the major may recommend that a student graduate with the additional diploma and transcript notation of “With Honors.” For more information, see the section “Engineering Majors.”

S-U Grades

Many courses may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade C- receive U. (A course in which a U grade is received does not count toward graduation requirements.) Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must previously have completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an adviser-approved elective in the engineering curriculum.
- Students may enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered “S-U only” may be taken in the same semester as the “elected S-U” course.)

The choice of grading option for any course is made initially during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed Add/Drop Form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which he or she was previously enrolled (in the current semester) under a different grade option.

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with a major.

Students on a voluntary leave of absence are permitted to register for courses extramurally only with the approval of their major (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the B.S. degree in engineering. Students may not complete their last semester extramurally.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad Office, 474 Uris Hall. Programs should be planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division Office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with Engineering Advising.

Students who wish to transfer into the College of Engineering can apply at Engineering Advising—application forms are available in 167 Olin Hall. It is preferred that students apply in the semester in which they are completing affiliation criteria for the desired major. Students who would enter the college as a second-semester sophomore or later must be accepted by a major as part of the admission process. Students who would enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of major affiliation but must be sponsored by a major.

Students who wish to transfer into engineering should take courses in math, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Students should discuss their eligibility with an adviser in Engineering Advising, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows:

Voluntary leave: Students sometimes find it necessary to suspend their studies. To do this, they must petition for a leave of absence for a specified period of time and receive written approval. Affiliated students request leave through their majors. Unaffiliated students request leave through Engineering Advising; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a major and while not in good standing may be granted a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence generally are not granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a “W” will appear on the transcript for each course). Students who owe money to the university are ineligible for leaves of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved in advance through a formal transfer petition. (See previous section, “Transfer Credit.” For details.) Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

Medical leave: Medical leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Such leaves are granted for at least six months and up to two years with the understanding that the student may return at the beginning of any term after the medical
condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required leave: A required leave of absence is imposed in cases where the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are not offered in the fall or spring semester. Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year).

Rejoining the College
Students wishing to rejoin the college who have not yet affiliated with a major should request permission to return to Engineering Advising; affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College
A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary withdrawal: Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

A student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn. Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intramural transfer process should be followed.

A student who has withdrawn and subsequently wishes to return must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major.

Required withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action withdraws them only from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

ENGINEERING MAJORS
This section describes the majors in the College of Engineering: the programs in which an undergraduate can study to obtain a B.S. degree.

A basic requirement of any major is a GPA ≥ 2.0. Most majors have a higher GPA requirement and may have other requirements.

Honors Program within Majors
Many of the Engineering majors supplement the major with an honors program.

Eligibility
The B.S. degree with honors is granted to engineering students who, in addition to having completed the requirements for a B.S. degree in a major, satisfactorily complete the honors program in the major and are recommended for the degree by the honors committee of that major. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5. If the GPA drops below 3.5, the student is dropped from the honors program.

Courses taken to satisfy the honors requirement may not be used to satisfy B.S. degree requirements. At least 9 extra credit hours are required, and a student must be in the program for at least two semesters before graduation.

No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Procedures
An applicant to the honors program in a major must have an honors adviser, a faculty member from that major who will supervise the honors program and direct the research or project. The honors adviser need not be the student's adviser in the major.

The application for the honors program should be a letter from the student that describes the proposed honors program in detail and includes the explicit approval of the honors adviser.

Students must complete a written application no later than the beginning of the first semester of their senior year, but they are encouraged to make arrangements with the honors adviser during the second semester of their junior year. Each major may place further constraints on timing.

Major-Specific Information
Each major defines the content of the honors program and may also place other requirements on the program, in terms of timing, content, and procedures. Information is given within the description of the individual majors.

BIological ENGINEERING
Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255–2173, www.bee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). Biological and Environmental Engineering (BEE) addresses three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The Biological Engineering major has a unique focus on biological systems, including the environment, which is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies.

An option in Environmental Engineering is discussed further below.

Students interested in the BEE major should have a strong aptitude for the sciences and math and an interest in the complex social issues that surround technology.

Students take courses in math, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), and engineering applications. Students select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal.

Students may further strengthen their programs by completing a minor or a second engineering major. Students planning for medical school also take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills, and all students complete a capstone design project.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate and professional programs in engineering and science, as well as professional fields like medicine, business, and law. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us, and within us. The biological revolution continues, and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and interested in the challenges facing society. This major is designed to educate the next generation of engineers to meet these challenges.
The major program requirements for students affiliating with the program in 2004–2005 are outlined below.

**Basic Subjects**  
**Credits**

- MATH 191 (or 190), 192, 293, 294  
- Calculus for Engineers and Engineering Mathematics 16
- PHYS 112, 213 8
- General Chemistry (207 or 211 or 215)* 4
- Organic Chemistry (257 or 357)* 3
- BEE 151, Introduction to Computing or COM S 100 4
- Biological Sciences* 15
- Introductory (BIO G 101–104 recommended) 6-8
- Biochemistry or Microbiology 4-5
- BIO XXX Biological science course(s) ≥ 200 3-5

**Major-required courses**

- BEE 200, The BEE Experience or ENGRG 150 1
- ENGRD 202, Mechanics of Solids 4
- BEE 251 or BEE 260, ENGR Applications 3
- BEE 350, Biological and Environmental Transport Processes 3
- BEE 222 or M&AE 221, Thermodynamics 3
- Engineering Statistics and Probability (ENGRD 270 or CEE 304) 3
- Fluid Mechanics (CEE 331 or M&AE 323 or CHEME 323) 3-4
- Upper-level BEE courses (3 courses numbered 450–499; at least one of these must be an approved capstone design course) 9
- Major-approved electives and electives outside the major (200 level or above; at least one must be an approved laboratory experience course; at least one must be a BEE capstone course) 18-19
- Liberal studies (two first-year and six liberal-studies electives) 24
- Adviser-approved electives 6
- Total (minimum) 126

*Basic accredited curriculum. Specializations (options or preprofessional studies) may be accommodated by selecting additional courses in the indicated area(s).

**Biological Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Undergraduate Majors” as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following, with at least 4 credits in the first category:

1. A significant research experience or honors project under the supervision of a BEE faculty member using BEE 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department under BEE 498, Undergraduate Teaching.

3. Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, math, biology, chemistry, and physics at the 400+ and graduate level.

**Option in Environmental Engineering**

The Environmental Engineering Option provides BEE majors the opportunity to follow a structured environmental engineering concentration. Students complete a prescribed program of courses within the framework of the B.E. curriculum.

Chemistry/microbiology: Students must take at least two semesters of chemistry (CHEM 211/257 or CHEM 207/208). They must also satisfy the B.E. organic chemistry requirement either by taking organic chemistry as one of the two required chemistry courses (i.e., CHEM 257) or by taking CEE 451. The microbiology requirement of the Environmental Engineering option can also be met by taking CEE 451.

Chemistry: CHEM 211/257 or CHEM 207/208
Organic Chemistry: CHEM 257 or CEE 451
Microbiology: CEE 451 or BIOM 290
Fluid Mechanics: CEE 331
Probability and Statistics: CEE 304
Environmental Quality Engineering: CEE 351
Environmental Engineering Lab: CEE 453
Environmental Engineering: BEE 473 or 475: Watershed Engineering or Environmental Systems Analysis

**CHEMICAL ENGINEERING**

Offered by the School of Chemical and Biomolecular Engineering

Contact: 120 Olin Hall, 255–8656, www.cheme.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The undergraduate major in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Students who plan to enter the major take CHEM 208 during the freshman year. The program for the last three years is as follows:

**Semester 3**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 293, Engineering Mathematics</td>
<td>4</td>
</tr>
<tr>
<td>PHYS 213, Electricity and Magnetism</td>
<td>4</td>
</tr>
<tr>
<td>CHEM 389, Physical Chemistry I</td>
<td>4</td>
</tr>
<tr>
<td>ENGRD 219, Mass and Energy Balances</td>
<td>3</td>
</tr>
<tr>
<td>Humanities or social sciences</td>
<td>3</td>
</tr>
</tbody>
</table>

**Semester 4**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 294, Engineering Mathematics</td>
<td>4</td>
</tr>
<tr>
<td>CHEM 323, Fluid Mechanics</td>
<td>4</td>
</tr>
</tbody>
</table>

**CHEM 290–391, Physical Chemistry (field) | 6       |

**Biology elective**

**Humanities or social sciences**

**Semester 5**

**CHEM 357, Organic Chemistry for the Life Sciences**

**CHEM 251, Organic Chemistry Laboratory**

**CHEM 313, Chemical Engineering Thermodynamics**

**CHEM 324, Heat and Mass Transfer**

**Humanities or social sciences**

**Semester 6**

**Advanced science elective**

**CHEM 301, Nonresident Lectures**

**CHEM 332, Analysis of Separation Processes**

**CHEM 372, Introduction to Process Dynamics and Control**

**CHEM 390, Reaction Kinetics and Reactor Design**

**Humanities or social sciences**

**Semester 7**

**CHEM 422, Chemical Engineering Laboratory**

**Electives**

**Humanities or Social Sciences**

**Semester 8**

**CHEM 462, Chemical Process Design**

**Humanities or social sciences**

**Electives**

**Approved elective**

*The electives in semesters 7 and 8 comprise 6 credits of major-approved electives and 6 credits of advanced CHEM electives. Advanced CHEM electives include any CHEM course at the 400+ level except CHEM 400, 490, 491, 492, 493, 494, and 499.

Advanced science electives include: BIOM 290, General Microbiology Lectures; BIOM 330, 351, 352, and 353, Principles of Biochemistry; BMPE (CHEM) 401, Molecular Principles of Biomedical Engineering; BMPE (CHEM) 402, Cellular Principles of Biomedical Engineering, CEE 451, Microbiology for Environmental Engineering, CEE 654, Aquatic Chemistry; CHEM 470, Process Control Strategies; CHEM 480, Chemical Processing of Electronic Materials; CHEM 481, Biomedical Engineering; CHEM 484, Microchemical and Microfluidic Systems; CHEM 488, Polymer Materials; CHEM 543, Bioprocess Engineering; CHEM 601, Air Pollution Control; FOOD 417, Food Chemistry I; M&AE 423, Intermediate Fluid Dynamics; MS&EE 206, Atomic and Molecular Structure of Matter; MS&T 305, Electronic Structure of Matter; MS&T 306, Electrical, Optical, and Magnetic Properties of Materials; MS&T 521, Properties of Solid Polymers; MS&EE 531, Introduction to Ceramics; MS&EE 541, Microscopy of Materials; T&AM 310, Advanced Engineering Analysis I; any A&EP course numbered 333 or above; any CHEM course numbered 401 or above; any PHYS course numbered 500 or above.
CIVIL ENGINEERING
Offered by the School of Civil and Environmental Engineering
Contact: 221 Hollister Hall, 255–3412, www.cee.cornell.edu
This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).
While it is not necessary to do so, students may concentrate in civil infrastructure, fluid mechanics and hydrology, geotechnical engineering, structural engineering, transportation, or water resource systems.

Admission Requirements
Students planning to affiliate with this major must complete ENGRD 202, Mechanics of Solids, by the end of the first semester of the sophomore year with at least C–.

Engineering Distribution Courses
Majors are required to take ENGRD 202, Mechanics of Solids, as an engineering distribution course. For the second engineering distribution course, one of the following is recommended:
ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or civil engineering materials, strongly recommended for those concentrating in civil infrastructure.
ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering.
ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology.
ENGRD 211, Computers and Programming, for students interested in transportation.

Major Program
Students may substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

Core Courses Credits
ENGRD 203, Dynamics, or CEE 478, Structural Dynamics 3
ENGRD 241, Engineering Computation* 3
CEE 304, Uncertainty Analysis in Engineering 3
CEE 323, Engineering Economics and Management 3
CEE 331, Fluid Mechanics 4
CEE 341, Introduction to Geotechnical Engineering and Analysis 4
CEE 351, Environmental Quality Engineering** 3
CEE 361, Introduction to Transportation Engineering** 3
CEE 371, Modeling of Structural Systems 4
Additional requirements include a set of two major-approved electives and three design electives from a list of approved courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRG or approved communications courses. If the technical communications course is taken as an expressive art, then an additional approved elective must be taken from a department or school other than Civil and Environmental Engineering.
ENGRD 241 can be used to satisfy a major requirement if a student elects to use this course as a second distribution course, the student must take an additional major-approved elective to fulfill the core course requirements.
ENGRD 270 may be accepted (by petition) as a substitute for CEE 304 in the major, but only if ENGRD 270 is taken before affiliation, or in some special cases where co-op or study abroad programs necessitate such a substitution.
**Students may substitute any major-approved elective for either CEE 351 or CEE 361, if they complete either CEE 376 or CEE 472 and also complete CEE 473. However, this substitute course then counts as a core course only and not as one of the required five CEE design courses and major-approved electives.

Civil Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Undergraduate Majors” as well as the following requirements.
The 9 credits beyond the B.S. degree requirements shall be drawn from the following components:
1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Senior Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grade only.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., ENGRG 470, Peer Teaching in Engineering, or CEE 401, Undergraduate Teaching in CEE (1–3 credits per semester).
3. Advanced or graduate courses at the 500 level or above. The minimum number of credits in any component included in a program should be 2.

Procedures
Application to the program shall be a registration form for CEE 400 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major adviser and the honors adviser. The program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

ENGINEERING - 2004–2005

COMPUTER SCIENCE
Offered by the Department of Computer Science
The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.
Computer Science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:
• four semesters of calculus (MATH 191–192–293–294)
• two semesters of introductory computer programming (COM S 100 and ENGRD 211)
• a 1-credit project (COM S 212)
• a seven-course computer science core (COM S 280, 312, 314; one of 321, 322, 421, or 428; 381, 414, and 492)
• two 400+ level computer science electives, totaling at least 6 credits
• a computer science project course (COM S 413, 415, 419, 427, 435, 466, 473, 501, 514, or 604)
• a math elective course (e.g., ENGRD 270, MATH 300+, T&AM 310)
• two 300+ level courses (major-approved electives) that are technical in nature and total at least 6 credits
• three courses in a topic area other than computer science, all numbered 300 level or greater
All the major electives described above must be courses of at least 3 credits, with the exception of the COM S project course, which is at least 2 credits.
The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study or employment in any technical area or any professional area such as business, law, or medicine. With the adviser, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of a liberal education.

Computer Science Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Undergraduate Majors" with a set of coherent courses and research activities that satisfy the following requirements:

1. at least one COM S course (at least 3 credit hours) at or above the 500 level with at least A– (no seminars or 2-credit project courses)
2. at least two 3-credit semesters of COM S 490 (independent research), with at least A– each semester
Honors determinations are made during the senior year. Students wanting to be considered
for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The subject line for this message should read “HONORS TRACK.” Address related questions to the same e-mail address; call or stop by 303 Upson Hall, 255-0982; or visit www.cs.cornell.edu/ugrad for more information on eligibility.

ELECTRICAL AND COMPUTER ENGINEERING

Offered by the School of Electrical and Computer Engineering

Contact: 223 Phillips Hall, 255-4309, www.ece.cornell.edu

This major is accredited under the title “Electrical Engineering” by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The Electrical and Computer Engineering major, leading to a B.S. degree, provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer architecture and organization, digital systems and computer vision; power systems, control, optimization, numerical and state-space methods; communications, computer networks, information theory and coding, signal processing, electronic circuits, VLSI, solid state physics and devices, MEMs, nanotechnology, lasers and optoelectronics; electromagnetics, radiophysics, space sciences, plasmas.

Students planning to affiliate with ECE must take ENGRD 230 as an engineering distribution course. Prospective majors are encouraged, but not required, to take ENGRD 211 as the other engineering distribution course. The major normally begins in the spring of the sophomore year. Of the courses listed below, only ENGRD/ECE 210, ECE 220, ENGRD 230, CS/ECE 314, and ECE 315 are taught in both the fall and spring semesters.

Course Credits

Major-required courses

ECE/ENGRD 210, Introduction to Circuits for Electrical and Computer Engineers 4

ENGRD 230, Introduction to Digital Logic Design 4

ECE 220, Signals and Information 4

ECE 303, Electromagnetic Fields and Waves 4

ECE/COM S 314, Computer Organization 4

ECE 315, Introduction to Microelectronics 4

ECE 302, Systems and Networks 4

Major-Approved Electives

(32-credit minimum in the following categories)

Advanced ECE electives*: (6 lecture courses)

Outside ECE electives**: 9 minimum credits

Total minimum major credits 55

ECE 310 can be taken in place of ENGRD 270 or ENGRD 310 to satisfy the college application of probability and statistics requirement.

These electives must include two 400-level electrical and computer engineering culminating design experience (CDE) courses and at least two additional courses at the 400 level or above. The remaining electives may not include independent project courses, such as ECE 391, 392, 491, or 492, and must be at the 300 level or above in Electrical and Computer Engineering.

Courses that meet the CDE requirement are described in the Engineering Undergraduate Handbook. The list is dynamic and changes frequently. Always refer to the latest information in the Electrical and Computer Engineering Web Handbook. All courses must have a college-level prerequisite.

Honors Project

A student in the honors program is required to accumulate at least 3 credit hours from a senior year honors project with an ECE faculty member, consisting of either design, research, or directed reading at the 400 level. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects explicitly require a written submission summarizing and concluding the project.

Additional Course Work

At least 3 credit hours are required of advanced (senior level) ECE course work that has at least a 300-level prerequisite. These credit hours are in addition to any credit hours required as part of the ECE major.

The requirement for at least 9 credits over and above the B.S. degree means that an honors degree requires at least 137 credit hours.

ENGINEERING PHYSICS

Offered by the School of Applied and Engineering Physics

Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu

The Engineering Physics (EP) major is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics base with a solid background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mathematics, mechanical engineering, medical physics, medicine, nuclear technology, oceanography, and physics. The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The EP major fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the
application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR/ A&EP 110, Lasers and Photonics; ENGR/ A&EP 102, Introduction to Nanoscience and Nanotechnology; ENGRD/ A&EP 264, Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Optics (a junior/senior course); A&EP 365, Digital Circuits (a sophomore/junior course); PHYS 410, Advanced Experimental Physics; and A&EP 438, Computational Engineering Physics (a senior computer laboratory).

Students who plan to affiliate with the EP major are advised to arrange their Common Curriculum with their developing career goals in mind. They are encouraged to take PHYS 112 or 116 during their first semester (if their advanced placement credits permit) and to satisfy the prerequisites to the writing requirement ECE 210 with the engineering distribution course ENGRD 222. EP students need to take only one engineering distribution course, since A&EP 333, taken in the junior year, counts as the second one. EP students are advised to take A&EP 363 (taking ECE 210 and 230). 4 credits each, can satisfy AEP 363. Count ECE 210 as an approved elective and ECE 230 as AEP 363) in the spring semester of the sophomore year. Students with one semester of advanced placement in math and who have received at least A- in MATH 192 may wish to explore accelerating their math requirements so as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.

In addition to the requirements of the Engineering Common Curriculum,* the major requirements are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>A&amp;EP 333, Mechanics of Particles and Solid Bodies</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 355, Intermediate Electromagnetism</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 356, Intermediate Electrodynamics</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 361, Introductory Quantum Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 363, Electronic Circuits</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 423, Statistical Thermodynamics</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 434, Continuum Physics</td>
<td>4</td>
</tr>
<tr>
<td>PHYS 410, Advanced Experimental Physics</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 321, Mathematical Physics I; or MATH 421 (applied mathematics)</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 322, Mathematical Physics II; or MATH 422 (applied mathematics)</td>
<td>4</td>
</tr>
<tr>
<td>Six major-approved electives (18-23 credits), of which five must be technical upper-level courses (300 or above).</td>
<td></td>
</tr>
</tbody>
</table>

Total major credits=56 credit hours minimum

*The Engineering Common Curriculum allows freshmen to take only four courses each semester. This course load is fully consistent with the requirements of the EP major, but freshmen with strong preparation are encouraged to take up an additional course during one or both semesters so that they may have additional flexibility in developing a strong, individualized educational program in their later years and for allowing options such as a semester or year abroad or early graduation.

Two of the 4 credits of PHYS 410 required for the B.S. degree in EP can be satisfied by completing A&EP/PHYS 330 or ASTRO 410. The remaining 2 credits of PHYS 410 can then be satisfied by taking PHYS 400 for 2 credits, provided that the experiments completed in PHYS 400 do not overlap with those in A&EP/PHYS 330 or ASTRO 410. (A list of experiments that are not appropriate will be prepared by A&EP faculty and made available in the A&EP office.) If a student chooses this option, A&EP/PHYS 330 or ASTRO 410 may also count as a technical elective, provided the remaining three technical electives are 4 credits each.

Choosing elective courses. The EP major provides the students with a strong opportunity to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of broad expertise in a number of advanced technical and scientific areas. With at least seven electives in the sophomore, junior, and senior years, EP majors are encouraged to work closely with their adviser to develop a coherent program that is in accordance with those goals. For students who look toward an industrial position after graduation, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of A&EP, Clark Hall. Students are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school.

Electives need not be all formal course work: qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

Academic Standing

Students are expected to pass every course in which they are registered, to earn at least C- in specifically required courses, and to attain a semester GPA ≥ 2.3 each semester.

Environmental Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Undergraduate majors" as well as the following requirements.

1. At least 8 credits of major-approved electives at the 400 level or higher with at least A- in each, not counting credits given for item 2.

2. Two semesters of A&EP 490 or an equivalent course, with at least 2 credits the first semester and 4 credits the second. The student will complete an independent research project or senior thesis under the supervision of an engineering or science faculty member. The level of work required for successful completion is to be consistent with the amount of academic credit granted.

Procedures

Before enrolling in A&EP 490 or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the project or thesis and an honors adviser's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies. The proposed project or thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report must be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor after consultation with the chair of the Honors Committee. At least A- is required for successful completion of the honors requirement.

ENVIRONMENTAL ENGINEERING

To be offered by the School of Civil and Environmental Engineering, pending final approval. A joint offering of this major in the Department of Biological and Environmental Engineering is planned. Until final approval, environmental engineering is offered as a concentration within the existing majors of civil engineering and biological and environmental engineering.

Contact: 221 Hollister Hall, 295–3142, www.cce.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET) under the title "Civil Engineering."

Environmental engineering is the study and practice of analyzing, designing, and managing natural and engineered systems in ways consistent with the maintenance or enhancement of environmental quality and sustainability. It requires the ability to predict multiple interactions and impacts among natural and engineering-system components at various spatial and temporal scales in response to alternative design and management policies. It requires increased understanding of the interactions among the natural environment, the constructed environment, and human activities.
The major requires a GPA ≥ 2.0 in engineering and science courses, and at least a C- in ENGRD 202, CHEM 257, or ENGRD 251.

Students planning to affiliate with this major should take the following courses:

**Mathematics-science requirements**

MATH 191, 192, 293, 294

PHYS 112, 213

CHEM 207, 257*

CS100 or BEE 151 (computer programming)

**Introduction to engineering**

ENGRD 115 recommended.

**Engineering distribution courses**

ENGRD 251. Engineering for a Sustainable World, is required.

ENGRD 202, 241, or CEE 304 are recommended.

**Major-required courses**

<table>

**Electives**

Technical communications course (ENGRD 335, 350; COMM 260, 263, 252; CEE 453; or BIEE 489) 3-4

Three CEE design electives** 9-12

One major-approved elective†† 6-8

Two approved electives 6

Total credits (minimum) 127

*Substitute CHEM 357 for 257, without petition

†Students using this course as a second engineering distribution must take an additional elective. BIO G 109-110 is not an engineering distribution course.

** If ENGRD 241 is not taken as a distribution course, it must be taken as a major-approved elective.

†† Students planning graduate-level study in EnEV may take BIOM 290, Introduction to Microbiology, in place of CEE 451.

To be chosen from a list of design courses. Students are encouraged to take CEE 352.

The list of suggested courses covers the areas of environmental engineering, hydraulics/hydrology, environmental systems engineering, geotechnical engineering, remote sensing, air pollution and biological and environmental engineering. The list is available at the departmental office.

If the course fulfilling the technical writing requirement also fulfills another requirement (e.g., liberal studies, major-approved elective), then an additional approved elective must be substituted for this requirement.

**Environmental Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Undergraduate Majors” as well as the following requirements.

The 9 credits beyond the B.S. requirements shall be drawn from one or more of the following components:

1. A research experience or honors project under the direct supervision of a faculty member using CEE 400, Senior Honors Thesis (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., ENGRG 470, Peer Teaching in Engineering, or CEE 401, Undergraduate Teaching in CEE (1-3 credits per semester).

3. Course at the 500 level or above. At least 2 credits in any component of the program.

**Procedures**

Each program must be approved by the CEE Curriculum Committee (the committee may delegate approval authority to the associate director for all but unusual proposals).

**Geological Sciences**

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5460, www.eas.cornell.edu

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is a naturally powerful planet, with natural hazards such as earthquakes, hurricanes, and volcanic eruptions that alter the course of history with little prior warning. As the human population grows, understanding the earth is so pervasive and the earth system is so multifaceted, the major has three options, which cover the spectrum of modern earth sciences.

The three options are the geoscience option, the atmospheric science option, and the science of earth systems (SES) option. The geoscience option emphasizes the structure, composition, and evolution of our planet; the atmospheric science option covers the planetary processes producing weather and climate; and the SES option is concerned with processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment.

**Geoscience Option**

The geoscience option reveals Earth's turbulent history from the formation of our solar system to the plate tectonic cycles and ice ages that dominate Earth's present behavior. That history is highlighted by the co-evolution of life and the Earth system—from the origin of life to the modern interglacial phase during which our species has proliferated and become able to alter the chemical and physical environment. Topics of study also include the fundamental processes responsible for earthquakes, volcanic eruptions, and mountain building. This option prepares students for advanced study in geology, geophysics, geochemistry, and geobiology and for careers in energy and mineral industries or in water and contaminant investigation (environmental geology). The option is also valuable for a pre-law or pre-med program or in preparation for a career in K-12 education.

The geoscience option stresses a balanced overview of geology with considerable flexibility and a degree of specialization achieved by careful selection of major-approved electives. Students must take ENGRD/EAS 201 as an engineering distribution course. For students interested in geobiology or paleontology, BIO G 101/103-102/104 (or BIO G 109-110) are recommended. CHEM 208 may be substituted for PHYS 214. Learning through direct observation of the natural system is highly valued, akin to design projects in other engineering majors.

The geoscience option requires these courses: the introductory outdoor field course EAS 210 and the five core courses EAS 325, 355, 356, 375, and 388. Two additional EAS major-required courses and at least one major-approved elective must be EAS 300 through 600-level courses. The core courses may be taken in any reasonable sequence, except that EAS 355 (full course) should be taken before EAS 356 (spring course). EAS 325, 355, 356, and 375 should be taken relatively early in the program.

There are four alternatives for completing the required 4-credit advanced outdoor field experience: a) EAS 417 (Field Mapping in Argentina, 3 credits) and EAS 491-492 (1 credit based on field observations), b) EAS 437 (Geophysical Field Methods, 3 credits) plus at least 1 credit of EAS 491 or 492 using geophysical techniques from EAS 437, c) EAS 491–492 (1 undergraduate research, 2 credits each) with a significant component of fieldwork, d) a pre-approved outdoor advanced field course taught by another college or university (2-4 credits). A selection of major-approved electives may provide specialization in geophysics, geochemistry (including petrology and mineralogy), geobiology (palaeontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students who want a more general background or
want to remain uncommitted with regard to specialty must choose at least two of their major-approved electives from the same department or school. The major-approved electives outside the major may be chosen from offerings in other science or engineering areas or the liberal arts at the 300 level or above. Students may request substitution of EAS 491 and 492. Undergraduate Research, for a fourth-year major-approved elective but not if it is being used to fulfill the outdoor field requirement.

In addition to course work, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the Earth’s surface, instruments for highly precise isotope and element analyses, and extensive libraries of earthquake records, satellite images, and exploratory records. Undergraduates have served as field assistants for faculty members and graduate students in South America, Europe, Asia, Canada, the USA, and several ocean islands. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

**Atmospheric Science Option**

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in analysis, interpretation, and forecasting of meteorological events. This option satisfies both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist, which also qualifies graduates for positions in private-sector forecasting and environmental consulting firms. The option also provides excellent preparation for graduate work in atmospheric science and related fields.

The atmospheric science option requires ENGRD 270 as an engineering distribution course as well as introductory courses in atmospheric science (EAS 131 and 133) and EAS 250 (Observations and Instrumentation). Many of the upper-division major courses require EAS 341 (Atmospheric Thermodynamics and Hydrostatics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required major courses are EAS 331 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology). Major-approved electives may be chosen from EAS courses and selected upper-division courses in other departments.

**Science of Earth Systems (SES) Option**

The SES option provides an integrated view of Earth processes critical to the understanding of our environment. This scientific understanding is the primary foundation used to determine to what degree human societies can modify or adapt to future change. The option is for students interested in careers or graduate study in any of the Earth system sciences or a future in environmental law, environmental engineering, science teaching, or environmental public policy. The option is part of the multidisciplinary, intercollegiate program in the Science of Earth Systems. Collaborations with other departments provide breadth and depth to the program.

The SES option emphasizes a strong preparation in basic math and sciences and an integrated approach to the study of the Earth system including the lithosphere, biosphere, hydrosphere, and atmosphere. Students are required to take a second semester of chemistry (CHEM 208), three semesters of biology (BIO G 101/103-102/104 or BIO G 109-100; plus BIOEE 261), and ENGRD 201 (Physics and Chemistry of the Earth) as an engineering distribution course.

The option requires a set of three core courses, normally taken in the junior or senior years, that provide breadth and integration. Five additional intermediate to advanced courses are selected—within the adviser's approval—to provide depth and a degree of specialization, and an additional major-approved elective is selected. These courses permit the student to specialize in such areas as climatic dynamics, biogeochemistry, ocean sciences, environmental geosciences, ecological systems, hydrological sciences, and soil sciences.

Two of the specialization courses will count as major-required courses and three as major-approved electives. At least three of the major-approved electives must be non-EAS courses. The three SES core courses are:

- EAS 302 Evolution of the Earth System—spring, 4 credits
- EAS 321 Biogeochemistry (also NTRES 321)—fall, 4 credits
- EAS 331 Climate Dynamics (also ASTRO 331)—fall, 4 credits

See www.eas.cornell.edu for possible specializations.

Excellent opportunities for learning through direct observation of the natural systems exist in either the spring "Environmental Semester in Hawaii" or through a summer field course in geology operated in Argentina (EAS 417), or through campus-based field courses.

**Field Study in Hawaii**

Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program, offered during the spring semester, emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the SES major include EAS 240, 322, and 351. EAS 322 and 351 may also be used to fulfill requirements of the Geological Sciences major. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically, students participate in the EES program during their junior year, although exceptions are possible. The EES program is administered by Cornell Abroad. For further information, see www.geo.cornell.edu/geomor/classes/hawaii/course.html.

**Geological Sciences Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Undergraduate majors" as well as the following requirements.

1. Acceptance of the written proposal of the honors project by the faculty adviser, the honors adviser, and the director of undergraduate studies.
2. An honors thesis involving research (EAS 491-492 or 499, 2 or more credits each) of breadth, depth, and quality is required.

**INDEPENDENT MAJOR**

Offered by the Independent Major Committee

Contact: Engineering Advising, 167 Olin Hall, 255-7414

The Independent Major is designed for students whose educational objectives cannot be met by one of the regular majors. With the exception of certain faculty-sponsored programs at the major consists of an engineering major subject (approx. 32 credits) and an educationally related minor subject (approx. 16 credits). The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in any logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. Each program includes the normally required common-curriculum requirements and approved electives.

Students should apply to the Independent Major during the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas (an adviser in each area is required). The program must also be approved by the Independent Major Committee. If approved, the program is the curricular contract to which the student must adhere.

Because no single standardized curriculum exists, the Independent Major is not accredited. Independent Major students who intend to seek legal licensing as a Professional Engineer should be aware that this nonaccredited degree program will require additional education, work, and experience to qualify for eligibility to take the Fundamentals of Engineering examination and may affect acceptance into engineering graduate programs.
INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

Offered jointly by the Department of Computer Science and the School of Operations Research and Industrial Engineering

Digital information technologies have become pervasive in science, engineering, manufacturing, business, finance, culture, law, and government, dramatically changing the way people work and live. The proliferation and confluence of these new technologies demands a new focus in engineering education—one that remains rigorous and technically oriented but is simultaneously devoted to integrating engineering design, theory, and practice within the social and organizational contexts in which these complex digital information systems are employed.

The ISST major studies the design and management of complex information systems. Just as structural engineers and nanofabricators use physics at radically different scales, so also there is a scale difference between the focus of the ISST major and the more traditional, look-under-the-hood majors in computer science and operations research and industrial engineering. Rather than focusing on the computing and communication technologies that underlie digital information systems, the ISST major emphasizes information systems engineering in broad application contexts, where issues at the confluence of information science, technology, and management are the primary concerns.

The ISST major has two options. Students in the Management Science option will obtain advanced training in quantitatively oriented decision making in the information technology arena. Students in the Information Science option will obtain advanced training in methods for the creation, representation, organization, access, and analysis of information in digital form.

Engineering distribution courses

Majors are required to take ENGRD 270, Basic Engineering Probability and Statistics as an engineering distribution course. ENGRD 211, Computers and Programming, is required for the major and is recommended as the second engineering distribution course.

Requirements for the Information Science option:

1. Three courses from Information Systems (Area II below).
2. One course from Mathematical Modeling in IT (Area III).
3. Three electives, all from either Human-Centered Systems (Area V) or Social Systems (Area VI).
4. Two electives from any of the six areas.

Requirements for the Management Science option:

1. Four courses from Mathematical Models in Management Science (Area I).
2. Three electives, one from each of:
   - Information Systems (Area II)
   - Mathematical Modeling in IT (Area III)
   - Information Technology Management Solutions (Area IV)
3. Two electives from any of the six areas.

Area I. Mathematical Models in Management Science

| ORIF 350 Financial and Managerial Accounting |
| ORIE 361 Introductory Engineering Stochastic Processes I |
| ORIE 480 Information Technology |
| ORIE 580 Simulation Modeling and Analysis |

Area II. Information Systems

| INFO 430 Information Retrieval |
| INFO 431 Web Information Systems |
| COM S 432 Introduction to Database Systems |
| COM S 465 Computer Graphics I |
| COM S 472 Foundations of Artificial Intelligence |
| COM S 474 Introduction to Natural Language Processing |
| COM S 501 Software Engineering |
| COM S 578 Empirical Methods in Machine Learning and Data Mining |

Area III. Mathematical Modeling in IT

| OR&IE 431 Discrete Models |
| OR&IE 404 Extreme Value Analysis with Applications to Finance and Data Communications |
| OR&IE 474 Statistical Data Mining I |
| COM S 478 Machine Learning |
| OR&IE 483 Applications of Operations Research and Game Theory to IT |
| ECE 562 Fundamental Information Theory |
| OR&IE 574 Statistical Data Mining II |

Area IV. IT Management Solutions

| OR&IE 481 Delivering OR Solutions with Information Technology |
| OR&IE 518 Supply Chain Management |

Area V. Human-Centered Systems

| PSYCH/COGST 342 Human Perceptions: Applications to Computer Graphics, Art, Visual Display* |
| INFO 345 Human-Computer Interaction Design |

Area VI. Social Systems

| SOC 304 Social Networks and Social Processes |
| AEM 322 Technology, Information, and Business Strategy |
| INFO 349 Media Technologies |
| INFO 355 Computers: From Babbage to Gates |
| ECON 368 Game Theory* |
| INFO 387 The Automatic Lifestyle: Consumer Culture and Technology |
| ECON 404 Economics and the Law |
| LAW 410 Limits on and Protection of Creative Expressions—Copyright Law |
| STS 411 Knowledge, Technology, and Property |
| ECON 419 Economic Decisions Under Uncertainty |
| COMM 428 Communication Law |
| INFO 435 Seminar on Applications in Information Science |
| ORIE 435 Introduction to Game Theory* |
| STS 438 Minds, Machines, and Intelligence |
| INFO 447 Social and Economic Data |
| ECON 476/477 Decision Theory I and II |
| INFO 515 Culture, Law, and Politics of the Internet |

* Only one of ECON 368 and ORIE 435 can be taken for ISST credit.

Information Science, Systems, and Technology Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Undergraduate Majors” as well as the following requirements:

1. 8 credit hours of ISST course work at or above the 500 level (no SU courses, no seminars or 2-credit courses)
2. 6 credit hours of INFO 490 independent study and research with an ISST faculty member, spread over at least two semesters and with at least A- each semester OR
3. 3 credit hours of INFO 490 independent study and research with an ISST faculty member and 3 credit hours of INFO 491 teaching experience, both with grades of at least A-
The ISST research is expected to result in a programming project or a written report (or both).

Any 500- or 600-level course taken to fulfill the honors requirements may be counted toward fulfillment of the associated primary or secondary option requirements.

Procedures
Each program must be approved by the appropriate co-director of the ISST major, and any changes to the student’s program must also be approved.

Note: Students will not be allowed to double major in ISST and COM S or ISST and OR&IE.

MATERIALS SCIENCE AND ENGINEERING

Offered by the Department of Materials Science and Engineering
Contact: 214 Bard Hall, 255–4135, www.mse.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Prospective majors are required to take ENGRD 261 or ENGRD 262 before affiliating with the major. It is strongly recommended that the course be taken as engineering distribution during the sophomore year. The major program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

Students are required to complete a series of electives to develop knowledge of materials, such as biomaterials, ceramics, polymers, and semiconductors. Application-related courses include the areas of biotechnology and life science, energy and environment, materials for information science, nanotechnology, and technology management and ethics. These requirements are satisfied through a series of technical electives taken mainly in the senior year, selected from various engineering and science departments. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The major requirements for a B.S. degree in materials science and engineering are:

1. ENGRD 261, Mechanical Properties of Materials: From Nanodevices to Superstructures OR ENGRD 262, Electronic Materials for the Information Age
2. 12 required major courses:
   - MS&E 204 Materials Chemistry
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 302 Mechanical Properties of Materials, Processing, and Design
   - MS&E 303 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations
   - MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials
   - MS&E 307 Materials Design Concepts I
   - MS&E 311 Junior Lab I
   - MS&E 312 Junior Lab II
   - MS&E 403/405 Senior Materials Lab I or Senior Thesis I
   - MS&E 404/406 Senior Materials Lab II or Senior Thesis II
   - MS&E 407 Materials Design Concepts II

3. Two materials-related electives covering two groups of different materials
4. Three application-related electives in at least two different types of applications
5. Two of the application-related electives must be taken from outside MS&E
6. One additional technical elective outside MS&E

Materials Science and Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Undergraduate Majors” as well as the following requirements.

1. The 9 credits (giving a total of 140) of additional courses must be technical in nature, i.e., in engineering, math, chemistry, and physics at the 400 and graduate level, with selected courses at the 300 level. The courses must be approved by the major adviser.
2. Senior honors thesis (MS&E 405/406) with a grade of at least A.

MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 108 Upson Hall, 255–3573, www.mae.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

This major is designed to provide a broad background in the fundamentals of the discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of mechanical engineering.

Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Other topics covered are computer-aided design, vibrations, control systems, and dynamics. Particular areas of concentration are mechanical systems and design, vehicle engineering, biomechanics, and engineering materials.

Engineering of fluids, energy, and heat transfer systems is concerned with the efficient conversion of energy, aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering and thermo-fluids engineering.

During the fall term, sophomores who plan to affiliate with the Mechanical Engineering major take ENGRD 202 (also TRAM 202) as an engineering distribution course. ENGRD 221/MAE 221 is required for the major and is recommended as the second engineering distribution course. The Sibley School supports students who have unusual requirements, but delays or substitutions must be discussed with and receive approval of their major adviser.

The major requires eleven courses (beyond ENGRD 202 already mentioned) and five major-approved elective courses.

Required courses
- MAE 212, Mechanical Properties and Selection of Engineering Materials
- ENGRD 221, Thermodynamics
- MAE 225, Mechanical Design and Synthesis
- ENGRD 203, Dynamics
- ECE 210, Introduction to Circuits for Electrical and Computer Engineers (PHYS 360 or MAE 378 may be substituted)
- MAE 323, Introductory Fluid Mechanics
- MAE 324, Heat Transfer
- MAE 325, Analysis of Mechanical and Aerospace Structures
- MAE 326, System Dynamics
- MAE 327, Mechanical Property and Performance Laboratory
- MAE 427, Fluids/Heat Transfer Laboratory
- MAE 428, Seminar on Engineering Design

Electives
Students should use the flexibility provided by the major-approved electives, adviser-approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

Major-approved electives
The major includes five major-approved electives. At least three of these courses must be upper-level (300+) MAE courses. Of these three, two must be a concentration of MAE’s upper-level courses. Standard concentrations are shown below, but students may petition for approval of two other related courses to form a custom concentration.

The standard concentrations are:
- Biomechanics, MAE 463, 464, 466, 565
- Engineering Materials, MAE 312, 313, 455, 464, 470, 513
- Mechanical Systems and Design, MAE 378, 409, 415, 417, 470, 477, 478, 479, 514, 525
- Thermo-Fluids Engineering, MAE 423, 449, 453, 501, 543

Students substituting MAE 378 for the required ECE 210 cannot use MAE 378 as a major-approved elective.
Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year. Typically, they include M&AE 401, 412, 426, 441, 470, 479, 486, 491, and 525.

The design elective must be taken during the senior year. A single course may satisfy both the design and concentration requirements, in which case the third course could be any upper-level M&AE course.

One of the courses must be an approved upper-level math course taken after MATH 294. The course must include some statistics. Currently, the approved courses are TAM 310, OR&IE 270, and CEE 394.

One of the major-approved electives may be any course at an appropriate level, chosen from engineering, math, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted. Advisers may approve such courses as adviser-approved electives.

**Adviser-approved electives**

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the senior years), the Sibley School faculty recommends that students delay use of adviser-approved (AA) electives until after term three. Students must seek adviser approval before taking an AA elective. Advanced placement credit cannot count as an AA elective, nor can Reserve Officer Training Corps (ROTC) courses unless they are co-listed in an academic department. Students must document AA electives approved before M&AE affiliation within a month of registration as an M&AE student. The faculty encourages students to consider the following as possible AA electives:

- an engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in information science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (e.g., economics, financial, legal)
- courses in organizational behavior
- courses in cognitive sciences

**Other considerations**

It is recommended that humanities/social sciences electives include studies in:

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science

Aesthetics
Economics
Architecture

The technical-writing requirement of the Common Curriculum is satisfied by M&AE 427.

Introduction to Circuits for Electrical and Computer Engineers (EE 210) may be replaced or supplemented by Electronic Circuits (PHYS 360) or Mechatronics (M&AE 378).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

**Preparation in Aerospace Engineering**

There is no separate undergraduate program in aerospace engineering, but students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

**OPERATIONS RESEARCH AND ENGINEERING**

Offered by the School of Operations Research and Industrial Engineering

Contact: 202 Rhodes Hall, 255–5088, www.orie.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

This major provides a broad education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. The major prepares students for a wide range of careers including operations research, industrial engineering, entrepreneurship, automation technology, operations management, consulting, financial engineering, financial services, and management.

The foundation of the major is the development of basic skills in calculus, statistics, probability, mathematical programming, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. The design curriculum is quite flexible. Students take OR&IE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, or financial engineering.

Because of the wide range of career goals among our students, the major is designed with a minimum of required courses and a large number of required electives. Students should consult with their major advisers to select electives that best meet their future goals.

Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.

A student who intends to affiliate with the major in Operations Research and Engineering should take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member or the associate director for undergraduate studies can be helpful in making appropriate choices.

The required courses for the ORE major and the typical terms in which they are taken are as follows:

**Term 2, 3, or 4**

<table>
<thead>
<tr>
<th>Credit</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>ENGRD 211, Computers and Programming</td>

</tr>
</tbody>
</table>

Available OR&IE electives are as follows:

Manufacturing and distribution systems: OR&IE 416, 451, 480, 481, 483, 518, 524, 525, and 562 and JGSM MBA 641
Academic Standing
The student in the major should obtain a passing grade in every course; at least C- in ENGRD 211 and 270, OR&IE 310, 320, 321, 350, 360, 361 and 561, a semester GPA ≥ 2.0, and a passing grade in every course; at least C- in ENGRD 211 and 270, OR&IE 310, 320, 321, 350, 360, 361 and 561; a semester GPA ≥ 2.0 each semester; a GPA ≥ 2.0 for OR&IE major students. The College of Engineering offers minors and options in the following areas (offering programs are found below, in the Academic Standards section). An engineering minor or option requires:

- At most one course from any one of the groups 1, 2, 3, or 4.
- At most one course that is offered by the OR&IE or ENGRG 470, Undergraduate Engineering Teaching.
- At most one 200-level course.
- At most three courses from groups 5 and 6.
- At most one 200-level course.
- At most one course that is offered by the student's major department.

Operations Research and Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Undergraduate Majors” as well as the following requirements. The 9 additional credits of course work shall be from one or more of the following, with at least 4 credits in the first category:

1. Advanced courses in OR&IE at the 500 level or above.

2. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 499, OR&IE Project. A significant written report must be submitted as part of this component.

3. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490, Teaching in OR&IE, or ENGRG 470, Undergraduate Engineering Teaching.

4. At most one of the following two:
   - A&EP 322 Mathematical Physics II
   - ECE 411 Random Signals

5. At most one of the following two:
   - ECE 411 Random Signals
   - OR&IE 361 Introductory Engineering Stochastic Processes I

MINOR: APPLIED MATHEMATICS
Offered by the Department of Theoretical and Applied Mechanics

Contact: Richard Rand, 207 Kimball Hall, 255-7145, rhr@cornell.edu, www.tam.cornell.edu/Undergrad.html

All engineering undergraduates are eligible to participate in this minor.

Academic standards: At least C in each course in the minor.

Requirements
At least six courses beyond MATH 294, to be chosen as follows:

- At most one course from any one of the groups 1, 2, 3, or 4.

Groups:
1. MATH 420 differential Equations and Dynamical Systems
2. COM S 280 Discrete Structures
3. MATH 319 Introduction to Ordinary Differential Equations
4. MATH 341 Introduction to Analysis I
5. MATH 422 Applied Complex Analysis
6. MATH 423 Applied Functional Analysis
7. MATH 424 Partial Differential Equations
8. MATH 425 Basic Probability

Courses:
- MATH 319 Introduction to Ordinary Differential Equations
- MATH 420 Differential Equations and Dynamical Systems
- MATH 425 Basic Probability
- MATH 471 Basic Probability
MINOR: BIOLOGICAL ENGINEERING

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

Students in all majors except Biological Engineering may participate. Students may participate in only the Bioengineering Option, the Biological Engineering minor, or the Biomedical Engineering minor.

Students should meet with the BE program director as soon as they decide to pursue the minor. They will receive a BEE faculty adviser, who will assist them in completing their minor.

Biological Engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The Biological Engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Academic standards: At least C- in each course in the minor.

Requirements

At least six courses (≥ 18 credits), as follows:

BEE 350, Biological and Environmental Transport Processes

I. Analysis: Two (2) of these:
   MS&E 304 (3) Kinetics, Diffusion, and Phase Transformations
   CHEM 313 (5) Chemical Engineering Thermodynamics
   CHEM 390 (4) Reaction Kinetics and Reactor Design
   CEE 437 (3) Experimental Methods in Fluid Dynamics

II. Application: Two (2) of these:
   BEE 459 (4) Biological Engineering Analysis
   BEE 685 (4) Biological Engineering Analysis

III. Basic Sciences: One (1) of these:
   BIOC 233 (3) Introduction to Biomolecular Structure
   BIOM 290 (3) General Microbiology
   BIOM 350-353 (2–4) Principles of Biochemistry
   BIOM 454 (3) Applications of Molecular Biology
   BIONH 470 (5) Biophysical Methods

OPTION: BIOENGINEERING

Offered by the Bioengineering Program

Contact: 270 Olin Hall, 255–7577

Students in all majors, except Biological Engineering, may participate. Students may participate in only one of the Bioengineering Option, the Biological Engineering minor, or the Biomedical Engineering minor.

The purpose of the option is to provide students with a guided, coherent, individualized plan of exploration in bioengineering. Bioengineering consists of subjects that fall at the interface between engineering and life science. It involves bioprocesses, bioenvironmental engineering, biomedical devices, biomaterials, biomolecular engineering, systems biology, and more.

Students are asked to enroll after affiliation with the major adviser, who will help select appropriate bioengineering-related courses and provide advice on careers in bioengineering.

Academic standards: S in the Bioengineering Seminar and at least C- in the other courses.

Requirements

At least 12 credit hours consisting of two to three bioengineering courses, one to two biological sciences courses, and 1 credit of Bioengineering Seminar (BMEP 501). A list of approved courses can be found in 167 Olin Hall.

MINOR: BIOMEDICAL ENGINEERING

Offered by the Department of Biomedical Engineering (BME)

Contact: 270 Olin Hall, 255-1003, www.bme.cornell.edu/

BME is responsible for a new minor program in biomedical engineering. Students graduating in the Class of 2006 and later must complete the minor as specified by BME. Students graduating in 2005 may elect to complete the requirements in the Biomedical Engineering Minor offered by Theoretical and Applied Mechanics (T&AM).

All engineering majors are eligible to participate in this minor. Students may participate in only one of the Bioengineering option, the Biological Engineering minor and the Biomedical Engineering minor.

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The field includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug-delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. This minor allows students in the College of Engineering to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain recognition for their interest and capability in area.

Interested students are asked to register with the Biomedical Engineering Office (270 Olin). A BME faculty adviser will be assigned and will approve the student’s BME minor plan.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

Required course: BMEP 501, Bioengineering Seminar (1 credit)

At least six courses (≥ 18 credits) from the five groups listed below, with at least four of the groups represented and four of which must be from categories 3, 4, and 5 (two courses should be in categories 1 and/or 2 with no more than one course from category 1). At least four of the six courses must be from outside the student’s major department.

1. Introductory biology (≥ 4 credits and one course toward the BMEP minor)
   BIO G 110 and ENGRG 101 Biological Principles and Introduction to Biomedical Engineering Analysis
   BIO G 101, 102, 103, 104 Biological Sciences
   BIO G 105 and 106 Introductory Biology
220 ENGINEERING - 2004-2005

MINOR: BIOMEDICAL ENGINEERING
Offered by the Department of Theoretical and Applied Mechanics

Contact: James Jenkins, 221 Kimball Hall, 255-7185, jj2@cornell.edu, www.tam.cornell.edu/Undergrad.html

All engineering undergraduates are eligible to participate in this minor unless they also are pursuing the Bioengineering Option. (Students may participate in either the Bioengineering Option or the Biomedical Engineering minor, but not both.)

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The field includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug-delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. The purpose of this minor is to allow students in the College of Engineering to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain recognition for their interest and capability in this rapidly growing area.

Academic Standards: At least C- in each course in the minor.

Requirements
All students must take ENGRG 501, Bioengineering Seminar (1 credit). In addition, students must take at least six (6) courses (with a minimum total of 18 credits) from the five groups listed, with at least one course from each group. Four of the six courses must be outside the student's major.

1. Biomatertials and Biomechanics
   - BEE 365 (3) Properties of Biological Materials
   - MS&E 265 (3) or TXA 439 (2) Biological Materials and Their Synthetic Replacements
   - M&E 463 (3) Neuromuscular Biomechanics
   - M&E 464 (3) Orthopaedic Tissue Mechanics
   - M&E 565 (3) Biomechanical Systems—Analysis and Design

and operation of the built environment that is vital for any modern economy.

**Academic standards:** At least C in each course in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

I. Required course: ENGRD 202 Mechanics of Solids

II. Additional courses: choose any 5

(“groupings are for information only”)

**Geotechnical engineering**

CEE 341 Introduction to Geotechnical Engineering and Analysis
CEE 440 Foundation Engineering
CEE 441 Retaining Structures and Slopes
CEE 444 Environmental Site and Remediation Engineering

**Structural engineering**

CEE 371 Structural Modeling and Behavior
CEE 372 Structural Mechanics and Analysis
CEE 471 Fundamentals of Structural Mechanics
CEE 472 Finite Element Analysis of Solids and Structures
CEE 473 Design of Concrete Structures
CEE 474 Design of Metal Structures
CEE 481 LRFD-Based Engineering of Wood Structures

**Other related courses**

CEE 595 Construction Planning and Operations

*Other CEE courses may be approved by petition in advance*

**MINOR: COMPUTER SCIENCE**

Offered by the Department of Computer Science

Contact: Upson 303, 255-0220, www.cs.cornell.edu

Students affiliated with all majors except Computer Science and Information Science, Systems, and Technology are eligible to participate in this minor. This minor is for students who anticipate that computer science will play a prominent role in their academic and professional career.

**Academic standards:** At least C in each course in the minor.

**Requirements**

At least six courses (≥ 18 credits) chosen as follows:

I. Required courses

COM S/ENGRD 211 Computers and Programming

One of the following:

COM S 321 Numerical Methods in Computational Biology
COM S/ENGRD 322 Introduction to Scientific Computing
COM S 421 Numerical Analysis

II. Additional courses

Three COM S courses numbered 280 or higher (excluding seminars and COM S 490).

Computing courses offered by other departments cannot be applied toward the Computer Science minor, with the exception of ECE 314. All qualifying courses should be taken at Cornell for a letter grade. No substitutions allowed.

**MINOR: ELECTRICAL AND COMPUTER ENGINEERING**

Offered by the School of Electrical and Computer Engineering

Contact: 223 Phillips Hall, 255-4309, www.ece.cornell.edu

Students affiliated with all majors except Electrical and Computer Engineering are eligible to participate in this minor. But MSE students must receive prior written approval from both MSE and ECE, via petition.

This minor offers the opportunity to study analog and digital circuits, signals and systems, and electromagnetics and to concentrate at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, and space engineering.

**Academic standards:** At least C- in each course in the minor. GPA ≥ 3.0 for all courses in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

I. Two of the following:

ECE/ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers (4 credits)
ECE 220 Signals and Information
ENGRD 230 Introduction to Digital Logic Design

II. Two of the following:

ECE 303 Electromagnetic Fields and Waves
ECE/CS 314 Computer Organization
ECE 315 Introduction to Microelectronics
ECE 320 Networks and Systems

III. One other ECE course at the 300 level or above (3-credit minimum)

IV. One other ECE course at the 400 level or above (3-credit minimum)

**MINOR: ENGINEERING MANAGEMENT**

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors except Civil Engineering and Environmental Engineering are eligible to participate in this minor.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

**Academic standards:** At least C in each course in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

I. Required courses (3):

CEE 323 Engineering Economics and Management
OR&IE 350 Financial and Managerial Accounting
CEE 304 Uncertainty Analysis in Engineering
or ENGRD 270 Basic Engineering Probability and Statistics
or ECE 310 Introduction to Probability and Random Signals

II. Additional courses—choose any three*

CCE 490 Management Practice in Project Engineering
CCE 492 Engineers for a Sustainable World: Engineering in International Development
CCE 466 Civil Infrastructure Systems
CCE 593 Engineering Management Methods: Data, Information, and Modeling
CCE 594 Economic Methods for Engineering and Management
CCE 595 Construction Planning and Operations
CCE 596 Management Issues in Forensic Engineering
CCE 597 Risk Analysis and Management
CCE 598 Introduction to Decision Analysis
NBA 507 Entrepreneurship for Scientists and Engineers
or M&AE/ENGRG 461/OR&IE 452 Entrepreneurship for Engineers
or ECE 489 Engineering Entrepreneurship, Management and Ethics

*Other courses approved by petition in advance.

T&MAM 310 may not be substituted for CEE 304.
MINOR: ENGINEERING STATISTICS
Offered by the School of Operations Research and Industrial Engineering
Contact: 202 Rhodes Hall, 255–5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering are eligible to participate in this minor.

The goal of the minor is to provide the student with a firm understanding of statistical principles and engineering applications and the ability to apply this knowledge in real-world situations.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
I. Required courses:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&IE 360 or ECE 310 Basic Engineering Probability and Statistics II or Introduction to Probability and Random Signals
II. Four of these (≥ 11 credits):
   - OR&IE 361 or ECE 411 Introductory Engineering Stochastic Processes I or Random Signals in Communications/Signal Processing
   - OR&IE 476 Applied Linear Statistical Models
   - OR&IE 576 Regression
   - OR&IE 563 Applied Time Series Analysis
   - OR&IE 575 Experimental Design
   - OR&IE 577 Quality Control
   - OR&IE 580 Simulation Modeling and Analysis
   - MATH 472 or BTRY 409 Basic Probability or Theory of Statistics
   - BTRY 602 Statistical Methods II
   - BTRY 603 or ILRST 411 Statistical Methods III or Statistical Analysis of Qualitative Data
   - ILRST 310 Statistical Sampling
   - ILRST 314 Graphical Methods for Data Analysis
   - ILRST 410 Techniques of Multivariate Analysis

*Other course options approved by petition in advance. Some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

MINOR: ENVIRONMENTAL ENGINEERING
Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering

Students affiliated with all majors except Biological Engineering, Civil Engineering, and Environmental Engineering are eligible to participate in this minor.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation’s resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen from the following groups, with at least one course from each group:

Group A. Environmental engineering processes:
   - BEE 251 Engineering for a Sustainable Society
   - CEE 351 Environmental Quality Engineering
   - CEE 451 Microbiology for Environmental Engineering
   - CEE 452 Water Supply Engineering
   - CEE 453 Laboratory Research in Environmental Engineering
   - CEE 454 Sustainable Small-Scale Water Supplies
   - BEE 476 Solid Waste Engineering
   - BEE 478 Ecological Engineering
   - CEE 444 Environmental Site and Remediation Engineering
   - BEE 651 Bioremediation
   - CEE 653 Water Chemistry for Environmental Engineering
   - CEE 655 Physical/Chemical Process
   - CEE 657 Biological Processes
   - CEE 658 Microbial Biodegradation and Biocatalysis Lab

Group B. Environmental systems
   - ENGR 115/CEE 112* Solving Environmental Problems for Urban Regions (*may count only if taken before the junior year)
   - BEE 475 Environmental Systems Analysis
   - CEE 597 Risk Analysis and Management
   - CEE 623 Environmental Quality Systems Engineering
   - BEE 678 Nonpoint Source Models

Group C. Hydraulics, hydrology, and environmental fluid mechanics
   - CEE 331 Fluid Mechanics (CHME 323 or M&AE 323 may be substituted for CEE 331)
   - CEE 332 Hydraulic Engineering
   - BEE 371 Hydrology and the Environment
   - CEE 451 CEE 471 Introduction to Groundwater Hydrology
   - CEE 452 Hydrology
   - CEE 456 Case Studies in Environmental Fluid Mechanics
   - CEE 457 Experimental Methods in Fluid Dynamics
   - BEE 473 Watershed Engineering
   - BEE 474 Drainage and Irrigation Systems
   - CEE 631 Computational Simulation of Transport in the Environment
   - CEE 653 Flow in Porous Media and Groundwater
   - CEE 655 Transport, Mixing, and Transformation in the Environment
   - BEE 671 Analysis of the Flow of Water and Chemicals in Soils
   - BEE 672 Drainage

MINOR: GEOLOGICAL SCIENCES
Offered by the Department of Earth and Atmospheric Sciences
Contact: 2124 Snee Hall, 255–5466, www.eas.cornell.edu

Students affiliated with all majors except Geological Sciences are eligible to participate.

Some of the major problems facing mankind in this century involve earth science, especially the generation of new energy sources for a growing world population, and engineers will be challenged to solve these problems. This minor will prepare engineering students to understand the natural operating systems of Earth and the tools and techniques used by Earth scientists to understand and monitor these solid and fluid systems.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
I. At least one of these courses:
   - ENGRD 201 Introduction to the Physics and Chemistry of the Earth
   - EAS 210 Introduction to Field Methods in Geological Sciences
II. At least two of these courses:
   - EAS 302 Evolution of the Earth System
   - EAS 321 Introduction to Biogeochemistry
   - EAS 326 Structural Geology
   - EAS 355 Mineralogy
   - EAS 356 Petrology and Geochemistry
   - EAS 375 Sedimentology and Stratigraphy
   - EAS 388 Geophysics and Geotectonics
III. Additional EAS courses at the 300 level or higher. These may include, e.g.,
additional courses from the above lists, undergraduate research courses, and
outdoor field courses.

MINOR: INDUSTRIAL SYSTEMS AND
INFORMATION TECHNOLOGY
Offered by the School of Operations and
Industrial Engineering
Contact: 202 Rhodes Hall, 255-5088,
www.orie.cornell.edu
Students affiliated with any major except
Operations Research and Engineering are
eligible to participate in this minor.

The aim of this minor is to provide an in-
depth education in the issues involved in
the design and analysis of industrial systems,
and the tools from information technology
that have become an integral part of the
manufacturing process. Students will become
familiar with the problems, perspectives, and
methods of modern industrial engineering and
be prepared to work with industrial engineers
in designing and managing manufacturing
and service operations. That is, rather than
providing a comprehensive view of the range
of methodological foundations of operations
research, this minor is designed to give the
student a focused education in the application
area most closely associated with these
techniques.

Academic standards: At least C in each
course in the minor. GPA ≥ 2.0 for all courses
in the minor.

Requirements
At least six courses (≥ 18 credits) chosen as
follows:
I. At least three of the following:
  ENGRD 270 Basic Engineering Probability
and Statistics
  OR&IE 310 Industrial Systems Analysis
  OR&IE 320 Optimization I
  OR&IE 480 Information Technology
II. The remaining courses chosen from:
  OR&IE 350 Financial and Managerial
  Accounting
  OR&IE 416 Design of Manufacturing
  Systems
  OR&IE 451 Economic Analysis of
  Engineering Systems
  OR&IE 525 Production Planning and
  Scheduling Theory and Practice
  OR&IE 577 Quality Control
  OR&IE 580 Simulation Modeling and
  Analysis

The interdisciplinary field of information
science covers all aspects of digital
information. The program has three main
areas: Information Systems, Human-
centered Systems, and Social Systems. Information Systems studies the computer
science problems of representing, storing,
manipulating, and using digital information.
Human-centered Systems studies the
relationship between humans and information,
drawing from human-computer interaction
and cognitive science. Social Systems
examines information in its economic, legal,
political, cultural, and social contexts.

The minor has been designed to ensure that
students have substantial grounding in all
three areas in addition to having a working
knowledge of basic probability and statistics
necessary for analyzing real-world data.

Academic standards: At least C in all courses
in the minor.

Statistics
An introductory course that provides a
working knowledge of basic probability and
statistics and their application to analyzing
real-world data.

MINOR: MATERIALS SCIENCE AND ENGINEERING
Offered by the Department of Materials Science and Engineering
Contact: 214 Bard Hall, 255-4135, www.mse.cornell.edu
Students affiliated with all majors except Materials Science and Engineering are eligible to participate in this minor.
Material properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides engineers in related areas with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

Academic standards: At least C in each course in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. ENGRD 261 Mechanical Properties of Materials, From Nanodevices to Superstructures, or ENGRD 262, Electronic Materials for the Information Age
2. Two of:
   - MS&E 204 Materials Chemistry
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 302 Mechanical Properties of Materials, Processing, and Design
   - MS&E 303 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations
   - MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials
3. Three electives chosen from:
   - Any MS&E course at the 300 level or above
   - Selected courses in materials properties and processing (at the 300 level or above) from AKP, CHEM, CEE, ECE, M&E, PHYS, and CHEM, as approved by the MS&E undergraduate major coordinator.

MINOR: OPERATIONS RESEARCH AND MANAGEMENT SCIENCE
Offered by the School of Operations Research and Industrial Engineering
Contact: 202 Rhodes Hall, 255-5088, www.orie.cornell.edu
Students affiliated with all majors except Operations Research and Engineering are eligible to participate in this minor.

Operations research and management science aims to provide rational bases for decision making by seeking to understand and model complex situations and to use tools of the area, including mathematical models, and simulation. The intent of this minor is to give a broad knowledge of these fundamentals, rather than to train students in a particular application domain. This way, students can adjust their advanced courses and pursue either methodological or application-oriented areas of greatest interest and relevance to the overall educational goals of their program.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. At least three of these courses:
   - OR&IE 320 Optimization I
   - OR&IE 321 Optimization II
   - OR&IE 360 Engineering Probability and Statistics I
   - OR&IE 361 Introduction Engineering Stochastic Processes I
   - OR&IE 580 Simulation Modeling and Analysis
   - Any OR&IE courses at the 300 level or higher (including those in 1).

M.S. ENGINEERING DEGREES
Office of Research, Graduate Studies, and Professional Education (ORGSPE), 222 Carpenter Hall, www.engineering.cornell.edu/grad
The following one-year (30-credit) professional master of engineering (M.Eng.) degrees are offered (giving also the administering unit):

M.Eng. (Aerospace): Mechanical and Aerospace Engineering
M.Eng. (Biomedical): Biomedical Engineering
M.Eng. (Biological and Biological): Biological and Environmental Engineering
M.Eng. (Chemical): Chemical and Biomolecular Engineering
M.Eng. (Civil): Civil and Environmental Engineering
M.Eng. (Computer Science): Computer Science
M.Eng. (Electrical): Electrical and Computer Engineering
M.Eng. (Engineering Physics): Applied and Engineering Physics
M.Eng. (Geological Sciences): Earth and Atmospheric Sciences
M.Eng. (Materials): Materials Science and Engineering
M.Eng. (Mechanical): Mechanical and Aerospace Engineering
M.Eng. (Nuclear): Graduate Field of Nuclear Science and Engineering
M.Eng. (OR&IE): Operations Research and Industrial Engineering
M.Eng. (Systems): Systems Engineering

These degrees are discussed in Courses of Study (below) because the curricula are integrated with the undergraduate majors. Many Cornell bachelor's degree graduates choose to attend an M.Eng. degree, although the program is also open to qualified graduates of other schools.

Requirements for admission vary by program. In general, the standard M.Eng. application requirements include:
• Statement of purpose
• Complete transcripts from each college or university attended
• At least two letters of recommendation
• Graduate Record Examination (GRE) scores—may not be required by all M.Eng. programs

Many M.Eng. programs waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Check with the appropriate office for specific program requirements. A list of links and general admission information is posted on www.engr.cornell.edu/grad.
Superior Cornell students who will have between 1 and 8 credits remaining in their last undergraduate semester may petition for early admission to the M.Eng. program. They spend the last semester in both programming, finishing up their B.S. degree and also doing their first semester of the M.Eng. program.

**Master of Engineering Options**

The following M.Eng. options are offered:
- Bioengineering Option
- Financial Engineering Option
- Manufacturing Option
- Engineering Management Option
- Systems Engineering Option

**Cooperative Program with the Johnson Graduate School of Management**

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M.Eng. M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M.Eng. M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the Twelve-Month M.B.A. Program of the Johnson Graduate School of Management (JGSM). Since 95 percent of the students in the JGSM have work experience, there will typically be a gap for work experience between the M.Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M.Eng. portion. For further details, see Engineering Advising (167 Olin Hall), the M.Eng. office (222 Carpenter), the JGSM office in Sage Hall, or the office of your intended undergraduate major.

**Lester Knight Scholarship Program**

The Lester Knight Scholarship Program is designed to assist and encourage Cornell engineering students and alumni interested in combining their engineering education with a business degree. The program offers three options or categories of financial support:
- Alumni Knight Scholarship Option
- Undergraduate Knight Scholarship Option
- Six-Year Knight Scholarship Option

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional career. Participation in the program requires admission by each respective academic program (M.Eng. M.B.A.) as well as an application to participate in the Knight Scholarship Program.

Contact ORGSPE or refer to the Knight Scholarship web site (www.engr.cornell.edu/grad/knight) for program specifics.

**MASTER OF ENGINEERING (AEROSPACE)**

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 107 Upson Hall, 255-2520, www.mae.cornell.edu

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, nonequilibrium flows, combustion, dynamics and control, and computational fluid dynamics.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the chair of the M&AE Master of Engineering committee. An individual student's curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in aerospace engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

Design projects must have an aerospace engineering design focus and have the close supervision of a faculty member. The projects may arise from individual faculty and student interests or from collaboration with industry.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the approval of the M&AE Master of Engineering chair.

The technical electives may be courses of appropriate level in math, physics, chemistry, or engineering; a maximum of 3 credits may be taken in areas other than those if the courses are part of a well-defined program leading to specific professional objectives. Students are expected to use technical electives to develop proficiency in math beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering math or statistics are particularly recommended.

Check with the M&AE graduate field office (107 Upson Hall) for additional degree requirements.

**MASTER OF ENGINEERING (AGRICULTURAL AND BIOLOGICAL)**

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley Robb Hall, 255-2173, www.bee.cornell.edu

This degree is intended primarily for students who plan to enter engineering practice. The program is planned as an extension of an undergraduate major in biological and environmental engineering but can accommodate graduates of other engineering disciplines. The required 30 credits of courses are intended to strengthen the student's fundamental knowledge of engineering and develop their design skills. Of the 30 credits, 3 to 9 are earned for an engineering design project that culminates in a written and oral report.

Students may concentrate in any of a variety of areas: biological engineering, energy, environmental engineering, environmental management, food processing engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student's interests. The design project requires courses in technical communication, math, biology, and the physical sciences may also be taken as part of a coherent program. Students can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topical areas.

**MASTER OF ENGINEERING (BIOMEDICAL)**

Offered by the Department of Biomedical Engineering

Contact: 270 Olin Hall, 255-1003, www.bme.cornell.edu

Our mechanistic understanding of biology has increased rapidly over the past 20 years, and many expect biology to drive engineering and technology in the next 50 years in much the same way that physics drove them in the twentieth century. As biology has become more mechanistic, the opportunities to apply engineering approaches have increased enormously. Simultaneously, humanitarian needs and economic opportunities for the application of engineering to improve health care have increased significantly.

Engineers who understand biology and can apply their knowledge and skills to improve human health are increasingly in demand. A professional degree in BME will prepare students to fill this increasing critical need.

The breadth and depth of knowledge needed in biomedical engineering makes a four-year B.S. degree program impractical. By combining the M.Eng. in BME with a strong B.S. program, a student can obtain the knowledge and skills necessary to be an effective professional biomedical engineer.

Students will acquire an in-depth knowledge of an essential area of biomedical engineering as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education.
in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire depth by extending undergraduate concentrations, by selecting one of three area for concentrated study, and by completing a design project in their area of concentration. The areas are biomedical mechanics and materials; bioinstrumentation/diagnostics; and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science.

A knowledge of molecular- and cellular-base biomedical engineering and engineering analysis of physiological systems at the level of BMEP 301, 302, 401, and 402 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class) or by passing a diagnostic exam.

Students lacking the appropriate background will need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

MASTER OF ENGINEERING
(Chemical)
Offered by the School of Chemical and Biomolecular Engineering
Contact: 120 Olin Hall, 255-6331,
www.cheme.cornell.edu

This degree is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, math, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described at the beginning of the section “Master of Engineering Degrees.” Specific requirements include:

1. Twelve credits in CHEME courses distributed among chemical and biomolecular engineering fundamentals (CHEME 711, 731, and 751) and chemical and biomolecular engineering applications (partial list: CHEME 480, 481, 484, 520, 543, 572, 651, 640, and 661).
2. A minimum of 3 credits of an individual or group project, CHEME 565.
3. Knowledge of business practices and techniques for pollution abatement and control. This knowledge may have already been acquired by students as undergraduates. If not, then CHEME courses (such as CHEME 572 and 661) or other courses covering these topics are required.

MASTER OF ENGINEERING (CIVIL)
Offered by the School of Civil and Environmental Engineering
Contact: 219 Hollister Hall, 255-7560,
www.cee.cornell.edu

The M.Eng. (Civil) degree program is designed to prepare students for professional practice. There are two concentrations in this program: civil and environmental engineering design and engineering management. Both require a broad-based background in an appropriate engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering normally satisfy this requirement. Admitted applicants without adequate preparation will require course work beyond the 30-credit minimum to fulfill the engineering preparation requirement. Both concentrations also require one course in professional (design) or managerial (management) practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, with some concentration areas using an intensive, full-time session between semesters.

The general degree requirements and admissions information are described above in the section “Master of Engineering Degree Programs.” A student’s program of study is designed individually in consultation with an academic advisor and then submitted to the school’s Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design areas, the requirements are:

1. Three courses, one in professional engineering practice (CEE 503) and a two-course design project (CEE 501 and 502).
2. Work in a major concentration area: four courses in either environmental engineering, environmental fluid mechanics/hydrology, geotechnical engineering, structural engineering, or environmental and water resource systems engineering.
3. Support electives, two required.

Courses taken as support electives may consist of graduate or advanced courses in fields related to the major concentration area, either inside or outside of CEE.

For the M.Eng. (Civil) program in engineering management, the requirements are:

1. Five courses: Project Management (CEE 500), Engineering Management Methods (CEE 503 plus either 594, 597, or 598), and the Management Project (CEE 591 and 592).
2. Two managerial breadth courses.
3. Three disciplinary or functional electives.

The School of Civil and Environmental Engineering cooperates with the Johnson Graduate School of Management in a joint program leading to both Master's of Engineering and Master of Business Administration degrees. See the beginning of the section “Master of Engineering Degrees.”

MASTER OF ENGINEERING
(COMPUTER SCIENCE)
Offered by the Department of Computer Science
Contact: 4126 Upson Hall, 255-8953,
www.cs.cornell.edu/grad/meng

The M.Eng. program in computer science can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high-performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program includes several upper-division and graduate courses and a faculty-supervised project. The flexible requirements allow students to build up a program that closely matches their interests. In fact, slightly under half the courses may be taken outside the computer science department (many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have 1 to 8 credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. “early admit” program.

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. See the section “Master of Engineering Degrees.”

MASTER OF ENGINEERING
(ELECTRICAL)
Offered by the School of Electrical and Computer Engineering
Contact: 223 Phillips Hall, 255-8414,
www.ece.cornell.edu/students/meng.html

The M.Eng. (Electrical) degree program prepares students either for professional work in electrical and computer engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the master of science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.
The program requires 30 credits of advanced technical coursework beyond that expected in a typical undergraduate program, including at least four courses in electrical and computer engineering. The required electrical and computer engineering design project may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may petition to increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content but are taught in disciplines other than engineering, math, or the physical sciences.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available at the web site listed above.

MASTER OF ENGINEERING
(ENGINEERING MECHANICS)
Offered by the Department of Theoretical and Applied Mechanics
Contact: 212 Kimball Hall, 255–5062, www.tam.cornell.edu/meng.html
This program emphasizes fundamentals in engineering science and applied mathematics. In this way the student is prepared to handle a wide variety of multidisciplinary problems. The program is designed for engineering students and students from the physical and mathematical sciences.

Twelve of the required 30 course credits involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in Theoretical and Applied Mechanics (T&AM). Up to 10 credits will be awarded for an M. Eng. project. The balance of the required 30 credits can be obtained as electives from T&AM or from other degree programs in engineering, physical or mathematical sciences. Thus, students have great flexibility in choosing a course of study tailored to their interests.

Projects may be chosen from the current interests of the faculty, including: nonlinear dynamics and chaos (with applications to problems in physics, engineering and biology), solid mechanics (fracture mechanics, nonlinear elasticity, shape-memory alloys, composite materials, ultrasonics, and acoustics), fluid mechanics (granular materials, space mechanics (evolution of the solar system, planetary rings).

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computer resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

MASTER OF ENGINEERING
(ENGINEERING PHYSICS)
Offered by the School of Applied and Engineering Physics
Contact: 212 Clark Hall, 255–5198, www.aep.cornell.edu
The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanoscience and technology, device physics, materials characterization, or software engineering. Wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nano-structure science and technology. Core courses include: device physics and nano-characterization of materials (A&EP 661) and the microprocessing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics and fabrication technology, and optoelectronics. Another area of study may be applied optics, where core courses can be chosen from applied physics, electrical engineering, and physics.

Students plan their program in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates planning to enter industry usually want instruction in both areas. Students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The degree requires 30 credits of graduate-level courses or their equivalent, with at least C– in each course, and distributed as follows:

1) a design project in applied science or engineering with a written final report (6 to 12 credits)
2) an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3) a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied math, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science: mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree: other undergraduate courses may be required as prerequisites but are not credited toward the degree.

MASTER OF ENGINEERING
(GEOLICAL SCIENCES)
Offered by the Department of Earth and Atmospheric Sciences
Contact: 2124 Snee Hall, 255–5466, www.eas.cornell.edu
The M.Eng. (Geological Sciences) degree program is a one-year course of study that provides future professional geologists or engineers with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Individual programs are developed within two established options: geohydrology and environmental geophysics.

Incoming students are expected to have a strong background in mathematics, the physical sciences, and chemistry and have a strong interest and substantial background in the geological sciences. The 30-hour M.Eng. program is intended to extend and broaden this background to develop competence in four subject categories. Typical categories for the geohydrology option are porous media flow, geology, geochemistry, and numerical modeling. Typical categories for the environmental geophysics option are geophysics, geology, porous media fluid flow, and computer methods. The courses a student selects in a category will vary depending on the student’s background and courses may be required in some categories, and the categories can be adjusted to the student’s interest and needs. Alternatives to numerical modeling in the geohydrology option could be economics or biochemistry, for example. To count toward the 30-credit degree requirement, courses must be at a graduate or advanced undergraduate level.

At least 10 of the 30 hours in the program must involve engineering design. Much of this requirement is normally met through a design project, which cannot account for over a third of the program (12 of 30 credits) and must constitute at least 3 credits. The design project must involve a significant geological component and lead to concrete conclusions or recommendations of an engineering nature. The project topic can be drawn from a student’s nonacademic work experience but carried out or further developed with advice from a Cornell faculty member with expertise in the project area selected by the student. A design project in geohydrology would normally involve groundwater flow and mass transport. A design project in environmental geophysics might involve implementation of a field survey using seismological, geoelectrical,
or ground-penetrating radar methods to map subsurface stratigraphic or structural features that control groundwater flow or contamination at a site. Projects are presented both in written form and orally in a design seminar at the end of the year.

**MASTER OF ENGINEERING (MATERIALS SCIENCE AND ENGINEERING)**

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This 30-credit program includes course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One 3-credit technical elective must include advanced math (modeling), computer application, or computer modeling, beyond the MS&E undergraduate requirements.

**MASTER OF ENGINEERING (MECHANICAL)**

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

Candidates may concentrate on any of a variety of specialty areas, including biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This program and any subsequent changes must also be approved by the chair of the M&AE Master of Engineering committee. An individual student's curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the M&AE Master of Engineering chair.

The technical electives may be courses of appropriate level in math, physics, chemistry, or engineering; a maximum of 3 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. Students are expected to use technical electives to develop proficiency in math beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering math or statistics are particularly recommended.

Check with the M&AE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the Master of Engineering (Mechanical) degree program may take courses that also satisfy the requirements of bioengineering, engineering management, or systems manufacturing programs leading to special dean's certificates in those areas.

**MASTER OF ENGINEERING (NUCLEAR)**

Offered by the Nuclear Engineering Program

Contact: 312 Rhodes Hall, 255-1453, www.gradschool.cornell.edu/academics/research/fields/nuc-sci.html

The two-term curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate concentrations. The recommended background is 1) an accredited baccalaureate degree in engineering, physics, or applied science; 2) physics, including atomic and nuclear physics; 3) math, including advanced calculus; and 4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses, or equivalents, are included in the 30-credit program:

**MASTER OF ENGINEERING (OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING)**

Offered by the School of Operations Research and Industrial Engineering

Contact: 201 Rhodes Hall, 255-9128, www.orie.cornell.edu

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project on a significant real-world problem. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems in manufacturing, information, finance, and nonprofit organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is intended for three groups of students: graduates of the undergraduate major in OR who wish to expand their practical knowledge of the field; Cornell undergraduates in other math-based area who want to broaden their exposure to OR&IE; and qualified non-Cornellians with strong backgrounds from other programs in the United States and abroad.
Undergraduates majoring in Operations Research and Engineering may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Operations Research and Industrial Engineering), and M.B.A. degrees. See the section "Master of Engineering Degrees."

To ensure completion of the program in two semesters, the entering student should have completed courses in probability and statistics and in computer science, as well as four semesters of mathematics, through differential equations, linear algebra, and multivariate calculus.

Program requirements include a core of OR&IE courses plus technical electives chosen from a broad array of offerings. The choice of a particular elective sequence plus a specific project course results in completion of one of several options within the program. These include the applied operations research option, the manufacturing option, the financial engineering option, the systems engineering option, the information technology concentration, and the Semester in Manufacturing. These options are offered jointly with various other Cornell departments and schools and they provide the opportunity to interact on projects and in class with specialists in other engineering fields and in business. Many students select the applied operations research option, offered only by OR&IE, which has project teams made up entirely of OR&IE M.Eng. students and which offers the broadest choice of elective courses and career alternatives, in business and elsewhere. Students interested in an option other than the applied operations research option should obtain further information from the following: manufacturing option, Center for Manufacturing Enterprise, 207 Hollister Hall, 607-255-7757; financial engineering option and information technology option, 201 Frank H. T. Rhodes Hall, 607-255-9128; semester in manufacturing option, 304 Sage Hall, 607-255-4691; systems engineering option, 201 Frank H. T. Rhodes Hall, 607-255-9129. For students lacking an undergraduate degree in engineering, the financial engineering option, which is highly specialized, may entail additional prerequisites or more than two semesters.

I. For matriculants with preparation comparable to that provided by the undergraduate major in Operations Research and Engineering:

For both of the above pro forma schedules, at least 12 credit hours of the specified electives must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. For scheduling reasons, some options may require an additional summer, depending on the student's preparation.

The project requirement can be met in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, and service organizations such as hospitals.

Additional program requirements are described in the Master of Engineering Handbook. For further details, see the contact information at the beginning of this section.

As part of their undergraduate ORE major or M.Eng. (ORIE) curriculum, students may study several subjects that are required for the Johnson Graduate School M.B.A. This early start on business-degree requirements may make it possible to get both the M.Eng. and the M.B.A. in two years, rather than the usual three. For details, see the subsection "Cooperative Program with the Johnson Graduate School of Management in the section 'Master of Engineering Degrees,' and contact the ORIE M.Eng. office, 201 Rhodes, with an academic adviser and approved by the director of graduate studies for systems.

The requirements are:

1. SYSEN 510 (Applied Systems Engineering), SYSEN 520 (System Architecture, Behavior, and Optimization), CEE 590 (Project Management), and a two-semester systems design project (SYSEN 590 or equivalent).

2. Electives from three categories of courses: Modeling and Analysis, Applications, and Systems Management. At least one course must be taken from the Modeling and Analysis category and at most one from the Systems Management category. A list of pre-approved electives is on the Systems Engineering web site.

**ENGINEERING COURSES**

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

Engineering Communications ENGRC
Engineering Distribution ENGRD
Engineering General Interest ENGRG
Introduction to Engineering ENGRI
Biological and Environmental Engineering BEE
Applied and Engineering Physics A&EP
Chemical and Biomolecular Engineering CHEME
Civil and Environmental Engineering CEE
Computer Science COM S
Earth and Atmospheric Sciences EAS
Electrical and Computer Engineering ECE
Information Science IS
Materials Science and Engineering MS&E
Mechanical and Aerospace Engineering M&E
Nuclear Science and Engineering NS&E
Operations Research and Industrial Engineering OR&IE
Theoretical and Applied Mechanics T&AM

**ENGINEERING COMMON COURSES**

Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

ENGRIC 334 Independent Study in Engineering Communications

Variable credits (1-5). Letter grade. By arrangement with instructor. Members of the ECP occasionally give independent (also called "directed") studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional
communications in more depth than is possible in the ECP's regular courses. Various types of projects are possible, e.g., studying forms of technical documents, creating user manuals, analyzing and producing technical graphics, and learning about special problems in engineering practice, and writing about technical topics for the public.

**ENGRD 335 Communications for Engineers**

Fall, spring. 3 credits. Limited to 20 students per section. Designed for juniors and seniors. Prerequisite: two freshman writing seminars and field affiliation. This seminar focuses on communications in organizations. Undergraduate students to engineering graduates. Topics may include internal and external communications: balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies, and communication with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical arguments, write reports, and present technical information to an audience. They also learn how to communicate specialized information to different audiences (e.g., technical and non-technical). (Note that absences are limited to three, after which sharp penalties occur.) Fulfills the college's technical-writing requirement. May be used as a Free or Approved Elective in expressive arts.

**ENGRD 350 Engineering Communications**

Fall and spring. 3 credits. Letter grade. 20 students per section. Designed for juniors and seniors. Prerequisite: two freshman writing seminars and field affiliation. The ability to communicate well is a factor in students' success in college and in their professional lives. This course provides students with the tools needed to communicate effectively in both technical and non-technical environments. Students learn to develop and deliver oral presentations, write technical documents, and incorporate graphics into their work. The course includes a weekly laboratory portion of the course. The laboratory provides hands-on experience in creating technical documents, preparing oral presentations, and using graphics software.

**ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers (also ECE 210)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course provides an introduction to the principles of electrical and computer engineering. Students learn about basic electrical circuits, including resistors, capacitors, and inductors. They also study circuit analysis techniques, such as nodal analysis and mesh analysis, and learn about basic circuit designs, such as simple filters and oscillators. The course emphasizes the practical application of these concepts in real-world engineering problems.

**ENGRD 211 Computers and Programming (also COM S 211)**

Fall, spring. 3 credits. Corequisite: PHYS 213. This course introduces students to the fundamentals of computer programming. Students learn how to write and debug programs using a high-level programming language, such as C or Java. They also learn about basic data structures, algorithms, and algorithm analysis. The course emphasizes problem-solving skills and the ability to think logically and creatively.

**ENGRD 212 Introduction to the Physics and Chemistry of the Earth (also EAS 212)**

Fall. 3 credits. Prerequisites: PHYS 112 or PHYS 212. This course covers the formation of the solar system, accretion and evolution of the earth, the rock cycle, radioactive isotopes and the geological time scale, plate tectonics, rocks and minerals, earth dynamics, mantle plumes, the hydrologic cycle, run-off, sedimentation, groundwater flow, contaminant transport, and the weathering cycle: chemical cycles, CO₂ (weathering) controls on global temperature (CO₂ or ocean currents), oil and mineral resources.

**ENGRD 213 Thermodynamics (also MIEE 213)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of thermodynamics and their applications in engineering. Students learn about the first and second laws of thermodynamics, and how they are used to analyze heat engines and refrigeration systems. They also study the properties of thermodynamic systems and the behavior of real gases.

**ENGRD 214 Introduction to the Physics of Life (also B&AE 214)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the physics of the human body and its interactions with the environment. Students learn about the physics of the cardiovascular system, the respiratory system, and the nervous system. They also study the physics of energy transfer and the flow of heat in the body.

**ENGRD 215 Thermodynamics for Engineers (also ECH 215)**

Fall. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course provides an introduction to the principles of thermodynamics and their applications in engineering. Students learn about the first and second laws of thermodynamics, and how they are used to analyze heat engines and refrigeration systems. They also study the properties of thermodynamic systems and the behavior of real gases.

**ENGRD 216 Introduction to the Physics of Materials (also A&AE 216)**

Fall. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the physics of materials and their applications in engineering. Students learn about the physics of solid mechanics, including stress, strain, and deformation, and how these concepts are used to design and analyze structures.

**ENGRD 217 Introduction to the Physics of Fluids (also A&AE 217)**

Fall. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the physics of fluids and their applications in engineering. Students learn about the physics of fluid mechanics, including flow, turbulence, and heat transfer, and how these concepts are used to design and analyze systems involving fluids.

**ENGRD 218 Introduction to the Physics of Energy (also A&AE 218)**

Fall. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the physics of energy and its applications in engineering. Students learn about the physics of energy transfer, including heat, work, and power, and how these concepts are used to design and analyze systems involving energy.

**ENGRD 219 Engineering Computation (also CEE 219)**

Fall. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the principles of computational methods and their applications in engineering. Students learn about the fundamentals of numerical analysis, including error analysis, approximation, and interpolation, and how these concepts are used to solve engineering problems.

**ENGRD 220 Introduction to the Design and Implementation of Digital Circuits (also ECE 220)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the principles of digital circuit design and their applications in engineering. Students learn about the fundamentals of digital logic, including logic gates, Boolean algebra, and computer organization, and how these concepts are used to design and implement digital circuits.

**ENGRD 221 Introduction to the Physics and Chemistry of the Earth (also EAS 221)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of earth science and their applications in engineering. Students learn about the physics of plate tectonics, erosion, and sea level change, and how these concepts are used to design and analyze systems involving earth material.

**ENGRD 222 Introduction to the Physics of Materials (also A&AE 222)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of materials science and their applications in engineering. Students learn about the physics of materials, including their structure, properties, and behavior, and how these concepts are used to design and analyze systems involving materials.

**ENGRD 223 Introduction to the Physics of Fluids (also A&AE 223)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of fluid mechanics and their applications in engineering. Students learn about the physics of fluid flow, including viscosity, turbulence, and heat transfer, and how these concepts are used to design and analyze systems involving fluid.

**ENGRD 224 Introduction to the Physics of Energy (also A&AE 224)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of energy and its applications in engineering. Students learn about the physics of energy transfer, including heat, work, and power, and how these concepts are used to design and analyze systems involving energy.

**ENGRD 225 Introduction to the Physics of Life (also B&AE 225)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of biophysics and their applications in engineering. Students learn about the physics of biological systems, including cells, tissues, and organs, and how these concepts are used to design and analyze systems involving biology.

**ENGRD 226 Introduction to the Physics of Materials (also A&AE 226)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of materials science and their applications in engineering. Students learn about the physics of materials, including their structure, properties, and behavior, and how these concepts are used to design and analyze systems involving materials.

**ENGRD 227 Introduction to the Physics of Fluids (also A&AE 227)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of fluid mechanics and their applications in engineering. Students learn about the physics of fluid flow, including viscosity, turbulence, and heat transfer, and how these concepts are used to design and analyze systems involving fluid.

**ENGRD 228 Introduction to the Physics of Energy (also A&AE 228)**

Fall, spring. 3 credits. Prerequisites: PHYS 213 and MATH 294. This course introduces the fundamental principles of energy and its applications in engineering. Students learn about the physics of energy transfer, including heat, work, and power, and how these concepts are used to design and analyze systems involving energy.
a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

ENGRD 260 Principles of Biological Engineering (also BEE 260) Fall. 3 credits. Corequisite: MATH 293. Focuses on the integration of biological systems with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and then practice it in homework sets. Topics range from molecular principles of reaction kinetics and nuclear binding events to macroscopic applications, such as energy and mass balances of bioprocessing and engineering design of implantable sensors.

ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures (also MS&E 261) Fall. 3 credits. S. P. Baker. The mechanical properties of materials (strength, stiffness, ductility, and so on) and their physical origins are examined. The relationship of the elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials is explored. Effects of time and temperature on materials properties are discussed. The emphasis of this course is on considerations for design and optimum performance of materials and engineered objects.

ENGRD 262 Electronic Materials for the Information Age (also MS&E 262) Fall. 3 credits. Prerequisite: MATH 192; corequisite PHYS 213 or permission of instructor. G. Malliaris. The course examines the electrical and optical properties of materials. Topics covered include the mechanism of electrical conduction in metals, semiconductors and insulators, the tuning of electrical properties in semiconductors, the transport of charge across metal-semiconductor and semiconductor-semiconductor/semi-conductor junctions, and the interaction of materials with light. Applications in electrophotography, solar cells, electronics, and display technologies are discussed.

ENGRD 264 Computer-Instrumentation Design (also A&EP 264) Fall, spring. 3 credits. Prerequisite: COM S 100. 1 lec, 1 lab. Not open (without instructor’s permission) to seniors. T. Cool. Covers the use of a small computer in an engineering or scientific research laboratory. The experiments and devices investigated include: analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, nonlinear least squares fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. Both C++ programming and graphical programming with LabVIEW are used for computer interfacing to hardware. A second goal of the course is to develop effective written communication skills in the context of science and engineering. Students prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 270 Basic Engineering Probability and Statistics Fall, spring, summer. 3 credits. Prerequisites: MATH 191 and 192. This course gives students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are included. Topics include random variables, probability distributions, estimation, testing, experimental design, quality control, and regression.

ENGRD 321 Numerical Methods in Computational Molecular Biology (also BIOBM 321 and COM S 321) Fall. 3 credits. Prerequisites: at least one course in calculus such as MATH 106, 111, or 191 and a course in linear algebra such as MATH 221 or 294 or BTRY 417. Topics include error analysis, nonlinear least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization are also treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421, or 428.

ENGRD 322 Introduction to Scientific Computation (also COM S 322) Spring, summer. 3 credits. Prerequisites: COM S 100 and MATH 222 or 294. An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures cover parallel computation. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421, or 428.

Courses of General Interest

Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 100J Cooperative Workshop for COM S 100J Fall, spring, 1 credit. S-U grades only. Concurrent registration in COM S 100J required. Academic Excellence Workshop for COM S 100J. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in COM S 100J.

ENGRG 210 Cooperative Workshop for COM S 211 Fall, spring, 1 credit. S-U grades only. Concurrent registration in COM S 211 required. Academic Excellence Workshop for COM S 211. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in COM S 211.

ENGRG 321 Cooperative Workshop for CHEM 311 Fall, spring, 1 credit. S-U grades only. Concurrent registration in CHEM 311 required. Academic Excellence Workshop for CHEM 311. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course
material, designed to enhance understanding of core concepts in CHEM 211.

ENGRG 250 Technology in Society (also ECE 250, HIST 250, S&T &S 250)
This course investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's regulation of technology; the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 293 Cooperative Workshop for MATH 293
Fall. 1 credit. S-U grades only. Concurrent registration in MATH 293 required.
Academic Excellence Workshop for MATH 293: Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 293.

ENGRG 294 Cooperative Workshop for MATH 294
Fall, spring. 1 credit. S-U grades only. Concurrent registration in MATH 294 required.
Academic Excellence Workshop for MATH 294: Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 294.

ENGRG 298 Inventing an Information Society (also AM ST 292, ECE 298, S&T &S 292, and HIST 292)
Spring. 3 credits. Approved for humanities distribution. Cannot be taken for credit after ENGRI 101. R. R. Kline.
Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, television, computers, and the Internet. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 323 Engineering Economics and Management (also CEE 323)
Spring, usually offered in summer for Engineering Co-op Program. 3 credits.
Primarily for juniors and seniors. Student must register under CEE 323. D. P. Loucks.
Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 357 Engineering in American Culture (also AM ST 356, S&T &S 357, and HIST 357)
Fall. 4 credits. Approved for humanities distribution. R. R. Kline.
The history of engineering in the United States from 1800 to the present. We investigate the education of engineers, how engineering changed from a masculine profession to one more open to women, the building of monumental projects, public images of the engineer, enthusiasm and disasters, and engineering in a global setting.

ENGRG 360 Ethical and Social Issues in Engineering (also S&T &S 360)
Spring. 3 credits. Open to sophomores. R. R. Kline.
Studies major ethical and social issues involved in engineering practice. The issues include: responsibility for designing products that do not harm public health, safety, and welfare; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistleblowing; trade secrets; and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history and sociology of engineering are introduced to analyze these issues.

ENGRG 461 Entrepreneurship for Engineers (also M &AE 461, OR &IE 452)
Fall. 3 credits. Enrollment open to upperclassmen: others with permission of instructor.
For description, see M &AE 461.

ENGRI 110 Lasers and Photonics (also A &EP 110)
Fall. 3 credits. A. Gatica.
Lasers have had an enormous impact on communications, medicine, remote sensing, and material processing. In this course we review the properties of light that are essential to understanding the underlying principles of lasers and these photonic technologies. There also is a strong, hands-on laboratory component in which the students build and operate a nitrogen laser and participate in several demonstration experiments and projects. The course concludes with courses on holography, laser processing of materials, optical tweezers, and fiber optics.

ENGRI 111 Nanotechnology (also MS &E 111)
Fall. 3 credits. E. Giannelis.
Nanotechnology has been enabling the Information Revolution with the development of even faster and more powerful devices for manipulating, storing, and transmitting information. In this hands-on course, students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGRI 112 Introduction to Chemical Engineering (also CHEM 112)
Fall. 3 credits. Limited to freshmen. T. M. Duncan.
Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual block-busting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.
ENGR 113 Solving Environmental Problems for Urban Regions (also CEE 113)
Spring. 3 credits. M. L. Weber-Shirk.
Learn how to design: reservoirs to provide water during droughts, aqueducts to transport water, and water treatment plants to prevent waterborne diseases. Take field trips, build a computer-simulated water treatment plant, and explore new technologies for making safe drinking water.

ENGR 115 Engineering Applications of Operations Research
Fall, spring. 3 credits. Enrollment not open to OR&E upper-class majors.
An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation); the situations in which these problems arise, and several standard solution techniques. In the computational laboratory, students encounter problem simulations and use some standard commercial software packages.

ENGR 116 Modern Structures (also CEE 116)
Fall. 3 credits. M. J. Sansalone.
An introduction to structural engineering in the 21st-century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry load—using principles of statics, mechanics, and material behavior. In addition, the historical, economic, social, and political context for each structure is discussed. Case studies of failures are used to explain how structures fail in earthquakes and other extreme events, and students are introduced to analytical and experimental approaches (shake table and wind tunnel testing) to quantifying loads on structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures. Includes a project to design, analyze, build, and test a structure subjected to dynamic loads.

ENGR 117 Introduction to Mechanical Engineering (also M&AE 117)
Fall. 3 credits. 2 lectures and 1 lab per week.
An introduction to fundamentals of engineering, with emphasis on mechanical and aerospace engineering. The lectures will cover a little from each aspect of mechanical and aerospace engineering applied to how to design and analyze products or devices and their performance. Students learn and understand characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of fluid mechanics, heat transfer, automotive engineering, engineering design and product development, patents and intellectual property, and engineering ethics. There will be a final project in which students use the information learned to design and manufacture a product.

ENGR 118 Design Integration: A Portable CD Player (also M&AE 118 and TAMH 118)
Spring. 3 credits. W. Sachse.
This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGR 119 Biomaterials for the Skeletal System (also M&AE 119)
Fall. 3 credits. D. T. Grubb.
Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics covered include strength, corrosion, wear, and biocompatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGR 122 Earthquake! (also EAS 122)
Spring. 3 credits. I. D. Brown.
The science of natural hazards and strategic resources is explored. This course covers techniques for locating and characterizing earthquakes, and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; and the historical importance of earthquakes. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

ENGR 124 Designing Materials for the Computer (also MSAE 124)
Spring. 3 credits. 5 lectures.
Introduces the materials, processes, and properties of the semiconductors, polymers, ceramics, and metals used in the microelectronics industry to form integrated circuits, electronic devices, and displays. This course examines lithographic processing, metallization, diffusion, ion implantation, oxidation, and other processes used in fabricating electronic devices and their packages. The technology of displays is discussed, including liquid crystal displays and light-emitting devices.

ENGR 126 Introduction to Signals and Telecommunications
Spring. 3 credits. D. F. Delchamps.
This course introduces the concepts that underlie wired and wireless communication systems. Students achieve a rudimentary understanding of basic ideas such as coding and data compression, frequency content, bandwidth, and filtering; sampling and reconstruction; and time- and frequency-division multiplexing. Discussions of practical applications focus on areas such as the public switched telephone network, ISDN, ATM, and TCP/IP. Students also develop an appreciation for the development of the field. The course includes both lectures and laboratory demonstrations.

ENGR 127 Introduction to Entrepreneurship
Spring. 3 credits. Open to all Cornell students regardless of major. No prerequisites.
This course provides a solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-technology ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed.

ENGR 165 Computing in the Arts (also CIS 165, COM S 165)
Fall. 3 credits. S-U grade optional. Complements ART 171+ and MUSIC 120+.
For description, see CIS 165.

ENGR 167 Visual Imaging in the Electronic Age (also CIS 167, COM S 167)
Spring. 3 credits. S-U grade optional.
For description, see CIS 167

ENGR 172 Computation, Information, and Intelligence (also COGST 172 and COM S 172)
Fall. 3 credits. Prerequisites: some knowledge of differentiation required. Permission of instructor required for students who have completed the equivalent of COM S 100. Not offered 2004-2005.
An introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, computer-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets will be assigned. Some calculus required.

ENGR 185 Art, Archaeology, and Analysis (also EAS 200, and MSAE 285)
An interdisciplinary course on the use of techniques of science and engineering in cultural research. Includes applications of physical and physiological principles to the study of archaeological artifacts and works of art. Also covers historical and technical aspects of artistic creation. Students learn analyses by modern methods to deduce geographical origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for Engineering.

APPLIED AND ENGINEERING PHYSICS

A&EP 102 Introduction to Nanoscience and Nanotechnology (also ENGR 102)
Spring. 3 credits.
This is a course in the Introduction to Engineering series. For description, see ENGR 130.

A&EP 110 Lasers and Photonics (also ENGR 110)
Fall. 3 credits. A. Gaeta.
This is a course in the Introduction to Engineering series. For description, see ENGR 110.
A&EP 217 Electricity and Magnetism (also PHYS 217)
Fall, spring. 4 credits. Prerequisites: approval of student's advisor and permission of the instructor; co-registration in PHYS 216 or knowledge of special relativity at the level of PHYS 116; MATH 192 or equivalent and co-registration in MATH 191 or equivalent. Intended for students who have done well in PHYS 112 or 116 (or the equivalent) and in mathematics who desire a more analytic treatment than that of PHYS 213. At the level of Electricity and Magnetism by Purcell. Recommended for prospective engineering physics majors. A placement quiz may be given early in the semester, permitting those students who find the material too abstract or analytical to transfer into PHYS 213 without difficulty.

A&EP 252 The Physics of Life (also ENGRD 252)
Fall. Prerequisites: MATH 192, CHEM 207 or 211, and co-registration in or completion of PHYS 213. L. Pollack. For description, see ENGRD 252.

A&EP 264 Computer-Instrumentation Design (also ENGRD 264)
Fall, spring. 3 credits. Prerequisites: COM S 100 or 100-1. Lab. not open (without instructor's permission) to seniors. For description, see ENGRD 264.

A&EP 321 Mathematical Physics I
Fall, summer. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in the physical sciences. B. Kusse.

Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping. Fourier Series. Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 322 Mathematical Physics II

Topics: partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 324 Maple Supplement to Mathematical Physics 321 and 322
Spring. 1 credit. R. V. E. Loveless.
The course gives a broad introduction to Maple in applications to problems of mathematical physics similar to those covered in A&EP 321 and 322. We use Maple to solve differential equations—both linear and nonlinear. We make extensive use of plotting capabilities of Maple. Additionally, we cover matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. We also give an introduction to LaTeX.

A&EP 330 Modern Experimental Optics (see also PHYS 330)
Fall. 4 credits. Enrollment limited. Prerequisites: PHYS 214 or equivalent. E. Bodenschatz.
A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to wave interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

A&EP 333 Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits. Prerequisites: PHYS 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor. This course covers: Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (On the level of Classical Dynamics, by Marion and Thornton.)

A&EP 355 Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor. Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasistatics, and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356 Intermediate Electrodynamics
Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor. Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis is on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 333 or PHYS 318; coregistration in A&EP 322 or equivalent and in A&EP 356 or PHYS 326.
A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)
Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1 lab. Fall: E. Kirkland; spring: J. Alexander.
Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory 3-semester physics sequence plus 1 year of junior-level mathematics. Quantum statistical basis for equilibrium thermodynamics, macrocanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Physics, by Kittel and Kroemer, and Statistical Physics, by Rossiter.

A&EP 434 Continuum Physics
Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.

A&EP 438 Computational Engineering Physics
Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 355, 356, or equivalent, or permission of instructor; coregistration in PHYS 361 permitted.
Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) is introduced and applied to engineering physics problems that cannot be solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.
A&EP 440 Quantum and Nonlinear Optics
An introduction to the fundamentals of the interaction of laser light with matter. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical bistability, propagation of ultrashort pulses, solitons, optical coherence, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and stimulated scattering, and ultra-intense laser-matter interactions.

A&EP 450 Introductory Solid State Physics (also PHYS 454)
Fall. 3 credits. Prerequisites: some exposure to quantum mechanics at the level of PHYS 443, A&EP 361, or CHEM 793 is highly desirable but not absolutely required.
An introduction to the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Optical properties, magnetism, and superconductivity are covered as time allows.
The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel or Solid State Physics by Ashcroft and Mermin.

A&EP 470 Biophysical Methods (also BIONB 470)
Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level; some knowledge of cellular biology helpful but not required. Letter grades only.
An overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level. Topics covered include methods that examine both structure and function of biological systems, with emphasis on the physical properties and applications of these methods to biological membranes. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ECE 484, M&AE 459, and NS&E 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand.
For description, see NS&E 484.

A&EP 490/491 Independent Study in Engineering Physics
Fall. spring. Credit TBA.
Laboratory and theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 (or equivalent).
Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, some solid state electronic devices, old state detectors and generators of electro-magnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 607 Advanced Plasma Physics (also ECE 578)
Spring. 4 credits. Prerequisites: ECE 581 and A&EP 606. Offered on demand.
For description, see ECE 582.

A&EP 633 Nuclear Reactor Engineering (also NS&E 633)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand.
A&EP 661 Nancharacterization
Fall. 3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and graduate-level quantum mechanics or chemistry. Undergraduates should consult with the instructor before enrolling in this class.
A graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and below. Discussion centers on the physical interaction processes used for characterization, quantification, and interpretation of the collected signals, common artifacts, the engineering tradeoffs made in constructing the actual instruments, and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanned probe and force microscopy; scanning and transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and IMS.

A&EP 662 Micro/Nano-fabrication and Processing
Spring. 3 credits. An introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and optical applications. Vacuum and plasma thin-film deposition processes. Photon, electron, x-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

A&EP 663 Nanobiotechnology (also BIO G 663 and MS&E 563)
Spring. 3 credits. Letter grade only. C. Batt. Upper level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the main requirements. The course is held twice weekly with 75-minute classes. All lectures are teleconferenced to our NBTC associate institutes.

A&EP 711 Principles of Diffraction (also MS&E 671)
This course is a graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics that are covered in the course include: elastic and inelastic scattering, diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

A&EP 751 M ENG Project
Fall. spring. 6–12 credits TBA. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students partial, or complete, classwork or an independent research project through work on a self-selected problem related to their field of interest. A formal and complete research report is required.

A&EP 753 Special Topics Seminar in Applied Physics
Fall. 1 credit. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics.
Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

A&EP 781 Advanced Plasma Physics I: Cosmic Plasma Physics (also ECE 601)
Fall. 3 credits. R. Lovelace.
The course uses the text Cosmic Plasma Physics by Boris Somov and covers the following topics: charged particles and EM fields; statistical description of plasma; distribution functions and the Vlasov equation, propagation of particles, motion of particles in given fields, wave particle interactions.
Coulomb collisions, hydrodynamic description of plasmas, magnetohydrodynamic description of plasmas, and cosmic plasma flows.

A&EP 782 Advanced Plasma Physics (also ECE 682)  Spring. 3 credits. Prerequisite: ECE 581. C. E. Seyler
For description, see ECE 682.

BIOLICAL AND ENVIRONMENTAL ENGINEERING

For complete course descriptions, see the Biological and Environmental Engineering listing in the College of Agriculture and Life Sciences section or visit the department web site, www.bee.cornell.edu.

BEE 151 Introduction to Computing  Fall. 4 credits. Prerequisite: MATH 191 or equivalent (coregistration permissible). Each lab and recitation section limited to 22 students.

BEE 200 The BEE Experience  Spring. 1 credit.

BEE 222 Bioengineering Thermodynamics and Kinetics  Spring. 3 credits. Prerequisites: MATH 192, BIO 100, PHYS 213, and one course in chemistry.

BEE 251 Engineering for a Sustainable Society (also ENGRD 251)  Fall. 3 credits. Corequisite: MATH 293.

BEE 260 Principles of Biological Engineering (also ENGRD 260)  Fall. 3 credits. Corequisite: MATH 293.

BEE 299 Sustainable Development: A Web-Based Course  Spring. 3 credits. Prerequisite: sophomore standing and above. S-U grades optional.

BEE 301 Renewable Energy Systems  Spring. 3 credits. Prerequisite: college physics.

BEE 325 Environmental Management  Fall. 3 credits.

BEE 350 Biological and Environmental Transport Processes  Fall. 3 credits. Prerequisites: MATH 293 and fluid mechanics (coregistration permissible).

BEE 360 Molecular and Cellular Bioengineering (also BMEP 360)  Spring. 3 credits. Prerequisite: biochemistry or A&EP 252.

BEE 365 Properties of Biological Materials  Spring. 3 credits. Prerequisites: ENGRD 202 (coregistration permissible).

BEE 368 Biotechnology Applications: Animal Bioreactors  Fall. 3 credits. Prerequisite: biochemistry or permission of instructor.

BEE 371 Physical Hydrology for Ecosystems  Spring. 3 credits. Prerequisite: 1 course in calculus.

BEE 427 Water Sampling and Measurement  Fall. 3 credits. Prerequisites: soils and/or fluids or hydrology courses and MATH 191.

BEE 435 Principles of Aquaculture  Spring. 3 credits. Prerequisite: minimum junior standing.

BEE 450 Bioinstrumentation  Spring. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming, and use of spreadsheets.

BEE 453 Computer-Aided Engineering: Applications to Biomedical Processes (also M&E 453)  Spring. 3 credits. Prerequisite: heat and mass transfer (BEE 350 or equivalent).

BEE 454 Physiological Engineering  Fall. 3 credits. Corequisite: fluid mechanics.

BEE 456 Biomechanics of Plants (also BIO PL 456)  Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology, and 1 year of calculus, or permission of instructor. S-U grades optional.

BEE 459 Biosensors and Bioanalytical Techniques  Spring. 4 credits. Prerequisites: biochemistry or permission of instructor.

BEE 464 Bioseparation Processes  Fall. 3 credits. Prerequisites: biochemistry, physics, MATH 112 or 192, BEE 260, or permission of instructor.

BEE 471 Introduction to Groundwater (also CEE 431 and EAS 445)  Spring. 3 credits. Prerequisites: MATH 293, fluid mechanics or hydrology course. For description, see CEE 431.

BEE 473 Watershed Engineering  Fall. 3 credits. Prerequisite: fluid mechanics or hydrology.

BEE 474 Water and Landscape Engineering Applications  Spring. 3 credits. Prerequisites: fluid mechanics, hydrology, or permission of instructor.

BEE 475 Environmental Systems Analysis  Fall. 3 credits. Prerequisites: computer programming and 1 year of calculus.

BEE 476 Solid Waste Engineering  Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry.

BEE 478 Ecological Engineering  Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent.

BEE 481 LRFD-Based Engineering of Wood Structures (also CEE 481)  Spring. 3 credits. Prerequisite: ENGRD 202.

BEE 484 Metabolic Engineering  Spring. 3 credits. Prerequisites: biochemistry or permission of instructor.

BEE 487 Sustainable Energy Systems  Spring. 3 credits. Prerequisites: BEE 350 and thermodynamics.

BEE 489 Engineering Entrepreneurship, Management and Ethics  Spring. 3 credits. Prerequisites: ENGRD 270 or CEE 304 or equivalent, junior standing.

BEE 493 Technical Writing for Engineers  Fall, spring. 1 credit. Corequisite: BEE 450/473.

BEE 494 Special Topics in Biological and Environmental Engineering  Fall, spring. 1-4 credits. S-U grades optional.

BEE 495 BEE Honors Research  Fall, spring. 1-6 credits. Prerequisites: enrollment in the BEE Honors Research Program.

BEE 496 Capstone Design in Biological and Environmental Engineering  Fall, spring. 1-3 credits. Corequisite: BEE 473 or BEE 478, or BEE 481 and permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 497 Individual Study in Biological and Environmental Engineering  Fall, spring. 1-4 credits. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. S-U grades optional. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 498 Undergraduate Teaching  Fall, spring. 1-4 credits. Prerequisite: written permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 499 Undergraduate Research  Fall, spring. 1-4 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Completed independent study form (available in 140 Roberts Hall) is required to register.

BEE 501 Bioengineering Seminar (also BMEP 501)  Fall, spring. 1 credit. For junior, senior, and graduate students only.

BEE 551/552 Agricultural and Biological Engineering Design Project  Fall, spring. 551, 5-6 credits. Prerequisite: admission to the M.Eng. (Agricultural and Biological) degree program.

BEE 625 Environmental Management  Fall. 3 credits. Prerequisite: graduate standing.

BEE 647 Water Transport in Plants  Fall. 2 credits. Offered alternate years.

BEE 649 Solute Transport in Plants  Fall. 2 credits. Offered alternate years.

BEE 651 Bioremediation: Engineering Organisms to Clean Up the Environment  Spring. 3 credits. Prerequisites: BIOMI 290 or BIOMI 398 or BIOMI 331 or permission of instructor.
BEE 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of instructor.

BEE 655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: MATH 293 or equivalent.

BEE 659 Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisites: biochemistry and permission of instructor.

BEE 671 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: 4 calculus courses and fluid mechanics.

BEE 672 Drainage
Spring. 4 credits. Prerequisites: BEE 471 or BEE 473. S-U grades optional.

BEE 673 Sustainable Development Seminar (also NBA 572)
Spring. 1-3 credits. Prerequisite: upper division undergraduate and graduate students or permission of instructor.

BEE 678 Nonpoint Source Models
Spring. 3 credits. Prerequisites: computer programming and calculus.

BEE 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: TAM 310 or permission of instructor.

BEE 687 Sustainable Bio-based Industries
Fall. 1 credit. Prerequisite: graduate standing.

BEE 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall, spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional.

BEE 697 Graduate Individual Study in Agriculture and Biological Engineering
Fall, spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional.

BEE 700 General Seminar
Fall. 1 credit. S-U grades only.

BEE 750 Orientation to Graduate Study
Fall. 1 credit. S-U grades only. Limited to newly joining graduate students.

BEE 754 Watershed Management
Spring. 2-3 credits. Prerequisite: graduate standing or permission of instructor.

BEE 760 Nucleic Acid Engineering (also BMPE 760)
Fall. 3 credits. Prerequisite: BEE 360 or permission of instructor.

BEE 771 Soil and Water Engineering Seminar
Fall. spring. 1-3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional.

BEE 781 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

BEE 785 Biological Engineering Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

BEE 787 Industrial Ecology of Agriculturally Based Bioindustries
Spring. 3 credits. Prerequisites: 1 year calculus, MATLAB, BEE 687, graduate standing.

BEE 788 Biomass Conversion of Energy and Chemicals
Fall. 3 credits. Prerequisites: one year of college calculus and a minimum of one course in thermodynamics and computer programming.

BEE 800 Master's-Level Thesis Research
Fall, spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades only.

BEE 900 Doctoral-Level Thesis Research
Fall, spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades only.

BIOMEDICAL ENGINEERING

Michael L. Shuler, chair; Donald L. Bartel, associate director; William Lee Olbricht, director of graduate studies; Larry Bonassar, David Putnam

BMPE 101 Introduction to Biomedical Engineering Analysis (also ENGR 101)

BMPE 301 Molecular Principles of Biomedical Engineering (also CHEM 401)
Fall. 3 credits. Prerequisites: BMEP 301 or prior course work in BIO G 110, BIO BM 330, BME PM 290 or equivalent. Lec and lab. S. Archer and staff.

Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Cytoskeletal and motor proteins and their relationship to nano- and micro-machines and nanobiotechnology. Existing and emerging technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

BMPE 302 Cellular Principles of Biomedical Engineering (also CHEM 402)
Spring. 3 credits. Prerequisite: BMPE 301 or prior course work in BIO G 110, BIOBM 330, BOMI 290 or equivalent plus mathematics through differential equations (e.g., MATH 221 or 294), or permission of instructor. Lecture and laboratory. D. A. Putnam, S. Archer.

Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Three modules comprising: 1) cell culture techniques/receptor ligand interactions, 2) cellular trafficking, and 3) signal transduction.

BMPE 330 Introduction to Computational Neuroscience (also BIONB 330, PSYCH 330, and COGST 330)
Fall. 3 credits. Limited to 25 students. For description, see BIONB 330.

BMPE 360 Molecular and Cellular Bioengineering (also BEE 360)
Spring. 3 credits. Prerequisite: biochemistry or A&EP 252.

BMPE 375 Biomedical Engineering Analysis of Metabolic and Structural Systems (also M&AEE 468)
Fall. 3 credits. Prerequisite: prior course work in basic biology. Prior course work in solid mechanics and fluid mechanics is highly recommended. Lecture and laboratory.

This course presents the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs is included.

BMPE 401 Information Exchange in Biomedical Engineering Systems
Spring. 3 credits. Prerequisite: BMPE 401 or permission of instructor. Lecture and laboratory.

Quantitative biology of the endocrine, nervous, and immune systems. Computation and mathematics of neural nets, communication among macroscale biocommunication systems.

BMPE 404 CDE in Biomedical System Design (also ECE 402)
Spring. 1-4 credits. Co- or prerequisites: at least one of ECE 425, ECE 470, ECE 453, J. C. Hudina.

For description, see ECE 402.

BMPE 440 Electronics in Neurobiology (also BIONB 440)
Fall. 4 credits. Limited to seniors, and graduate students. Prerequisite: a calculus course. S-U grades optional. Offered alternate years. B. R. Land.

For description, see BIONB 440.

BMPE 441 Computer in Neurobiology (also BIONB 441)
Fall. 4 credits. Limited to seniors, and graduate students. Prerequisite: a calculus course. S-U grades optional. Offered alternate years. B. R. Land.

For description, see BIONB 441.

BMPE 463 Neuromuscular Biomechanics (also M&AEE 463)
Spring. 3 credits. Prerequisites: ENGRD 202 and 203, or permission of instructor. Offered alternate years.

For description, see M&AEE 463.

BMPE 464 Orthopaedic Tissue Mechanics (also M&AEE 464)
Spring. 3 credits. Prerequisites: ENGRD 202 and M&AEE 325 or permission of instructor. Offered alternate years.

For description, see M&AEE 464.

BMPE 481 Biomedical Engineering (also CHEM 481)
Spring. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor. Lecture and laboratory.

W. L. Olbricht.

For description, see CHEME 481.

BMPE 491 Principles of Neurophysiology (also BIONB 491)
Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students with permission of instructor. B. R. Johnson.

For description, see BIONB 491.
For description, see A&EP 470.

For description, see M&AE 565.

and pharmaceuticals, and stringent ethical needs of patients and physicians, the

Applications in human medicine. Co­

Students learn how to design biomedical
devices or therapeutic

occasionally be held outside of scheduled
times.

BMEP 539 Biomedical Materials and Devices for Human Body Repair (also TXA 439)

Spring. 2-3 credits. Prerequisites: college Natural Science requirement (Chem. or Biol). C. C. Chu.

For description, see TXA 439. Extra project required; same lectures as TXA 439.

BMEP 550 Product Engineering and Design in Biomedical Engineering

Spring. 3 credits. Prerequisite: graduate standing with priority given to M.Eng.

Students majoring in BMEP. D. L. Bartel.

Students learn how to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards of biomedical engineering practice.

BMEP 565 Biomechanical Systems—Analysis and Design (also M&AE 565)

Fall. 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials (e.g., TRAM/ENGRD 202 and 203) and senior standing, graduate standing or permission of instructor.

For description, see M&AE 565.

BMEP 570 Biophysical Methods (also BIONB 470 and A&EP 470)

Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level, some knowledge of cellular biology helpful but not required. Letter grades only.

For description, see A&EP 470.

BMEP 578 Computer Analysis of Biomed Images (also ECE 578)

Spring. 4 credits. Prerequisite: permission of instructor. A. P. Reeves.

For description, see ECE 578.

BMEP 591 Design Project

Fall, spring. 3-0 credits. Students are encouraged to register for two terms as a continuing course. Required for M. Eng.

students majoring in BME.

Design and economic evaluation of a biomedical engineering device or therapeutic strategy. Team projects are encouraged.

BMEP 607 Principles of Magnetic Resonance Imaging (MRI)

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. Y. Wang.

Physical principles and engineering techniques of MRI. Application in human medicine. Co­taught with Well Medical College.

BMEP 631 Engineering Principles for Drug Delivery (also CHEME 631)

Fall. 3 credits. Prerequisites: graduate standing and background in organic and polymer chemistry or permission of instructor.

Application of engineering design principles to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmacological stability, stimuli-sensitive systems, controlled release devices, prodrugs, targeted drug delivery, biomaterials, gene therapy, and governmental regulatory issues.

BMEP 663 Advanced Topics in Neuromuscular Biomechanics (also M&AE 663)

Spring. 3 credits. Permission of instructor only. Offered at alternate years. F. Valero-Cuevas.

For description, see M&AE 663.

[BMEP 664 Mechanics of Bone (also M&AE 664)]

Spring. 3 credits. Prerequisites: graduate standing or permission of instructor.

BMEP 665 Principles of Tissue Engineering (also M&AE 665 and MS&E 665)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. J. Bonassar.

This course covers introductory concepts in tissue engineering, including polymeric biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

BMEP 703 Graduate Student Teaching Experience

Fall. Spring. Variable credit. S-U grades optional. Staff.

Guided individual experience in laboratory instruction and/or lectures/recitation instruction. Provides a preparatory teaching experience for graduate students considering an academic career.

BMEP 711 Fundamentals of Biomedical Engineering Research I

Fall. 3 credits. Prerequisite: graduate standing. Priority is given to MS/PhD graduate students with a major or minor in BME. Staff.

First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

BMEP 712 Fundamentals of Biomedical Engineering Research II

Spring. 3 credits. Prerequisite: BMEP 711 or permission of instructor. Staff.

Continuation of BMEP 711.

BMEP 716 Immersion Experience in Medical Research and Clinical Practice

Summer. 6 credits. Prerequisite: open to PhD students in BME. D. L. Bartel.

A six-week immersion at Weill Medical College. Students participate in lectures, rounds, and seminars; observe surgeries; and solve medical problems presented by the staff.

BMEP 731 Advanced Biomedical Engineering Analysis of Biological Systems

Fall. 3 credits. Prerequisite: graduate standing. Priority given to MS/PhD and M.Eng. students majoring in BMEP. Not offered 2004–2005. Staff.

The fundamentals of quantitative analysis of biological systems. The course illustrates analytical methods applicable to a variety of biological systems, ranging from molecular to cellular to organ to application of whole-body systems.

BMEP 760 Nucleic Acid Engineering (also BEE 760)

Spring. 3 credits. Prerequisite: BEE 360 or permission of instructor.

For description, see BEE 760.

BMEP 790 Biomedical Engineering Seminar

Fall, spring. 1 credit. Prerequisite: graduate standing. Staff.

Research-based seminars. May meet concurrently with other seminar series as appropriate.

BMEP 890 MS Thesis Research

Fall, spring. Variable credit.

Thesis research for the M.S. degree in BME.

BMEP 990 Ph.D. Thesis Research

Fall, spring. Variable Credit.

Thesis research for the Ph.D degree in BME.

CHEMICAL AND BIOMOLECULAR ENGINEERING

CHEME 112 Introduction to Chemical Engineering (also ENGR 112)

Fall. 3 credits. Limited to freshmen. T. M. Duncan.

This is a course in the Introduction to Engineering series. For description, see ENGR 112.

CHEME 219 Mass and Energy Balances (also ENGR 219)

Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. W. L. Olbricht.

For description, see ENGR 219.

CHEME 301 Nonresident Lectures

Spring. 1 credit. P. Clancy.

Lectures from industry and from selected departments of the university provide information to assist students in their post­graduate plans.

CHEME 313 Chemical Engineering Thermodynamics

Fall. 3 credits. Prerequisite: physical chemistry II. F. A. Escobedo.
A study of the first and second laws and their consequences for chemical systems. Thermodynamic properties of pure fluids, solids, and mixtures, phase and chemical reaction equilibria; heat effects in batch and flow processes, and power cycles and refrigeration.

**CHEM 323 Fluid Mechanics**
Spring. 3 credits. Prerequisites: CHEM 219 and engineering mathematics sequence. D. Koch.

**CHEM 324 Heat and Mass Transfer**
Fall. 3 credits. Prerequisite: CHEM 323. C. Cohen.

**CHEM 332 Analysis of Separation Processes**
Spring. 3 credits. Prerequisites: CHEM 313 and 324. Y. L. Joo.
This course covers analysis of separation processes involving phase equilibria and mass transfer. Topics include phase equilibria, equilibrium-based separations, rate-based separation processes (membrane separations, sorption operations), introduction to bioseparations and process simulators; choosing a separation option; and the design and synthesis of separation processes.

**CHEM 372 Introduction to Process Dynamics and Control**
Spring. 2 credits. Prerequisites: CHEM 313 and 323. A. B. Anton.
Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

**CHEM 390 Reaction Kinetics and Reactor Design**
Spring. 3 credits. Prerequisites: CHEM 313 and 323. J. R. Engstrom.
A study of chemical reaction kinetics and principles of reactor design for chemical processes.

**CHEM 391 Physical Chemistry II (also CHEM 391)**
Spring. 4 credits. Limited to engineering students. T. M. Duncan.
For description, see CHEM 391.

**CHEM 401 Molecular Principles of Biomedical Engineering (also BMEP 301)**
Fall. 3 credits. Prerequisites: BIO G 110 or BIO BM 330. K. H. Lee.
For description, see BMEP 301.

**CHEM 402 Cellular Principles of Biomedical Engineering (also BMEP 302)**
Spring. 3 credits. D. Putnam.
For description, see BMEP 302.

**CHEM 432 Chemical Engineering Laboratory**
Fall. 4 credits. Prerequisites: CHEM 323, 324, 332, and 390. A. M. Center and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

**CHEM 462 Chemical Process Design**
Spring. 4 credits. Prerequisite: CHEM 432. A. M. Center and staff.
Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reaction system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

**CHEM 470 Process Control Strategies**
Spring. 3 credits. A. M. Center.
Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

**CHEM 472 Feedback Control Systems (also ECE 472 and M&AE 478)**
Fall. 4 credits. Prerequisites: CHEM 372, ECE 301, M&AE 326, or permission of instructor. A. B. Anton and R. D'Andrea.
For description, see M&AE 478.

**CHEM 480 Chemical Processing of Electronic Materials**
Spring. 3 credits. A. B. Anton.
Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermochemistry of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

**CHEM 481 Biomedical Engineering (also BMEP 481)**
Spring. 3 credits. Prerequisite: CHEM 324 or equivalent or permission of instructor. W. L. Olbricht.
Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (EKG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

**CHEM 484 Microchemical and Microfluidic Systems**
Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. J. R. Engstrom.
Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies.

**CHEM 490 Undergraduate Projects in Chemical Engineering**
Fall, spring. 1-6 credits (1 credit per section).
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

**CHEM 491 Undergraduate Teaching in Chemical Engineering**
Fall. 1 credit. T. M. Duncan and M. Ackley.
Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

**CHEM 520 Chemical, Polymer, Biomedical, and Electronic Materials Processing**
Fall, spring. 1-6 credits (1 credit per section).
An introduction to polymer processing and analysis and mathematical modeling, graphical methods and dynamic scaling. Open to nonchemical engineers only.

**CHEM 520.1 An Overview of Chemical Processing**
Spring. 1 credit. Meets first third of term. Limited to nonchemical engineers. T. M. Duncan.
An introduction to chemical engineering design and analysis—mathematical modeling, graphical methods and dynamic scaling. Open to nonchemical engineers only.

**CHEM 520.2 Introduction to Biomedical Engineering**
Spring. 1 credit. Meets first third of term. W. L. Olbricht.
Meets concurrently with CHEM 481.

**CHEM 520.3 Introduction to Electronic Materials Processing**
Spring. 1 credit. Meets first third of term. A. B. Anton.
Meets concurrently with CHEM 480.

**CHEM 520.4 Introduction to Polymer Processing**
Spring. 1 credit. Meets second third of term. L. A. Archer.
Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

**CHEM 520.5 Chemical Engineering Tools and Equipment**
Spring. 1 credit. Meets first third of term. A. M. Center.
An introduction to the hardware used in chemical engineering processes and a discussion of how these mechanical devices are configured to meet their process objectives. Also includes an introduction to the evaluation techniques and troubleshooting methods frequently used by chemical engineers.

**CHEM 520.6 Introduction to Petroleum Refining**
Fall. 1 credit. Meets second third of term. A. M. Center.
The petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

**CHEM 543 Bioprocess Engineering**
Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler.
A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Primary emphasis is on production of biopharmaceuticals, but biological waste treatment and medical systems are also considered.

**CHEM 565 Design Project**
Fall, spring. 3 or 6 credits. Required for students in the M.Eng. (Chemical) program.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.
**CHEM 572 Managing New Business Development**  
Fall. 3 credits. Prerequisites: graduate standing; undergraduates must have permission of instructor. A. M. Center. A case study approach introduces the typical fundamental factors driving a business venture; examines how to develop implementation strategies for the venture; and teaches the project management skills necessary to successfully implement the venture.

**CHEM 590 Special Projects in Chemical Engineering**  
Fall, spring. Variable credit. Limited to graduate students. Nonthesis research or studies on special problems in chemical engineering.

**CHEM 631 Engineering Principles for Drug Delivery (also BMEP 631)**  
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see BMEP 631.

**CHEM 640 Polymeric Materials**  

**CHEM 644 Aerosols and Colloids**  
Fall. 3 credits. D. Koch. Dynamics of micro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include the formation and growth of particles; their transport, rheological, and phase behaviors; and their role in technologies including paints, foods, health-care products, drug delivery, composite materials, and air pollution control.

**CHEM 661 Air Pollution Control**  

**CHEM 675 Synthetic Polymer Chemistry (also MS&E 622 and CHEM 671)**  
Fall. 4 credits. Prerequisites: CHEM 590-360 or equivalent or permission of instructor. For description, see CHEM 671.

**CHEM 711 Advanced Chemical Engineering Thermodynamics**  
Fall. 3 credits. Prerequisite: CHEM 313 or equivalent. P. H. Stein. Postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problem solving. Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

**CHEM 713 Chemical Kinetics and Transport**  
Spring. 3 credits. P. H. Stein. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

**CHEM 731 Advanced Fluid Mechanics and Heat Transfer**  
Fall. 3 credits. Prerequisites: CHEM 324 and 342 or equivalent. Y. L. Joo. Topics include: derivation of conservation equations; convective heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

**CHEM 741 Selected Topics in Biochemical Engineering**  
Fall. 3 credits. Corequisite: CHEM 711 or equivalent. Offered alternate years; next offered 2005-2006. C. Cohen. Discussion of current topics and research in biochemical engineering for graduate students.

**CHEM 745 Physical Polymer Science I**  
Fall. 3 credits. Corequisite: CHEM 711 or equivalent. Covers thermodynamic properties of dilute, semifluid, and concentrated solutions from both classical and scaling approaches. Also covers characterization techniques of dilute solutions: osmometry, light scattering, viscometry, and sedimentation. Covers rubber elasticity, mechanical and thermodynamic properties of gels. Includes discussion of polymer melts: equations of state and glass transition phenomenon.

**CHEM 751 Mathematical Methods of Chemical Engineering Analysis**  
Fall. 4 credits. D. L. Koch. Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

**CHEM 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation**  
Fall. 3 credits. Prerequisite: CHEM 751 or equivalent. Offered alternate years. P. H. Stein. Topics include elements of stability and bifurcation theory, branch-following techniques, stability of discrete and continuous systems; and application to elasticity and reaction-diffusion, and hydrodynamic systems using software for continuation problems.

**CHEM 790 Seminar**  
Fall. Spring. 1 credit each term. General chemical engineering seminar required of all graduate students in the field of chemical and biomolecular engineering.

**CHEM 890 Thesis Research**  
Fall, spring. Variable credit. Thesis research for the M.S. degree in chemical engineering.

**CHEM 990 Thesis Research**  
Fall, spring. Variable credit. Thesis research for the Ph.D. degree in chemical engineering.

**CIVIL AND ENVIRONMENTAL ENGINEERING**

Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Engineering Systems and Management. Within each mission area are several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

**General**

CEE 113 Solving Environmental Problems for Urban Regions (also ENGR 113) (S.3cr.)

CEE 116 Modern Structures (also ENGR 116) (F.3cr.)

CEE 241 Engineering Computation (also ENGRD 241) (S.3cr.)

CEE 401 Undergraduate Engineering Teaching (S,4cr.)

CEE 408 Introduction to CAD (F,4cr.)

CEE 509 Special Topics in Civil and Environmental Engineering (F,5cr.)

CEE 532 Engineering Economics and Management (also ENGRG 325) (S,5cr.)

CEE 600 Senior Honors Thesis (F,5cr.)

CEE 901 Undergraduate Engineering Teaching in CEE (F,5cr.)

**Civil Infrastructure**

See also: CEE 116, CEE 241, CEE 304, CEE 508, CEE 503, and CEE 595

**Geotechnical Engineering**

CEE 241 Introduction to Geotechnical Engineering and Analysis (S,5cr.)

CEE 448 Foundation Engineering (F,5cr.)

CEE 449 Retaining Structures and Slopes (S,5cr.)

CEE 450 Environmental Site and Remediation (S,5cr.)

CEE 501/502 Project Design in Geotech/Structures (F,5cr.)

CEE 602 Seminar—Civil Infrastructure (F,5cr.)

CEE 640 Foundation Engineering (F,3cr.)

CEE 641 Retaining Structures and Slopes (S,5cr.)
CEE 644 Environmental Applications of Geotechnical Engineering (S,3cr.)
CEE 649 Special Topics in Geotechnical Engineering (F,S,Var.)
CEE 740 Engineering Behavior of Soils (F,3cr.)
CEE 741 Rock Engineering (F,3cr.)
CEE 744 Advanced Foundation Engineering (S,2cr.)
CEE 745 Soil Dynamics (S,3cr.)
CEE 746 Embankment Dam Engineering (S,2cr.)
CEE 749 Research in Geotechnical Engineering (F,S,Var.)
CEE 840 Thesis—Geotechnical Engineering (F,S,Var.)

Structural Engineering
CEE 116 Modern Structures (F,3cr.)
CEE 371 Structural Modeling and Behavior (S,4cr.)
CEE 372 Structural Mechanics and Analysis (F,3cr.)
CEE 471 Fundamentals of Structural Mechanics (F,3cr.)
CEE 472 Finite Element Analysis of Solids and Structures (S,3cr.)
CEE 473 Design of Concrete Structures (F,4cr.)
CEE 474 Design of Metal Structures (F,3cr.)
CEE 475 Introduction to Composite Materials (S,3cr.)
CEE 476 Evaluation and Failure of Structures (S,3cr.)
CEE 477 Concrete Materials and Construction (S,3cr.)
CEE 478 Structural Dynamics and Earthquake Engineering (S,3cr.)
CEE 479 Collaborative Distance Design of Structural Systems (F,S,8cr.)
CEE 481 LRFD-Based Engineering of Wood Structures (S,3cr.)
CEE 501/502 Design Project in Structural Engineering (F,5cr.)
CEE 602 Seminar—Civil Infrastructure (F,S,1cr.)
CEE 671 Structural Mechanics (F,3cr.)
CEE 672 Finite Element Analysis of Solids and Structures (S,3cr.)
CEE 673 Design of Concrete Structures (F,4cr.)
CEE 675 Concrete Materials and Construction (S,3cr.)
CEE 676 Finite Element Analysis for Mechanical, Structural, and Aerospace Applications (S,3cr.)
CEE 677 Engineering Analysis (F,3cr.)
CEE 678 Structural Dynamics and Earthquake Engineering (S,3cr.)
CEE 679 Evaluation and Failure of Structures (S,3cr.)
CEE 697 Special Topics in Structural Engineering (F,S,Var.)
CEE 770 Engineering Fracture Mechanics (F,3cr.)
CEE 771 Stochastic Mechanics (F,3cr.)
CEE 772 Random Vibration (F,3cr.)
CEE 773 Structural Reliability (F,3cr.)
CEE 774 Advanced Structural Concrete (F,3cr.)
CEE 775 Mathematical and Computational Modeling of Material Behavior (S,3cr.)
CEE 776 Advanced Topics in Stability (F,3cr.)
CEE 777 Computational Solids and Structural Mechanics (S,4cr.)
CEE 778 National Disaster Risk Assessment and Management (S,3cr.)
CEE 783 Civil and Environmental Engineering Materials Project (F,S,Var.)
CEE 785 Research in Structural Engineering (F,S,Var.)
CEE 880 Thesis—Structural Engineering (F,S,Var.)

Environment
See also CEE 113, CEE 241, and CEE 304

Environmental Engineering
CEE 113 Solving Environmental Problems for Urban Regions (S,3cr.)
CEE 351 Environmental Quality Engineering (S,3cr.)
CEE 451 Microbiology for Environmental Engineering (F,3cr.)
CEE 452 Water Supply Engineering (S,3cr.)
CEE 453 Laboratory Research in Environmental Engineering (F,3cr.)
CEE 454 Sustainable Small-Scale Water Supplies (F,3cr.)
CEE 501/502 Design Project in Environmental Engineering (F,3cr.)
CEE 601 Seminar—Water Resources and Environmental Engineering (F,1cr.)
CEE 653 Water Chemistry for Environmental Engineering (F,3cr.)
CEE 654 Aquatic Chemistry (S,3cr.)
CEE 655 Transport, Mixing, and Transformation in the Environment (F,3cr.)
CEE 656 Physical/Chemical Process (F,3cr.)
CEE 657 Biological Processes (S,3cr.)
CEE 658 Microbial Biodegradation and Biocatalysis Lab (S,3cr.)
CEE 659 Seminar—Environmental Quality Engineering (S,1cr.)
CEE 750 Research in Environmental Engineering (F,S,Var.)
CEE 759 Special Topics in Environmental Engineering (F,S,Var.)
CEE 850 Thesis—Environmental Engineering (F,S,Var.)

Environmental Systems
See Engineering Systems and Management mission areas for a listing of courses in Environmental and Public Systems.

Environmental Fluid Mechanics and Hydrology
CEE 331 Fluid Mechanics (F,S,4cr.)
CEE 332 Hydraulic Engineering (S,3cr.)
CEE 431 Introduction to Groundwater Hydrology (also GEOL 445 and BEE 471) (S,3cr.)
CEE 432 Hydrology (S,3cr.)
CEE 435 Coastal Engineering (S,3cr.)
CEE 436 Case Studies in Environmental Fluid Mechanics (S,4cr.)
CEE 437 Experimental Methods in Fluid Dynamics (S,3cr.)
CEE 501/502 Design Project in Environmental Systems (F,S,3cr.)
CEE 503 Seminar—Water Resources and Environmental Engineering (F,1cr.)
CEE 531 Computational Simulation of Transport in the Environment (S,3cr.)
CEE 632 Hydrology (S,3cr.)
CEE 633 Flow in Porous Media and Groundwater (F,3cr.)
CEE 634 Boundary Layer Meteorology (F,3cr.)
CEE 635 Small and Finite Amplitude Water Waves (S,3cr.)
CEE 636 Environmental Fluid Mechanics (S,3cr.)
CEE 637 Experimental Methods in Fluid Dynamics (S,4cr.)
CEE 638 Seminar—Hydraulics (S,1cr.)
CEE 639 Special Topics in Hydraulics (F,S,Var.)
CEE 655 Transport, Mixing, and Transformation in the Environment (F,3cr.)
CEE 735 Research in Hydraulics (F,S,Var.)
CEE 850 Thesis—Fluid Mechanics and Hydrology (F,S,Var.)

Engineering Systems and Management
See also CEE 113, CEE 241, and CEE 304

Engineering Management
CEE 490 Management Practice in Project Engineering (F,3cr.)
CEE 590 Project Management (F,S,4cr.)
CEE 591 Engineering Management Project (F,3cr.)
CEE 592 Engineering Management Project (S,3cr.)
CEE 593 Engineering Management Methods: Data, Information, and Modeling (F,3cr.)
CEE 594 Economic Methods for Engineering and Management (S,4cr.)
CEE 595 Construction Planning and Operations (F,3cr.)
CEE 596 Management Issues in Forensic Engineering (F,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 598 Introduction to Decision Analysis (F,3cr.)
CEE 599 Special Topics in Engineering Management (F,S,Var.)
CEE 694 Research in Engineering Management (F,S,Var.)

Environmental and Public Systems
CEE 323 Engineering Economics and Management (also ENGRG 323) (S,3cr.)
CEE 501/502 Design Project in Environmental Systems (F,S,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 620 Water Resource Systems Engineering (S,3cr.)
CEE 621 Stochastic Hydrology (S,3cr.)
CEE 623 Environmental Quality Systems Engineering (F,S,3cr.)
CEE 628 Seminar—Environmental and Water Resources Systems Analysis (S,1cr.)
CEE 722 Environmental and Water Resources Systems Analysis Research (F,S,3cr.)
CEE 729 Special Topics in Environmental and Water Resources Systems Analysis (F,S,var.)
CEE 820 Thesis—Environmental and Water Resources Systems Engineering (F,S,3cr.)

**Remote Sensing**

CEE 411 Remote Sensing: Resource Inventory Methods (also CSS 411) (S,3cr.)
CEE 610 Remote Sensing Fundamentals (F,S,3cr.)
CEE 615 Digital Image Processing (S,3cr.)
CEE 617 Special Topics—Remote Sensing (F,S,3cr.)
CEE 710 Research—Remote Sensing (F,3cr.)
CEE 810 Thesis—Remote Sensing (F,S,3cr.)

**Systems Engineering**

CEE 406 Civil Infrastructure Systems (S,3cr.)
CEE 504 Applied Systems Engineering (also MREE 591, ECE 512, ORIF 512, SYSEN 510, COM S 504, ORIF 504) (F,3cr.)
CEE 505 Applied Systems Engineering (also MREE 592, ECE 513, ORIF 513, SYSEN 520, COM S 505) (S,3cr.)
CEE 509 Heuristic Methods of Optimization (also COM S 574, CIS 572, ORIF 533) (F,S,4cr.)
CEE 603 Seminar—Engineering Systems and Management (F,3cr.)

**Transportation**

CEE 361 Introduction to Transportation Engineering (S,Su,3cr.)
CEE 463 Transportation and Information Technology (F,3cr.)
CEE 464 Transportation Systems Design (S,3cr.)
CEE 661 Urban Transportation Planning and Modeling (F,3cr.)
CEE 662 Urban Transportation Network and Design (F,S,3cr.)
CEE 663 Network Flows and Algorithms (S,3cr.)
CEE 762 Practicum in Modeling Transportation Systems (F,3cr.)
CEE 764 Special Topics in Transportation (F,S,3cr.)
CEE 860 Thesis—Transportation Engineering (F,S,3cr.)

**CEE 113 Solving Environmental Problems for Urban Regions (also ENGRD 113)**

Spring. 3 credits. Students must register under ENGRD 113. M. L. Weber-Shirk.
This is a course in the Introduction to Engineering series. For description, see ENGRD 113.

**CEE 116 Modern Structures (also ENGRD 116)**

Fall. 3 credits. Students must register under ENGRD 116. M. J. Sansalone.
This is a course in the Introduction to Engineering series. For description, see ENGRD 116.

**CEE 241 Engineering Computation (also ENGRD 241)**

Spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294 (completion of MATH 294 is suggested). Students must register under ENGRD 241. C. A. Shoemaker.
For description, see ENGRD 241.

**CEE 304 Uncertainty Analysis in Engineering**

Fall. 4 credits. CEE Engineering Co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Stedinger.
Introduction to probability theory and statistical techniques, with examples from civil, environmental, biological, and related disciplines. Course covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, pollutant concentrations, and models of vehicle arrivals.

**CEE 308 Introduction to CADD**

Fall, spring. 1 credit. Prerequisite: affiliation in CEE or permission of instructor. Course begins second full week of classes. J. F. Abel.
Learn to employ Computer Aided Design and Drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD 2004 techniques. Alternative software tools for 3D visualization and solid modeling are introduced. Course meets in ACCEL once per week for twelve weeks, and grades are based on attendance, weekly exercises completed in class, and a semester project.

**CEE 309 Special Topics in Civil and Environmental Engineering**

Fall, spring. 1-6 credits. Staff.
Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

**CEE 323 Engineering Economics and Management (also ENGRD 323)**

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. A. H. Meyburg and J. F. Abel.
Introduction to technological, economic, and social aspects of transportation. Emphasis is on design and functioning of transportation systems and their components. Covers: supply-demand interactions; system planning, design, and management; traffic flow, intersection control and network analysis; institutional and energy issues; and environmental impacts.

**CEE 371 Structural Modeling and Behavior**

Spring. 4 credits. Prerequisite: ENGRD 202. J. F. Abel.
An introduction to the structural engineering enterprise including aspects of design, loads, behavior, form, modeling, mechanics, materials, analysis, and construction.

**CEE 372 Structural Mechanics and Analysis**

Fall. 4 credits. Prerequisite: ENGRD 202. J. F. Abel.
A strong foundation of mechanics and analysis is created by focusing on linear elastic behavior; the application of finite-element software. Covers: hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulent boundary layer, flows around obstacles, and open-channel flow. Includes small-group laboratory assignments.

**CEE 373 Hydraulic Engineering**

Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, open-channels, and river engineering. Lectures supplemented by laboratory work and a design project.
Topics include surface and internal wave dynamics, sediment and nutrient contaminant transport, and interfacial transfer. Lectures are based on laboratory/field projects. Course includes a design project.

[CEE 437 Experimental Methods in Fluid Dynamics]
Spring. 3 credits. Prerequisites: CEE 331 or equivalent and CEE 504 or equivalent (both may be taken concurrently). Next offered 2005-2006. E. A. Cowen. Same as CEE 637 but no project is required. For description, see CEE 637.

CEE 440 Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341. F. H. Kuhlawy. This course covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 441 Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke. This course covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 444 Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke. This course covers the principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis is on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfill designs. Design problems are based on real projects and involve visits from practicing engineers.

CEE 451 Microbiology for Environmental Engineering
Fall. 3 credits. Prerequisites: two semesters of college chemistry; organic chemistry or permission of instructor. R. F. Richardson. This course is intended to provide a background for moving to further study and commercial software and obtaining a strong professional background for entering environmental engineering and science. The course provides an overview of the characteristics of bacteria, archaea, unicellular eukaryotes (protozoa, algae, fungi), and viruses. Discussions of cell structure, bioenergetics and metabolism, and microbial genetics are included. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms; roles of microbes in the carbon, nitrogen, and sulfur cycles; enzymes; molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOM 290 or equivalent.

CEE 452 Water Supply Engineering

CEE 453 Laboratory Research in Environmental Science
Fall. 3 credits. Prerequisites: CEE 351 or permission of instructor. M. L. Weber-Shirk. Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment and remediation; and wastewater treatment. Design of laboratory experiments, data analysis, computerized process control, and model development are emphasized.

CEE 454 Sustainable Small-Scale Water Supplies
Fall. 3 credits. Offered alternate years. M. L. Weber-Shirk. This course covers the design and analysis of small-scale drinking water supply systems. We explore the technical, economic, and social constraints that form the sustainable space—i.e., the set of viable technologies that could be adopted progressively to improve the availability and quality of water. Students work in teams to design water supply and treatment systems.

CEE 463 Transportation and Information Technology
Spring. 3 credits. Prerequisite: CEE 361. M. A. Turnquist. Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

CEE 471 Fundamentals of Structural Mechanics
Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. Senior for only by permission of the instructor. M. D. Grigoriu. Course topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 472 Finite Element Analysis of Solids and Structures
Spring. 3 credits. Prerequisites: CEE 371, CEE 372, and CEE 471. W. Aquino. This course covers the formulation of the finite element method in 2D and 3D continuum, basic 2D and 3D continuum isoparametric elements, plate and shell elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding the fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and
research. Problems are drawn primarily from structural and solid mechanics.

**CEE 473 Design of Concrete Structures**
Fall. 4 credits. Prerequisite: CEE 341 or permission of instructor. K. C. Hover. Behavior and design of reinforced concrete and structures. Discussion of how forces are transferred through elements of building systems. Includes a semester project requiring the design of a reinforced concrete structure.

**CEE 474 Design of Metal Structures**
Fall. 4 credits. Prerequisite: CEE 341 or permission of instructor. T. Pekoz. Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

**CEE 475 Introduction to Composite Materials**
(also M&AE 455, MS&E 555, and T&M 455) Spring. 3 credits. L. Phoenix. For description, see T&M 455.

**[CEE 476 Evaluation and Failure of Structures**
Spring. 3 credits. Offered alternate years. Prerequisites: ENGRD 202, ENGRD 261, and ENGRD 203; CEE 371 and CEE 473. Not offered 2004–2005. M. J. Sansalone. This course covers the critical structural evaluation through the lens of failure. The course builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., stress wave propagation, electromagnetic wave propagation, heat flow), introduces students to structural damage and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast/impact loadings on structures and the concept of progressive collapse.)

**CEE 477 Concrete Materials and Construction**
Spring. 3 credits. K. C. Hover. This course covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

**CEE 478 Structural Dynamics and Earthquake Engineering**
Spring. 3 credits. M. D. Grigoriu. Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

**[CEE 479 Collaborative, Distance Design of Structural Systems (also M&AE 491)**
Fall, spring. 8 credit hours. Students who enroll in CEE 479 are expected to take it in both the fall and spring semesters. Not offered 2004–2005. A. Ingraffea, S. Jones. This is a new senior-level design course, funded by NASA and the state of New York and taught jointly with Syracuse University. It emphasizes teamwork, collaboration at a distance, and multidisciplinary activities. The project is based on structural systems for a reusable launch vehicle. The course involves design, analysis, simulation, building, testing, virtual reality, and asynchronous learning environments. First semester covers conceptual design, study of advanced mechanics, materials, software applications, risk and cost analysis. The second semester involves detailed design, construction, testing, and simulation.

**CEE 481 LRFD-Based Engineering of Wood Structures**
(also BEE 481) Spring. 3 credits. Prerequisite: ENGRD 202. For description see BEE 481 in the College of Agriculture and Life Sciences section of this catalog.

**[CEE 490 Management Practice in Project Engineering**
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2007–2008. K. C. Hover. An introduction to the principles of project management. Planning, organizing, communicating, scheduling, and controlling of engineering work done in project teams.

**CEE 492 Engineers for a Sustainable World: Engineering in International Development**
Fall. 3 credits. R. A. Davidson and P. Doing. Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local, and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationships between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

**CEE 501/502 Design Project**
Fall, spring. 3 credits each term. Required for students in the M.Eng. (Civil) program.

CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically formed by student design groups, and the topics reflect the diverse specialty areas of the Civil and Environmental engineering field as described below.

**CEE 501/502 Design Project in Structural Engineering**
Design of a major civil engineering project. Planning and a preliminary design are completed during the fall term; the final design is completed in the January intersession.

**CEE 501/502 Design Project in Geotechnical Engineering**
Design for a major geotechnical engineering project. Planning and preliminary design during the fall term, final design completed in January intersession.

**CEE 501/502 Design Project in Environmental Water Systems**
Design of a major water systems project.

**CEE 501/502 Design Project in Environmental Engineering**
Design of a major environmental engineering project.

**CEE 501/502 Design Project in Environmental Fluid Mechanics and Water Research**
Design of a major environmental systems fluid mechanics and water research project.

**CEE 502 Professional Practice and Ethics in Engineering**
Spring. 3 credits. Open to all engineering undergraduate seniors and graduate students; required for students in the M.Eng. (Civil) program. C. H. Trautmann. This course is designed to prepare students for professional practice by examining various nontechnical aspects of engineering, including finance, marketing, ethics, law, and management.

**CEE 504 Applied Systems Engineering**
(also COM S 504, ECE 512, M&AE 591, OARIE 512, SYSEN 510) Fall. 3 credits. Prerequisite: senior or graduate standing in an engineering field; concurrent or recent (in the past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor. A. R. George and R. Roundy. For description, see SYSEN 510.

**CEE 505 Applied Systems Engineering**
(also COM S 505, ECE 513, M&AE 592, OARIE 513, SYSEN 520) Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504). COM S 504, ECE 512, M&AE 591, OARIE 512 or SYSEN 520). Staff. For description, see SYSEN 520.

**CEE 509 Heuristic Methods for Optimization**
(also COM S 572, CIS 572, ORB 533) Fall. 3 or 4 credits. Prerequisites: graduate standing or COM S, ENGRD 211, ENGRD 321, or CEE 241: ENGRD 241 or permission of instructor. C. A. Shoemaker and B. Selman. This course teaches heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, and random walk developed for optimization of combinatorial- and continuous-variable problems. Applications project options include wireless networks, genome mapping, job shop scheduling, partial differential equations, satisfiability, or independent projects. Statistical methods are presented for comparing search algorithm results. Advantages and disadvantages of heuristic search methods are discussed in parallel and serial computation are discussed in comparison with other optimization algorithms.

**CEE 590 Project Management**
Fall, spring. 4 credits. Prerequisite: permission of instructor. F. J. Wayno. A core graduate course in course management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (methods for planning, scheduling, and control) and the "human" side (forming a project team, managing performance, resolving conflicts, etc.). With somewhat greater emphasis on the latter.

**CEE 591 Engineering Management Project**
Fall. 3 credits. Prerequisite: permission of instructor. P. Carr. An intensive evaluation of the management aspects of a major engineering project or system. Most students work on a large group project in the area of project management. Students may also work singly or in small groups on an engineering management topic of special interest to them.
CEE 592 Engineering Management Project
Spring. 3 credits. Prerequisite: permission of instructor. P. Carr.
A continuation of CEE 591.

CEE 593 Engineering Management Methods: Data, Information, and Modeling
Fall. 3 credits. Prerequisites: CEE 323 and CEE 304 or equivalent. M. A. Turqanist.
Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project design, scheduling, operations, forecasting, and resource allocation.

CEE 594 Economic Methods for Engineering and Management (also EMSE 594)
Spring. 4 credits. Prerequisite: calculus, probability and statistics, and a course in economics. For seniors and graduate students or by permission of instructor. R. E. Schuler.
Economic concepts are introduced and used to select, calibrate and apply proper analytic decision tools in engineering design and management. Topics covered include: market analysis and pricing strategies; production choices and cost estimation; input acquisition and employee motivation; project evaluation and the cost of capital; decision-making in risky and uncertain environments; industry structure, bidding strategies and game theory; plus the regulatory and ethical consequences of overall managerial strategies.

CEE 595 Construction Planning and Operations
Fall. 3 credits. K. C. Hover.
A course on the fundamentals of construction planning: organization of the work site; construction planning, scheduling, and cost estimating; bidding; temporary structures; contract documents and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 596 Management Issues in Forensic Engineering
Fall. 3 credits. J. G. Carr.
This course is an introduction to forensic engineering, contract administration, and dispute resolution, with particular emphasis on contract formation, performance, breach, and remedies. Through case studies in forensics, the engineer's standard of care and design obligations are explored. The engineer's technical and ethical duties to the client, the contractors, and the public are examined.

CEE 597 Risk Analysis and Management
Spring. 3 credits. Prerequisite: An introduction to probability and statistics course such as CEE 304, ENGRD 270, ILRST 210, BTHY 261 or AEM 210; and two semesters of calculus. For seniors and graduate students or by permission of instructor. R. A. Davison.
Course develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the United States historical accidents, natural hazards, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

CEE 598 Introduction to Decision Analysis
Fall. 3 credits. Prerequisite: an introduction to probability and statistics course such as CEE 304, ENGRD 270, ILRST 210, BTHY 261 or AEM 210. For seniors and graduate students or by permission of instructor. R. A. Davison.
Framework to structure the way we think about decision situations that are complicated by uncertainty, complexity, and competing objectives. Specific decision analysis concepts and tools, such as decision trees, sensitivity analysis, value of information, and utility theory. Applications to all areas of engineering and life. Includes a group project to analyze a real-world decision.

CEE 601 Seminar—Water Resources and Environmental Engineering
Fall. 1 credit. R. R. Mahon, simulation.
Presentation of topics of current interest.

CEE 602 Seminar—Civil Infrastructure
Fall, spring. 1 credit. Required for first-year graduate students. Staff.
Presentation of topics of current interest.

CEE 603 Seminar—Engineering Systems and Management
Fall. 1 credit. Staff.
Presentation of topics of current interest.

CEE 605 Seminar—Issues in Risk Analysis
Fall 1 credit. S-4 option. Staff.
Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risk, communication issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series. Enrollment in seminar requires short reports and participation in three required discussion meetings for class members designed to integrate the issues raised during the semester.

CEE 606 Civil Infrastructure Systems
Spring. 3 credits. Letter or S/U grades. Prerequisites: probability and statistics (CEE 304 or equivalent) and engineering economics (CEE 325 or equivalent). L. K. Nozick.
This course is an introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, and Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

CEE 610 Remote Sensing Fundamentals (also CSS 660)
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

CEE 615 Digital Image Processing
Spring. 3 credits. Prerequisite: facility with algebra, trigonometry, and basic statistics or permission of instructor. W. D. Philpot.
An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

CEE 617 Special Topics—Remote Sensing
On demand. 1-6 credits. W. D. Philpot.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 620 Water-Resources Systems Engineering
Spring. 3 credits. Prerequisites: CEE 523 and CEE 593 or BEE 475. D. P. Lukacs.
Development and application of deterministic and stochastic optimization and simulation models for water-resource planning and management. Covers river-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality planning and control.

CEE 621 Stochastic Hydrology
Spring. 3 credits. Prerequisites: CEE 304 or permission of instructor. Not offered 2004–2005. J. R. Stedinger.
Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty and hydrologic inputs. Statistical issues include: maximum likelihood and moments estimators; censored data sets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

CEE 623 Environmental Quality Systems Engineering
Fall. 3 credits. Prerequisites: MATH 294, optimization, and graduate standing or permission of instructor. Not offered 2004–2005. C. A. Shoemaker.
Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include: regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use: linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

CEE 626 Case Studies in Environmental Fluid Mechanics
An introduction to fundamental fluid mechanics and transport processes of the environment through laboratory- and field-based studies (Guyuga Lake and Fall, Six-Mile, and Cascadilla Creeks) and case studies. Topics include surface and internal wave dynamics, sediment and nutrient/contaminant transport, and interfacial transfer. Lectures are based on laboratory- and field projects. Course includes a design project.
CEE 628 Seminar—Environmental and Water Resources Systems Analysis
Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker.
Graduate students and faculty members give informal lectures on topics related to ongoing activities in the fluid mechanics and related environmental systems planning and analysis.

CEE 631 Computational Simulation of Flow and Transport in the Environment
Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 241 or experience in numerical methods and programming, and CEE 331 or equivalent. Not offered 2005–2006. P. L.-F. Liu.
This course covers fundamental equations of saturated and unsaturated flow in porous media, flow in fractured media; numerical modeling of transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. The course teaches various numerical methods including finite difference, finite elements, and boundary elements.

CEE 632 Hydrology
Spring. 3 credits. Prerequisite: CEE 531. W. H. Brutsaert.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers: physical and statistical prediction methods for design related to hydrologic processes, hydrometeorology and evaporation, infiltration and base flow; surface runoff and channel flow; and nonlinear hydraulic processes; and storage routing and unit hydrograph methods.

CEE 633 Flow in Porous Media and Groundwater
Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications include aquifer hydraulics, pumping wells, drought flows, infiltration, groundwater recharge; land subsidence; seawater intrusion; miscible displacement; and transient seepage in unsaturated materials.

CEE 634 Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Not offered 2004–2005. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 635 Small and Finite Amplitude Water Waves
Review of linear and nonlinear theories of ocean waves. Discussions on the applicability of different wave theories to engineering problems.

CEE 636 Environmental Fluid Mechanics
Course covers analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 637 Experimental Methods in Fluid Dynamics (also M&AE 627)
Spring. 4 credits. Prerequisites: CEE 331 or equivalent and CEE 304 or equivalent (both may be taken concurrently). Not offered 2004–2005. E. A. Cowen.
Introduction to experimental data collection and analysis, in particular as they pertain to fluid flows. Covers: computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Also covers: analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CEE 638 Seminar—Hydraulics
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. Staff.
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 639 Special Topics in Hydraulics
On demand. 1–6 credits. Staff.
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 640 Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341. F. H. Kulhawy.
This course covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 641 Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke.
Course covers: Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 644 Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 341 or equivalent or permission of instructor. T. D. O'Rourke.
Covers principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis is on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 649 Special Topics in Geotechnical Engineering
On demand. 1–6 credits. Staff.
Supervised study of special topics not covered in the formal courses.

CEE 653 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: 1 semester of college chemistry or permission of instructor. L. W. Lion.
Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 654 Aquatic Chemistry
Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams, adsorption phenomena, humic acid chemistry, and chemical- and bioequilibrum computational techniques. In-depth coverage of topics covered in CEE 653.

CEE 655 Transport, Mixing, and Transformation in the Environment
Fall. 3 credits. Prerequisite: CEE 331. P. L.-F. Liu.
Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffusive, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CEE 656 Physical/Chemical Process
Fall. 3 credits. Prerequisite: previous or concurrent enrollment in CEE 653 or permission of instructor. J. J. Bisogni.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

CEE 657 Biological Processes
Spring. 3 credits. Prerequisites: an introductory course in microbiology and CEE 656, or permission of instructor. J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Biogeochemistry analysis, stoichiometry, biokinetic, and design of biological treatment process.
CEE 658 Microbial Biodegradation and Biocatalysis Lab
Spring. 3 credits. Prerequisites: CEE 451 or BIOM 250 or equivalent; CEE 351 or CHEM 390 or permission of instructor. M. E. Richardt.
Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzyme classes and kinetics, selective isolation of organisms with desired biocatalysis capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Student teams design and then construct a bioreactor employing their own environmental isolates that degrade a selected contaminant or produce a desired compound.

CEE 659 Seminar—Environmental Quality Engineering
Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff.
Presentation and discussion of current research in environmental engineering.

[CEE 661 Urban Transportation Planning and Modeling
Fall. 3 credits. Prerequisite: CEE 361 or permission of instructor. Offered alternate years. Next offered 2005-2006. A. H. Meyburg.]
This course covers modern transportation planning practice and the analytical tools that are necessary to engage in this field. Emphasis is on passenger transportation in the urban context. The legislative, political, and economic contexts of urban transportation planning (UTP) are discussed. The course presents the travel demand estimation process and the associated models and approaches and provides insights in travel survey data acquisition.

CEE 662 Urban Transportation Network Design and Analysis
Fall. 3 credits. Prerequisite: CEE 361 or permission of instructor. L. K. Nozick.
This course covers the development and use of mathematical models for the design and analysis of urban transportation networks, including formulations and solution procedures based on user equilibrium and stochastic user equilibrium. Students apply these tools to a substantive real-world case study.

[CEE 663 Network Flows and Algorithms
Spring. 3 credits. Prerequisite: CEE 662 or permission of instructor. Offered alternate years. Not offered 2004-2005. M. A. Tunniss.]
Algorithms for network flow problems encountered in transportation systems modeling, including shortest path, multiobjective shortest path, minimum cost flows, multi-commodity flows and generalized flows, are presented. Applications to vehicle routing, dynamic vehicle allocation, and network design are included.

CEE 671 Fundamentals of Structural Mechanics
Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. Primarily for seniors or by permission of instructor. M. D. Grigoriu.
Course topics include beam bending, beams on elastic foundation, stability analysis for columns and beam-columns, linear elasticity, numerical solutions for linear elasticity problems, and applications including stress concentration, torsion, and plates.

CEE 672 Finite Element Analysis of Solids and Structures
Spring. 3 credits. Prerequisites: CEE 371, CEE 372, and CEE 471. W. Aquino.
This course covers the formulation of the finite element method in 2D and 3D continuum isoparametric elements, plate and shell elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research. Problems are drawn primarily from structural and solid mechanics.

CEE 673 Design of Concrete Structures
Fall. 4 credits. Prerequisite: CEE 341 or permission of instructor. K. C. Hover.
This course covers the behavior and design of reinforced concrete and structures. Discussion of how forces are transferred through elements of building system is included. A semester project is assigned requiring the design of a reinforced concrete structure.

CEE 674 Design of Metal Structures
Fall. 4 credits. Prerequisite: CEE 341 or permission of instructor. T. Pekoz.
This course covers the behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges is included.

CEE 675 Concrete Materials and Construction
Spring. 3 credits. K. C. Hover.
This course covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 676 Finite Element Analysis (also T&AM 666 and M&AE 680)
Spring. 3 credits. Staff.
This course covers the conceptual, theoretical, and practical basis for finite element analysis in engineering, with emphasis on structural, mechanical, and thermal problems. It focuses on the FEM as a method for numerically solving partial differential equations. Topics include strong and weak problem forms; weighted-residual and variational formulations; formulations for elliptic, parabolic, and hyperbolic problems (Laplace's equation, elasticity, heat conduction, structural dynamics, wave propagation); meshing and error estimation and various kinds of elements.

CEE 677 Engineering Analysis

CEE 678 Structural Dynamics and Earthquake Engineering
Spring. 3 credits. M. D. Grigoriu.
Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 679 Evaluation and Failure of Structures
Spring. 3 credits. Offered alternate years. Not offered 2004-2005. M. J. Sansalone. This course teaches material and structural evaluation through the lens of failure. The course builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., stress wave propagation, electromagnetic wave propagation, heat flow), introduces students to design and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast/impact loadings on structures and the concept of progressive collapse.

CEE 692 Special Topics in Engineering Management
On demand. 1-6 credits. Staff.
Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 694 Research in Engineering Management
On demand. 1-6 credits. Staff.
The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

CEE 697 Special Topics in Structural Engineering
On demand. 1-6 credits. Staff.
Individually supervised study of one or more specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 710 Research—Remote Sensing
On demand. 1-6 credits. W. D. Philpot.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 722 Environmental and Water Resources Systems Analysis Research
On demand. 1-6 credits. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Staff.
Investigations of particular environmental or water resources systems problems.

**CEE 729 Special Topics in Environmental or Water Resources Systems Analysis**
On demand. 1-6 credits. Staff. Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

**CEE 735 Research in Hydraulics**
On demand. 1-6 credits. Staff. The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge of the form of a research report.

**CEE 740 Engineering Behavior of Soils**
Fall. 3 credits. Prerequisite: CEE 341. H. E. Stewart.

**CEE 741 Rock Engineering**
Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. T. D. O'Rourke.
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers stress states and stress analysis, design of foundations on, and openings in, rock masses, and analysis of the stability of rock slopes.

**CEE 744 Advanced Foundation Engineering**
Spring. 2 credits. Prerequisite: CEE 640. F. H. Kulhawy.
A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

**CEE 745 Soil Dynamics**
Spring. 2 credits. Prerequisite: permission of instructor. Next offered spring 2006. H. E. Stewart.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

**CEE 746 Embankment Dam Engineering**
Spring. 2 credits. Prerequisite: CEE 641 and 741, or permission of instructor. Not offered 2004–2005. F. H. Kulhawy.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance (monitoring, abatement and foundation evaluation. Introduction to tailings dams.)

**CEE 749 Research in Geotechnical Engineering**
On demand. 1-6 credits. Staff.
For students who want to pursue a particular geotechnical topic in considerable depth.

**CEE 750 Research in Environmental Engineering**
On demand. 1-6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

**CEE 759 Special Topics in Environmental Engineering**
On demand. 1-6 credits. Staff. Supervised study in special topics not covered in formal courses.

**CEE 762 Practicum in Modeling Transportation Systems**
Fall. 3 credits. Prerequisites: CEE 661, CEE 662, and CEE 663. Offered alternate years. L. K. Nozik.
Students develop appropriate models and practical solution procedures for decision making in transportation systems. Alternative approaches are compared by assessing the strengths and weaknesses of each. Case studies and model implementation skills are included.

**CEE 764 Special Topics in Transportation**
On demand. 1-6 credits. Staff.
Advanced subject matter not covered in depth in other regular courses.

**CEE 770 Engineering Fracture Mechanics**
Fall. 3 credits. Prerequisite: CEE 672 or CEE 772 (M&AE 680/T&AM 666) and T&AM 753, or permission of instructor. Offered alternate years. Next offered 2005–2006. A. Ingraffea.
Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elastic-plastic and cohesive approaches to inelastic crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

**CEE 771 Stochastic Mechanics in Science and Engineering**
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 2004–2005. M. D. Grigoriu.
Review of probability theory, stochastic processes, and Itô formula with illustrations by Monte Carlo simulation. Analytical and numerical methods for solving stochastic problems defined by algebraic, differential, and integral equations with random/deterministic input. Applications include: solution of Laplace, transport, Schrodinger, and other deterministic partial differential equations, dynamic systems subjected to Gaussian and non-Gaussian noise, random eigenvalue problems, and homogenization, structure evolution, and pattern formation for random heterogeneous materials.

**CEE 772 Random Vibration**
Fall. 3 credits. Prerequisites: M&AE 326 and OR&IE 260, or equivalent, and permission of instructor. Not offered 2004–2005. M. D. Grigoriu.
Review of random-process theory, simulation, and first-passage time. Linear random vibration: moment-response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolomogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

**CEE 773 Structural Reliability**
Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 2004–2005. M. D. Grigoriu.
Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, and elementary concepts of probabilistic fracture mechanics.

**CEE 774 Advanced Structural Concrete**
Fall. 3 credits. W. Aquino.
The fundamental aspects of the mechanical behavior of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and multi-axial modeling are covered. The behavior of reinforced concrete membrane elements subjected to plane states of stress, torsion, limit analysis is included, and an introduction to finite element modeling of reinforced concrete structures is given.

**CEE 775 Mathematical and Computer Modeling of Material Behavior**
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent course in solid mechanics and T&AM 611 or equivalent. Offered every other year; not offered 2004–2005. W. Aquino.
This course covers the fundamental physical and mathematical aspects of formulating material models for use in numerical schemes such as the finite element method. Possible topics covered in this course include basic plasticity and damage mechanics, numerical integration of plasticity equations, plastic-damage models, coupled models (temperature-deformation), and emerging techniques for constitutive modeling using neural networks and genetic algorithms. Applications include engineering materials such as concrete, soils, metals, and composites.

**CEE 776 Advanced Topics in Stability**
Fall. 3 credits. Prerequisite: CEE 574 or equivalent. T. Pelcza.
Preliminary design of structural systems. Behavior and design of members and connections. Behavior and computer-aided design of building frames.

**CEE 777 Computational Solid and Structural Mechanics**
Spring. 3 credits. Prerequisites: T&AM 663 or CEE 771, CEE 771 with approval of instructor, CEE 672 or CEE 676 or equivalent background. Offered every other year. K. D. Papoulia.
This course covers the formulation and numerical solution of problems of solids and structures using the finite element method. Topics include a review of solid mechanics: nonlinear kinematics, invariance, 1st and 2nd law of thermodynamics, and constitutive equations with internal variables; strong forms and weak forms; implicit and explicit algorithms; variants of Newton's method.
and Lagrangian and Eulerian formulations. Application topics are chosen from the following areas: 3D finite elasticity, fully nonlinear beams and shells, distributed and discrete damage, contact-impact, and plasticity.

[CEE 778 Natural Disaster Risk Assessment and Management
Spring. 3 credits. Offered alternate years. Next offered spring 2005. R. A. Davidson. This course explores ways to define, measure, and manage natural disaster risk using systems engineering, civil engineering, and social science perspectives and analysis tools. Multiple hazards and multiple viewpoints (local, international, individual, public sector, private sector) are considered.]

CEE 783 Civil and Environmental Engineering Materials Project
On demand. 1-3 credits. Staff. Individual projects or reading and study assignments involving engineering materials.

CEE 785 Research in Structural Engineering
On demand. 1-6 credits. Staff. Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 786 Fracture Mechanics
Spring. 3 credits. L. Banks-Sills. This course covers the basic principles of linear elastic fracture mechanics (LEFM): asymptotic expansion of stresses and displacements at a crack tip, Griffith's criterion, and plastic region at a crack tip. Topics include simple methods for calculating stress intensity factors, energy principles, energy release rate, compliance, and J-integral; experiments in fracture mechanics: plane strain fracture toughness K_{IC}, plane stress fracture toughness K_{IC}, fracture mechanics: plane strain fracture toughness K_{IC}, plane stress fracture toughness K_{IC}, and plane strain fracture toughness K_{IC}. Experiments at the crack tips: HRR singularity, small- and large-scale yielding, J dominance, and J_{IC} experiments.

CEE 810 Thesis—Remote Sensing
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. W. D. Philpot. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 820 Thesis—Environmental and Water Resource Systems
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 821 Thesis—Environmental and Public Systems
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 830 Thesis—Fluid Mechanics and Hydrology
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 831 Thesis—Hydraulics/Hydrology
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 840 Thesis—Geotechnical Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 850 Thesis—Environmental Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 851 Thesis—Environmental Quality Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 860 Thesis—Transportation Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 880 Thesis—Structural Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.
COM S 201 Cognitive Science in Context (also COGST 201 and PSYCH 201)
Spring. 4 credits. Limited to 24 students. Prerequisite: concurrent or prior registration in Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191) is suggested but not required. Knowledge of programming languages is not assumed. Fall, B. Halpern and staff; spring, D. Field and staff. For description, see COGST 201.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++.

COM S 212 Java Practicum
Fall, spring, summer. 1 credit. Letter grade only. Pre- or corequisite: COM S/ENGRD 211.

COM S 213 C++ Programming
Spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S-U grades only.

COM S 214 Advanced UNIX Programming and Tools
Spring. 1 credit. Usually weeks 5-8. Prerequisite: COM S 114 or equivalent. S-U grades only.

COM S 215 Introduction to C
Fall, spring. 1 credit. Usually weeks 5-8. Prerequisite: COM S 114 or equivalent. S-U grades only.

COM S 230 Intermediate Design and Programming for the Web (also INFO 230)
Spring. 3 credits. Prerequisite: COM S 150 or equivalent knowledge.

COM S 280 Discrete Structures
Fall, spring. 3 credits. Pre- or corequisite: COM S/ENGRD 211 or permission of instructor.

COM S 312 Data Structures and Functional Programming
Fall, spring. 4 credits. Prerequisite: COM S 211/212 or equivalent programming experience. Should not be taken concurrently with COM S 314.

COM S 314 Computer Organization (also ECE 314)
Fall, spring. 4 credits. Prerequisite: COM S 211. COM S 312 or ENGRD 230 are recommended but not required. Should not be taken concurrently with COM S 312.

COM S 321 Numerical Methods in Computational Molecular Biology (also BIOBM 321 and ENGRD 321)
Fall. 3 credits. Prerequisites: at least one course in calculus, such as MATH 106, 111, or 191 and a course in linear algebra, such as MATH 221 or 294 or BTRY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures. COM S majors and minors may use only one of the following toward their degree: COM S 211, 321, 421, or 428. Not offered fall 2004.

COM S 322 Introduction to Scientific Computation (also ENGRD 322)
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 221 or MATH 294). COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421, or 428.

COM S 324 Computational Linguistics (also COGST 424, LING 424)
Fall, spring. 4 credits. Prerequisites: LING 203; labs involve work in the Unix environment; COM S 114 recommended. For description, see LING 424.

COM S 330 Applied Database Systems (also INFO 330)
Fall. 3 credits. Prerequisite: COM S 211/ENGRD 211. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

COM S 381 Introduction to Theory of Computing
Fall, summer. 3 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.

COM S 400 The Science of Programming
Fall. 3 credits. Prerequisite: COM S 211.

COM S 411 Programming Languages
Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor.

COM S 412 Introduction to Compilers
Spring. 3 credits. Prerequisites: COM S 312 (or permission of instructor) and COM S 314. Corequisite: COM S 413.

COM S 413 Practicum in Compilers
Spring. 2 credits. Corequisite: COM S 412.

COM S 414 Systems Programming and Operating Systems
Fall, spring, summer. 3 credits. Prerequisites: COM S 211, 212, 312 (or permission of instructor), and 314. Corequisite: COM S 415 in spring only.

COM S 415 Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: COM S 414.

COM S 419 Computer Networks (formerly COM S 519)
Spring. 4 credits. Prerequisite: COM S 211, COM S 312, or ENGRD 230 are recommended but not required, or permission of instructor. Not offered every year.

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisite: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421, or 428.

COM S 426 Introduction to Computational Biology
Fall. 3 credits. Prerequisites: COM S/ENGRD 211, COM S 280.

COM S 427 Practicum in Computational Biology
Fall. 2 credits. Pre- or corequisite: COM S 426.

COM S 428 Introduction to Computational Biophysics
Fall. 3 credits. Prerequisite: COM S 100, CHEM 211, or equivalent. MATH 293 or MATH 294, PHYS 112 or 215, or permission of instructor. BIOLBM 330 recommended. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, 421, or 428.

COM S 430 Information Retrieval (also INFO 430)
Fall. 3 credits. Prerequisite: COM S 211 or equivalent.

COM S 431 Web Information Systems (also INFO 431; formerly CIS 502)
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with the technology of web sites.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312, or 211/212, and permission of instructor. Recommended: COM S 213 and strong programming skills in C or C++.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

COM S 485 Computer Graphics I (also ARCH 374)
Fall. 4 credits. Prerequisite: COM S/ENGRD 211. May not be taken after completion of COM S 417.

COM S 467 Computer Graphics II
Spring. 3 credits. Prerequisite: COM S 465.

COM S 468 Computer Graphics Practicum
Spring. 2 credits. Prerequisite: COM S 465. Corequisite: COM S 467.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 (or equivalent).

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.

COM S 474 Introduction to Natural Language Processing (also COGST 474, LING 474)
Fall. 4 credits. Prerequisites: COM S 211.

COM S 478 Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.

COM S 480 Introduction to Cryptology (also MATH 335)
Fall. 3 credits. Prerequisites: COM S 100 and MATH 222 or 294. Students who take this course may not also receive credit for MATH 336. For description, see MATH 335.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.
COM S 482 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 280, 312, and either 381 or 481, or permission of instructor.

COM S 483 Quantum Computation (also PHYS 481 and 681)
Spring. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers. Not offered every year. For description, see PHYS 481.

COM S 486 Applied Logic (also MATH 486)
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

COM S 490 Independent Reading and Research
Fall, spring. 1–4 credits.

COM S 501 Software Engineering
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

COM S 504 Applied Systems Engineering (also CEE 504, ECE 512, MAE 591, OR&IE 512, SYSEN 510)
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor. For description, see SYSEN 510.

COM S 505 System Architecture, Behavior, and Optimization (also CEE 505, ECE 513, MAE 592, OR&IE 513, SYSEN 520)
Spring. 3 credits. Prerequisite: Applied System Engineering (CEE 504, COM S 504, ECE 512, MAE 591, OR&IE 512). For description, see SYSEN 520.

COM S 513 System Security
Fall. 4 credits. Prerequisites: COM S 414 or 419 and familiarity with JAVA or C programming languages.

COM S 514 Intermediate Computer Systems
Spring. 4 credits. Prerequisites: COM S 414 or permission of instructor.

COM S 522 Computational Tools and Methods for Finance
Spring. 4 credits. Prerequisites: programming experience (e.g., C, FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. Not offered every year.

COM S 530 The Architecture of Large-Scale Information Systems (also INFO 530)
Spring. 4 credits. Prerequisite: COM S/INFO 350 or COM S 342.

COM S 565 Computer Animation (also ART 372, CIS 565; formerly CIS/COM S 518)
Fall. 4 credits. Prerequisite: COM S/ENGRD 211.
For description, see ART 372.

COM S 572 Heuristic Methods for Optimization (also CEE 509, CIS 527, OR&IE 533)
Spring. 3 or 4 credits. Prerequisites: COM S/ENGRD 211 or 322 or CEE/ENGRD 241 or graduate standing, or permission of instructor. Not offered every year. For description, see CEE 509.

COM S 578 Empirical Methods in Machine Learning and Data Mining
Fall. 4 credits. Prerequisites: COM S 280 and 312 or equivalent.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Graduate standing or permission of instructor.

COM S 612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

COM S 614 Advanced Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 615 Peer-to-Peer Systems
Spring. 4 credits. Prerequisites: COM S 614 recommended.

COM S 619 Advanced Computer Networks
Fall. 4 credits. Prerequisite: COM S 419 or COM S 519, or permission of instructor. Not offered every year.

COM S 621 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621. Offered odd-numbered years only.

COM S 624 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: previous exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations, and knowledge of MATLAB. Offered in even-numbered years.

COM S 626 Computational Molecular Biology
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods.

COM S 627 Computational Biology: The Machine Learning Approach
Spring. 4 credits. Prerequisites: COM S 420 or 626 and COM S 478 or 578 or permission of instructor.

COM S 630 Representing and Accessing Digital Information (also INFO 630)
Fall. 4 credits. Prerequisites: COM S 472 or 478 or 578 or the equivalent.

COM S 632 Database Systems
Spring. 4 credits. Prerequisites: COM S 432/433 or permission of instructor.

COM S 633 Advanced Database Systems
Spring. 4 credits.

COM S 664 Machine Vision
Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent.

COM S 665 Advanced Rendering
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and an undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming.

COM S 667 Physically Based Rendering
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and an undergraduate-level understanding of algorithms, programming, and vector calculus.

COM S 671 Introduction to Automated Reasoning
Fall or spring. 4 credits. Prerequisite: COM S 611 and graduate standing or permission of instructor.

COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.

COM S 673 Integration of Artificial Intelligence and Operations Research (also CIS 673)
Spring. 3 credits.

COM S 674 Natural Language Processing
Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. COM S 474 is NOT a prerequisite. Not offered every year.

COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic.

COM S 677 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic.

COM S 678 Advanced Topics in Machine Learning
Spring. 4 credits. Prerequisites: COM S 478 or equivalent, or COM S 578 or equivalent, or permission of instructor.

COM S 681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.

COM S 682 Theory of Computing
Spring. 4 credits. Prerequisite: COM S 381 or 481 and COM S 482 or 681 or permission of instructor.

COM S 683 Advanced Design and Analysis of Algorithms
Spring. 4 credits. Prerequisites: COM S 681 or permission of instructor. Not offered every year.

COM S 684 Algorithmic Game Theory
Spring. 4 credits. Prerequisites: COM S 681 or permission of instructor. Not offered every year.

COM S 685 The Structure of Information Networks (also INFO 685)
Spring. 4 credits. Prerequisite: COM S 482.

COM S 696 Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486. Not offered every year.

COMPUTER SCIENCE 251
COM S 709 Computer Science Colloquium  
Fall, spring. 1 credit. S-U grades only.  
For staff, visitors, and graduate students  
interested in computer science.

COM S 711 Seminar in Advanced Programming Languages  
Fall, spring. 3 credits.

COM S 713 Seminar in Systems and Methodology  
Fall, spring. 4 credits. Prerequisites:  
a graduate course employing formal reasoning such as COM S 611, 613, 671, a  
logic course, or permission of instructor.  
Not offered every year.

COM S 715 Seminar in Programming Refinement Logics  
Fall, spring. 4 credits. Prerequisite:  
COM S 612 or permission of instructor.  
Not offered every year.

COM S 717 Topics in Parallel Architectures  
Fall. 4 credits. Prerequisite: COM S 612 or  
permission of instructor. Not offered every year.

COM S 718 Computer Graphics Seminar  
Fall, spring. 4 credits.

COM S 719 Seminar in Programming Languages  
Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades  
only.

COM S 721 Topics in Numerical Analysis  
Fall, spring. 4 credits. Prerequisite: COM S 621 or permission of instructor.

COM S 726 Problems and Perspectives in Computational Molecular Biology  
(also PL BR 726)  
Fall, spring. 1 credit. S-U grades only.

COM S 732 Seminar in Database Systems  
Fall, spring. 4 credits. S-U grades only.

COM S 750 Evolutionary Computation and Design Automation  
(also CIS 750, MAE 650)  
Fall. 4 credits. Prerequisite: programming experience or permission of instructor.

[COM S 751 Media Research and Critical Design  
(also CIS 751)  
Fall. 4 credits. Prerequisites: graduate standing in COM S or equivalent ability to  
read technical research papers. Contact instructor if unsure of qualifications. Not  
offered every year.]

[COM S 752 Seminar on Scholarly Information Architecture  
(also CIS 752)  
Fall. 3 credits. Prerequisite: concurrent enrollment in COM S 502 or equivalent  
coursework. S-U grades only. Not offered every year.]

COM S 754 Systems Research Seminar  
Fall, spring. 1 credit. S-U grades only.

COM S 772 Seminar in Artificial Intelligence  
Fall, spring. 4 credits. Prerequisites: permission of instructor. S-U grades only.

COM S 775 Seminar in Natural Language Understanding  
Fall, spring. 2 credits.

COM S 786 Introduction to Kleene Algebra  
Spring. 4 credits. Prerequisites: COM S 481 required; COM S 482 or 681, COM S 682, elementary logic (MATH 481 or 681);  
Algebra (MATH 432) recommended.

COM S 789 Seminar in Theory of Algorithms and Computing  
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790 Special Investigations in Computer Science  
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only.

COM S 990 Special Investigations in Computer Science  
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only.  
Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

T. E. Jordan, chair; S. J. Colucci, co-chair  
(CALS); directors of undergraduate studies:  
B. L. Isacks (Geological Sciences and Science of Earth Systems—AAS), S. J. Riha (Science of Earth Systems—CALS), M. W. Wysocki  
(Atmospheric Sciences); and  
R. W. Allmendinger, W. D. Allmon,  
M. Barazangi, W. Basset, J. M. Bird,  
A. L. Bloom, L. D. Brown, L. M. Cathles,  
J. L. Casne, K. H. Cook, A. T. DeGaetano,  
L. A. Derry, P. J. Gierasch, C. H. Greene,  
D. L. Hysell, D. E. Karig, R. W. Kay,  
S. Mahfuz, M. C. Kelley, W. W. Knapp,  
J. E. Oliver, A. J. Pershing, J. Phipps Morgan,  
M. Pritchard, F. H. T. Rhodes, D. L. Turcotte,  
W. M. White, D. S. Wilks

For complete course descriptions, see the Earth and Atmospheric Sciences listing in the  
College of Arts and Sciences or the College of  
Agriculture and Life Sciences section.

EAS 101 Introductory Geological Sciences  
Fall. 3 credits. Staff.

EAS 102 Evolution of the Earth and Life  
(also offered as BIO Q 170)  
Spring. 3 credits. J. L. Cisne.

EAS 103 SES Freshman Colloquium  
Fall. 1 credit. TBA.

EAS 107 How the Earth Works  
Fall. 1 credit. J. L. Cisne.

EAS 108 Earth in the News  
Summer. 3 credits. S. L. Losh.

EAS 109 Dinosaurs  
Fall. 1 credit. J. L. Cisne.

[ EAS 111 To Know the Earth  
Fall. 3 credits. Not offered 2004–2005. Staff ]

EAS 121 Introduction to MATLAB  
(also CIS 121)  
Fall, spring. 2 credits. Prerequisites: MATH 111, 191, or equivalent. D. Schwartz.

EAS 122 Earthquake!  
(also ENGR 122)  
Spring. 3 credits. L. D. Brown.  
This is a course in the Introduction to Engineering series. For description, see ENGR 122.

EAS 131 Basic Principles of Meteorology  
Fall. 3 credits. M. W. Wysocki.  
The one-credit laboratory for this course is  
EAS 133.

EAS 133 Basic Meteorology Lab  
Fall. 1 credit. Laboratory. Prerequisite: concurrent enrollment in EAS 131.  
M. W. Wysocki.

Laboratory course covering topics presented in EAS 131. This course is required for  
atmospheric science majors, but is optional for other students taking EAS 131.

EAS 150 Fortran Applications in Earth Science  
Spring. 2 credits. Prerequisite: CIS/EAS 121 or equivalent. LET only. A. J. Pershing.

EAS 154 The Sea: An Introduction to Oceanography  
(also BIOEE 154)  
Spring, summer. 3 credits. Lecture: Spring. C. H. Greene, W. M. White; summer:  
B. C. Monger. The optional one-credit laboratory for this course is EAS 155/  
BIOEE 155.

EAS 155 The Sea: An Introduction to Oceanography  
(also BIOEE 155)  
Spring. 1 credit. Laboratory. Prerequisite: Concurrent enrollment in EAS 154.  
C. H. Greene.

Laboratory course covering topics presented in EAS 154.

[EAS 200 Art, Archaeology, and Analysis  
(also ENGRD 201, MS&E 285)  
Spring. 3 credits. Not offered 2004–2005.]

EAS 201 Introduction to the Physics and Chemistry of the Earth  
(also ENGRD 201)  
Fall. 3 credits. Prerequisites: PHYS 112 or  
207. J. Phipps Morgan, L. Cathles.

EAS 203 Fundamental Principles of Earth Science  
Fall. 3 credits. Letter grade only.  
Prerequisite: modest science background advantageous. L. M. Cathles, J. Phipps  
Morgan.

EAS 210 Introduction to Field Methods in Geological Sciences  
Fall. 3 credits. Prerequisites: EAS 101 or  
201, or permission of instructor. 1 lecture,  
Saturday field trips. R. W. Allmendinger.

EAS 213 Marine and Coastal Geology  
Summer. 4 credits. Prerequisite:  
an introductory course in geology or ecology  
or permission of instructor. Staff.

EAS 222 Seminar—Hawaii’s Environment  
Fall. 1 credit. S-U grade only. A. Moore,  
L. Derry.

EAS 240 Field Study of the Earth System  
Spring. 5 credits. Prerequisites: one  
semester of calculus (MATH 191, 192, 193  
or MATH 111, 112) and two semesters of  
any of the following: PHYS 207/208  
or 112/213; CHEM 207/208; BIOG  
101/103–102/104 or 105/106 or 109/110;  
or equivalent course work. Limited to  
those enrolled in Cornell Abroad Earth  
and Environmental Sciences Semester in  

EAS 250 Meteorological Observations and Instruments  
Fall. 3 credits. Prerequisite: EAS 131.  
M. W. Wysocki.
EAS 268 Climate and Global Warming
Spring. 3 credits. Prerequisite: basic college math. A. T. DeGaetano.

EAS 296 Forecast Competition
Fall and spring. 1 credit. S-U grades only. Prerequisite: sophomore undergraduate standing in atmospheric science, or permission of instructor. D. S. Wilks.

EAS 302 Evolution of the Earth System
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. W. M. White, W. D. Allmon, B. L. Isacks.

EAS 315 Geomorphology
Fall. 4 credits. Prerequisite: one course in geology, hydrology, or soil science. B. L. Isacks.

EAS 321 Introduction to Biogeochemistry (also NTRES 321)
Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt.

EAS 322 Biogeochemistry of the Hawaiian Islands
Spring. 4 credits. Prerequisite: BIOEE 261, EAS 321, EAS 455, or permission of instructor. Limited to those enrolled in Cornell Abroad and Earth and Environmental Sciences Semester in Hawaii. L. Derry.

EAS 326 Structural Geology
Spring. 4 credits. Prerequisite: one semester of calculus plus an introductory geology course or permission of instructor. One weekend field trip. R. W. Allmendinger.

EAS 331 Climate Dynamics (also ASTRO 331)
Fall. 4 credits. Prerequisite: two semesters of calculus and one semester of physics. K. H. Cook, P. J. Gierasch.

[EAS 334 Microclimatology
Spring. 3 credits. Prerequisite: a course in physics. Offered alternate years. D. S. Wilks.]

EAS 341 Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. A. T. DeGaetano.

EAS 342 Atmospheric Dynamics (also ASTRO 342)
Spring 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook and P. J. Gierasch.

[EAS 350 Dynamics of Marine Ecosystems (also BIOEE 350)
Fall. 3 credits. Prerequisites: 1 year of calculus and a semester of oceanography (i.e., EAS 154), or instructor's permission. C. H. Greene and R. W. Howarth.]

EAS 351 Marine Ecosystems Field Course (BIOEE 351)
Spring. 4 credits. Prerequisites: one semester of calculus (MATH 191, 192, 193 or MATH 111, 112), two semesters of biology (BIOG 101/103-102/104 or 105/106 or 109/110); one semester of oceanography (EAS 154) is recommended. Limited to those enrolled in Cornell Abroad and Earth and Environmental Sciences Semester in Hawaii. C. Greenc, B. Monger.

EAS 352 Synoptic Meteorology I
Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. M. W. Wysocki.

EAS 355 Mineralogy
Fall. 4 credits. Prerequisites: EAS 101 or 201 and CHEM 207/211 or permission of instructor. S. Mahlburg Kay.

EAS 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.

EAS 375 Sedimentology and Stratigraphy
Fall. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cove.

EAS 388 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.

EAS 401 Fundamentals of Energy and Mineral Resources
Spring. 3 credits. L. Cathles.

EAS 417 Field Mapping in Argentina
Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable but not required. S. Mahlburg Kay.

EAS 434 Reflection Seismology
Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. L. D. Brown.

EAS 435 Statistical Methods in Meteorology and Climatology
Fall. 3 credits. Prerequisite: an introductory course in statistics (e.g., EEM 210) and calculus. D. S. Wilks.

[EAS 437 Geophysical Field Methods
Fall. 3 credits. Prerequisite: PHYS 213 or 208 or permission of instructor. Offered alternate years. L. D. Brown.]

EAS 445 Introduction to Groundwater Hydrology (also EEE 471/CEE431)
Spring. 3 credits. Prerequisites: MATH 294 and ENGRD 202. L. Cathles.

EAS 447 Physical Meteorology
Fall. 3 credits. Prerequisites: 1 year each of calculus and physics. Offered alternate years. A. T. DeGaetano.

EAS 451 Synoptic Meteorology II
Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Golucci.

[EAS 453 Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. R. W. Kay.]

[EAS 454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. Not offered 2004–2005. S. M. Kay.]

EAS 455 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended. EAS 356. Offered alternate years. W. M. White.

[EAS 456 Mosasaur Meteorology
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. Not offered 2004–2005. S. J. Golucci.]

EAS 457 Atmospheric Air Pollution
Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and one semester of oceanography, or permission of instructor. Offered alternate years. M. W. Wysocki.

EAS 458 Volcanology
Fall. 3 credits. Prerequisite: EAS 356 or equivalent. Offered alternate years. R. W. Kay and W. M. White.

EAS 460 Late Quaternary Palaeoecology
Fall. 3 credits. Prerequisite: BIOEE 261. Offered alternate years. C. D. Harvell, C. H. Greene.

EAS 470 Weather Forecasting and Analysis
Spring. 3 credits. Prerequisites: EAS 352 and EAS 451. M. W. Wysocki.

EAS 475 Special Topics in Oceanography
Fall, spring. 2–6 var. credits. Prerequisites: one semester of oceanography and permission of instructor. Fall: spring. C. H. Greene, summer: B. C. Monger.

EAS 476 Sedimentary Basins: Tectonics and Mechanics
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.

[EAS 478 Advanced Stratigraphy
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Not offered 2004–2005. T. E. Jordan.]

[EAS 479 Palaeobiology (also BIOEE 479)
Fall. 4 credits. Prerequisites: 1 year of introductory biology and either BIOEE 274 or 373 or EAS 375, or permission of instructor. Offered alternate years. Not offered 2004–2005. W. Allmon.]

EAS 481 Senior Survey of Earth Systems

EAS 483 Environmental Biophysics
Spring. 3 credits. Offered alternate years. S. J. Riba.

EAS 487 Introduction to Radar and Remote Sensing (also ECE 487)
Fall. 3 credits. Prerequisites: PHYS 208 or 213 or equivalent or permission of instructor. D. L. Hysell.

EAS 491-492 Undergraduate Research
Fall, spring. 1–4 credits. Staff.

EAS 494 Special Topics in Atmospheric Science
Fall, spring. 8 credits maximum. S-U grades optional. Undergraduate level. Staff.

EAS 496 Internship Experience
Fall, spring. 1–2 credits. Staff.

EAS 497 Individual Study in Atmospheric Science
Fall, spring. 1–6 credits. S-U grades only. Students must register with an Independent Study form. Staff.

EAS 498 Teaching Experience in Earth and Atmospheric Sciences
Fall, spring. 1–4 credits. S-U grades only. Students must register with an Independent Study form. Staff.
EAS 499 Undergraduate Research in Atmospheric Science
Fall, spring. Credit by arrangement. S-U grades only. Students must register with an Independent Study form. L. M. Cathles.

EAS 500 Design Project in Geohydrology
Fall, spring. 5-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 502 Case Histories in Groundwater Analysis
Spring. 4 credits. L. M. Cathles.

[EAS 622 Advanced Structural Geology I
Spring. 3 credits. Prerequisites: EAS 526 and permission of instructor. Offered alternate years. R. W. Allmendinger.]

EAS 624 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: EAS 526 and permission of instructor. Offered alternate years. R. W. Allmendinger.

[EAS 628 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2004-2005. Staff.]

[EAS 634 Advanced Geophysics I
Fall. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. Not offered 2004-2005.]

EAS 636 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. J. Phipps Morgan.

EAS 641 Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry.

EAS 651 Atmospheric Physics (also ASTRO 651)
Fall. 3 credits. Prerequisite: a good background in undergraduate calculus and physics is required. Offered alternate years. K. H. Cook, P. J. Gierasch, S. J. Colucci.

EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or their equivalent. Offered alternate years. S. J. Colucci, P. J. Gierasch.

EAS 656 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White.

EAS 666 Applied Multivariate Statistics
Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two previous courses in statistics. Offered alternate years. D. S. Wilks.

[EAS 675 Modeling the Soil-Plant-Atmosphere System
Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. Offered alternate years. S. J. Riha.]

EAS 692 Special Topics in Atmospheric Science
Fall, spring. 1-6 credits. S-U grades optional. Staff.

EAS 695 Computer Methods in Geological Sciences
Fall, spring. 3 credits. L. Brown, B. L. Isacks.

EAS 700-799 Seminars and Special Work
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.

EAS 711 Upper Atmospheric and Space Physics
D. L. Hyellw

EAS 722 Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731 Planetary Geodynamics, Active Tectonics, Volcanology, Earthquakes, and Geodesy
M. Pritchard.

EAS 733 Advanced Topics in Geodynamics
Spring. J. Phipps Morgan.

EAS 751 Petrology and Geochemistry
R. W. Kay.

EAS 755 Geodynamics
Fall. 3 credits. J. Phipps Morgan.

EAS 757 Current Research in Petrology and Geochemistry
S. Mahlburg Kay.

EAS 762 Advanced Topics in Paleobiology
W. D. Allmon.

EAS 771 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773 Paleobiology
J. L. Case.

EAS 775 Advanced Topics in Oceanography
Spring. C. H. Greene.

EAS 777 Advanced Topics in Climate Dynamics
Spring. K. Cook.

EAS 780 Earthquake Record Reading
Fall. M. Barazangi.

EAS 781 Geophysics, Exploration Seismology, Ground-Penetrating Radar
L. D. Brown.

EAS 783 Advanced Topics in Geophysics
B. L. Isacks.

EAS 789 Lithospheric Seismology
L. D. Brown.

EAS 793 Andes-Himalaya Seminar

EAS 795 Low Temperature Geochemistry
1-3 credits. S-U grades only. L. A. Derry.

EAS 796 Geochemistry of the Solid Earth
W. M. White.

EAS 797 Fluid-Rock Interactions
L. M. Cathles.

EAS 799 Soil, Water, and Geology Seminar
Spring. L. M. Cathles, T. S. Steenhus.

EAS 850 Master's-Level Thesis Research in Atmospheric Science
Fall, spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

EAS 950 Graduate-Level Dissertation Research in Atmospheric Science
Fall, spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science
Fall, spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

ELECTRICAL AND COMPUTER ENGINEERING

C. R. Pollock, director; C. E. Seyler, associate director; D. H. Albonesi, A. B. Apsel.

ECE 210 Introduction to Circuits for Electrical and Computer Engineers (also ENGRG 210)
Fall, spring. 3 or 4 credits. Corequisites: MATH 293 and PHYS 213. ECE majors must take 4 credits, includes a design project. Non-ECE majors can take 3 credits. All students must take a lab and a section. Fall, J. C. Bellina, C. E. Seyler, spring, staff. For description, see ENGRG 210.

ECE 220 Signals and Information
Fall, spring. 3 or 4 credits. Prerequisite: MATH 293. ECE majors must take 4 credits. Fall, S. S. Hemmani; spring, C. R. Johnson. An introductory course in signal processing. Topics include frequency-based representations: Fourier series and discrete Fourier transform; discrete time linear systems: input/output relationships, filtering, spectral response; analog-to-digital and digital-to-analog conversion; continuous time signals and linear time invariant systems: frequency response and continuous-time Fourier transform.

[ENGRG 250 Technology in Society (also ENGRG 250, HIST 250 and S&T 250)]
Fall. 3 credits. A humanities elective for engineering students. Not offered 2004-2005. For description, see ENGRG 250.

ECE 291-292 Sophomore Electrical and Computer Engineering Project
Fall, spring, 291: 292. 1-4 credits. Limited to sophomores in Engineering. Staff. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor.
prior to registration and submit a request for Independent Project form to the Electrical and Computer Engineering Undergraduate Office.

ECE 298 Inventing an Information Society (also AM ST 292, ENGRG 298, HIST 292, and S&S TS 292)
Spring. 3 credits. Approved for humanities distribution. R. R. Kline.
For description, see ENGRG 298.

ECE 303 Electromagnetic Fields and Waves
Fall. 4 credits. Prerequisites: grades of C or better in PHYS 213, 214, and MATH 294.
D. T. Farley.
Maxwell's equations in differential form; wave equation, plane electromagnetic waves; phase and group velocities; Poynting's theorem, complex dielectric constant; wave transmission and reflection, guided waves on transmission lines, transient pulse propagation; and elementary dipole antenna; analysis of wireless communication links.

ECE 306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits. Prerequisites: PHYS 214 and MATH 294. C. L. Tang.
Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ECE 310 Introduction to Probability and Random Signals
Spring. 4 credits. Prerequisite: MATH 294.
This course may be used in place of ENGRD 270 to help satisfy the engineering distribution requirement. T. I. Fine.
Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Topics are given in such areas as communications, and device modeling, probability, and characteristic functions: nonlinear transformations of data; expectation and correlation; and the central limit theorem.

ECE 311 Electrical and Computer Engineering Honors Seminar
Spring. 1 or 2 credits. Staff.
Students registered for this course are required to attend all of the colloquium lectures. Summary papers are required. Honors students who take the seminar for letter grade are required to write two summary papers for two credits. Non-honors students, who must take the seminar pass/fail, are required to write one summary paper for one credit. Each summary paper reviews a topic presented during the term.

ECE 314 Computer Organization (also COM S 314)
Fall, spring. 4 credits. Prerequisites: COM S/ENG RD 211 or ENGRD 230 required. Fall, COM S staff; spring, staff.
Course description for spring offering: basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies, including caches and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor. For fall description, see COM S 314.

ECE 315 Introduction to Microelectronics
Fall, spring. 4 credits. Prerequisites: ECE/ENGRD 211.
Design of digital and analog electronic circuits in the context of modern integrated circuit technology. Course coverage includes the building blocks of integrated circuits: introductory physics of semiconductors, MOS and junction transistors; digital electronics—inverters, logic circuits, and memory; and analog circuits—multi-stage and differential amplifiers.

ECE 320 Networks and Systems
Spring. 4 credits. Prerequisites: ECE 220 and MATH 294. S. B. Wicker.
Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include state-space techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

ECE 336 Nanofabrication (also ECE 536 and MS&E 541)
Spring. 3-5 credits. Prerequisites: PHYS 213 or 217, PHYS 214 or 218, CHIM 211 or 212, or equivalent. D. Ast.
For description, see MS&E 541.

ECE 391-392 Junior Electrical and Computer Engineering Project
Fall, spring. 391, 1-8 credits. Limited to juniors in Engineering.
Individual study, analysis, and, usually, experimental test in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit a Request for Independent Project form to the Electrical Engineering Undergraduate Office.

ECE 402 Biomedical System Design (also BMPE 404)
Spring. 1-4 credits. Co- or prerequisites: at least one of ECE 425, ECE 476, ECE 453.
J. C. Belanger.
Course introduces techniques of measuring and conditioning low-level (biological) signals. Topics include special signal to noise improvement circuits for analog signals, techniques to remove common-mode and correlated noise, and computer-aided techniques for analyzing sampled data. Final 6 or 7 weeks devoted to designing/prootyping a safe and effective "ambulatory microprocessor-controlled blood pressure monitor." Formal design document is required. ECE 402 is a culminating design experience (CDE) course.

ECE 411 Random Signals in Communications and Signal Processing
Fall. 3 credits. Prerequisite: ECE 310 or equivalent. A. Scaglione.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ECE 413 Introduction to Nuclear Science and Engineering
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294. K. B. Cady.
This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It also can serve as a basic course for those who do not intend to continue in the field. It is an introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics.

ECE 415 GPS: Theory and Design (also MASE 415)
Fall. 4 credits. Prerequisite: a 300-level engineering course with advanced math content such as ECE 303, or MAE 326.
A. M. Kranker.
An analysis of GPS operating principles and engineering practice with a culminating design exercise: Navigational algorithms, receiver analysis, error investigation, dilution of precision, antennas, differential GPS. ECE 415 is a culminating design experience (CDE) course.

ECE 425 Digital Signal Processing
Fall. 4 credits. Prerequisites: ECE 220, ECE 320, and ECE 310. T. W. Parks,
B. A. Hutchins.
An advanced course in digital signal processing. Topics include sampling, A/D and D/A conversion, digital filter design and implementation, multirate DSP including sampling rate conversion and filter bank theory, Wiener filtering, spectral estimation, introduction to two-dimensional sampling, and Fourier techniques.

ECE 426 Applications of Signal Processing
Spring. 4 credits. Prerequisite: ECE 425.
B. A. Hutchins.
Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis. ECE 426 is a culminating design experience (CDE) course.

ECE 430 Lasers and Optical Electronics
Fall. 4 credits. Prerequisite: ECE 303 or equivalent. C. R. Pollock.
An introduction to the operation and application of lasers. Material covered includes diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Applications of coherent radiation to nonlinear optics, co-localization, and research are discussed.

ECE 432 MicroElectro Mechanical Systems (MEMS)
Spring. 3 credits. Prerequisite: ECE 315 or permission of instructor A. Lal.
Introductory course to MEMS: microsensors, microactuators, and microsystems. Fundamentals of MEMS, including materials, microstructures, devices and simple microelectro-mechanical systems, scaling electronic and mechanical
systems to the micrometer/nm-scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and mathematics. ECE 452 is a culminating design course (CDE).

**ECE 433 Introduction to Microwave Devices and Circuits**

Fall, 4 credits. Prerequisites: ECE 305 and ECE 306. J. R. Shealy.

An introduction to the properties of microwave devices and circuits and the consideration of microwave devices and microwave measurement techniques. S-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. Laboratories cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

**ECE 437 Fiber and Integrated Optics**

Spring, 4 credits with a project. Prerequisite: ECE 305 or equivalent. M. Lipson.

Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides, numerical analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components. ECE 477 is a culminating design experience (CDE) course.

**ECE 445 Computer Networks and Telecommunications**

Fall, 4 credits. Prerequisite: ECE or COM S 314 and a course in probability. Not offered 2004–2005.

This is a basic course in networking covering the design, analysis, and implementation of communication networks and systems. Topics covered include data transmission and data encoding, data link control, circuit vs. packet switching, Asynchronous Transfer Mode, local area networks, networking technology, network interconnections, protocol design (OSF and IP), network security, and multimedia. Emphasis is placed on performance evaluation.

**ECE 446 Digital Communications Over Packet-Switched Networks**

Spring, 4 credits. Prerequisites: ECE or COM S 314 and a course in probability. This is a basic course in networking covering the design and performance analysis of communication systems operating over packet-switched networks. It aims to bridge the gap between a classical networking class and a classical digital communications class.

The course is lab oriented, with a strong emphasis on programming assignments (both C and MATLAB). Topics covered include data compression, error control in networks, and network algorithms. ECE 446 is a culminating design experience (CDE) course.

**ECE 451 Electric Power Systems I**

Fall, 3 credits. Prerequisite: ECE 320 or equivalent. H. Chiang.

The objective is to acquaint the student with modern electrical system analysis and control. Analysis techniques appropriate for the restructured industry and advanced protection and control systems are stressed. Topics include transmission line models, transformers and per unit system, generator models, network matrices, power flow, system protection, computer relaying, and GPS-based measurement and control systems.

**ECE 452 Electric Power Systems II**

Spring, 3 credits. Prerequisite: ECE 451 or permission of instructor. R. J. Thomas.

Acquaints students with modern electric power system operation and control. Aspects of the restructuring of the industry and its implications for planning and operation objectives and their integration. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

**ECE 453 Analog Integrated Circuit Design**

Fall, 4 credits. Prerequisite: ECE 315 or equivalent. ECE 457 recommended as a corequisite. A. B. Apsel.

Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques. ECE 453 is a culminating design experience (CDE) course.

**ECE 457 Silicon Device Fundamentals**

Fall, 4 credits. Prerequisites: ECE 315 and ECE 306 or MEE 262 or AE 450. S. Tiwari.

Semiconductor carrier statistics, band diagrams, transport and their applications in device modeling. Emphasis is placed on the CMOS operations for advanced VLSI technology. Six labs cover device measurements and design by simulation. By using the combined simulation and measurement, the course leads to a comprehensive design project dealing with technical concerns in current VLSI industry as well as its economical, environmental, and social impacts. ECE 457 is a culminating design experience (CDE) course.

**ECE 467 Digital Communication Receiver Design**

Fall, 4 credits. Prerequisite: ECE 220. C. R. Johnson.

An introduction to broadband digital receiver design. Topics include PAM and QAM demodulation, pulse-shaping, matched filtering, carrier frequency and phase recovery, baud-timing synchronization, packet marker synchronization, adaptive linear equalization, and coding. Course project: composition and testing of a Matlab-based software receiver. ECE 467 is a culminating design experience (CDE) course.

**ECE 476 Digital Systems Design Using Microcontrollers**

Spring, 4 credits. Prerequisites: ENGRD 230 and ECE or COM S 314. J. F. Martinez.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchy. Students learn the issues and tradeoffs involved in the design of modern microprocessors. Labs: Symbolic simulation of a processor and cache subsystem at the RTL level. ECE 476 is a culminating design experience (CDE) course.

**ECE 477 Computer Architecture**

Fall, 4 credits. Prerequisites: ENGRD 230 and ECE or COM S 314. J. F. Martinez.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchy. Students learn the issues and tradeoffs involved in the design of modern microprocessors. Labs: Symbolic simulation of a processor and cache subsystem at the RTL level. ECE 476 is a culminating design experience (CDE) course.

**ECE 478 Digital VLSI Design**

Fall and spring, 5 credits (fall 4, spring 1). Prerequisites: ENGRD 230, ECE or COM S 314. Students will receive an R grade until they test their chips in the spring. K. T. Kornegay.

Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, combo logic, PLAs, memories, physical design, floor planning, CMOS scaling, and performance and power considerations, etc. Lecture and homework topics emphasize disciplined design and include: CMOS logic, layout, and timing; computer-aided design and analysis tools, and electrical and performance considerations. Students take out a small project that is tested in the following semester. The course also includes an introduction to asynchronous design. ECE 474 is a culminating design experience (CDE) course.

**ECE 479 Computer Organization**

Fall and spring, 4 credits. Prerequisites: ENGRD 230 and ECE or COM S 314. J. F. Martinez.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchy. Students learn the issues and tradeoffs involved in the design of modern microprocessors. Labs: Symbolic simulation of a processor and cache subsystem at the RTL level. ECE 476 is a culminating design experience (CDE) course.

**ECE 480 Fundamental of Digital Communications**

Topics include: digital source coding, Huffman coding, sampling, quantization, analog source coding; optimum receivers for digital transmission through additive white Gaussian noise (AWGN) channels, matched filters; channel capacity and error control coding; digital transmission through bandlimited AWGN channels, interference, clock offset (IS), equalization techniques, phase-locked loops (PLL: trellis-coded modulation (TCM), and spread-spectrum communication systems.

**ECE 472 Feedback Control Systems (also CHEM E 472 and M & A E 478)**

Fall, spring, 4 credits. Prerequisite: CHEM E 472, 480. B. R. Land.

For description, see M & A E 478.

**ECE 473 Optimizing Compilers**

Fall, 4 credits. Prerequisite: ECE/COM S 314. B. P. Buntscher.

This course provides in-depth coverage of how compilers optimize code for high-performance microprocessors as well as how software interacts with hardware and the operating system. The projects involve implementing, testing, and evaluating an optimizing compiler backend that generates executables for a UNIX workstation. Lecture topics include static single assignment form (SSA), redundancy elimination, loop optimizations, procedure optimizations, register allocation, instruction scheduling, control flow optimizations, numerous small optimizations, feedback optimization, executeable formats, and system calls.

**ECE 474 Digital VLSI Design**

Fall and spring, 5 credits (fall 4, spring 1). Prerequisites: ENGRD 230, ECE or COM S 314. Students will receive an R grade until they test their chips in the spring. K. T. Kornegay.

Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, combo logic, PLAs, memories, physical design, floor planning, CMOS scaling, and performance and power considerations, etc. Lecture and homework topics emphasize disciplined design and include: CMOS logic, layout, and timing; computer-aided design and analysis tools, and electrical and performance considerations. Students take out a small project that is tested in the following semester. The course also includes an introduction to asynchronous design. ECE 474 is a culminating design experience (CDE) course.

**ECE 475 Computer Architecture**

Fall, 4 credits. Prerequisites: ENGRD 230 and ECE or COM S 314. J. F. Martinez.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchy. Students learn the issues and tradeoffs involved in the design of modern microprocessors. Labs: Symbolic simulation of a processor and cache subsystem at the RTL level. ECE 476 is a culminating design experience (CDE) course.

**ECE 476 Digital Systems Design Using Microcontrollers**

Spring, 4 credits. Prerequisite: ECE/COM S 314. J. F. Martinez.

Design of real-time digital systems using microprocessor-based embedded controllers.
Students working in pairs design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed. ECE 476 is a culminating design experience (CDE) course.

ECE 484 Introduction to Controlled Fusion: Principles and Technology (also M&AE 459 and NS&E 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and the physical sciences. Offered alternate years. D. A. Hamner. For description, see NS&E 484.

ECE 486 Electromagnetic Waves and Communication
Spring. 3-5 credits. Prerequisite: ECE 303. D. L. Hyssel.
This course is recommended for students who wish to obtain a greater understanding of the fundamentals of guided waves, high data rate electromagnetic wireless communication. Topics covered include vector and scalar potentials, transmission lines, waveguides, fiber optics, antenna arrays, and propagation in different environments including interference and diffraction.

ECE 487 Introduction to Radar and Remote Sensing
Fall. 3 credits. Prerequisites: ECE 220 and ECE 486 (or a grade of B or better in ECE 303). D. L. Hyssel.
Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, and aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, and range and frequency aliasing. Synthetic aperture radars and remote sensors from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; and radar astronomy techniques.

ECE 488 RF Circuits and Systems
Spring. 4 credits. Prerequisites: ECE 315 or equivalent. 2 design credits. Lab credit. W. E. Schwartz.
Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions. ECE 488 is a culminating design experience (CDE) course.

ECE 491-492 Senior Electrical and Computer Engineering Project
Fall. 491: spring. 492: 1-8 credits. Limited to seniors in Engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report documenting the project is required. Students must make individual arrangements with a faculty sponsor prior to registration for this course and submit a request for an independent project form to the Electrical Engineering undergraduate office.

ECE 493 Introduction to Evolutionary Computation
Fall. 3 credits. Prerequisite: a course in probability. J. D. Delchamps.
An introductory course that attempts to address the development of the field and culminates in discussion of current research topics. Specific choices of subject matter and focus will reflect the instructor's interests and will probably include evolutionary game theory and its relationship to learning.

ECE 495 Optimizing Compilers
This course provides in-depth coverage of modern compiler optimizations for high-performance microprocessors. Topics include static single assignment form (SSA), redundancy elimination, loop optimizations, procedure optimizations, register allocation, instruction scheduling, control-flow optimizations, interprocedural analysis and optimization, numerous "small" optimizations, and feedback optimizations. The projects involve implementing, testing, and evaluating a number of advanced compiler optimizations for a high-end microprocessor.

ECE 496 Principles of Large Scale, Computer Implemented Networks
Spring. 4 credits. Prerequisites: ECE requirements through the 200 level, plus some knowledge of probability. Recommended for junior and senior ECE students interested in the systems area. T. L. Fine.
Large-scale complex adaptive (LSA) networks in ECE include the Internet, World Wide Web; bulk electric power distribution systems; wireless and photonic communications networks. We study several principles common to LSA networks. Each principle will be introduced in the context of a particular large-scale complex adaptive network, abstracted to expose its mathematical essentials, and then illustrated and developed through calculations and/or simulations.

ECE 497 Practicum in Analog-Integrated Circuit Design
A practicum accompanying ECE 493. During the fall semester, students work in small groups designing an analog-integrated circuit that is sent out for fabrication through MOSIS. When the chips return from fabrication in the spring, students test their designs for functionality and performance.

ECE 512 Applied Systems Engineering I (also CEE 504, COM S 504, M&AE 591, OR&IE 512, SYSEN 510)
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor. A. W. Georgiadis, R. E. Boundy. For description, see M&AE 591.

ECE 513 Applied Systems Engineering II (also CEE 505, COM S 505, M&AE 592, OR&IE 513, SYSEN 520)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M&AE 591, or OR&IE 512). Staff.
For description, see M&AE 592.

ECE 521 Theory of Linear Systems (also M&AE 521)
Fall. 3 credits. Prerequisite: ECE 320 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations. M. L. Piskai. State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of Linear Systems by T. Kailath.

ECE 526 Signal Representation and Modelling
Spring. 4 credits. Prerequisites: ECE 425, T. W. Parks.
Sampling and signal reconstruction. Approximation theory. Linear inversion theory. Exponential signal modelling. Multirate filter banks, wavelets, and lifting. Laboratory experiments with speech and image signals.

ECE 531 Applied Quantum Optics for Photonics and Optoelectronics
Fall. 4 credits. Prerequisites: ECE 306 and 407, or PHYS 443. F. Rana.
Introduces the basic concepts of quantum optics and quantum electronics necessary for understanding the basic physical principles in photonic and optoelectronic devices and systems. Topics include quantization of the electromagnetic field, quantum mechanical properties of photon states, vacuum fluctuations, noise and quantum Langevin equations, matter-photon interactions, phase-sensitive and phase-insensitive optical amplifiers, direct and coherent photon detection, lasers, parametric oscillators, and photonic devices for quantum information processing.

ECE 535 Semiconductor Physics
Fall. 4 credits. Prerequisites: ECE 407 and 457, or permission of instructor. Not offered 2004-2005. S. Tiwari.
Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, and surface and interface effects. On the level of Compound Semiconductor Device Physics by S. Tiwari.

ECE 536 Nanofabrication for MENG (also ECE 336 and M&AE 541)
Spring. 3 credits. Prerequisites: PHYS 213 or 217, PHYS 214 or 218, CHEM 211 or 207, or equivalent. D. Ast.
For description, see MSE 541.

ECE 547 Computer Vision
Fall. 4 credits. Prerequisites: ECE 220 (or COM S 280 and 314) or consent of instructor. Not offered 2004-2005.
Computer acquisition and analysis of image data with emphasis on techniques for robot vision. This course concentrates on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.
will be considered in some detail, as will the iterative (turbo) decoding of concatenated codes and codes on graphs. The use of error control codes and channels will be discussed throughout the course.

**ECE 562 Fundamental Information Theory**

Spring. 4 credits. Prerequisite: ECE 411 or equivalent. T. Berger

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**ECE 563 Communication Networks**

Fall. 4 credits. Prerequisite: ECE 411 or permission of instructor. T. Berger

**ECE 564 Detection and Estimation**

Spring. 4 credits. Prerequisites: ECE 410, ECE 475, or instructor's consent. L. Tong

**ECE 566 Wireless Networks**

Fall. 4 credits. Prerequisites: ECE 445 and ECE 441. Z. Haas

An introductory course in mobile and wireless networks. The course is targeted mainly at the graduate level but is open to undergraduates as well. The course covers fundamental techniques and protocols in the design and operation of the first, second, and third generation of wireless networks. Examples of related topics include cellular systems, medium access control, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques, common air interfaces (AMPS, IS-136, IS-95, GSM), wireless data (CDPD, Mobitex), satellite communication, ad hoc networks (Bluetooth), Internet Mobility, Personal Communication Services (PCS), and so on.

**ECE 567 Digital Communications**

Fall. 4 credits. Prerequisites: ECE 310, ECE 411, or instructor's consent. L. Tong

A graduate-level introduction to fundamentals of digital communications. Complex random signals. Digital modulations and optimal receiver principles. Baseband and passband transmissions and processing. Interference channels and equalization techniques. Performance analysis including error rate calculation and bounds, cutoff rate and channel capacity. Applications in wireless and digital subscriber loops (DSL).

**ECE 568 Mobile Communication Systems**

Spring. 4 credits. Prerequisites: ECE 411 and ECE 467; corequisite: ECE 468. Scaglione

Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

**ECE 572 Parallel Computer Architecture**

(Also COM S 516)

Spring. 4 credits. Prerequisite/corequisite: ECE 475, J. F. Martinez

Principles and tradeoffs in the design of parallel architectures. For description, see ECE 574.

**ECE 573 Advanced Digital VLSI Design**

Fall. 4 credits. Prerequisites: ECE 474, ECE 475, R. Manohar

Top-down approach to asynchronous design and the relation between computer architecture and VLSI design. For the asynchronous design component: high-level synthesis, design by program transformations, and correctness by construction. Topics include delay-insensitive design techniques, description of circuits as concurrent programs, program compilation, and electrical optimizations. Students complete a group project of the design of a processor or microprocessor. The processor can be clocked, asynchronous, or a combination of the two. Note: the only difference between taking and not taking ECE 576 is fabricating and testing the chip. All students have to design one.

**ECE 575 High-Performance Processor Architecture**

Spring. 3 credits. Prerequisite: ECE 475. M. Burtscher.

This course provides in-depth coverage of the advanced architectural features of current and next-generation high-performance microprocessors. Topics include superscalar design, out-of-order execution, register renaming, caching, value prediction, confidence estimation, branch prediction, predication, control speculation, multithreading, compiler optimizations, and case studies of existing processors. Projects involve writing simulators to evaluate the performance of various microprocessor components.

**ECE 576 Advanced Digital VLSI Design Project**

Course starts in spring term and finishes the following fall (2-semester course).

5 credits. Prerequisites: ECE 474, ECE 475. Groups receive an R in ECE 576, for the spring, until they fabricate and test their chips the following fall. Not offered spring and fall 2005.

For description, see ECE 574.

**ECE 579 Radio Frequency (RF) Integrated Circuit Design**

Fall and spring. 6 credits. Prerequisites: ECE 433, ECE 453, and ECE 488. Not offered 2004–2005.
This two semester, 6-credit course conveys practical knowledge of advanced concepts related to the design radio-frequency (RF) integrated circuits, signal processing, and control. Emphasis is on the circuit architecture, design, trade-offs, optimization, and layout of RF integrated circuits for use in wireless applications. Special attention is devoted to the most important challenges facing RF circuit designers today, such as the impact of noise, power distribution, and consumption. Low noise amplifiers, voltage-controlled oscillator (VCO), and high-performance operational amplifiers are emphasized.

The basic transmitter/receiver building blocks are covered, and students learn to design and assemble them to form single-chip wireless systems.

**ECE 581 Introduction to Plasma Physics (also A&EP 606)**

Fall. 4 credits. Prerequisite: ECE 303 or equivalent. First-year graduate-level course; open to exceptional seniors.

D. A. Hammer.

Topics covered include plasma state; motion of charged particles in fields; drift-orbit theory; collisionless transport; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability, and elementary applications to space physics, plasma technology, and controlled fusion.

**ECE 585 Upper Atmospheric Physics I**

Fall. 4 credits. Prerequisite: Physics through 214 or equivalent, introductory chemistry, ECE 486 or equivalent. Not offered 2004–2005.

D. A. Hammer.

**ECE 586 Upper Atmospheric Physics II**

Spring. 4 credits. Prerequisites: ECE 581 and ECE 585. C. E. Seyler.

Topics include solar phenomena, solar wind, and space weather; magnetospheric structure and physical processes; plasma instabilities in the ionosphere and magnetosphere; and magnetic reconnection and the relation to high-latitude phenomena.

**ECE 587 Energy Seminar I (also NS&E 544 and M&A 545)**

Fall. 1 credit. D. A. Hammer.

Energy resources, their conversion to electricity, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Examples of topics to be covered include: energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

**ECE 588 Energy Seminar II (also M&A 546)**

Spring 1 credit. D. A. Hammer.

See description for ECE 587; however, there will be different speakers and/or topics discussed in ECE 588.
Emphasis is on developing tools needed to do research work in this area.

**[ECE 697 Topics in Computer Systems]**
Spring. 1 credit. S-U only. Prerequisites: ECE 475 and interest in computer systems. Not offered 2004–2005.
A course for systems graduate students in which the class reads papers about the design and implementation of computer systems and their components. Influential papers from the past as well as papers describing current research and development efforts are discussed.

**ECE 698 The Foundations of Probability**
Fall. 3 credits. Prerequisite: prior course in probability: T. L. Fine.
This course examines a variety of interpretations/meanings that have been proposed for probability, including logical/epistemic, subjective, frequentist, and propensity. It also examines a variety of mathematical formulations of probability in which probability is not just an assignment of real numbers to events. Examples include comparative probability, interval-valued probability, set-valued probability, and plausibility measures.

**ECE 791-792 Thesis Research**
Fall, 791; spring, 792. 1–15 credits. For students enrolled in the master's or doctoral program.

**INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY**

- **INFO 130 Introductory Design and Programming for the Web (also COM S 130)**
  Fall. 3 credits.
- **INFO 214 Cognitive Psychology (also COGST 214, PSYCH 214)**
  Fall. 3 credits. Sophomore standing required. Limited to 175 students. Graduate students: see INFO 614, PSYCH 614, or COGST 501.
- **INFO 230 Intermediate Design and Programming for the Web (also COM S 230)**
  Spring. 3 credits. Prerequisite: COM S/ INFO 130 or equivalent.
- **INFO 245 Psychology and Social Computing (also COMM 245)**
  Fall. 3 credits.
- **INFO 292 Inventing an Information Society (also ECE 296, ENGRG 298, HIST 292, S&T 292)**
  Spring. 3 credits.
- **INFO 295 Mathematical Models for Information Science**
  Fall. 4 credits. Corequisite: MATH 231 or equivalent.
- **INFO 330 Applied Database Systems (also COM S 330)**
  Fall. 3 credits. Prerequisite: COM S 211/ENGRD 211.
- **INFO 345 Human-Computer Interaction Design (also COMM 345)**
  Spring. 3 credits.
- **INFO 349 Media Technologies (also S&T 349)**
  Spring. 3 credits.
- **INFO 355 Computers: From Babbage to Gates (also S&T 355)**
  Spring. 4 credits.
- **INFO 387 The Automatic Lifestyle: Consumer Culture and Technology (also S&T 387)**
  Spring. 4 credits. Not offered spring 2005.
- **INFO 430 Information Retrieval (also COM S 430)**
  Fall. 5 credits. Prerequisite: COM S 211/ENG RD 211 or equivalent.
- **INFO 431 Web Information Systems (also COM S 431)**
  Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with the technology of web sites.
- **INFO 435 Seminar on Applications of Information Science (also INFO 635)**
  Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at the level of COM S 211 or equivalent, and experience in using information systems.
- **INFO 440 Advanced Human-Computer Interaction Design (also COMM 440)**
  Fall. 3 credits.
- **INFO 447 Social and Economic Data (also ILR 447)**
  Spring. 4 credits. Prerequisites: one semester of calculus, the IS statistics requirement, at least one upper-level social science course, or permission of the instructor.
- **INFO 450 Language and Technology (also COMM 450)**
  Spring. 3 credits.
- **INFO 490 Independent Reading and Research**
  Fall, spring. 1–4 credits.
- **INFO 491 Teaching in Information Science, Systems, and Technology**
  Fall, spring. Variable credit.
- **INFO 515 Culture, Law, and Politics of the Internet**
  Fall. 4 credits.
- **INFO 530 The Architecture of Large-Scale Information Systems (also COM S 530)**
  Spring. 4 credits. Prerequisite: COM S/ INFO 330 or COM S 432.
- **INFO 614 Cognitive Psychology (also PSYCH 614)**
  Fall. 5 credits. S. Edelman.
  This course consists of two components: PSYCH 214 (3 credits) and COGST 501 (2 credits). It is intended for graduate students; undergraduates opting for 5 credits should enroll simultaneously in PSYCH 214 and COGST 501.
- **INFO 630 Representing and Accessing Digital Information (also COM S 630)**
  Fall. 4 credits. Prerequisite: COM S 472 or 478 or 578 or the equivalent.
- **INFO 634 Information Technology in Sociocultural Context (also S&T 634)**
  Fall. 4 credits. Prerequisite: permission of instructor.
- **INFO 635 Seminar on Applications of Information Science (also INFO 435)**
  Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at the level of COM S 211 or equivalent, and experience in using information systems.
  Undergraduates and master's students should register for INFO 435. PhD students should register for INFO 635.
- **INFO 640 Human-Computer Interaction Design (also COMM 640)**
  Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
- **INFO 685 The Structure of Information Networks (also COM S 685)**
  Spring. 4 credits. Prerequisite: COM S 482.

**MATERIALS SCIENCE AND ENGINEERING**

**Undergraduate Courses**

- **MS&E 111 Nanotechnology (also ENGR 111)**
  Fall. 3 credits. E. Giannelis.
  This is a course in the Introduction to Engineering series. For description, see ENGR 111.
- **MS&E 118 Design Integration: A Portable CD Player (also ENGR 118 and T &AM 118)**
  Spring. 3 credits. W. Sachse.
  This is a course in the Introduction to Engineering series. For description, see ENGR 118.
- **MS&E 119 Biomaterials for the Skeletal Systems (also ENGR 119)**
  Fall. 3 credits. D. T. Grubb.
  This is a course in the Introduction to Engineering series. For description, see ENGR 119.
- **MS&E 124 Designing Materials for the Computer (also ENGR 124)**
  Spring. 3 credits. 3 lectures.
  This is a course in the Introduction to Engineering series. For description, see ENGR 124.
- **MS&E 204 Materials Chemistry**
  Spring. 4 credits. U. Wiesner.
  This course is designed to give a molecular understanding of materials properties with emphasis on general concepts. In the first part, the structure of atoms is discussed introducing fundamental concepts of quantum chemistry. In the second part the transition from atoms to molecules is made discussing symmetry aspects of chemical bonding.
The last part describes the transition from molecules to materials. Materials classes covered include modern examples of polymers, organic semiconductors, ceramics, organic-inorganic hybrids, and superconductors emphasizing the interdisciplinary nature of materials science. Examples illustrate current materials research involving nanobiotechnology, organic optoelectronics, self-assemblying materials, or nano-ceramic.

**MS&E 206 Atomic and Molecular Structure of Matter (also M&E 313)**
Spring. 4 credits. Staff.
The course discusses the basic elements of structure; order and disorder; ideal gas; crystals; liquids; amorphous materials; polymers; liquid crystals; composites; crystal structure; x-ray diffraction.

**MS&E 261 Mechanical Properties of Materials: From Nanodevices to Superstructures (also ENGRD 261)**
Fall. 3 credits. S. P. Baker.
For description, see ENGRD 261.

**MS&E 262 Electronic Materials for the Information Age (also ENGRD 262)**
Fall. 3 credits. Prerequisite: MATH 192, Corequisite: PHYS 213 or permission of instructor. G. Malliaris.
For description, see ENGRD 262.

**MS&E 291-292 Research Involvement Ia and Iib**
291, fall; 292, spring. 3 credits each term.
Prerequisite: approval of department. Staff.
Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-term affiliation with a research group.

**MS&E 302 Mechanical Properties of Materials, Processing, and Design (also M&E 323 and MSE 582)**
Spring. 4 credits. Prerequisite: MS&E 206. Corequisite: PHYS 214 or permission of instructor. S. P. Baker.

**MS&E 303 Thermodynamics of Condensed Systems**
Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson.
The three laws of thermodynamics are introduced as the fundamental basis for thermal and chemical equilibrium, coupled with statistical mechanical interpretations for entropy and specific heat capacities. These principles are applied to understanding phase equilibrium diagrams, heterogeneous reactions, solutions, surfaces, and defects. Introduction to electrochemistry and fuel/power cells.

**MS&E 304 Kinetics, Diffusion, and Phase Transformation (also MSE 584)**
Spring. 4 credits. Prerequisite: MS&E 303 or permission of instructor.
The topics covered include phenomenological and atomistic theories of diffusion; diffusion in metals, alloys, and nonmetals, including polymers; diffusion in the presence of driving forces; fast diffusion paths; thermal and electrotransport; interfaces and microstructure; nucleation and growth; growth of product layers (parabolic and linear kinetics); solidification of alloys; diffusion and diffusionless transformations in solids; glass transition.

**MSE 305 Electronic, Magnetic, and Dielectric Properties of Materials (also MSE 585)**
Fall. 4 credits. Prerequisite: MS&E 206 or permission of instructor. R. B. van Dover.
Electronic structure of materials and connection to transport, magnetic, and dielectric properties. Wave and particle nature of electrons, wave packets, potential wells, barriers, tunneling. Valence electron behavior in crystals, density of states for metals, Fermi level, field and thermionic emission, Schottky barriers. Periodic potentials and band structure of crystals. Intrinsic and doped semiconductors, junction electronic and optical devices, local origin of magnetic behavior, ferromagnetic domains, magneto-resistance. Materials for data storage and manipulation. Polarization in dielectric materials; frequency dependence of dielectric constants and refractive indexes. Ferroelectric domains. Dielectric components in devices. The close connection between fundamental concepts and current technology will be emphasized.

**MS&E 307 Materials Design Concept I**
Fall. 2 credits. S. Sass.
For description, see MSE 407.

**MS&E 311 Junior Laboratory I**
Fall. 1 credit. Staff.
Practical laboratory covering the analysis and characterization of materials and processing. The fall semester labs will be based on materials from courses in thermodynamics of condensed systems and electronic, magnetic, and dielectric properties of materials.

**MS&E 312 Junior Laboratory II**
Spring. 1 credit. Staff.
Practical laboratory covering the analysis and characterization of materials and processing. The spring semester labs will be based on course material in kinetics, diffusion, and phase transformation and mechanical properties of materials, processing, and design.

**MS&E 391-392 Research Involvement Ila and Ilib**
391, fall; 392, spring. 3 credits each term.
Prerequisite: approval of department. Staff.
For description, see MS&E 291. May be continuation or a 1-semester affiliation with a research group.

**MS&E 404 Materials Laboratory I and II**
403, fall; 404, spring. 2 credits. D. Grubb.
Practical laboratory covering the analysis and characterization of materials and processing. Emphasis is on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

**MS&E 405-406 Senior Thesis I and II**
405, fall; 406 spring. 4 credits each term. Staff.
Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Both semesters must be taken to complete the laboratory requirement. This course is required for graduation with honors.

**MS&E 407 Materials Design Concepts II**
Fall. 2 credits. Staff.
The goal of this course is to introduce materials design in the context of real world materials design projects carried out in industry. In the first portion of the course, the process of engineering design will be studied in light of economic, environmental, regulatory, and safety issues. Patent searching and communication skills will be addressed. In the second portion of the course, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on the case studies.

**MS&E 433 Materials for Energy Production, Storage, and Conversion**
Fall. 3 credits. R. Dieckmann.
This new course is concerned with materials and technologies related to energy production, storage, and conversion as well as to sensors used for monitoring the emission of pollutants. The devices discussed include solar cells, fuel cells, batteries, and electrochemical sensors. Thermodynamic, kinetic, and electrochemical concepts and materials properties critical for such devices will be the central part of this class.

**MS&E 461 Biomedical Materials and Their Applications**
Spring. 3 credits. D. Grubb.
Many types of materials are used in biomedical engineering to replace or supplement natural biological systems. Interaction with blood and tissues is always of primary importance, but depending on the use of the biomedical material, mechanical, optical, and transport properties may also be vital. After a general introduction to biomedical materials, much of the course is taken up with case studies where a physiological system is considered, then the design of artificial parts and the materials now chosen are investigated. Constraints such as methods of production, economics, regulatory approval, and legal liabilities are included in the case study. Examples may include dialysis, contact and intra-ocular lenses, heart valves, and the artificial pancreas. Every student is involved in a presentation to the class about a case study.

**MS&E 471 Transmission Electron Microscopy**
Fall. 1 credit. S. Sass.
This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include microscope optics and conventional and high-resolution image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi pattern, and convergent beam pattern) and obtaining useful images of crystal defects.
Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Current text is *Transmission Electron Microscopy* by D. B. Williams and C. B. Carter.

**MS&E 481 Technology Management (also MS&E 597)**
Spring. 3 credits. E. P. Giannelis. This course is designed to provide students in engineering and the sciences with the knowledge and analytical skills to manage R&D for competitive advantage. Most organizations recognize the critical importance of R&D management in becoming and remaining world-class competitors. The course uses a combination of case studies, readings, discussions, and outside lectures. Topics include technology evaluation, R&D portfolio, intellectual property portfolio and management, technology transfer, and technology, policy, and society.

**MS&E 487 Ethics and Technology**
Fall. 1 credit. C. Ober. Ethics influences all decisions made by a technology-based organization. This course discusses those factors that must be considered in reaching a decision involving technology, ranging from legal impact to consideration of community expectations.

**MS&E 491-492 Research Involvement IVa and IVb**
491 Fall; 492, Spring. 3 credits each term. Prerequisite: approval of department. Staff. For description, see MS&E 291. May be continuation or a one-term affiliation with a research group.

**MS&E 495 Undergraduate Teaching Involvement**
Fall, spring. Variable credit. Staff. This course will give credit to students who help in the laboratory portions of select MS&E courses. The number of credits earned will be determined by the teaching load and will typically be 1-3 credits.

**MS&E 512 Mechanical Properties of Thin Films (also M&E 513)**
Spring. 3 credits. Offered alternate years. S. P. Baker.

**MS&E 521 Properties of Solid Polymers**

**MS&E 523 Physics of Soft Materials**
Fall. 3 credits. Offered alternate years. U. B. Wiesner. The course covers general aspects of structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers, liquid crystals, gels, and surfactant solutions. A general formalism for the description of order in terms of orientation distribution functions is introduced. Examples are given for the measurement of order parameters for partially ordered materials. Finally, the dynamics of soft materials is discussed. Besides transport and flow behavior aspects of the local dynamics of soft materials are presented. Emphasis is put on the discussion of various techniques frequently used (and available at Cornell) for the characterization of structure, order and dynamics of soft materials such as NMR or various scattering techniques. Using examples of modern multidimensional spectroscopic methods the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented at the end of the class.

**MS&E 524 Materials Chemistry of Synthetic Polymeric Materials**
Fall. 3 credits. Prerequisite: MS&E 521 or permission of instructor. Offered alternate years.

**MS&E 525 Organic Optoelectronics**
Fall. 3 credits. Offered alternate years. G. G. Malliaras.

**MS&E 531 Introduction to Ceramics**
Spring. 3 credits. C. Laddell. This course covers ceramic processes and products, structure of ceramic crystals, structure of glasses, structural defects (point defects, dislocations), surfaces, interfaces and grain boundaries, diffusion in ionic materials (atomistic and phenomenological approach, relationships between diffusion and point defect structure), ceramic phase diagrams, phase transformations. Physico-chemical aspects of the different topics are emphasized.

**MS&E 541 Nanofabrication**
Spring. 3, 4, or 5 credits. D. Ast. The previous material science course in micromachining has been combined with ECE 336 and is taught jointly with ECE. The course consists of a 2-lecture, 3-credit core course providing an introduction to the materials and processes used to fabricate integrated circuits and micro electromechanical systems. An optional extension is a hands-on, 1-credit, laboratory in which students fabricate transistors, simple integrated circuits, and MEMS structures. Students enrolled in MS&E 541 must enroll in the advanced topic, 1-credit section of the course. Enrollment in the advance credit section is optional for students registered in ECE 336. The recommended textbook is *Micromachining and its Application in Microelectronics* by Campbell. Course notes available to registered students on a password-protected web site.

**MS&E 542 Materials Design in Electronic Packaging**

**MS&E 543 Thin-Film Material Science**
Fall. 3 credits. Offered alternate years. D. G. Ast. This course provides fundamental information on the deposition, properties, reaction, and evaluation of thin films. Topics covered include: deposition techniques, surface energies, stress in thin films, surface kinetics, homoepitaxy, heteroepitaxy and superlattices, electrical and optical properties, Schottky barriers, solid phase regrowth, interdiffusion, thin film reactions, and electromigration. The recommended textbook is *Thin Film Science for Electrical Engineers and Material Scientists* by Tu, Mayer, and Feldman.

**MS&E 544 Plasma Processing of Electronic Materials (also ECE 482)**
Spring. 3 credits. Prerequisite: PHYS 213 and 214 or equivalent. Offered on demand. Staff. For description, see ECE 482.

**MS&E 545 Magnetic and Ferroelectric Materials**
Fall. 3 credits. Prerequisites: PHYS 213 and 214 or equivalent. Offered alternate years. R. B. van Dover. This course covers the fundamentals of magnetic phenomena and specific magnetic materials and their use in modern applications. Magnetization phenomena, the origin of magnetism in a material, magnetic domains, and magnetic anisotropy are included in the fundamentals. Specific magnetic materials and their applications include ferromagnetism in thin films and fine particles, amorphous magnetic materials; magnetic recording, magnetic circuits.

**MS&E 546 Solar Cells: Energy from the Environment**
Fall. 2 or 3 credits.LEC, 2 credits. Lab, 1 credit. Laboratory enrollment is limited to 10 students. No prerequisites. Not offered fall 2004. D. G. Ast.

**MS&E 555 Introduction to Composite Materials (also MS&E 545 and T&M 456)**
Spring. 3 credits. For description, see T&M 456.

**MS&E 563 Nanobiotechnology (also A&EP 663 and BIO G 663)**
Spring. 3 credits. For description, see A&EP 663.

**MS&E 571 Analytical Techniques for Material Science (Also MS&E 603)**
Spring. 3 credits. Offered alternate years. Not offered spring 2005.

**MS&E 572 Computational Materials Science**
Spring. 3 credits. Prerequisite: MS&E 303/601 or equivalent; programming. Not offered spring 2005. M. O. Thompson.

**Graduate Professional Courses**

**MS&E 501-502 Special Project**
501. Fall; 502, Spring. 6 credits each term. Master of Engineering research project.

**MS&E 501**
Atomic and Molecular Structure of Matter (also MS&E 206 and M&E 313)
Spring. 4 credits. Staff. For description, see MS&E 206.

**MS&E 502**
Mechanical Properties of Materials, Processing, and Design (also MS&E 302 and M&E 323)
Spring. 4 credits. Corequisite: MS&E 594 or permission of instructor. For description, see MS&E 302.

**MS&E 583 Thermodynamics of Condensed Systems (also MS&E 303)**
Fall. 4 credits. M. O. Thompson. For description, see MS&E 303.

**MS&E 584 Kinetics, Diffusion, and Phase Transformation (also MS&E 304)**
Spring. 4 credits. Prerequisite: MS&E 583 or permission of instructor. For description, see MS&E 304.
Graduate Core Courses

**MS&E 601 Therodynamics of Materials**
Fall. 3 credits. Prerequisite: course in thermodynamics at level of MS&E 503.
Topics covered include basic statistical thermodynamics, partition functions and thermodynamic state functions, distributions, laws of thermodynamics, free-energy functions and conditions of equilibrium, chemical reactions, statistics of electrons in crystals, heat capacity, heterogeneous systems and phase transitions, and lattice models of 1-, 2-, and 3-dimensional interacting systems. Also covariant thermodynamics of alloys, free-energy and phase diagrams, order-disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

**MS&E 602 Elasticity, Plasticity, and Fracture**
Spring. 3 credits. Offered alternate years. Not offered spring 2005.

**MS&E 603 Analytical Techniques for Materials Science (also MS&E 571)**
Spring. 3 credits. Offered alternate years. Not offered spring 2005.
For description, see MS&E 571.

**MS&E 604 Kinetics of Reactions in Condensed Matter**
Spring. 3 credits. A. L. Ruoff.
Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic, ionic, semiconductor, and polymeric solids. Cartesian tensors are utilized for fields and properties. Covers phase stability and transformations; nucleation and growth, spinodal decomposition and displacive transformations; phase coarsening processes, recrystallization, and grain growth; diffusion-controlled growth, interfacial reactions, moving boundary problems; grain-boundary diffusion controlled kinetics; viscosity, anelasticity, and diffusional creep. Texts: 1) Shewmon, Diffusion in Solids, 2) Porter and Easterling, Phase Transformations in Metals and Alloys.

Related Course in Another Department

**Introductory Solid-State Physics (PHYS 454)**

Further Graduate Courses

**MS&E 621 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607)**
Fall. 4 credits. Prerequisite: CHEM 605 or permission of instructor. S. Lee.
For description, see CHEM 607.

**MS&E 622 Synthetic Polymer Chemistry (also CHEM 675 and CHEM 671)**
Spring. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor. Staff.
For description, see CHEM 671.

**MS&E 631 Solid-State Reactions**
Fall. 3 credits. Offered alternate years. Not offered 2005-2006. R. Dieckmann.

**MS&E 632 Solid State Electrochemistry**
Fall. 3 credits. Prerequisite: MS&E 631 or permission of instructor. Not offered 2004-2005. R. Dieckmann.

**MS&E 655 Composite Materials (also M&AEE 665 and T&AM 655)**
Spring. 4 credits. Fall.
For description, see T&AM 655.

**MS&E 665 Principles of Tissue Engineering (also M&AEE 665, BMEP 665)**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
This course covers introductory concepts in tissue engineering, including: polymeric biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

**MS&E 671 Principles of Diffraction (also A&EP 711)**
Spring. 3 credits. Letter grades only. J. D. Brock.
For description, see A&EP 711.

**MS&E 672 Transmission Electron Microscopy (also MS&E 471)**
Fall. 1 credit. Prerequisite: MS&E 206 or equivalent. Offered alternate years.

**MS&E 680 Research in Materials Science**
Fall. 3 credits. Offered alternate years. J. Blakely.
This course deals with special topics in the field of surface and interface science. Knowledge of basic statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes is assumed. The following are the main topics: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

**Specialty Courses**

**MS&E 800 Research in Materials Science**
Fall. Spring. Credit to be arranged. Staff.
Independent research in materials science under the guidance of a member of the staff.

**MS&E 801 Materials Science and Engineering Colloquium**
Fall and spring. 1 credit each term. Credit limited to graduate students. Staff.
Lectures by visiting scientists. Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

**MS&E 802 Materials Science Research Seminars**
Fall, spring. 2 credits each term. For graduate students involved in research projects. Staff.
Short presentations on research in progress by students and staff.

General and Required Courses

**MAE 101 Naval Ship Systems (also NAV S 202)**
Spring. 3 credits.
For description, see NAV S 202.

**MAE 117 Introduction to Mechanical Engineering (also ENGRI 117)**
Fall. 3 credits. 2 lectures and 1 lab per week.
This is a course in the Introduction to Engineering series. For description, see ENGR 117.

**MAE 127 Introduction to Entrepreneurship and Enterprise Engineering (also ENGRI 127)**
Spring. 3 credits. Open to all Cornell students regardless of major. No prerequisites.
For description, see ENGR 127.

**MAE 212 Mechanical Properties and Selection of Engineering Materials.**
Spring. 3 credits. Prerequisite: ENGRD 202 (strictly enforced). Software fee.
This course covers the mechanics of deformable bodies and reinforces the concept of "simple engineering elements" for mechanical analysis associated with design. There is an introduction to the broad range of properties and behaviors of engineering materials as they relate to mechanical performance. Emphasis is placed on general states of stress and strain and on elasticity and combined loading effects. Failure criteria, including yielding, buckling, fracture, fatigue, and environmental effects, are developed. A general introduction to the function/constraints/objectives approach to material selection associated with the mechanical design is provided with candidate material systems coming from metals, polymers, ceramics, and/or composites. A general overview of material processing is presented within this context of material selection.

**MAE 221 Thermodynamics (also ENGRD 221)**
Fall, spring may be offered summer. 3 credits. Prerequisites: MATH 192 and PHYS 112 or permission of instructor.
For description, see ENGR 221.

**MAE 225 Mechanical Synthesis**
Spring. 4 credits. Prerequisite: ENGRD 202. Pre- or corequisites: ENGRD 203 and ENGRD 221. Lab.
A hands-on introduction to the mechanical design process. Basic prototyping skills developed using machine tools. Mechanical dissection used to demonstrate successful
M&AE 323 Introductory Fluid Mechanics
Fall. Usually offered in the summer through the Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 202 and 203 and coregistration in 221, or permission of instructor. Topics include properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers, introduction to compressible flow.

M&AE 324 Heat Transfer
Spring. Usually offered in the summer through the Engineering Cooperative Program. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Topics include steady and unsteady heat conduction: forced and free; radiation heat exchange, and heat exchangers and boiling.

M&AE 325 Analysis of Mechanical and Aerospace Structures
Fall. Usually offered in the summer through the Engineering Cooperative Program. 3 credits. Prerequisites: ENGRD 202 and M&AE 212 (strictly enforced). This course covers topics in the mechanics of materials applied to the analysis and design of structural components encountered in mechanical, aeronautical, and aerospace systems, including the following: torsion and bending of nonsymmetric or curved members, elastic stability, stress concentration, contact stresses, statically indeterminate structures, bound theorems for collapse of structures, and applications to composite and sandwich structures.

M&AE 326 System Dynamics
Spring. May be offered in Engineering Cooperative Program. 4 credits. Prerequisite: MATH 294, ENGRD 203. Junior standing required. Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

M&AE 327 Mechanical Property and Performance Laboratory
Spring. 2 credits. Prerequisites: M&AE 212 and M&AE 325. This course provides an introduction to the experimental methods, instrumentation, and data analyses associated with material property determination and mechanical performance of materials. Emphasis is placed on integration of theory and analysis with experimental methods.

M&AE 427 Fluids/Heat Transfer Laboratory
Fall. 3 credits. Prerequisites: M&AE 323, 324. Completes the short technical writing requirement. Laboratory exercises in fluid mechanics and the thermosciences. Measurements of flame temperature, pressure, heat transfer, viscosity, lift and drag, fluid-flow rate, effects of turbulence, air foil stall, flow visualization, and speciﬁc engine performance. Instrumentation, techniques and analysis, and interpretation of results. Biweekly written assignments with extensive feedback.

M&AE 428 Seminar on Engineering Design
Fall. 2 credits. Prerequisite: completion of 6 semesters in mechanical engineering or permission of instructor. This course is offered to illustrate the design "process" in action. It consists of formal lectures and invited seminars by industrial and academic practitioners of design. Case studies are prepared in weekly invited lectures from a wide range of disciplines, including thermo-fluid processes, manufacturing, energy, chemical design, aerospace, and biological sciences. The invited lectures are supplemented by one or more design "projects" in the semester.

M&AE 591 Applied Systems Engineering
(also CEE 504, COM S 504, ECE 512, OR&IE 516, SYSEN 510) Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor. For description see SYSEN 510.

M&AE 592 System Architecture, Behavior, and Optimization
(also CEE 505, COM S 505, ECE 513, OR&IE 513, SYSEN 510) Spring. 3 credits. Prerequisites: senior/graduate standing and completion of Applied Systems Engineering (CEE 504, COM S 504, ECE 512, M&AE 591, or OR&IE 512, SYSEN 510) or permission of instructor. See SYSEN 510 for description.

M&AE 103 Introduction to Computer-Aided Manufacturing (CAM)
Fall, spring. 1 credit, approximately eight weeks (total 15 hrs. of instruction and 15 hrs. of lab). Prerequisites: M&AE 225 or equivalent computational experience. Introduction to the fundamentals of computer-aided manufacture (CAM) seminars through the use of computer numerical control (CNC) programming. The course is the hands-on component of the three-part series on CAM. Provides practical applications of the use of G codes and solid modeling software, CNC mill and/or lathe setup, tool selection, and operation. The course is required for students wishing to use the CNC equipment in the Emerson Lab's Product Realization Facility's CNC seminars: An Introduction to CNC Machining and CNC Programming; or permission of instructor. Limited enrollment. Completes the introduction to the fundamentals of computer-aided manufacture (CAM) seminars through the use of computer numerical control (CNC) programming. The course is the hands-on component of the three-part series on CAM. Provides practical applications of the use of G codes and solid modeling software, CNC mill and/or lathe setup, tool selection, and operation. The course is required for students wishing to use the CNC equipment in the Emerson Lab's Product Realization Facility for team or research projects. May not be used to fulfill any M&AE requirement.

M&AE 312 Mechanical Properties of Materials, Processing, and Design (also MS&E 302 and MS&E 582)
Spring. 4 credits. Prerequisite: MS&E 206. Corequisites: MS&E 304 or permission of instructor. For description, see MS&E 302.

M&AE 313 Atomic and Molecular Structure of Matter (also MS&E 206)
Spring. 4 credits. For description, see MS&E 206.

M&AE 378 Mechatronics
Fall. 4 credits. Prerequisite: MATH 294 (Engineering Mathematics II), PHYS 213 (Physics II: Heat/Electromagnetism), or permission of instructor. At the intersection of mechanical and electrical engineering, mechatronics involves technologies necessary to create automated systems. It introduces students to the fundamental elements of modern controlled dynamic systems. Topics include analog circuits (both passive and active components); filter design; transistors; diodes; MOSFETs and power amplification; transduction mechanical and electro-mechanical devices such as electromagnetic systems; piezoelectric and shape memory material transduction; gear trains; pulse width modulation; optical encoders; discretization, aliasing, and microprocessors and programming. Laboratory experiments culminate in the design and programming of a microprocessor-controlled robotic vehicle.

M&AE 386 Automotive Engineering
Spring. 3 credits. Prerequisite: M&AE 325 or permission of instructor. Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles. Engines, transmissions, suspension, brakes, and aerodynamics will be discussed. The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches. Co-requisites with M&AE 486.

M&AE 409 Data Structures and Algorithms for Computational Science (also CIS 409)
Fall. 4 credits. Prerequisite: COM S 100 or programming experience in any language. Not offered every year. Not offered 2016-2017. For description, see CIS 409.

M&AE 412 Smash and Crash: Mechanics of Large Deformations
Fall. 4 credits. Prerequisites: M&AE 212, TRAM 202. Fulfills field design requirement. Not offered 2004-2005. Severe loading is a defining feature of both materials processing and crashworthiness. Materials are stressed beyond their elastic limits intentionally, resulting in large permanent deformations. In materials processing, the desire is to change a workpiece shape to manufacture a component, in crash worthiness, the intent is to absorb a vehicle's energy and to protect its occupants. In this course the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods including bounding theorems, are presented. The fundamentals are applied to a number of topics in materials processing and crash design. The laboratory experience deals with these topics, culminating with the team design, construction, and testing of a crash cage.

M&AE 415 GPS: Theory and Design (also ECE 415)
Fall. 4 credits. Prerequisites: a 300-level engineering course with advanced math content such as ECE 413 or M&AE 326. For description, see ECE 415.
M&AE 417 Introduction to Robotics: Dynamics, Control, Design
Spring. 3 credits. Prerequisites: engineering math at the level of 293–294; some course in dynamics on the level of TAM/ENGRI 205; familiarity with control concepts typical of M&AE 320.
Introductory course in the analysis and control of mechanical manipulators and related robotic machines. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators, trajectory control, and compliant motion control. Simulation and design using MATLAB and multi-body codes are used.

M&AE 425 FSAE Automotive Design Project (Design Option)
Fall, spring. 3 credits for team members or 4 credits for team leaders. Intended for M&AE or ECE juniors and seniors or by arrangement with instructor. Usually 3 credits. Project consists of research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and specialized engineering principles applied to complex mechanical, electromechanical, and electronic systems.

M&AE 426 FSAE Auto Design Project (Design Option)
Fall, spring. 3 or 4 credits. Limited to M&AE seniors; permission of instructor only. Senior design version of M&AE 425. For description, see M&AE 425.

M&AE 440 Hybrid Electric Vehicle
Fall, spring. 3 credits for team members; 4 credits for team leaders. Enrollment limited to a maximum of 4 semesters. Permission of instructor only. Team work on the design and fabrication of a hybrid vehicle for national competition.

M&AE 441 Hybrid Electric Vehicle (Design Option)
Fall, spring. 3 or 4 credits. Limited to M&AE seniors; permission of instructor only. Senior design version of M&AE 440. For description, see M&AE 440.

M&AE 455 Introduction to Composite Materials (also CEE 475, M&AE 555, and TAM 455)
Spring. 3 credits. For description, see TAM 455.

M&AE 461 Entrepreneurship for Engineers (also ENGRG 461 and ORIE 452)
Fall. 3 credits. This course develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business plans, technology forecasting, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft skills are left for other courses.
Course work consists of discussions, assignments, and the preparation and presentation of a complete business plan.

M&AE 463 Neuromuscular Biomechanics (also BMEP 463)
Spring. 3 credits. Prerequisites: ENGRD 202 and 203 or permission of instructor. Offered alternate years.
Modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Physiology of neurons and muscles introduced and related to the production of force and movement in biological systems. Representation of neuromuscular systems as simultaneous equations. Exploration of the muscular redundancy problem using optimization methods and general-purpose languages (such as Mathematica or MATLAB). Selected clinical applications.

M&AE 464 Orthopaedic Tissue Mechanics
Spring. 3 credits. Prerequisites: ENGRD 202 and M&AE 325 or permission of instructor. Offered alternate years. Not offered 2004–2005.
Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon introduced and related to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

M&AE 466 Biomedical Engineering Analysis of Metabolic and Structural Systems (also BMEP 401)
Fall. 3 credits. Prerequisites: ENGRD 202 and prior course work in basic biology or permission of instructor.
For description, see BMEP 401.

M&AE 470 Finite Element Analysis for Mechanical and Aerospace Design
Spring. 3 credits. Prerequisite: senior standing or permission of instructor. Limited enrollment. Evening examinations.
Term project satisfies senior design requirement for M&AE students. Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Includes thermal, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as MATLAB and ANSYS). Selected mechanical and aerospace applications. Co-meets with M&AE 570.

M&AE 471 Mechanical Properties of Thin Films (also MS&E 512)
Spring. 3 credits. Prerequisite: M&AE 212 or 412, and introductory probability and statistics, or permission of instructor.
Nominal DFMA (design for manufacture and assembly) and variational DFMA are covered in two parallel streams. The nominal stream is based on readings in a popular text that surveys the role of manufacturing and assembly processes in product and plant design. The second stream, covered mainly through lectures, addresses dimensional variability and its control through parametric and geometric tolerances, dimensional metrology, and statistical quality and process control.

M&AE 472 Mechanical Properties of Materials (also CEE 472, ECE 472)
Spring or fall. 3 credits. Prerequisites: ECE 420 or permission of instructor.
Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes. Co-meets with M&AE 579.

M&AE 473 Cost and Management Accounting
Fall or spring. 3 credits. Prerequisite: senior standing. Offered alternate years. Not offered 2004–2005.
For description, see M&AE 551.

M&AE 474 Feedback Control Systems (also CHEM 472, ECE 472)
Fall. 4 credits. Prerequisite: ECE 220 or M&AE 320 or permission of instructor.
Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes. Co-meets with M&AE 579.

M&AE 475 Feedback Control Systems (also CHEM 472, ECE 472)
Fall. 4 credits. Prerequisite: ECE 220 or M&AE 320 or permission of instructor.

**M&AE 525 Advanced Mechatronics-Systems Engineering Project (Robo Cup)**

Fall, spring. 4 credits each term (must be taken for 8 credits). Prerequisite: CHEM 372 or ECE 301 or M&AE 326 or permission of instructor. Fulfills M&AE senior design elective.

Project-based introduction to systems engineering with a focus on system design, systems and technology integration, and systems analysis. Approximately 30 students from the various engineering disciplines design, construct, and fully test several teams of fully autonomous mobile robots. These teams engage in head-to-head competitions at the end of the spring semester. There are approximately six lectures per semester and weekly group meetings with the instructor. The project involves vehicle design, real-time feedback control and trajectory generation, microprocessor design and implementation, wireless communication, computer vision, and artificial intelligence.

**M&AE 565 Biomechanical Systems—Analysis and Design (also BMPE 565)**

Fall. 3 or 4 credits. Prerequisites: Undergraduate courses in dynamics and strength of materials, (e.g., T&AM/ENGRD 202 and 203) and senior standing, graduate standing or permission of instructor. Mechanics and design in musculoskeletal systems. Emphasis on the modeling and analysis of bones and joints and the analysis and design of bone-implant systems for fracture fixation and joint replacement. Selected topics from the study of the human musculoskeletal system as a mechanical system. Emphasis on the modeling and analysis of bones and joints, and the analysis and design of biomechanical systems frequently encountered in orthopaedic engineering, including bone-implant systems.

**M&AE 570 Finite Element Analysis for Mechanical and Aerospace Design (also M&E 470)**

Spring. 4 credits. Prerequisite: Graduate standing or permission of instructor. Two 75-minute lectures each week. Introduction to multibody simulation using working model.

**M&AE 577 Engineering Vibrations**

Spring. 3 credits. Prerequisite: M&E 326 or equivalent, graduate standing, or permission of instructor. Graduate version of M&E 477.

For description, see M&E 477.

**M&AE 578 Feedback Control Systems**

Fall. 4 credits. Graduate version of M&E 478.

For description, see M&E 478.

**M&AE 579 Modeling and Simulation of Mechanical and Aerospace Systems**

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. Limited enrollment. Evening examinations. Term project. Graduate version of M&E 479.

For description, see M&E 479.

**M&AE 655 Composite Materials (also M&E 655 and T&AM 655)**

Spring. 4 credits. For description, see T&AM 655.

**M&AE 663 Advanced Topics in Neuromuscular Biomechanics (also BMPE 663)**

Spring. 3 credits. Permission of instructor only. Offered alternate years. Not offered 2004–2005.

F. Valero-Cuevas.

Advanced topics in modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Mathematical representation of functional interactions among neurons, muscles, and skeletal structures. Numerical prediction of force and movement in biological systems, and projects exploring muscle coordination using optimization methods and general-purpose languages (such as Mathematica or MATLAB). Project-based investigation of clinically relevant topics.

**M&AE 664 Mechanics of Bone**

Spring. 3 credits. Prerequisites: graduate standing or permission of instructor. Offered alternate years. Not offered 2004–2005.

This course focuses on current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.

**M&AE 665 Principles of Tissue Engineering (also BMPE 665 and M&E 665)**

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. L. Bonassar.

See BMPE 665 for description.

**M&AE 675 System Identification and Control**

Fall. 3 credits. Prerequisite: M&E 478/ECE 471/CEME 472, M&AE 521/ECE 521, or equivalent. Not offered 2004–2005.

Covers the identification of linear uncertain and nonlinear models and their connections to control. Black box methods, such as subspace methods, and model tuning approaches, such as recursive parameter estimation, are presented. Connections to control include the development of model uncertainties and bounds and control approaches consistent with identified models. Current trends in model identification for control are discussed. Other topics, such as hybrid models, are presented given enough time.

**M&AE 676 Model-Based Estimation**

Fall. 4 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming. Open to M.S./Ph.D.; others by permission of the instructor. Offered alternate years. Not offered 2004–2005.

This course covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are least-squares estimation for general problems and Kalman filtering for dynamic systems problems. Techniques for linear models are taught as are techniques for nonlinear models. Both theory and application are presented.

**M&AE 680 Finite Element Analysis (also CEE 676 and T&AM 666)**

Spring. 3 credits. Prerequisites: T&AM 663 and T&AM 610 or equivalent.

Conceptual, theoretical, and practical bases for finite element analysis in engineering, with emphasis on structural, mechanical, and thermal problems. Focusing on the FEM as a method for numerically solving partial differential equations. Topics include: strong and weak problem forms; weighted-residual and variational formulations: formulations for elliptic, parabolic, and hyperbolic problems (Laplace’s equation, elasticity, heat conduction, structural dynamics, wave propagation); meshing and error estimation; and various kinds of elements.
Energy, Fluids, and Aerospace Engineering

M&AE 305 Introduction to Aeronautics
Fall. 3 credits. Prerequisite: TAM-ENGRD 205; limited to upperclassmen, engineers, other M&AE students by permission of instructor.

M&AE 306 Spacecraft Engineering
Spring. 3 credits. Prerequisite: junior or senior M&AE or ECE students or permission of instructor.
Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics covered include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.

M&AE 400 Components and Systems: Engineering in a Social Context (also S&S 400)
Spring. 3 credits. Prerequisites: upperclass standing, 2 years of college physics. Serves as an approved elective but not as a Field Elective in Mechanical Engineering. This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Missile Defense, supersonic transport, and the automobile and its effect on the environment, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

M&AE 401 Components and Systems: Engineering in a Social Context
Fall. 4 credits. Prerequisites: M&AE senior standing, 2 years of college physics. Serves as a Field Elective in Engineering and the physical sciences. Offers an advanced viewpoint, including formulation of continuum fluid dynamics; surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

M&AE 453 Computer-Aided Engineering: Applications to Biomedical Processes (Also BEE 453)
Spring. 3 credits. Prerequisite: BEE 350, CHME 324, M&AE 324, or equivalent.
Fulfills technical elective requirement for M&AE students. See BEE 453 for description.

M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also ECE 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in Engineering and the physical sciences. Offered alternate years. For description, see NS&EE 484.

M&AE 501 Future Energy Systems
Spring. 3 credits. Prerequisites: ENGRD 522 or equivalent, M&AE 323, 324 recommended or equivalent. Open to graduate and upperclass students or approval from instructor.
Critical examination of the technology of energy systems that will be acceptable in a world faced with global warming, local pollution, and declining supplies of oil. The focus is on renewable energy sources (wind, solar, biomass), but other non-carbon-emitting sources (nuclear and lower-carbon sources (co-generative gas turbine plants, fuel cells) also are studied. Both the devices as well as the overall systems are analyzed.

M&AE 506 Aerospace Propulsion Systems
Fall. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years.
Application of thermodynamic and fluid-mechanical principles to design and performance analysis of aerospace propulsion systems. Jet propulsion principles, including gas turbine engines and rockets. Electric propulsion. Future possibilities for improved performance or aerospace propulsion systems.

M&AE 507 Dynamics of Flight Vehicles
Spring. 3 credits. Prerequisites: M&AE 505 and M&AE 323, with 326 concurrently or permission of instructor. Offered alternate years.
Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability of longitudinal and lateral-directional motions; transient response to control input. MATLAB will be used extensively. At the level of Flight Stability and Control by Nelson.

M&AE 523 Intermediate Fluid Dynamics with CFD
Spring. 4 credits. Prerequisites: graduate standing or permission of instructor. This course is intended for M.Eng. students who wish to take a single-fluid dynamics course. Students desiring more intensive treatment should consider M&AE 601 and one or more of M&AE 636, M&AE 730, and M&AE 737. This class co-meets with M&AE 425. In addition to the normal requirements for M&AE 425, this course includes an extensive CFD design project.

M&AE 543 Combustion Processes
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics covered include: thermochromy, kinetics, vessel explosions, laminar premixed and diffusion flames, droplet combustion, and combustion of solids.

M&AE 601 Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Introduces the fundamental fluid mechanics of an advanced viewpoint, including formulation of continuum fluid dynamics, surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

M&AE 602 Fluid Dynamics at High Reynolds Numbers
Analysis and discussion of a wide range of specific flows and flow regimes characterized by high Reynolds number are provided. Potential flows, conformal transformations, slender-body theory, and Kelvin’s impulse are included. Laminar viscous flows are studied, including fully diffused flows, “exact” solutions, and boundary layers. Compressible flows are treated, including propagation and viscous decay of sound and shock waves and their decay, and the method of characteristics for analysis of such problems. Stratified flows, especially gravity and capillary waves, are analyzed. Various stability problems associated with high Reynolds number flows are discussed. Finally, certain low Reynolds number flows associated with creeping motions or with ultra-small scale will be described.

M&AE 608 Physics of Fluids
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 2004–2005.
Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory: velocity distribution, collisions, Boltzmann equation. Quantum theory: postulates of quantum mechanics, internal structure, rigid rotor, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relation to thermodynamics, calculations of thermodynamic properties. Chemical rate processes.

M&AE 627 Experimental Methods in Fluid Dynamics
Spring. 4 credits. Not offered 2004–2005. For description, see CEE 637.

M&AE 631 Turbulence and Turbulent Flows
Fall. 4 credits. Prerequisite: M&AE 601, graduate standing, or permission of instructor.
Topics include the dynamics of buoyancy and shear-driven turbulence; boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.
M&AE 632 Multiphase Turbulence: Particulates, Drops and Polymer Suspensions
Spring. 4 credits. Prerequisites: M&AE 601, graduate standing, or permission of instructor. Not offered 2004–2005.
The course will cover turbulent transport of suspensions of microstructures: (i) particulates; (ii) drops; and (iii) polymer molecules. Topics include transport properties of individual microstructures, statistical averaging and the closure problem, Euler/Lagrangian methods, multiphase transport equations, direct numerical simulation and large eddy simulation. The course emphasizes fundamental questions concerning modeling of discrete phases by continuum means.

M&AE 636 Elements of Computational Aerodynamics
Fall. 4 credits. Prerequisites: graduate standing and a graduate-level course in fluid mechanics. Not offered 2004–2005.
Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course has common lectures with M&AE 736 but is more applications oriented and uses commercial software for all computational exercises.

M&AE 643 Computational Combustion
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 2004–2005. S. B. Pope.
Examines laminar and turbulent flames and the fundamental chemical and transport processes involved. Emphasis is on using computational tools (Chemkin and Fluent) to calculate flame properties, which are compared to experimental data. Topics covered include thermodynamic equilibrium, chemical kinetics, reactor studies, conservation equations, transport properties, laminar premixed and non-premixed flames, turbulent jets, turbulence modeling, and PDF models of non-premixed turbulent combustion. A knowledge of combustion at the level of M&AE 543, Turbulent Combustion Processes, is useful but not required.

M&AE 645 Turbulent Reactive Flow
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 2004–2005.
Large turbulent reactive flows occur in combustion devices, the chemical process industry, the atmosphere, oceans, and elsewhere. In the last decade, substantial progress has been made in the understanding of these flows, through both experimental and computational approaches. This course focuses on turbulent combustion and describes the different phenomena involved, the basic processes and governing equations, experimental observations, and a range of modeling approaches. Class meets, on average, twice per week.

M&AE 650 Evolutionary Computation and Design Automation (Also COM S 750, CIS 750)
Fall. 4 credits.
For description, see COM S 750.

M&AE 651 Conduction and Radiation Heat Transfer
Fall, weeks 1–7. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor.

M&AE 652 Convection Heat Transfer
Fall, weeks 8–14. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor.

M&AE 714 Computational Sensors: Information Technologies for Complex Continuum Systems
Fall. 4 credits. Prerequisites: exposure to computational mathematics. Some background in continuum systems and processes such as fluid flow, thermal transport and/or deformation of materials/structures. N. Zaharas.
Syllabus: examples of industrial control of continuum systems; mathematical preliminaries; finite element approach to partial differential equations; inverse problems and inverse problem solving; optimal control problems; numerical analysis of distributed control problems; reduced-order models for continuum systems; feedback laws for continuum systems; robust control and uncertainty; data mining of continuum systems and models; data compression and transmission; techniques for optimization; image processing; actuation and sensing of continuum fields.

M&AE 653 Convection Heat Transfer
Fall. 4 credits. Prerequisite: exposure to computational mathematics. Some background in continuum systems and processes such as fluid flow, thermal transport and/or deformation of materials/structures. N. Zaharas.

M&AE 736 Theory of Computational Aerodynamics
Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics or fluid mechanics, and some higher-level (e.g., FORTRAN, MATLAB) programming experience. Not offered 2004–2005.
Numerical methods to solve inviscid and high-Reynolds number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming a digital computer.

M&AE 737 Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some MATLAB, C++ or other programming experience.
Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

Special Offerings

M&AE 490 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Limited to undergraduate students. Prerequisite: permission of instructor.
Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&AE 491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. 3 credits. Prerequisite or co-requisite: M&AE 428. Limited to M&AE seniors. Enrolls M&AE senior design requirement.
Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses. Students should adhere to the design process and documentation guidelines available at the M&AE undergraduate office.
Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include fuels and conditions required for fusion power, and basic fusion-reactor concepts; fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

NS&E 545 Energy Seminar (also ECE 587 and M&AE 545)  
Fall, spring. 1-credit course. May be taken for credit both semesters. D. A. Hammer. For description, see ECE 587.

M&AE 791 Mechanical and Aerospace Engineering Seminar  
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects. Presentations on research in progress by faculty and students.

M&AE 799 Mechanical and Aerospace Engineering Colloquium  
Fall, spring. 1 credit each term. Credits limited to graduate students. Special lectures by faculty members on topics of current research.

M&E AE 545 Energy Seminar I (also ECE 587, NS&E 545)  
Fall. 1 credit.  
For description, see ECE 587.

M&E AE 546 Energy Seminar II (also ECE 588)  
Spring. 1 credit.  
For description, see ECE 588.

M&E AE 594 Enterprise Engineering  
Fall. 1 credit. (usually S-U) each term.  
For description, see OR&IE 893-894.

M&E AE 690 Special Investigations in Mechanical and Aerospace Engineering  
Fall, spring. Credit TBA. Limited to graduate students.

M&E AE 955 Special Topics in Mechanical and Aerospace Engineering  
Fall, spring. Credit TBA. Graduate standing and permission of instructor. Special lectures by faculty members on topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&E AE 890 Research in Mechanical and Aerospace Engineering  
Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&E AE 990 Research in Mechanical and Aerospace Engineering  
Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

OR&IE 310 Industrial Systems Analysis  
Spring. 4 credits. Prerequisite or corequisite: ENGRD 270 or permission of instructor. J. Callister.  
This course presents a systematic and hierarchical approach to the development of information systems, featuring business case justification, requirements analysis, use case analysis, functional analysis, structural design, object-oriented modeling, database design, verification and validation, and project schedule estimation. Graphical tools of analysis (e.g., the Unified Modeling Language) are emphasized. Examples are drawn from business and industrial processes. An integrative design project resulting in a detailed information system design specification (but not necessarily implementation) is required.

OR&IE 320 Optimization I  
Fall. 4 credits. Prerequisite: MATH 221 or 294. J. Renegar.  
Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

OR&IE 321 Optimization II  
Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent. L. Trotter.  
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer programming, dynamic programming, and network optimization. Formulation and modeling are stressed as well as numerous applications.

OR&IE 350 Financial and Managerial Accounting  
Fall. 4 credits. J. Callister.  
Course covers principles of accounting, financial reports, financial-projections analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

OR&IE 360 Engineering Probability and Statistics II  
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. Staff.  
This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using minimum likelihood and the method of moments.

OR&IE 361 Introductory Engineering Stochastic Processes I  
Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent. Staff.  
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

OR&IE 416 Design of Manufacturing Systems  
Fall. 4 credits. Senior OR&IE students only. Others by permission of instructor only. P. Jackson, J. Muckstadt.  
This is a project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures.

OR&IE 431 Discrete Models  
Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211 or permission of instructor. Not offered 2004-2005.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

NS&E 484 Introduction to Controlled Fusion: Principles and Technology (also A&EE 484, ECE 484, and M&AE 489)  
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; permission of instructor. Intended for seniors and graduate students. D. A. Hammer.
Course covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

**OR&IE 432 Nonlinear Optimization**
Fall. 4 credits. Prerequisite: OR&IE 320. Not offered 2004–2005.
This course is an introduction to the practical aspects of the mathematical techniques for optimization. Attention is given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Methods of numerical linear algebra are introduced as needed.

**OR&IE 434 Optimization Modeling**
Emphasis is on modeling complicated decision problems as linear programs, integer programs, and highly structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.

**OR&IE 435 Introduction to Game Theory**
Fall. 4 credits. Prerequisite: OR&IE 320. M. Todd.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games, cooperative and noncooperative n-person games, and games in extensive, normal, and characteristic function form. Encompasses all aspects of game theory. Applications to weighted voting and cost allocation.

**OR&IE 436 A Mathematical Examination of Fair Representation**
Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor. J. R. Bland
This course covers the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. At first blush it appears that there is a straightforward approach that must lead to a fair, or fairest apportionment, for any fixed size house and known populations. However, indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The debate extends beyond apportionment of legislatures (in both federal systems and proportional representation systems) to some other realms where indivisible resources are to be allocated among competing constituencies.

**OR&IE 451 Economic Analysis of Engineering Systems**
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350. X. Guo.
Course topics include financial planning, including cash-flow analysis and inventory flow models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment replacement or capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

**OR&IE 452 Entrepreneurship for Engineers**
(also M&AE 461 and ENGRL 461)
Fall. 3 credits. Enrollment open to upperclass engineers, others by permission of instructor. J. Callister.
For description see M&AE 461.

**OR&IE 462 Introductory Engineering Stochastic Processes II**
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Not offered 2004–2005.
Course topics include stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

**OR&IE 464 Extreme Value Analysis with Applications to Finance and Data Communications**
Spring. 3 credits. Prerequisites: open to undergraduate and M.Eng. students who have had a stochastic processes course at the level of OR&IE 361 as well as a prior course in statistics. Not offered 2004–2005. S. Resnick.
The course will cover the basic models of extreme events used in hydrology, finance, insurance, environmental science (pollution controls), reliability, risk management. The basic models contain parameters that must be estimated, and graphical and analytic estimation methods are discussed. Extreme quantiles and very small exceedence probabilities need to be estimated, and usually the part of a distribution tail which is way beyond the range of the data needs to be considered. This leads to discussion of estimation needed for VAR (value-at-risk) calculations. The course material intersects the related fields of heavy tailed modeling and the implications of heavy tails in insurance and data networks.

**OR&IE 467 Credit Risk: Modeling, Valuation, and Management**
Spring. 4 credits. Prerequisite: OR&IE 361. K. Giesecke.
Credit risk refers to losses due to changes in the credit quality of a counter party in a financial contract. The course is an introduction to the modeling and valuation of credit risk. Emphasis will be on credit derivative instruments used for hedging credit risks, including credit swaps, credit options, and collateralized debt obligations.

**OR&IE 468 Financial Engineering with Stochastic Calculus I**
Fall. 4 credits. Prerequisite: knowledge of probability at the level of OR&IE 360. B. Rodi.
This course is an introduction to continuous-time models of financial engineering and the mathematical tools required to use them, starting with the Black-Scholes model. Driven by the problem of derivative security pricing and hedging in this model, the course develops a practical knowledge of stochastic calculus from an elementary standpoint, covering topics including Brownian motion, martingales, the Ito formula, the Feynman-Kac formula, and Girsanov transformations.

**OR&IE 469 Financial Engineering with Stochastic Calculus II**
Building on the foundations established in OR&IE 468/568, this course presents no-arbitrage theories of complete markets, including models for equities, foreign exchange, and fixed-income securities, in relation to the main problems of financial engineering: pricing and hedging of derivative securities, portfolio optimization, and risk management. Other topics include model calibration and incomplete markets.

**OR&IE 473 Operations Research Tools for Financial Engineering**
Spring. 3 credits. Prerequisites: engineering math through MATH 294 and OR&IE 270 and 360. S. Resnick.
This course is an introduction to the applications of OR techniques, e.g., probability, statistics, and optimization, to finance and financial engineering. No previous knowledge of finance is required. The course first reviews probability and statistics and then surveys assets returns, ARIMA time series models, portfolio selection, regression, CAPM, option pricing, GARCH models, fixed-income securities, resampling techniques, and behavioral finance. The use of MATLAB, MINITAB, and SAS for computation is also covered.

**OR&IE 474 Statistical Data Mining I**
Fall. 3 credits. Prerequisites: OR&IE 360 and MATH 294 or equivalent, or permission of instructor. A. Berdt.
This course examines the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments are done using one or more statistical computing packages.

**OR&IE 476 Applied Linear Statistical Models**
Spring. weeks 1–7. 2 credits. Prerequisite: ENGRD 270. T. Apanasovitch.
Course topics include multiple linear regression, diagnostcs, model selection, inference, and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

**OR&IE 480 Information Technology**
Fall. 4 credits. Pre- or corequisites: COM S/ENGRD 211, plus either OR&IE 310 or OR&IE 350. E. Friedman.
This is a project course that encompasses various aspects of information technology related to operations research and industrial engineering. Topics include the design of databases and information systems, the World Wide Web, the economics and industrial organization of IT goods and services, electronic markets, and agent based interactions.
OR&IE 481 Delivering OR Solutions with Information Technology
Spring. 2 credits. Prerequisites: OR&IE 480. Enrollment limited. Staff.
Stud of ways information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, and web-based techniques. Several actual applications are investigated. Labs introduce Visual Basic for Applications (VBA) for decision support.

OR&IE 483 Applications of Operations Research and Game Theory to Information Technology
Spring. 3 credits. Prerequisites: OR&IE 321, OR&IE 361, or permission of instructor. D. Shimoy. This course covers a variety of operations research and game theoretic problems arising in information technology. Examples include web searching, network routing and congestion control, online auctions, and trust and reputation in electronic interactions.

OR&IE 490 Teaching in OR&IE
Fall, spring. Varying credit. Prerequisite: permission of instructor. This course involves working as a TA in an OR&IE course. The course instructor assigns credits (the grading guideline is 1 credit per 4 hours of work per week of work with a limit of 3 credits).

OR&IE 499 OR&IE Project
Fall, spring. Varying credit. Prerequisite: permission of instructor. Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the associate director.

OR&IE 512 Applied Systems Engineering I (also CEE 504, COM/S 504, ECE 512, M&A 591)
Full. 3 credits. Prerequisite: permission of instructor. R. Roundy. For description, see SYSEN 510.

OR&IE 513 Applied Systems Engineering II (also CEE 505, COM/S 505, ECE 513, M&A 593)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM/S 504, ECE 512, M&A 592, or OR&IE 512). P. Jackson. For description, see SYSEN 520.

OR&IE 515 Design of Manufacturing Systems
Fall. 4 credits. Prerequisite: permission of instructor. Limited to graduate students in Engineering and the Business School. For description, see ORIE 416.

OR&IE 516 Case Studies
Fall. 1 credit. Limited to M.Eng. students in OR&IE. M. Eisen. Students are presented with an unstructured problem that resembles a real-world situation. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

OR&IE 518 Supply Chain Management
Spring. 3 credits. Prerequisite: one of the following: OR&IE 510, ORIE 416, ORIE 525, or ORIE 562. J. Muckstadt. A supply chain is the scope of activities that convert raw materials (e.g., wheat) to finished products delivered to the end consumer (e.g., a box of cereal at the local P&G). Usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, system dynamics, control, design, re-engineering. Covers the relationship between the supply chain and the company’s strategic position relative to its clients and its competition. Considers dimensions of inter­corporate relationships with partners, including decision-making, incentives, and risk.

OR&IE 520 Operations Research I: Optimization I
For description, see ORIE 320.

OR&IE 521 Optimization I
For description, see ORIE 321.

OR&IE 522 Operations Research I: Topics in Linear Optimization
Fall. 1 credit. Prerequisite: OR&IE 520. Students who have already taken OR&IE 521 or 521 should not enroll. Limited to M.Eng. students in OR&IE. An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

OR&IE 523 Operations Research II: Introduction to Stochastic Processes I
For description, see ORIE 361.

OR&IE 524 Design of Manufacturing Systems
Spring. weeks 8-14. 2 credits. Prerequisites: OR&IE 562, ORIE 416; or by permission of instructor. Not offered 2004-2005.

This project course focuses on the design and analysis of a global corporation's operations. Working in teams, students examine issues pertaining to a prototype company on the following topics: information system design, marketing, strategy, location of facilities, organization design, manufacturing capacity, planning logistics, production planning, scheduling, inventory control, and financial analysis. Meetings between project teams and faculty are substituted for some lectures or laboratories. Analytical methods appropriate for conducting analysis are discussed in lectures.

OR&IE 525 Production Planning and Scheduling Theory and Practice
Fall. 4 credits. Corequisite: OR&IE 320, ORIE 500. P. Rosmevenmorgt. Topics covered include: production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus is on setup time as a determinant of plans and schedules.

OR&IE 528-529 Selected Topics in Applied Operations Research
Fall, spring. Varying credit. Prerequisite: permission of instructor. Current topics dealing with applications of operations research.

OR&IE 533 Heuristic Methods for Optimization (also CEE 509, COM/S 572, CIS 572)
Fall. 3 or 4 credits. Prerequisite: graduate standing or COM/S/ENGRD 211, 321 or CEE/ENGRD 241 or permission of instructor. For description, see CEE 509.

OR&IE 551 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350. Lectures concurrent with OR&IE 451. For description see ORIE 451.

OR&IE 560 Engineering Probability and Statistics II
For description, see ORIE 360.

OR&IE 561 Queuing Systems: Theory and Applications
Fall. 3 credits. Prerequisite: ORIE 361 or permission of instructor. Not offered 2004-2005.

Course covers: basic queueing models; delay and loss systems; finite source, finite capacity, balk, reneging, systems in series and in parallel; FCFS versus LCFS; busy period problems; output, design and control problems, priority systems, queueing networks; the product formula; time sharing; server vacations; and applications to equipment maintenance, computer operations and flexible manufacturing systems.

OR&IE 562 Inventory Management
Spring. 3 credits. Prerequisite: ORIE 361, 361, or permission of instructor. R. Roundy. The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

OR&IE 563 Applied Time-Series Analysis
Fall. 3 credits. Prerequisites: ORIE 361 and ENGRD 270 or permission of instructor. Not offered 2004-2005. The first part of this course treats regression methods to model seasonal and nonseasonal data. The second part of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

OR&IE 564 Introductory Engineering Stochastic Processes II
Spring. 4 credits. Limited to M.Eng. students. A. Berndt, K. Giesecke. This course has two components: a sequence of lectures and a project. The course is co­ listed with the Johnson School. The lectures are given by the faculty for the course and by invited speakers from the financial industry. The project satisfies the M.Eng. project requirement.

OR&IE 566 Extreme Value Analysis with Applications to Finance and Data Communications
Spring. 3 credits. S. Resnick. For description, see ORIE 464.
OR&IE 567 Credit Risk: Modeling, Valuation, and Management
Spring. 4 credits. Prerequisite: OR&IE 361. K. Giesenbauer.
For description, see OR&IE 467.

[OR&IE 569 Financial Engineering with Stochastic Calculus II
For description, see OR&IE 469.]

OR&IE 574 Statistical Data Mining II
This course is a continuation of OR&IE 474 and covers more advanced techniques such as clustering with applications to market segmentation, discriminant analysis, artificial neural networks, support vector machines, additive models, radial basis function and spline models, principal components, model assessment and selection, bagging, and boosting. Applications to business problems such as quantitative marketing and credit scoring are discussed.

OR&IE 575 Experimental Design
Spring. weeks 8–14 (alternates with 576). 2 credits. Prerequisite: OR&IE 476.
Course covers: randomization, blocking, sample size determination, factorial designs, 2p full and fractional factorials, response surfaces,拉丁平方, split plots, and Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

[OR&IE 576 Regression
Course covers nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, and regression with correlated errors. Computing in MINITAB or SAS.]

[OR&IE 577 Quality Control
Fall. 3 credits. Prerequisite: ENGRD 270. Not offered 2004–2005.
Course covers: concepts and methods for process and acceptance control; control charts for variables and attributes; process capability analysis; acceptance sampling; continuous sampling plans; life tests; and use of experimental design and Taguchi methods for off-line control.]

OR&IE 580 Simulation Modeling and Analysis
Fall. 4 credits. Prerequisite: OR&IE 560 (may be taken concurrently) and computing experience, or permission of instructor: H. Topaloglu.

OR&IE 597 Systems Engineering Project
Fall; R grade only, spring; 8 credits. For M.Eng. students.
For M.Eng. students enrolled in the Systems Engineering Option. A substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enters the course. (The following projects are pre-approved: SAE, IEEE, Robocup. Brain.) A formal report is required.

OR&IE 598 Master of Engineering Manufacturing Project
Fall. R grade only; spring, 5 credits. For M.Eng. students.
Project course for M.Eng. students enrolled in the Manufacturing Option coordinated by the Center for Manufacturing Enterprise.

OR&IE 599 Project
Fall. R grade only; spring, 5 credits. For M.Eng. students.
Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

OR&IE 625 Scheduling Theory
S. Shinoy. Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

OR&IE 626 Advanced Production and Inventory Planning
Spring. 4 credits. H. Topaloglu. Introduction to a variety of production and inventory control planning problems, the development of mathematical models corresponding to these problems, and a study of approaches for finding solutions.

OR&IE 629 Foundations of Game Theory and Design for Engineering Applications
Spring. 3 credits. Class will not assume any prior knowledge of game theory or computer networks, but will assume a basic knowledge of operations research at the level of OR&IE 560 and OR&IE 650.
E. Friedmann. This course provides a rigorous foundation for the applications of mechanism design and game theory to problems in engineering such as data networks and computer science. The goal is to develop a deep understanding of the fundamental issues that are important in many applications while presenting many current open research problems.

OR&IE 630 Mathematical Programming I
Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra.
D. Shmoys.
A rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality, algorithms, sensitivity analysis, network flow problems and algorithms, theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma, and exploiting special structure in the simplex method and computational implementation.

OR&IE 631 Mathematical Programming II
Spring. 4 credits. Prerequisite: OR&IE 630.
M. Todd.
A continuation of OR&IE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

OR&IE 632 Nonlinear Programming
Fall. 3 credits. Prerequisite: OR&IE 630. A. Lewis.
Necessary and sufficient conditions for unconstrained and constrained optima. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).

OR&IE 633 Graph Theory and Network Flows
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2004–2005.
Topics covered include directed and undirected graphs; bipartite graphs; hamilton cycles and euler tours; connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.

OR&IE 634 Combinatorial Optimization
Fall. 3 credits. R. Bland.
Topics in combinatorial graphs and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

OR&IE 635 Interior-Point Methods for Mathematical Programming
Fall. 3 credits. Prerequisites: MATH 413 and OR&IE 650, or permission of instructor. Not offered 2004–2005.
Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discussion of the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms and various ways of combining them. Emphasis on recent mathematical theory and the most modern viewpoints.

OR&IE 636 Integer Programming
Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 2004–2005.
Topics covered include discrete optimization; linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

OR&IE 637 Semidefinite Programming
Spring. 2 credits. Pre- or corequisite: OR&IE 635. M. Todd.
Course covers: linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality; computational methods, particularly interior-point algorithms.

OR&IE 639 Polyhedral Convexity
Spring. 3 credits. Prerequisite: basic knowledge of linear algebra. Not offered 2004–2005.
A comprehensive introduction to the geometry and combinatorics of polyhedral convex sets. Also, linear inequalities, supporting and separating hyperplanes; polarity, convex hulls, facets, and vertices; face lattices; convex sets and polytopes; Minkowski sums; Gale transforms; simplicial and polyhedral subdivisions; and applications to linear programming, combinatorial optimization, and computational geometry.
OR&IE 650 Applied Stochastic Processes
Fall 4 credits. Prerequisite: a 1-semester calculus-based probability course. X. Guo. An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

OR&IE 651 Probability
Spring 4 credits. Prerequisite: real analysis at the level of MATH 413 and a previous 1-semester course in calculus-based probability. G. Samorodnitsky. Course covers sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

[OR&IE 662 Advanced Stochastic Processes
Fall 3 credits. Prerequisite: OR&IE 651 or equivalent. Not offered 2004-2005. Course topics include Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Lévy processes, regenerative phenomena, random walks, and stochastic integrals.]

OR&IE 665 Storage and Data Communication Models
Fall 3 credits. U. Palibhui. This course covers a selection of topics including queues, storage, insurance risk, dams, and data communication. The basic assumptions of the underlying models are discussed with emphasis on their common features. The overall objective is the study of the stochastic processes that arise from these models. The approach is based on the fluctuation theory of random walks, Levy processes, and Markov-additive processes. Further topics for discussion include stochastic comparisons and statistical inference from the models with particular emphasis on data communication models. Current research on network models with discrete and fluid inputs is discussed.

OR&IE 670 Statistical Principles
Fall 4 credits. Corequisite: OR&IE 650 or equivalent. T. Apanasovich. Topics include review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

[OR&IE 671 Intermediate Applied Statistics
Fall 3 credits. Prerequisite: OR&IE 670 or equivalent. Not offered 2004-2005. Course topics include statistical inference based on the linear model: least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.]

OR&IE 673 Empirical and Computational Issues in Finance
Spring 3 credits. Prerequisite: stochastic processes at the level of OR&IE 650 and statistics at the level of OR&IE 670, or permission of instructor. A. Bernt. This course is designed to introduce students to existing empirical work in finance and to demonstrate the use of statistical, econometric, and numerical methods in the analysis of financial data. The topics covered include linear and nonlinear time series analysis, high-frequency data and market microstructure, continuous-time models, extreme values and quantile estimation, volatility models, and MCMC methods. Numerous applications using market data are presented. MATLAB programming skills are useful.

OR&IE 674 Statistical Learning Theory for Data Mining
Fall 3 credits. Prerequisites: Probability at the level of OR&IE 651, and statistical at the level of OR&IE 670. D. Ruppert. This course will provide a thorough grounding in probabilistic and computational methods for statistical data mining. We intend to cover a subset of the following topics from supervised and unsupervised data mining: The framework of learning, Performance measures and model selection. Methodology, theoretical properties and computing algorithms used in parametric and nonparametric methods for regression and classification. Frequentist and Bayesian methods.

OR&IE 677 Sequential Methods in Statistics
Spring 3 credits. S-U grades only. B. Turnbull. The statistical theory of sequential design and analysis of experiments has many applications, including monitoring data from clinical trials in medical studies and quality control in manufacturing. Topics in this course include classical sequential hypothesis tests, Wald's SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and Bayesian and decision theoretic approaches.

[OR&IE 680 Bayesian Statistics and Data Analysis
Spring 3 credits. Prerequisites: OR&IE 670 and some knowledge of measure theoretic probability, e.g., co-registration in OR&IE 650. Not offered 2004-2005. Priors, posteriors, Bayes estimators, Bayes factors, credible regions, hierarchical models, computational methods (especially MCMC), empirical Bayes methods, Bayesian robustness. The course will include data analysis and MCMC computation in WinBUGS and possibly other languages such as MATLAB.]

OR&IE 685 Simulation
Spring 4 credits. Prerequisite: computing experience and OR&IE 650 or equivalent, or permission of instructor. Not offered 2004-2005. Introduction to Monte Carlo and discrete-event simulation. Emphasis on underlying theory. Random variate generation, input and output analysis, variance reduction, selection of current research topics.]

OR&IE 728-729 Selected Topics in Applied Operations Research
Fall, spring. Credit TBA. Current research topics dealing with applications of operations research.

OR&IE 738-739 Selected Topics in Mathematical Programming
Fall, spring. Credit TBA. Current research topics in mathematical programming.

OR&IE 760-769 Selected Topics in Applied Probability
Fall, spring. Credit TBA. Topics are chosen from current literature and research areas of the staff.

OR&IE 778-779 Selected Topics in Applied Statistics
Fall, spring. Credit TBA. Topics chosen from current literature and research of the staff.

OR&IE 790 Special Investigations
Fall, spring. Credit TBA. For individuals or small groups. Study of special topics or problems.

OR&IE 799 Thesis Research
Fall, spring. Credit TBA. For individuals doing thesis research for master's or doctoral degrees.

OR&IE 891 Operations Research Graduate Colloquium
Fall, spring. 1 credit. Staff. A weekly 1-1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

OR&IE 893-894 Enterprise Engineering Colloquium (also M&AE 594)
893, fall; 894, spring. 1 credit (usually S-U) each term. A weekly meeting for Master of Engineering students. Discussion with industry speakers and faculty members on the uses of engineering in the economic design, manufacturing, marketing, and distribution and goods and services.

SYSTEMS ENGINEERING
P. L. Jackson, director; L. K. Nozick, director of graduate studies; M. Campbell, R. D'Andrea, R. A. Davidson, E. Garcia, A. R. George, J. A. Mackstadt, A. F. Myers, R. O. Roundy, F. B. Schneider, B. Selman, C. A. Shoemaker, J. R. Stedinger, R. J. Thomas, H. Topoloski, M. A. Turnquist

SYSEN 510 Applied Systems Engineering (also CEE 504, COM S 504, ECE 512, M &AE 591, OR&IE 512)
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor. A. R. George, R. Roundy. Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project plans, mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle.
SYSEN 511 Applied Systems Engineering
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor. Intended for off-campus students. Staff. For description see: SYSEN 510.

SYSEN 520 System Architecture, Behavior, and Optimization (M&AE 592, CEE 505, COM S 505, ECE 513, ORR&E 513)
Spring. 3 credits. Prerequisite: Applied System Engineering (M&AE 591, CEE 504, COM S 504, ECE 501, or ORR&E 512, SYSEN 520 or SYSEN 521) or permission of instructor. Staff. This is an advanced course in the application of the systems engineering process to the design and operation of complex systems. Topics introduced in Applied Systems Engineering I will be covered in greater depth. Topics include techniques for design, simulation, optimization, and control of complex systems. Case studies and system simulations in diverse areas will provide context for the application of these techniques. Students majoring in Systems Engineering enroll in SYSEN 520. Students taking Option in Systems Engineering enroll in M&AE 592, CEE 505, CS 505, ECE 513, or ORR&E 513. Students in Continuing Education enroll in SYSEN 521. Lectures are identical for all versions.

SYSEN 521 System Architecture, Behavior, and Optimization
Spring. 3 credits. Prerequisites: Applied System Engineering I Fundamentals or permission of instructor. Intended for off-campus students. Staff. For description see SYSEN 520.

SYSEN 570 Special Topics in Systems Engineering
On demand. 1-4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 571 Practicum in Systems Engineering
On demand. 3 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 590 Systems Engineering Design Project
Fall. 6-8 credits. Prerequisites: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 600 Topics in Systems Engineering Research
Fall. 1.5 credits. Staff. Advanced topics in systems engineering research.

SYSEN 681 Topics in Systems Engineering Research
Spring. 1.5 credits. Staff. Advanced topics in systems engineering research.

THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics
T&AM 118 Design Integration: A Portable CD Player (also ENGR 118 and MS&E 118)
Spring. 3 credits. This is a course in the Introduction to Engineering series. For description, see ENGR 118.

T&AM 202 Mechanics of Solids (also ENGRD 202)
Fall, spring. 4 credits. Prerequisite: PHYS 112, coregistration in MATH 192, or permission of instructor. For description, see ENGRD 202.

T&AM 203 Dynamics (also ENGRD 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 293, or permission of instructor. For description, see ENGRD 203.

Engineering Mathematics
T&AM 190 Calculus for Engineers (also MATH 190)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms. For description, see MATH 190.

T&AM 191 Calculus for Engineers (also MATH 191)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry. For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)
Fall, spring, or summer. 4 credits. Prerequisite: MATH/T&AM 191. For description, see MATH 192.

T&AM 293 Engineering Mathematics (also MATH 293)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus a knowledge of computer programming equivalent to that taught in COM S 100. For description, see MATH 293.

T&AM 294 Engineering Mathematics (also MATH 294)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293. For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisites: MATH/T&AM 293 and 294. Course covers initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers: special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

T&AM 311/511 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310). Mathematical modeling of physical and biological systems. Examples range from molecular diffusion, lusitania swimmers, chemotaxis, and physiological flows, to bird flight. The mathematics necessary to understand these phenomena is discussed in depth. They include probability theory, PDEs, stability analysis, complex variable analysis, and numerical analysis. Students from all fields are encouraged to take the course.

T&AM 610 Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310-311) but open to exceptional undergraduates with permission of instructor. Emphasis is on applications. Course covers: linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

T&AM 611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent. Emphasis is on applications. Course covers: partial differential equations, transform techniques, tensor analysis, calculus of variations.

T&AM 613 Methods of Applied Mathematics IV
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods) and asymptotic expansion of integrals (method of steepest descent, stationary phase, and Laplace methods). Also covers regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Lapunov-Schmidt reductors, and Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

T&AM 614 Methods of Applied Math V
Spring. 3 credits. Prerequisites: T&AM 610 plus T&AM 611 or equivalent. Not offered 2004-2005.

T&AM 617 Mathematical Biofluid Dynamics
Spring. 3 credits. Course topics include ciliary propulsion (biology); Eulerian realm: fish swimming, bird flight, etc.; review of potential flows; two-dimensional theory of lunate tails; unsteady airfoil theory; Weisflog mechanism of insect flight.

Continuum Mechanics
T&AM 455 Introduction to Composite Materials (also CEE 475, M&AE 455 and MS&E 555)
Spring. 3 credits. Course topics include introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer
in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates, including computer software for design; and manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

**T&AM 591 Master of Engineering Design Project I**
- Fall. 5-10 credits.

**T&AM 592 Master of Engineering Design Project I**
- Spring. 5-10 credits.

**T&AM 655 Composite Materials (also M&E 655 and MSE 655)**
- Spring. 4 credits.
- Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homework through additional lectures. Additional material includes shear-lag models of stress transfer around arrays of fiber breaks, including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates, and compressive strength of composites. Laboratory on effects of holes and notches in composites.

**T&AM 663 Solid Mechanics I**
- Fall. 4 credits.
- Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors, deformations, rotations and strains: balance principles; stress; small-strain theory, linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; and boundary-value problems, e.g., plates, St. Venant's solutions.

**T&AM 664 Solid Mechanics II**
- Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663 or equivalent.
- Preparation for advanced courses in solid mechanics. Topics include singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, airy stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelectricity; and three-dimensional elasticity.

**T&AM 666 Finite Element Analysis (also M&E 680 and CEE 772)**
- Spring. 3 credits. Prerequisites: T&AM 665 or equivalent.
- For description, see M&E 680.

**T&AM 751 Continuum Mechanics and Thermodynamics**
- Fall. 3 credits. Prerequisites: T&AM 610 and 611, and 663 and 664 or equivalents.
- Course topics include kinematics; conservation laws; the entropy inequality; constitutive relations; frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

**Dynamics and Space Mechanics**

**T&AM 570 Intermediate Dynamics**
- Fall. 3 credits.
- Course topics include Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Lagrangian mechanics; Hamilton's principle; small vibration and stability theory; Newtonian-Fulerian mechanics of rigid bodies and gyroscopes.

**T&AM 578 Nonlinear Dynamics and Chaos**
- Spring. 3 credits. Prerequisite: MATH/T&AM 293 or equivalent.
- Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, computer algebra, and geometric thinking.
- Topics: one-dimensional systems; bifurcations; phase plane, nonlinear oscillators, and Lorenz equations; chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

**T&AM 672 Celestial Mechanics (also ASTRO 579)**
- Spring. 3 credits. Offered alternate years.
- Course topics include description of orbits: 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems; oscillating orbital elements, perturbation expansions: effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits, and secular perturbations, resonances, mechanics of planetary rings.

**T&AM 675 Nonlinear Vibrations**
- Spring. 3 credits. Prerequisite: T&AM 578 or equivalent.
- Offered alternate years.
- Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology. Additional topics may include Hopf bifurcation, Invariant manifolds, coupled oscillators, vibrations in continuous media, normal forms, and exploitation of symmetry.

**T&AM 776 Applied Dynamical Systems (also MATH 717)**
- For description, see MATH 717.

**Special Courses, Projects, and Thesis Research**

**T&AM 491-492 Project in Engineering Science**
- Fall. 491; spring, 492. 1-4 credits, as arranged.
- Projects for undergraduates under the guidance of a faculty member.

**T&AM 796-800 Topics in Theoretical and Applied Mechanics**
- Fall, spring. 1-3 credits, as arranged.
- Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

**T&AM 890 Master's Degree Research in Theoretical and Applied Mechanics**
- Fall, spring. 1-15 credits, as arranged. S-U grades optional.
- Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

**T&AM 990 Doctoral Research in Theoretical and Applied Mechanics**
- Fall, spring. 1-15 credits, as arranged. S-U grades optional.
- Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

GRADUATE SCHOOL

Alison G. Power, dean
J. Ellen Gainor, associate dean
Terry D. Plater, associate dean
Sarah S. Hale, assistant dean

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee and usually has the primary responsibility for directing the student’s thesis or dissertation research.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test, or other specific examinations for those fields that require these examinations.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be:

1) a minimum Test of English as a Foreign Language (TOEFL) score of 213 (higher for some fields);
2) evidence of two or more years' study in, or a degree from, a college or university in a country where both the language of instruction and the native language are English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, NJ 08541, U.S.A.

Applications for fall admission to the Graduate School should be received by the deadline of the field to which one applies. The earliest deadline is December 1. Many fields, however, have different deadlines. Applicants should consult the Graduate School’s application booklet for the specific closing date for each field.

Inquiries regarding admission should be addressed to the specific graduate field office or to the Graduate School, Cornell University, Caldwell Hall, Ithaca, N.Y. 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for fellowships and teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the Graduate School Catalog. Both may be viewed on the web at <www.gradschool.cornell.edu/>. An interactive application is available through this site, and application forms may be downloaded and printed directly from the web. The application may be received through the mail by contacting either the individual graduate field office or the Graduate School, Caldwell Hall, Cornell University, Ithaca, NY 14853-2602.

Note: Programs leading to the degrees of Doctor of Law (J.D.), Master of Laws (LL.M.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on these programs can be obtained from the Law School, the Weill Medical College of Cornell University (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management, respectively.
The School of Hotel Administration's Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 25,000 books, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including NEXIS, Dow Jones, ABI/INFORM, and The International Hospitality and Tourism Database: an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined space, the Hotel School library extends quality service to every student.

Statler Hotel and J. Willard Marriott Executive Education Center The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the local community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 500 students each semester with preference given to students in the hotel school.

UNDERGRADUATE CURRICULUM
The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in operations, management, and organizational behavior, human resource management, finance/accounting, real estate development, food and beverage management, marketing, tourism, strategy, facilities management planning and design, communication, information systems, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in room 178, Statler Hall).

Requirements for Graduation
Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;

2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits, as set forth in the table on the following page;

3) qualification in one language other than English. This requirement may be met by any one of the following: 1) three years of high school study of one foreign language; 2) score of 560 on Cornell Placement Test; 3) pass language course level 121 and 122 (eight credits) or the equivalent, and attain a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or 4) pass language course level 123 or the equivalent;

4) completion of two units of practice credit; and

5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation. The hotel school electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for "00"-level courses, such as EDUC 005.

Transfer Credit Policy
Transfer students are required to complete all degree requirements with at least 75 credits at Cornell University, of which a minimum of 60 must be in courses offered by the School of Hotel Administration, and nine must be in distributive electives taken outside the hotel school. Thus, a maximum of 45 hours

FACILITIES

Statler Hall Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, a newly refurbished auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation. In the fall of 2004, the school will open the Robert A. and Jan M. Beck Center, a $5,000-square-foot addition to Statler Hall. This $16.2 million expansion will provide state-of-the-art classroom and meeting spaces, a new computer laboratory, and teaching technologies that facilitate an interactive teaching style.

ADMINISTRATION
David W. Butler, dean
Leo Renaghan, associate dean for academic affairs
Margaret Haley Ferguson, associate dean for business administration
Steven A. Carvell, assistant dean
Gary M. Thompson, executive director, Center for Hospitality Research
Sheryl E. Kimes, Richard J. and Monene P. Bradley director for graduate studies
Brad Walp, director of enrollment management
Lisa M. Shaffer, director of graduate programs
Cheryl S. Farrell, director of student services
Neoma Mullens, associate director of admissions and student services
Millie Reed, director of career services
Walter C. Williams, director of alumni affairs and development
William C. Summers, director of communication strategy
Philippus Miller III, director of alumni affairs
Timothy J. Durnford, director of information technologies
Practice-Credit Requirement

As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the school's career services office, room 255, Statler Hall.

Management-Intern Program

Hotel school juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management-intern program. Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance.

Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493 and 494 for more details. More information about the management-intern program also is available in the career services office, 255 Statler Hall.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study. The hotel school represents the international aspects of the hospitality industry in many ways—from the large number of international students in its program, to career opportunities throughout the world. To prepare for the global nature of the industry, students are encouraged to consider studying abroad in either the fall or spring semesters (or, in some cases, both). While abroad, students have the opportunity to learn about other cultures, become more proficient in a second (or perhaps third) language, and, in those programs where internships are offered, work in an international environment.

Students should start the process of investigation early, including consultation with Mrs. Farrell, the hotel school study abroad advisor, 174 Statler Hall, as well as with the study abroad advisor at either the fall or spring semesters. Students have the opportunity to learn about other cultures, become more proficient in a second (or perhaps third) language, and, in those programs where internships are offered, work in an international environment.

Students should start the process of investigation early, including consultation with Mrs. Farrell, the hotel school study abroad advisor, 174 Statler Hall, as well as with the study abroad advisor at either the fall or spring semesters. Students have the opportunity to learn about other cultures, become more proficient in a second (or perhaps third) language, and, in those programs where internships are offered, work in an international environment.

Independent Study

Students may conduct independent study projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H ADM 499 or 699 for more details.

Typical Course Sequences
The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

Freshman Year
Typically, a freshman schedule will consist of 15 to 16 credits each term, to include the following:

<table>
<thead>
<tr>
<th>Required courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>H ADM 105, Introduction to Hotel Operations</td>
<td>2</td>
</tr>
<tr>
<td>H ADM 106, Introduction to Food Service Operations</td>
<td>2</td>
</tr>
<tr>
<td>H ADM 115, Organizational Behavior and Interpersonal Skills</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 121, Financial Accounting</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 141, Microeconomics for the Service Industries</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 165, Managerial Communication I</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 174, Microcomputing</td>
<td>3</td>
</tr>
<tr>
<td>First-Year Writing Seminar</td>
<td>3</td>
</tr>
<tr>
<td>Electives</td>
<td>6</td>
</tr>
<tr>
<td><strong>Total Credits</strong></td>
<td><strong>28</strong></td>
</tr>
</tbody>
</table>

Sophomore Year

<table>
<thead>
<tr>
<th>Required courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>H ADM 201, Hospitality Quantitative Analysis</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 211, Human Resources Management</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 221, Managerial Accounting</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 222, Finance</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 236, Culinary Theory and Practice</td>
<td>4</td>
</tr>
<tr>
<td>H ADM 243, Principles of Marketing</td>
<td>3</td>
</tr>
<tr>
<td>H ADM 255, Hotel Development and Planning</td>
<td>3</td>

ORGANIZATIONAL MANAGEMENT, COMMUNICATION, AND LAW

Management and Organizational Behavior

H ADM 110 Distinguished Lectures in Hospitality Management
Fall. 1 credit. Elective. D. Butler.

The Dean's Distinguished Lecture Series is a long-standing hotel school tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

H ADM 115 Organizational Behavior and Interpersonal Skills
Fall, spring. 3 credits. Required. C. Lundberg, T. Simons, K. Walsh. Focuses on managing people in the workplace. Students develop theoretic lenses for understanding people and organizations, and practical tools for accomplishing personal and organizational goals. Topics include: individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Students learn through case studies and assignments, experiential exercises, readings, discussions, papers, and group activities.

H ADM 314 High-Performance Leadership
Fall. 3 credits. Prerequisite: H ADM 115. Limited to 30 hotel school juniors and seniors. Graduate students should enroll in H ADM 614. Elective. J. Brownell. This course explores the nature of leaders and leadership from a variety of perspectives. Discussion of current articles in leadership prepare participants to be thoughtful leaders and discriminating consumers of leadership ideas. Topics include charismatic leadership, leadership characteristics, the exercise of power, symbolic communication, gender challenges, and related themes. Leadership will be examined from the individual, small group, and organizational perspectives. Case studies further illustrate the application of course material. Students will assess their own leadership style and engage in leadership-development activities. Class members will have opportunities to interact with hospitality leaders and to gain a better understanding of the dynamics of leadership behavior.
H ADM 410 Hospitality Management Seminar
Fall. 1 credit. Co-registration in H ADM 110 required. Limited to 30 hotel school seniors and graduate students. Elective. Pre-registered students or students wishing to add to the course who do not attend the first class and fail to notify the secretary in 146 Statler Hall of their absence before the first class will be automatically moved to the instructor's waiting list. Students permitted to take the course will have until Friday, September 3, 2004 to add the course. Failure to do so will result in their being dropped from the course. D. Butler. Complements H ADM 110 by giving students the opportunity to interact with guest speakers, and to participate in roundtable discussions on issues relating to the hospitality industry. The dialog can give students a better understanding of industry trends, challenges, and opportunities.

H ADM 411 Negotiations in the Hospitality Industry
Spring. 3 credits. Prerequisite: H ADM 115 or equivalent. Limited to 30 undergraduate students. Elective. T. Hinkin. Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play exercises, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

H ADM 414 Quality Planning in the Hospitality Industry
Spring. 3 credits. Prerequisites: all required hotel school undergraduate courses at the 100, 200, and 300 levels. Limited to 25 seniors and graduate students. Elective. T. Hinkin. Covers the analysis of work processes and examines operations from three perspectives: the external customer, the internal customer, and management. This course is designed to provide students with a systematic approach to identifying, prioritizing, and improving processes and work processes. Students learn to use the tools of quality management including cost of quality, flowcharting, statistical process control, and collecting, organizing, and presenting data. A major component of the course is HOTs, an interactive hotel simulation that is conducted as a group activity. This is a seminar course, requiring active participation in discussion of case studies.

H ADM 415 Managerial Leadership in the 21st Century
Spring. 1 credit. Elective. A $25.00 fee for the required textbook will be charged to student's bursar bill; textbook distributed on the first day of class. Friday, January 28 (1–9 P.M.), Saturday, January 29 (9 A.M. – 1 P.M.), Sunday, February 5 (9 A.M. – 5 P.M.), 2005 in the Statler Auditorium. K. Blanchard. Helps students become participant observers in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and develop behavior. Learning occurs primarily through readings, case studies, and self-reflective teamwork.

H ADM 416 High-Performance Leadership
Fall. 3 credits. Prerequisite: H ADM 710. Limited to 30 hotel school students. Juniors and seniors who should enroll in H ADM 314. Elective. J. Brownell. For description, see H ADM 314.

H ADM 603 Managing Across Cultural Boundaries
Fall. 3 credits. Elective. M. Taylor. With the rapid growth in the services sector and increasing globalization in the business environment, the ability to manage in the services context across cultural borders becomes crucial for management success. The objective of this three-section course is to learn how cultural context impacts the management process. The first section focuses on management practices that are relevant to management practices. Applying these frameworks, the second section focuses on comparative management practices. The last section covers international management practices. At the end of the course, the students should be able to explain how cultural context may affect management practices, and understand the implications for managing a culturally diverse workforce.

H ADM 610 Negotiations in the Hospitality Industry
Spring. 3 credits. Prerequisite: H ADM 710 or equivalent. Limited to 30 graduate students, seniors by permission of instructor. Elective. T. Simons. Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play exercises, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

H ADM 611 Negotiations in the Hospitality Industry
Fall. 3 credits. Elective. M. Taylor. With the rapid growth in the services sector and increasing globalization in the business environment, the ability to manage in the services context across cultural borders becomes crucial for management success. The objective of this three-section course is to learn how cultural context impacts the management process. The first section focuses on management practices that are relevant to management practices. Applying these frameworks, the second section focuses on comparative management practices. The last section covers international management practices. At the end of the course, the students should be able to explain how cultural context may affect management practices, and understand the implications for managing a culturally diverse workforce.

H ADM 614 High-Performance Leadership
Fall. 3 credits. Prerequisite: H ADM 710. Limited to 30 hotel school students. Juniors and seniors who should enroll in H ADM 314. Elective. J. Brownell. For description, see H ADM 314.

H ADM 610 Human Behavior in Organizations
Fall. 3 credits. Open to M.M.H. students only, except by written permission of the instructor in advance of pre-enrollment. M.M.H. requirement. T. Hinkin. This course focuses on manager and member behavior in organizations. Ideas and models about persons, interpersonal relationships, small groups, and organizations provide the basis for understanding the dynamics of effective organizational behavior. Learning occurs primarily through readings, case studies, and self-reflective teamwork.

Human Resources Management
H ADM 211 Human Resource Management
Fall, spring. 3 credits. Prerequisite: H ADM 115. Limited to 60 hotel school students per lecture; not open to freshmen or graduate students. Required. M. Sturman. B. Tracey. Provides students with a broad yet in-depth overview of HR policies and procedures and the opportunity to apply course topics to substantive situations that students will face as future hospitality professionals. Lectures, discussions, case studies, and videos.

Managerial Communication
H ADM 165 Managerial Communication I
Fall, spring. 3 credits. Note: students required to take this course generally may not delay it. If extenuating circumstances exist, the student must petition to drop the course by the end of the first week of classes. This course must be taken within the first two semesters in the school, including any semesters in the Internal Transfer Division (ITD). Add/drop and section exchange must be approved by the chairperson. Priority given to hotel school students. Limited to 16 students per lecture. Required. N. Dahl, D. Jameson, D. Lennox, C. Snow. An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.
H ADM 364 Advanced Business Writing
Fall, spring. 3 credits. Priority given to hotel school students. Prerequisite: junior, senior, or graduate standing; or written permission of the instructor. School hotel undergraduates must have completed the H ADM 165 requirement or had it waived. Non-hotel school undergraduates must have completed their college's writing requirement. Limited to 20 students per lecture. Elective. Faculty. This course focuses on communicating challenging messages in business contexts. Writing assignments emphasize delivering persuasive messages, working with tone and style, and developing different types of documents in professional contexts. Different kinds of assignments are offered from semester to semester. Assignments often include business letters and memos written for various contexts, procedures and policy statements, promotional materials, negative messages, and the significant role of communication in management context. This course emphasizes additional topics include persuasion and negotiation across cultures, and group process and leadership.

H ADM 365 Managerial Communication II
Fall, spring. 3 credits. Priority given to hotel students. Prerequisites: Hotel school undergraduates must have completed H ADM 165 and H ADM 115. Limited to 22 juniors and seniors per lecture. Required. J. Brownell, N. Dahl, D. Lennox. A broad study of communication in a management context. This course emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of persuasive communication that allow managers to influence professional audiences. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

H ADM 462 Communication and the Multicultural Organization
Spring. 3 credits. Priority given to hotel school students. Elective. D. Lennox. Successful managers are able to understand and bridge cultural differences as they guide organizations made up of people from a variety of backgrounds and worldviews. In the hospitality industry—with its global customer base and diverse service workforce—leaders must possess advanced communication skills that include an awareness of the ways culture affects interactions in the workplace. This course is designed to help managers develop proficiency communicating among and between people who do not share some of their own cultural assumptions. Students can expect to learn communication variables that differ among cultural groups, including the use of eye contact, body language, personal space, hierarchy, and time. Additional topics include persuasion and negotiation across cultures, and the ethics of communication in international business. The course is a blend of theory and practice. Class activities include lectures, guided discussions, group projects, student and guest speaker presentations, and analysis of specific cross-cultural managerial challenges, with emphasis on the service industry.

H ADM 761 M.M.H. Managerial Communication
Yearlong. Variable. Open to M.M.H. students only, except by written permission of the instructor in advance of pre-enrollment. Elective. D. Lennox, C. Snow. Introduction in communication and leadership skills helps students enrolled in the M.M.H. program reach their individual professional development goals, enrich their education, perform well on course assignments, and meet the program benchmarks in managerial writing, presentation speaking, and group process and leadership.

H ADM 385 Business Law I
Fall, spring. 3 credits. Open to hotel school juniors, seniors, and graduate students and non-hotel school students. Elective. P. Wagner. Provides students with a presentation of three substantive areas of business law: contracts, intellectual property, and business organizations. Students read judicial opinions, learn to identify issues, and analyze the issues applying legal principles.

H ADM 387 Business and Hospitality Law
Fall, spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. D. Sherwyn. Provides students with an integrated presentation of employment discrimination, tort, and contract concepts as they apply to the legal aspects of hospitality management. The course examines relevant federal and state cases and statutes. The overall objective is to enable students to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions in the workplace.

H ADM 485 Employment Discrimination Law and Union-Management Relations
Spring. 3 credits. Prerequisites: H ADM 387 or permission of the instructor. Limited to juniors, seniors, and graduate students. Elective. D. Sherwyn. Anti-discrimination statutes and union-management regulations are two of the most pervasive legal issues affecting the hospitality industry. Managers must take these issues into account whenever they make a personnel decision. This course provides students with an understanding of the discrimination law, a framework for complying with law, a method using the law to maintain positive employment relations, and an understanding of how to negotiate and administer a union contract.

H ADM 487 Real Estate Law
Fall, spring. 3 credits. Completion of H ADM 387 preferred but not mandatory. Limited to juniors, seniors, and graduate students. Elective. A. Klausner. Provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students learn to recognize and evaluate legal issues to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

H ADM 489 The Law of the Internet and e-Commerce
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Elective. A. Klausner. The Internet has changed how business is done in the hospitality industry. The change has raised numerous legal issues that courts and legislatures are trying to decide on or enact. The purpose of this course is to allow students to identify and understand the rapid developments of the law of e-commerce. The course topics are: how the Internet works, consumer protection, privacy, intellectual property (patent, trademark, and copyright), personal jurisdiction in cyberspace, and online contracts and legal disclaimers. This course introduces students to this emerging area of the law and enables them to identify issues so that they can intelligently seek counsel and understand the law as it continues to evolve.

HOSPITALITY FACILITIES AND OPERATIONS

Food and Beverage Management
H ADM 226 Culinary Theory and Practice
Fall, spring. 4 credits. Prerequisite: H ADM 106. Required. Note: Because this course is laboratory-based, students may not drop after the second full week of classes. During the first two weeks of classes, students may drop only with permission of the instructor and/or the academic dean. B. Lang, T. O'Connor, R. White. Introduces the student to food-and-beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety. Students will prepare recipes, menus, and production schedules. Students will develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating them. They also will be involved in a project where they create menus, develop and standardize recipes, and complete a plan for a dining event. Completion of a five-hour practicum experience is required. This is an academic course.

H ADM 334 Wine and Food Pairing Principles and Promotion
Spring. 2 credits. Prerequisite: H ADM 430. Limited to 20 hotel school seniors, and graduate students. Elective. G. Pezzotti. Focuses on the pairing and creative marketing of wine and food. Students develop an understanding of regional and varietal wine styles, world food flavors, and the promotion of wine and food. Topics include: wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and at home, special event planning, and winery development. Students develop and present wine and food tastings to industry guests.

H ADM 339 Wine in Culture and History
Fall. 2 credits. Note: students may not add the course after the second lecture. Elective. A. Nash. Regions: Germany and Champagne. Through lectures, videos, guest discussions, and readings (but not tastings), students examine the history, people, culture, and production
of wine in the world’s great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies. Different regions are covered in the fall and spring (H ADM 439), so the course may be taken both terms in either sequence. Neither term is a prerequisite for the other, nor are H ADM 430 Introduction to Wines and H ADM 339 and 439 prerequisites for the others.

H ADM 430 Introduction to Wines
Fall, spring. 2 credits. Limited to juniors and seniors in the hotel school and graduate students in all other colleges. Hotel school students are strongly encouraged to enroll in the fall semester. Students are exempt from the 21-year age requirement under Section 65 of New York State law. Preregistered students who do not attend the first class and fail to notify the secretary in 274 Statler Hall of their absence before the first class are automatically dropped from the instructor’s records. Because of the high demand for this course and because a product is consumed, the absolute drop deadline in the fall for all students is Friday, October 10, 2004, and the drop deadline in the spring is Friday, February 4, 2005. The course fee of $50.00 includes the cost of a wine glass and tasting kit. No auditing allowed. Elective. S. Mutkoski, A. Nash. An introduction to the major wine-producing regions of the world, and what the consumer needs to know to purchase wine at retail outlets and in a restaurant setting. Lecture topics include components in wine, pairing wine and food, responsible drinking, selecting quality and value wine, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

H ADM 432 Contemporary Healthy Foods
Fall. 3 credits. Prerequisite: H ADM 305 or equivalent. Preference is given to 20 seniors and graduate students. Others may enroll, space permitting. One field trip is required (cost $50). Elective. M. Tabacchi. Designed to build a greater awareness and understanding among nutrition and foodservice professionals of the origins and manifestations of today’s health conscious and educated foodservice patron. The course addresses the marriage of nutrition and the imaginative, flavorful cuisine demanded by today’s consumer. Emphasis is on the use of fresh produce, lean meats, and lack of fabricated diet foods. Creativity and nutrient density of foods served are very important components of menu design in this course. Key topics include the preparation, marketing, merchandising, and selling of healthy menus in the Statler Hotel.

H ADM 435 Selection, Procurement, and Supply Management
Fall. 2 credits. First seven weeks of the semester. Limited to 20 hotel school juniors and graduate students or others by permission. Add/drop deadline is September 2, 2004. G. Norkus. This course deals with contemporary management issues related to the procurement activities of the hospitality industry. The course focuses on both the food distribution industry and the hospitality industry so that students understand the role the distributor plays in the movement of food and supplies from the producer to the hospitality operator, and how the creation of distributor partnerships serves to improve efficiency and reduce costs. Topics covered include: distribution channels and intermediaries in the supply chain, food distributor financial statement analysis, evaluation and selection of suppliers, developing buying strategies, purchasing and inventory management, the emerging role of the Internet, and e-procurement service providers.

H ADM 436 Beverage Management
Spring. 2 credits. Prerequisite: H ADM 430. Co-requisite: H ADM 435. Limited to 25 hotel school juniors, seniors, and graduate students. Elective. S. Mutkoski, A. Nash. Designed for students who intend to pursue food and beverage management as a career. The course deals specifically with the management of beverage operations, including: lecture topics cover: beverage pricing, food and wine pairing, wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lectures highlight industry trends and outlooks.

H ADM 437 Anheuser-Busch Seminar In Quality Brewing and Fine Beer
Fall, spring. 2 credits. Prerequisite: H ADM 430. Offered during the first seven weeks of the semester only. Elective. G. Pizzotti. Designed for upper-level students who intend to pursue food and beverage careers. The course serves to advance one’s knowledge about beers in terms of managing such products in a restaurant setting or other foodservice outlet. Lecture topics include the brewing process, sensory aspects of beer, international beer styles and types, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls, and third-party liability issues. There is one required field trip.

H ADM 438 Seminar In Culture and Cuisine
Fall. 3 credits. Prerequisites: H ADM 105 and H ADM 201. Co-requisite: H ADM 202. Required. Limited to 20 students. Elective. R. Spies. This seminar explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines enabling students to make comparisons and draw relationships among foodways of different cultures. Possible incorporation of each cuisine into restaurant menus is discussed as well. Each student is involved in doing research reports,oral presentations, and designing and orchestrating the preparation of menus.

H ADM 439 Wine in Culture and History—II
Spring. 2 credits. Elective. Note: Students may not add the course after the second lecture. A. Nash. Regions: Bordeaux, Burgundy, and California. Provides students a cultural and historical perspective on wine and its place in society. Through lectures, videos, guided discussions, and readings students examine the historical people, culture, and production of wine in the world’s great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies.

Operations
H ADM 105 Introduction to Hotel Operations
Fall, spring. 2 credits. Limited to 20 hotel school students only. Required. R. McCarthy. Note: This course must be taken in conjunction with H ADM 109, Introduction to Food Service Operations. Students enrolled in Lecture 1 of H ADM 105 will take Lecture 1 of H ADM 106 in the same semester, and vice versa.

Designed to provide students with an introduction to the scope of the hospitality industry. The course serves to advance one’s knowledge about beers in terms of managing such products in a restaurant setting or other foodservice outlet. Lecture topics include the brewing process, sensory aspects of beer, international beer styles and types, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls, and third-party liability issues. There is one required field trip.

H ADM 106 Introduction to Food Service Operations
Fall, spring. 2 credits. Limited to 30 hotel school students per section. Required. G. Norkus. Note: This course must be taken in conjunction with H ADM 105, Introduction to Hotel Operations. Students enrolled in Lecture 1 of H ADM 106 will take Lecture 1 of H ADM 105 in the same semester, and vice versa.

An introduction to the principles of food and beverage management, beginning with an overview of the foodservice industry at large. Attention is focused on major industry segments, business practices, and trends. Subsequently, detailed consideration is given to the components of the foodservice system: menu planning and production, service, and controls and quality assurance. The course is designed for the student who intends to pursue a career in this field. The course is available to seniors and graduate students in all other colleges. Others may enroll, space permitting. Add/drop deadline in the fall is September 2, 2004. G. Norkus. Required. Limited to 30 hotel school students only. Required. R. Lloyd. An introductory course taught from the perspective of solving problems and making decisions within the hospitality industry. Students will learn some introductory probability and how to gather data, evaluate the quality of data, graphically represent data, and apply some fundamental statistical methodology. Statistical methods covered will include estimation and hypothesis testing relating to one- and two-sample problems of means, simple linear regression, and multiple regression. Problems involving multiple means (one way ANOVA) will be covered as a special case of multiple regression, time allowing. Minitab will be used as the statistical computing software.
H ADM 301 Service Operations Management
Fall, spring. 3 credits. Limited to 60 hotel school students per lecture. Limited to 20 students per section. Required. B. Noone, M. Pullman.
Introduces statistical and operations research methods appropriate for the hospitality industry. The goal of the class is to provide students with the tools and understanding necessary for decision making using quantitative data. Students use computer spreadsheet software extensively. A key requirement of the course is an ability to communicate the results of the analyses in a clear manner. Topics include: probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, and project management.

H ADM 303 Club Management
Fall, spring. 2 credits. Not open to freshmen. Second 7 weeks in the fall: limited to 35 hotel school junior and seniors who must have completed H ADM 105 or equivalent. First 7 weeks in the spring: open enrollment. The deadline to drop a seven-week course is the midpoint of the course. Elective.
The study of private membership clubs and the leadership role in club administration. The application of current management principles in a not-for-profit environment is discussed and club management compared to other areas of the hospitality industry and other not-for-profit organizations. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and human resource considerations; and marketing, pricing policies, and quality standards.

H ADM 305 Restaurant Management
Fall, spring. 4 credits. Prerequisites: H ADM 106 and H ADM 236. Limited to 27 hotel school students per lab. Approximate cost of lab manual, certification for alcohol servers, and foodservice and beverage management is $85.00. Required. Because this is a group course, the absolute deadline to drop the course in the fall is September 2, 2004, and the deadline to drop the course in the spring is January 31, 2005. R. Spies.
Offers the opportunity to synthesize the skills, concepts, and theories students have learned in other classes and practically apply them in an actual restaurant setting. Lecture topics cover pertinent issues and principles relevant to the industry at large and then, as a class, the principles are incorporated into actions that occur in the student-run operation.

H ADM 401 Restaurant Entrepreneurship
Fall, spring. 3 credits. Limited to 20 hotel school students with written permission of the instructor. R. James.
Prepared to incur expenses over the term of the semester for five required field trips, totalling no more than $350.00. Elective. G. Pezzotti.
Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Under the supervision of the instructor and utilizing student-developed case studies, the students visit and analyze various independently owned restaurant operations. Analysis covers, but is not limited to: the restaurant's concept (market), organization, ownership, management, physical structure, staff, front-of-the-house operations, back-of-the-house operations, and fiscal integrity. Readings relative to current topics in the restaurant industry are required. Classes alternate weekly between field trips (2:30 p.m. through dinner hour) and seminar/case presentation.

H ADM 402 Contract Foodservice Management
Fall. 3 credits. Prerequisites: H ADM 106 and H ADM 236. Limited to 30 juniors, seniors, and graduate students. Elective.
Operations in business and industry, healthcare, sports complexes, and education, as well as other on-site segments, represent more than one fourth of total restaurant-industry sales. This course addresses the major differences between onsite foodservice management and traditional restaurant management with particular focus on organizational structure, operational configuration, controls, labor issues, systems design and implementation, contractual issues, and revenue enhancement/cost containment. Related topics such as event planning and senior living are also discussed. Includes readings, discussions with industry leaders, case studies, course tests, and an integrated research project.

H ADM 403 Specialty Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Prerequisites: H ADM 305 or H ADM 702 with permission of the instructor. Limited to 20 hotel school juniors, seniors, and graduate students with permission of the instructor. Elective. G. Pezzotti.
Designed for students focusing in food and beverage preparation. Students considering a career in the hotel or restaurant food and beverage environment or those who anticipate interacting with present-day culinary trends will find the course especially beneficial. Over the course of the semester, the class, working in groups, is responsible for the marketing, organization, financial planning, marketing, and financial analysis, and accounting relative to three guest-chef specialty production nights. The chef will be asked to recommend the evening's menu reflecting his/her culinary background, and the group is responsible for producing the meal for the Cornell community using the hotel facility. Required final project analyzes the relative degree of success experienced during each guest-chef event. The analysis considers consumer reaction as well as proper application of food and beverage management principles.

H ADM 404 Catering and Special Events Management
Spring. 3 credits. Prerequisites: H ADM 236, or permission of instructor. Limited to 30 students. Field trip to New York City; approximate cost $250. Elective. R. Spies.
The catering and special events industries are among the fastest growing segments of the hospitality industry. This course focuses on off-premise and on-premise catering for social and business functions, and the management of large-scale independent events, such as sporting events, artistic performances, and product launches. Topics include: organizational structure, legal aspects of catering and special events management, product and service development, marketing and sales, catered function and special event planning and execution, staff recruitment and training, post event analysis, financial success of catering, and special events businesses.

H ADM 407 Seminar in Hotel Operations
Spring. 3 credits. Limited to 30 juniors and seniors. The estimated cost of the field trips is $250. Elective. R. McCarthy.
In this seminar-style class, students develop their leadership abilities through a series of hands-on projects for the Statler and Waldorf-Astoria hotels. Students gain experience by identifying the requirements and challenges of a project, creating a plan, and carrying out the leadership responsibilities that will result in others successfully implementing their recommendations. Drawing on their specific knowledge and skills in all the academic disciplines, students gain a broader perspective on the hotel as a business organization. They investigate the combination of human and technical forces that make a hospitality business succeed or fail. Emphasis is on reconciling the real or apparent conflicts between theory, as learned in the students' college courses, and practice, as observed in actual hotel operations. Upon completion of the course, students will be able to evaluate issues and formulate cogent strategies for managing hotel operations.

H ADM 408 Introduction to Casino Operations
Fall. 2 credits. Limited to hotel school students. One required field trip to Atlantic City will cost approximately $200. Elective. R. McCarthy.
A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest growing industries. In this course we focus primarily on the operation and ownership of commercial casinos and the hotels attached to them. The course is designed to introduce students to the internal and external casino environment. We look at the historical development of gaming in America to understand how the industry has evolved to its present form. Students learn the organizational structure of a casino hotel, how it operates, and how it makes money. Students also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Topics include: casino and marketing strategies and player rating systems; the social and economic impact of gaming and the various regulatory environments within which casinos operate; and how common casino games are played and the mathematics of the various games. Students build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

H ADM 602 Spa and Spa Hotel and Resort Development and Management
Fall, spring. 3 credits. Preference is given to 35 hotel school seniors and graduate students; others may enroll, space permitting. Two field trips are required; approximate cost $75-100. Elective. M. Tabacchi.
Emphasizes the development, management and marketing of spas, spas in hotels and resorts, and spa restaurants. Day spas, resort spas, and destination spas are studied in depth. The feasibility of success for new spas and marketing research necessary to establish new spas is discussed. The design of menus, mental and physical fitness programs, stress management, spa medical treatments.
complementary medical treatments, and other spa programs are all considered. Personnel required, safety, legal, and ethical issues facing spas are an important part of the course. The integration of nutritious menu items into restaurant menus and their marketing and merchandising is studied. Guest speakers from spas are an integral part of the course.

H ADM 604 Service Operations Management
Fall. 3 credits. Prerequisite: H ADM 775, or equivalent. Limited to 25 graduate students. Elective. G. Thompson. Improves the understanding of the operations function of service organizations. The course focuses on the functions and nature of service operations and the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics covered include service design, bottleneck and layout analysis, capacity management, workforce management, and quality management. This course is intended for any graduate students interested in services management.

H ADM 605 Yield Management
Fall, spring. 3 credits. Prerequisite: H ADM 301, H ADM 302, or equivalent. Limited to 30 seniors and graduate students. Elective. S. Kimes, B. Noone. Helps students learn how to effectively apply the principles of yield management. The course focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics covered include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 606 Restaurant Revenue Management
Spring. 2 credits. First seven weeks of the semester. Prerequisites: H ADM 701 and H ADM 702. Limited to 30 graduate students. Permission of the instructor. Note: the deadline to drop a seven-week course is the midpoint of the course. Elective. S. Kimes. Revenue management is a method for profit maximization. The objective of this course is to help students learn how to apply the principles of revenue management to restaurants. The course focuses on methods of managing duration and price with the operation of microcomputer-based spreadsheet programs. Topics covered include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

H ADM 609 Airline Service Management
