Goals are to learn about information systems and understand how to effectively communicate to clearly articulate the difference between information technology and information systems; link concepts and technical jargon to the real-world uses of information systems; and learn the information fundamentals needed throughout hospitality careers. Designed for students who will work within hospitality organizations as end users, user-managers, leaders, and information-systems professionals. This is not a technologist course, but rather for the general-management student. Provides the essential information that all hospitality management students should know about information systems.

H ADM 374(3374) Fundamentals of Database Management and Data Analysis
Fall. 3 credits. Elective. Limited to 30 students. E. Wagner.
Prepares students to create and manage information in a knowledge-based organization. The design and use of database and spreadsheet functionality are used to perform analyses and make decisions. Students gain a conceptual foundation and then practice applying these ideas through project activities and course readings. Topics include information and information management in organizations; fundamentals of relational database design and implementation; SQL queries; how to work in a database design team and as an individual; database design and management using Microsoft Access; how to normalize a database design to ensure effective use of the technology; analysis of the managerial decision-making process functionality within Microsoft Access and Excel; the conversion of data into information and knowledge that can be leveraged for particular business goals; the role of data and information management in contemporary society; and data management opportunities in the hospitality industry.

H ADM 375(3375) Internet Technologies for the Entrepreneur
Spring. 3 credits. Elective. Prerequisite: H ADM 174 or equivalent. Owing to capacity restrains in Binenkorb lab, attendance in class is mandatory; no show students are dropped from course to make room for stand-by students; students may not drop course after second week of class. M. Talbert.
Introduces students to the technical underpinnings of the Internet, with an emphasis on the World Wide Web. Students survey many of the key technologies that form the mechanism of the web, including HTML, DHTML, XML, Java Script, VB Script, Java, Style Sheets, Browsers, Servers, ActiveX, and Active Server Pages. The goal is a managerial familiarity with a broad range of important technologies, rather than proficiency in any single technology. This is an implementation course; in other words, programming. Students should expect a considerable demand on outside time for practice necessary to gain programming fluency in the languages introduced.

H ADM 474(4474) Strategic Information Systems Management
Spring. 3 credits. Elective. G. Piccoli. Targeted to students contemplating careers in general management and operations, marketing, or information systems. Managerial in nature, the course is designed to help students to articulate the difference between information and knowledge that can help them make effective decisions about the use (or not) of IT in organizations. Students learn the material implications of recent technology trends, the economic premises of the new competitive landscape dominated by pervasive networks (e.g., the Internet); how information technologies can be leveraged to create shareholder value and service customers; how information and advanced IT can create competitive advantage; and when and how a competitive advantage based on IT can be sustained. Course includes lectures, case study discussions, guest presentations, and project work. Many of the class activities center on analysis and discussion of readings and case studies. Class meetings are very interactive.

H ADM 476(4476) Visual Basic for Applications: End-user Programming
Fall, spring. 3 credits. Elective. Limited to 30 students. Owing to IT capacity restrains in Binenkorb lab, attendance at first class is mandatory; no-show students are dropped from course to make room for stand-by students; students may not drop course during second week of class. M. Talbert.
Introductory programming course for end-users (e.g., business managers and consultants). Students develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also develop custom information systems using Microsoft Office applications as programmable building blocks. Secondary objectives of the course are to cover fundamental design and programming principles. The course is entirely lab based.

H ADM 477(4477) Advanced Business Modeling
Fall, spring, second seven weeks of semester. 2 credits. Limited to 21 students. Prerequisite: seniors and graduate students with prior given to M.M.H. students; H ADM 174. Note: Deadline to drop seven-week course is midpoint of course. M. McCarthy and M. Talbert.
Focuses on organizational systems, planning, and decision process, and how information is used for decision support in organizations. Provides students with practical skills in developing spreadsheet computer models using Microsoft Excel. Topics include business planning and forecasting, numerical methods, advanced formulas and functions, user-interface design, data protection and validation, importing external data, and output presentation.

H ADM 772(7720) Information Systems Management
Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor. G. Piccoli.
Information technologies (IT)-based information systems are important to almost all organizations. They are a primary means for ensuring efficient operations and effective decision-making, and they offer the potential to increase a firm's competitiveness when appropriately planned and used. Students become comfortable with all aspects of information systems decision-making, including systems analysis and design, systems selection and purchasing, and the risks in IT investments. They become familiar with the systems found in hospitality operations. The course is not overly technical, but you are expected to be comfortable researching and discussing information technologies.

FINANCE AND REAL ESTATE

Finance/Accounting

H ADM 120(1120) Personal Financial Management
Fall, spring. 2 credits. Elective. Limited to 50 non-hotel students. L. Hensley and E. Cornell.
Overview of personal financial planning including money management, tax planning, use of credit, insurance, investing, retirement planning, and estate planning.

H ADM 121(1121) Financial Accounting
Fall, spring. 3 credits. Required. Prerequisite: hotel students. D. Dittman.
Introduction to the basic principles of accounting, involving transaction analysis, flow of accounting data, basic financial statements, and current and long-term consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 221(2221) Managerial Accounting
Fall. 3 credits. Required. Prerequisites: H ADM 121 and 174 or equivalents. G. Potter and J. Hesford.
Focuses on the use of accounting information for management decision making and control. Topics include product costing, budgeting, management decision making, and control systems. There is one common exam at the end of the semester.

H ADM 222(2232) Finance
Fall and spring. 3 credits. Required. Prerequisites: hotel students or permission of instructor. H ADM 121, 221, or equivalents, or permission of instructor. L. Canina and S. Carvell.
Provides students with accounting cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and short-term and long-term financial decision-making. Topics include current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.
in-depth analysis of corporate financial management, including: financing alternatives and capital structure decisions, cash management and working capital management, capital budgeting decisions, risk analysis, valuations of real options, and Economic Value Added (EVA) analysis. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. The course emphasizes analytical methods through case studies and a semester project.

H ADM 427(4427) Multinational Finance and International Risk Management
Fall, spring. 3 credits. Prerequisites: H ADM 121, 221, 222, or equivalents. Graduate students should enroll in H ADM 627. C. Chang.

Focuses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. The major areas covered are: the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

H ADM 429(4429) Investment Analysis and Portfolio Management
Fall, spring. 3 credits. Elective. Prerequisites: H ADM 222, 221, or equivalents. Graduate students should enroll in H ADM 629. C. Chang.

The course provides an in-depth understanding of the major investment vehicles: bonds, equity, and derivatives. In each case, it discusses what they are, how they are valued, and what risks they entail. The course relies heavily on case studies of actual frauds perpetrated in hotel and restaurant operations.

H ADM 426(4426) Advanced Corporate Finance
Fall. 3 credits. Elective. Prerequisite: junior or senior standing. H ADM 321. Graduate students should enroll in H ADM 320. Faculty.
Topics include management contracts, securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). The course is intended for those who wish to acquire a working knowledge in the analysis of such securities (e.g., collateralized mortgage obligations, commercial MBS, auto loan, and credit card backed securities) and an understanding of the securitization process. The course's subject matter necessitates a highly analytic and quantitative approach, and students are required to have a strong background in finance and economics. Students who have questions about preparation or background should see the instructor.

**H ADM 628(6628) Real Estate Finance and Investments**

Spring. 3 credits. Elective. Limited to 40 students. Prerequisites: H ADM 323 or 621, 450 or 651; graduate standing, J. Corgel. Promotes sound real estate investment and finance decision-making, use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through applications of an extended version of the after-tax discounted cash flow model, and other valuation models including option pricing models and regression models. Financing decisions are made using the techniques of Chapter 10. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are extensively covered. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

**OTHER**

**H ADM 490(4490) Exploring Social Responsibility: Hunger and Homelessness**

Fall, spring. 4 credits. Students work in pairs or small groups with a local area agency that provides services for homeless or disadvantaged people. This field practicum comprises approximately 60 hours of community work during the fall semester, half of which is in direct service and half of which is project-based. (2) 4 credits. Students participate in the Alternative Spring Break through Cornell's PSC in various domestic or international locations. Students work in an agency that serves low-income, homeless, hungry, or disenfranchised people. Housing and transportation are arranged. This option may cost students up to $100. Students interested in this option must see the instructor at pre-registration time. (3) 5 credits. Students do community work in the Ithaca area with an agency that serves homeless, hungry, incarcerated, or disenfranchised people. Students work on a regular weekly basis for a minimum of 30 hours during this semester.

**H ADM 491(4491) Hotel Ezra Cornell (H.E.C.)**

Fall and spring. Variable credit. In spring and fall, students who are interested in learning the professional approach to food preparation, cooking, and presentation. The course is designed specifically for non-hotel majors; priority given to seniors and graduate students. Fee (includes cost of uniform and uniform cleaning): $75. Preregistered students who drop after the drop deadline for this course is $50. Cornell (H.E.C.) may receive up to 3 credits in hotel electives for their participation in the planning, organizing, and direct management and controlling of a hotel. Students interested in this option must see the instructor to establish Hotel Ezra Cornell as the premier forum to deliver a unique hospitality learning experience to industry leaders and students in an interactive setting. Board positions are limited to students in good standing. Additional credits would be in free elective, only. Next year's board will continue to implement the business plan developed by the previous H.E.C. board of directors. To establish Hotel Ezra Cornell as the premier forum to deliver a unique hospitality learning experience to industry leaders and students in an interactive setting. Board positions are limited to students in good standing with a minimum cumulative GPA of 2.5. Eligibility requirements for specific board positions can be obtained in the Office of Student Services, 180 Statler Hall. Eligible students considering a board position for H.E.C. should pre-enroll in the course and speak with the instructor; final enrollment is determined by an election process.

**H ADM 493(4493) Management Intern Program I—Operations**

Fall, spring. 6 credits. Elective. Prerequisites: H ADM 105 or 115, 201, 211, 121, 221, 222, 106 or 236, 243, 255, 165, 174, and 275. Highly recommended: H ADM 321, 305, 355, and 365. Additional course work may be required for applicants considering specialized internships. Students must submit detailed plan for completion of all remaining academic requirements before acceptance into the course. Limited to juniors and seniors in the hotel school with approval of the Management Intern Program (MIP) faculty coordinator. The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted to MIP enroll in both H ADM 493 and 494. Students enrolled in H ADM 493 receive academic credit in free electives as well as practical experience in the hospitality field. Six performance evaluations are used to determine this grade. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding semester. Further information is available in the Office of Student Services, 180 Statler Hall.
H ADM 494(4494) Management Intern Program II—Academic
Fall, spring. 6 credits. Elective. Faculty. Limited to juniors and seniors in the hotel school with approval of the Management Intern Program (MIP) faculty committee. The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted into MIP enroll in both H ADM 493 and 494. Students enrolled in H ADM 494 receive academic credit in free electives for submission of a goals and objectives statement, four monthly progress reports, six journal entries which focus on insights gained through analysis of events occurring in the workplace, and four Hospitality Management Checklist summaries. Upon return to campus, each intern completes a debriefing and an oral presentation to fulfill the academic requirements. Students must be in good academic standing and have a GPA of at least 2.0 in the proceeding semester. Further information is available in the Office of Student Services, 180 Statler Hall.

H ADM 495(4495) Implementing Strategies for Tying Wellness Practices to Company Profit
Spring. 3 credits. Elective. Priority given to juniors, seniors, and graduate students; others may enroll, space permitting. M. Tabacchi.

There is increasing evidence linking job-induced stress to overall health and happiness or lack thereof. Adding to workplace stress are the needs of its diverse and changing population. These stresses affect the financial health of the company as well as the psychological and physical health of the individual. The purpose of this course is to encourage future managers to evaluate the work environment and to enhance opportunities for reducing job-induced stress in order to improve productivity, which can sharpen the corporation's competitive edge. The emerging fields of complementary and alternative medicines are explored as preventive and cost-effective methods of improving workers' health. Business models for encouraging workplace wellness, systems for implementation, reward, and accountability of managers and corporate officers are introduced in this course. Only students who accompany them. A. Susskind.

H ADM 497(4970) Undergraduate Research
Fall, spring. Variable credit. Elective. Faculty. Outstanding students may conduct independent research under faculty supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report. Students make two presentations coordinated by the Center for Hospitality Research (CHR). One at a preliminary stage and one at project completion. Students submit the completed report to the CHR, which will be available online through the CHR web site.

H ADM 498(4980) Undergraduate Independent Study
Fall, spring. Variable credit. Elective. Faculty. Can be taken only by students conducting two independent studies in one semester. For more details, see H ADM 499.

H ADM 499(4990) Undergraduate Independent Study
Fall, spring. Variable credit. Elective. Faculty. Students have the option of conducting an independent study project in any academic area. The number of credits for which students may register are arranged on an individual basis. Note: Students commit themselves to a certain number of credits of independent academic work per week per credit hour if they choose to do an independent study project, and the work must be performed in the semester for which the student is enrolled in the independent study. The usual add/drop policy applies, and retroactive credit for work commenced after an academic semester has ended is not allowed. Projects are conducted under the direction of a faculty member, and regular, frequent consultations are mandatory. Also, a written report must be produced and made available to all faculty members and students of the school after its submission to the supervising faculty member. Credit for independent study projects may not count toward the hotel school elective requirement, but, rather, toward free electives. Students cannot earn academic credit for independent study when the equivalent material is offered in a regular course, and credit is not earned for teaching a course. Students should consider all aspects of their situation before committing themselves to an independent study project. Enrollment forms are available in the Office of Student Services, 180 Statler Hall.

H ADM 690(6900) Graduate Independent Research
Fall, spring. Elective. Faculty. Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the Office of Student Services, 180 Statler Hall.

H ADM 699(6990) Graduate Independent Research
Spring. 2 credits. Elective. Faculty. Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the Office of Student Services, 180 Statler Hall.

H ADM 790(7790) Externship
Winter. 1 credit. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Faculty.

H ADM 791(7791) Professional Development
Summer. 0.5 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Faculty. Seminar format, varies week to week.

H ADM 792(7792) Professional Development II
Fall. 0.5 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Faculty. Seminar format, varies week to week.

H ADM 795(7795) Master of Management in Hospitality Master Class
Spring, three-day immersion seminar taught by industry leaders at their establishment during Jan. winter break. 1 credit. Elective. Prerequisite: M.M.H. students or permission of instructor. Faculty. Students solve problems based on real-life scenarios and present their solutions to industry leaders and the Hotel School faculty members who accompany them. A final paper is due in the spring semester immediately following the seminar.

H ADM 796(7796) M.M.H. Charette
Fall. 1 credit. Required. M.M.H. students only. A. Susskind.

H ADM 797(7797) Hospitality Industry Leadership Development Institute
Summer. 1 credit. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Faculty. A dozen or more senior executives from the hospitality industry visit the campus to evaluate students as individuals and as part of a team. They assess how well the students are able to lead, take direction, work with others, present ideas, and listen to other ideas. At the end of the class, one or more of them meet with students individually, and in teams, to evaluate performance. This centerpiece of the orientation process is designed to outline some of the personal and career goals students will want to work toward in the coming year.

H ADM 890(8890) M.S. Thesis Research
Fall, spring. Required. Faculty.

H ADM 990(9990) Ph.D. Thesis Research
Fall, spring. Required.

COLLEGE OF HUMAN ECODY

ADMINISTRATION
Lisa Staiano-Coico, dean
Alan Mathios, associate dean
S. Kay Obendorf, associate dean
Brenda Bricker, director, undergraduate affairs
Darryl Scott, director, admission, student, and career services
Tracey L. Thompson, college registrar

COLLEGE FOCUS
The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology; as well as human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

FACILITIES
The college is housed in Martha Van Rensselaer (MVR), Savage, and Kinzelberg Halls. The buildings include administrative and faculty offices, classrooms, auditoriums, galleries, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and computer-aided design laboratories; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; human factors and infant research facilities; and an audiovisual classroom for distance learning. Also included are learning resource centers for career planning, field and international study, a historical costume collection, a human metabolic research unit, an animal research facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment, and cameras, videotape, and sound recording equipment.

DEGREE PROGRAMS
Cornell programs in Human Ecology lead to the degrees of bachelor of science (B.S.), master of arts (M.A.), master of science (M.S.), master of professional studies in human ecology (M.P.S.), master of health administration (M.H.A.), and doctor of philosophy (Ph.D.).

General academic information concerning the bachelor of science degree is given here under "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to master and doctoral degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and in announcements published by the individual field offices (Design and Environmental Analysis, Human Development, Nutritional Sciences, Policy Analysis and Management, and Textiles and Apparel). For information regarding the Sloan Program in Health Services Administration, contact the Department of Policy Analysis and Management.

UNDERGRADUATE DEGREES
Bachelor of science (B.S.) degrees are offered in the following areas:
- Biology and society
- Design and environmental analysis
- Human biology, health, and society
- Human development
- Individual curriculum
- Nutritional sciences
- Policy analysis and management
- Textiles and apparel

UNDERGRADUATE AFFAIRS
Persons interested in undergraduate study in human ecology should contact the admissions office, 170 MVR (255-5471). Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty members are listed at the beginning of the course descriptions for each department.

Counselors in the Office of Admission, Student, and Career Services (172 MVR) can help prospective students understand college programs and requirements, as well as college and university resources and services. They provide a broad range of career services and personal support for all matriculated undergraduates. The college registrar and degree auditor (145 MVR) assists undergraduates with questions about academic credit and graduation requirements.

The Student Body
The College of Human Ecology undergraduate enrollment is 1,222. Roughly 400 students graduate each year; last year 255 freshmen and 115 transfer students matriculated. Ninety faculty members serve as advisors to undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is highly selective. Approximately two-thirds of the student body comes from New York State, with the remainder coming from other parts of the United States and abroad. In 2005, 30 percent were identified as members of minority groups. Members of the college faculty chair the special committees of approximately 200 graduate students.

Mature Students
The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those 24 years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Admission, Student, and Career Services (172 MVR) can provide information of interest to mature students. Mature students are permitted to enroll for as few as 6 credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight semesters. To find out about qualifying for prorated tuition, mature students must see the college registrar during the course enrollment period in the preceding semester.

Special Students
Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with a bachelor's degree who are preparing for graduate study or jobs and careers in human ecology-related fields, or those who have interrupted their education and are considering completing degree programs. Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree. Those interested in becoming special students should make appointments to discuss admissions procedures in the Office of Admission (170 MVR, 255-5471).
Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs (120 Day Hall, 255-4987). All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor. At the time of registration, Empire State College students must submit a completed Extramural Division notification of cross-registration (form number SA-22, F-031) to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

Transfer Students

Students may be considered transfer students once they complete 12 college credits after high school graduation. An external transfer student is one who transfers to Human Ecology from an institution outside of Cornell University. Liberal arts credits from other institutions transfer readily, but students must earn a minimum of 60 Cornell credits to graduate. Internal transfer students are admitted to Human Ecology from one of Cornell's other six undergraduate units. Students transferring internally should take special care to learn the policies of Human Ecology, because rules at the various Cornell colleges often differ. Before admission, both internal and external transfer candidates should contact the Office of Admission (170 MVR, 255-5471) to discuss credit transfer. Upon matriculation, admitted transfer students should attend the orientation and contact the Human Ecology registrar's office (145 MVR, 255-2255) to discuss how transfer credits will apply to their specific degree program.

MAJORS

The college requires students to fulfill requirements for a major to graduate. Students must declare a major by the end of the sophomore year. It is common for students to change interests during their undergraduate careers. Counselors in the Office of Admission, Student, and Career Services (172 MVR), academic advisors, and directors of undergraduate study in each of the academic departments can help students to consider their options and engage in academic planning. All changes of major require submission of the change of major form and are processed through the college registrar's office, 145 MVR. Change of major will trigger re-evaluation of all academic credit and assignment of a new faculty advisor.

DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing the built environment. This includes consideration of human behavior, experience, and the environment itself. The processes for creating, managing, and maintaining the built environment, and the implications for how we live our lives face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is designed for students who wish to help individuals, groups, and organizations meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Students explore creative concepts for the design and management of interior environments through laboratory, shop, studio, and computer facilities. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the MVR gallery. The DEA resource center includes books, journals, newsletters, and material samples for student use.

Options

The department offers undergraduate education in three areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is accredited for the Foundation for Interior Design Education Research (FIDER). The Facility Planning and Management Program at Cornell is an FMA Recognized Program. This means that it meets the standards for recognition of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option should plan on a minimum of six semesters at Cornell to complete the program.

Option I: Interior Design

This option prepares students for professional careers in interior design. The interior design option emphasizes a design process in which innovative solutions are based on research-derived knowledge of human behavior, values, and attitudes. Students develop an understanding of design theory and methods, design history, behaviorally based programming, and post-occupancy evaluation. They learn about design communication, building systems, furnishings, materials and finishes, and project practice. Students may use their elective courses to develop a specialization in areas such as design history, historic preservation, theory and criticism, design leadership, interactive multimedia, design sustainability, and behavior-based design.

This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and industrial design.

Option II: Facility Planning and Management

This option prepares students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, engineering, construction, business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellence career opportunities exist in the facility management divisions of private companies, institutions, the health care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human Factors and Ergonomics

This option focuses on the interaction between people and their physical surroundings. The program seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior and product designers, and facility managers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, lifestyle, social class, and stage-in-life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising

All DEA majors are matched with a faculty advisor during their first semester by the director of undergraduate studies, Professor Mark Jennings, E219 MVR. Consultation with faculty advisors about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisors can make recommendations on what to include. Students are free to change advisors. Although advisors must approve students' schedules during course enrollment each semester, it is the student's responsibility to keep track of his or her academic progress in order to make sure that they meet graduation requirements for their major and college.
Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The human biology, health, and society (HBHS) program permits students to combine their interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Issues that can be explored include biology and behavior; metabolism, physical health, biology, growth, and development, and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division's programs.

HUMAN DEVELOPMENT

Human development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. A wide range of issues are included in the study of human development, including biological, cognitive, and emotional development; the role of family, neighborhood, workplace, and culture in development; and the influence that developing humans have on their environment. The human development major provides an excellent foundation for many careers, such as medicine (particularly family medicine, pediatrics, and psychiatry), clinical psychology and other mental health professions, law, business (especially human resources), child and family advocacy, and education (from preschool and elementary school teaching to school administration). The major prepares students for academic careers as professors in human development, psychology, or sociology departments. Learning about human development also helps students understand more clearly their own development and the development of those around them.

The faculty of the Department of Human Development comes from several disciplines, including developmental and clinical psychology, sociology, and education. The diversity of faculty expertise results in a wide-ranging view of human development. The research of the department's faculty is extensive. It includes basic research on issues such as the neurobiology of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, and the effects of environmental stressors on children's cognitive development. It also includes applied research useful for the creation of public policy, such as studies of the causes and consequences of child maltreatment and studies of the effectiveness of reading programs for Head Start preschoolers, apprenticeship programs for high school students, and support programs for aging adults in community and congregate settings.

Curriculum

Human development is the most flexible major in the College of Human Ecology. While all students learn the fundamentals of human development, each student can focus on one or more areas of particular interest. The flexibility of the major also allows students ample opportunity to meet the requirements for admission to many professional schools, including medical, dental, law, and business schools.

Requirements specified by the College of Human Ecology make up part of each student's curriculum, and include classes in the social sciences, humanities, history, writing, and communication. In addition, there are requirements for the human development major. Students in this major can choose up to 14 elective courses from the broad range of offerings across the Cornell campus.

Special Opportunities

Beyond formal course work, students have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of them. These opportunities include the following:

Field placements. Human development majors can arrange internships with Urban Semester in New York City, Cornell in Washington, and Cornell abroad programs and in local agencies. These have included hospitals, psychiatric hospitals, juvenile detention centers, senior housing, and the department's on-campus Early Childhood Program. Students also have also participated in projects with the Tompkins County Office of Aging, the Tompkins County Youth Bureau, and the Law Guardian's Office of Tompkins County.

Faculty research. Many students work as research assistants on faculty projects. Students use research techniques ranging from laboratory procedures to family observations to large surveys. They assist in study design, data collection, and data analysis. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. Recent projects have included the study of parent-infant interactions, the transition of high school students into the world of work, evaluation of pre-kindergarten programs, and the impact of poverty on stress responses in children and teens.

Independent research. Under faculty supervision, some advanced students complete an honors thesis in an area of personal interest by designing a study and collecting and analyzing data. Recent thesis topics have included development in families that adopt school-age children, connections between speed of language development in infants and later scores on intelligence tests, ethnic variation in exposure to stressors in adolescence, and the relationship of religious beliefs to well-being.

Undergraduate Teaching Assistant. Advanced students can serve as undergraduate teaching assistants. This requires close work with the professor teaching the course as well as with students taking the course.

Teaching certification. A cooperative education program exists between the Department of Human Development and Wells College. This program requires careful planning and course scheduling. It enables students to graduate with a Cornell bachelor's degree and New York State Certification to teach nursery school through sixth grade. This certification is honored by other states.

The program requires a minimum of a three-semester commitment. Cornell HD students take four courses at Wells College and study teach their last semester at Cornell. Although there is van transportation between Cornell and Wells College, it is important for students to have access to a car, especially while student teaching. Students will be registered at Cornell during the entire undergraduate program and usually maintain Ithaca housing.

Well's College courses count as Cornell courses and are used as electives but are not included in a student's GPA. The one-semester student teaching experience is typically based in the Ithaca area, though not necessarily within the city of Ithaca.

This program is open to HD majors only. Students must have at least a 3.0 Cornell cumulative GPA upon application and must maintain a 3.0 GPA to qualify for student teaching and to complete the program. For more information, contact Judith Ross-Bernstein in 550 MVR at 255-0826.

NUTRITIONAL SCIENCES

A major in nutritional sciences (NS) focuses on the complex interrelationships of food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand questions such as: How are nutrients used by the body? What factors influence human food choice? What nutrients and dietary patterns are recommended to promote growth, maintain health, or treat health problems such as chronic disease? Students in this program may also fulfill the courses required for didactic training in dietetics toward registration as a dietitian (R.D.), which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the "Nutritional Sciences" section of this catalog.

Special Opportunities

Dietetics and Clinical Nutrition

Interested students should complete the academic requirements for the didactic program in Dietetics, approved by The American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, social science, and economics are added to the core curriculum (specific requirements). Evaluation of academic credentials to qualify for a dietetic internship should be completed before graduation. Seniors should initiate this
academic evaluation process in March if they will graduate in January or in September if they will graduate in May. All students who will complete the academic requirements by graduation should participate in the evaluation process while at Cornell. Students who meet most but not all of the academic requirements are encouraged to have their academic work evaluated while they are at Cornell so that deficiencies can be identified and documented.

Advocates in the dietetics program can also help students plan to meet the experience or supervised practice requirement. Active membership and/or eligibility to take the Registration Examination to be registered as a dietitian (R.D.). For additional information about meeting ADA requirements, contact the DNS academic affairs office, 335 MVR, 255-4410.

Exercise Science Minor

Students can complete the applied exercise science concentration at Ithaca College, which includes courses in fitness measurements, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the applied exercise science concentration, contact the DNS academic affairs office, 335 MVR, 255-4410.

POLICY ANALYSIS AND MANAGEMENT

The policy analysis and management (PAM) major produces graduates skilled in policy analysis and possessing management skills applicable in the public, nonprofit, and private sectors. In addition, the PAM graduate will have concentrated knowledge in one of three policy areas: family/social welfare, health, or consumer policy. Concentrations are well-qualified for a wide variety of public, not-for-profit, and private sector employment emphasizing either policy analysis or management. The major also attracts large numbers of pre-law students, pre-M.B.A. students, and students intending to follow a graduate program in public affairs and policy analysis programs. The potential exists to pursue a five-year program resulting in a B.S. and a master of health administration.

The PAM major combines theoretical understandings from economics, sociology, psychology, demography, and government to critique and analyze our society's laws, policies, and programs. It also gives students the knowledge to build management skills for use in public, not-for-profit, and for-profit settings. Ideas of social justice, equity, and economic efficiency will be studied. Research methods, statistics, and planning concepts will be learned and used to direct and aid in program planning, policy analysis, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills within a particular concentration area—social welfare/family, health, or consumer policy. Social welfare and family policy includes a panoply of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption, neglect, and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Health programs and policies include such politically sensitive programs and issues as health care access, Medicare, Medicaid, long-term care, managed care, public health issues, and substance abuse policies. Consumer programs and policies include regulations and laws governing advertising, corporations, product safety, food and drug safety, nutrition policies, consumer credit, insurance, telecommunications, housing, and public utility markets, and also deal with issues such as the invasion of privacy, Internet, and television.

In addition to meeting college requirements, all PAM majors are expected to take the following core courses: Introduction to Policy Analysis, Research Methods, Multivariate Statistics, Intermediate Microeconomics, and Public Sector Economics. Research Methods, Multivariate Statistics, and Intermediate Microeconomics must be completed by the second semester of the sophomore year. Students also will be expected to develop a concentration of three courses in either social welfare/family, health, or consumer policy. Finally, all PAM majors are encouraged to complete an integrative capstone experience, which may involve an experiential learning program such as Cornell Washington, the Capital Semester, or Urban Semester, or an honors thesis. Please check with the undergraduate advising coordinator, Professor Rick Geddes, for further details.

PAM Honors Program

The honors program, which leads to a B.S. degree with honors in Policy Analysis and Management, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling requirements for the major, students in the honors program participate in an honors seminar (PAM 498) and prepare an honors thesis. Students work with a research mentor in preparing their thesis. Students should obtain a PAM Honors Program application form from the PAM Undergraduate Office (MVR 122). This form should be completed no later than the second semester of their junior year. For more information, students should contact Professor Rick Geddes.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, composites, biomaterials, residential and contract interiors, geotechnical and other applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The undergraduate curriculum focuses on the development of design skills; an understanding of the properties of textile materials, knowledge of marketing, and the use of technology in the industry.

Practical problem-solving skills are developed in the department's studios and laboratories. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource, items from the collection are made available to students for classroom and special study use.

Academic Advising

All TXA majors are matched with a faculty advisor by the director of undergraduate studies, Professor Anil Netravali, 201 MVR. Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty advisor. Students in apparel design must begin working with their advisors early to develop a professional portfolio of their work. Students are free to change advisors; changes must be recorded with the director of undergraduate studies. Although advisors must provide the PIN number to lock in courses during course enrollment each semester, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for his or her major and college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid and equipment returned by the last week of classes.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric; the study of textile and functional apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Most transfer students will need at least one extra semester to fulfill the requirements of the major. Transfers in the design option should plan on two additional semesters.

Option I: Apparel Design

The apparel design major integrates design, technology, physical sciences, the humanities, and social sciences in the study of clothing, its materials, and its functions. Using a problem-solving approach, the design process is studied and applied in the creation and critique of fashion and functional apparel. The relationships between dress and human behavior, aesthetics, and a series of apparel items is studied within the context of the meaning of dress. The materials and technologies used in apparel design and the product interface with the consumer are also integral to the major. The themes of technological innovation,
cultural transmission, innovation by consumers and designer, and geopolitical change are stressed as topics of engagement.

Option II: Apparel/Textile Management
Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, product development, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (apparel design) or III (fiber science).

Option III: Fiber Science
Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

Career Opportunities
Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of design, management, new product development, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY
Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy. It is also designed for students who plan postgraduate study in management, health, medicine, law, or other related fields. Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including courses in the fields of biology, humanities, social sciences, and mathematics. In addition, majors take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in human development, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty advisor to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see Nancy Breen, director of undergraduate studies, in 205 MVR.

INDIVIDUAL CURRICULUM
A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisors from at least two subject matter fields and the program coordinator, Patti Papapietro, Office of Admission, Student and Career Services (172 MVR).

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made after the freshman year and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, the individual curriculum coordinator will provide direction in developing a formal program of study. Although the coordinator must approve the course enrollment schedule during the course enrollment period each semester, it is the student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her advisor and the program coordinator before the program changes are made.

SPECIAL OPPORTUNITIES
Study Abroad
Each year over 75 Human Ecology students spend a semester or more off campus in places spanning the globe, such as Australia and Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study abroad opportunities are available through Cornell-sponsored programs and other U.S. college-sponsored programs as well as by direct enrollment at foreign universities.

Residency Requirements
All study abroad students must meet college study abroad requirements and remain registered at Cornell during the overseas study. Credits earned count toward the 60 Cornell credits required for graduation (in unusual circumstances some credits earned abroad may be considered as transfer credit). Study abroad credits do not count toward the maximum number of endowed credits that Human Ecology students are permitted to earn.

Requirements for College Approval
1. GPA of 3.0 or higher, good academic standing, and well-articulated goals for students' study abroad semester.
2. Completion of the Cornell application; applications from individual programs also must be submitted to Cornell.
3. Completion of the equivalent of 15 semester credits per semester while abroad.
4. Courses taken for a letter grade (unless course is offered with only an S-U option).
5. Submission of a petition by second-semester seniors going abroad.

Application Process
Typically, students considering study abroad begin their planning at least a year before the semester abroad. Students should carefully consider what they hope to get out of a study abroad experience (academically and culturally) when investigating program options. Resources can be found in the Cornell Abroad office (300 Caldwell Hall), through the Human Ecology study abroad advisor (170 MVR), or in the Human Ecology Career Development Center (162 MVR).

Applications may be found through these resources or in the Human Ecology registrar's office (115 MVR). Completed applications must be submitted to the Human Ecology registrar's office by the following dates:
- Fall and year deadlines: February 1
- Spring deadline: September 15

Some programs will be filled by these dates. Use of the early deadlines is strongly recommended. These are:
- Fall and year deadlines: December 15
- Spring deadline: May 1

Approved applications will be signed and sent to the respective programs through the Cornell Abroad office.

Credits Abroad and Transfer of Credit
Most study abroad courses are transferred to the Cornell degree program as electives or liberal arts distribution credit. Study abroad credit awarded toward one's major is much less common and must be approved via signature of the student's department advising coordinator on the Cornell application. Credit for study abroad will be awarded only after successful completion of the semester abroad (marks equivalent to a Cornell grade of C or higher) and receipt of the official transcript by the college. Official transcripts should be sent to the Cornell Abroad office, which will process and forward them to the Human Ecology registrar.

Courses must be pre-approved before the student's departure. Any variances must be cleared with Human Ecology. Students must include a foreign language course in the country's native language. Students traveling in a country where English is not the native language. All courses taken abroad and grades received will appear on the Cornell transcript. Grades earned do not, however, become part of the Cornell GPA. Students should review all written work from all classes until courses are officially transferred.
Independent Research
Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that approximately half of the college's undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member's research group, completing an independent study research project, or carrying out an honors program project.

For further information, students should contact individual faculty members or the director of undergraduate studies (DUS) in their department.

Honors Programs
Students interested in college honors programs that lead to the degree “bachelor of science with honors” or “bachelor of arts with honors” may apply to the appropriate honors committee no later than the end of the first semester of their junior year. A minimum GPA of 3.3 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation; attend honors seminars, complete a written thesis, and defend it in an oral examination.

In addition to the college honors program, special programs are offered by the Department of Human Development, the Department of Policy Analysis and Management, and the Division of Nutritional Sciences.

Students who are interested in the honors program should contact the director of undergraduate studies (DUS) in their department or division for information and guidelines.

Field Study and Internships
Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research methods, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the director of undergraduate studies for major specific information. The Career Development Center (162 MVR) and career counselors in 172 MVR also can provide resources and assistance in finding internships and other experiential opportunities.

Concentration/Certificate in Gerontology
For students interested in pursuing study related to aging, the College of Human Ecology, under the auspices of the Bronfenbrenner Life Course Center, offers the option of completing an undergraduate concentration in gerontology. This program is designed to develop an understanding of and competence in dealing with the processes and issues of aging. Study in gerontology enriches the practical experience of students and prepares them for professional work in this area. The program draws on the resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to each student's professional goals and interests.

The concentration is available in combination with any major offered by the university. Twelve credit hours of course work must be completed, with 9 of these taken in the College of Human Ecology. The courses explore aging through biology, psychology, sociology, economics, and design.

Experiential learning opportunities are strongly recommended as a complement to classroom work. With faculty sponsorship, students can participate in experiences in the Ithaca area, the Urban Semester in New York City, Cornell in Washington, the Capital Semester, or in a placement arranged more individually.

Both Cornell and Ithaca College offer courses that incorporate a service-learning component into the curriculum. Cornell course Environments for Elders (DFA 472) involves service in local agencies (e.g., local nursing homes, Office of Aging, assisted-living facilities), where students gain valuable experience. Students may also join the “Elderly Partnership” through the Cornell Public Service Center to participate in local visits to elders. There are also opportunities for undergraduates to become involved in research projects examining topics such as residential changes and adjustments in the later years, nutrition and elders, social security, and design for people with dementia. In addition, senior students can apply to work as a teaching assistant for a gerontology course.

Departments and programs have designated academic advisors for the gerontology concentration who will help students plan the sequences of courses and electives needed to complete both a major and the gerontology concentration. Because many gerontology courses have prerequisites, early and careful planning is essential.

Specific program requirements may be obtained in the Human Ecology registrar's office (145 MVR, 255-2255) or from Nancy Wells, Bronfenbrenner Life Course Center (E220 MVR, 254-6530).

Concentrations
The College of Human Ecology formally recognizes as concentrations computer information sciences and international relations (both administered by the College of Arts and Sciences) and the previously described concentration in gerontology (administered by the College of Human Ecology). The college also offers a minor in education. Students interested in pursuing these concentrations should inquire with the college department. If successfully completed before graduation, these concentrations will be posted as part of the student's official transcript.

Students may develop an unofficial concentration in additional fields taught at Cornell by taking 12 credits in an approved area. African studies, communications, and business are just a few examples of concentrations that are possible. While these unofficial concentrations are not part of a student's transcript, students may choose to publicize these concentrations on their personal resumes.

THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Multicultural Issues in Urban Affairs
Sam Beck, Ph.D., director
The Urban Semester Program is a set of courses spanning the entire year. Students choose either fall or spring semester and enroll in three classes focusing on the opportunities and barriers that a multicultural society presents and their relationship with professional, community, or public policy settings and concerns (15-credit residential program). They also intern three days each week in placements of their choosing. One day each week, students carry out community service in an inner city school (pre-K to high school). One day each week, students participate in site visits. Seminars are incorporated into the activities. All students reside in the Olin Hall dormitory of the Well Medical College of Cornell University.

In the eight-week summer semester (1 to 2 credits), students carry out internships in various medical settings. Students work with the program staff to locate internship placements. For information, contact the Urban Semester Program staff in 162 MVR, 255-1846, or the Urban Semester Program in New York City at 212-746-2273.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

Health and medicine—New York Presbyterian Hospital/New York Weill Cornell Medical Center, Queens Medical Center for Women and Children, South Bronx Health Center for Children and Families, Memorial Sloan Kettering Hospital, Hospital for Special Surgery, Montifiore Hospital, Bellevue Hospital, Our Lady of Mercy Hospital

Private and public law—NOW Legal Defense and Education Fund, Agenda for Children Tomorrow, Skadden Arps, Slate, Meagher & Flom, Lawyers for Children, DA's Office, Legal Aid Society, AALDEF, Committee Against Anti-Asian Violence, Center for Immigrant Rights, NAACP/LDEF, Dorsey & Whitney

Niedefhoffer-Henkel Century Group, American Management Association

Private and public schools—Beginning with Children, Banana Kelly High School, East Harlem School at Exodus House, The Hetrick Martin Institute, Nuestra Ninos, Theodore Roosevelt High School, The Choir Academy of Harlem, El Puente, Genesis RFK Center, River East School, MS 118, Mott Haven Village

Other Off-Campus Programs

Capital Semester

William Rosen, Ph.D., director

Combine a full semester of 15 Cornell credits with a paid internship and a reduction in tuition. Students intern directly for a New York State legislator (Senate or Assembly) in Albany to explore their policy interests in greater depth. Interns attend hearings and legislative sessions, meet with lobbyists and constituents, write reports for legislation and possible publication, and generally help conduct the work of their legislator. All Cornell students, regardless of major, are encouraged to apply. The program is available during the spring semester only, and it is open to sophomores, juniors, and seniors. Interns benefit greatly when subsequently applying for future employment, law school, graduate school, or business school. Information is available from the Career Development Center (162 MVR), and applications and further information can be obtained from William Rosen (259 MVR, wrl4@cornell.edu).

Cornell in Washington

Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation's capital. For more information visit the program office (471 Hollister Hall).

Courses at Ithaca College and Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells College. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells where applicable. Students are allowed to register for one course per semester and a maximum of 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise science through a specially arranged program with Ithaca College.

Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to the Cornell and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit but not as Human Ecology credit. Students are accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (145 MVR, 259-2235).

Double-Registration Programs

Cornell undergraduates from PAM and other fields across the college and campus are eligible to apply to the Sloan Program in their junior year for a five-year accelerated B.S./M.P.S. degree in health administration. In their senior year, these students will take the first-year Sloan courses, which will be counted twice to satisfy both undergraduate as well as graduate requirements. At the end of their senior year, students will graduate with a B.S. degree. Students whose grades are competitive will be notified during the spring semester of their senior year that they are invited to continue for the final year of Sloan as a graduate student. Those students accepted for the five-year program will participate in a health care administrative internship during the summer after earning their B.S. degree and following the first year of Sloan academic course work. The following graduate year they will complete the second year of required Sloan courses and electives and earn a master in professional studies, with Cornell certifying completion of the requirements for a graduate degree in health administration.

Students applying to the accelerated M.P.S. program must complete the initial application to the Sloan five-year program through PAM in their junior year. In general, at the time of application, most of their undergraduate requirements will have been met. This application must include the GRE general test score, along with recommendations from the faculty advisor and at least one other source, as well as transcripts and the statement of purpose. During their final senior undergraduate year they also will have to submit a formal application to the graduate school. A sample schedule of the two-year curriculum for Sloan can be viewed at www.human.cornell.edu/pam/sloan/2005curric.cfm.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission.

Interested students should contact the Law School director of admissions (Myron Taylor Hall, 255-5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year away from Human Ecology, they need to plan ahead to ensure that distribution and major requirements for the B.S. degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Faculty Advisors

Students who choose to major in a particular department are assigned an advisor whose special interests match their need. Students may change advisors as their own interests change by working with the director of undergraduate studies (DUS).

Faculty advisors are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. Although advisors must provide the adviser key number (PIN) during course enrollment each semester, it is the student's responsibility to make sure that his or her course selections meet graduation requirements for the major, the college, and the university. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors in the Office of Admission, Student, and Career Services.

Office of Admission, Student, and Career Services

The Office of Admission, Student, and Career Services (ASCS) (170-172 MVR) is a center for undergraduate freshman and transfer admission activities; student orientation activities, academic, personal, and career advising, study abroad, and multicultural student programs.

Personal counseling, including exploration of problems or concerns of a personal nature, is available to all students. These ASCS counselors, however, are not psychiatrists or therapists; they are available to help students understand and navigate the Cornell system, and to offer support, assistance, and referral. Discussions are completely confidential. Appointments may be made through the receptionist in ASCS or by calling 255-2532.

In addition, ASCS provides support for several student organizations, including Human Ecology Ambassadors, the Mature Students Association, the Association for Students of Color, the Pre-professional Association toward Careers in Health, the Pre-law Undergraduate Society, the Orientation Committee, and Human Ecology PAM. Primary responsibilities of the office are listed below:

Academic advising. This service is provided to all students as an adjunct to faculty advising. Counselors can assist in course scheduling, academic planning, selection of a major, graduation requirements, and related issues.
Undeclared majors. Students who have not yet declared a major are urged to work closely with a counselor or staff to plan their program of study. For the period a student is undeclared, counselors will provide assistance during course enrollment.

Career counseling. Career counseling is designed to help students clarify the relationship between personal skills, abilities, and career goals. Services are offered on an individual or group basis. Counselors assist in identifying career outcomes of the majors, developing networking skills, suggesting course work appropriate to various career goals, and assisting students in their general internship and job searches.

Post-graduate advisement. Material pertaining to graduate and professional-schools, graduate entrance examinations, courses of study, and career outcomes is readily available.

Students with disabilities. The college is committed to assisting students with disabilities. Students who have special needs are urged to contact Student Disability Services (420 CCC) when they arrive on campus.

Financial aid. Students who encounter financial difficulty or anticipate running short of funds may discuss their needs with a counselor. Complete information is available from the Office of Financial Aid, 203 Day Hall.

The Human Ecology Alumni Association Cash Award Fund. This fund provides small emergency grants to students in the college who have unexpected financial problems. Applications may be made through ASCS.

Office of the Registrar
The Office of the University Registrar (B7 Day Hall) maintains the official academic records for the university and provides students with their official university transcripts. Additional information is available on the university registrar's web site: www.sws.cornell.edu/our. The college registrar (145 MVR) maintains student academic records, including the audit of progress toward the degree. The college registrar also provides services such as adding and dropping courses, correcting student records, and approving the transfer of credit from other institutions. Additional information is available on the HE registrar's web site: www.human.cornell.edu/registrar.

Multicultural Programs
The College of Human Ecology at Cornell University believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college collaborates with university and New York State programs to assure that Human Ecology students have access to the vast array of services available here.

The professional staff of Human Ecology's Office of Admission, Student, and Career Services includes a director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/COSEP; academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

The Human Ecology Partnership Program provides mentorship through a network of faculty and upperclass students to all incoming students of color, particularly during their first year. In addition, this office serves as a liaison to the Office of Minority Educational Affairs (COSEP), State Programs (EOP), and the Learning Strategies Center. Students are also encouraged to visit the college's Career Development Center to enhance personal career exploration and decision making.

Selected programs include the following: BBMTA (Black Biomedical and Technical Association) is a university organization that provides enrichment activities for minority students interested in pursuing medical careers. For more information, contact Janice Turner (55 Goldwin Smith Hall, 255-9497). ASC (Association for Students of Color). With the motto "Yesterday's vision, today's reality. Tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement for students of color. The goals of the ASC are to increase communication between students of color, administration, and faculty; assist in increasing enrollment of students of color in Human Ecology; and assist in increasing the retention of students of color in Human Ecology and in their selected majors. ASC's two committees are recruitment/retenion and career development. For more information, contact Veredene Lee (172 MVR, 255-2532).

Human Ecology Peer Partnership Program helps incoming students of color transition to the college and university. Small groups of freshmen, usually 6 to 8 students, are paired with faculty and upperclass students. They meet weekly for discussions, guidance, and explorations of the Cornell campus and the Ithaca community. For more information, contact Veredene Lee (172 MVR, 255-2532), or Gary Evans (E306 MVR, 255-4775), or Lorraine Maxwell (E310 MVR, 255-1958), both in the Department of Design and Environmental Analysis.

STEP. The Collegiate Science and Technology Entry Program is the New York State program that provides enrichment activities for pre-med and pre-law New York State residents. Services are targeted at populations who are historically underrepresented in scientific, technical, health-related, or licensed professions and/or who are economically disadvantaged and who demonstrate interest in, and potential for, a STEP-targeted profession. For more information, contact Veredene Lee (172 MVR, 255-2532).

Multicultural Education
Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

Africana Studies and Research Center
Asian American Studies Program
East Asia Program
Feminist, Gender, and Sexuality Studies Program
Gender and Global Change
Institute for European Studies
Languages and Linguistics
Latin American Studies Program
Latino Studies Program
Peace Studies Program
Program for Contemporary Near Eastern Studies
Program in Jewish Studies
Religious Studies
South Asia Program
Southeast Asia Program

International Students
The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255-5245) provides a broad range of services to international students. All international students are encouraged to maintain contact with the ISSO. Counselors in ASCS are also available for assistance.

International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

Career Planning, Graduate and Professional School, and Job Search Services
Counseling. The Office of Admission, Student, and Career Services (ASCS, 172 MVR, 255-2532) provides career counseling and resources to help students explore career options through employment and internship opportunities and professional and graduate school advising. Individual assistance is available as well as group programming, workshops, panels, and field trips. Career development is strongly encouraged and supported, including skill development in resume writing, networking, and interviewing.

Students also are instructed in the use and protocol of online resume submissions and on-campus recruiting. The office works in conjunction with Cornell Career Services (103 Barnes Hall, 255-5221) to facilitate access to university-wide programs.

The Career Development Center (CDC, 162 MVR) is a starting point for students looking for career information. Selected resources about career planning and job search techniques, general directories to begin job or graduate school searches, and information for alumni networking are housed there. Also available are Cornell Career Services handouts and registration forms, graduate and professional school testing booklets and
registration packets, study abroad, and Urban Semester program materials. Computers provide access to web-based information regarding internship and employment opportunities, as well as graduate/professional schools.

The CDC is open weekdays during the regular school semester. Student career assistants are available to provide résumé and cover letter critiques, conduct mock interviews on video, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

Former Urban Semester Program participants comprise a portion of the CDC student staff and are available daily to answer questions about the program and its application process.

Selected services are listed below. They will help students investigate their interests, skills, and values as they relate to career options, provide useful information and tips for a successful summer or full-time job search, and provide access to employment opportunities. In addition, please refer to the college’s career services web site: www.human.cornell.edu/student.

Pre-law or Pre-med. Students who consider themselves pre-law or pre-med are encouraged to join a student group affiliated with ASCC. Those interested in a law career can join PLUS (PreLaw Undergraduate Society), which provides information on applying to law school, preparing for the LSAT, and examining career opportunities in law. Students interested in pursuing a health-related career are welcome to join PATCH (Pre-professional Association Toward Careers in Health), which serves as a link to the university health careers network and provides guidance as students prepare for the MCAT, apply to medical school, and explore the various specialties of medicine.

Extern Program. Students can spend one day to one week over winter break shadowing an alum in a career field of their choice. They observe day-to-day activities, discuss specific jobs and careers, and sometimes obtain limited hands-on experience. This service is available to sophomores, juniors, and seniors.

Fresh Program. This service is similar to the Extern Program but is available to freshmen only. Students can spend one day to one week over spring break shadowing an alum in a career field of their choice. In addition to career explorations, the Extern and Fresh programs provide excellent networking opportunities.

Internship and Employer Files. The CDC keeps files of more than 300 internships and hundreds of potential employers for student review.

Student Jobs and Internships. This is an electronic listing of information about internships and career-related summer and academic year employment that is exclusive to Cornellians.

Alumni Career Presentations. Alumni from the college come back to campus throughout the year to discuss their postgraduate or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet. Students have access to Human Ecology alumni who can provide information on their career paths and offer suggestions on a job search in their particular field or location. Students can query alumni on a host of variables and review selected alumni résumés to learn more about specific careers.

Job Search Workshops. The college hosts approximately 10 workshops every semester. These workshops are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to conduct an effective job search, write a résumé and cover letter, and interview successfully.

CornellITRAK. Exclusively for Cornell students, CornellITRAK provides a listing of job opportunities available. Most are full-time jobs, although some summer opportunities are listed. Search by career field, geographic location, or both.

InterviewTRAK. This service provides access to on-campus interviews with employers interested specifically in Cornell students. Interviews occur primarily in banking and financial services, retail sales and management, facilities planning and management, and consulting, along with a few nonprofit organizations.

New York Recruiting Consortium. Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium happens in New York City over winter break. It offers interviews for full-time employment with employers involved in banking and financial services, retail sales, management, advertising, law, health care, and consulting.

NFP in New York City and NFP in Washington, D.C. Speak with representatives from dozens of New York City or Washington, D.C., not-for-profit/public service agencies about work or internship opportunities in health, education, advocacy, government, and more (held only during the spring semester).

Communications Consortium. Interview with organizations in advertising, public relations, film and radio, and print media. National organizations come to Syracuse, N.Y., to meet with students for individual appointments. During the spring semester, a job fair is held the evening before.

GRADUATION REQUIREMENTS AND POLICIES

It is important for students to track their graduation progress by comparing their current transcript with an appropriate curriculum sheet. These sheets may be obtained at the Office of the University Registrar (B07 Day Hall). Curriculum sheets are available in the Human Ecology registrar’s office (145 MVR). Students are responsible for planning course selections to ensure that graduation requirements are fulfilled in eight semesters. Transfer students are allowed fewer semesters based on the number of transferable credits granted at admission. Students requiring additional semesters to fulfill their graduation requirements must meet with a Human Ecology counselor (172 MVR) and request to petition for an extension.

Grade Point Average (GPA) Requirement for Graduation

• Students must earn a minimum cumulative GPA of 2.0 (C) to graduate.

Note: Students matriculating before spring 2004 may continue to follow the older cumulative GPA standard of a 1.7 (C-) or better.

Cornell Credit Requirements

• To graduate, a student must earn a minimum of 120 academic credits.

Physical education credits and "00" courses do not count toward the 120 required credits. An unlimited number of credits may be taken in Cornell's statutory colleges.

• Of the 120 credits required to graduate, at least 60 credits must be earned at Cornell University (applicable to transfer students).

• As of fall 2003, students who matriculate as freshmen may apply a maximum of 15 non-Cornell credits earned before matriculation (including AP, IB, and college credit) toward the 120 credits required for graduation. For all students, an additional pre-approved 15 in absentia credits earned after matriculation may be applied. AP, IB, and transfer courses may be applied toward fulfillment of specific requirements regardless of whether the credit is transferred (i.e., required courses may be waived). Refer to "Advanced Placement Credit" for full details.

• No college credit earned before matriculation and used to meet Cornell's minimum admission requirements may be counted in the 120 credits required for graduation. This policy does not apply to transfer students.

• Courses taught by a college in the high school setting or counted toward high school graduation are not allowed to count for either credits or fulfillment of requirements (i.e., Syracuse Project Advance).

• Cornell extramural credit (defined below) is limited to 15 credits toward the 120 required.

• Strict limitations exist on the number of credits that can be applied toward the 120-credit minimum for special studies courses (400, 401, 402), for 403 courses, and for courses taken with an optional S-U grade. Details follow.

Human Ecology Credit Requirements

• The college divides the 120 minimum required academic credits into four general categories. (Students should refer to curriculum sheets for their major for specific details on course selections. These sheets are available in the Office of the Registrar (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) as well as on the college web site at www.human.cornell.edu.)
These categories are detailed below:

- Students must complete 40 Human Ecology (HE) credits from Categories II and III. (HE credits from Category I may not be applied toward this requirement.)
- A maximum of 3 credits from the 401-403 special studies series courses may be used toward this requirement. Additional course-specific rules are listed below.

S-U grading rules for this requirement are as follows:

1. If a course is a requirement in Category I or II, the course may not be taken for an S-U grade (unless it is the only grade option offered for the course).
2. Courses used to count toward Category III (electives) that are taken for an S-U grade may also count toward the 40-credit requirement.
3. Students should refer to the section on S-U grading rules for full S-U grading details.

- Students must complete 9 Human Ecology (HE) credits from outside their major department from Categories I, II, or III. Note: Biology and society majors are exempt from this requirement. A maximum of 3 credits from the 400-402 special studies series courses may be applied to this requirement. Other course-specific rules for this requirement are as follows:

1. If a course counting toward the 9-credit outside-the-major requirement is also a requirement in Category I or II, the course may not be taken for an S-U grade unless it is the only grade option offered for the course.
2. Courses used to count toward Category III (electives) that are taken for an S-U grade may also count toward the 9-credit outside-the-major requirement.
3. Students should refer to the section on S-U grading rules for full S-U grading details.

Course-specific rules that apply to both the 40 Human Ecology credit requirement and the 9 Human Ecology credit outside-the-major requirement:

1. Effective fall 2004, Human Ecology (prefix "HE") courses below the 300 level (e.g., HE 100, 101, 120, and 201) do not count toward either the 40-credit requirement or the 9-credit outside-the-major requirement. These HE-prefix courses that are below 300 level may be used as elective credit.
2. ECON 101 and 102 are considered Human Ecology credit courses and may be used to fulfill Human Ecology's 40- and 9-credit outside-the-major requirements. If either or both courses are taken to fulfill a Category I or II requirement, they must be taken for a letter grade.
3. Experiential credit is applied to Human Ecology's 40- and 9-credit outside-the-major requirements as follows:
   a. Urban Semester (HE 470, 480, 490/495). Effective fall 2004, students in all Human Ecology majors earn:
      • 15 Human Ecology credits and 6 credits toward the 9-credit outside-the-major requirement.
   b. Capital Semester (PAM 392). Effective fall 2004, PAM majors earn:
      • 15 Human Ecology credits and 7 credits as PAM credits
      Non-PAM majors earn:
      • 15 Human Ecology credits and 7 credits toward the 9-credit outside-the-major requirement.
   c. Cornell in Washington (PAM 406). For this entire semester, PAM majors earn:
      • 8 credits toward the 40-credit requirement, which also count as 8 PAM credits.
      Non-PAM majors earn:
      • 88 credits toward the 40-credit requirement, which also count as 8 credits toward the 9-credit outside-the-major requirement.

Elective Credits
Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisors are available to discuss which courses may interest students and best round out their education. Students should consult the index in this catalog to learn where different subjects are taught in the university. Some subjects are taught in more than one division.

Elective credits can be earned in the endowed and statutory divisions of Cornell.

Endowed Colleges
- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

Statutory Colleges
- College of Agriculture and Life Sciences
- College of Human Ecology
- School of Industrial Relations
- College of Veterinary Medicine

An unlimited number of credits may be taken in the statutory colleges of Cornell.

Physical Education Education for Graduation

1. Students must earn 2 credits of physical education within their first two semesters. These 2 credits do not count as part of the 60 Cornell credits, or as part of the 120 total credits required for a degree, or toward full-time status. Students who matriculate at Cornell with 12 or more credits must complete only 1 credit of physical education. Students who transfer more than 25 credits (excluding AP credits) are not required to take physical education at Cornell, regardless of whether they took physical education at their previous college.

2. Students must pass the university's swim test. Students who transfer more than 25 credits (excluding AP credits) are exempt. Refer to "University Requirements for Graduation—Physical Education—Swim Test" in this catalog for specifics.

Minimum Semester Requirements

1. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester, and at least 5 credits of Human Ecology courses must be taken in the freshman and 7 credits in the sophomore year (ECON 101 and 102 may be used to fulfill this requirement).

2. Students must carry 12 credits each semester, excluding physical education, to be matriculated as full-time students. Mature students must carry 6 credits each semester (see “Mature Student Guidelines” for details).

3. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning this exception and advice on how to proceed are available in the Office of Admission, Student, and Career Services (172 MVR).
Special Studies
- Students may use only 12 credits of 400, 401, 402, or 403 courses toward graduation.
- Additional credits of 400, 401, 402, or 403 courses can be taken but will not be applied toward graduation.

"00" Courses
- "00" courses do not count toward graduation requirements but do count toward full-time semester status.

Requirements for Majors
- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter. The requirements are detailed in curriculum sheets that are maintained for each academic year.

S-U Grade Options
- The S-U grading option may not be used for courses in category I or required courses in category II unless it is the only grade option offered for those courses. S-U grades may be used for the 9 credits of Human Ecology course work outside of one's major and for electives in category III.
- Students may apply no more than 12 credits of S-U toward the 120 credits required for graduation. If a required course is offered only S-U, it will not count toward this limit. Also, Honors Research 499 taken S-U does not count against the 12 minimum limit. Students may take more S-Us if they choose, but the additional credit may not be applied toward graduation.

First-Year Writing Seminars
In each of their first two semesters of matriculation at the College of Human Ecology, students are required to take a Knight Program First-Year Writing Seminar. The policy also applies to transfer students. One or more of the seminars may be waived for transfer students if the college registrar grants credit for equivalent course work taken before matriculation at Cornell.

Those who do not fulfill this requirement on time will be referred to the Committee on Academic Status. Refer to "Criteria for Good Standing" for specifics on warning statuses that the committee applies to students who do not complete this requirement.

First-year writing seminars must be taken at Cornell and may not be taken in absentia. Students who receive a score of 5 on either the English Literature and Composition or English Language and Composition Advanced Placement (AP) exams can be exempt from one semester of their first-year writing seminar requirements. No other AP scores will allow a student this exemption (even if a lower score allows the student to use the course as elective credit toward graduation.) Students should be aware that the add/drop period for first-year writing seminars may be shorter in duration than the add/drop period for most Cornell classes.

Wells, Ithaca College, and Study Abroad Credits
Any credits earned with the Wells or Ithaca College exchange programs are considered Cornell credits for the purpose of fulfilling the 60 Cornell credit graduation requirement. They may not be used for Human Ecology credit. Study abroad courses may also count as Cornell credit (but not for Human Ecology credit). Refer to "Cornell Credit Requirements" for details on how many advanced placement (AP) credits can be applied toward the 120 credits needed for graduation.

Advanced Placement Credit
Students can earn advanced placement credit from one of the following:
1. The requisite score on a departmental examination at Cornell (usually given during orientation week) or on a College Entrance Examination Board (CEEB) achievement test. The requisite scores for the CEEB exams are determined by the relevant department at Cornell, vary by subject, and are listed in the beginning of this catalog. College-specific rules apply toward many AP courses such as biology, English literature, English composition, and statistics. Details may be found at http://human.cornell.edu/registrar/regdata/ap.cfm.
2. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.
3. Credit from the International Baccalaureates (IB) is evaluated individually.
4. Refer to "Cornell Credit Requirements" for details on how many Advanced Placement (AP) credits can be applied toward the 120 credits needed for graduation.

Note: Cornell does not accept credit for courses sponsored by colleges but taught in high schools to high school students, at colleges if enrollment is targeted at high school students, or if the course was used toward high school credit. This is true even if the college provides a transcript of such work. These courses also may not be used to fulfill course requirements. Students who have taken such courses may, however, take the appropriate CEEB test to qualify for credit as in paragraph 1 above. For further information and limitations on Advanced Placement credit, see the front pages of this catalog and the Human Ecology registrar's website (http://human.cornell.edu/registrar/ap.cfm).

Foreign Language Study and Placement
Students who studied a foreign language before coming to Cornell and who want to continue must take either the CEEB test in that language or a Cornell departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Human Ecology students who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Many study abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study.

Extramural Credit
Extramural credit is administered by the Office of Continuing Education and Summer Sessions (1B0 West Hall, 555-9487). Extramural credit is charged by the credit hour at the endowed tuition rate. Students may count only 15 credits of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell.

An exception to this rule is credit earned in the Ithaca College or Wells College exchange programs. Students enrolled in these programs simultaneously maintain their status as students registered in the College of Human Ecology.

Humanities
Only certain classes will count for Category I, Humanities. To determine eligibility the college uses the following definition: "The humanities include the study of literature, history (including art and design history), philosophy, religion, and archaeology. Critical, historical, and theoretical studies of the arts and design are considered humanities. Languages and creative or performing arts such as the writing of fiction or poetry, painting, sculpting, designing, composing or performing music, acting, directing, and dance are not considered humanities." Additionally, social science courses such as sociology, government, anthropology, and psychology are not considered humanities.

Specifically, courses in the following list will count as humanities:
- Africana Studies (literature and history)
- Archaeology
- Asian American Studies
- Asian and Near Eastern Studies (literature and history)
- Classics (literature and history)
- Comparative Literature
- Development Sociology
- English (literature only)
- History
- History of Art
- History of Architecture
- Landscape Architecture 282
- Music and Theatre Arts (theory, literature, and history only)
- Natural Resources 407, 411
- Philosophy
- Policy Analysis and Management 631, 634, 652
- Religious Studies
Math Requirement

Students have an opportunity to take the math assessment exam during orientation. Use the information below to decide whether you should take the exam.

1. Students must meet the minimum competency level of mathematics, equivalent to EDUC 115 (pre-calculus mathematics). This requirement can be met in any of the following ways:
   - Advanced Placement credit (a score of 3 or better on either the AB or the BC Mathematics exam). Be sure that we get your score!
   - Performance on the math assessment exam at the level of EDUC 115.
   - The math assessment exam is offered during New Student Orientation each semester. See schedule for details.

2. Students are allowed three hours to complete the exam, which covers high school-level mathematics including algebra, geometry, trigonometry and other pre-calculus topics. No calculators may be used.

3. Completion of EDUC 115 or a higher-level mathematics course at Cornell. Students choosing this option must take the math assessment exam (offered during orientation) in order to choose the appropriate level course. See above for details.

4. Completion of a course acceptable to the College of Human Ecology as equivalent to EDUC 115 (or higher) at another institution. If you have already taken such a course, please submit the description to the Office of the Registrar in 145 MVR for evaluation.

5. If you would like to take a course at another college or university at some point in the future, you must request permission and course approval by filing the Petition to Study In Abstentia, available in the Office of the Registrar, 145 MVR.

6. Students must take 3 credits of statistics or advanced mathematics (calculus or above), or logic; departments may specify which courses they require to fulfill this requirement. Consult your director of undergraduate studies or printed curriculum materials for your department's requirements.

Summary: Don't take the math assessment if you have earned AP credit, and don't take it if you already have college credit for a math course at the pre-calculus level or higher. If you would like to use the math assessment to demonstrate knowledge equivalent to pre-calculus, go ahead and sit for the exam during orientation.

PROCEDURES

Registration and Course Enrollment

Registration Requirements

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately. The university verifies properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements; settle all financial accounts including current semester tuition; satisfy New York State health requirements; and have no holds from the college, the Office of the Judicial Administrator, Gannett Health Center, or the Bursar's office.

1. Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises.

Verification of Registration

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Should students need such verification, they should use the official university verification service at http://certification.cornell.edu or request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology registrar's office (145 MVR).

Bursar Bill

A bursar bill is sent to each student over the summer and winter breaks; it summarizes what is owed to the university. The bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due. According to university policy, all students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's office will charge a late fee. Students who fail to register by the third week of the semester may be withdrawn from the university. Human Ecology students who do not arrange payment satisfaction to the university bursar by the last day of classes for a semester will be withdrawn from the university. Furthermore, credit for any classes attended for the semester will not be awarded regardless of the letter grade received for a class. Should withdrawn students wish to return, they must reapply through the college admissions office.

Proration of Tuition

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. See the college registrar (145 MVR) or counselors (Office of Admission, Student, and Career Services, 172 MVR) for more information. Students of mature status may carry fewer than 12 credits without petitioning but must request that their tuition be prorated. Prorated tuition will be considered only for requests of between 3 and 10 credits. All requests should be made to the college registrar (145 MVR) by the end of the pre-enrollment period in the prior semester.

Course Enrollment

Initiating the Process

"CourseEnroll" selections are only "requests" for seats in classes. Between the end of the course enrollment period and the beginning of the next semester, course requests are evaluated by the offering college department. Students can determine if their requests have been successful when final schedules are published before the add/drop period. Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and available on the University Registrar's web site (www.sws.cornell.edu/our). "CourseEnroll" takes place electronically, using software available through Just the Facts. During this time, each student must meet with his or her faculty advisor to discuss academic plans and to obtain the advising PIN code required for finalizing course requests. A student may enter and hold requests for courses before entering his or her PIN. Once the PIN number is entered, however, the schedule is locked and it is not possible to change until the add/drop period of the next semester. Important: students who fail to finalize the CourseEnroll process by not entering their PIN code by published deadlines will lose all course requests.

Information on courses is readily available in this catalog and in the Course and Time Roster for each semester. Both of these publications can be accessed on the web through CUInfo. Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisors during the orientation period.

Course Loads

Full-time matriculated students must carry at least 12 credits (exclusive of physical education courses) to maintain full-time status. Refer to the preceding section, "Minimum Semester Requirements," for details. The normal course load in the college ranges from 12 to 18 credits, although there is no limit to...
the number of statutory credits a student may take each semester. Nonetheless, students should avoid planning excessive workloads; the time required to keep abreast of courses tends to increase as the semester progresses. Students may not withdraw from courses after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Late Course Enrollment
Students who do not complete course enrollment during the CourseEnroll period usually must wait until the beginning of the next semester's add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 145 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using just the Facts.

Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and other data. Errors must be corrected immediately. Procedures for correcting enrollment errors as well as for making any other changes are described in the following section.

Course Enrollment Changes
It is to the student's advantage to make any necessary course enrollment changes as early in the semester as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping a course early makes room for other students who may need it for their academic programs.

Ideally, students evaluate their course load carefully at the beginning of the semester. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

In addition to the procedures listed below for course enrollment changes, all add/drop forms for nutritional science majors must be signed by a faculty advisor.

Deadlines for Add/Drop and Grade Option Changes
Note: Brief add/drop periods exist for first-year writing seminars and half-semester courses.

1. During the first three weeks of the semester, courses may be added, dropped, or the grade option changed. Special status courses (400, 401, 402) may be added through the 11th week of classes. 403 Teaching Apprentice courses must be added during the first three weeks of the semester.

2. From the fourth through the seventh week of the semester, courses may be dropped. Grade option changes may not be made at this point regardless of instructor's permission.

3. After the seventh week of the semester, any requests for course changes must be made through the petition process.

   Students should request an appointment with an Admission, Career and Student Services counselor in 172 MVR to initiate the process.

   4. After the seventh week of the semester, any student granted permission to drop a course whose permanent grade will automatically receive a grade of W (Withdrawn), and the course and grade will remain on the official transcript even if repeated in a later semester.

    Deadlines for Half-Semester Courses
    Students may drop half-semester courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Time and Place for Add/Drop and Grade Option Changes
All students may adjust their schedules and grading options during the first three weeks of each semester. To make course changes after the seventh week of the semester, a student must file a general petition form (see "Petition Process.") Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

Permission of Instructor
Certain courses may be taken only with the permission of the instructor as indicated in this catalog or on the official course description page in the course bulletin. Undergraduates must obtain permission of the instructor to take any graduate course. Students must request the instructor's permission during the course enrollment period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjaden Hall) before enrolling in the course. Seniors who want to take an elective course in the School of Art Management are required to obtain permission of the instructor in a course authorization form that the student then files with that school's registrar in Sage Hall.

Course Enrollment while Studying Abroad
Students who plan to study abroad have several options available to enroll for their returning semester at Cornell. Students can consult with their faculty advisor before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access Courses of Study and the Course and Time Roster for the coming semester. The roster is available on the web in approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty advisor for approval; the faculty advisor can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the Course and Time Roster to arrive via airmail from the Cornell Abroad office. The student can then e-mail, fax, or mail the course requests to their faculty advisor and ask the faculty advisor to submit the course requests to the college registrar. The Course and Time Roster becomes available only the day that pre-enrollment begins; thus, students who depend on receiving the mailed copy will experience some delay in submitting the course requests. Requests must be submitted within the published deadlines. Because the faculty advisor submits requests for the students, the students do not have to finalize selections with a PIN number.

Oversubscribed Courses
Enrollment in many human ecology courses is limited. When a course is overenrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in this book. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list maintained by the professor or the department offering the course. Course instructors are responsible for determining the criteria to fill their classes from waiting lists. Waiting lists are maintained only for the first three weeks of each semester.

Limited-Enrollment Classes
Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

Cross-listed Courses
To apply a cross-listed course to graduation requirements, students must enroll in the department for which they need the credits. If changes in department designations need to be made, this must be done during the official course add period for the semester. To do so, students must complete a special form, which can be obtained in the registrar's office in 145 MVR

Courses with Duplicate Content
Students should scrutinize course descriptions for details about other Cornell courses with duplicate content that would preclude a student from receiving full credit for duplicate courses. For example, students may not receive 6 credits toward graduation requirements if they take D SOC 101 and SOC 101. Because both are introduction to sociology courses, only 3 credits would be allowed. To aid students in this evaluation, the college maintains a partial list (those that are commonly required in Human Ecology curricula) of Cornell courses that have duplicate content. Other courses with similar content may be found at www.human.cornell.edu/registrar/forbiddenoverlaps.cfm.

Special Studies Courses
Each department in the College of Human Ecology (DEA, HD, NS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300 Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain coursework.

The other special studies courses are 400 Directed Readings; 401 Empirical Research;
and 402 Supervised Fieldwork. Juniors and seniors normally take those courses, and a faculty member in the department in which the course is offered supervises the student's work on an individual basis. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project. To register for a special studies course, a student obtains a special studies form from the departmental office where he or she plans to take the course. The student discusses the proposed course with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, faculty advisor, and department chair before submitting the form to the college registrar's office (145 MVR). Special studies forms are available in 145 MVR or in departmental offices.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or a person designated by the faculty member). To earn 1 credit, a student must have the equivalent of three to four hours of contact time per week for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course. Strict limitations exist on the number of special studies credits that can apply toward graduation and how these credits may be applied toward Category II requirements in the major. Refer to "Human Ecology Credit Requirements" for more information. In special studies courses taught in a department outside the college, follow the procedures established by that department.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore what is possible, the student may discuss the situation with a college counselor or the college registrar.

If a student decides to submit a general petition, the form is available in the registrar's office (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) or on the web at www.human.cornell.edu/student/forms/. After completing the form and obtaining the required signatures, the student must turn the form in to the registrar. Once a decision is made, a letter is placed in the student's college mail folder indicating approval or denial of the petition.

Students may appeal the college registrar's decision to the Committee on Academic Status. Students who elect to appeal have the option of appearing in person before the committee to state their case. A member of the counseling staff can guide a student through this process.

In Absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. In absentia study can be done during any semester: fall, winter, spring, or summer. First-year writing seminars may not be taken in absentia.

To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. A student not in good standing may study in absentia but will not receive transcript credit until the Committee on Academic Status has returned the student to good standing. Students not in good academic standing who wish to finish their degree in absentia must seek pre-approval from the college's Committee on Academic Status via the general petition process. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology registrar's office (145 MVR) or on the web at www.human.cornell.edu/student/forms/. The student submits the form to the Human Ecology registrar's office (145 MVR). In absentia study during the fall or spring semester carries a nominal administrative fee. (Contact the Bursar's office, 260 Day Hall, for the current amount.) Students will receive a letter in their college mail folder from the college registrar notifying them of the petition decision.

Note: Students seeking pre-approval for in absentia course work should do so well in advance as turnaround time for the approval process can be variable.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. Students who study abroad during the summer or winter term are limited to a maximum of 9 in absentia credits. Study abroad during the fall or spring semester must be done through the Study Abroad office and is not considered in absentia study. Students studying while on a leave of absence during the spring or fall semester may petition for nondomestic campus programs.

On the following rare occasions a student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15-credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. Students seeking in absentia credit for a modern foreign language in which they have done work must obtain the approval of the Department of Modern Languages and Linguistics (College of Arts and Sciences). The department will recommend the number of credits the student should receive and may require the student to take a proficiency test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades directly to the Human Ecology registrar's office (145 MVR). Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted only for those courses with grades of C- or better. Courses may not be taken for S-U grades unless it is the only grade option offered. In absentia courses appear on the Cornell University transcript, but the grades are not calculated in the student's GPA.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology. The rules regarding study in absentia apply to transfers students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by making a written request to the Office of Admission, Student, and Career Services (172 MVR). Note: In absentia study status and leave of absence status are not the same; however, students may petition to earn credits with either status. Students taking a leave of absence must obtain the college registrar (145 MVR), in writing, of their intention to return to campus at least one month before the beginning of the semester. Those whose leave period has expired will be withdrawn from the college after the seventh week of the semester they were due back.
Students considering a leave of absence should discuss their plans with a counselor in the Office of Admission, Student, and Career Services. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology registrar's office (145 MVR). Leaves initiated after instruction begins will be charged a percentage of the semester tuition. (Refer to "Bursar Information" in this catalog for a billing schedule.) Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leaves of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions to the leave as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester. If the petition for leave is approved the student's courses will remain on the transcript with W grades.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

Under certain documented medical circumstances a student may be granted a medical leave of absence. Medical leaves are initiated by the student with Gannett Health Center. If Gannett Health Center recommends a medical leave for the student, the college registrar may grant the leave. A medical leave is for an indefinite period of time not to exceed five years. Students who are granted a medical leave of absence should maintain contact with a counselor in the Office of Admission, Student, and Career Services (172 MVR, 255-2532) to arrange their return to campus. The counselor will advise the student on procedures to obtain a recommendation from Gannett Health Center to the college registrar for the student's return. Students should plan sufficiently in advance to assure time for Gannett Health Center and the college registrar to consider their request.

Withdrawal
A withdrawal is a termination of student status at the university. Students may withdraw voluntarily at any time by notifying a counselor in the Office of Admission, Student, and Career Services and filing a written notice of withdrawal in the Human Ecology registrar's office. No refund of tuition will be charged for the second time. The student considering such an action is urged to first discuss plans with a counselor in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

In some instances a student may be given a withdrawal by the college registrar. Students who leave the college without an approved leave of absence, or do not return after the leave has expired, will be given a withdrawal after the seventh week of the semester in which they fail to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admission for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status (CAS) for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

GRADES AND EXAMINATIONS

Grade Definitions and Equivalents
The official university grading system uses a system of letter grades ranging from A+ to D-, with F denoting failure. An INC grade is given for incomplete work and R is given at the end of the first semester of a two-semester course. If a student is given permission to withdraw from a course after the seventh week of the semester a W grade is automatically assigned. Students can view their grades on Just the Facts after the semester has ended. See "Grading Guidelines" for more information on the official university grading policies.

To compute a semester grade point average (GPA), first add up the products (credit hours X grade quality points) and divide by the total credit hours taken. Grades of INC, R, S, SX, U, UX, and W should not be included in any GPA calculations. A grade of F has no quality points, but the credits are counted. Thereby lowering the average. A cumulative GPA is simply the sum of all semester products divided by all credits taken. Refer to "Repeating Courses" for details on how GPA is affected if a student repeats a course. For further help in calculating a GPA ask the college registrar's office (145 MVR).

These are the quality point equivalents:

- A+ = 4.3
- A = 4.0
- A- = 3.7
- B+ = 3.3
- B = 3.0
- B- = 2.7
- C+ = 2.3
- C = 2.0
- C- = 1.7
- D+ = 1.3
- D = 1.0
- D- = 0.7
- F = 0.0

Repeating Courses
Students are allowed to register a second time for a course they have already passed in or in which they received an F. If a student has previously passed a course he or she is taking a second time, the second registration will not count toward the degree requirements, and the grade received will not be included in the cumulative GPA.

If a student enrolls in a course in which he or she previously received an F, the credits from the second registration will count toward the graduation requirements and the grade will be included in the cumulative GPA. The F will also remain on the record and will be included in the GPA.

S-U Grades
Some courses in the college and in other academic units at Cornell are offered on an S-U basis. See course catalog (paper and on the Cornell web site). Courses listed as SX-UX are available only on an S-U basis and may not be taken for a letter grade. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C or better, and that a U grade be given for work equivalent to a D or lower. Grades of U or S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives a grade of S is, however, counted as credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the semester's Dean's List must take at least 12 credits of course work graded non-S-U. See "Awards and Honors" for more details about the Dean's List.

No more than 12 S-U credits will count toward a student's 120-credit graduation requirement. However, a student may take more than one S-U course in any one semester. S-U courses may be taken for both Credit and S-U credit or for S-U credit only. If a student enrolls in a course in which he or she previously received an S, it is required that the student receive a grade of S in order to count toward the degree requirements. Students are at risk of going under the minimum semester requirement if an INC grade in a course puts the total number of credit hours under 12 for the semester. For more information, refer to "Minimum Semester Requirements."

Grades of Incomplete
A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor in order to get a grade of incomplete. Students are at risk of going under the minimum semester requirement if an INC grade in a course puts the total number of credit hours under 12 for the semester. For more information, refer to "Minimum Semester Requirements."

A grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. If the instructor has the option of setting a shorter time limit for completing the course work, the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form,
GRADES AND EXAMINATIONS

A student may also seek advice from his or her instructor over grades. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing the form without the student's signature and turning the form in to the Human Ecology registrar's office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology registrar's office to fill out and sign the remainder of the form.

It is allowed to register for succeeding semesters without leaving a record of the work completed in the course. If the work is completed satisfactorily within the required time, the course appears on the student's official transcript with an asterisk. If the work is not completed in the time required by the student, the work will not be allowed to register for succeeding semesters. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing the form without the student's signature and turning the form in to the Human Ecology registrar's office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology registrar's office to fill out and sign the remainder of the form.

Grade Disputes

Students who find themselves in disagreement with an instructor over grades have several options:

1. Meet with the instructor and try to resolve the dispute.
2. Meet with the chair of the department in which the instructor has their appointment.
3. Meet with the associate dean for undergraduate programs in the college in which the course was taught.
4. Meet with the president of the University (18 Stimson Hall, 255-4321).

A student may also seek advice from his or her faculty advisor or with a counselor in the Office of Admission, Student, and Career Services (172 MVR).

Examinations

Both the preliminary and final examination schedules are printed every semester in the Course and Time Roster. The current exam information is also available on the university registrar's web page at www.sws.cornell.edu/our.

Final Examinations

The following is quoted from the Cornell University Faculty Handbook (1990), pages 66-67:

"Although not specifically prohibited, it is University policy to discourage more than two examinations for a student in one 24-hour period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a makeup for other valid reasons, e.g., illness, death in the family, etc.

Legislation of the University Faculty governing study period and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Registrar's Office without prior written permission of the Dean of the Faculty.
2. No permission will be given for any reason to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the Dean of the Faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time that the examination was originally scheduled. The faculty member requesting such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the Registrar's Office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

Students have a right to examine their corrected exams, papers, and the like, in order to be able to question their grading. They do not, however, have an absolute right to the return thereof. Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester preferably until the end of the following semester, to afford students such right of review."

Preliminary Examinations

The following is quoted from the Cornell University Faculty Handbook (1990), pages 65-66:

"Preliminary examinations are those given at intermediate times during a course. It is common to have three of these in a semester to encourage review and integration of major segments of the course content. Make-up examinations that provide students with feedback on how well or poorly they are progressing, and to contribute to the overall basis for a subsequent final grade.

The most convenient times and places for "prelims" are the normal class times and classrooms. But many courses, particularly large ones with multiple sections, choose to examine all the sections together at one time and to design an examination that takes more than one class period to complete. In such cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

To eliminate direct conflicts, departments offering large multisection courses with evening prelims send representatives annually to meet with the dean of the University Faculty to lay out the evening prelim schedule. In some cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

The policy governing evening examinations is as follows:

1. Evening examinations may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m. without prior permission from the Office of the University Faculty.
   a. Such prior permission is not, however, required for examinations or makeup examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is acceptable to the students involved and that an alternate examination time is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
2. Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays and Thursdays or at a time before 7:30 p.m. will be granted only on the following conditions:
   a. Conditions such as the nature of the examination, room availability, large number of conflicts, etc., justify such scheduling.
   b. An alternate time to take the exam must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
3. If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule shall have a priority, and the course not on the schedule must provide an alternate time to take the examination for those students faced with the conflict.
4. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved must consult and agree on how to resolve the conflict. Both instructors must approach this resolution process with a willingness to provide an alternative or earlier examination.

5. Courses using evening examinations are strongly urged to indicate this in the course description listed in Courses and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed.

ACADEMIC STANDING

Criteria for Good Standing

The College of Human Ecology has established a set of minimum academic standards that all students must meet or exceed each semester. These standards are as follows:

1. A student must maintain a semester and cumulative grade point average of 2.0 or higher.

2. A student must successfully complete at least 12 credits per semester, excluding physical education courses. Mature students must carry at least 6 credits each semester, also excluding physical education.

3. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester such that at least 5 credits must be taken by the end of the second semester (ECON 101 and 102 may be used to fulfill this requirement).

4. A student must be making "satisfactory progress" toward a Human Ecology bachelor's degree.

5. All students must complete their requirements for first-year writing seminars (FWS) during their first two semesters at Cornell. Students who do not take a required first-year writing seminar in the first semester that they matriculate at Cornell and are enrolled in Human Ecology will be placed on a warning status. Students who have completed the second or subsequent semesters of matriculation at the college who have not taken both of the required writing seminars will be placed on a severe warning with danger of being withdrawn status. In these cases, if the student has not pre-enrolled for a FWS for the upcoming semester, a hold will be placed on the student's semester registration status until the student's semester registration status is correct.

Academic Integrity

Academic Integrity is a critical issue for all students and professors in the academic community. The University Code of Academic Integrity states that (1) a student assumes responsibility for the content and integrity of the academic work he or she submits, such as papers, examinations, or reports and (2) a student shall be guilty of violating the code and subject to proceedings under it if he or she:

a. Knowingly represents the work of others as his or her own.

b. Uses or obtains unauthorized assistance in any academic work.

c. Gives fraudulent assistance to another student.

d. Fabricates data in support of laboratory or field work.

e. Forges a signature to certify completion or approval of a course assignment.

f. Uses an assignment for more than one course without the permission of the instructor involved.

g. Uses computer hardware and/or software to abuse privacy, ownership, or user rights of others.

h. In any manner violates the principle of absolute integrity.

The college’s Academic Integrity Hearing Board, which consists of a chairperson, three faculty members, and three students, hears appeals from students who have breached the code. It also deals with cases brought directly to it by members of the faculty.

Academic Records

Students may obtain their Cornell academic record in several ways. The Cornell transcript, which is the official record of the courses, credits, and grades that a student has earned can be ordered with no charge at the Office of the University Registrar (B7 Day Hall) or online at http://transcript.cornell.edu. For more information, call 255-4232. Students may also access their grades and course schedules electronically using Just the Facts. Students should be in the habit of checking just the Facts by the second week of every semester to confirm that their schedule and grade options are correct. Adjustments must be made before published enrollment deadlines.

The college also maintains a graduation progress worksheet for each student showing progress toward the degree. At the beginning of fall semester continuing students should check their updated worksheet at http://human.cornell.edu/student/. It is important to check this document and bring any errors to the attention of the staff in the college registrar's office (145 MVR). Disclaimer: These worksheets are unofficial tally tools used by the college registrar and in no way substitute for a student's responsibility for tracking the progress toward completing degree requirements as outlined in the curriculum sheet for each major.
Access to Records
The Family Educational Rights and Privacy Act of 1974 assures students of privacy of their records. The law also assures students' access to their records. Information concerning a student's relationship with the university is considered restricted and may be released only at the student's specific written request. Restricted information includes the courses elected; grades earned; class rank; academic and disciplinary actions by appropriate faculty, student, or administrative committees; and financial arrangements between the student and the university. Letters of recommendation are restricted information unless the student has specifically waived right of access.

Students who want additional information on access to their records may contact the Office of the College Registrar (145 MVR) or the Office of the University Registrar (87 Day Hall). An inventory of those student records maintained by Cornell University offices in Ithaca, their location, and cognizant officer are available in the Office of the Dean of Students (401 Willard Straight Hall).

For specific information, refer to the university's policy "Access to Student Information" at www.unice.cornell.edu/policy/AS1.html, or talk with the college registrar.

ACADEMIC HONORS AND AWARDS
The college encourages high academic achievement and recognizes outstanding students in several ways.

Honors
Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits of letter grades and who have a semester GPA of 3.7 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and inquiry toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of B or higher. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. No more than 10 percent of the junior class may be elected to membership and no more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected. The president of Kappa Omicron Nu has the honor of serving as First Degree Marshall for the college during May commencement.

Bachelor of science with honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact the Office of Admission, Student, and Career Services (172 MVR) during their sophomore year or the first semester of their junior year. Honors candidates must have a minimum GPA of 3.3 and have demonstrated potential for honors-level research. To graduate with honors a student must take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and successfully defend it in front of a committee.

Bachelor of science with distinction recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class based on the last 60 credits earned at Cornell. The graduating class includes students who will complete requirements for bachelor of science degrees in January or May of the same academic year or the prior August. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, Phi Kappa Phi, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines. To be eligible for membership students must rank in the top 10 percent of the senior class, or in the top 5 percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

Awards
The Elise Van Buren Rice Award in Oral Communication is awarded for original oral communication projects related to the college's mission by undergraduate students in the College of Human Ecology. The contest is held each year in February and awards prizes totaling $1,500.

The Flora Rose Prize is given biennially to a Cornell junior or senior whom, in the words of the donor, "shall demonstrate the greatest promise for contributing to the growth and self-fulfillment of future generations." The recipient receives a cash prize of $500.

The Florence Halpern Award is named for the noted psychologist, Dr. Florence Halpern, in recognition of her lifelong interest in "innovative human service, which bettered the quality of life." In that spirit the award is presented to an undergraduate in the College of Human Ecology who has demonstrated, through supervised fieldwork or community service, creativity in the search for solutions to human problems. The award carries a $500 cash prize.

COLLEGE COMMITTEES AND ORGANIZATIONS

Student Groups and Organizations
Following are brief descriptions of some of the organizations that offer valuable experiences to human ecology students. Information about many other student activities on campus may be obtained from the Office of the Dean of Students (401 Willard Straight Hall).

The Cornell Design League was formed to give students interested in apparel a chance to express their creativity outside of the classroom by producing a fashion show every spring. It has become concerned with all aspects of a professional presentation. Consequently, it also provides a creative outlet for those interested in graphics, photography, illustration, or theater production. Although many of its designers are part of the Department of Textiles and Apparel, the Design League welcomes people of all majors and schools.

Students have opportunities to work throughout the community in a variety of service capacities. These agencies include day care centers, youth programs, health-related agencies, services for elderly people and people with disabilities, as well as nutrition programs, arts organizations, and Ithaca schools. For further information, contact the Public Service Center (200 Barnes Hall). Call 255-1148 for information about volunteer work or 255-1107 for information about work-study arrangements.

The Human Ecology Ambassadors is a group of Human Ecology undergraduates who assist the Office of Admission in the area of new student recruitment and yield. Ambassadors participate in group conferences with prospective students to provide information from a student's perspective, conduct high school visits, assist with on-campus programs for high school students and potential transfer students, and help with prospective student, phonathons, and letter writing. In addition, ambassadors attend regular meetings and serve as coordinators for activities in the Office of Admission.

For information, contact the Office of Admission, Student, and Career Services (172 MVR, 255-5471).

The mission of the Human Ecology Voices is to build unity among students, faculty, and staff in the College of Human Ecology. Membership consists of all representatives of all other Human Ecology student organizations and other interested students. Patti Papapietro is the liaison with other university offices, and serves as coordinators for activities in the Office of Admission.

For information, contact the Office of Admission, Student, and Career Services (172 MVR, 255-5471).

The mission of the Human Ecology Voices is to build unity among students, faculty, and staff in the College of Human Ecology. Membership consists of all representatives of all other Human Ecology student organizations and other interested students. Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR, 255-2532), serves as Voices advisor.

The Human Ecology Mature Students Association is an organization of students who are 24 years of age or older at the time of matriculation. Many mature students need to balance family, work, and other concerns with their academic efforts. The Mature Students Association strives to help by providing a forum for resource exchange and referral, support, socializing, and special projects depending upon expressed interest. These goals are pursued through seminars and informational meetings, the mature students listerv, supplementary orientation activities, liaison with other university offices, and the
Admission, Student, and Career Services (172 MVR). Students interested in the relationship between the physical environment and human behavior may join the Human-Environment Relations Students Association (HERSA). For more information, contact the Office of Admission, Student, and Career Services (172 MVR).

The International Facility Managers Association (IFMA) also has a student chapter. Membership information is available from the Department of Design and Environmental Analysis.

The Association for Students of Color (ASC) unites Human Ecology students of color to provide a supportive foundation for their enrollment, retention, graduation, and career placement. ASC members work toward these goals by:
1. participating in admissions hosting programs and conducting high school visitations.
2. sponsoring presentations on career and graduate school outcomes of a Human Ecology education.
3. providing volunteer services to the Cornell and Ithaca communities.
4. attending regular meetings and hosting annual fall and spring forums.

For more information, contact Verdene Lee in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

The PreLaw Undergraduate Society (PLUS) is sponsored by Human Ecology and welcomes members from the Cornell community. Meetings provide information and support for students considering careers in law. Programs include information on the law school admission process, law school applications, and LSAT preparations. Additionally, PLUS offers tours of the Cornell Law School and information panels with current law students. Guest speakers include practicing attorneys, law faculty, and current law school students. For more information, contact Kelly Deasy in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

The Preprofessional Association Toward Careers in Health (PATCH) provides support, advising, and up-to-date information to students pursuing careers in health care. Programs include academic advising, guest speakers from allopathic and alternative medicine, information on medical school admissions, exposure to complementary health care career options, MCAT preparation tips, information on research and internship opportunities, and a visit to a local medical school. This student-run organization is sponsored by Human Ecology and is open to the College of Human Ecology. For more information, contact Paula Jacobs in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

The Orientation Committee consists of students and advisors interested in planning and implementing programs to acquaint incoming freshmen with the College of Human Ecology. The committee is particularly active at the beginning of each semester and is always eager for new members. For more information, contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

Membership in the Sloan Student Association is open to students interested in health care and related fields. For more information, contact the president of the association (122 MVR, 255-7772).

The Students for Gerontology (SGF) is composed of students from a wide variety of majors who are interested in career and internship opportunities that contribute to the well-being of our aging population. Programs sponsored by this organization focus on developing linkages with community organizations and other student gerontology groups. SGF meets monthly. For more information, contact Nancy Wells, faculty advisor, Bronfenbrenner Life Course Center (E220 MVR, 254-6330).

The Health and Nutritional Undergraduate Society (Health NUTS) promotes nutritional well-being through education, communication, and research. Members of the student chapter organize programming on topics such as Food and Nutrition Day in March, and host on-campus speakers in nutrition and health-related fields. The student chapter is open to all students interested in nutrition education. For more information, contact Gail Canterbury (335 MVR, 255-2628).

Committees and Councils
Several official organizations exist within the college to deal with matters of policy and to provide leadership in college planning. Most include elected student and faculty representatives; the actions of these various groups affect all students directly or indirectly.

The Educational Policies Committee (EPC) has two student members, one graduate and one undergraduate, who vote along with the faculty members on all matters relating to college academic policy. Recommendations are submitted to this committee regarding revisions in degree requirements, new curriculum changes, and new course approval. Students also have the opportunity to serve on the Admissions Policy Subcommittee, and the Academic Integrity Hearing Board.

The Selection Committee for the Chancellor's Award for Excellence in Teaching or Professional Service handles the nomination and selection process for this prestigious yearly award. The committee consists of three teaching faculty members, one professional staff member, and three undergraduate members.

The Human Ecology Alumni Association Board of Directors includes two student board members—one junior and one senior. One student is selected each spring to begin a two-year term as student representative. The two students co-chair the board's Student Activities Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The Committee on Academic Status does not include students but does have a faculty representative from each department. This committee is responsible for upholding the academic standards of the college and takes action when appropriate. The committee also hears appeals regarding student petitions and requests and permits to the college.

### INTERDEPARTMENTAL COURSES

**HE 100(1000) Critical Reading and Thinking**
Fall, spring, or summer. 2 credits (credit toward graduation depends on individual college). Limited enrollment. Prerequisite: Freshman or sophomore standing; juniors and seniors by permission of instructor. Letter or S-U grades. Enables students to increase critical reading and thinking abilities. Examines the theory and research associated with a wide range of reading, thinking, and learning skills. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

**HE 101(1010) College Achievement Seminar**
Summer, six-week session. 2 credits (credit toward graduation depends on individual college). Prerequisite: Freshman or sophomore standing. Improves the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell courses is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

**HE 301(3010) Collaborative Leadership**
Fall. 4 credits. Includes required retreat beginning Fri. afternoon, Aug. 25, and ending when bus returns to campus about 4 p.m. Sun. August 31. Open to freshmen, sophomores, and seniors. Letter grades only. Lec and sec. B. Bricker.

Introduces the principles of leadership theory and practice of leadership. Serves as the introduction to leadership for a new leadership certificate but is also appropriate for students who simply want to understand leadership better. Assignments are diverse, including individual and group projects, journaling, the creation of case studies, an in-depth team project, several presentations, and a variety of other activities. More information on this course is available at the Courses of Study web site: http://cuninfo.cornell.edu/Academic/Courses/. Complete syllabus available on request.

**HE 405(4050) Mentoring for Advanced Leadership**
Spring and fall. 2 credits. Capstone course for Leadership Certificate Program. Prerequisite: permission of instructor. Letter grades only. B. Bricker.

Supports advanced leadership students through critical months of their junior-senior project development. Taught in a small seminar format. Emphasizes reflection on the leadership experience and planning for individual projects. Reviews leadership themes and principles. With carefully selected readings and assignments, students
learn to write effective grant proposals, to
design evaluation programs appropriate
for their leadership programs, write press
releases, and think about what makes for
successful lobbying for policy change.
Students work together to provide critical
feedback and support for one another through
important challenges in their own leadership
development.

HE 407(4070) Leadership in the Nonprofit Environment
Fall and spring. 2 credits. Limited to 30
students. Letter grades only. Staff.
The nonprofit sector contributes nearly 10
percent of U.S. GNP and employs 11 to 12
percent of citizens. This economic sector
touches all our lives—as volunteers, donors,
receivers of service, employees, or board
members. This course provides an opportunity
to explore the challenges and opportunities of
the nonprofit sector. After becoming familiar
with the issues and complications of
strategic charitable giving, students will
consider actual grant applications from
community organizations and make decisions
to award $10,000 in grant aid. HE 407 is made
possible by a generous gift of $10,000 from
the Sunshine Lady Foundation. Students learn
to read, evaluate, and write effective grant
proposals. They create a Request for Proposal
(RFP) to stimulate community nonprofits to
apply for funding. They study organizational
missions, the strengths and challenges of
private, not for profit organizations, the
relationships between them, and their
influences on our communities.

HE 480(4800) Communities in Multicultural Practice
Fall and spring. 6 credits. Students must
take course during semester they
participate in Urban Semester Program.
Concerns urban children and youth in
communities of color. Each week of the
semester, students participate one day in the
school lives of children pre-K through eighth
grade in selected neighborhoods in New York
City. Students keep journals of their reflections
on their experiences and observations.

HE 490(4900) Multicultural Practice
Fall and spring. 6 credits. Students must
take either HE 490 or 495 during semester they
participate in Urban Semester Program;
which is appropriate depends on
Student's placement and is determined by
Urban Semester director.
Topics include: The intersection of
organizational culture with issues of diversity.
They investigate the nature of organizational
culture and how it engages and excludes
students. Students report back in seminars their understanding and
analysis of their internship organizations and
their industry's role in creating conditions
and environments of inclusion or exclusion.
The course explores and challenges of
processes that have brought about inclusion or exclusion.

THE URBAN SEMESTER PROGRAM
IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students
with many study options that focus on
multicultural dynamics in urban affairs.
The options available include internships,
individual and group community service
projects, research, independent study,
collaborative learning, and mentorships.
Students must enroll concurrently in the three
courses HE 470, 480, and 490 or 495. Students
learn through reflection and action. Program
options are possible throughout the academic
year, during winter break, and in the summer.
Courses of study enable students to seek out
the relationship between theory and practice,
apply theory to practice, identify and acquire
professional practice skills, and learn about
the impact of diversity on New York City. By
applying ethnographic research techniques
and methods, students learn to think
critically, reflect on their actions, and be
agents of change.

HE 406(4060) Fieldwork in Diversity and Professional Practice
Summer, eight-week session. Variable
credit.
Course provides students with an opportunity
to work in a community-based medical center hospital or clinic member of
New York Presbyterian Hospital and Weill Medical College of Cornell University. This is a
day internship and one day of seminars per week.

HE 470(4700) Multicultural Issues in Urban Affairs
Fall and spring. 3 credits. Students must
take course during semester they
participate in Urban Semester Program.
Uses New York City as a classroom. The
landscapes, built environments, and people
in them are the texts. In the beginning, students
study the formation of this multicultural city
by traversing lower Manhattan and imagining
New Amsterdam as it became New York
City. Then they investigate a number of
eighborhoods and speak with local leaders
about diversity issues in context, in practice,
and in use, to learn how multicultural issues are experienced by people and how they
make sense of them.

DEA 41+1 Master's Degree Program
Outstanding students who complete their four-
year undergraduate degree in DEA may apply for a master of arts/M.A. (instructor design) or a master of science/M.S. (human environment relations) degree that typically requires one
additional year of graduate study.

Through careful planning by the beginning of
their junior year, many of the courses required
in the M.A. or M.S. programs can be taken
during the undergraduate years, creating an
opportunity to focus the fifth year of study on completing graduate coursework and thesis
requirements. Typically, students will take
four to five courses in their fall semester as
a graduate student, and two to three courses
plus their thesis research in the spring
semester. Students should expect to complete
their thesis by the end of the summer term of
their fifth year.

Admission to the 4+1 Master's program is not
automatic. Students must meet with their
advisors early in their undergraduate programs
to plan carefully for this possibility. In the
fall of the senior year, interested students
must submit an application to the Graduate
School. The GRE exam and a portfolio are
not required for admission, but students
must submit a statement of intent, letters of
reference, and transcripts. Students who have
compiled a strong undergraduate record in
the department are usually good candidates
for admission into the graduate program in
Design and Environmental Analysis.

DEA 101(1010) Design Studio I
Fall. 3 credits. Limited to 20 students per
sec. Prerequisite: DEA majors; permission of
instructor for nonmajors; priority given to
interior design majors. Option 1 majors
must take DEA 101 in fall of first year. B-
or higher in DEA 101 required to take DEA
102 and 115. Must complete incomplete
grade in DEA 101 before taking 102 and 115.
Cost of materials: approx. $200.
J. Elliott.
Introduces the fundamental vocabulary and
principles of two- and three-dimensional
design. Students experiment with
the principles of two- and three-dimensional
development of image and form through
problem-solving activities. Visit http://
 instruct1.cit.cornell.edu/courses/dea101/.

DEA 102(1020) Design Studio II
Spring. 3 credits. Prerequisite: Option 1
DEA majors only. Option 1 majors must take
DEA 102 and 115 concurrently. B-
or higher in DEA 101 required to take DEA
201. Must complete incomplete grade in
this course before taking DEA 201. Cost of
materials: approx. $200; shop fee: $10.
P. Eshelman.
Studio course in three-dimensional design
with an interior design emphasis. Explores
problems in spatial organization through
drawings and models.
DEA 111(1110) Making a Difference: By Design
Fall. 3 credits. Limited to 130 students. Lab fee: $25. S. Danko.
This course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, science, and other areas who have made a difference using design as a tool for positive social change. Using a micro to macro framework, students examine how design affects their daily lives and future professions from the person to the planet. Additional topics include nurturing creativity, visual communications, socially responsible design and business, culture, and ecological issues.

DEA 115(1150) Design Graphics and Visualization
Spring. 3 credits. Limited to 18 students. Prerequisite: Option I DEA majors only; DEA 101 with grade of B- or higher. Corequisite: DEA 102. B- or higher in DEA 115 required to take DEA 201. Must complete incomplete grade in this course before taking DEA 201. Minimum cost of materials: $200; technology fee: $10. K. Gibson.

DEA 150(1500) Introduction to Human-Environment Relations
Spring. 3 credits. G. Evans.
Human-Environment Relations is an interdisciplinary field concerned with how the physical environment and human behavior interrelate. Most of our attention will be focused on what role the physical environment plays in human health and well-being. Our focus will be on residential environments, urban settings, and work environments. We will also take a look at human utilization and behaviors affect environmental quality. Hands-on projects plus exams. Visit http://instruct1.cit.cornell.edu/courses/dea150.

DEA 201(2010) Design Studio III
Fall. 4 credits. Limited to 18 students. Prerequisites: Option I DEA students; DEA 101, 102, 111, 115, and 150 (minimum grades of B-); must complete incomplete in 201 before taking 202. Corequisites: DEA 251, DEA 215, DEA 460. Minimum cost of materials: $150; lab fee: $40; required field trip: approx. $130. S. Jennings.
Third semester in the studio sequence of eight semesters. The theme and objectives focus on design as critical thinking, introducing means by which students can think, draw, write, and build their way critically through design. Taken concurrently with DEA 251, the course applies historical theory to contemporary design projects. Also includes a collaborative project with a professor and students from another design discipline. Visit http://instruct1.cit.cornell.edu/courses/dea201.

DEA 202(2020) Design Studio IV
Spring. 4 credits. Prerequisites: Option I DEA students; DEA 201 and 203. Pre- or corequisite: DEA 204. Must complete incomplete grade in this course before registering for DEA 201. Minimum cost of materials: $120; field trip fee. R. Gilmore.
Based on projects from real clients, students learn how to design several types of interior environments, from health care facilities to local nonprofit agencies. Emphasis is on space planning, lighting design, construction detail, light fixtures, and service learning, where students use design to transform the facilities of social service agencies in the community.

DEA 203(2030) Digital Communications
Spring. 2 credits. Limited to 27 students. Priority given to DEA majors. Lab fee: $10. J. Elliott.
Digital information technologies for designers of the built environment. Students explore issues in relation to text and image through analysis and composition of form and content. Through a series of weekly projects the students work toward the development of a professional web-based portfolio of self-promotional materials. The primary objective is to reinforce principles of visual communications while learning the rudiments of vector, raster, and html graphic software. Visit http://instruct1.cit.cornell.edu/courses/dea203/.

DEA 204(2040) Introduction to Building Technology
Spring. 2 credits. W. Sims.
Introduction to building technology for interior designers and facility managers. Emphasizes developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems. Visit http://courseinfo.cit.cornell.edu/courses/dea204.

DEA 215(2150) Digital Graphics
Fall. first seven weeks of semester. 1 credit. Prerequisites: none. Letter grades only. S. Curtis.
This course will be an investigation into use of computer graphic software programs for the purpose of design, visualization, and presentation. The course will investigate the inherent differences between raster and vector graphics and how to use a variety of computer graphics programs such as Adobe Photoshop, Illustrator, InDesign, and Acrobat to achieve a desired end result. Lab-based course providing technical illustration in Adobe Illustrator and Photoshop.

DEA 241(2410) Introduction to Computer-Aided Design (CAD)
Spring, first seven weeks of semester. 1 credit. Prerequisites: DEA majors, DEA 101, or permission of instructor. Letter grades only. Minimum cost of materials: $50. S. Curtis.
This course provides an understanding of, and experience with, electronic drafting on the microcomputer. It includes a basic understanding of the features, limitations, and considerations associated with the operation of the latest release of AutoCAD. By the end of the course, the student will be proficient enough with the AutoCAD software to draw and plot most projects required by their course of study as they relate to architecture and interior design.

DEA 242(2420) Advanced Computer-Aided Design
Spring, second seven weeks of semester. 1 credit. Prerequisites: DEA majors, DEA 101 or 241, or permission of instructor. Letter grades only. Minimum cost of materials $50. S. Curtis.
This course provides a thorough understanding of the 2-D features, limitations, and considerations associated with the operation of the latest release of AutoCAD. This course builds on knowledge gained in DEA 241 and requires DEA 241 as a prerequisite. Commands and concepts such as multi-sheet plotting, xreferece drawings, blocks and attributes, OLE, raster images, user coordinate systems, and customization of AutoCAD are covered. This course will give the student a high level of proficiency with the AutoCAD software as they relate to architecture and interior design.

DEA 250(2500) The Environment and Social Behavior
Fall. 3 credits. Limited to 16 students. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 150 and written permission of instructor. Field trip fee: $65. G. Evans.
This course is about architecture and human behavior. It is centered around two key principles: 1. the complex interplay of social and personal factors with the physical environment largely determines how the built environment influences human wellbeing. 2. aesthetics is not sufficient in judging design success. These fundamental beliefs force students to design with an emphasis on the concepts of social, environmental, and cultural factors. The course will cover the principles of design evaluation and the implications for the future of architecture and human behavior.

DEA 251(2510) History and Theory of the Interior
A historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the 20th century and isolate cultural patterns, spatial ideas, dialectics, design elements, and theorists. Reading, discussion, analytical exercises, essays, and a field trip are included. Visit http://instruct1.cit.cornell.edu/courses/dea251/.

DEA 300(3000) Special Studies for Undergraduates
Fall or spring. Credit TBA. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the college registrar's office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.
DEA 301(3010) Design Studio V
Fall. 5 credits. Prerequisites: DEA 111, 150, 201, 202, 203, and 204. Corequisites: DEA 303 and 459. Must complete incomplete grade in this course before registering for DEA 302. Minimum cost of materials: $150; short field trips: $10; P. Eshelman.
This intermediate-level interior design studio focuses on design for a special population inclusive of young children, older adults, and people of any age living with a congenital or hereditary condition, injury, or disease. The course is organized around a semester-long project broken into four phases: pre-design, full-scale model construction, and design documentation and presentation. Collaboration with students in DEA 250/660 provides experience in the application of evidence-based information in the design process.

DEA 302(3020) Design Studio VI
Spring. 5 credits. Limited to 18 students. Prerequisites: DEA 301 and 303 or permission of instructor. Corequisite: DEA 305. Must complete incomplete grade in this course before registering for DEA 407. Minimum cost of materials: $200; shop fee: $10; field trip fee: $20. K. Gibson.
Sixth semester in the studio sequence of eight semesters. Emphasizes use of the microcomputer as a creative tool in the design process. Explores social, cultural, and physical factors related to the interior environment through assignments, readings, and a field trip. Design and problem-solving skills are reinforced according to project type. Visit http://instruct1.cit.cornell.edu/courses/dea302.

DEA 303(3030) Interior Materials and Sustainable Elements
Fall. 3 credits. Approx. cost of materials: $10. R. Gilmore.
A sustainable approach to the evaluation and selection of materials, finishes, and furnishings for the built environment has the potential to protect our planet. This course provides an introduction to sustainable sources and asks students to manipulate materials, understand performance testing, use building codes, and create a life-cycle cost analysis, and complete interior specifications. Field trips provide an overview of the manufacturing process, and group projects culminate in the presentation of research on current "green" products and resources.

DEA 304(3040) Introduction to Professional Practice of Interior Design
Spring. 1 credit. Limited to 18 students. Prerequisite: Option I DEA students. A. Basinger.
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and inspection, and cost estimation.

DEA 305(3050) Construction Documents and Detailing
A continuous dialogue between the idea for an interior space and the reality of its final built form is contained within construction documents, also known as working drawings and specifications. Students study the history of architectural documentation, the organization of construction drawings, schedules, and specifications, and the detailing of interior elements and construction methods by touring a local millwork shop. Each student completes a comprehensive set of construction documents for the renovation of an existing conference facility located on the Cornell campus.

DEA 325(3250) Human Factors: Ergonomics–Anthropometrics
Fall. 3 credits. Recommended: DEA 150. Undergraduate sec of DEA 651; shares sec meets for an additional hour. DEA 651 has additional readings and projects. A. Hedge.
Implications of human physical and physiological characteristics and limitations on the design of settings, products, and task; An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Includes practical exercises and field project work. Visit http://ergo.human.cornell.edu.

DEA 350(3500) Human Factors: The Ambient Environment
Spring. 3 credits. Recommended: DEA 150. Undergraduate sec of DEA 652; shares sec meets for an additional hour. DEA 652 has additional readings and projects. A. Hedge.
Introduces human-factor considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. Views the ambient environment as a support system that should promote human efficiency, health, and safety. Emphasizes the implications for planning, design, and management of settings and facilities. Visit http://ergo.human.cornell.edu.

DEA 354(3540) Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor: Letter grades only. Minimum cost of materials: $200. W. Sims.
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Considers sociopsychological, organizational, financial, architectural, and legal factors. Visit http://courseinfo.cit.cornell.edu/courses/dea354_654.

DEA 400-401-402-403(4000-4010-4020-4030) Special Studies for Undergraduates
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a syllabus description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department head and filed at course registration or cost of change-of-registration period in the college registrar's office, 145 MVR, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisor and the instructor should register for one of the following subdivisions of independent study.

DEA 400(4000) Directed Readings
For study that predominantly involves library research and independent reading.

DEA 401(4010) Empirical Research
For study that predominantly involves data collection and analysis or laboratory or studio projects.

DEA 402(4020) Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 403(4030) Teaching Apprenticeship
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

DEA 407(4070) Design Studio VII
Fall. 5 credits. Prerequisites: DEA 302, 303, 304, and 305. Must complete incomplete grade in this course before registering for DEA 408. Minimum cost of materials: $150; field trip: $50. R. Gilmore.
Comprehensive historic preservation design studio in which students complete each phase of the adaptive reuse of a historic structure. Working with real buildings and real clients, students research the market, complete a building assessment, and then design new uses for viable, yet older structures. Lecture topics range from professional practice strategies, to the history of preservation, to the secretary of the interior's Standards for Rehabilitation. Components of the work include program document, code compliance, concept development, schematic and design development presentations, and construction documents.

DEA 408(4080) Design Studio VIII
Spring. 5 credits. Prerequisites: DEA 301, 302, 303, and 304. Minimum cost of materials: $150. S. Danko.
Design problem-solving experiences involving completion of advanced interior design problems. Problems are broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.
by course instructors and visiting design professionals.

**DEA 430(4300) Furniture as a Social Art**

This course is an upper level graduate course for advanced undergraduate and graduate students in furniture design and management, the Sloan program, urban planning, and design/architecture students interested in furniture planning and decision issues in a diverse society. Specifically, the role of culture, gender, stage in the life cycle, and disability in planning facilities of various types will be studied. This course will examine the issues of diversity from two perspectives. One, how are the implicit and explicit assumptions about the user expressed in various aspects of the built environment in our society, and two, how do we purposely plan facilities in a diverse society?

**DEA 445(4450) Strategy Planning for Healthcare and Educational Facilities**
Spring. 3 credits. Prerequisites: DEA 150, 250, 459, or permission of instructor. Letter grades only. Not offered 2006-2007.

This is an upper level undergraduate course appropriate for undergraduate and graduate students in facility planning and management, the Sloan program, urban planning, and design/architecture students interested in facility planning and design issues for healthcare and educational institutions. The course will examine the facility planning and management aspects that affect the education and health care industries. The course will specifically look at how these facilities respond to changes in 1) the needs of their target population, 2) technology and the built environment, 3) sustainability of the built environment, 4) pedagogy and health care delivery practices, 5) regulatory and policy issues related to the healthcare or educational industry, and 6) daily operational and maintenance issues.

**DEA 422(4220) Ecological Literacy and Design (also ARCH 461(4610))**
Spring. 3 credits. Prerequisite: junior or senior standing. Letter grades only. Minimum cost of materials: $50. R. Gilmore and S. Robson.

This intensive weekend-long course pushes the boundaries of current restaurant design by developing a concept plan for an innovative restaurant in a real-world setting. Students work in teams to develop design solutions and prepare design presentations for review.

Develops students' understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasizes selection of appropriate methods for specific problems and the policy implications derived from those methods. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

**DEA 455(4550) Research Methods in Human-Environment Relations**
Fall. 3 credits. Prerequisite: DEA majors or permission of instructor. Letter grades only. Minimum cost of materials: $100. L. Maxwell.

Introduction to facility programming. Emphasizes formulation of building requirements based on user characteristics and potential constraints. The course presents diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users. The course emphasizes selection of appropriate methods to suit the specific user/client needs. Students will work with an actual client to prepare a program document.

**DEA 460(4600) Design City**
Fall. 1 credit. May be repeated for credit. Prerequisite: DEA majors. Not open to freshmen for credit. Students are required to take this course in order to participate in field study trip to a major city. Field trip fee of $115 covers cost of hotel and chartered bus; trip fee will be billed to student's bursar account. S-U grades only. Not offered 2006-2007. K. Gibson and L. Jennings.

Field study of historic and contemporary interiors with guided tours to architectural and interior design firms, installations, exhibits, and showrooms in New York City, Toronto, or other major cities. Topics and themes change yearly. Visit http://instruct1.cit.cornell.edu/courses/dea460.

**DEA 470(4700) Applied Ergonomic Methods**
Spring. 3 credits. Prerequisite: DEA 325. Undergraduate sec of DEA 670; shares lec but meets for an additional hour. DEA 670 has additional readings and projects.

A. Hedge.

Covers physical and cognitive ergonomics methods and techniques and their application to the design of modern work environments. Emphasizes understanding key concepts. Covers conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems.

**DEA 472(4720) Environments for Elders: Housing and Design for an Aging Population**
Fall. 3 credits. Field trip fee: $20. N. Wells.

Through seminars, lectures, field trips, and service learning opportunities, students examine the relationship between older adults and the physical environment. Students gain understanding of the relevance of design characteristics to the well-being of older people, an appreciation of late-life social, cognitive, and physical changes, as well as familiarity with a variety of housing options for late life. Visit http://instruct1.cit.cornell.edu/courses/dea472.
DEA 499(4990) Senior Honors Thesis
Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only.

Opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis advisor on a topic of interest.

DEA 600-603(6000-6030) Special Problems for Graduate Students
Fall or spring. Credit TBA. S–U grades optional. Department faculty. Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

600(6000): Special Problems. For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.

601(6010): Directed Readings. For study that predominantly involves library research and independent study.

602(6020): Graduate Empirical Research. For study that predominantly involves collection and analysis of research data.

603(6030): Graduate Practicum. For study that predominantly involves field experiences in community settings.

[DEA 645(6450) Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice]
Spring. 3 credits. Limited to 24 students. Prerequisite: graduate or advanced undergraduate standing; undergraduates must have permission of instructor. Not offered 2006–2007. S. Danko.

Focuses on thinking processes and techniques that support creative problem solving. Examines theories of creative behavior and critical thinking. The course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. The primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

DEA 648(6480) Virtual Design, Analysis, and Representation
Fall. Variable credit; max. 4. Limited to 15 students. Prerequisite: graduate or advanced undergraduate standing; for undergraduates, DEA 302 or permission of instructor. Minimum cost of materials: $150; lab fee: $35. K. Gibson.

Advanced use of computer technology to create and analyze interior environments. Emphasizes the use of 3-D modeling, animation, photorealistic rendering, and emerging technologies to investigate dynamic design issues.

DEA 650(6500) Programming Methods in Design
Fall. 3 credits. L. Maxwell.

Intended for graduate students who want a more thorough introduction to programming methods than is provided by DEA 459. Each student is required to attend DEA 459 lectures, complete all required readings, meet with the instructor and with other graduate students. An additional programming project will be required for all graduate students.

DEA 651(6510) Human Factors: Ergonomics and Human-Environment Analysis
Fall. 4 credits. Recommended: DEA 150 and 3-credit statistics course. A. Hedge.

Intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 325. Each student is required to attend DEA 325 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 325.

DEA 652(6520) Human Factors: The Ambient Environment
Spring. 4 credits. Recommended: DEA 150. A. Hedge.

Intended for graduate students who want a more thorough grounding in human factors considerations than is provided by DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For detailed description, see DEA 350.

DEA 653(6530) Planning and Managing the Workplace
Fall. 4 credits. Prerequisite: graduate standing. Letter grades only. F. Becker.

Through lectures, readings, and a field studies project, this course explores how the planning, design, and management of health care facilities affects the experience of patients and care-giving staff; and the relationship of these outcomes to quality of health measures. Invited lecturers from around the country and world (via videoconferencing) provide a broad-based perspective into different approaches to hospital planning and design, and how the form of hospitals is changing in response to new information and medical technologies, changing work patterns, and shifting demographics. Students through field projects involve analysis of actual health care setting and the development of innovative solutions to improve the quality of health care provided in it.

DEA 654(6540) Facility Planning and Management Studio

For description, see DEA 554.

DEA 656(6560) Research Methods in Human-Environment Relations
Fall. 4 credits. Prerequisite: DEA majors or permission of instructor; statistics course. N. Wells.

Intended for graduate students who want a more thorough understanding of the use of research to study the relationship between physical environment and human behavior than is provided by DEA 455. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 455.

DEA 659(6590) Introduction to Facility Planning and Management
Fall. 1 credit. For graduate students interested in careers in facility planning and management. Letter grades only. F. Becker.

Introduction to the field of facility planning and management. Focuses on how the planning, design, and management of an organization's physical facilities can help it meet its business objectives. Topics include the history of the field, strategic planning, space planning and design, project management, building operations, workplace management, real estate and computer-aided facility management systems.

DEA 660(6660) The Environment and Social Behavior
Fall. 4 credits. Prerequisite: DEA 150 and written permission of instructor. Field trip fee: $65. G. Kolb.

This course is about architecture and human behavior. It is centered around two key principles: 1. the complex interplay of social and personal factors with the physical environment largely determines how the built environment influences human well-being. 2. aesthetics is not sufficient in judging design—we must also consider how the built environment affects health, interpersonal relationships, and performance along with preference. Two major projects, one in collaboration with a design studio and a real community client.

DEA 661(6610) Environments and Health
Spring. 3 credits. N. Wells.

Examines the impact of the physical environment on human health and wellbeing through the life course. Environmental factors examined include characteristics of the built and natural environment, housing, and neighborhood as well as sprawl, the dominance of the automobile, and patterns of food. Environmental health outcomes include physical health, obesity, mental health, and cognitive functioning. Working within the life course perspective, the course focuses particularly on environmental factors that may act as either protective or mechanisms fostering the long-term resilience of individuals or risk factors contributing to long-term vulnerability.

DEA 668(6680) Design Theory and Criticism Seminar
Spring. 4 credits. Limited to 15 students. J. Jennings.

For advanced undergraduate and graduate students. The seminar explores two methods of design thinking: theoretical and critical. One method stems from a desire to understand historical theory and to assess the relevance of theory and history for contemporary design. The other approach involves learning to write critically. Within this construct is the notion that every design is an argument a designer makes.

DEA 670(6700) Applied Ergonomics Methods
Spring. 4 credits. Limited to 20 students. Prerequisite: DEA 651. A. Hedge.

Intended for graduate students who want a more thorough understanding of applied ergonomics methods than is provided by DEA 470. Each student is required to attend DEA 470 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For further detail, see DEA 470.
thought, language, emotions, memories, and desires. Relevant human clinical disorders are discussed throughout.

[HD 230(2300) Cognitive Development (also COGST 230[2300])]
Spring. 3 credits. Prerequisite: HD 115 or PSYCH 101. Not offered 2006–2007.
Q. Wang.
Surveys current theory and research on various aspects of cognitive development across the life span, with emphasis on infancy and early childhood. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills. Students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to critically assess developmental research. The course is a combination of lecture, seminar, and fieldwork.

[HD 233(2330) Children and the Law]
Examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena. Attempts to integrate theories, research, and methodology from several areas of psychology, including developmental, cognitive, social, and clinical. Also attempts to examine the degree to which basic research can (and should) be used to solve applied issues. Selected topics include memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, symbolic representational ability, and finally, what can (or should) an expert witness tell the court. Several actual cases involving child witnesses are presented to illustrate the application of scientific data to the courtroom. Because of the heavy use of case materials and video and textual coverage of actual trials, it is expected that students will devote more than the usual number of hours to this course.

[HD 238(2380) Thinking and Reasoning (also COGST 437)]
Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101. Not offered 2006–2007. B. Koslowksy.
Examines problem solving, transfer, and creativity; pre-causal and causal reasoning; models of good thinking based on formal logic; pragmatic syllogisms, and probability theory; expert-novice differences; cognition and attitudes; extra-rational and magical beliefs; and putative racial and social class differences in intelligence. Two general themes run through the course: (1) the extent to which children and adults approximate the sorts of reasoning that are described by various psychological models; (2) the extent to which various models accurately describe the kind of thinking that actually is required by the problems and issues that arise and must be dealt with in the real world.

[HD 250(2500) Families and the Life Course (also SOC 250[2500])]
Introduction to social scientific research on family roles and functions in American society. Topics include the history of the family, family changes over the life course, and the influence of cultural and economic forces on families.

[HD 251(2510) Social Gerontology: Aging and the Life Course (also SOC 251[2510])]
Spring. 3 credits. S-U grades optional. E. Wethington.
Analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics include (1) an introduction to the field of gerontology, its history, theories, and research methods; (2) a brief overview of the physiological and psychological changes that accompany aging; (3) an analysis of the contexts (e.g., family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class; (4) and the influence of society on the aging individual.

[HD 260(2600) Introduction to Personality (also PSYCH 275[2750])]
Spring. 3 credits. Limited to 600 students (300 HD 260, 300 PSYCH 275).
Recommended: introductory psychology or human development course. Staff.
Introduction to theory and research in the area of personality psychology, with special emphasis on personality development. Covers the major influences—including genetic, environmental, and gene-environment interactions—and in-depth study of the major theories. Examines and compares assumptions and models of human behavior that form the basis of each theoretical orientation, and reviews and evaluates the relevant empirical evidence. In addition, basic psychometric concepts and the methods for measuring and assessing personality are covered, as are the major related debates and controversies.

[HD 261(2610) The Development of Social Behavior]
Fall. 3 credits. Highly recommended: HD 115 or PSYCH 120. B. Mikes.
Views issues in the development of social behavior from the perspective of theory and research. Likely topics include bases of social behavior in infancy and early childhood, the role of parents, siblings, and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, and the function and limits of experimental research in the study of social development.

[HD 266(2660) Emotional Functions of the Brain]
Spring. 3 credits. Prerequisites: HD 220, PSYCH 223/460, BIONB 420, or several PSYCH courses. Letter grades only. R. Depue.
After an presenting an overview of the gross neuroanatomy of the primate brain, this course focuses on networks of brain regions that are organized around the integration of processes related to emotion and motivation. First, general features of the brain in relation to emotional evaluation and expression; processes are discussed, and then the brain organization related to several specific types of emotional systems is presented.
including incentive-reward motivation, social bonding, fear versus anxiety and affective aggression. Emotion, memory, and conscious awareness of emotional feelings are also discussed. Neurobiological modulation of emotional processes by neurotransmitters and neuropeptides of wide distribution in the brain are detailed as well. The latter lay the groundwork for understanding the nature of individual differences in much of our social and emotional behavior as explored in HD 366.

HD 282(2820) Community Outreach (also PSYCH 282[2820])
Fall. 2 credits. Prerequisites: HD 115 or PSYCH 101. Students may not register concurrently with HD 327/PSYCH 327 or 328. Letter grades only. H. Segal.
For description, see PSYCH 282.

HD 328(3280) Field Practicum II (also PSYCH 328[3280])
Spring. 3 credits. Limited to 30 students. Prerequisites: HD 327/PSYCH 327 taken previous semester, PSYCH 325 or HD 370 and permission of instructor. Letter grades only. H. Segal.
For description, see PSYCH 328.

HD 334(3340) The Growth of the Mind (also COGST 334[3340])
Spring. 4 credits. Recommended: course in human experimental psychology, statistics, or HD 115 or equivalent, or permission of instructor. S-U grades optional. Not offered 2006-2007. B. Lust.
Introduces the study of human development from conception through the first two years of life in traditional areas (e.g., perception, cognition, socioemotional theory, language, motor function). Strongly emphasizes the fundamental interconnectedness of these aspects of development as well as their relation to the biology of fetal and infant development. Emphasizes topics with implications for general theories of development (e.g., the functional significance of early behavior, the nature of continuity and change, and the ways the environment in development). Also describes conditions that put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights). Research methodology in the study of early behavior and development is emphasized throughout the course.

HD 346(3460) The Role and Meaning of Play
Fall. 3 credits. Limited to 45 students. Prerequisite: junior or senior standing; HD 115. J. Ross-Bernstein.
Examines the play of children ages three through seven. Through seminar discussions, workshops, videos, and individualized research projects students explore the meaning and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.
across the life span may be coded in the brain with hormone and opiates in determining social, genetic, and biological points of view. The manner in which environmental influences across the life span may be coded in the brain and influence the development of personality is explored.

**[HD 368(3680)] Children's Development in Different Cultures**
Spring. 3 credits. Prerequisites: HD 115 or PSYCH 101 and consent of instructor. Letter grades only. Not offered 2006–2007. Staff.
Examines the influence of ecological, cultural, and ethnic factors on the social and cognitive development of children in different cultures. Discusses factors that guide us in making comparisons about parent-child development across cultures. Topics include family origin, behavior of children at different ages, and economic and health issues.

**[HD 370(3700)] Adult Psychopathology (also PSYCH 325(3250))**
Spring. 3 credits. Prerequisites: sophomore, junior, or senior standing; any course in psychology or human development. H. Segal.
For description see PSYCH 325.

**[HD 371(3710)] Child Development and Psychopathology (also PSYCH 371(3710))**
Fall. 3 credits. Priority given to HD 115 and psychology majors. Prerequisites: HD 115 or PSYCH 325 or a B+ or higher in HD 250 or PSYCH 275. Letter grades only. Not offered 2006–2007. J. Haugard.
Explores the development and process of mental, emotional, and behavioral disorders in children, such as mental retardation, autism, depression, and attention deficit disorder. Topics include (1) the classification of mental disorders; (2) biological, psychological, and sociological theories regarding the development and maintenance of mental disorders; (3) prevalence and etiology of childhood mental disorders; and (4) preventive and therapeutic interventions. If there is sufficient enrollment, an optional discussion section will be available to students who would like an opportunity to discuss readings and lecture material in greater depth.

**[HD 382(3820)] Research Methods in Human Development**
Spring. 3 credits. Prerequisite: HD 115. Highly recommended: background in statistics. Letter grades only. M. Casasola.
Students learn about a variety of research methodologies and gain firsthand experience in conducting all aspects of a research project. Students design and conduct one descriptive and one experimental study. They also learn to use statistical software to analyze data.

**[HD 400-401-402-403] Special Studies for Undergraduates**
Full or spring. Credit TBA; 1–4. Prerequisite: permission of instructor. S-U grades optional.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere. Students prepare a multiphase description of the study they wish to undertake, on a form available from the department office in G77 MVR. This form must be signed by the instructor directing the study and the student's faculty advisor and submitted to G77 MVR, the Office of Undergraduate Education. After the form is approved, the student submits it to the college registrar's office, 145 MVR. To ensure review before the close of the periods, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their advisor, should register for one of the following subdivisions of independent study.

**[400(4000)] Directed Readings**
Prerequisite: permission of instructor. For study that primarily involves library research and independent study.

**[401(4010)] Empirical Research**
Prerequisite: permission of instructor. For study that primarily involves data collection and analysis, or both, by the student.

**[402(4020)] Supervised Fieldwork**
Prerequisite: permission of instructor. For study that primarily involves data collection and analysis, or both, by the student.

**[HD 414(4140)] Social and Psychological Aspects of the Death Penalty**
Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing and HD 115 and HD 233 or PSYCH 265. S-U grades optional.
This course will focus on how the field of human development contributes to death penalty cases through the creation of social history reports on death-qualified defendants and will provide training in how to prepare such reports. Students will study relevant areas of death penalty law (e.g., Wiggins v. Smith, mitigation law, pre–post-conviction). Students will also study specific areas of human development research that figure centrally in social history reports (e.g., intelligence testing, educational disability, mental illness and the DSM-IV, social and family environment, prediction of future dangerousness, anti-social personality).

**[HD 418(4180)] Aging: Contemporary Issues**
Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing. HD 218, 250, or 251 or permission of instructor. Letter grades only. Not offered 2006–2007. J. Mikels.
Seminar addressing major issues and controversies in the field of aging. Designed for upper-level students who wish to pursue an in-depth exploration of concepts such as "successful" aging and wisdom, as well as controversial issues of generational equity and the right to die. Although these issues are addressed primarily from a psychological viewpoint, interdisciplinary perspectives are considered and incorporated in both readings and discussions. Also designed for advanced undergraduates who have completed an introductory course in adulthood and aging and wish to pursue such issues in more
depth. Class time is devoted primarily to discussion of assigned readings.

**HD 419(4190) Midlife Development**
Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 218, 250, or permission of instructor. Letter grades only. Offered alternate years. A. Ong.

This seminar-style course examines the burgeoning research literature on adult development and Midlife. Focuses on research and theory examining psychological changes during midlife adulthood such as relativistic and dialectical thinking, personality, identity, and sense of control. Also considers the social and physical changes that occur at this time of life especially regarding issues such as empty nest anxieties, divorce, career transitions, menopause, and cardiovascular disease. Oral presentations, class participation, and an integrative paper are required.

**HD 420(4200) Laboratory in Risk and Rational Decision Making**
Spring. 3 credits. Limit to 20 students. Prerequisites: junior or senior standing and HD 115 and HD 253 or PSYCH 265 or PSYCH 280. S-U grades optional. V. Reyna.

This laboratory course will offer a hands-on introduction to various laboratory techniques that address topics in risk and rational decision making in human development from multiple disciplinary perspectives. The course will include activities such as scientific presentations, collaborative work, peer review, and designing research on topics in decision-making under risk and uncertainty, as well as discussions of scientific methods and interpretation of data. Topics in decision-making methodological issues, war, terrorism, cancer control and prevention (e.g., screening tests), personal behaviors that involve risk (e.g., HIV-prevention), and other public health risks (e.g., vaccinations), law enforcement (e.g., use of a weapon) and legal decision-making (e.g., jury deliberations).

**HD 431(4310) Mind, Self, and Emotion**
Fall. 3 credits. Limited to 20 students. Prerequisites: upperclass undergraduate or graduate standing; HD 115 or PSYCH 101. Letter grades only. Offered alternate years; not offered 2006–2007. Q. Wang.

Examines current data and theory concerning aspects of human behaviors such as language, attention, and memory, as well as the brain mechanisms that may underlie various developmental disorders such as developmental dyslexia, autism, and attention deficit (hyperactive) disorder (AD/HD). Emphasis is on reading primary research literature and acquiring the skills to understand, critique, discuss, and write about primary research. The format includes lecture and discussion.

**HD 432(4320) Cognitive, Social, and Developmental Aspects of Scientific Reasoning**
Fall. 3 credits. Limited to 20 students. Prerequisites: HD 432(4330) Developmental Cognitive Neuroscience.

This course will supplement survey course HD/COGST 334 with additional discussion of current research in the area of cognitive development. Selected current papers which debate issues discussed in HD/COGST 334 will be read and discussed in parallel with the HD/COGST 334 survey course. Modern interpretations and challenges to Piaget's theory will be evaluated in light of current literature in the field. A small-group format will be adopted to encourage discussion.

**HD 437(4370) Lab Course: Language Development**
Spring. 2 credits. Limited to 20 students. Prerequisite: HD 337/COGST/PSYCH/LING 450(450H) or permission of instructor. For description, see COGST 450.

**HD 440(4440) Internship in Educational Settings for Children**
Fall or spring. 9–12 credits. Prerequisites: HD 115, 342, and 348: permission of instructor. Recommended: HD 346. S-U grades optional. J. Ross-Bernstein.

Offers an opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages 2 to 10 and their families. Interns function as participants in varied settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by host teacher and instructor. Students are expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

**HD 448(4480) Advanced Participation with Children**
Spring. 4–8 credits. Limited to 20 students (depending on availability of placements and supervision). Prerequisites: HD 115 and 342 and permission of instructor. Recommended: HD 346. S-U grades optional. J. Ross-Bernstein.

Supervised field-based course designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and the instructor; to keep a journal; and to plan, carry out, and evaluate research projects designed for children within their placement. Conference groups and readings focus on the contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the course. Participation is in settings that serve typical and/or special needs children from three to eight years of age and provide education, care, or special-purpose interventions for them.

**HD 451(4510) Nontraditional Families and Troubled Families**
Spring. 3 credits. Limited to 20 students. Prerequisites: HD juniors and seniors; HD 115 or PSYCH 209; HD 260 or PSYCH 275. Letter grades only. Not offered 2006–2007. J. Haugaard.

Advanced course designed to explore the functioning of families. The first part of the course examines family system theory and how it relates to our understanding of all families. The second part examines four types of families: two nontraditional families (e.g., adoptive families) and two troubled (e.g., families with a chronically ill child).

**HD 452(4520) Culture and Human Development**
Fall. 3 credits. Limited to 20 students. Prerequisite: HD 115 or PSYCH 101. Open to undergraduate and graduate students. Letter grades only. Offered alternate years; not offered 2006–2007. Q. Wang.

This seminar takes an interdisciplinary approach to address the central role of culture in human development. It draws on diverse theoretical perspectives, including psychology, anthropology, education, ethnography, and linguistics, to understand human difference, experience, and complexity. It takes empirical reflections upon major developmental topics such as cultural aspects of physical growth and development; culture and cognition; culture and language; culture, identity, and personality; cultural construction of emotion; cultural issues of sex and gender, and cultural differences in pathology.
adulthood, particularly those arising in the family. Topics include common stressors in the lives of children (e.g., divorce of parents) that have potentially damaging consequences for development. Also covers topics in which Cornell faculty members have conducted significant research (e.g., child abuse and neglect). In addition to considering the negative effect of stress on development, also considers issues of individual differences in stress reactivity, including the concepts of coping and resilience. These topics lead naturally into discussions of practice and policy. 

HD 478(4780) Attention Deficit/ Hyperactivity Disorder in Children
Spring. 3 credits. Limited to 15 students. Prerequisites: HD 115 or equivalent, introductory biology, statistics course. S-U grades optional. Offered alternate years. S. Robertson.

This seminar examines in detail the nature, diagnosis, epidemiology, causes, and treatment of ADHD through a critical evaluation of the recent scientific and medical literature. Also considers implications for families, schools, and society.

HD 483(4830) Early Care and Education in Global Perspective
Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 115, 250, and college-level statistics course. Letter grades only. Not offered 2006–2007. E. Wethington.

Examines parent-child relationships in African American families. Topics include historical influences on contemporary parenting behaviors, the impact of societal forces on African American families' socialization practices, and the influence of parental child-rearing beliefs, strategies, and practices on African American children's development. Particular attention is given to the relevance of mainstream theoretical formulations of African Americans' parental and familial functioning.

HD 498(4980) Senior Honors Seminar
Fall and spring. 1 credit. Requirement for and limited to seniors in HD honors program. S-U grades only. M. Casasola.

Discussion and presentation of honors theses being completed by HD seniors.

HD 499(4990) Senior Honors Thesis
Fall or spring. Credit TBA. Prerequisite: permission of thesis advisor and coordinator of honors program. S-U grades optional. HD faculty.

The Graduate Program

HD graduate courses are open to undergraduates only by permission of instructor.

General Courses

HD 602(6020) Research in Risk and Rational Decision Making
Spring. 3 credits. Limited to 5 students. Prerequisite: HD 420 S-L or letter grades. V. Reyna.

This hands-on laboratory course will inculcate research skills in the context of risk and rational decision making in human development from multiple disciplinary perspectives and with respect to different kinds of decision-making under risk and uncertainty. Such decisions concern war, terrorism, cancer control and prevention (e.g., screening tests), personal behaviors that involve risk (e.g., smoking), and other public health risks (e.g., vaccinations), law enforcement (e.g., use of a weapon), and legal decision-making (e.g., jury deliberations). Students will read the research literature, and discuss the latest findings and scientific theories of risk and rationality, engaging in group work and peer review to hone their skills. Students will then design research projects based on that material as well as additional references tailored to their interests.

HD 614(6140) Social and Psychological Aspects of the Death Penalty
Spring. 3 credits. Limited to 5 students. Prerequisite: Cornell doctoral students S-U grades optional. C. Braiered.

This course will focus on how the field of human development contributes to death penalty cases through the creation of social history reports on death-qualified defendants and will provide training in how to prepare such reports. Students will study relevant areas of death penalty law (e.g., Wiggins v. Smith, mitigation law, pre- vs. post-conviction) and design relevant research. Students will also study specific aspects of human development research that figure centrally in social history reports (e.g., intelligence testing, educational disability, mental illness and the DMS-IV, social and family environment, prediction of future dangerousness, anti-social personality).

HD 617(6170) Adolescence
Fall. 3 credits. Not offered 2006–2007. R. Savin-Williams.

Critically examines seminal theoretical and empirical writings on adolescence development. Considers empirical research on specific questions chosen by students in the light of these approaches.

HD 620(6200) First-Year Proseminar in Human Development
Yearlong. 1 credit. Prerequisite: first-year HD graduate students. S-U grades only. B. Koslowski.

Designed as an orientation to the department and the university. Activities include attendance at research presentations, visits to departmental research laboratories, relevant informational sessions (e.g., University Committee on Human Subjects, College Grants), and guidance in preparing a public research presentation to be made at the end of spring semester.
**HD 631(6310) Preseminar on Cognitive Development**

Designed to help students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to do critical, in-depth analyses of developmental research. Discusses how children's thinking changes over the course of development and explores psychological theories and research on various aspects of cognitive development. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills.

**HD 632(6320) Cognitive Neuroscience Seminar: Applications of Brain Science to Behavioral Research**
Spring. 3 credits. Limited to 25 students. Prerequisite: doctoral students; master's students and undergraduate students who have been approved for research by permission of instructor. S-U grades optional. E. Temple.

Gives graduate students the opportunity to learn about current methods of cognitive neuroscience and related psychological theories and methods. Topics are organized around the integration of neurobiological and cognitive neuroscience science and current findings may affect their field of research. Initial meetings include foundational lectures on the fundamentals of cognitive neuroscience. Subsequent meetings allow students to discuss current topics in cognitive neuroscience that vary by year depending on the research fields of the graduate students enrolled. Topics include cognitive neuroscience of false memory formation, sexual orientation, effects of trauma, and bilingualism. Students do not need to have had previous course work in neurobiology or cognitive neuroscience but rather to be actively engaged in planning or implementing their thesis research. Class format is graduate seminar with reading and discussion of research, student presentations, and papers.

**HD 633(6330) Language Acquisition Seminar (also COGST 633(6330), LING 633(6330))**
Fall. 1-4 credits. Prerequisite: 357 or equivalent and permission of instructor. S-U or letter grades. B. Lust.

This seminar reviews and critiques current theoretical and experimental studies of first language acquisition, with a concentration on insights gained by cross-linguistic study of this area. Attention is also given to the development of research proposals.

**HD 634(6340) Judgment, Decision Making, and Scientific Reasoning**
Fall. 3 credits. Prerequisite: human development or psychology course. Letter grades only. Not offered 2006-2007. B. Koslowski.

Seminar based on selected chapters from *The Cognitive Basis of Science*, ed. by Carruthers, Stich, and Siegal (Cambridge U. Press, 2002), an anthology that resulted from a conference of the same name. Most of the authors treat scientific reasoning very broadly, as an instance of good thinking in general. The book addresses issues of innateness and cross-cultural commonsalities, modularity, the role of cognition in scientific and emotional factors in science and scientific thinking, and the role of the broader social context in scientific reasoning. Appropriate course for someone interested in current cross-disciplinary thinking about scientific reasoning as an instance of good reasoning.

**HD 636(6360) Connecting Social, Cognitive, and Emotional Development**
Spring. 3 credits. S-U or letter grades. M. Casasola.

Opportunity for graduate students to explore several current areas of research from both a cognitive and a social-emotional perspective. Although the traditional approach to the study of development has centered on studying cognitive development as separate from social and emotional development, the current course focuses on how cognitive and socio-emotional development are integrated and how each influences the development of the other. Thus the course is intended to provide a more integrated view of development. As one example, language acquisition, which traditionally has been viewed as a cognitive achievement, depends not only on social interactions but also on achievement in social understanding and awareness. Likewise, acquiring language that describes emotional states plays an important role in developing children's understanding of others' emotional states. Topics are determined by the interests of the graduate students who enroll.

**HD 637(6370) First-Language Acquisition**
Spring. 1-4 credits. Prerequisites: HD 337, LING/PSYCH/COGST 436 and permission of instructor. S-U and letter grades. B. Lust.

This seminar supplements the survey course (HD 357, LING/PSYCH/COGST 436) with more advanced discussion of central issues and materials covered there. Graduate students who are taking the survey course (or who have taken it or an equivalent previously) may also enroll for this seminar.

**HD 640(6400) Infancy**

Examines development in infancy through a critical review of key research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues considered include the role of experiences in early development, sensitive periods, continuity and discontinuity in development, and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development are also considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. Combines perspectives from developmental psychology and psychobiology.

**HD 660(6600) Social Development**
Fall. 3 credits. Letter grades only. Not offered 2006-2007. Staff.

This seminar examines literature relevant to early childhood determinants and developmental processes of personality and social behavior. Addresses current research, theories, and methodological issues. Special emphasis is placed on possible interrelations between the quality of relationships with parents and with peers, and on the meaning of risk, vulnerability, and resilience in children's lives.

**HD 666(6660) Emotions and the Brain**
Spring. 3 credits. Prerequisite: HD 266. Letter grades only. B. Depue.

Concerns networks of brain regions that are organized around the integration of processes related to emotion and motivation. Explores (1) the basic brain mechanisms for recognizing and evaluating emotionally relevant stimuli; (2) the brain mechanisms involved in emotional expression, including hormonal and behavioral variables; (3) the special nature of emotional feelings. Extends all of these basic processes by placing them within larger brain networks that support phylogenetically old emotional-motivational systems that help us to adapt to critical stimuli in the environment. Neurobiological modulation of emotional processes by several neurotransmitters of wide distribution in the brain is detailed. The manner in which emotion influences learning and memory concludes the discussion. There are two take-home essay exams. 

**HD 686(6860) Graduate Seminar in Research Methods**

This course will provide an examination of a variety of basic research methods used in the study of the life course development of individuals and families. Through use of the course text, *A Conceptual Understanding of Experimental*, quasi-experimental, survey, longitudinal, observational, and qualitative methodologies. Faculty who are experts in the use of particular methodologies will be invited to lead class discussions and will recommend readings on the use of a particular methodology. Each semester the course is offered, the specific methodologies covered will be tailored to meet the needs and interests of the students in the course. Nonetheless, we will cover topics that are relevant to all research methodologies, such as the role of theory in research, formulating a specific and testable research hypothesis, measurement, research design, sampling, data analysis, ethics, and scientific writing.

**HD 687(6870) Issues in Professional Development**
Spring. 3 credits. Prerequisite: at least one semester of graduate-level course work. S-U grades optional. Not offered 2006-2007. S. Ceci.

The goal of this seminar is to provide graduate students with essential information about professional activities that are related to careers in the academy, such as publishing in journals, applying for grants, ethical dilemmas in teaching and research, human subjects issues, academic job search issues, career milestones and evaluations, nonacademic positions, values and mores of the professorate.

**HD 691(6910) Poverty, the Life Course, and Public Policy (also DEA 691(6910))**
Fall. 3 credits. Limited to 15 students. Prerequisite: graduate standing. Letter grades only. G. Evans.

For description, see DEA 691.

**HD 692(6920) Seminar in Translational Developmental Science**

Provides graduate students with the knowledge and opportunities to translate developmental research into public interest
positions. A secondary goal is to provide students with essential information about professional activities that are related to translational research, such as publishing in journals and applying for grants.)

HD 711(7110) Psychological Expert Testimony in the Courts [also LAW 711(7110)]
Fall. 3 credits. Prerequisite: permission of instructor. S-U or letter grades. J. Haugard and A. Mooney.

The goals of this course include (1) providing law students and graduate students with the opportunity to work together on a case in which expert testimony from a psychologist will be given, (2) increasing law students' understanding of the strengths and limitations of psychological research, psychological testing, and clinical interviewing, (3) increasing graduate students' understanding of the limits that are imposed on psychological research, testing, and interviewing when it is presented in court, (4) providing law students the opportunity to conduct an examination and a cross-examination of a psychologist expert witness, and (5) providing graduate students with the opportunity to act as an expert witness.

Individualized Special Instruction
HD 700-806(7000-8060) Special Studies for Graduate Students
Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). S-U or letter grades at discretion of instructor.

Independent advanced work by graduate students recommended by their Special Committee chair with permission of the instructor.

HD 700(7000): Directed Readings
For study that predominantly involves library research and independent study.

HD 701(7010): Empirical Research
For study that predominantly involves collection and analysis of research data.

HD 702(7020): Practicum
For study that predominantly involves field experience in community settings.

HD 703(7030): Teaching Assistantship
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

HD 704(7040): Research Assistantship
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

HD 705(7050): Extension Assistantship
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

HD 706(7060): Supervised Teaching
For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

HD 806(8060): Teaching Practicum
For advanced graduate students independently to develop and teach an undergraduate topics course under the supervision of a faculty member.

HD 899(8990) Master's Thesis and Research
Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). Prerequisite: permission of thesis advisor. S-U grades only.

HD 999(9990) Doctoral Thesis and Research
Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). Prerequisite: permission of thesis advisor. S-U grades only.

POLICY ANALYSIS AND MANAGEMENT

Fall or spring. 4 credits. Prerequisite: ECON 101 or equivalent. Students must enroll in a sec. J. Cawley, W. Rosen, and S. Unur. Topics include theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost, models for the following markets-competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; and risk.

PAM 204(2040) Economics of the Public Sector
Fall or spring. 3 credits. Prerequisite: PAM 200. S-U grades optional. J. Lewis. The public sector now spends nearly two out of every five dollars generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course provides an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis are presented, as well as the role of public policy in improving economic efficiency, promoting the goals of equity and social justice, and improving equity by altering the distribution of wealth and income.

PAM 210(2100) Introduction to Statistics
Fall or spring. 4 credits. K. Joyner, J. Lewis, W. Rosen, R. Swisher, and S. Unur. Introduces students to descriptive and inferential statistics. Topics include hypothesis testing, analysis of variance, and multiple regression. To illustrate these topics, this course examines applications of these methods in studies of child and family policy.

PAM 215(2150) Research Methods
Fall or spring. 3 credits. Prerequisite: PAM 210 or equivalent. S. Sassler and M. Waller. Students learn the logic and methods of social science research, as well as how to create researchable questions out of their interests. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies and samples to test hypotheses, measuring variables, and simple descriptive analysis. PAM majors should take this course no later than their junior year.

PAM 222(2220) Controversies about Inequality [also PHIL 195(1950), SOC/D SOC 222(2220)]
Spring. 1–3 credits. Not offered 2006–2007. Staff. For description, see SOC 222.

PAM 223(2230) Consumer Marketing
Fall. 4 credits. Offered alternate years; not offered 2006–2007. R. Avery.

PAM 230(2300) Introduction to Policy Analysis
Fall or spring. 4 credits. R. Avery and J. Gerner. Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to study substantive issues in the public policy arena. Students are introduced to the functions and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course focuses on public policy analysis in the consumer, health, and family/social welfare areas and also includes an introduction to the technical skills required to undertake policy analysis.

PAM 245(2450) Neighborhoods, Families, and the Life Course
Spring. 3 credits. R. Swisher. Considers the social policy implications of research on the effects of geographic inequalities (e.g., neighborhood poverty) on individual and family welfare across the life course. Emphasizes the consequences of neighborhood poverty in adolescence and explores the long-term effects of these early experiences for outcomes later in the life course, and contrasts them to those of working-class, middle-class, and more advantaged youth. Policy implication discussions include welfare reform, housing policy, racial and class segregation, the Moving to Opportunity demonstration program, school vouchers, and neighborhood programs aimed at promoting social capital and community policing.

PAM 303(3030) Ecology and Epidemiology of Health
Spring. 3 credits. S-U grades optional. Staff. Covers ecological and epidemiological approaches to the problems that restrict human health within the physical, social, and mental environments. Uses epidemiological methods and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Discusses application of epidemiology to health care.

PAM 305(3050) Introduction to Multivariate Analysis
Fall or spring. 4 credits. Prerequisites: PAM 210, AEM/ILRST 210 or equivalent. Sex meets once a week. C. Lucarelli and W. Rosen.
Introduces basic econometric principles and the use of statistical procedures in empirical studies of economic models. Discusses assumptions, properties, and problems encountered in the use of multiple regression procedures. Students are required to specify, estimate, and report the results of an empirical model.

PAM 323(3230) Consumer Behavior

PAM 334(3340) Corporations, Shareholders and Policy
Fall. 3 credits. Prerequisite: ECON 101. S-U grades optional. R. Greddes. Uses economic analysis to study the interaction of the market, the corporation, and the law and how these interactions affect the well-being of shareholders and consumers. Examines the costs and benefits of the corporate form of organization. The legal institutions defining the corporation, such as limited liability and shareholder voting, are analyzed along with regulations governing these institutions. A particular focus is mechanisms that control the behavior of managers. Those mechanisms include hostile takeovers, insider trading, outsiders on the board, the role of large investors, and executive compensation plans. Additional topics include government ownership of corporations and nonprofit enterprises.

PAM 335(3350) Low-Income Families: Qualitative and Policy Perspectives
Spring. 3 credits. M. Waller. Examines the experiences and challenges of low-income families in the contemporary United States as documented in qualitative and policy research. Also looks at policies designed to assist these families. Considers such topics as the characteristics and causes of poverty, changes in family structure and the emergence of “fragile families,” nonresident fathers’ relationships with their children, families’ participation in the welfare system and low-wage labor market, and socioeconomic variations in parenting and child well-being.

PAM 336(3360) Evolving Families: Challenges to Family Policy (also SOC 336[3360])
Fall. 3 credits. S. Sassler. This course examines the social institution of the family, challenges to the institution’s well-being and stability, and the role of public policy in these transformations. Topics include family structure and responsibilities; marriage as a traditional building block of the family and challenges to the institution of marriage, including divorce, nonmarital childbirth, cohabitation, and same-sex unions; children, and the impact of family change on their well-being, including the effects of child poverty, maternal employment, and paternal involvement. The role of public policy in managing and shaping these developments will be discussed.

PAM 337[3370] Racial and Ethnic Differentiation (also SOC 337[3370])
Spring. 3 credits. S. Sassler. This course provides an overview of perspectives used in sociological studies of race and ethnicity. We will read classic and contemporary research on racial and ethnic relations in the United States. The first part of the course covers a variety of theories on race-ethnic relations and addresses issues related to the social construction of race, racial identities, and the impact of immigration on racial dynamics. We next examine racial and ethnic inequality in social and demographic outcomes. The course concludes with readings that explore interracial contact and multi- racial populations.

PAM 340(3400) The Economics of Consumer Policy
Fall. 4 credits. Prerequisite: PAM 200 or permission of instructor. S. Unur. Familiarizes students with the economic analysis of consumer policy issues. Uses the tools of microeconomic analysis to investigate the interaction between government and the marketplace, with an emphasis on how that interaction affects consumers. Examines the rationale for and effects of regulation of industry. Considers alternative theories of regulation, including the capture, economic, and public interest theories. Applies those theories to specific types of regulation, including economic regulation of specific industries (e.g., telecommunications, electricity, trucking, railroads, postal services) as well as to regulation (e.g., health, safety, environmental). The effects of regulatory reform in numerous industries are also examined. An attempt is made to examine current topics relating to consumer policy.

PAM 341(3410) Economics of Consumer Law and Protection
Spring. 3 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. J. Gerner. Economic analysis of the roles played both by the courts and by federal and state regulators in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, product liability, accident law and antitrust law, and the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

PAM 346(3460) Economics of Social Security (also ECON 447[4470])
Fall. 3 credits. Prerequisite: PAM 200. S-U grades optional. R. Burkhauer. Provides students with an economic perspective on the social security policies. The readings illustrate the use of economic analysis to predict the behavioral effects and income distributional consequences of policy. Focuses primarily on the Old-Age, Survivors, and Disability Insurance Program but also discusses other programs such as the Supplemental Security Income and mandates, for example, the Americans with Disabilities Act, that affect the aged and those with disabilities.

PAM 350(3500) Contemporary Issues in Women’s Health
Fall. 3-5 credits. A. Parrot. Deals with the history of women in medicine and the historical and cultural treatment of women’s health problems. Also addresses health care research and the exclusion of women from research trials and protocols. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations are also discussed in depth. Students may take the course for a fifth credit, which requires attending a discussion section every other week and observing 12 facilities (e.g., birthing center, mammogram, and ultrasound center, wellness center, hospital labor and delivery unit, LaMaze class, women’s self defense class) that provide a variety of women’s health care. Some of these visits will be virtual visits available through the course web site, others will require in- person attendance.

PAM 371(3710) Demography and Family Policy
Fall. 3 credits. K. Joyner. Examines from a demographic perspective family policies that concern children and adults. Toward this end, it considers the relationships between family policies and demographic behavior. It also addresses the effects of family policies and demographic behavior on the well-being of children. Although this course focuses on the United States, it considers U.S. trends against the backdrop of changes in other industrialized countries.

PAM 380(3800) Human Sexuality
Spring. 4 credits. Limited to 150 students. Prerequisite: introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: biology course. Two 75-minute lec and 1 sec per week. A. Parrot. Provides students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. Focuses on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues and needs, and/or problems. Addresses future trends in sexuality.

PAM 383(3830) Social Welfare as a Social Institution
Fall. 4 credits. S-U grades optional. J. Allen. Provides a philosophical and historical orientation to social welfare policy, programs, and services. Examines the social, political, and economic contexts within which social welfare policies have evolved in the United States. Analyzes the ideological, political, and social processes through which public policy is formed and focuses on the issue of social justice, social and economic disparities, and the process by which public policies are translated into social welfare programs. The importance of a global perspective is emphasized in the context of current program design, public concerns, interrelationships, and human need.

PAM 392(3920) New York State Government Affairs: Capital Semester in Albany
Spring. 15 credits; for HE students, 7 credits count toward outside-the-major requirement; for PAM majors, credits satisfy capstone requirement and 7 additional PAM credits. Prerequisite: permission of instructor; sophomores, juniors, and seniors; with minimum 2.3 GPA. W. Rosen. Students participate in either the New York State Assembly or New York State Senate Intern Programs. Internships include research on legislation, support for legislator initiatives and public hearings, work on constituent and interest group issues, and other tasks. Students also participate in one “in-residence” course, and Cornell students also participate in a seminar conducted by W. Rosen. Students earn $3,500 stipend.
stakeholders in health care delivery, including regulators, providers, health plans, employers, and consumers. Describes the history and organization of health care, behavioral models of utilization, issues of health care reform, and current trends. Provides an overview of the key elements of the field including ambulatory care services, mental health services, hospitals and clinicians, insurers, the role of public health organizations, and the politics of health care in the United States.

**PAM 437(4370) Economics of Health Policy**
Spring. 3 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. K. Simon.
Uses the economic tools of policy analysis to understand the health care system and critically evaluate current policy debates. In the past decade, some of the most controversial policies considered by state and federal governments have involved issues that have been studied by health economists and health services researchers. Uses the United States as its main institutional framework, but also pays attention to health care topics of international concern, such as the AIDS epidemic.

**PAM 440(4400) Critical Perspectives**
Fall. 3 credits. J. Allen.
Presents an overview of different perspectives on U.S. social policies and programs with an emphasis on health, education, social welfare, family, and consumer issues. Analyzes and contrasts historical, social, scientific, and personal perspectives. Students explore the inevitability and legitimacy of diverse perspectives on social conditions, policies, and programs. Students also gain knowledge about the social contexts, conditions, policies, and programs presented; critically analyze them; employ the conceptual frameworks presented; and evaluate policy debates by applying these insights.

**PAM 441(4410) Evidence-Based Practice**

**PAM 444(4440) Violence against Women: Policy Implications and Global Perspectives (also FGSS 448(4480))**
Spring. 3 credits. A. Parrot.
Focuses on the historical and current reasons for and impact of the alarming rate of violence against women both domestically and internationally. Considers the impact of legislative, public, social, or religious policies on the incidence of such violence. Considers rape, child sexual abuse, homicide, battering, hate crimes, gay bashing, kidnapping, ethnic cleansing, war crimes, forced prostitution, female genital mutilation, honor killings, public beating, lashing, stoning, torture, female infanticide, trafficking of women, forced abortions, acid attacks, sexual slavery, and sati (self-immolation). Each student is required to evaluate the impact of one current policy and critique the potential value of one pending policy relating to violence against women.

**PAM 457(4570) Innovation and Entrepreneurship in the Health Care Industry**
Spring. 3 credits. Prerequisite: PAM 435 or permission of instructor. Not offered 2006-2007. J. Kuder.
PAM 552(5520) Health Care Services: Consumer and Ethical Perspectives
Fall. 3-4 credits; 4-credit option may be used as Biology and Society senior seminar option. Limited to 30 students. Prerequisite: undergraduate by permission of instructor. A. Parrot. Focuses on consumer and ethical issues faced by professionals in the health care field today. Broad topics discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care, services for the medically indigent and elderly, practice training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and grannny Doe cases.

PAM 554(5540) Legal Aspects of Health Care
Spring. 3 credits. Prerequisites: PAM 557 or permission of instructor. Offered alternate years; not offered 2006-2007. H. Allen.

PAM 556(5560) Managed Health Delivery Systems: Primary-Ambulatory Care
Fall. 3 credits. Prerequisite: PAM 557 or permission of instructor. Not offered 2006-2007. J. Kuder.

PAM 557(5570) Health Care Organization
Fall. 3 credits. Limited to 30 students. Prerequisite: Sloan students or permission of instructor. Offered alternate years. D. Battelle. Graduate-level introduction to the organization of health providers in the United States, the interrelationships of health services and the major sources and methods of paying for care. Describes how health services are structured in the United States and how these different services interrelate along the continuum of care. Describes and analyzes organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Also presents innovations by the public and private sectors in the delivery and reimbursement of health care.

PAM 558(5580) Field Studies in Health Administration and Planning
Fall or spring. Fall, 1 credit; spring, 3 credits. Graduate-level course for second-year Sloan students. Staff. Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 559(5590) Epidemiology, Clinical Medicine, and Management Interface Issues
Spring. 3 credits. Staff. Explores, from an empirical and analytical framework, the relationships between epidemiology, clinical medicine, and management. Covers the epidemiology, policy issues, and treatment of selected diagnoses accounting for a significant percentage of utilization and cost of health care services. In addition, students have an opportunity to explore issues of allocation and continuous quality improvement. The format is lecture, discussion, and case analysis.

PAM 561(5610) Economics of Health and Medical Care

PAM 562(5620) Health Care Financial Management I
Spring. 3 credits. S. Nicholson. Provides a framework for evaluating how a firm should make investment and financing decisions to create value for its shareholders or stakeholders. Most of the course focuses on profit-maximizing firms, although it also discusses whether and how the investment and financing decisions are different for nonprofit firms that are prevalent in the health care industry. Therefore, this is primarily a course on general corporate finance.

PAM 563(5630) Health Care Financial Management II
Fall. 3 credits. Prerequisite: PAM 562 or other financial management course. S. Nicholson. Focuses on the financial analyses that managers in the health care industry use to make strategic and operating decisions. Begins by examining how health insurers design and price their products and manages enrollee's medical expenditures. Next reviews two different methods of valuing a medical product/service, and two methods of estimating the value of a company. The four valuation methods covered are: net present value of discounted cash flows, decision tree analysis/real options, multiples, and the venture capital method. Seven cases allow students to apply the skills to examine decisions/situations such as: determining why a Medicare HMO is losing money and recommending a redesigned benefit and reimbursement structure; estimating a health system's profitability by product line; valuing a pharmaceutical company; determining whether a medical device company should go public and how it should price its products.

PAM 564(5640) Information Resources Management in Health Organizations
Spring. 3 credits. Prerequisite: strong basic computer skills. S. Nicholson. Graduate course in health administration. Exposes students to the opportunities and challenges inherent in the use of health management information systems (HMIS) in both clinical and nonclinical applications. Focuses on the manager's role in the application of HMIS to solve problems and address concerns in today's health care service industry. Students learn how an HIMS can enhance the ability to organize, orchestrate, and control interprofessional and intra-professional teams. Emphasizes applications to health care organizations.

PAM 565(5650) Strategic Management and Organizational Design of Health Care Systems
Fall. 3 credits. T. de Lara. Examines strategy and design issues faced by health care organizations. Topics include analysis of market conditions, organizational culture issues, development of an organizational mission and management strategy, the management of professionals, and the importance of roles, structure, and inter- and intra-institutional relationships within organizations. Taught via a case study approach.

PAM 567(5670) Health Policy
Fall. 3 credits. Prerequisite: Sloan MHA students, Ph.D. students, or permission of instructor. K. Simon. Addresses major health policy issues and the critical processes that influence them. Focuses primarily on the United States, with some coverage of health policy in other countries. Topics include Medicare, Medicaid, the uninsured, public health, the effect of welfare policy on health care, managed care development and regulation, state and federal health care reform, and many others. The course analyzes the policies of health policy in terms of legislative and executive processes, the forces involved including economic, sociological, and political factors, and key players in health policy, such as special interest groups, public agencies, and elected officials.

PAM 569(5690) Regression Analysis and Managerial Forecasting
Fall. 4 credits. Prerequisite: at least one statistics course. C. Lucarelli. Teaches various statistical methods for managerial decision making, with a particular emphasis on regression and forecasting. Other topics include ANOVA, correlation, confounding, interaction, and statistical process control. Emphasizes applications to health care organizations.

PAM 570(5700) Health Care Accounting
Fall. 4 credits. Core course for Sloan MHA students. W. Schlesinger.

PAM 571(5710) Organizational Development/Human Resource Management in Health Care Organization
Fall. 3 credits. Prerequisite: graduate standing. N. Fabrizio.

Explores (1) the theoretical foundation of organizational theory, research, and human resource management with an emphasis on implementation; (2) real-world problems while analyzing, exploring, and discussing varied interpretations of selected cases; (3) the building blocks of managerial activity: internal organizational issues, performance issues related to organization design; and strategic issues. Key organizational change and development concepts enhance students' perspectives on how the theories, strategies, and practices relate to today's organizations.

The course serves as a framework to...
establish the theory and both the conceptual and competency foundations necessary for applying interventions.

**PAM 572(5720) Economic Evaluations in Health Care**

**PAM 574(5740) Short Course in Fundamentals of Health Facility Planning for Managers**
Spring. 1 credit. B. Hollis.
Provides MHA and other students who may be interested in careers in health care management with a basic familiarity regarding some of the concepts and terminology related to health facility planning projects. The course will touch on areas that a manager might encounter, including working with designers, the relationship between strategic planning issues and facility planning, basic cost estimating techniques, simplified plan interpretation, and use of architectural and engineering scales. The course will have two primary components. One portion will be lectures and hands-on demonstrations on plan reading/measurements and an overview of the process of project planning. We anticipate a tour of an active or recently completed project at either Cornell or Cayuga Medical Center as time allows. The other will involve live or videoconference presentations from invited practitioners and researchers in the health facilities area.

**PAM 576(5760) Long-Term Care and Life Style Alternatives for the Older Adult**
Spring. 1 credit. M. Weidner.
Provides students with exposure to, and fosters critical thinking about policy, and operational issues related to health care and living alternatives for the older adult. Preliminary readings will introduce the students to societal issues of the aging, clinical issues facing the older adult, and management operations for nursing homes, independent living communities, assisted living, and home care. Emphasis will be placed on interaction between instructors and other seminar participants regarding society and management issues. Case studies will be used to enhance student interaction and participation.

**PAM 577(5570) Marketing for Health Care Managers**
Spring. 3 credits. Prerequisites: microeconomics and permission of instructor. D. Perosio.
Introduces students to the substantive and procedural aspects of marketing strategy and management. The course is designed to capture the key concepts of marketing and how they fit into the larger context of overall management strategy and decisions. Both the practical "how" and the fundamental "why" of marketing activities will be explored. Course examples rely heavily on actual situations and experiences in the health care industry. Students will apply their knowledge of marketing and health care management to the development of a marketing plan.

**PAM 600(6000) Special Problems for Graduate Students**
Fall and spring. Credit TBA. S-U grades optional. Staff
Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

**PAM 601(6010) Policy Process and Theory**
Fall. 3 credits. R. Swisher.
Introduces students to the policy process model, goal setting and program formulation through identification of policy alternatives, cost-benefit analysis and policy selection, implementation, monitoring, and feedback. At each stage, students read and discuss theoretical contributions from across the social sciences and political philosophy that help to contextualize and "socially embed" this mainstream, microeconomics-driven model. Such contributions include notions of bounded-rationality, satisficing, incrementalism, and muddling-through from organizational behavior, heuristics and biases from social psychology; theories of justice from political philosophy; habits and other pragmatic logics from anthropology; and concepts such as bureaucracy, power, status, symbolic interaction, and social learning from sociology and psychology.

**PAM 603(6030) Experimental, Quasi-Experimental, and Economic Evaluation Methods**
Spring. 3 credits. Highly recommended: background in statistics (e.g., BTRY 601 or equivalent) and microeconomics (e.g., PAM 200, PAM 547, or ECON 639). E. Peters.
Focuses on quantitative methods of policy analysis and program evaluation, with an emphasis on those programs and policies that are related to health, family, and consumer issues. The first part of the course covers experimental design and methods of making causal inferences from non-experimental data. The second part covers benefit-cost analysis, explicitly incorporating both equity and efficiency considerations. Throughout the course attention is paid to the role of economic modeling in program evaluation, including the role of structural theoretical models and general equilibrium analysis.

**PAM 604(6040) Qualitative, Survey, and Mixed-Method Approaches to Policy Research**
Spring. 3 credits. Prerequisite: Ph.D. students. Highly recommended: previous course in social science research methods. M. Wiltzie.
Introduces students to theories and methods of data collection techniques such as in-depth interviews, ethnography, focus groups, and surveys as well as mixed-method approaches used in policy and evaluation research. Addresses the strengths and weaknesses of various methods and the design of qualitative and mixed-method studies. Covers epistemology, ethics, induction and deduction, measurement, validity, and triangulation. Also discusses more concrete issues such as gaining access to a field site, developing a qualitative interview guide and survey questionnaire, conducting a qualitative interview, managing data, and assessing data quality.

**PAM 605(6050) Economics of Family Policy**
Fall. 3 credits. Prerequisite: PAM 639 or ECON 609 or permission of instructor. S-U grades optional. Not offered 2006-2007. E. Peters.

**PAM 606(6060) Demographic Techniques (also D SOC 608[6080])**
Fall. 3 credits. S-U grades optional. D. Gurak and K. Joyner.
For description, see D SOC 608.

**PAM 608(6080) Economics of Consumer Demand (also AEM 670[6700])**
Fall. 3 credits. Prerequisites: PAM 600, ECON 313, or concurrent enrollment in one of those, and two semesters of calculus. S-U grades optional. C. Ranney.
For description, see AEM 670.

**PAM 611(6110) Social Demography**
Fall. 3 credits. Prerequisites: STBTRY 601, SOC 505, or equivalent. K. Joyner.
Considers demographic behavior from a sociological perspective. Topics include fertility, cohabitation, marriage, divorce, inequality, immigration, and health. Close attention is paid to the effects of social policies on demographic behavior. To a lesser extent, this course addresses the effects of social policies and demographic behavior on individual well-being. Although a background in demographic methods is not required, some of the assigned articles are based on these methods.

**PAM 631(6310) Ethics, Public Policy in American Society**
Fall. 3 credits. Prerequisite: senior or graduate standing. Not offered 2006-2007. J. Ziegler.

**PAM 632(6320) The Intergovernmental System: Analysis of Current Policy Issues**
Fall. 3 credits. Prerequisite: graduate students or seniors who have had course in American government. J. Ziegler.
Offers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Pays particular attention to how certain policy and human service issues are played out at the federal, state, and local levels of government, and to the formulation of federal and state budget policy. Considers general public administration theoretics with an emphasis on those programs and policies that are related to health, family, and consumer issues. The first part of the course covers experimental design and methods of making causal inferences from non-experimental data. The second part covers benefit-cost analysis, explicitly incorporating both equity and efficiency considerations. Throughout the course attention is paid to the role of economic modeling in program evaluation, including the role of structural theoretical models and general equilibrium analysis.

**PAM 632(6320) The Intergovernmental System: Analysis of Current Policy Issues**
Fall. 3 credits. Prerequisite: graduate students or seniors who have had course in American government. J. Ziegler.
Offers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Pays particular attention to how certain policy and human service issues are played out at the federal, state, and local levels of government, and to the formulation of federal and state budget policy. Considers general public administration theoretics with an emphasis on those programs and policies that are related to health, family, and consumer issues. The first part of the course covers experimental design and methods of making causal inferences from non-experimental data. The second part covers benefit-cost analysis, explicitly incorporating both equity and efficiency considerations. Throughout the course attention is paid to the role of economic modeling in program evaluation, including the role of structural theoretical models and general equilibrium analysis.

**PAM 633(6330) Seminar in Pharmaceutical Policy Issues**
Fall. 2 credits. S-U grades optional. Meets once a week. S. Tennyson.
Exposes students to, and fosters critical thinking about, consumer and health policy issues related to pharmaceuticals and the pharmaceutical industry. A key component of the seminar is invited presentations from practitioners and researchers in pharmaceutical policy. Specific topics vary and depend in part on the interests of the invited speakers. Students are required to write critiques of invited papers and a literature review on a selected topic in pharmaceutical policy.

**PAM 639(6390) Microeconomics for Policy Analysis**
Fall. 4 credits. Prerequisites: intermediate economics and calculus course; Ph.D. students; undergraduates by permission of instructor. Not offered 2006-2007. J. Cawley.
PAM 640(6400) Consumers, Information, and Regulatory Policy

PAM 691(6910) Health Economics I (also ECON 691[6910])
Spring. 3 credits. First course in Ph.D.-level health economics sequence. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. J. Cawley.
Comprehensive course covering microeconomic theory and its application to health and health care markets. Topics include consumer decision making, the theory of the firm, welfare economics, monopolies and oligopolies, and market imperfections. Applications in health economics include the demand for health, rational addiction, the industrial organization of health care, cost-effectiveness analysis, price discrimination by health care providers, how consumers respond to information about health care, adverse selection in health insurance, and the moral hazard created by physician compensation strategies. Each student writes a research paper, testing predictions from microeconomic theory by acquiring suitable data and estimating the appropriate econometric model, and presents his or her findings in a research seminar.

PAM 692(6920) Health Economics II
Fall. 3 credits. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. D. Kenkel.
Covers microeconomic theory and its applications to health and health care markets. Topics include consumer demand for health and health behaviors, the supply side of health promotion, the industrial organization of health care, and cost-benefit and cost-effectiveness analysis of health interventions. Second course in Ph.D.-level health economics sequence, but the courses may be taken in any order.

PAM 760(7600) Challenges and Trends in the Health Services Industry
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. W. White.
Provides students with information and exposure to current and emerging issues in the health services industry. Topics may include financial management of health care facilities, human resource management, information systems, cost-effective clinical decision making, quality measurement and outcomes, public health, and entrepreneurship in the health services industry.

PAM 899(8990) Master's Thesis and Research
Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional.

PAM 999(9990) Doctoral Thesis and Research
Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional.

TXA 114(1140) Introduction to Computer-Aided Design
Fall. 3 credits. Limited to 14 students per section. Priority given to TXA students. S-U grades optional. Minimum cost of materials: $80. A. Racine.
Studio course that explores the creative potential of microcomputers. Uses AutoCAD software program as a design tool for generating a wide variety of visual images. Introduces basic Photoshop software commands. Includes daily hands-on demonstrations and studio work. Students develop two- and three-dimensional designs based on historical, cultural, and museum sources for portfolios and display.

TXA 177(1770) Fashion Graphics (Drawing the Clothed Figure)
Spring. 3 credits. Limited to 21 students. Priority given to apparel design students. Prerequisite: basic drawing course. Letter grades only. Minimum cost of supplies: $125; lab fee: $30. V. D. Lewis.
Students develop both familiar and unfamiliar methods that enable them to draw the fashioned body and ancillary expressions of fashion. Drawing is explored as a communicative medium for visual research and as a creative tool for image creation.

TXA 125(1250) Art, Design, and Visual Thinking
Fall. 3 credits. S-U grades optional. C. Jirousek.
Introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an Internet-based electronic textbook, lectures emphasize the varieties of visual expression seen in works of art and design. Discusses social, cultural, and historic interpretations of visual expression.

TXA 135(1350) Fibers, Fabrics, and Finishes
Spring. 3 credits. S-U grades optional. M. Frey.
Introduction to fibers, fibrous materials, and dyes and finishes. Gives special emphasis to the use of fibrous materials in apparel, residential and contract interiors, and industrial applications. Topics include fiber properties, fabric structure, coloration of fibrous materials, dimensional stability, flammability, product specifications, and performance standards.

TXA 136(1360) Fiber and Yarn Analysis Laboratory
Consists of 14 laboratory sessions, in which students learn techniques to identify and test fibers and yarns. A mid-term and final exam are based on using the methods learned to identify an unknown fiber (midterm) and an unknown bi-component yarn (final).

TXA 145(1450) Introduction to Apparel Design
Spring. 4 credits. Limited to 30 students. 15 per lab. Priority given to TXA students and entering into TXA. Prerequisite: TXA 114. Letter grades only. Apparel design majors should take course during first year. Minimum cost of materials: $200. A. Racine.
Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in children's apparel. Students develop an understanding of the techniques needed to produce apparel from sketches, including patternmaking and garment assembly.

TXA 237(2370) Structural Fabric Design
Fall. 3 credits. Prerequisite: TXA 135. Recommended: college algebra. S-U grades optional. M. Frey.
Covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

TXA 264(2640) Draping
Fall. 4 credits. Limited to 30 students: 15 per lab. Prerequisites: TXA 125 and 145. Recommended: drawing course. Letter grades only. Minimum cost of materials: $250; lab fee: $10. S. Ashdown.
This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. The principles and processes of draping, advanced flat pattern making, and fitting are studied through projects. Drawing exercises focus on the communication of three-dimensional garments in two-dimensional sketches. Assigned problems require students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

TXA 265(2650) Apparel Patternmaking
Spring. 3 credits. Limited to 30 students. Prerequisites: TXA 114, 117, 125, 145, and 135 (may be taken concurrently). Letter grades only. Minimum cost for fabrics, studio, and portfolio supplies: $250. A. Racine.
The goal of this apparel studio course is to expand student competencies in flat pattern design and analysis and fitting techniques. Students generate original design concepts using fashion sources from historic to contemporary times. The Cornell Costume Collection is used for inspiration and instruction. Full-scale samples in various levels of completion, from paper patterns to muslins to finished garments, include detailed technical drawings for portfolios.

TXA 266(2660) Apparel Design: Product Development
Spring. 3 credits. Prerequisites: TXA 114, 145, and TXA 117 and 265 (may be taken concurrently). Letter grades only. Minimum cost of materials: $250; lab fee: $10. S. Ashdown.
Project-based course in which students explore the relationship between technology and design. Students learn computer-aided pattern-making, grading, manufacturing technologies, communication of technical details, flats, specifications, and costing of garments and how those factors affect design. Designs are developed to various stages from conceptual work to final garment.

TEXTILES AND APPAREL 333
HUMAN ECOLOGY - 2006-2007

TXA 300(3000) Special Studies for Undergraduates
Fall or spring. Credit TBA. Staff. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from their college registrar's office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

TXA 325(3250) Color and Surface Design of Textiles

Studio experience in textile surface design and color theory. Students produce a portfolio of textile design technique samples, color exercises, and a final yardage project.

TXA 335(3350) Fiber Science
Fall. 3 credits. Limited to 20 students. Prerequisites: college chemistry and physics. S.U. grades optional. A. N. Netravali.

Covers fibers commonly used in various engineered apparel applications. Topics include the nature of polymer molecules, the chemical structure of organic fibers, inorganic fibers, micro-macro structure of fibers, fiber dimensions, environmental effects, and mechanical, optical, thermal, and frictional properties of fibers. The following fiber uses are discussed: composites in aerospace and other structural components, circuit boards, bullet proof vests, sutures, artificial arteries, prosthetics, sporting goods, and others.

TXA 336(3360) Fundamentals of Color and Dyeing Fall. 3-4 credits. 3 credits for lec only; 4 credits for lec and lab. Fiber science students required to take lab. Prerequisites: college natural science requirements. S-U grades optional. T. A. C. N. Next offered 2008-2009. C. C. Chu.

Theories and scientific principles of color for design, marketing, or research. Addresses how colors are used to dye fabrics. Includes guest lectures from the industry.

TXA 346(3460) Design Process Fall. 4 credits. Limited to 30 students. Prerequisites: TXA 135, 145, 204, and 265. Letter grades only. Minimum cost of materials: $250; lab fee: $10. V. D. Lewis.

Exposition of the methods used by the creative fashion designer. Aims to develop students' understanding of the empathy needed as designers. Unites a provocative design issue with the requirement of functionality and emphasizes pattern cutting as a way of realizing design ideas.

TXA 369(3690) Style, Fashion, and the Apparel Industry Fall. 3 credits. Was TXA 269. Limited to 30 students. Not open to freshmen. Prerequisites: TXA 125, 135, and 237. Priority given to TXA majors. Letter grades only. A. Raine.

Illustrated lectures focus on changes in the U.S. apparel industry and fashion from the 19th century to the present day resulting from social forces, technological developments, and shifting demographics. The Costume Cornell Collection is used for discussion. Students write a term paper on issues relating to the fashion industry.

TXA 370(3700) History of Color and Design in Textiles Fall. 3 credits. Prerequisite: TXA 125 or permission of instructor. S-U grades optional. Offered alternate years. C. Jirousek.

Explores color theory principles, color trends, science and technology of color measurement, color and design, color in construction and embellishment, use of pigments and dyes, and history of textile design as a designer resource. Students complete hands-on exercises, two exams, and a paper.

TXA 400-401-402-403(4000-4010-4020-4030) Special Independent Studies for Undergraduates
Fall, summer, or spring. Credit TBA. Staff.

For advanced independent study by an individual student or for study on an experimental basis in a small group of students in a field of TXA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake on a form available from the department or elsewhere at the university. The form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration along with an add/drop slip in the college registrar's office (145 MVR). To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

TXA 400(4000): Directed Reading. For study that predominantly involves library research and independent reading.

TXA 401(4010): Empirical Research. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

TXA 402(4020): Supervised Fieldwork. S-U grades only. For study that involves both field observation and collection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

TXA 403(4030): Teaching Apprenticeships. Fall or spring. 2-4 credits. Prerequisites: upper-class standing; demonstrated high level of performance in subject to be taught and in overall academic program, and permission of instructor and department chair. S-U grades optional. Staff. Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

TXA 411(4110) Apparel Production and Management Fall. 3 credits. Limited to 40 students. prerequisites: ECON 101 and 102 and upper-division course in either apparel or textiles. S-U grades optional. Staff. Introduction to the global textile and apparel industry, particularly the technical and economic aspects of apparel production. Includes analysis of specific apparel manufacturing and management issues such as international sourcing, Quick Response, mass customization, production and information technology, labor, and logistics.

TXA 432(4320) Product Quality Assessment
Spring. 3 credits. Limited to 36 students in lec, 16 per lab. Prerequisites: TXA 135 and statistics course. S-U grades optional. Lab fee: $15. N. Breen.

Covers evaluation of fibers, yarns, fabrics, and garments, with emphases on the meaning of standards, testing philosophy, quality control, and statistical analysis. Discusses day-to-day tests done in the textile and apparel industry. Laboratory sections introduce students to various test methods, data generation for analysis, and evaluation.

TXA 436(4360) Fiber Chemistry
Spring. 3 credits. Prerequisite: senior or first-year graduate standing. S-U grades optional. Offered alternate years; next offered 2007-2008. C. C. Chu.

Chemical and physical structure of several commercially important fibers and their polymerization process. Discusses color chemistry and relationship to fiber dyeing.

TXA 439(4390) Biomedical Materials and Devices for Human Body Repair (also BME 5390)
Spring. 2-3 credits. Prerequisites: junior or senior standing; college natural science requirement (chemistry or biology). S-U grades only for 2 credits, letter grades only for 3 credits. N. Breen.

Surveys materials and devices for repair of injured, diseased, or aged human tissues/or- gans. Includes properties of synthetic and biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, hearts, joints, bones, nerves, male impotence, vision/hearing/voice, and drug control/release.

TXA 444(4440) Apparel/Textile Retailing and Distribution
Fall. 3 credits. Prerequisites: junior or senior standing, TXA 135 and marketing course. S-U grades optional. Lab fee: $15. N. Breen.

Overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. Includes the organization and structure of both domestic and international retailers along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies are emphasized throughout.

TXA 466(4660) Textiles, Apparel, and Innovation
Fall. 3 credits. Prerequisite: TXA 237. Recommended: TXA 432. S-U grades optional. Cost of field trip: $100. Offered alternate years. S. Ashdown and J. Hines trea.

Designed for students in all TXA options. Explores the relationship between materials and design with a concentration on the use of innovative textile materials in apparel. Both aesthetic and functional issues are addressed. The course consists of a combination of lecture, discussion of readings, oral reports, a research paper, and project work. There is a one-day field trip to New York City.
TX A 470(4700) Fashion Presentation: Portfolio Development
Fall. 3 credits. Limited to 25 students. Prerequisites: TXA 117, 264, 265, and 346. Minimum cost of materials: $250. V. D. Lewis.
Students gain an understanding of presentation methods currently used by fashion designers, runway illustrative journalists, forecasting artists, and fashion editorial illustrators. Skills in fashion illustration, image manipulation, and photography are developed. To satisfy personal philosophies of fashion, students discover and adopt current presentation techniques with new and original effects. Students must bring all past project work for possible inclusion in the portfolio.

TX A 499(4990) Honors Thesis Research
Fall and spring. 1–6 credits, max. 6 credits for graduation. Prerequisite: TXA students admitted to college honors program. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

TX A 600(6000) Special Problems for Graduate Students
Fall or spring. Credit TBA. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

TX A 620(6200) Physical Properties of Fiber-Forming Polymers and Fibers
Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years. V. D. Lewis.
Covers formation and properties of fiber-forming polymers, rubbery, glassy, and crystalline states and their interconnection. Discusses fiber structure, relationship between chemical structure and physical properties of manufactured and natural fibers, mechanical, thermal, and viscoelastic properties of fibers and testing methods.

TX A 626(6260) The Chemistry of Textile Finishes and Dyeing
Fall. 3 credits. Prerequisite: TXA 336 or equivalent and organic chemistry course or permission of instructor. S-U optional. C. C. Chu.
Discusses chemical aspects of textiles with emphasis on finishes and dyeing. Studies industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, water repellency. Emphasizes the correlation of the observed effect with chemical structure, end-use influences, interaction with fabric and fibers, sources, and synthetic routes. Briefly discusses the environmental effect of these textile chemicals and current federal regulation.

TX A 637(6370) Research Seminars in Apparel Design
Fall and spring. 1 credit; repeat of course each semester encouraged for all apparel design graduate students. Prerequisites: permission of individual instructor for advanced undergraduates. S-U grades only. Apparel Design faculty.

[TX A 639(6390) Mechanics of Fibrous Assemblies
Fall. 3 credits. Prerequisite: solid mechanics course or permission of instructor. S-U grades optional. Offered alternate years; next offered 2007–2008. Staff.
Studies the mechanics of fiber assemblies: deformation of yarns and fabrics in tensile, shear, and compressive stress; bending and buckling.]

TX A 664(6640) Human Factors: Anthropometrics and Apparel
Fall. 3 credits. Open to advanced undergraduates. Prerequisites: statistics course and permission of instructor. S-U grades optional. Offered alternate years. S. Ashdown.
Seminar course focusing on the human form and its relationship to clothing. Includes discussion of quantification of body sizes and human variation; historical, cultural, and aesthetic concepts of fit; apparel sizing techniques; and international and international sizing systems and standards; impact of sizing systems on various populations (e.g., elderly, disabled).

[TX A 666(6660) Fiber Formation: Theory and Practice
Spring. 3 credits. Prerequisites: polymer chemistry, college physics, TXA 436, 620, or permission of instructor. S-U grades optional. Offered alternate years; next offered 2007–2008. M. Frey.
Covers the practical and theoretical analysis of the chemical and physical principles of the methods of converting bulk polymer to fiber.]

[TX A 670(6700) Fashion Theory
Spring. 3 credits. Prerequisite: TXA 346 for undergraduates or similar course for graduates. Letter grades only. Offered alternate years; next offered 2007–2008. Minimum cost of materials: $250. V. D. Lewis.
The course connects theoretical concepts in criticism, philosophy, and fashion scholarship with fashion design practice. Students create design concepts that are demonstrated in fashioned objects.]

[TX A 675(6750) Aesthetics and Meaning in World Dress
Spring. 3 credits. Prerequisite: TXA 125 or course in history of art, costume history, or other history. S-U grades optional. Offered alternate years; next offered 2007–2008. C. Jirousek.
Examines the aesthetic and social/psychological relationship between body and clothing in a cross-cultural context. Individual research papers lead to the development of an exhibition.]

TX A 899(8990) Master's Thesis and Research
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. Staff.

TX A 999(9990) Doctoral Thesis and Research
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. Staff.
HUMAN ECOLOGY - 2006–2007

Unur, Ali Sinan, Ph.D., Cornell U. Lec., Policy Analysis and Management
Almost half of the school's typical freshman students who are preparing for careers in industrial and labor relations at Cornell may take a course of study that has about 800 undergraduates and approximately 200 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 20 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of entering classes, and minority students comprise about 25 percent of freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 800 undergraduates and approximately 200 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 20 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of entering classes, and minority students comprise about 25 percent of freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES

More than 200 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 214 Ives Hall, Ithaca, NY 14853-3901.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies

The Department of Human Resource Studies consists of world-class faculty members engaged in research, teaching and practice. These faculty members play integral roles in the administration of the Center for Advanced Human Resource Studies (CAHRS), an ILR-based research center funded by over 50 corporations, and the ILR Executive Education Program, which offers advanced training to HR practitioners. The goal in teaching is to balance a rigorous academic research approach with a real-world practice orientation. In this way students are provided with state-of-the-art knowledge relevant to managing human resources in organizations.

International and Comparative Labor

The Department of International and Comparative Labor is concerned with industrial and labor relations systems and labor markets in other parts of the world. The world-renowned faculty members are authorities on the labor markets of Western Europe, Asia, Latin America, South America and Africa and bring this knowledge to bear on the courses they teach as they prepare their students to understand the global marketplace.

Labor Economics

The Department of Labor Economics deals with labor markets, that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

The psychologists and sociologists in the Department of Organizational Behavior use discipline-based theoretical perspectives to examine an array of empirical workplace phenomena. Their teaching and research focus on the impact of environmental, technological, and interpersonal relationships on work group and organizational dynamics.

Social Statistics

Faculty members in the Department of Social Statistics conduct research in the field of economic and social statistics. In applying their research results to their teaching, they provide their students with cutting-edge training on the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis. A full list of required and elective courses is available from the Office of Student Services, 146 Ives Hall.

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of bachelor of science, master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty members and faculty committees to
Study in Absentia
Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee.

Leave of Absence or Withdrawal
Students who desire to withdraw or take a personal leave of absence from the university should schedule an interview with a counselor in the Office of Student Services. Counselors will assist students in contacting the appropriate offices or departments of the university, if necessary. All medical leaves are handled by Gannett Health Center.

Requirements for Graduation
To earn the Cornell bachelor of science degree in industrial and labor relations, a student must successfully complete 120 credits. This requires eight semesters for an average of 30 credits a year although some students accelerate their studies.

New Curriculum Effective Fall 2006

First Year
FALL
- First-year writing seminar* 3
- IRL Colloquium (introduction to IRL School, ILRID 150)** 1
- Introduction to Organizational Behavior (ILROB 122)** 3
- History of American Labor (ILRCB 100)** 3
- Introductory Microeconomics (ECON 101)* 3
- Elective 3
- PE (university requirement)

SPRING
- First-year writing seminar* 3
- Introductory Macroeconomics (ECON 102)* 3
- Electives (9)
- PE (university requirement)

Sophomore Year
FALL
- Statistical Reasoning (ILRST 212)** 4
- Labor and Employment Law (ILRCB 201)** 3
- Human Resource Management (ILRHR 260)** 3
- Advanced Writing† 3
- Electives (3)

SPRING
- Collective Bargaining (ILRCB 205)** 3
- Economics of Wages and Employment (ILRLE 240)** 3
- Western Intellectual Tradition† 3
- Cultural Perspectives† 3
- Elective (3)

Junior and Senior Years
- Science and Technology† 3
- ILR Elective courses—40 credits
- Must include at least one course from an approved list in each of the following three areas: International and Comparative elective, Labor History elective and Economic Policy elective
- Minimum of 24 credits of IRL course work, including 495 Honors, 499 Independent Study—with a maximum of 16 credits for non-ILR courses at Cornell as approved in ILR departments.
- Minimum of 12 credits from foreign language or advanced math
- May include up to 9 credits for one semester abroad or 15 credits for a full year abroad
- Maximum of 12 credits in a credit internship program

Additional general elective credits (in addition to distribution requirements) 12

Minimum total credits required for graduation 120

*Required courses usually taken in the College of Arts and Sciences
**Required courses taken in the ILR School
†Distribution credits (courses you choose that satisfy requirements in certain categories)

Physical Education credit does not count toward the 120 credits
Students who take more than 50 credits in the endowed colleges (the College of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management; the College of Engineering; the School of Hotel Administration; and the Law School) must pay for each credit taken in excess of 50, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.

The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

ILR Math Requirement
A student who took AP calculus in high school and scored a 3 or better on the AB exam or subscore of BC exam has fulfilled the ILR math requirement. If AP calculus wasn’t completed, or if the scores noted above were not achieved, the student is expected to take and pass the ILR Math Assessment before registering for required courses in Statistics and Labor Economics. The Math Assessment is based on materials covered in New York State Regents Exams for Courses 2 and 3. (Calculus is not covered in those courses.)

The ILR Math Assessment is scheduled in August, January, and May. Those who do not pass in the first attempt are expected to register in an appropriate math course and pass the assessment before the beginning of their third semester in the school. Any student who cannot meet the requirement by the beginning of the third semester is enrolled for a terminal semester and is expected to leave the school thereafter.
Transfer students are expected to meet the same standards in math: either present the score required by Cornell University for AP calculus (AB or BC) credit or pass the ILR Math Assessment before being permitted to register in ILST 212 or ILRLE 240 with a terminal semester possible after failing the assessment given at the beginning of a third semester as an ILR student.

SCHEDULING AND ATTENDANCE

Schedule Changes
Occasionally it may be necessary for a student to request changes in his or her course schedule either before a semester begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance
It is each student's responsibility to attend all scheduled classes unless excuses have been approved by the faculty members. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:
1. participation in authorized university activities such as athletic events, dramatic productions, or debates;
2. medical problems supported by a record of clinic or infirmary treatment;
3. serious illness or death in the immediate family;
4. other circumstances beyond the student's control.
A request for an explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

STANDING AND GRADES

Academic Integrity
In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.
Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1. knowingly representing the work of others as one's own;
2. using or obtaining unauthorized assistance in any academic work;
3. fabricating data in laboratory or field work;
4. giving fraudulent assistance to others;
5. fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

Dean's List
A Dean's List is compiled for each of the four undergraduate classes each semester on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:
1. achievement of a semester average for freshmen of 3.3 or better, for sophomores of 3.4 or better, and for juniors and seniors of 3.6 or better;
2. a minimum course load for the semester of 12 letter-graded credits;
3. completion of all courses registered for at the beginning of the semester;
4. satisfaction of all good-standing requirements.

Academic Standing
Good standing requires that all of the following criteria be met at the end of each semester:
1. an average of C- (1.7) for the semester's work, including a minimum of 8 completed and letter-graded credits;
2. no failing grades in any course, including physical education;
3. a cumulative average of C- (1.7) for all completed semesters;
4. achievement of a semester average for seniors of 3.6 or better;
5. satisfaction of all good-standing requirements.

Involuntary Separation from the School for Academic Reasons
A student may be denied permission to reregister at the end of any semester when he or she has failed:
1. to establish good standing after a semester on warning;
2. to maintain an average of 1.7 in any semester after a previous record of warning;
3. to achieve good standing after being on warning any two previous semesters;
4. two or more classes in one semester or has a semester average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

S-U Grading Policy
An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:
1. the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2. students are limited to registering in two S-U courses a semester;
3. S-U registration is limited to 4 credits for each course;
4. students registering for S-U grades must be in good standing;
5. students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

Grades of Incomplete
A grade of incomplete (INC) is assigned when a course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which the work may be made up must be made with the instructor. The school's policy allows a maximum of two full semesters of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

Five-Year Master of Science Degree Program
To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

SPECIAL ACADEMIC PROGRAMS
in the school for a master of science degree. Students considering this program should consult a counselor in the Office of Student Services before their freshman year.

Internships

Many ILR students decide to participate in the ILR Credit Internship Program, working in cities all over the country, typically during the junior year. Most sponsors expect that interns will have completed the introductory required courses before coming to work with them, so the junior year is the earliest opportunity to test out what’s been learned in the classroom. The majority of ILR interns are located in either New York City, Washington, D.C., or the ILO in Geneva, Switzerland. Contact ILR’s Off-Campus Programs office and visit Professor Clete Daniel’s ILR Credit Internship web site at www.ilr.cornell.edu/creditinternships.

Summer Internships

What is a summer internship? During the summer, a student who works in a job that is related to industrial and labor relations may find that the employer refers to that job as an internship. Their terminology differs from that used by ILR and Cornell to refer to credit-bearing internships. Academic credits earned by ILR considers an internship to be a learning experience engaged in during the academic year, for which students earn academic credit, are supervised by a faculty member, are evaluated, have a grade recorded, and pay tuition. With very few exceptions (the Clem Miller Scholarship, Saul Wallen internship, Chaim and Ida Miller Scholarship, all of which are summer support provided to selected ILR students) and employment has little in common with the semester credit internship program. Approval is required in advance. Some companies tell students that they cannot be employed unless they receive academic credit for a summer internship. Cornell does not grant credit unless a student is registered, pays tuition, has a faculty supervisor, and is in a position approved for internship credit.

Programs in Washington

Two Washington programs are available to ILR students: the ILR Credit Internship Program and the Cornell in Washington program, sponsored through the College of Arts and Sciences.

ILR Credit Internship Program: Interns work approximately 30 hours per week for the 15 weeks of the semester, in ILR-related organizations approved by the ILR faculty. They also work on a research project related to their internship, which is graded by their ILR faculty supervisor. The credit hours that they earn are ILR elective credits. Internships are available in New York City and Washington, D.C., as well as other locations. Cornell in Washington interns find placement in practically any and every operation in Washington, work there about 30 hours per week, and attend Cornell classes taught in Washington by Cornell faculty members. Interns are expected to complete a major thesis project that is related to their course work and internship and for which they receive a grade.

Selecting a program: Most ILR students who wish to be interns in Washington, D.C., apply to the ILR Credit Internship Program. Occasionally, an ILR student identifies an interest that cannot be met by the ILR program. The student may then apply to the Cornell in Washington program but will be expected to secure ILR faculty approval of his or her placement academic eligibility before applying to the Cornell in Washington program.

Application procedure: Interested students are expected to discuss the program with Professor Daniel, ILR’s academic coordinator for internships, before proceeding with applications.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 4 credits each semester) to research, write, and then defend the thesis.

Study Abroad

Students in ILR who plan to study in another country usually do so in the junior year, occasionally in the senior year. They may study in one of the programs that is sponsored by Cornell, in one sponsored by another institution and endorsed by Cornell, or in an approved externally sponsored program. Information about study abroad is available in OSS (146 Ives Hall) or the Cornell Abroad office (300 Caldwell Hall). Students are expected to register for a full course load, the equivalent of 15 credit hours in a semester or 30 hours in a year, when they study abroad. Some courses will be the equivalent of general elective credit or distribution credit, but others may be accepted as ILR elective credit if evaluated and approved by the relevant ILR department chairs. A student may satisfy up to 9 hours of the ILR elective requirement in a single semester abroad and up to 15 hours in a year of foreign study.

Application for foreign study requires that the student meet the schedules of the program of interest and Cornell’s schedule. Applications include tentative class schedules, recommendations from faculty members, approval of the application by an ILR faculty committee, essays, and transcripts. After being approved in ILR, the application is sent to the Cornell Abroad office and then to the program for which the student is applying. For more information, contact Kevin Harris, ILR study abroad coordinator, 101 Ives Hall, 255-2223, kh4@cornell.edu, or the Cornell Abroad office, 300 Caldwell Hall, 255-6224, cornellabroad@cornell.edu, www.cuabroad.cornell.edu.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

ILR CB 100(1100) Introduction to U.S. Labor History

Fall and spring. 3 credits. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore. Introductory survey covering the major changes in the nature of work, the workforce, and the institutions involved in industrial relations from the late 19th century to the present.

ILR CB 201(2010) Labor and Employment Law

Fall and one sec in spring. 3 credits. M. Gold, J. Gross, R. Lieberwitz, and K. Stone. Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys the laws against discrimination based on race, religion, sex, national origin, age, and disability. Also serves as an introduction to judicial and administrative systems.

ILR CB 205(2050) Collective Bargaining

Fall and spring. 3 credits. R. Givan, H. Katz, D. Lipsky, S. Kuruvilla, R. Seeber, and L. Turner. Comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict, the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILR CB 207(2070) The Legal Construction of Asian American Workers

Fall. 3 credits. Limited to 20 students. Prerequisite: ILR CB 201. Fulfills ILR advanced writing requirement. Not open to students who have taken ILR CB 105 (FWS). J. Ying. Discussion-based and writing-intensive course. How does the legal construction of race/ethnicity influence how we see ourselves and how others perceive us in the workplace, and consequently, impact our career paths and career mobility? At once the model minority, the perpetual foreigner, the quiet American, and the math and science whiz, Asian Americans assume a unique but stereotypical position in our racial terrain. As such, studying the legal construction of this racial category will throw new light on our understanding of citizenship, identity, and work. This course will draw heavily from critical race theory and case law to help us understand how the legal construction of race impacts the Asian American worker.
I work in a workplace? Does a workplace racial hierarchy exist, and if so, how does this hierarchy affect White studies, and intersectionality theory as globalization. We examine the evolution of American workplace in the past 20 years in the context of the global economy. Through a combination of nonfiction, fiction, workplace site visits, worker interviews, guest speakers, and weekly writing assignments, students learn about the nature of corporate structure, the workplace, the work process, and workers' lives in a range of occupations in five different sectors of the economy: IT, manufacturing, public sector, health care, and casual labor. Guest speakers include workers, union leaders, and employers from companies in the target sectors and site visits are made to both union and nonunion facilities. Particular emphasis is placed on exploring how work, workers, and communities have been impacted by globalization.

ILRCB 301(3010) Labor Union Administration
Fall. 4 credits. R. Hurst.
Study and analysis of the structure and operations of American unions, including the complexities of internal life of the organizations; the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the context of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions. Examines the role of union leaders and the strategic choices they make. Attention is given to current developments in the labor movement and to the eternal problems of attaining union democracy.

ILRCB 302(3020) Strangers and Citizens: Immigration and Labor in U.S. History
Fall or spring. 4 credits. J. DeVault.
Explores immigrant workers' experiences in the 19th and 20th centuries from different perspectives. Students examine what it meant to the immigrants themselves to arrive as strangers in the United States while also examining the ways in which preexisting American groups defined these immigrants as "strangers." Similarly, students look at U.S. citizens in their roles as greeters of immigrants, detectors of immigrants, and as models for the aspirations of immigrants. The main examples are taken from the industrial and union realms.

ILRCB 303(3030) Working-Class America in Mass Media and Popular Culture
Spring. 4 credits. J. Cowie.
Examines a variety of representations of working people in mass popular culture throughout the 20th century. The course means to explore the ways in which history, memory, and politics are shaped through popular discourse. Uses sources as diverse as popular music, Hollywood movies, the mainstream press, and television sitcoms to understand the ideological and political influences on our preconceptions of workers, and how these forces influence our notions of authenticity, the historical experience, and the politics of social class.

ILRCB 304(3040) Seminar in American Labor and Social History
Fall or spring. 4 credits. Prerequisite: permission of instructor. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore. Undergraduate seminar whose topic changes depending on semester and instructor.

ILRCB 305(3050) Introduction to Labor Arbitration and Alternative Dispute Resolution
Fall. 4 credits. J. Gross.
Introductory survey that focuses on the U.S. labor arbitration process in the private and public sectors (legal issues, discipline and discharge, contract language interpretation, remedies, and procedures) and on alternative dispute resolution systems in the United States and other countries. Student participation in class discussion is assigned and assignments include an original research paper.

ILRCB 306(3060) Recent History of American Workers: From the 60s through the 90s
Fall. 4 credits. J. Cowie.
Focuses on the social history of American workers and the role of organized labor in American life since the 1960s. Course themes often center on the complexities of social class in the United States. Topics include the transformations of liberalism, the civil rights and black power movements, the Vietnam War, the rise and fall of the New Left, industrial restructuring, the rise of neoconservatism, changes in civic identity, and sources of cultural conflict. Course ends with an examination of globalization, changes in the major political parties, the future of work, and prospects for social change.

ILRCB 307(3070) U.S. Business History Since the Civil War
Spring. 4 credits. B. Applegate.
Surveys the history of U.S. business enterprise since the establishment of a nationally unified political economy. Focuses on the corporation's emergence as the dominant form of business organization in the context of changing government-business relations. Students examine distinctive features of American business development—such as the preeminence of "big business," corporate governance by hierarchy, and the multinational scope of corporate operations—by exploring the circumstances of their creation, the private-sector limits of their reach, and their consequences for economic development and industrial relations.

ILRCB 383(3830) Workers' Rights as Human Rights
Fall or spring. 4 credits. J. Gross.
Examines U.S. domestic labor law and policy using internationally accepted human rights principles as standards for judgment. Considers the idea of human rights, its philosophical and moral origins, and introduces the legal and social obligations of both governments and nonstate actors to respect the human rights of workers. Topics include the Universal Declaration on Human Rights, ILO International Labor Standards, the Declaration on Fundamental Principles and Rights at Work, workers' freedom of association and collective bargaining, occupational health and safety, discrimination, forced labor, child labor, migrant labor, labor rights defined in international trade agreements, the value judgments underlying labor policy choices, and the struggle for enforcement of human rights standards nationally and internationally. The course examines these topics in an internationally comparative context and includes presentations and discussions from international experts on various human rights issues.

ILRCB 384(3840) Women and Unions
Explores women's participation in the United States labor movement. Topics include the role of women workers in the major labor movements of the 19th and 20th centuries. Issues covered include women workers' relations with male-dominated union movements, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activists.

ILRCB 385(3850) African American Social History, 1865 to 1910: The Rural and Urban Experience
Fall. 4 credits. N. Salvatore.
Examines the experience of black Americans from Emancipation through the experience of the first generation born after slavery. Topics include the changing nature of work; political organization and the rise of Jim Crow; protest, accommodation, and separatism; and the continued viability of black social and cultural expression after slavery.

ILRCB 386(3860) African American Social History, 1910 to the Present: Race, Work, and the City
Spring. 4 credits. N. Salvatore.
Examines the experience of black Americans from the start of the Great Migration just before World War I. Topics include the effects of migration on work experiences and unionization patterns, the impact of depression and two world wars on black social structure and economic status, the growth of the Civil Rights movement, and the impact of migration and urbanization on a variety of social and cultural institutions.

ILRCB 400(4000) Union Organizing
Spring. 4 credits. Prerequisites: ILRCB 201/501, 205/500. K. Bronfenbrenner.
Explores various aspects of unions' attempts to organize workers. Including why some workers join unions and others do not; strategy and tactics implemented by unions and management during organizing campaigns; present status of labor law as it affects organizing; creative approaches to union organizing; and the organizing model of unionism.
ILRCB 404(4040) Contract Administration
Fall. 4 credits. Prerequisites: ILRCB 201/501, 205/500, K. Bronfenbrenner.
Focuses on the practice, nature, and challenges of labor relations under collective bargaining agreements. Working with union contracts, constitutions, and by-laws from a diversity of national and local public and private sector agreements, the course examines how U.S. unions represent their members in different industries and different collective bargaining environments. Issues addressed include union representative/steward rights and responsibilities, contract enforcement structures and practice, access to information, new work systems, hours of work and scheduling, contingent staffing arrangements, workplace discrimination, health and safety, promotional opportunities, downsizing, leadership development, membership involvement and commitment, internal organizing, community coalition building, and decertification campaigns. Students practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.

ILRCB 407(4070) Contemporary Trade Union Movement
Spring. 4 credits. Prerequisites: undergraduates, ILRCB 100; graduate students, ILRCB 502. R. Hurd.
Examination of contemporary trade union issues, including union power, political action, collective bargaining approaches, and organizing efforts. Covers structural, functional, and strategic aspects of contemporary unions. Speakers from the union movement address the class.

ILRCB 482(4820) Ethics at Work
Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold.
Examines major theories of ethics, then applies them to issues in the employment relationship such as genetic screening of job applicants, job testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 488(4880) Liberty and Justice for All
Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold.
Examines major theories of ethics, then applies them to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 495(4950) Honors Program
Fall and spring (yearlong). 4 credits each semester. Students are eligible for ILR senior honors program if they (1) are in upper-division standing at the end of junior year; (2) propose an honors project, entailing research leading to completion of a thesis, to an ILR faculty member who agrees to act as thesis supervisor; and (3) submit by proposed faculty sponsor, to Committee on Academic Standards and Scholarships. Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the time the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department chair, and a representative of the Academic Standards and Scholarship Committee.

ILRCB 497-498(4970-4980) Internship
Fall and spring. 4 credits, 497, 8 credits. Staff.
All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of off-campus credit programs. Upon approval of the internship, the Office of Student Services will register each student for 497, for 4 credits graded A-F or S/U, for individual research, and for 498, for 8 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

ILRCB 499(4990) Directed Studies
Fall and spring. 4 credits. For individual or group research projects conducted under the direction of a member of the ILR faculty, in a special area of labor relations not covered by regular course offerings. Sophomores, juniors, and seniors with a preceding semester of 3.0 semester average are eligible to submit projects for approval by the Academic Standards Committee. Students should consult with a counselor in the Office of Student Services at the time of CourseEnroll to arrange for formal submission of their directed study.

ILRCB 500(5000) Collective Bargaining
Fall. 3 credits. Prerequisite: graduate standing. Recommended: previous or concurrent enrollment in ILRCB 501. H. Katz, S. Kuruvilla, and L. Turner.
Comprehensive introduction to the industrial relations systems of the United States. Covers the negotiation, scope, and day-to-day administration of contracts, union and employer bargaining structures, implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict, and U.S. industrial relations in international and comparative perspective.

ILRCB 501(5010) Labor and Employment Law
Fall. 3 credits. Prerequisite: graduate standing. L. Compa, M. Gold, and R. Lieberwitz.
Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal" and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 502(5020) History of Industrial Relations in the United States since 1865
Fall or spring. 3 credits. Prerequisite: graduate standing. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.
Introductory course emphasizing historical developments in the 20th century. Special studies include labor union struggles over organizational issues and such other topics as industrial conflicts, working-class lifestyles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 504(5040) The U.S. Industrial Relations System
4 credits. Offered only in New York City for M.P.S. program. Staff. Examines the development, operation, and outcomes of the U.S. industrial relations system in a comparative context. Specifically, the course contrasts the American experience with industrial relations institutions and outcomes with the experience of several other countries in Europe and Asia. Students look at the process of union formation, the practice of collective bargaining at different levels, the methods of dispute resolution, and the legal regime germane to industrial relations. The course also focuses on both processes and outcomes of different country systems, focusing on the degree of collaboration or conflict, wage levels and wage inequity, and practices in different industries and firms. Finally, the role played by industrial relations and human resource policy in economic and social development in these nations is addressed.

ILRCB 602(6020) Arbitration
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 201, 205, 500 and 501. J. Gross and R. Lieberwitz.
Study of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentations at an arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 603(6030) The Economics of Collective Bargaining in Sports
Fall or spring. 4 credits. L. Kahn.
Surveys economic and industrial issues in the sports industry. Topics include salary determination, including free agency, salary caps, salary arbitration; competitive balance and financial health of sports leagues; antitrust issues in sports; labor disputes, union history, and contract administration issues in sports leagues; discrimination in sports; and performance incentives.

ILRCB 605(6050) Readings in the History of Industrial Relations in the United States
Fall. 4 credits. Prerequisite: senior or graduate standing. C. Daniel and N. Salvatore.
Intensive seminar covering original printed sources and scholarly accounts for different periods in American history.

ILRCB 606(6060) Theories of Industrial Relations Systems
Fall or spring. 4 credits. Prerequisite: graduate standing. ILRCB 100, 205, 500. H. Katz.
Traces the evolution of theory and research on industrial relations. Topics include theories
of the labor movement; institutional models and evidence regarding what unions do; the origins of internal labor markets and their relation to unionization; models of strikes; empirical assessments of arbitration; research on union decline; and empirical evidence of the impacts of new technology.

**ILRCB 607(6070) Values in Law, Economics, and Industrial Relations**

Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 201, 205, 500, 501. J. Gross.

Examination of the often hidden values and assumptions that underlie the contemporary U.S. system of employment law, work and business, and industrial relations. Classroom discussions and student research projects use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as discrimination, law, economics, and the state; work and business; power, conflict, and protest; and rights and justice.

**ILRCB 608(6080) Sex Discrimination and the Law**

Fall or spring. 4 credits. Prerequisites: ILRCB 201, 501, or permission of instructor. L. Adler.

Lec 01—Examines various legal issues relevant to discrimination on the basis of sex. Problems analyzed include sexual harassment, pornography, reproductive rights, prostitution, work and family conflict, inequality in employment opportunities, gay and lesbian rights, welfare rights, and affirmative action.

**ILRCB 608(6080) Collective Bargaining Simulation**

Fall. 4 credits. Limited to 18 students. Prerequisite: junior, senior, or graduate standing. Recommended: previous or concurrent enrollment in collective bargaining theory and labor law course. Attendance at first class mandatory. Up to two required evening extended bargaining sessions. H. Kramer.

Lec 01—Students prepare for and participate in a simulated negotiation between a hypothetical corporation and a hypothetical union in a typical big company with mid-size single site bargaining unit context. Students are assigned usually in line with preferences to either a management or union bargaining team. The course stresses the negotiation process over settlement or substantive outcomes. Negotiation problems are as real life as possible, constrained by student time needs and with attention given to dynamic legal, political, economic, and communications concerns as well as power, information, and time factors. Participants plan for negotiations, reach agreements in principle and negotiate language, bargain wages, pensions, health care and noneconomic items in the context of a company and union with an established contract, policies, and culture. This is a hands-on program with active participation essential.

**ILRCB 608(6080) Labor and Employment Law and Immigrant Workers in the United States**

Fall. 4 credits. Prerequisites: ILRCB 201, 502. L. Compa.

Lec 05—Immigrant workers have surged into the U.S. labor force in recent years, creating new problems and new agendas for the labor law system. This course examines labor and employment law developments affecting documented and undocumented immigrant workers. Because labor economics and immigration policy obviously set the framework for legal developments, some early classes and assignments address these issues. Most of the course is then devoted to federal and state legislation and case law on immigrant workers, focusing on labor and employment matters rather than immigration law as such.

**ILRCB 608(6080) Special Topics in International Labor and Employment Law**

Fall. 2 credits. Prerequisites: ILRCB 201/501. J.-P. Lavie.

Lec 07—This seven-week course explores, from an international and comparative perspective, various topics related to the regulation of work and workplace relations in a global economic environment.

**ILRCB 610(6011) Negotiation: Theory and Practice**

Fall or spring. 4 credits. Prerequisites: background in economics and social sciences, or permission of instructor. D. Lipsky and R. Seether.

Deals with negotiation and bargaining, focusing on process, practice, and procedures. Concentrates on the use of negotiation and bargaining to resolve conflicts and disputes between organizations and groups. Discusses various theories of negotiation, including conventional, "positional" bargaining, interest-based bargaining, the use of power in negotiation, and game theoretic approaches to bargaining. Examples, cases, and exercises are used to illustrate general principles. This is a generic negotiation course and thus does not deal with labor relations nor does it focus on any particular labor relations. Rather, the course examines negotiation and bargaining generally, using examples drawn from several contexts, including employment relations, environmental disputes, real estate transactions, and other settings.

**ILRCB 611(6012) Managing and Resolving Conflict**

Fall or spring. 4 credits. Prerequisite: background in economics and social sciences or permission of instructor. D. Lipsky and R. Seether.

Deals with managing and resolving workplace conflict and examines dispute resolution and conflict management in both union and nonunion settings. The course covers two related topics: (1) third-party dispute resolution, including alternative dispute resolution (ADR). It focuses primarily on the use of mediation and arbitration but also deals with other dispute resolution techniques, such as fact-finding, facilitation, mini-trials, early neutral evaluation, peer review, and the other methods; (2) conflict management in organizations, including the recent development of conflict management systems. The course reviews the factors that have caused the growth of ADR and conflict management systems, and it provides instruction on the design, implementation, and evaluation of such systems.

**ILRCB 618(6018) Current Issues in Collective Bargaining: Theory and Practice**

Spring. 4 credits. K. Bronfenbrenner.

Designed to provide an in-depth examination of the contemporary collective bargaining process from a strategic and theoretical perspective. This is achieved both through a review of recent literature on bargaining theory and practice and through the analysis and evaluation of a series of contract negotiations from a variety of industries, unions, strategic models, and outcomes. Subjects include: changing bargaining climate, bargaining theory, changes and variations in bargaining structures and practices, union and company power analysis, development of membership in bargaining, interest-based bargaining, strategic coordinated campaigns, strikes and lockouts, bargaining in a global economy, community labor coalitions, concessions and job security, and settlement and defining victory.

**ILRCB 655(6013) Service Work and Workers in Historical Perspective**

Fall or spring. 4 credits. I. DeVault.

Takes a historical perspective on the development of a service economy in the United States. Readings include general and theoretical works with a focus on the role of women and service work in the United States, although some attention is paid to developments in Western Europe, the United Kingdom, and Japan.

**ILRCB 655(6014) Industrial Relations in Transition**

Spring. 4 credits. Prerequisite: senior or graduate standing. H. Katz.

Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Reviews recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Also reviews the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material focuses on industrial relations practice in the private sector in the United States, although some attention is paid to developments in Western Europe, the United Kingdom, and Japan.

**ILRCB 655(6016) Employment Law I**

Fall. 4 credits. Prerequisites: ILRCB 201, 501, or permission of instructor. L. Adler.

Takes a similar approach to ILRCB 656, but the subject matter differs. Topics include employment at will and its exceptions; the role of the Constitution in the U.S. workplace; the law of electronic and traditional privacy at work; and the slowly evolving rights of contingent workers in the old and new economies. One study reviews primarily federal and state court decisions and focuses upon the way that employees' rights are advanced or constrained by law. There are considerable reading responsibilities.

**ILRCB 656(6016) Employment Law II**

Spring. 3 credits. Prerequisites: ILRCB 201, 501, or permission of instructor. L. Adler.

Takes a similar approach to ILRCB 655, but the subject matter differs. Topics include the meaning and validity of preemployment arbitration agreements, the critical distinctions in the status and thus the rights of employees, independent contractors, and contingent workers; what rights the working poor, the homeless, and welfare individuals have
on the ‘job,’ and the origin and application of the workers’ compensation laws that apply when people are injured or contract disease from their work. One study reviews primarily federal and state court decisions and focuses on the way that employers’ rights are advanced or construed by the law. There are considerable reading responsibilities.

ILRBC 681(6810) International Labor Law
Fall or spring. 4 credits. Prerequisites: undergraduates, ILRBC 201; graduate students, ILRBC 501. Fulfills ILRC distribution requirement for ILR students. L. Comp.
Examine labor rights and labor standards in a world economy regulated by bilateral and multilateral trade agreements, in a context of sharp competition among countries and firms. Readings and discussions focus on the intersections of labor, human rights, and international trade law and policy in this new global economic context. A prior course in a related topic may be helpful but is not required—the first classes are meant to establish a foundation in each area. While labor law is a unifying theme, the course is more policy-oriented than legalistic. After the introductory classes on labor rights, human rights, and trade, the course turns to a series of topics that reflect the links between labor rights and trade.

ILRBC 683(6830) Research Seminar in the History of Industrial Relations
Fall or spring. 4 credits. Prerequisites: ILRBC 100, 502, J. Cowie, C. Daniel, I. DeVault, and N. Salvatore. Areas of study are determined each semester by the instructor offering the seminar.

ILRBC 684(6840) Employment Discrimination and the Law
Fall or spring. 4 credits. Prerequisite: ILRBC 201/501 or equivalent. M. Gold and R. Lieberwitz.
Examine the laws against employment discrimination based on race, color, religion, sex, national origin, age, and disability.

ILRBC 686(6860) Collective Bargaining in Public Sector
Fall or spring. 4 credits. Prerequisites: ILRBC 201 and 205/500. L. Adler.
Examine the history of public employees’ collective bargaining and other workplace rights. Emphasis is placed on the current trade-offs between municipal and state governments and their unionized employees in New York City and state, although trends in other states, the federal sector, and in certain EU countries are also examined. Topics include representation rights, public sector workers ability to leverage their power, unfair labor practices, impasse procedures, the scope of collective bargaining, and a limited treatment of the U.S. Constitution in the public workplace. Examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees throughout the U.S. is mindful of the exercise of public employee rights impacts municipal, state, and federal public policy labor market considerations. There are several prominent guest speakers.

ILRBC 687(6870) Introduction to Labor Research
Spring. 4 credits. Limited to 20 students. K. Bronfenbrenner.
Designed to provide students interested in the labor field with skills necessary to understand and use social science research as it relates to the labor movement. The course’s four major goals are to (1) develop the skills to critically evaluate a wide variety of research relating to unions and the workplace; (2) introduce a number of both quantitative and qualitative research techniques used by unions and those who study the labor movement; (3) familiarize students with the broad range of library and computer resources that can be used for labor and corporate research; and (4) provide students with an opportunity to design and conduct a research project for a national or local union.

ILRBC 689(6890) Constitutional Aspects of Labor Law
Fall or spring. 4 credits. R. Lieberwitz.
In-depth analysis of the Supreme Court decisions that interpret and apply the United States Constitution as it applies in the workplace. Focuses on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, assignments include a research paper.

ILRBC 703(7030) Qualitative Research Methods in Industrial Relations
Fall, Spring. 4 credits. Prerequisite: M.S. and Ph. D. students; ILRBC 500. Recommended: statistics course beyond level of ILRST 510. S. Kuruvilla.
Advanced doctoral seminar that focuses on the philosophy of inquiry, generally, as well as the various paradigms governing research on work. The course further focuses on selected qualitative research methods used in research in labor and human resource management, and organizational behavior.

ILRBC 705(7050) The Economics of Collective Bargaining
Spring. 3 credits. Prerequisites: ILRBC 500, ILRLE 540 or equivalents and an understanding of multiple regression analysis, or permission of instructor. Staff.
Focuses on both the economic analysis of unions and collective bargaining in our economy and the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productivity, earnings, inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in specific industries are reviewed. A term paper is required.

ILRBC 706(7060) Labor in Global Cities (also GOVT 706(7060))
Fall. 3 credits. L. Turner.
Examines urban and labor literature, targeting selected cities to assess union influence and strategies in local politics, organizing, and collective building. The course looks at the city as a world city of particular interest and becomes an expert on that city’s key unions, political actors, and corporations. The idea is to develop overall pictures of new union vitality (if and where it exists) based not only on particular unions and industries, and nations but also on regions, coalitions, and local politics.

ILRBC 708(7080) Negotiations in Practice
Fall. 3 credits. S. Kuruvilla.
Provides opportunities for students to develop their negotiating abilities for use in organizational and other settings. The course is premised on the assumption that negotiating concepts are best learned through practical that is grounded in rigorous analysis and reflection. While theoretical principles and concepts from various reference disciplines (e.g., social psychology, sociology, and economics) are presented through lectures and readings, this course focuses primarily on improving practical skills. Participants learn not only to develop their individual abilities in dyadic and group situations but also to analyze contexts for the most effective application of these skills.

ILRBC 783(7830) Seminar in American Labor History (also HIST 683(6830))
Fall or spring. 4 credits. Prerequisite: graduate standing and permission of instructor. N. Salvatore.
Explores the relationship of scholarly biographical writing to the field of American social history. More and more historical biographies look to incorporate social analyses at the center of their biographical structures. Students read, discuss, and analyze the varied strengths and weaknesses of a number of these efforts. The author’s understanding of the play between biographical subject and the larger social context, and its meaning for the structure of the book, are a primary focus that encourages numerous approaches and interpretations. A research paper is required.

ILRBC 790(7900) ILR M.P.S. Program
Fall and spring. 1-9 credits. Staff. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRBC 796(7980) Internship
Fall and spring. 1-3 credits. Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRBC 796 must be approved by the faculty member who will supervise the project.

ILRBC 799(7990) Directed Studies
Fall and spring. Credit TBA. For individual research conducted under the direction of a member of the faculty.

ILRBC 800(8900) Workshop in Collective Bargaining, Labor Law, and Labor History
Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. S-U grades only. S.Unvaried. Provides a forum for the presentation of current research being undertaken by faculty members and graduate students in the
HUMAN RESOURCE STUDIES

L. Dyer, chair (393 Ives Hall, 255-8805); H. M. Gasser.

ILRHR 260(2600) Human Resource Management
Fall. 3 credits. Prerequisite: ILR students or permission of instructor. Staff.

Intended to introduce students to the field of human resource management (HRM). Students learn theories and applications involved in effectively managing people in organizations. In addition, this course covers current topics in HRM that have resulted from environmental and organizational challenges, e.g., technology, globalization, legislation, restructuring, work/life balance, changing labor markets, and so on. Emphasis is placed on developing relevant problem solving and critical thinking skills, as the basic concepts of HRM and the skills developed in this course are applicable to all types of organizations and jobs in which students will eventually work.

ILRHR 266(2660) Essential Desktop Applications
Fall, spring, and summer. 2 credits. Limited enrollment. G. Homlightly.

Provides skills in the use of personal computers that run the Windows operating system. Covers the basics and time-saving techniques for Windows, Lotus Nensis, and Microsoft Excel, Access, and PowerPoint. Emphasizes hands-on experience and development of PC-based solutions by using examples that address human resource and other practical real-world issues. The skills developed in this course are useful prerequisites for several elective courses in human resource management and essential in the 21st-century workplace.

ILRHR 360(3600) Human Resource Economics and Public Policy
Fall and spring. 4 credits. Prerequisite: sophomore, junior, or senior standing. J. Bishop.

Review of labor-market trends, data collection systems, and theories pertaining to public efforts to develop the employment potential of the nation's human resources and to combat unemployment. Examines the major segments of the nation's educational training enterprise (e.g., public education, higher education, employer-provided training, apprenticeship, and special training programs for the economically disadvantaged). Also covers policies issues pertaining to welfare reform, direct job creation, worker relocation, economic development and, and targeted tax credits.

ILRHR 362(3620) Career Development: Theory and Practice
Fall, spring. seven weeks. 2 credits. Limited to 30 students. S-U grades only. L. Gassner.

Covers the components of career management, individual factors, and organizational realities in the development of both careers and organized programs for career management. Two complementary learning tasks are required: information-gathering for career decision-making based on self-assessment activities, and comprehension of organizational circumstances and practices encountered as careers develop. Grades are based on short writing assignments and a research paper.

ILRHR 365(3650) Organizational Consulting: Process and Results
Fall. 4 credits. Prerequisite: ILRHR 260 or equivalent. R. B. Hewerton.

Provides students with the insights and tools they need to work successfully as human resource generalists who consult with operating managers on organizational effectiveness. The consulting process is examined from both an interpersonal and systems perspective. This includes the knowledge and skills required to build trust and influence, contact with clients, and maintain good working relationships with clients. It also includes developing a clear comprehension of the consulting process from diagnosis, through action planning, to implementation and completion. While attention is given to theory and practice, the focus is on gaining hands-on experience dealing with real-world issues. As a final project, students design and present consulting plans based on actual case situations (e.g., implementing a new HR program, effectuating a new organizational culture, and enhancing project team operations).

ILRHR 367(3670) Employee Training and Development
Fall. 4 credits. Prerequisite: ILRHR 260; undergraduate standing. B. Bell.

Faced with in-house, globalization, technological complexities, and dynamic labor markets, firms increasingly are struggling to determine the best approaches to training and developing their workforces. This course introduces the issues, concepts, and processes with which firms are wrestling, as well as specifics on planning, designing, implementing, and evaluating training and development programs. After completing this course, participants should be able to conduct a needs assessment, evaluate employee readiness, evaluate the strengths and weaknesses of various training and development techniques, solve transfer of learning problems, and design evaluation procedures.

ILRHR 456(4600) International Human Resource Management
Fall. 4 credits. Prerequisite: ILRHR 260 or equivalent. L. Nishii.

Illustrates how cultural context affects the structure and implementation of HR practices. The first part focuses on comparative human resource management or the study of how HRM differs across cultures, with a primary emphasis on comparing American HRM practices with the situation in Asia and a secondary focus on Western European HRM practices. Class readings and discussions are grounded in theories of cultural variation.

The second part focuses on IHRM, or the HRM issues facing multinational corporations. Topics include expatriation and repatriation, global leadership, compensation, and training.

ILRHR 461(4610) Working in the New Economy: The Sociology of Work
Spring. 4 credits. Prerequisite: undergraduate standing. R. Batt.

Seminar that draws on exploratory studies of the workplace to examine how workers and managers are affected by changes in technologies, business strategies, labor markets, and other external factors. What dilemmas and conflicts emerge, how are they managed, and what are their outcomes? Readings cover firsthand accounts of people's experiences in a wide range of occupations and industries, including professional, service, and factory workers.

ILRHR 462(4620) Staffing Organizations
Spring. 4 credits. Prerequisite: undergraduate standing. C. Collins and J. Hausknecht.

Seminar designed to provide an overview of the processes by which organizations staff positions with both internal and external applicants. Through a combination of lectures, cases, and projects, the course covers theory, research, and legal foundations that inform organizational staffing actions. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, and other topics.

ILRHR 463(4630) Diversity and Employee Relations
Fall. 4 credits. Prerequisite: undergraduate standing. Q. Roberson.

Designed to provide an opportunity for students to understand the importance of, and develop competencies for, promoting organizational justice and building inclusive work environments. The first half of the course focuses on identifying differences and similarities in the experiences, needs, and beliefs of people from diverse backgrounds as well as assisting students in developing sensitivity to such differences. The second half focuses on stimulating critical thinking regarding the management of diversity and employee relations in organizations as well as increasing students' knowledge of HR policies and practices designed to manage these issues effectively. To achieve these goals, the course uses an experiential design that includes readings, exercises, cases, and class discussion.

ILRHR 464(4640) Business Strategy
Fall. 4 credits. Prerequisite: undergraduate standing. C. Collins.

Integrative course focusing on strategic management. The main purpose is to provide an opportunity for students to study and analyze issues associated with strategic thinking in complex business situations, top management decision making, and the functions of corporations as a whole. Allows students to bring together all of their functional skills they have learned in other business or related classes (e.g., marketing, accounting, finance, human resources) and to apply this knowledge to business problems faced by top management in existing organizations. Class format includes lectures and case studies.
ILRHR 465(4650) Globalization at Work
Spring. 4 credits. Prerequisite: undergraduate standing. R. Batt.
Seminar that examines how firms are responding to globalization and compares the strategies and outcomes of restructuring in manufacturing and service enterprises. While globalization has been a continuing phenomenon in manufacturing, recent changes in multilateral agreements, advances in information technology, and market deregulation have led to a process of globalization in service activities as well. Outcomes for firms, employees, consumers, and unions are examined.

ILRHR 466(4660) Entrepreneurship and Small Business
Fall. 4 credits. Prerequisite: undergraduate standing. M. Allen.
Broadly addresses strategic issues in the management of entrepreneurial firms and small businesses. Topics include strategy, performance, financial planning, growth, and innovation. W. Wasmuth.

ILRHR 468(4680) Human Resources Management Simulation
Fall, seven weeks. 2 credits. Limited to 30 students. Prerequisites: junior or senior standing. ILRHR 260 or equivalent. Regular attendance mandatory. W. Wasmuth.

ILRHR 469(4690) Immigration Policy and the American Labor Force
Spring. 4 credits. Prerequisite: undergraduate standing. V. Briggs.
Assesses the role that immigration policy plays as an instrument of human resource development in the United States. Places immigration policy in an evolutionary context but gives primary attention to the post-1965 revival of mass immigration. In addition to legal immigration, policies pertaining to illegal immigration, border commuters, "maquiladoras," refugees, asylees, and nonimmigrant workers are examined. Comparisons are also made with immigration systems of other nations. Comparisons are also made with immigration systems of other nations.

ILRHR 495(4950) Honors Program
Fall and spring (yearlong). 4 credits each semester.
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 497-498(4970-4980) Internship
Fall and spring. 4 and 8 credits.
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 499(4990) Directed Studies
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 560(5600) Human Resource Management
Fall and spring. 3 credits. Prerequisite: graduate standing. Staff.
Survey course designed to provide an introduction to selected topics in human resource management. Consideration is given to theories and applications involved in effectively managing people in organizations. Topics include recruitment, staffing, training, performance management, compensation, international human resource management, and the legal environment. Emphasis is placed on exploring these issues from both strategic and tactical levels to increase organizational effectiveness.

ILRHR 564(5640) Human Resources Management in Effective Organizations
Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.
Offers students the opportunity to become better prepared to make effective decisions about human resource management. Successful organizations depend on people, their human resources. The first module examines strategic human resource management and the effects of HR decisions on organization success and fair treatment and rights. The second module focuses on alternative systems used to staff, develop people. The third module focuses on compensating and rewarding people. The final module includes employee relations and alternative work systems. Case and field studies are used throughout the course.

ILRHR 653(6601) Research on Education Reform and Human Resource Policy
Spring. 4 credits. J. Bishop.
State and local efforts to improve K-12 education are employing a variety of (sometimes contradictory) reform strategies. This research seminar critically examines the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The seminar examines reform strategies examined include vouchers, charter schools, small schools, career academies, direct instruction versus discovery learning, extending the school day and year, better preparation of new teachers. The seminar also examines better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 654(6602) Introduction to HR Information Systems
Fall, seven weeks. 1 credit. Prerequisite: ILRHR 260 or equivalent, use of Access or similar database package for at least data entry and report generation. C. Homighouse.
Focuses on understanding how and why human resource information systems are developed, maintained, and managed. A database is designed from the ground up, beginning with basic instruction on the need for and how to create a relational database. Once the initial design is in place, the data are manipulated to create reports, forms, and queries to assist in human resource decisions. The course explores ways to make databases efficient and consistent. Production database systems such as PeopleSoft also are reviewed and used. All instruction is hands-on and supplemented with assigned readings and guest lectures.

ILRHR 658(6604) Field Study In Strategic Human Resources
Spring. 4 credits. Limited to 25 students. P. Wright.
Provides students with in-depth classroom instruction on HRM in a specific region of the world, and a one-to-three week visit to the region to explore human resource strategies and practices firsthand. This year’s focus is the European Union. Attention is paid to the development of selected European business entities, the history, role, and current efforts of the European Union in the workplace, and local cultural nuances as they affect the world of work. Students are asked to compare and contrast significant aspects of the dominant U.S. strategic HR model with strategic HR models found in the EU. The field visit is to Brussels, with potential for further travel to The Hague and Amsterdam. Travel dates TBA. Fees for participation in the course are expected to be approximately $2,500, payable in advance. Students incorporate their learning in the classroom and on the field visit in a final paper and/or class presentation. Papers and projects are due the final week of classes.

ILRHR 659(6600) HR Leadership: Views from the Top
Fall and spring. 4 credits. Limited to 15 students. Prerequisite: ILHR 260/560, MILR graduates; seniors by permission of instructor. Letter grades only. P. Wright.
Examines the challenges of synthesizing personal/professional ethics with professional responsibilities and synthesizing organizational economic demands with social responsibility, particularly focusing on how these issues impact HR professionals. These concerns are examined from both ends of the political spectrum. The course is taught in a seminar format in which students are expected to participate in and lead class discussions.

ILRHR 660(6600) HR Leadership: Views from the Top
Fall. 4 credits. Limited to 30 students. Prerequisites: ILRHR 260/560 or equivalent. Senior or graduate standing, and permission of instructor. L. Dyer.
Hands-on course offering students a unique opportunity to learn about strategic business and human resource issues from the perspectives of senior HR executives. Five chief human resource officers (CHROs) from major corporations meet with the class for lively give-and-take sessions on subjects of strategic and topical interest to their organizations. Before their visits, teams prepare background papers on the speakers, their companies, and their topics. Students discuss these papers before the visits to assure readiness to address the issues at hand when the CHROs arrive. During the visits the teams host the CHROs and usually have an opportunity to interact informally with them. After the visits, the teams revise their background papers into white papers that reflect insights gleaned from their research and discussions. Subsequently, all five white papers are assembled in a book that is shared with the CHROs and others.
ILRHR 661(6610) Applied Personal and Organization Development
Fall. 4 credits. Prerequisite: senior or graduate standing. C. Warzinski.

Experiential course that deals with OD and its role in the organizational change process. Combines the opportunity for hands-on practice in a workshop setting. Students are responsible for researching and writing a paper that examines a specific method, technique, or critical issue; preparing an in-class demonstration/presentation illustrating an appropriate and logically supported chosen subject; and completing a final project requiring a comprehensive proposal that describes an appropriate and logically supported intervention strategy.

ILRHR 662(6620) The Agile Enterprise: Exploring the Dynamics of Marketplace and Organizational Agility
Fall. 4 credits. Prerequisite: ILRHR 260/560 and additional course work in business and human resource strategy. L. Dyer.

Increasingly, dynamic external environments are encouraging experimentation with new (i.e., nonbureaucratic) organizational paradigms. One such paradigm is the agile enterprise. This course explores the dynamics of the agile enterprise with particular emphasis on underlying justification and rationale, approaches to pursuing marketplace agility, and infrastructure designs and human resource strategies, as well as new approaches to leadership. But learning about the agile enterprise is one thing, learning to operate and live in one is another. Thus this course is mostly experiential and is conducted as much like an agile enterprise as is possible in an academic setting. In pursuit of a vision and armed with a few basic principles, students learn to self-organize and function autonomously, and use their experiences to enhance their, and others', learning about the pluses and minuses of life in an agile enterprise.

ILRHR 663(6630) Managerial Financial Analysis
Fall. 4 credits. Prerequisite: ILRHR 560 and one statistics course or permission of instructor. Q. Roberson.

Intended for students with limited knowledge of accounting and finance who want a better understanding of financial statements and measures that are affected directly or indirectly by the HR function. Provides a comprehensive introduction to financial statement and cash flow analysis with the goal of teaching students to compare firms' historical, current, and prospective financial condition and performance. Examines the basic concepts of accounting, major groups of accounts, financial statements that make up a company's annual report, and commonly used financial ratios.

ILRHR 664(6640) HR Online Research and Reporting Methods for Executive Decision-Making
Spring. 4 credits. Limited to 20 students. Prerequisite: ILRHR 560/260 or equivalent. S. Basilefsky.

Designed to develop key HR competencies and skills for researching and presenting information necessary for executive decision-making. Includes a comprehensive overview of primarily web-based resources available to HR executives. Emphasizes hands-on training in the best techniques and methods for extracting conceptual frameworks, checklists, best practices, competitive intelligence, legal information, statistical data, and academic research on topics of current interest to the industry. Interviewing skills, report writing and presentation methods are imparted. Following five weeks of intensive information instruction and hands-on experience, students act as team leaders and integrate their course work in special projects and topics posed by HR executives of Fortune 500 companies. These team-based assignments give students exposure to different companies, their cultures, and executives while providing real work experience.

ILRHR 665(6650) Business Strategy and Human Resources
Fall. 4 credits. Limited enrollment. Prerequisite: ILRHR 260/560; three other courses in human resource studies; permission of instructor. P. Wright.

In this capstone course in HR studies, students integrate the theories and practices learned in other courses, to explore the linkages between business strategy and HRM. Extensive fieldwork is involved. The field projects are designed to make students explore and understand business strategy and draw upon and integrate their course work in HR staffing, training and development, compensation, and rewards, and new work systems.

ILRHR 666(6660) Strategic HR Metrics
Spring. 4 credits. Prerequisites: ILRHR 260/560 or equivalent, one statistics course, one elective in HR studies.

P. Wright.

The search for the ideal strategic HR metrics misses the larger issue of taking a more analytical approach toward HR decision making. Analytics requires understanding the process through which knowledge is gained, and then applying the tools and techniques to gather and analyze the right kind of data relevant to the question at hand. This course covers topics such as philosophy of science, theory development, research methodology, data analysis and interpretation as well as data and practices commonly used to assess the effectiveness of HR activities. Consequently, the course simulates a data-driven approach to decision making, as well as the processes and techniques necessary to gather, integrate, and analyze the data.

ILRHR 667(6670) Diversity and Inclusion in Organizations
Spring. 4 credits. Prerequisite: ILRHR 260/560 or permission of instructor. Q. Roberson.

Explores diversity management in organizations. The primary goals are to increase student knowledge of strategic and tactical uses of HRM, and policies that effectively manage organizational diversity issues and to create inclusive work climates. In addition, the course aims to develop students' skills in the practical management of diversity, particularly diversity strategy to business strategy and developing diversity initiatives to help improve organizational competitiveness and enhance bottom-line outcomes.

ILRHR 668(6680) Staffing Organizations
Spring. 4 credits. Prerequisites: ILRHR 260/560, or permission of instructor. C. Collins and J. Hausknecht.

Seminar providing an overview of the processes by which organizations staff positions with both internal and external applicants. Because staffing is one of the primary human resource activities, it is critical for human resource professionals to understand how theory, research, and legal foundations can inform staffing decisions. Therefore, this course focuses on theories, research, policies, and practices concerning job recruitment and selection. Topics include staffing strategy and context, measurement of staffing effectiveness, personnel acquisition, human resource planning, recruitment and job choice, and internal and external selection practices.

ILRHR 669(6690) Managing Compensation
Spring. 4 credits. Limited to 30 students. Prerequisites: ILRHR 260/560 and statistics course. Staff.

Helps students gain an understanding of how to make decisions about compensation. The strong focus is on applications and includes some discussion of recent theory and research. By the end of the course, you should be able to design your own compensation system from scratch. Issues we consider include how compensation fits with an overall HR strategy, the internal focus on the firm (including job analysis and job evaluation), making pay competitive with the outside market (including designing pay levels, types of pay and pay structures), considering individual contributions (by examining performance appraisals, pay-for-performance, and stock options), benefits (such as pensions, child care, and health care), management (including government regulation and managing budgets), and dealing with international issues in setting pay plans. A substantial section focuses on executive compensation and also examines how a consultant might estimate the damages to an employee in the case of wrongful termination.

ILRHR 690(6900) International Comparative Human Resource Management
Fall. 4 credits. Prerequisite: ILRHR 260/560 or permission of instructor. L. Nishi.

Provides students with an understanding of the complexities associated with international human resource management (HRM). One of the major themes of the course is to identify whether and in what ways HRM practices need to be adapted across cultures to be effective. Course material reflects a focus on comparing American HRM practices with those in East Asia and Western Europe. In addition, the major topic areas of concern to IHRM managers are covered, including the selection, training, compensation, and performance management of international managers (expatriates), coordination of international subsidiaries of a company, the development and tracking of global leaders, and cross-cultural communication and negotiation.

ILRHR 691(6910) Finance for Human Resources
Fall. 4 credits. K. Hallock.

Helps students understand some basic ideas in finance from the perspective of human resource management. Broadly considers certain topics that include: overview of financial markets, how firms issue securities, history and pitfalls in investing, the time value of money, investment criteria such as risk and return, management of debt and equity, financial statements, and cost of capital. Also considers several HR-related issues such as retirement plans, stock options, and the financial performance of HRM.
as net present value, risk versus return and the opportunity cost of capital, capital asset pricing, capital budgeting and risk, market efficiency and predictability, measuring firm financial performance and reading financial statements, event studies in finance and economics, mergers, ESOPs and stock options, executive compensation, the relationship between job loss and firm outcomes, and other forms of organizational form such as nonprofits. Covers theoretical ideas and has many empirical, policy, and practitioner-relevant applications.

ILRHR 693(6930) Training and Development Organizations
Spring. 4 credits. Prerequisite: ILRHR 560 or permission of instructor. B. Bell. Acquaints students with aspects of learning in organizations. Begins by discussing organizational learning and then focuses on the ways in which learning is achieved through the training and development functions. Topics include how learning is linked to organizational strategy, how to determine that training is needed, how to design the content and organization of training programs, current training techniques, evaluation strategies, and management development practices.

ILRHR 694(6940) Competing in Services: Management, Marketing, and HR Strategies
Spring. 4 credits. Prerequisite: HR 560 or equivalent; permission of instructor. R. Batt. Examines alternative service management strategies and outcomes, with particular focus on customer relationship management. Priority is given to analyzing the relationship between business strategy, marketing, operations management, organizational structures, and human resource practices. Student projects focus on critical analysis of service management in particular companies and industries, using live cases where possible.

ILRHR 695(6950) Education, Technology, and Productivity
Fall. 4 credits. J. Bishop. This seminar investigates the nexus between the education and training in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. Students investigate how technological progress is changing the nature of work and what this implies for reform of education and training, how education and training contribute to growth and competitiveness, why educational achievement has declined, and how the responsibility for education and training should be apportioned among individuals, families, private nonprofit organizations, and government.

ILRHR 696(6960) Strategic Management
Fall. 4 credits. Prerequisite: senior or graduate standing. S. Snell. Offers students the opportunity to analyze companies from a strategic perspective; how firms position themselves in the context of competitors, and how they develop capabilities that drive sustainable advantage and performance. Throughout the course, emphasis is placed on the role executives play in creating value for customers, shareholders, and employees. Students engage in a series of analyses that integrate external factors, including key industry forces, as well as internal factors such as competencies, structures, and systems. In this regard, the course goes beyond issues of strategy formulation to include elements of implementation, alignment, change and organizational learning.

ILRHR 697(6970) Special Topics in Resource Studies
Fall or spring. 4 credits. Staff. Areas of study are determined each semester by the instructor offering the seminar.

ILRHR 698(6980) International Human Resource Policies and Institutions
Spring. 1 credit. J. Bishop. Comparative study of human resource policies and institutions in Western Europe, North America, Japan, and East Asia (with special emphasis on math and science education) and/or the effects of these institutions on productivity, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, employer training, and higher education. Data on the consequences of policies are presented and an effort made to understand how human resource policies and institutions have contributed to the rapid growth and low levels of inequality in Europe and East Asia. An important focus of the course is understanding the causes of the low levels of achievement of American high school students relative to their counterparts abroad.

ILRHR 699(6990) Advanced Desktop Applications
Spring. 1 credit. Prerequisite: ILRHR 266 or equivalent. C. Homrighouse. Explores advanced topics for common desktop applications including Windows, Word, Excel, Access, and PowerPoint. The course is designed based on student input and instructor recommendations, covering those subjects that students feel would be most useful and relevant in the job market. Examples of areas include working with tables, columns, or sections in Word, pivot tables and filters in Excel, and design a PowerPoint presentation "on the road"; and using join tables to create relationships in Access.

ILRHR 760(7600) Seminar in Human Resource Studies
Fall or spring. 3 credits. Prerequisites: ILRHR 550, ILRST 510/511, and ILRHR 669 and permission of instructor. Staff. "Floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

ILRHR 763(7630) Interdisciplinary Perspectives on the Organization of Work
Fall or spring. 4 credits. R. Batt. Ph.D. seminar examining the theoretical and empirical literature on the organization of work. Topics include studies of group effectiveness, teams, social capital, and recent critical and international research. Draws on alternative perspectives from psychology, sociology, engineering, organization studies, economics, and industrial relations.

ILRHR 764(7640) Comparative International Perspectives on Work and Human Resource Systems
Fall or spring. 3 credits. R. Batt. Research seminar focusing on comparative international research on work and human resource systems. It draws on institutional theories and emphasizes the need to bring in several disciplines to examine the intersection between institutions and organizations. What is the relative importance of markets, technology, management strategies, and the institutional environment in shaping work and employment systems? It considers how and why firms adopt alternative approaches to work and how variation in these choices shapes outcomes of interest to firms, employees, and other key stakeholder groups. The seminar is designed to help students formulate theoretically driven research questions of critical importance to the field and to develop appropriate qualitative and quantitative research methodologies.

ILRHR 790(7900) ILR M.P.S. Program
Fall and spring. 1-9 credits. Supervised research experience for those enrolled in the ILR M.P.S. program.

ILRHR 798(7980) Internship
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 799(7990) Directed Studies
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 960(9600) Workshop in Human Resource Studies
Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates. S.U. grades only. Staff. Provides a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of human resource studies. All M.S. and Ph.D. candidates in the Department of Human Resource Studies are urged to enroll, candidates in other departments are cordially invited. Each participant has an opportunity to benefit from the collective wisdom of the others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

ILRHR 961(9610) Doctoral Research Seminar in Human Resource Management
Fall or spring. 3 credits. Prerequisite: Ph.D. candidates. Staff. Aimed at reading, understanding, and conducting research in HRM. Students should obtain thorough understanding of the current research in traditional areas of HRM such as validation, job analysis, EEO, selection, performance appraisal, compensation, and training and should develop the skills necessary to evaluate, criticize, and contribute to the literature on HRM.

ILRHR 962(9620) Doctoral Research Seminar in Strategic Human Resource Management
Fall or spring. 4 credits. Prerequisite: Ph.D. candidates. Staff. Aimed at reading, understanding, and conducting research in SHRM. The course should enable students to obtain a thorough understanding of the principles of SHRM and to develop the skills necessary to evaluate, criticize, and contribute to the literature on SHRM.
ILRRC 963(9630) Research Methods in HRM/Strategic Human Resource Management
Fall and spring. 3 credits. Prerequisite: Ph.D. candidates. Staff.
Designed to build social science research skills, particularly in the area of human resource studies (HRS). Topics include measurement reliability, construct validity, design of studies, external validity, meta-analysis, critiquing/reviewing HRS research, publishing HRS research, and applications of statistical models of HRS issues.

INTERNATIONAL AND COMPARATIVE LABOR

INTERNATIONAL AND COMPARATIVE LABOR

ILRIC 333(4330) Politics of the Global North (also GOVT 330(3303))
Fall. 4 credits. L. Turner.
Covers current global debates, comparative political economy of Europe, the United States, and Japan, with a focus on labor and environmental coalitions for domestic reform and global justice.

ILRIC 339(3390) The Political Economy of Mexico
M. Cook.
Explores the range of challenges affecting contemporary Mexican politics, society, and economic development—from democratization to immigration to NAFTA. Provides both an introduction to Mexican political economy for those with no prior background and an opportunity for students with more knowledge of Mexico to explore a research topic in greater depth.

ILRIC 499(4990) Directed Studies
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRIC 533(6330) Politics of the Global North (also GOVT 330(3303))
Fall. 4 credits. Prerequisite: graduate standing. L. Turner.
For description, see ILRIC 333. Graduate students also submit an analytical term paper at the end of the semester.

ILRIC 630(6331) Special Topics
Fall. 4 credits. M. Cook.
Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRIC 630(6331) Political Economy of United Kingdom
Spring. 4 credits. Prerequisite: ILR 300/205 or 500 or permission of instructor. R. Givan.
Lec 03—Examines key issues in British politics, the economy, and society in recent years. Themes include Thatcherism, the rise of New Labour, trade unions, changing labor markets and changing work, race and immigration, social policy and welfare reform. No prior knowledge of the UK is expected, but students have the option of writing an in-depth research paper.

ILRIC 631(4310) Comparative Labor Movements in Latin America
Fall. 4 credits. M. Cook.
Examines the historical development of labor movements in Latin America, their role in national political and economic development, and the impact of economic liberalization, authoritarianism, and redemocratization on contemporary labor organizations in the region. Countries examined include, but are not limited to, Mexico, Brazil, Argentina, Chile, Peru, and Guatemala.

ILRIC 632(6320) Revitalizing the Labor Movement: A Comparative Perspective
Spring 4 credits. Prerequisite: graduate standing. L. Turner.
Graduate seminar examining contemporary efforts in the United States and Europe to revitalize unions and reform industrial relations. The first half of the course examines contemporary reform efforts in the United States. The second half covers Britain, Germany, Italy, Spain, the “Europeanization” of labor, and related topics depending on student interest.

ILRIC 633(6331) Labor, Industry, and Politics in Germany
Fall. 4 credits. Prerequisite: graduate standing. L. Turner.
Is the successful postwar “social partnership” model of organized capitalism in the Federal Republic of Germany viable in the 21st century? To answer this question, this course looks at the works councils and codetermination, the rise of a strong postwar labor movement, the contemporary German version of social partnership, with an emphasis on current events and the new challenges for German industry and labor posed by German unification and European integration.

ILRIC 635(4350) Labor Markets and Income Distribution in Developing Countries
Spring. 4 credits. Prerequisite: ILRLE 240/540 or ECON 513 or permission of instructor. Not offered 2006–2007.
L. Turner.
Analyzes who benefits and how much from economic growth in developing countries and how income distribution would be affected by various public policies. Topics include poverty, inequality, economic mobility, and social welfare, poverty profiles, earnings functions, and decompositions; employment, unemployment, wages, and labor markets; and an introduction to public economics and development policy.

ILRIC 636(6360) Comparative History of Women and Work (also FGSS 636/6360)
Spring. 4 credits. Prerequisite: permission of instructor. I. DeVault.
Explores the similarities and differences between different cultures’ assumptions about the work of women and children as women’s experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course consists of in-depth examinations of specific work situations as an occupational activity across time and specific geography. Comparative examples are taken from the United States, Europe, and the Third World.

ILRIC 637(6370) Labor Relations in Asia
Fall. 4 credits. Prerequisite: permission of instructor. S. Kuruvilla.
Compares the survey of the industrial relations systems of selected Asian nations such as Japan, South Korea, Thailand, Malaysia, Singapore, Hong Kong, China, and several others. Emphasizes economic development strategies and industrial relations policies in these countries. Industrial relations practices, the extent of union organization, and labor force demographics of these countries are examined. The primary objective is to provide students with an introduction to industrial relations systems in Asia. The countries chosen are representative but not exhaustive.

ILRIC 638(6380) Labor, Free Trade, and Economic Integration in the Americas
Fall. 4 credits. Limited enrollment.
Prerequisite: senior or graduate standing. L. Turner.
Analyze the contemporary movements toward free trade and regional economic integration in the Western Hemisphere. Special attention is paid to labor’s role and to transnational movements in the region. Examines the origins and implications of the North American Free Trade Agreement (NAFTA) and looks at integration schemes in South America (Mercosur), Central America, and the Caribbean and at hemisphere-wide initiatives. A research paper is required.

ILRIC 639(6390) Building a “Social Europe”: Regional Integration in the Global Economy
Spring. 4 credits. Limited enrollment.
Prerequisite: graduate standing. L. Turner.
Seminar addresses questions such as, what have the European Union and its member nations done to develop and reform the social dimension since the 1990s? How are the major actors—labor, government, and business—positioned to influence social policy and industrial relations reform, and what strategies are they pursuing? What are the prospects for “social Europe” in an increasingly deregulated global economy?

ILRIC 730(7300) Research Seminar on Labor Markets in Comparative Perspective
Fall and spring. 3 credits. Prerequisite: M.S. and Ph.D. students. G. Fields.
Research seminar for students writing theses or dissertations on economic aspects of labor markets in comparative perspective. Addresses research questions, methodologies, and contributions in the areas of employment and unemployment, income and earnings, educational and human resource development, welfare economics, and economic growth. Presentations and written papers are required.

ILRIC 731(7310) Industrial Relations in Latin America
M. Cook.
Faced with the competitive pressures brought on by globalization, employers and governments throughout the region are transforming practices, laws, policies, and institutions that shape the role of labor unions and other political and social actors, and the...
Implications of industrial relations changes in the region for economic development, political stability, and democracy. The aim is to introduce students to the key issues in contemporary Latin American industrial relations and, through individual research papers, to enable students to become familiar with a specific country or sector/theme in two or more countries of the region.

**ILRRCB 737(7370) Special Topics: Labor, Democracy, and Globalization in the South**

Labor movements in developing countries face distinct challenges from those in advanced industrial countries. This course examines two of the most important recent changes to affect countries in the developing "South" in recent years: democratization and the adoption of market-oriented economic reforms. It focuses on how these "dual transitions" affect workers and labor organizations in developing countries and on labor's responses to political and economic change. Among the issues examined are labor's role in political democratization, factors driving market reform and labor responses, the effects of economic liberalization on labor, national versus industry analyses of change, labor law and policy reform, national protections for labor rights and international labor standards, global trade and Southern country alliances, and issues in North-South labor relations.

**ILRRCB 739(7390) The Political Economy of Mexico**
Spring. 4 credits. M. Cook.

For description, see ILRRCB 339. Graduate students attend ILRRCB 339 lectures, meet with the professor, and write a research paper.

**ILRRCB 790(7900) ILR M.P.S. Program**
Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

**ILRRCB 799(7990) Directed Studies**
For description, see "Collective Bargaining, Labor Law, and Labor History."

**Other courses approved to fulfill the ILRIC distribution requirement**

**ILRC 304(3040) Latin American Labor Law**
Fall. J. Cowie.

For description, see "Collective Bargaining, Labor Law, and Labor History."

**ILRC 383(3830) Workers' Rights as Human Rights**
Fall. J. Gross.

For description, see "Collective Bargaining, Labor Law, and Labor History."

**ILRHR 465(4650) The Globalization at Work**
Spring. R. Batt.

For description, see "Human Resource Studies."

**ILRHR 469(4690) Immigration and the American Labor Force**
Spring. V. Briggs.

For description, see "Human Resource Studies."

**ILRHR 690(6900) Comparative Human Resource Management**
Fall. E. Nishi.

For description, see "Human Resource Studies."

**ILRHR 698(6980) International Human Resource Policies and Institutions**
Spring. J. Bishop.

For description, see "Human Resource Studies."

**ILRLE 444(4440) The Evolution of Social Policy in Britain and America**
Fall, spring. G. Boyer.

For description, see "Labor Economics."

**ILRLE 446(4460) Economy History of British Labor**
Fall, spring. G. Boyer.

For description, see "Labor Economics."

**ILRLE 448(4480) Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Management Economy**
Fall, spring. G. Boyer.

For description, see "Labor Economics."

**ILRLE 642(6420) Economic Analysis of the Welfare State**
Fall. 4 credits. R. Hutchens.

For description, see "Labor Economics."

**INTERDEPARTMENTAL COURSES**

**ILRID 150(1500) Freshman Colloquium**
Fall. 1 credit. Prerequisite: ILR freshmen. S-U grades only. Staff.

Acquaints first-year students with issues and disciplines in the field of industrial and labor relations and to establish acquaintanceship among members of the ILR faculty and small, randomly assigned groups of students. Includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

**ILRID 250(2500) Diversity in the Workplace**
Spring. 1 credit. Limited to 30 students. Prerequisite: ILR sophomores. Attendance at at least one mandatory, as is participation in group discussions and completion of written work. S-U grades only. R. Lawler. Not offered 2005-2006. Exposes students to issues of diversity and discrimination in corporate, union, and legal environments. The purpose is to understand, analyze, and discuss the experience of being part of a culturally and ethnically diverse workplace. The goals of the course are to sensitize students to the subtle ways that prejudice and discrimination can arise in the workplace; to bring students into direct contact with practitioners in corporations, labor unions, and law firms to familiarize students with current practices for addressing the opportunities and challenges of racial, ethnic, gender, and other forms of diversity in the workplace, and to analyze and discuss with practitioners ways to reduce prejudice and discrimination in workplaces.

**ILRHR 450(4500) Workplace Diversity: Stepping into the 21st Century**
Spring. 1 credit. Limited to 30 students; priority given to seniors. Prerequisite: ILR 250. ILR students: S-U grades only. P. Henderson and S. Woods.

Provides an orientation to diversity in the workplace and to the expectations and challenges presented for future workplace leadership. With an emphasis on hands-on experiential learning, the course begins by familiarizing class participants with current practitioner approaches to diversity awareness training and competency building. Course focus then shifts to examine diversity as an issue of organizational change. Students consider the range of policies, practices and procedures being used to create workplaces that are both diverse and inclusive. Dialogues and case study presentations with invited workplace diversity practitioners offer participants an opportunity to learn from an insider's perspective about the experiences, successes, and challenges of making diversity work. Students are required to complete a "case study" of an organization.

**ILRHR 556(5560) Public Policy**
Spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

The government's influence on the workplace and the role of public policy in the use and preparation of the nation's human resources for employment is assessed. Areas of study include the government's historical role in the labor market and the effect of efficiency, price stability and economic growth, equity, and immigration policy and its market implications.

**ILRHR 599(5990) Cross-Cultural Work Experience**
Fall. 1 credit. S-U only. W. Sonnestuhl.

Open to MILR students who will be working in the summer of 2006 in a country other than that of their citizenship or past work experience. This option is only available for students who have been enrolled for one academic year by the time the Internship begins. Enrollment occurs in regular pre-enrollment period, with a grade posted in the fall after the requirements are satisfied. Prior to registering for the course, students must obtain a summer internship offer and international students MUST report to the ISSO (B50 Caldwell Hall) for their work authorization forms.

**ILRRCB 790(7900) ILR M.P.S. Program**
Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

**LABOR ECONOMICS**

**ILRLE 240(2400) Economics of Wages and Employment**
Fall and spring. 3 credits. Prerequisites: ECON 101-102 or permission of instructor.
Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

ILRLE 344(3440) Development of Economic Thought and Institutions
Fall. 4 credits. Prerequisite: ECON 101-102.
Students who have taken ILRLE 140 may not receive credit for 344. G. Boyer.
Examines the historical roots of the economic institutions currently dominant in Western Europe and the United States, and the evolution of economics as a discipline, from pre-industrial mercantilist thought through the economics of John Maynard Keynes. Readings focus on the relationship between economic development and the evolution of economic thought, and in particular on policies relating to labor and the relief of poverty.

ILRLE 440(4400) Labor Market Analysis (also ECON 341[3410])
Spring. 4 credits. Note: ILR students can substitute ILRLE 440 for 341 by permission of instructor J. DeVero.
For description, see ILRLE 240. Designed for ECON majors with calculus.

ILRLE 441(4410) Income Distribution (also ECON 455[4550])
Spring. 4 credits. Prerequisite: ILRLE 240 or ECON 341. Students who have taken PAM 370 may not receive credit for 441. R. Hutchins.
Explores income distribution in the United States and the world. Topics include functional and size distributions of income, wage structure, income-generating functions and their determinants, poverty, public policy and income distribution, and changing income distribution and growth.

ILRLE 442(4420) The Economics of Employee Benefits (also ECON 456[4560])
Fall. 4 credits. Prerequisite: ILR 240 or equivalent. Not offered 2006-2007. Staff.
In-depth treatment of the economics and financial management and administration of all employee benefits: health care, insurance, retirement income, family-care benefits, executive incentive plans, and other compensation provided as a service or contingent financial package to employees. Includes detailed international comparisons of health care and retirement systems are included.

ILRLE 443(4430) Compensation, Incentives, and Productivity (also ECON 450[4500])
Fall. 4 credits. Prerequisite: ILRLE 240 or equivalent. J. DeVero.
Examines topics in labor economics of particular relevance to individual managers and firms. Representative topics include recruitment, screening; and hiring strategies; compensation (including retirement pensions and other benefits); training, turnover, and the theory of human capital; incentive schemes and promotions; layoffs, downsizing, and buyouts; teamwork; and internal labor markets. Focuses on labor-related business problems using the analytic tools of economic theory and should appeal to students contemplating careers in general business, consulting, and human resource management as well as in economics.

ILRLE 444(4440) The Evolution of Social Policy in Britain and America (also ECON 444[4440])
Fall or spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer.
Surveys the history of social policy in Great Britain and the United States from 1800 to the adoption of the British welfare state after World War II. Topics include the role of poor relief in the early 19th century, the changing relationship between public relief and private charity; the adoption of social insurance programs and protective labor legislation for children and women; government intervention in the Great Depression; and the beginnings of the welfare state.

ILRLE 445(4450) Women in the Economy (also ECON 457[4570], FGSS 446[4460])
Fall. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer.
Examines the changing economic roles of women and men in the labor market and in the family. Topics include a historical overview of changing gender roles; the determinants of the gender division of labor in the family, trends in female and male labor force participation, gender differences in occupations and earnings; the consequences of women's employment for the family, and a consideration of women's status in other countries.

ILRLE 446(4460) Economic History of British Labor 1750 to 1940 (also ECON 459[4590])
Fall or spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. Not offered 2006-2007. G. Boyer.
Examines various aspects of British labor history from the beginning of the Industrial Revolution until World War II. Specific topics include monetary and nonmonetary changes in workers' living standards, internal migration and emigration, London labor market, the extent of poverty and the evolution of the welfare state; Luddism and Chartism; and the development of trade unions.

ILRLE 447(4470) Social and Economic Data (also ILRLE 740[7400], INFO 447[4470])
Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor J. Abowd.
Teaches the basics required to acquire and transform raw information into social and economic data. Legal, statistical, computing, and social science aspects of the data "manufacturing" process are treated. The formal U.S., OECD, and UN statistical infrastructure is covered. Major private data sources are also covered. Topics include basic statistical principles of populations and sampling frames; acquiring data via samples, censuses, administrative records, and transaction logins; the law, economics, and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking, multivariate statistical matching); analytic methods in the social sciences. Grading is based on a group term project.

ILRLE 448(4480) Topics in 20th-Century Economic History: Depression and the Rise of the Managed Economy (also ECON 458[4580])
Spring. 4 credits. Prerequisite: ILRLE 240 or ECON 314. G. Boyer.
Examines the anatomy of the Great Depression through the experiences of the two most important economies of the time: the United States and Great Britain. Also examines the development of macroeconomic policy in the United States and Britain in the 1920s and 1930s and its evolution in the postwar world, culminating with the decline of Keynesian-style demand management policy under Reagan and Thatcher.

ILRLE 495(4950) Honors Program
Fall and spring (yearlong). 4 credits each semester.
For description, see "Collective Bargaining, Labor Law, and Labor History.

ILRLE 497-498(4970-4980) Internship
Fall and spring. 4 and 8 credits.
For description, see "Collective Bargaining, Labor Law, and Labor History.

ILRLE 499(4990) Directed Studies
For description, see "Collective Bargaining, Labor Law, and Labor History.

ILRLE 540(5400) Labor Economics Fall. 3 credits. Requirement for M.I.L.R. candidates. Prerequisites: ECON 101-102 or equivalent. Not open to students who have taken MBA 544. G. Fields.
Course in labor market economics for prospective managers in the corporate, union, and governmental sectors. Begins with demand and supply in labor markets, presenting the tools of decision analysis for workers and firms. It then goes on to consider various topics for managers including deciding on the optimal mix of capital and labor to employ; attracting and retaining talent; payroll and productivity-based and training investments; and pensions and retirement. The final section of the course covers other important labor market issues including unemployment, discrimination, poverty and inequality, and analysis of public policies.

ILRLE 544(5440) Labor Market and Personnel Economics
Staff.
Four-module course in which the first module covers the basic elements of supply and demand in the labor market, the second and third modules cover the "new personnel economics" (emphasizing economic issues in a firm that relate to selecting, training, assigning, motivating, and compensating workers), and the final module covers key institutions and economic security issues (including unemployment, pensions, disability, discrimination, and union). The goals of this course are for students to learn to analyze both business and public policy problems taking into account both basic principles of economic theory and the relevant institutional environments.]
ILRLE 642(6420) Economic Analysis of the Welfare State (also ECON 460[4600])
Fall. 4 credits. R. Hutchens.
Uses the tools of public economics to analyze modern welfare states. Although examples are drawn from several countries, the course focuses on the United States, Canada, and Sweden. What are the rationales for the level of government intervention in these states, and how do these rationales square with notions of market failure? What are the economic costs and benefits of taxes, transfers, and regulations in these states? Can voting models explain the growth and operation of welfare states? The possible answers to these questions are discussed.

ILRLE 647(6470) Economics of Education (also ECON 347[3470])
Spring. 4 credits. R. Ehrenberg.
A survey of the econometric literature on a wide variety of educational issues, primarily dealing with higher and secondary education. Topics include school finance policies, the class-size debate, teacher labor markets, charter schools, vouchers, and special education programs. The course begins with an introduction to statistical and quantitative design and the implementation of these designs in multivariate regression models. Much of the course involves reading and discussing recent research, and students conduct their own empirical research projects.

ILRLE 648(6480) Economic Analysis of the University (also ECON 342[3420])
Fall. 4 credits. Staff.
Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can usefully be applied to analyze resource allocation decisions at universities. Topics include financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings are supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

ILRLE 740(7400) Social and Economic Analysis (also PHIL RDC) (also INFO 447[4470])
Spring. 4 credits. J. Abowd.
Teaches the basics required to acquire and transform raw information into social and economic data. Graduate materials emphasize creating and identifying laboratories in which data privacy and confidentiality concerns can be controlled and audited. Legal, statistical, computing, and social science aspects of the data "manufacturing" process are treated. The formal U.S., Eurostat, OECD, and UN statistical infrastructure are covered as are major private data sources. Topics include basic statistical principles of populations and sampling frames, acquiring data via samples, censuses, administrative records, and transaction logging; the law, economics, and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking; multivariate statistical matching); analytic methods in the social sciences. Graduate students are assumed to be interested in applying these techniques to original research in an area of specialization, and are required to do individual projects.

ILRLE 741(7410) Applied Econometrics I (also ECON 748[7480])
Fall. 4 credits. Prerequisite: graduate core sequence in econometrics or permission of instructor. S-U or letter grades. G. Jakubson.
Considers methods for the analysis of longitudinal data, that is, data in which a set of individual units are followed over time. Focuses on both estimation and specification testing of these models. Students consider how these statistical models are linked to underlying theories in the social sciences. Course coverage includes panel data methods (e.g., fixed, random, mixed effects models) factor analysis, measurement error models, and general moment structure methods.

ILRLE 742(7420) Applied Econometrics II (also ECON 748[7482])
Spring. 4 credits. Prerequisite: ILRLE 741 or permission of instructor. Letter or S-U grades. G. Jakubson.
Continues from ILRLE 741 and covers statistical methods for models in which the dependent variable is not continuous. Covers models for dichotomous response (including probit and logit); polychotomous response (including ordered response and multinomial logit); various types of censoring and truncation (e.g., the response variable is only observed when it is greater than a threshold); and sample selection issues. Includes an introduction to duration analysis. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model.

ILRLE 743(7430) Applied Econometrics III
Spring. 4 credits. Prerequisites: ILRLE 741-742 or permission of instructor. ILRLE 741, 742, and 743 constitute Ph.D.-level sequence in applied microeconometrics. Letter grades only. Not offered 2006-2007. G. Jakubson.
Covers topics not covered in ILRLE 741-742. Including additional development of duration analysis, panel data methods for nonlinear models, quantile regression and related techniques, and an introduction to nonparametric and semiparametric methods. Additional topics as suggested by the use in applied areas of social science. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model. Also develops a general framework for the techniques covered in the ILRLE 741-742-743 sequence.

ILRLE 745(7450) Seminar in Labor Economics I (also ECON 742[7420])
Fall. 4 credits. Note: ILRLE 742, 745, and 746 constitute Ph.D.-level sequence in labor economics. Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 746(7460) Seminar in Labor Economics II (also ECON 743[7430])
Spring. 4 credits. Note: ILRLE 744, 745, and 746 constitute Ph.D.-level sequence in labor economics. Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 747(7470) Economics of Education (also ECON 647[6470])
Spring. 4 credits. Prerequisite: economics and labor economics Ph.D. students or permission of instructor. Not offered 2006-2007. R. Ehrenberg.
Survey of the econometric research on a wide variety of higher education issues. Topics at the higher education level include public and private funding, financial aid and tuition policies, faculty labor markets, and Ph.D. production. Topics at the elementary and secondary level include school finance policies, the class-size debate and teacher labor markets.

ILRLE 748(7480) Economics of Employee Benefits
Fall. 4 credits. Not offered 2006-2007. Staff. Students attend the lectures in ILRLE 442 (see description for 442) but have additional course requirements. If enrollment warrants, they also meet separately at a time TBA for discussion of topics in 442 and additional topics.

ILRLE 749(7490) Economics of Development (also ECON 772[7720])
Takes analytical approaches to the economic problems of developing nations. Topics include old and new directions in development economics thinking; the welfare economics of poverty and inequality; empirical evidence on who benefits from economic development; labor market models; project analysis with application to the economics of education; and development policy.

ILRLE 790(7900) ILR M.P.S. Program
Fall and spring. 1-9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLE 798(7980) Internship
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 799(7990) Directed Studies
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 940(9400) Workshop in Labor Economics
Fall and spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations.

Presentations of completed papers and work in progress by faculty members, advanced graduate students, and speakers from other universities. Focuses on the formulation, design, and execution of dissertations.
behavior, concentrating on the cultural forms that carry these cultural messages: rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention is given to rites and ceremonial as a cultural form in organizational life that consolidates many of these expressive forms into one. The course examines types of ceremonial behavior such as rites of enhancement, rites of degradation, and rites of ceremonial weight, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior also receive attention, especially the part played by occupational subcultures in formal organizations.

ILROB 370(3700) The Study of Work Motivation
Fall. 4 credits. Prerequisite: junior or senior standing. T. Hammer.
Designed to acquaint students with the basic concepts and theories of human motivation with implications for job design and organizational effectiveness. Focuses on theories of worker motivation and on research approaches and results as they apply to the performance of individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student designs, executes, and analyzes a research study of his or her own.

ILROB 420(4200) Contemporary Organizational Behavior Applications
Fall or spring. 4 credits. Prerequisites: ILROB 322 and permission of instructor. T. Hammer.
Explores current practical applications of OB theory in organizations. Using a range of contemporary resources, students sift through practitioner articles and research; manage discussions; meet with managers, consultants, and employees; and explore organizational issues from micro and macro perspectives in a political and legal context. Students also develop a toolbox of knowledge and skills to effectively carry out several organizational interventions or development initiatives. Choice of topics may differ to focus on contemporary issues such as emotional intelligence, influencing organizational climate and morale, engaging strategic planning processes, managing large-scale participative techniques, using job or workplace design concepts, applying SWOT analysis, developing effective teamwork, managing diversity, and applying quality management tools.

ILROB 422(4220) Organizations and Deviance
Fall or spring. 4 credits. Limited to 60 students. W. Sonnenstuhl.
Focuses on the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors in organizations, the processes by which they become institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course examines such contemporary cases as Exxon's Valdez oil spill, Iran-Contra, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work in an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

ILROB 423(4230) Leadership in Organizations
Fall or spring. 4 credits. T. Hammer.
Covers basic leadership theories with an emphasis on how they are used, analyzes leadership cases, and examines current leadership surveys and training materials. We also study leadership philosophies and management practices in countries outside of the United States. In addition, you learn to evaluate and use leadership "best-sellers," that is, the kind of books that sell in airports.

ILROB 424(4240) Social Influence and Persuasion
Fall. 4 credits. Prerequisites: junior or senior standing. J. Goncalo.
Many of the most important organizations are adept at using social influence to achieve their strategic objectives. This course reviews basic theories of social influence such as conformity, group polarization, and social facilitation to understand how social influence tactics can be used to make organizations more efficient and productive. The course also considers how these tactics can backfire when excessive agreement gives rise to groupthink and poor decision-making. Students apply this knowledge to the management of social influence processes to encourage creativity and innovation in organizations.

ILROB 425(4250) Seminar in Organizational Culture
Spring. 4 credits. Limited to 20 students. Prerequisite: ILROB 329 and permission of instructor. W. Sonnenstuhl.
Expands on the theoretical ideas developed in the earlier course through more focused reading, intensive fieldwork, and paper writing. Students are accepted into the seminar based on their research projects for ILROB 329 and work with the professor to develop a more detailed reading list and more focused data collection strategy for expanding upon their earlier projects. The seminar also is taught as an intensive writing experience.

ILROB 426(4260) Managing Creativity
Fall. 4 credits. J. Goncalo.
Although most people agree that creativity is an important concept, there is often very little agreement about what creativity is and how we can achieve it. This course surveys basic theories of creativity with the goal of applying this knowledge to the management of creativity in organizations. It focuses primarily on (1) cognitive theories about creative thought, (2) personality theories about exceptionally creative individuals (3) social-psychological theories about creative groups, and (4) the points at which these approaches interact. The course concludes by questioning whether, given the costs involved, anyone would willingly follow the path of a creative individual or implement the practices of the most innovative firms.

ILROB 427(4270) The Professions: Organization and Control
Fall. 4 credits. Prerequisite: permission of instructor. P. Tolbert.
Focuses on the sources of power and control traditionally used by professions in contemporary society. A number of issues are examined in this context, including the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control...
that professional associations have over their members, relations between professionals and nonprofessionals in organizations, and the relationship between unionization and professionalization of occupations.

ILROB 428(4280) Blue-Collar Work in America
Spring. 4 credits. Prerequisites: ILROB 122, S. Bacharach and W. Sonnenstuhl. Although America is often described as a post-industrial society, in which service jobs predominate, the term “blue collar” remains relevant for understanding workplace relationship and their consequences. This course examines the nature of blue-collar work in the 21st century. It takes an in-depth look at a number of blue-collar occupations to understand workers experiences. Special attention is paid to the manner in which management exercises control over blue-collar workers, the strategies workers use to gain greater discretion over their work, and the social and psychological consequences that follow from this struggle. This course uses lectures, readings, and interviews/discussions with blue-collar workers to illuminate workers experiences. It uses long-distance learning technology to bring New York city-based blue-collar workers into the ithaca classroom.

ILROB 429(4290) Organizational Politics and Institutional Change
Spring. seven weeks. 2 credits. Prerequisite: junior or senior standing; permission of instructor. Students should see instructor before first class. Not offered 2006-2007. S. Bacharach.
Examines the market, cultural, political, and structural forces that change the organizational “rules of the game” and how those changes affect individuals and organizations, and the distortions that occur as individuals and organizations attempt to adjust to a new unstable order. Issues examined include power, corruption, dealmaking, rationality, uncertainty, and competition. Course requirements include completing a major research paper and leading a class discussion.

ILROB 470(4700) Group Processes
Fall. 4 credits. Prerequisites: ILROB 122 or equivalent, junior or senior standing. E. Lawler.
A review of theoretical approaches and selected research on group phenomena, including the formation of groups, the structure of group relations, and group performance. Specific topics include conformity and obedience, status and power relations, social identity, emotions and emotion management, group solidarity and commitment, and groups within larger organizations.

ILROB 471(4710) Organizations and Negotiation
Spring. 4 credits. Prerequisite: undergraduate standing. M. Williams.
This introductory course provides understanding of the theory and the processes of negotiations as practiced in a variety of organizational settings. It is designed for relevance to the broad spectrum of bargaining problems faced by team members, managers, and professionals. It allows students the opportunity to develop negotiation skills experientially and to understand negotiation frameworks. General topics include: distributive bargaining, integrative negotiations, psychological biases, and multiparty negotiations. Advanced topics include: sources of power, dispute resolution, emotions/intelligence, tenaciousness, teams and negotiations (e.g., union management). Simulations, exercises, role-playing, and cases are emphasized.

ILROB 472(4720) Applied Organizational Behavior
Introduces students to intermediate theory of organizational behavior. Concentrates specifically on teaching students to use organizational theories for analytical and applied purposes. Topics include organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.

ILROB 475(4750) Organizational Uncertainty and Tactical Leadership
Spring, seven weeks. 2 credits. S. Bacharach.
Focuses on how leaders implement and sustain ideas in organizations during periods where it is clear that coming up with the perfect answer is impossible because of conditions of uncertainty. Specifically, the premise is that a good idea is not enough. What you need are the tactical skills to mobilize, implement, and sustain the idea throughout the organization. These tactical skills are the focus of the seminar. Through a series of examples and structured cases, students learn the skills of mobilization, coalition formation, and execution. There is a specific concern about how leaders need to anticipate reaction of others, analyze the political terrain in their organizations, and establish credibility. Leadership is examined not from the perspective of personality but from the perspective of practical skills that can be learned. These skills are applied to numerous types of organizations. There is case material, a required film, and tutorials. The class is broken up into six groups and grades assigned on the basis of group exercises and one final group project. An effort is made to equalize between graduate and undergraduate students. Please note that the final project is a comprehensive case development in which each group must extensively illustrate many of the arguments presented in the course. The final illustrates many of the arguments presented in the course.

ILROB 495(4950) Honors Program
Fall and spring (yearlong). 3 credits each semester.
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILROB 497-498(4970-4980) Internship
Fall and spring. 4 and 8 credits.
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILROB 499(4990) Directed Studies
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILROB 520(5200) Organizational Behavior and Analysis
Fall or spring. 3 credits. Staff.
Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and organizational climate. A preliminary course for advanced work in organizational behavior.

ILROB 525(5250) Organizational Behavior
Fall, spring. 4 credits. Offered only in New York City for M.S. program. Staff.
Applies theories and methods from the behavioral sciences to the analysis of behavior in organizations. Areas of study include classical and modern theories of organization and their underlying assumptions of human nature, the relationship between organizations and their environment, the role of power, politics, and decision-making in organizations, industrial history, and leadership culture.

ILROB 575(5790) Negotiation and Conflict Resolution
Fall. 4 credits. Provides understanding of the theory and the processes of negotiation as practiced in a variety of organizational settings. The course is designed for relevance to the broad spectrum of bargaining problems faced by the manager and the professional. It allows students the opportunity to develop negotiation skills experientially and to understand negotiation by using analytical frameworks. General topics include: distributive bargaining, integrative negotiations, psychological biases, sources of power, and multi-party negotiations. Advanced topics include: dispute resolution, emotionally intelligent negotiations, team or team negotiations (e.g., union-management, mergers). Simulations, exercises, role-playing, and cases are emphasized.

ILROB 625(6250) Conflict, Power, and Negotiation
Fall. 4 credits. Limited enrollment.
Prerequisite: senior or graduate standing; permission of instructor. E. Lawler.
Theoretical seminar that adopts a power perspective on bargaining and conflict resolution. Examines how power relations and power processes affect tactics in bargaining and also when power relations inhibit or promote conflict resolution. "Power" is viewed in the course as a capability, embedded in a social structure, and tactics are the action based on or using such power. The seminar gives an overview of several theoretical approaches to conflict and bargaining (e.g., rational choice, cognitive, social exchange) and places the power perspective in this context.

ILROB 626(6260) Organizations and Social Inequality
Spring. 4 credits. P. Tolbert.
Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality are examined, and the social policy implications of each are considered.

ILROB 627(6270) Leadership in Organizations
Spring. 4 credits. T. Hamer.
Examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Discusses personality, situational factors, intergroup processes, interpersonal perception as well...
as the motivation to both lead and follow. Explores the implications for leadership, training, organization development, and action research.

ILROB 678(6790) Methods of Observation and Analysis of Behavior Fall or spring. 4 credits. Limited to 25 students. Prerequisite: permission of instructor. W. Sonnenstuhl.

Focuses on qualitative methods and emphasizes learning by doing. Examines different approaches to the collection and analysis of data. Students learn a variety of data collection techniques for understanding individual and collective behavior, including participatory observation, in-depth interviews, and working with archival materials. The course also emphasizes the constant comparative method as a basic technique for data analysis. This technique is the basis of such qualitative computer programs as Ethnograph and Nudist. Students conduct their own research projects. Students who wish to use qualitative methods either for a senior honors thesis, master's thesis, or doctoral dissertation are encouraged to take this course.

ILROB 721(7210) Advanced Micro Organizational Behavior Spring. 3 credits. Staff.

Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 722(7220) Advanced Macro Organizational Behavior Fall. 3 credits. Prerequisite: ILROB 520. Staff.

Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 724(7240) Managing Social Influence Fall. 3 credits. J. Goncalo.

Survey of basic theories of social influence and how they are extended (and sometimes misapplied) to managing people in organizations. Theories covered include social facilitation, social norms, group polarization, conformity and minority influence. Emphasizes the evaluation of certain popular management techniques in light of social influence processes.

ILROB 725(7250) Analysis of Published Research in Organizational Behavior Fall. 3 credits. Prerequisites: ILROB 520 and one year of statistics. Staff.

Advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 726(7260) Selected Topics in Organizational Behavior Fall. 3 credits. Prerequisites: ILROB 520 and permission of instructor. Staff.

Advanced seminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves change from year to year depending on participants' interests. Course is designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more arenas of organizational theory. Emphasis is placed on exploring the relevance of tradition in related disciplines (e.g., anthropology, sociology, philosophy) that may enrich our understanding of organizational life.

ILROB 727(7270) Leadership in Organizations Fall or spring. 3 credits. Open to MLIR graduates. T. Hammer.

Covers basic leadership theories with an emphasis on how they are used, analyzes leadership cases, and examines current leadership surveys and training material. To allow you to gain additional information of practical use, you also have at the end of the semester a collection of essays on two practical topics: how to read and use leadership "best-sellers" (the kind of book that sells in airports), and leadership philosophies and management practices in foreign countries.

ILROB 728(7280) Theories of Motivation and Leadership in practice Spring. 4 credits. Prerequisite: ILROB 520. T. Hammer.

Introduction to basic concepts of human motivation in general, with particular emphasis on theories that explain and predict work motivation. Students examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used for practice in work organizations. Several current microtheories of leadership and power and related research are examined. The disciplinary perspective employed is social organizational psychology, and the level of analysis emphasized is action and experience of individuals in groups.

ILROB 729(7290) Organizational Change and Intervention Fall. 3 credits. Prerequisite: graduate standing.

Seminar concerned with planned and unplanned change in organizations. It is designed to analyze principles of intervention. Particular attention is paid to the role of internal and external change agents. Students are encouraged to analyze contemporary changes such as mergers and acquisitions and workforce reductions. Participants submit weekly workforce journals.

ILROB 772(7720) The Social Construction of Economic Life Spring. 3 credits. M. Louharn.

Drawing on the literature in economic sociology, this course emphasizes how economic activities are constituted and shaped by the social, cultural, and historical contexts in which they are situated. It surveys various empirical and theoretical approaches used to study the genesis and influence of broader-scale organizational and institutional arrangements. Provides students with an opportunity to formulate and refine their own research questions and perspectives.

ILROB 776(7760) Globalization and Its Discontents: The Organizational Implications of Global Competition Fall. 4 credits. Core course in master of engineering/manufacturing option degree program. Staff.

Aimed at helping students develop an understanding of organizations as complex social systems, and at helping them understand the behavioral implications of new manufacturing initiatives. Uses case studies to study the introduction of a variety of innovations in contemporary manufacturing firms, including manufacturing cells and teams, concurrent engineering, total quality management, and just-in-time material flow. Analyses emphasize the impact of such innovations on individuals' role definitions and relationships, organizations' communication requirements and patterns, group dynamics, leadership behaviors, labor relations, and human resource management systems.

ILROB 778(7780) Solidarity in Groups [also SOC 778(7780)] Fall. 3 credits. E. Lawler.

Examines sociological and social psychological theories about how social solidarity or a "sense of community" comes about and is maintained in groups and organizations. Distinguishes emotional, normative, and instrumental bases for solidarity and shows how these promote or inhibit subgroup formation in organizations, commitment of individuals to organizations, and organizational citizenship behavior.

ILROB 790(7900) IRL M.P.S. Program Fall and spring. 1–9 credits.

Supervisory research only for those enrolled in the IRL M.P.S. program.

ILROB 798(7980) Internship Fall. 3 credits. Prerequisite: 725 or 726.

For description, see "Collective Bargaining, Labor Law, and Labor History." 798 is strongly urged to enroll.

ILROB 799(7990) Directed Studies Fall. 3 credits. Prerequisite: "Collective Bargaining, Labor Law, and Labor History." 799 is strongly urged to enroll.

ILROB 920(9200) Organizational Behavior Workshop Fall. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. All M.S. and Ph.D. candidates in department at work on their theses are strongly urged to enroll.

This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. Each student is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of his or her thesis research.

SOCIAL STATISTICS 355

T. DiCiccio, chair (358 Ives Hall, 255-8643); J. Bunge, P. Velleman, M. Wells.

IRLST 212(2120) Statistical Reasoning Fall and spring. 4 credits. Prerequisite: IRL undergraduate. P. Velleman and staff.

Introduction to the basic concepts of statistics and data analysis with applications, particularly to the social sciences. Focuses on descriptive methods, normal theory models, and inference procedures for univariate, bivariate, and multivariate data. Basic statistical designs, an introduction to probability, and applications of the binomial and normal distributions are considered. Estimation, confidence intervals, and tests of significance are introduced and discussed in detail for means and proportions of a single population and for differences between means and proportions of two populations. Also covers inference in the contexts of two-way contingency tables, correlations, and simple
and multiple linear regression models. A statistics computer package is used throughout the course, both in class and for weekly homework assignments.

ILRST 212(2130) Applied Regression Methods
Fall. 2 credits. Prerequisite: ILR undergraduate standing; advanced placement or transfer credit for ILRST 212, but no corequisite material on multiple regression and analysis of variance that is not ordinarily part of AP statistics or introductory statistics at other institutions; permission of instructor or ILR OSS. Assumes basic knowledge of statistics at level of AP syllabus or standard introductory course, through inference for simple regression. P. Velleman. We cover one and two-way analysis of variance, multiple regression, regression model building and diagnosis, and, as time permits, touch on related linear model topics briefly. There is a midterm exam and a paper. This course meets once each week. Roughly half of the meetings are lectures; the other half are consulting meetings with smaller groups in support of course projects.

ILRST 310(3100) Statistical Sampling
Fall. 4 credits. Prerequisite: two semesters of statistics. J. Bunge. Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of non sampling errors. Discussion of applications to social and biological sciences and to business problems. Includes an applied project.

ILRST 311(3110) Practical Matrix Algebra
Fall or spring. 4 credits. Not offered 2006-2007. Staff. Matrix algebra is necessary for statistics courses such as regression and multivariate analysis and for other research methods courses in various other disciplines. One goal of this course is to provide students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices, matrix calculations, linear dependence and independence, vector geometry, matrix reduction (trace, determinant, norms), matrix inversion, linear transformation, eigenvalues, matrix decompositions, ellipsoids and distances, and some applications of matrices.

ILRST 312(3120) Applied Regression Methods
Fall and spring. 4 credits. Prerequisite: ILRST 212 or equivalent. M. Wells and P. Velleman. Reviews matrix algebra necessary to analyze regression models. Covers multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are covered. Illustrative examples are taken from the social sciences. Computer packages are used.

ILRST 410(4100) Techniques of Multivariate Analysis
Spring. 4 credits. Prerequisite: ILRST 312 or equivalent, some knowledge of matrix notation. P. Velleman. Discusses techniques of multivariate statistical analysis and illustrates them using examples from various fields. Emphasizes application, but theory is not ignored. Deviation from assumptions and the rationale for choices among techniques are discussed. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged programs. Topics include multivariate normal distribution, sample geometry and multivariate distances, inference about a mean vector, comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis; and multivariate multiple regression.

ILRST 411(4110) Statistical Analysis of Qualitative Data
Spring. 4 credits. Prerequisite: two statistics courses or permission of instructor. T. DiCiccio. Advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variates; contingency tables; linear and ordinal and multinomial regression models; and limit dependent variables.

ILRST 499(4990) Directed Studies
Fall. 2 credits. Prerequisite: ILRST 210. Staff. For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRST 510(5100) Statistical Methods for the Social Sciences I
Fall. 3 credits. Staff. First course in statistics for graduate students in the social sciences. Covers descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression, and correlation. Students are instructed on the use of a statistics computer package at the beginning of the semester and use it for weekly assignments.

ILRST 511(5110) Statistical Methods for the Social Sciences II
Fall and spring. 3 credits. Prerequisite: ILRST 510 or equivalent introductory statistics course. T. DiCiccio. Second course in statistics that emphasizes applications to the social sciences. Topics include simple linear regression, multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

ILRST 515(5150) Statistical Research Methods
Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff. Students learn basic skills for conducting qualitative and survey research. They work through an introductory review course at home on their own time. After passing an exam, they attend a two-week immersion course in Ithaca taught by the on-campus faculty in July. Topics include an introduction to surveys and discrete analysis, basic regression, and integration of qualitative and quantitative research methods.

ILRST 610(6100) Statistical Methods I (also BTRY/STBTRY 601)
Fall and summer. 4 credits. M. Wells. For description see, BTRY 601.

ILRST 715(7150) Likelihood Inference
Fall. 3 credits. Prerequisites: graduate courses equivalent to ORIE 670 and 671. Not offered 2006-2007. Staff. In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.

ILRST 717(7170) Analysis of Longitudinal Data
Spring. 3 credits. Prerequisites: extensive knowledge of SAS; advanced linear models; probability and statistics (at level of text by Casella and Berger). Staff. Comprehensive introduction to the analysis of longitudinal data. Involves three major components: a modeling component, an analysis component, and a diagnostic component. Linear and nonlinear mixed effects models are used for the modeling portion; likelihood and estimating function methodology are used for the analysis portion. Diagnostic tools for studying the validity of various assumptions are also developed. Modeling and methodology for the analysis of missing data are also incorporated in the curriculum. SAS is used extensively.

ILRST 798(7990) Directed Studies
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILR EXTENSION
Statewide
The following courses are open to participants in the Extension Division's statewide credit programs in labor studies and management studies. Extension offices are based in Buffalo, Albany, Rochester, Ithaca, New York City, and Long Island. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs. Courses and course credits earned in Extension Division's credit programs are not automatically accepted as transfer credits or as a basis of admission to the resident ILR undergraduate and graduate programs in Ithaca. Student applications for course transfer are evaluated by the ILR school on an individual basis.

204(2040) Managing Conflict
Fall or spring. 3 credits. Staff. Provides students with opportunities to apply conflict resolution theory to specific situations, based on real-life problems that require resolution. Students examine situations, analyze the facts and perceptions driving the actors, and engage in applying communication, negotiation, and mediation techniques to reduce or eliminate the conflict.

205(2050) Oral Skills for Conflict Management
Fall or spring. 3 credits. Staff. Emphasizes development of oral communications skills required to successfully manage conflict both as a party to a dispute and as a third party who is charged with helping to resolve a dispute. Presents
simulations to help the participants practice their skills.

206(2060) The Nature of Conflict  
Fall or spring. 3 credits. Staff.  
Provides students with a conceptual foundation to engage in further study of conflict management and conflict resolution. After taking the course, students are able to identify and describe types of conflict; identify the various sources of conflict; apply a conceptual model of conflict to interpersonal, organizational, and international conflict situations; describe conflict situations in terms of social psychological aspects using a "person perception" or "attribution" theoretical orientation; and identify their personal response styles to conflict.

209(2090) Leadership in Unions  
Fall or spring. 3 credits. Staff.  
What role does leadership play in the vitality of the labor movement? Is there a crisis of leadership in contemporary unions? Does the political context of a democratic membership organization affect the quality of leadership? Will changing workforce demographics create a demand for increased leadership opportunities by women and minorities in their unions? This course examines theories of leadership including a comparison of leadership styles and skills in the context of changing needs of the labor movement. The dynamic relationship of leaders and followers is examined in regard to emerging internal union organizing strategies that aim to increase membership and to activate current members.

212(2120) Labor, Technology, and the Changing Workplace  
Fall or spring. 3 credits. Staff.  
Technological changes are having a profound impact on both work and society. But what do these changes mean for workers and their unions? Is resisting technological change equivalent to obstructing progress? What can we do to influence how work is shaped and performed? These and other questions are at the heart of this course. The course is divided into three sections: Skills, Technology, and the Labor Process; Industrial Change and Worker Responses; Four Historical Case Studies; Unions, Technology, and the Future of Work.

240(2400) Union Organizing  
Fall or spring. 3 credits. Staff.  
Students learn which unions are organizing successfully today and which workers are joining unions. Through case studies, discussion, and in-class exercises, they learn about targeting, house calls, building rank and file organizing committees, how to talk union, inoculating against anti-union campaigns, legal aspects of organizing, and innovative ways to organize outside of government-run certification elections.

241(2410) Arbitration  
Fall or spring. 3 credits. Staff.  
Study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

242(2420) Public Sector Collective Bargaining  
Fall or spring. 3 credits. Staff.  
Introduction to collective bargaining in the public sector. Examines the historical development of bargaining in public employment, the evolution of state and federal and bargaining theory and practices, as well as impasse resolution techniques frequently found in this sector. Special emphasis is given to developing an understanding of the similarities and differences between public and private sector bargaining and how they have affected tactics and strategies employed by the parties.

245(2450) Public Sector Labor Law  
Fall or spring. 3 credits. Staff.  
Survey and analysis of the New York State Public Employees Fair Employment Act and compares it with other state laws covering public employees. Examines the extent to which the law protects and regulates concerted actions by employees in the public sector. The intent is to study and understand the law as applied and the most important to understand how it has been interpreted by the courts of New York State in its application. Major emphasis is on employee and employer rights, including recognition and certification, improper practices, strikes, grievances, and disciplinary procedures of the New York State Public Employment Relations Board.

247(2470) Labor and the American Economy  
Fall or spring. 3 credits. Staff.  
Helps the student understand how economic theories relate to the economic problems confronting the American citizen in general and the American union member in particular. Emphasis is placed on contemporary economic theories and how their proponents attempt to solve American economic problems.

248(2480) Employment Practices Law  
Fall or spring. 3 credits. Staff.  
Consider laws and regulations that directly affect managers and employers. Students examine issues and laws such as Equal Employment Opportunity, Employee Retirement Income Security Act, Federal Wage and Hour Laws, Occupational Safety and Health Act, unemployment laws, and other topics. Students focus on the practical application of laws and their impact on the workplace.

250(2500) New York Workers' Compensation Law for Trade Unionists and Injured Workers  
Fall or spring. 3 credits. Staff.  
There is a collective perception that the workers' compensation system in New York compounds an injured personal predicament with Byzantine responses that lead to despair. Unions and injured workers' organizations believe that, if properly empowered, they can be just as effective as lawyers in looking after their injured colleagues' claims. This course is structured to meet both of these realities. Students delve into every nook and cranny of New York Workers' Compensation Law. The course is entirely practical. Skills teaching, how to present a case, decorum, ethics, and persuasiveness are built into the course. Experts on how the system really works are used.

251(2510) Principles and Practices of Management  
Fall or spring. 3 credits. Staff.  
Presents the theory and processes of management with an emphasis on supervision. Includes management functions of planning, organizing, staffing, and evaluating. Presents concepts and theories and analyzes case studies. Emphasizes motivating people, exercising leadership, and effectively developing employees.

252(2520) Contract Bargaining  
Fall or spring. 3 credits. Staff.  
Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in bargaining. Students learn to prepare bargaining demands, cost economic items, draft noneconomic contract language, negotiate economic and noneconomic issues, and resolve a contract bargaining impasse. The course considers the impact of contract bargaining outcomes on workers, unions, employers, and the public.

253(2530) Contract Administration  
Fall or spring. 3 credits. Staff.  
Focuses on the role of the steward in administering the union contract in the workplace. Students evaluate grievance and arbitration contract clauses, the grievance procedure in practice, the role of the union steward, the role of local and international unions, negotiation of grievances, and preparation for arbitration. Students analyze the impact of grievance and arbitration procedures on workers, unions, and employers.

254(2540) Labor Law  
Fall or spring. 3 credits. Staff.  
Examines the principles of labor law by looking at social philosophy and the historical context of federal labor legislation from the 1920s. Students concentrate on major provisions of the National Labor Relations Act, examining how the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion includes new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

255(2550) Labor History  
Fall or spring. 3 credits. Staff.  
Reviews American labor history from the perspective of workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. Includes a discussion of the development of trade union institutions and leaders, and the evolution of union political activities and collective bargaining. Special attention is paid to the involvement of women and minority workers with unions.

256(2560) Dispute Resolution  
Fall or spring. 3 credits. Staff.  
Examines third-party participation in dispute resolution in private and public sector collective bargaining. Develops dispute resolution methods in American labor relations; issues and practices in neutral, binding arbitration, conciliation, and mediation; negotiation; mediation; and fact finding procedures are discussed. Use of exclusive labor-management mechanisms to settle industry disputes is also examined.
**259(2590) Union Administration**
Fall or spring. 3 credits. Staff.
Focuses on the principles and practices of effective union administration. Students study the dynamics of democratic organizations and the development of organizational leadership. The course explores alternative methods of decision making and lines of responsibility. The legal obligations of unions and union officials are discussed and analyzed. The course also examines the structure and evolution of relationships inside the labor movement.

**264(2640) Contemporary Labor Problems**
Fall or spring. 3 credits. Staff.
Survey of the major challenges that confront the American labor movement. Students are briefed on the background of each problem and discuss and analyze a broad range of solutions proposed by the experts.

**367(3670) Safety and Health in the Workplace**
Fall or spring. 3 credits. Staff.
Provides basic education and training in workplace safety and health. Focuses on applicable federal and state laws, standards for safety and health, industrial hygiene, and such health concerns as asbestos, radon, and AIDS. Practical experience is provided through workplace walk-through safety and health inspections and in use of industrial hygiene equipment to measure noise, temperature, humidity, airflow, and airborne toxins.

**FACULTY ROSTER**

Abowd, John M., Ph.D., U of Chicago. Edmund Ezra Day Prof. of Industrial and Labor Relations, Labor Economics

Bacharach, Samuel, Ph.D., U of Wisconsin. Jean McKevelly-Alice Grant Prof. of Labor Management Relations, Organizational Behavior

Batt, Rosemary, Ph.D., Massachusetts Inst. of Technology. Alice Cook Professorship in Women and Work. Assoc. Prof., Human Resource Studies

Bell, Bradford, Ph.D., Michigan State U. Asst. Prof., Human Resource Studies

The Johnson School prepares men and women for managerial careers in business. The school offers courses in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

The Johnson School web site: www.johnson.cornell.edu/academic/courses/ for information on enrollment and a complete course roster.

UNDERGRADUATE ONLY

NBA 300(3000) Entrepreneurship and Enterprise
Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Johnson School students, see NBA 564. D. Ben-Daniel.

Uses Cornell-developed case studies and lectures to address entrepreneurial management, competition, and new-business development in existing companies. Topics include valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and workouts, leveraged buyouts, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures.

COURSES FOR NON-JOHNSON SCHOOL STUDENTS

NBA 507(5070) Entrepreneurship for Scientists and Engineers
Fall, spring. 3 credits. Prerequisite: M.Eng., Ph.D., and M.S. students; priority given to seniors as undergraduates. J. Nesheim and G. Schneider.

Designed for mentored independent study, this course uses streaming video, guest speakers, discussion, and special lectures/tutorial. There is no homework and few required class meetings. Work is focused on one project: Students form a start-up team, choose a technical business idea, and develop and found a business that can attract venture investors. Tutorial sessions with instructors apply lessons to the team business plan. Students learn how high-technology ideas are converted into world-class businesses in venture-backed start-up companies and in new-business development in existing companies. Slides take the student from idea to initial public offering. Grading is based on a final exam focusing on the video lectures, a written business plan, and final presentation to a judging panel.

NBA 553(5530) Accounting and Financial Analysis for Engineers
Spring. 3 credits. Prerequisite: non-Johnson School students. J. D'Souza.

Focuses on basic financial and managerial accounting and the economic and financial concepts that have a bearing on managerial decisions. The goals are to (1) give students a working knowledge of the accounting process and the value and limitations of the data that come out of the accounting information system; (2) familiarize students with key concepts in managerial accounting and the application of cost information to pricing and operating decisions; (3) promote an understanding of the use of economic theory in the evaluation of capital investment projects. The teaching methods consist of lectures and cases. Students are evaluated on the basis of exams.

NCC 550(5500) Financial Accounting
Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Johnson School students, see NBA 564. D. Ben-Daniel.

Uses Cornell-developed case studies and lectures to address entrepreneurial management, competition, and new-business development in existing companies. Topics include valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and workouts, leveraged buyouts, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures.

NCC 553(5530) Marketing Management
Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Johnson School students, see NBA 564. D. Ben-Daniel.

Introduces students to the subject of marketing as it relates to business operations, management, and practices. Topics include market analysis, competitive strategy, and the role of marketing in achieving organizational goals. Students are evaluated on the basis of exams.

NCC 554(5540) Management and Leading in Organizations
Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Johnson School students, see NBA 564. D. Ben-Daniel.

Introduces students to the subject of management as it relates to business operations, management, and practices. Topics include market analysis, competitive strategy, and the role of marketing in achieving organizational goals. Students are evaluated on the basis of exams.

NCC 556(5560) Managerial Finance
Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Johnson School students, see NBA 564. D. Ben-Daniel.

Introduces students to the subject of financial management as it relates to business operations, management, and practices. Topics include market analysis, competitive strategy, and the role of marketing in achieving organizational goals. Students are evaluated on the basis of exams.

The Johnson School prepares men and women for managerial careers in business. The school offers courses in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the master of business administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, 111 Sage Hall.

Students in other graduate programs and undergraduate students registered with the university are welcome in most classes. See
Introduces business finance through theory and case studies. Topics include stock and bond valuation, the capital budgeting decision, portfolio theory, the asset-pricing models, raising capital, capital structure, mergers and acquisitions, costs of capital, option pricing, and risk management. International applications are considered within each topic area. Grading is based on an exam, group case reports, homework, and class participation.

**IMMERSIONS**

Only the Johnson School offers learning immersion courses in strategic operations, managerial finance, investment banking, management, and entrepreneurship. Immersions offer a semester of continuous focus, real-world problem solving, and site visits to dozens of companies.

**MFI—Managerial Finance Immersion**

Prerequisite: NCC 506 with grade of B or better.

Specifically designed for students planning to pursue finance careers. Some students interested in nonfinance careers (including consulting) may wish to consider this course, but they should recognize that it is not specifically designed for this purpose. A major objective is to help students make more informed choices about how to launch their finance careers.

NBA 502(5202) Managerial Cost Accounting
3 credits

NBA 506(5060) Financial Statement Analysis
1.5 credits

NBA 549(5490) Managerial Finance—Practicum
1.5 credits

NBA 558(5580) Corporate Financial Policy
1.5 credits

NBA 565(5650) Corporate Governance
1.5 credits

NBA 656(6560) Valuation Principles
1.5 credits

NCC 500(5080) Managing Operations
2.5 credits

NCC 504(5040) Managing and Leading in Organizations
2.5 credits

**IBI—Investment Banking Immersion**

Prerequisite: NCC 506 with grade of B or better.

Specifically designed for students planning to pursue careers in investment banking. Inappropriate for students interested in following a finance career in nonfinancial industry or nonfinance careers (including consulting).

This course is designed to meld the practical and the theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment banking profession, and it is expected that some of the participating firms will be using their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

NBA 500(5000) Intermediate Accounting
3 credits

NBA 511(5110) Financial Modeling
1.5 credits

NBA 556(5560) Investment Banking—Practicum
2.0 credits

NBA 558(5580) Corporate Financial Policy Turbo
2.5 credits

NBA 656(6560) Valuation Principles
1.5 credits

NCC 508(5080) Managing Operations
2.5 credits

NCC 504(5040) Managing and Leading in Organizations
2.5 credits

**RS&T—Research, Sales, and Trading Immersion**

Prerequisite: NCC 506 with grade of B or better.

Specifically designed for students planning to pursue careers in research (both buy-side and sell-side), sales, and trading, either at Wall Street firms (sell-side) or at buy-side firms such as mutual funds. Melds the practical and theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment management profession, and it is expected that some of the participating firms will use their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

NBA 516(5160) Introduction to Quantitative Asset Management
1.0 credit

NBA 542(5420) Investment and Portfolio Management
3.0 credits

NBA 563(5630) Research, Sales, and Trading Practicum
1.5 credits

NBA 656(6560) Valuation Principles
1.5 credits

NCC 508(5080) Managing Operations
2.5 credits

NCC 504(5040) Managing and Leading in Organizations
2.5 credits

NCC 550 Semester in Strategic Operations
Limited enrollment. Prerequisites: NCC 501 and 506 for Johnson School students; permission of instructor.

Full-time program for the semester; students are not able to take other courses concurrently. The course objective is to begin developing students to think and act like brand managers, some of the best trained and most upwardly mobile professionals in industry. It provides students with a unique opportunity to begin internalizing the concepts, principles, and tools necessary to achieve success in brand management. While the course focuses on managing traditional consumer brands, high-tech products, services, and global branding are also addressed. In-class methods consist of (1) academic and industry lectures; (2) on-site visits with marketing and manufacturing professionals; (3) case and project discussions and presentations; and (4) a brand management simulation. Course requirements consist of (1) discussion of readings; (2) individual case write-ups and presentations; (3) group projects and presentations (including a capstone simulation); and (4) in-class exams. There is considerable off-campus travel for field study.

NBA 502(5202) Managerial Cost Accounting
3 credits

NBA 620(6200) Marketing Research
3 credits

NBA 624(6240) Brand Management—Practicum
4.5 credits

NCC 508(5080) Managing Operations
2.5 credits

NCC 504(5040) Managing and Leading in Organizations
2.5 credits

NCC 550 Semester in Strategic Operations
Limited enrollment. Prerequisites: NCC 501 and 506 for Johnson School students; permission of instructor.

Full-time program for the semester; students cannot take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. The course is taught by a team of faculty and industrial practitioners, and much of the student work is team-oriented. There is off-campus travel for field study of various manufacturing plants.

NBA 502(5202) Managerial Cost Accounting
3.0 credits
NBA 650(6500) Semester in Strategic Entrepreneurship; is the student's full course load for the semester. David J. BenDaniel, the Don and Margi Berens Professor of Entrepreneurship at the Johnson School, leads the faculty team for this immersion.

NBA 656(6560) Valuation Principles

NBA 603(6030) Sustainable Global Enterprise

NBA 532(5320) Due Diligence in Private Equity Investments

NBA 509(5090) Strategy

NCC 504(5040) Managing and Leading in Organizations

NCC 500(5000) Financial Accounting

NCC 506(5060) Managerial Finance

NCC 501(5010) Statistics for Management

NCC 502(5020) Microeconomics for Management

NCC 503(5030) Marketing Management

NCC 504(5040) Managing and Leading in Organizations

NCC 508(5080) Managing Operations

NCC 506(5060) Sustainable Global Enterprise Practicum

NCC 501 or permission of instructor.

E&PE—Entrepreneurship and Private Equities Immersion

Comprehensive course that integrates the technical, strategic, and economic aspects of entrepreneurship; is the student's full course load for the semester. David J. BenDaniel, the Don and Margi Berens Professor of Entrepreneurship at the Johnson School, leads the faculty team for this immersion.

NBA 564(5640) Entrepreneurship and Private Equity—Practicum

NBA 618(6810) Global Technology Innovation and Commercialization

NBA 656(6560) Valuation Principles

NBA 657(6570) Entrepreneurship Marketing

NCC 508(5080) Managing Operations

NCC 504(5040) Managing and Leading in Organizations

Suggested additional courses for E&PE immersion

NBA 559(5590) Venture Capital Industry and Private Equity Markets

NBA 532(5320) Due Diligence in Private Equity Investments

SGE—Sustainable Global Enterprise

The SGE immersion provides students with a breadth and depth of knowledge and experience relating to the broad impact of social and environmental issues as well as the strategic opportunity these issues present to firms across a number of industries. Students will spend much of their time in field projects that require them to address real problems currently being faced by companies who expect to receive practical, operational solutions.

NBA 603(6030) Sustainable Global Enterprise

NBA 658(6580) Sustainable Global Enterprise Practicum

NCC 508(5080) Managing Operations

NCC 504(5040) Managing and Leading in Organizations

*Note: Students electing to take the immersion must choose a minimum of five (5) additional credits of course work from the recommended electives list of Johnson School courses or other courses from other programs at Cornell. Course availability is subject to scheduling.

NCC COMMON CORE COURSES

NCC 500(5000) Financial Accounting

Fall. 2.5 credits. Johnson School core course. Limited enrollment. R. Libby. Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis, the accounting cycle, financial statements, preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 501(5010) Statistics for Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. R. Hilton. Introduction to decision making under conditions of uncertainty. Topics include descriptive statistics, probability theory, classical statistics, statistical decision theory, and simple and multiple regression analysis. Applications in finance, marketing, and operations management are discussed.

NCC 502(5020) Microeconomics for Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. R. Hilton. Introduces microeconomic theory and applies it to problems faced by managers. Topics include supply and demand, consumer behavior, pricing when a firm has market power, and the role of contracts. The course employs a lecture format and emphasizes problem solving. Grading is based on a midterm and a final exam.

NCC 503(5030) Marketing Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. D. Stayman and E. Eisenstein.

NCC 504(5040) Managing and Leading in Organizations

Spring. 2.5 credits. Johnson School core course. Limited enrollment. E. Mannix and K. O'connor.

NCC 505(5050) Strategic Management

Spring. 2.5 credits. Johnson School core course. Limited enrollment. R. Michaely. Focuses on managing processes: actions that convert inputs into outputs. Almost any business function can be modeled as a network of processes. The first part of the course examines processes, both individually and as part of a larger system; students see that good process design reflects both the volume and the variety of the product. A common course theme is the deleterious effect of variability (in demand, supply, quality, or capacity) on complex systems. Queuing theory and simulation are particularly helpful for analyzing process capabilities. The second part analyzes how goods and services are produced. After describing the strategic role of operations, it examines forecasting systems, inventory management, and just-in-time and logistic management. Constrained optimization models provide information about managing with finite resources. The final part examines process improvement through quality and productivity management and corporate learning.

NCC 509(5090) Strategy

Fall. 2.5 credits. Johnson School core course. Limited enrollment. V. Kadiyali and J. Johnson.

Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks are based on recent advances in game theory, industrial organization, and organization theory.
although the course also draws from the older business policy tradition. Students who successfully complete this course are able to analyze industries, identify areas of strategy advantage and disadvantage, and devise strategies that exploit advantages and remedy disadvantages.

**NBA MANAGEMENT ELECTIVE COURSES**

**Accounting**

**NBA 500(5000) Intermediate Accounting**
Spring. 3 credits. Prerequisite: NCC 500 or equivalent. M. Nelson. Based on the essential concepts and terminologies of financial accounting introduced in the accounting core course. Students learn to evaluate financial statements through the use of case studies drawn from actual corporate financial reports.

**NBA 502(5020) Managerial Cost Accounting**
Fall, spring. 3 credits. Prerequisites: NCC 500, 501, and 502, or equivalent. R. Hilton and R. Bloomfield. Designed both for those responsible for internal accounting information and those who use such information for decision making. Topics include budgeting, accumulating costs for product costing, activity-based costing, standard costs, the analysis of cost variances, cost estimation and prediction, cost-price-volume decisions, performance measurement, nonmanufacturing cost analysis, cost allocation, and transfer pricing. Instruction is a mixture of lecture and case discussion. Student evaluation is based on a midterm exam, a final exam, a project, and class participation.

**NBA 503(5030) Strategic Cost Management**
1.5 credits. R. Hilton. Focuses on the role of cost management and related issues in helping a firm compete successfully in the global market. Topics include activity-based costing, activity-based management, value chain analysis, the lean enterprise, confronting competition in an industry dominated by lean enterprises, re-engineering, process value analysis, identification of non-value-added activities and costs, target costing, Kaizen costing, continuous improvement, time-based competition, cost versus quality, and benchmarking. The course is based almost entirely on cases, many of them lean enterprises in Japan.

**NBA 506(5060) Financial Statement Analysis**
Spring. 1.5 credits. Prerequisite: NCC 506, NCC 508 or (concurrent enrollment), or permission of instructor. Not open to students who have completed 3-credit version of NBA 506: S. Bhorjraj and P. Hribar. Develops a set of core skills essential to financial statement analysis. Covers strategic ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, credit analysis, bond rating and bankruptcy predictions, and firm valuation using discounted cash flow techniques. Emphasizes practical applications. The course format is a combination of case studies and lectures. The lectures communicate subtler aspects of the material while the cases provide hands-on experience. There is an exam.

**NBA 509(5090) Advanced Financial Analysis**
Fall. 1.5 credits. Prerequisites: NCC 506, finance immersion course, or permission of instructor. Not open to students who have completed 3-credit version of NBA 506: S. Bhorjraj. Builds on the core financial analysis skills developed in NBA 506. Topics include equity valuation, residual income models, quality of earnings assessments, earnings manipulation detection, market efficiency issues, fairness opinions in MBOs, and large sample stock screening strategies. The overall focus is on using accounting-based information to make investment decisions. Emphasis is on practical applications, and special attention is given to cultivating analytical and communication skills. Features both lectures and cases. There is a group term project but no final exam.

**Economics**

**NBA 524(5240) Macroeconomics and International Trade**
Fall. 3 credits. Prerequisite: NCC 502 or permission of instructor, mastery of basic Excel skills. P. Hribar. Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed consumers of national and international economic policies and discerning users of economic analyses and forecasts. Uses a lecture/discussion format.

**NBA 527(5270) Applied Price Theory**
Spring. 4 credits. R. Frank. Emphasizes how economic analysis can help firms and individuals make the most of their opportunities. Of special interest to managers and consultants is the focus on examples that illustrate how faulty economic reasoning leads to inefficient outcomes. Also emphasizes strategic thinking and instructs students in the art of "economic naturalism"—the use of economic reasoning to understand and explain everyday patterns of individual and firm behavior.

**Entrepreneurship**

**NBA 519(5190) Sustainable Business—The Challenge of the 21st Century**
Fall. 8 sessions. 1 credit. F. Keller. Gives students an overview of the emerging sustainable business model. By examining current writings and comparing them to the actual experiences of the lecturer's own business, students draw conclusions about how this business model could be employed in their individual career paths. Students learn that, in addition to traditional financial analysis, business analysts must consider the impacts of social and ecological capital. This so-called "triple bottom line" of sustainable business is so new that most information on the subject has been written in the past few years. Students read about actual cases of how this model has been constructed. There is dialogue about the advantages as well as the barriers and challenges of applying sustainable principles.

**NBA 521(5210) Investing in Distressed Corporations**
Fall. 1 credit. J. Rubin, R. Symington, and J. Hass. Focuses on the burgeoning practice of investing in distressed companies. Once a backwater, this $680 billion (face amount) "field of finance" has entered virtually all institutional portfolios. In 2001 alone, $63 billion of additional defaults entered this universe, with continued high inflows projected for the next few years. Corporate reorganization finance techniques are now necessary tools for individuals in a variety of other disciplines, as it is now highly likely that finance professionals and managers encounter distressed situations in their careers. Using a "bottoms-up" approach, the curriculum first seeks to develop the building blocks of this field: research, valuation, legal issues, and strategies. Issues such as target capital structure location, control/passive strategies, value creation through reorganizations/liquidations, and the role of mezzanine finance and mezzanine money plans are explored. These principles are then applied to real-world situations using case studies.

**NBA 525(5250) Social Entrepreneurship**

**NBA 530(5300) Entrepreneurship Lab**
Fall. 3 credits. Prerequisites: M.B.A. students; NBA 564 or concurrent enrollment or permission of instructor. G. Schneider. Students team up with entrepreneurs in the greater Ithaca area on defined projects that are integral to the companies' operations, such as production planning, new product launches, or assessing organizational structure. Students gain first-hand exposure to the application of functional knowledge in a startup setting, while bringing real value to the host company.

**NBA 531(5310) Venture Start-up**
Spring. 4 credits. R. Ryan. Short course by Professor Rob Ryan, founder of Ascend Communications and of Entrepreneur America, a boot camp for start-ups. Uses Ryan's book Smartups. The lectures contain analyses of various styles of entrepreneurship, ways of determining the viability of technical businesses and hints for negotiation with venture capital sources, among other important topics.

**NBA 535(5350) Special Readings in Private Equity**
Covers the transformation of a public corporation to private equity to increase value. Discusses the advantages and disadvantages of private equity but focuses on financial models. These models show the economic advantages of private equity as well as how to achieve status.

NBA 557(5570) Case Studies in Venture Investment and Management
Fall. 1.5 credits. F. Beste and Y. Hochberg. Consists of a series of cases that focus on the venture capital investment process and the subsequent management of such ventures. The primary perspective is that of the venture capitalist in assessing, evaluating information, preparing forecasts, assessing risks, developing and negotiating investment structure and terms, and deciding whether to invest. Cases also focus on management and financial problems related to policy issues and the relationship between venture capitalists and entrepreneurs. The secondary perspective is that of the entrepreneur and the techniques and skills employed in managing growing enterprises. Focus presents cases by venture capitalists and entrepreneurs supplement student discussion and analysis of cases. Grades are based on written reports, quality of classroom participation, and a final exam.

NBA 559(5590) The Venture Capital Industry and Private Equity Markets
Spring. 0.5 credit. D. BenDaniel. Focuses on the industry from the practitioners' perspective. Topics include (1) an introduction to the private equity market focusing on the transactions that define the industry, its structure, participants, history, and trends; (2) institutional private equity investing—now an increasingly important and dynamic part of the asset allocation mix; and (3) issues in private equity investing such as concentration in fewer, larger funds and the critical role of a new class of gatekeeper/consultants for limited partners. Involves four lectures and a final paper.

NBA 563(5630) The IPO Process and Deal Structure Alternatives
Fall, spring. 3 credits. Z. Shulman. Gives students an in-depth look at initial public offerings and deal structures from a practitioner's point of view. With respect to initial public offerings, the course covers the applicable statutory framework, pre-offering corporate preparations, the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, and selection of a trading forum. Regarding deal structures, the course explores choosing an appropriate transaction structure, deal financing alternatives, due diligence, public company transaction issues, and crucial legal aspects of the acquisition, such as caps, collars, letters of intent, successor liability, continuity of employees, and noncompetition agreements.

NBA 564(5640) Entrepreneurship and Private Equities
Fall, spring. 3 credits. D. BenDaniel. Uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and new-business development in existing companies. Topics include valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and workouts, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, strategic, operational, and human-resource topics in the context of high-growth business ventures.

NBA 618(6180) Global Technology Innovation and Commercialization
Spring. 1.5 credits. W. Sine and K. McGovern. Examines technology commercialization from an investor's point of view. Will address issues related to intellectual property, recognizing and screening opportunities, exploiting technology opportunities, and marketing high-technology Case. Studies and discussions with practitioners will be used to examine this topic.

NBA 653(6530) Strategic Alliances
Spring. 1 credit. J. Suwinski. A wide variety of strategic alliances are being used today as companies try to leverage their resources for competitive advantage. This course gives an overview of the spectrum of alliances, examines strategic rationale and pros and cons of each major type of alliance. The primary focus is on joint ventures as a specific form of strategic alliance, where the success rate is less than 50 percent. The course develops a set of principles that have contributed to success for Corning Incorporated. The course is taught from the perspective of the general manager of a major business unit.

NBA 657(6570) Entrepreneurial Marketing
Spring. 1.5 credits. J. Brinckmann. Addresses the special market issues related to entrepreneurial businesses. The course will cover developing a marketing model, market research, new product rollout, public relations and guerrilla marketing, brand building, and customer relationship building, all from an entrepreneurial point-of-view.

NBA 678(6780) Lectures on the Venture Capital Industry
Spring. 1.5 credits. Prerequisites: NBA 564, 500, 401, or permission of instructor. J. Bartlett and D. BenDaniel. Internet course with one classroom lec by Prof. Bartlett. Focuses on venture capital financing, including the problems and issues facing emerging growth companies as they progress from early stage, start-up status to mature public companies. Emphasizes practical skills: hands-on examination, for example, of how deals are negotiated and valuations arrived at, the principal focus being the so-called Series A, or first professional, round of financing. Views the early stage space from three perspectives: (1) the entrepreneur, or founder, (2) the professional investors, or VCs, and (3) the key executives, i.e., the major players in emerging growth finance. Reviews economics, finance, tax, securities, corporate and employment law considerations, and custom and usage in the industry.

NBA 689(6890) Law for High-Growth Business
Fall, spring. 2 credits. Z. Shulman. In-depth analysis of key issues that an emerging high-growth business must consider and address, including (1) choosing type of business entity, (2) protecting confidential information and inventions, (3) sources of capital (in both bull and bear market environments), (4) understanding capitalization structures (e.g., common stock, preferred stock, warrants), (5) using management buyouts, (6) fundamental fair employment practices, (7) proper establishment and use of boards of directors and advisory boards, (8) technology licensing and commercialization, (9) negotiating relationships with distributors, resellers, and customers, (10) the Foreign Corrupt Practices Act, and (11) dealing with creditors.

NBA 512(5120) Applied Portfolio Management
Fall, spring. 3 credits each semester. Limited enrollment. Students must commit to taking course in fall and spring semesters. Priority given to M.B.A.s who successfully completed either NBA 505 or finance immersion. Students must apply formally; if number of applicants exceeds 12, admission is competitive and merit-based.

NBA 540(5400) Advanced Corporate Finance
Fall. 3 credits. Prerequisite: NBA 506 or equivalent. Not offered 2006–2007. H. Bierman. Relevant for both investment banking and the treasurer's activities of an operating corporation. Most class sessions are lecture-discussion, but there will be several corporate finance cases. Topics include debt securities (duration, convexity, inverse floats, bond refunding, term structure), convertible debt, capital structure, distribution policy, exotic new securities, financial strategies, and the buy versus lease decision. Investigates corporate financial policy decisions for a normative-quantitative point of view and develops skill in formulating financial models and evaluating models. Uses basic mathematics.

NBA 542(5420) Investment and Portfolio Management
Fall, spring. 3 credits. Prerequisites: NCC 501, 502, and 506; comfort with quantitative methods. H. Li. Deals with several important issues pertaining to investments in securities markets. Covers (1) portfolio diversification theory, asset allocation, asset pricing models (e.g., CAPM and APT), and empirical anomalies such as size effect and January effect, (2) the issue of evaluating portfolio performance and mutual fund performance, (3) investment strategies based on patterns in historic security returns (may be loosely considered technical analysis); (4) investment strategies based on publicly available information related to accounting and other market statistics and the use of earnings forecasts (may be considered as fundamental analysis), (5) frictions to trading imposed by the institutional structure of securities markets. The goal of this course is to train students in the latest tools and techniques in portfolio theory and familiarize them with the latest developments in securities market research and applications. This is a highly quantitative course involving extensive analysis of security market data using regression analysis and other statistical tools.
tools. Grades are based on midterm and final exams, cases, a project, and a trading game.

NBA 543(5430) Financial Markets and Institutions
Fall, spring; 3 credits. Prerequisite: NCC 506 (finance core). M. O’Hara.
Applies principles of finance to understand modern financial markets. Central themes are the structure of financial markets, their pricing function, the interaction between financial markets and macroeconomic conditions, and the processes of innovation and regulation in these markets. Students look at the workings of a variety of markets and develop an understanding of the different problems that different types of markets address. Studies the question of market efficiency and the interaction between government policies and financial markets. Analyzes issues in innovation and regulation with basic principles of financial economics. Throughout the course, the relevance of these issues for the practical corporate, portfolio, or public sector decision maker is considered. The course includes ideas and evidence from academic research along with historical, institutional, and international perspectives. Recent events are used to illustrate concepts and develop analytic skills. Spreadsheet assignments and a term project require dataveillance and developing research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 552(5520) Cases in Corporate Finance
Fall; 3 credits. Prerequisites: second-year MBAs and Twelve-Month Option (TMO) students in NCC 506 or equivalent. H. Bierman.
We will develop an understanding of the theories of corporate finance and have discussions of corporate finance cases. Cases and lectures deal with mergers, acquisitions, valuations, corporate restructuring, LBOs, MBOs, distribution policies, and the financing of corporations. The material applies to careers in investment banking, managerial finance, and executive offices. Several executives working in or with corporate finance will present cases. The goal is to develop a skill in analyzing the financing decisions of corporations.

NBA 554(5540) International Finance
Spring; 3 credits. Prerequisite: NCC 506 (finance core) or permission of instructor. W. Bailey.
Applies principles of finance to the international setting. International finance is different in two basic respects: (1) the existence of multiple currencies adds risk to investment and financing decisions; (2) when corporations and portfolio investors cross international borders, both problems and opportunities arise. This course focuses on these issues and highlights how finance theory can be extended to address them. Students apply the basic principles of international finance to a variety of problems. The course helps students understand the ideas and research results of international finance and adapt what they learn to the practical problems in the increasingly globalized business world. The first part of the course outlines exchange rate volatility, barriers to international capital flows, and the value of international diversification. The second part presents a variety of problems, examples, and applications from the three basic themes described in part one. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 555(5550) Fixed-Income Securities and Interest Rate Options
Fall; 3 credits. Prerequisites: NCC 506 (finance core), NCC 501 (statistics core). R. Jarrow.
Designed to study the pricing, hedging, and risk management of fixed-income securities and interest rate derivatives. Topics include the term structure of interest rates, interest rate swaps (caps, floors, collars), the risk structure of interest rates, credit risk spreads, and corporate bond valuation. The method of instruction is lectures and discussion, and computer illustrations are an integral part of the course content.

NBA 558(5580) Corporate Financial Policy
Fall, spring; 1.5 credits. Prerequisite: NCC 506 (finance core). Y. Grinstein.
Provides an understanding of the financial decisions of firms. Discusses the factors that affect corporate financial decisions and how they determine firms’ financing, investment, and hedging policies. These factors include taxes, transaction costs, contracting (between managers and shareholders and between shareholders and other claimholders such as bondholders), and asymmetric information. Much of the material is presented using examples and cases designed to demonstrate how financial decisions create, destroy, or modify value.

NBA 565(5650) Corporate Governance
Spring; 1.5 credits. Prerequisites: NCC 506 and NBA 656 or permission of instructor. Y. Grinstein.
Deals with the ways in which different investors assure themselves of getting a return on their investments. How do investors get managers to return some of the profits to them? How do they make sure that managers do not invest their money in bad projects? These questions are extremely relevant for almost any organization, from startups to Forbes 500 companies. This course explores these issues through a series of case studies and examples. Topics depend on time availability. Career focus: M.B.A. students aspiring to top corporate offices, regardless of functional area, or envisioning a career in M&A/investment banking, financial management, or consulting firms.

NBA 655(6550) Advanced Valuations
Fall; 1.5 credits. Prerequisite: IBI immersion or written permission of instructor. B. Swaminathan.
Builds on the valuation principles course. Applies discounted cash flow (DCF) valuation and valuation by multiples using comparables to multinational contexts. Considers mergers and acquisitions, and multinational project and firm valuations, from the viewpoint of a U.S. manager. Discusses issues such as differences in parent and project cash flows, accounting differences, exchange risks, political risks, and valuation in developing countries. Examine the contingent claims valuation approach, with emphasis on flexibility in managerial decision-making. Focuses on the valuation of strategic options, growth options, and flexibility in capital investments using traditional and nontraditional option pricing techniques. Discusses valuation of growth options, expansion options, natural resource investments, land development, R&D, young-high-growth companies, etc., using the Black-Scholes option pricing model and its variants. Grading is based on cases, a valuation project involving a foreign company, and a final exam.

NBA 656(6560) Valuations Principles
Spring; 1.5 credits. D. Weinbaum.
Deals with the principles of valuation for publicly traded firms, divisions of publicly traded firms, or private firms that have publicly traded comparables, using discounted cash flow (DCF) valuation. The definitions of cash flow and discount rate depend on whether we want to value the entire firm or value only equity. Discusses (1) how to compute free cash flows based on historical income statements and balance sheets; (2) the concept of value drivers and economic value added (economic profits or residual income); (3) operating risk and financial risk, the relation between financial leverage and cost of capital, the leverage and value of equity betas, capital asset pricing model, computing cost of equity, cost of debt, cost of preferred stock, weighted average cost of capital, divisional cost of capital, etc. These concepts are applied. (4) Corporate restructuring. Introduces valuation by multiples using comparables and discusses its applications to valuing divisions of multibusiness firms.

NBA 673(6730) Introduction to Derivatives, Part 1
Fall; spring; 1.5 credits. Prerequisite: NCC 506 (finance core) or permission of instructor. X. Zhang.
Introduces students to the pricing and hedging of derivative securities. Briefly covers forward contracts, futures contracts, and swaps. The primary emphasis is on option contracts. Underlying assets include stocks, currencies, and commodities.

NBA 674(6740) Introduction to Derivatives, Part 2
Fall; spring; 1.5 credits. Prerequisite: NCC 506 (finance core) or permission of instructor. X. Zhang.
For description, see NBA 673.

General Management

NBA 537(5370) Information in Markets

NBA 544(5440) Workplace Management: An Economic Approach
Spring; 3 credits. G. Fields.
Covers labor market economics in the corporate and nonprofit sectors. Begins with demand and supply in labor markets, presenting the tools of decision analysis for workers and firms. Considers various topics for managers, including hiring the right quantity and types of workers; identifying, attracting, and retaining top talent, individual labor supply decisions, and strategic budget constraints.

NBA 550(5500) Risk Management
Fall; 1.5 credits. R. Jarrow.
Studies advanced topics in derivatives and risk management. The first part of the course covers topics in derivatives and develops the tools necessary for analysis, and the second part covers their application to risk management.
NBA 560(5600) Business Law I (also AEM 320(3200))
Fall. 3 credits. Requirement for students intending to be professional accountants. Highly recommended for finance students. Prerequisite: junior, senior, or graduate standing. D. Grossman. Introduces the basic tenets of law as they apply to businesses and their operations. Topics include personal property, contracts, federal and New York State estate and gift law, use of trusts, the law of wills, business law, discrimination, secured transactions, product concerns. Uses text readings and case studies.

NBA 561(5610) Business Law II (also AEM 321(3210))
Spring. 3 credits. Prerequisite: NBA 560 or permission of instructor. D. Grossman.

The small class size allows for significant student presenting seven or eight speeches.

NBA 562(5620) Estate Planning (also AEM 422(4220))
Fall. 14 sessions. 1 credit. Prerequisite: junior, senior, or graduate standing. D. Grossman. Covers law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures.

NBA 567(5670) Management Writing
Fall, spring. 1.5 credits. Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, A. Pike, and C. Rosen. Students learn to write clearly and effectively by focusing on the writing process as well as the finished product. Topics include audience perspective, style, organization, strategy, and persuasion. There is a writing assignment every week. Students receive instructor and peer feedback.

NBA 568(5680) Oral Communication
Fall, spring, seven weeks. 1.5 credits. Priority given to MBA students; open to other graduate students and employee degree candidates if room. B. Mink, A. Pike, and C. Rosen. Focuses on improving the presentation skills of management students. Covers speaking formats (impromptu, extemporaneous, manuscript), delivery, organization, visual aids, and question/answer. Student speeches constitute the bulk of class time, with each student presenting seven or eight speeches. The small class size allows for significant individual attention. Students receive feedback from classmates and the instructor, and have the opportunity to review in tutorials the videotapes of most of their presentations.

NBA 569(5690) Management Consulting
Fall, spring. 3 credits. A. McAdams.

Case study--oriented course focusing on strategic consulting. Objectives are to (1) provide students with the opportunity to understand the role of the consultant and for the consultant to gain experience in that role through dealing with a broad range of practical and real-world issues; (2) help students improve their analytic skills through practice with case studies; (3) provide students with information that they are unlikely to gain in other courses, as well as experience in making group presentations and evaluating them. Students are required to write a comprehensive analytic term paper.

NBA 570(5700) Leadership in Management
Spring, five full-day training sessions. 1 credit; attendance required at each day of course to receive credit. Prerequisite: M.B.A. students. E. Mannix, RPW Executive Development, and other Johnson School faculty.

Partnership with RPW Executive Development to provide M.B.A. students with the self-awareness and interpersonal skills required to be effective leaders (the general principles of leadership course is NBA 608). The first two days focus on self-awareness and employ several experiential exercises and self-assessment instruments, including the Campbell Leadership Index (CLI), Myers-Briggs Type Indicator (MBTI), the Fundamental Interpersonal Relations Orientation-Behavior (FIR0-B), the Kirton Adaptation/Innovation inventory (KAI), and the Ambiguity Preference Scale (APS). Students are also trained in giving and receiving feedback from team members and faculty. Midweek activities consist of various leadership and team challenges, including a business simulation. Note: Most of the self-assessment instruments listed above need to be completed the first day of class to allow for scoring and analysis.

NBA 571(5710) Cornell Management Simulation
Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. Not open to students who have completed NBA 549. Letter grades only S. Smidt.

This computer-based simulation is played by self-selected teams of four students who make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, during which the rules of the simulation are explained and the software used by each team is demonstrated, the teams make periodic decisions (meeting at their own convenience). At the beginning of the simulation, each team is given a strategic intent paper and, before the results of the last decision have been determined, presents an in-depth analysis of its performance and its strategy for the future in a "board of directors" (BOD) meeting (meeting based on I/B/E/S value created for the company's shareholders (relative to other firms in the same industry), the team's strategic intent paper, and the instructor's evaluation of team's performance at the BOD meeting. Meetings are periodic throughout the semester.

NBA 572(5720) Environmental Management Policy
Fall. 1.5 credits. D. Chapman.

The seminar assists participants in remaining value created for the company's shareholders and company analysis; and situational organizational change skills.

NBA 573(5730) Seminar in Sustainable Development
Spring. 1-3 credits, variable. A. McAdams. Involves readings and discussion of issues in environmental management and features four significant outside observers on the subject of environmental management. (Students interested in doing consulting projects in environmental management are accommodated in NBA 575 Management Projects.)

NBA 575(5750) Management Projects
Fall, spring (yearlong). 3 credits. A. McAdams, J. Thomas, and R. Allen. Designed to apply consulting processes to real business projects. Students form consulting teams focused on specific strategic, process improvement, or operational problems in companies. A faculty member/consultant in residence (CIR) advisors, are closely engaged in the teams' work. The teams meet with the faculty advisors weekly. Sessions focus on cross-team learning about the application of the consulting process to a variety of consulting engagements. The faculty advisor and/or CIR also meet as needed with each team to work through real-time issues presented by each consulting project. Projects include local small-business clients, not-for-profits, Big Red Incubator, and large national and multinational companies. At the end of the project, each student and team receive 360-degree feedback from the faculty advisor, CIR, the client, and other team members.

NBA 578(5780) Consulting Process
Fall, spring, half semester. 1.5 credits. R. Allen.

Focuses on understanding and applying the basic consulting process by covering the elements of a consulting engagement, including selling the engagement, scoping the project, contracting with the consulting team, creating consultant/client work teams, defining deliverables, developing a work plan, conducting analysis, creating a communication and change plan, managing the project, overcoming resistance and barriers, developing recommendations, presenting the deliverables/implementation plan, and developing potential follow-on work. The course is organized around a real client engagement, examining the consulting process from the perspective of the case. Several guest speakers from the consulting engagement add both client and consulting perspectives. The course is intended for students with no or limited consulting experience who have an interest in exploring consulting as a career or who want to sharpen their analytical and organizational change skills.

NBA 579(5790) Cases in Business Strategy
Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. J. Suwinski.

Focuses on the process of effective strategy formulation from the perspective of the general manager of a business unit. Discusses corporate strategy and its interaction with business unit strategies; tools for industry and company analysis, and situational analysis. Complements the core strategy course, with emphasis on understanding and practicing frameworks that are useful in case-based interviews. Draws heavily on the instructor's experience developing strategy for
numerous businesses at Corning Incorporated. Guest speakers from industry and strategy consulting firms and from industry present their approaches to strategy and discuss the analytical tools they find most effective in working strategy. Students gain experience, via assigned cases, in analyzing business problems/opportunities, using the strategic process to formulate effective business strategies, and in presenting their recommendations in written and oral form. In a final case study and presentation in a mock board environment at the end of the course gives each student an opportunity to play the role of a strategy consultant working on a real case.

NBA 603(6030) Sustainable Global Enterprise
Spring. 1.5 credits. S. Hart.
Explores the connections between "global sustainability" and business strategy—the unlimited business opportunities in solving the world’s most difficult problems. Through a combination of readings, lectures, videos, and simulations, class sessions will engage students in discussions aimed at developing strategy models and applying new strategy tools that incorporate principles of environmental management and social performance.

International Management
NBA 524(5240) Macroeconomics and International Trade
Spring. 3 credits. J. Lusis.
Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts.

NBA 548(5480) International Political Risk Management
Spring. 1.5 credits. E. Tarkova.
When investments remain domestic political risks are easier for executives to understand and manage. International business opens executives to new forms of risk and to risks that are less well understood. New political cultures, government instability, unpredictability in local tax and regulation regimes, corruption, civil unrest, globalization of trade and economic integration, increasing power of transnational social movements, and international terrorism have raised new challenges to foreign investors, and have demanded new management strategies. The aim of this course is to introduce students to the political risks involved in international business operations and to develop students’ general understanding of the field of international political risk analysis and management. The course focuses on the various techniques used by risk assessment agencies in their attempt to assess and analyze political risks on a global scale, and on the various strategies used by foreign investors in their attempt to manage political risks. Through a combination of readings, lectures, and case discussions, the course further intends to develop practical skills in evaluating and assessing political risk on a global scale.

NBA 576(5760) World Geopolitical Environment of Business
Fall. 3 credits. J. Katz.
The geopolitical face of the world is changing at a pace that few could have envisioned even five years ago. In the former Soviet Union, the fall of communism and institution of sweeping economic restructuring in the former Soviet Union, the move toward democracy with market economics in eastern Europe, the movement of Europe toward a unified economy, and the fluctuations with reform and its implications in China are just a few examples of the changing world environment of business. Topics include developments in western and eastern Europe, the former Soviet Union, the Pacific Rim, Central and South America, and the Middle East and the role and fate of developing countries in the world economy. Guest speakers include leading scholars from Cornell and other universities and leaders in business and government.

NBA 580(5800) Strategies for Global Competition
Fall, spring. 3 credits. Can be used to fulfill strategy requirement. A. MacAdams.
Initially, students explore the role of government in several private-market industrialized countries and in France, Germany, the United Kingdom, and Italy—for lessons the United States might learn and use. Students investigate the impact in each of those countries of government policies on the global competitiveness of the country’s firms. Special emphasis is given to differential policies appropriate to each of a range of industries, from the mature to the high tech (including computers, telecommunications, and electronics), and to stages of development in each economy. Students are then tested for less developed countries that might include Venezuela and Malaysia and newly emergent countries such as Singapore. Classes are run in a discussion format.

NBA 584(5840) International Competitive Strategy
Fall and spring. 1.5 credits. J. Katz.
Focuses on the development of competitive strategies in the global environment—including the identification of internationally relevant strengths and weaknesses, the movement and use of resources to gain competitive advantage, and the confrontation of both domestic and multinational.

NBA 586(5860) Cross-National Management
Fall. 1.5 credits. J. Katz.
Focuses on the differences in managerial style across countries and develops skills to deal with these differences. Most of the material is applicable to all countries, though two specific countries are highlighted each semester.

NBA 587(5870) International Mergers and Acquisitions
Spring. 1.5 credits. J. Hanks.
Addresses the principal business and legal issues involved in international mergers and acquisitions, including forms and techniques of combining two businesses, negotiation, pricing and other economic terms, due diligence, issuance of securities, antitrust, duties and obligations of the employee, and other social issues. The graded work is a written proposal for an M&A transaction between two existing companies in different countries prepared by small teams. Proposals are based on publicly available financial, business, legal, and other documents and data and any other information obtained. The goal of the written work is to simulate the process in which business people, investment bankers, and lawyers work together to structure transactions across national borders. The reading covers the basic business and legal issues most frequently encountered in international mergers and acquisitions. Class discussion occasionally refers to the reading but generally covers other issues.

NBA 590(5900) Business in Transition Economies
Fall, half semester. 1.5 credits. E. Lankova.
Explores business development and strategy in the transition economies of central and eastern Europe, Russia and the Commonwealth of Independent States, and China. Traces the divergence in the processes of political democratization and economic restructuring, with a special emphasis on marketization, liberalization, and privatization issues. Specifically examines the emergence and consolidation of new business organizations in the course of political and economic change, as well as foreign investment trends and foreign investors strategies in various transition economies. More specific issues of entrepreneurship, management restructuring, marketing, enterprise leadership and human resource management, as well as the impact of culture are also discussed. To understand better the pressures for change in the transition economies in their complexity and entirety, students have been involved in case discussions of organizations and ventures operating in different transition countries and sectors of the economy.

NBA 592(5920) Experience in International Management
Fall, spring. 1.5 credits. Fee charged for required faculty-approved study trip. J. Katz.
Combines classroom sessions and international experience with an increased awareness of business environments outside the United States. On trips, students visit local businesses, subsidiaries of foreign multinationals, government officials, local business school students, and others. Students also must attend two pre-trip meetings (1 1/4 hours each) and two Saturday meetings during spring semester (2 1/2 hours each). Classes are used to present information on international business conditions, institutional structures, management styles, and also to develop cross-cultural skills. A final paper, integrating the material learned in the classroom with their experiences, is required.

NBA 593(5930) International Entrepreneurship
Spring. 1.5 credits. M. Goldman.
Venture capital firms, corporate venture funds, and "angels" have increased their financing in high-growth start-up activities outside of their countries of origin. Provides an overview of the diffusion of entrepreneurship institutions outside of the United States vis-a-vis traditional forms of start-up finance (i.e., family backing, intrapreneurship). It also focuses on the process of selecting, financing, managing, and exiting venture capital deals abroad. The course is designed to provide practical insights through the participation of guest speakers involved in various stages of international entrepreneurship activities (e.g., European corporate funds in the United States, venture capital firms in Europe, U.S.-
to redefine their role on a world stage as "global citizens"—actively participating in creating a safer, more humane, sustainable world. Students discuss in detail and debate the various manifestations of corporate citizenship, such as community empowerment models, philanthropy and corporate social responsibility practices, respect for human rights and international labor standards, development of enhanced environmental policies and practices, creation of public-private partnerships and activities in corporate governance, and redefinition of business ethics on a global scale.

**Management Information Systems**

**NBA 518(5180) Data Mining for Marketing, Sales, and Customer Relationship Management**

Spring 1.5 credits. J. Gethke.

Introduces modern data management systems and their use in the business context. Focuses on the capabilities of modern database systems and their role in the enterprise instead of going into technical detail. Topics include data models and modeling, query languages, transactions, database tuning, application servers, service-oriented and three-tier architectures, capacity planning, and data mining. Students perform several hands-on exercises involving a commercial database system.

**NBA 600(6000) The Strategic Role of Information Technology**

Fall, spring 3 credits. D. Hutterlocher.

Beyond the hype surrounding the rise and fall of the dot-com era, information technology has had a wide-ranging impact on business and society. This course examines search costs and transaction costs have plummeted, while concurrently new ways of pricing and of organizing commercial transactions have emerged. Such changes are affecting how firms are managed as well as how they interact with their customers, employees, and business partners. This course explores how firms can use information technology to create business value and looks at strategies that they may capture part of that value. Examines small and large companies in a variety of industries, including financial services, travel, retail, software, and manufacturing. Prior knowledge of information technology is not presumed; relevant technologies are covered in class or in assigned readings. The course format is a combination of lectures and cases.

**NBA 601(6100) Electronic Commerce**

Spring, 3 credits. Letter or S-U grades. L. Orman.

Electronic commerce, the use of information technology in economic transactions and managing businesses over computer networks, has captured public attention because of its wide-ranging implications for businesses, markets, public institutions, and the general public. Electronic commerce involves a wide variety of cooperating technologies (e.g., communications, networks, databases, expert systems, and multimedia) and affects a wide variety of managerial issues. It creates a new emphasis on information technologies and systems in management; led to the development of new technologies and new combinations of existing technologies to support management, and occasionally radically altered business practices and the role of management. Students in this course learn to conduct economic transactions and manage businesses on the Internet. All major technical and managerial issues are covered through computer exercises on the Internet and current studies and examples of businesses on the Internet.

**NBA 608(6080) The Business of Biotechnology Taxonomy and Analysis**

Spring 1.5 credits. B. Ganem.

Breakthrough scientific discoveries in biotechnology will continue to drive medical advances in the new millennium. As it now enters the post-genomic era, the field of biotechnology comprises some 1,400 U.S. companies having $13 billion in worldwide sales and $10 billion in research expenditures. This broad spectrum of biotech businesses presents numerous challenges to professional securities analysts attempting to track progress and map future growth in this sector. This course introduces JGSM students to the main scientific advances in modern biotechnology and life sciences research, with the dual goals of developing new organizational models of this corporate sector and helping students perform financial and business evaluations of current and emerging technologies more effectively.

**NBA 612(6120) Disruptive Technologies**

Fall 3 credits. Priority given to students with technology of science backgrounds. Prerequisite: working knowledge of computers. D. Greenberg.

Begins by presenting historical technological advances that created major paradigm shifts for communications. Presents advances in computer technology emphasizing the fundamentals behind the increases in processing power, video and computer graphics capabilities, and network transmission. The second half of the course covers the effect of these scientific advances on many discipline-specific areas including photography, the film industry, the entertainment and animation industry, television broadcasting, publishing, and the computer industry itself. Sessions are devoted to the social and legal issues rising from the rapid advances in electronic communication. In attempting to predict the disruptive changes of the future, it is best to understand the technologies themselves. The course is especially tailored to a business school and industrial concerns and has interactive live demonstrations at the state-of-the-art laboratory of the Program of Computer Graphics. No prior knowledge of computer science is required.

**Management and Organizations**

**NBA 522(5220) Negotiations: The Global Perspective**

Spring 3 credits. Students must attend first class and all classes in which they register. W. Adair.

Covers all the topics in NBA 666 with a focus on issues particular to an international setting. These include culture (e.g., its effect on strategy, goals, communication), government at the national, regional, and the general public. The capstone exercise is a two-party cross-cultural team negotiation matching a student's native culture with that of his or her classmates.
Judgment is the art and science of analyses, and a final individual case analysis. Two recent contributions to leadership studies: turnaround in the early 1990s. This case includes questions on leadership. This course is designed to enhance students' skills in moral reasoning as it applies to managerial decision-making. It begins by examining normative concepts and principles that typically enter into moral reasoning, then uses those concepts and principles to analyze cases. Discussions seek to understand the moral issues confronting the decision makers in the cases and explore how those issues might be addressed in ethically responsible ways.

Goal Setting for Personal and Leadership Success
Spring. 1.5 credits. P. Stepp. Designed as a follow-up to NBA 570. Leadership Assessment for Managers. Provides structured support for personal change through personal learning plans, learning and development strategies, and feedback and coaching support from peers. Includes a workshop on establishing a personal values statement to help guide personal learning plans and align them with career aspirations. Employs a web-based, follow-through support system to facilitate further leadership growth by prompting students regularly to assess and document their progress. Learning coaching strategies and serving as a coach for the year for a classmate further enhance leadership growth. The course is scheduled to offer a trouble-shooter's guide to the business world.

Negotiation Essentials
Fall. 1.5 credits. Not open to students who have taken NBA 666. Staff. Designed to complement the technical and diagnostic skills learned in other courses at the Johnson School. While a manager needs analytical skills to develop optimal solutions to problems, he or she also needs a broad array of negotiation skills for these solutions to be accepted and implemented. The course highlights the components of an effective negotiation and teaches students to analyze their own behavior in negotiations. It is largely experiential, giving students an opportunity to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

Perspectives on Leadership
Fall. 1.5 credits. D. Radcliffe. What is leadership? What are its recognized styles? What skills and personal attributes are associated with these leadership styles? How are leadership traits and abilities manifested in different organizations and social environments? This course considers these and other questions on leadership. Most class sessions are discussions of cases comprising excerpts from classic texts in literature, political philosophy. Each case also includes both a contemporary article exemplifying themes found in the classic work and a brief review of relevant leadership theory. The course begins by examining Louis Gerstner's leadership in IBM's major turnaround in the early 1990s. This case serves as a frame of reference for examining two recent contributions to leadership studies:

Daniel Goleman's research on emotional intelligence and Howard Gardner's cognitive approach to leadership. The final paper invites students to work out their own views on leadership.

Business Ethics
Fall, spring. 1.5 credits. D. Radcliffe. Poor moral judgment can ruin a manager's career or even cost the company its existence. In general, an organization cannot survive without the trust of numerous stakeholders, and ethical lapses destroy trust and threaten vital stakeholder relationships. In today's volatile and fiercely competitive world, a manager must be able to identify and effectively resolve ethical issues that inevitably arise in the pursuit of business (and career) objectives. This course is designed to enhance students' skills in moral reasoning as it applies to managerial decision-making. It begins by examining normative concepts and principles that typically enter into moral reasoning, then uses those concepts and principles to analyze cases. Discussions seek to understand the moral issues confronting the decision makers in the cases and explore how those issues might be addressed in ethically responsible ways.

Goal Setting for Personal and Leadership Success
Spring. 1.5 credits. P. Stepp. Designed as a follow-up to NBA 570. Leadership Assessment for Managers. Provides structured support for personal change through personal learning plans, learning and development strategies, and feedback and coaching support from peers. Includes a workshop on establishing a personal values statement to help guide personal learning plans and align them with career aspirations. Employs a web-based, follow-through support system to facilitate further leadership growth by prompting students regularly to assess and document their progress. Learning coaching strategies and serving as a coach for the year for a classmate further enhance leadership growth. The course is scheduled to offer a trouble-shooter's guide to the business world.

Perspectives on Leadership
Fall. 1.5 credits. D. Radcliffe. What is leadership? What are its recognized styles? What skills and personal attributes are associated with these leadership styles? How are leadership traits and abilities manifested in different organizations and social environments? This course considers these and other questions on leadership. Most class sessions are discussions of cases comprising excerpts from classic texts in literature, political philosophy. Each case also includes both a contemporary article exemplifying themes found in the classic work and a brief review of relevant leadership theory. The course begins by examining Louis Gerstner's leadership in IBM's major turnaround in the early 1990s. This case serves as a frame of reference for examining two recent contributions to leadership studies:

Daniel Goleman's research on emotional intelligence and Howard Gardner's cognitive approach to leadership. The final paper invites students to work out their own views on leadership.
CSC, Netcentives, H-P, 1st USA, Catalina marketing, Bausch and Lomb, and others. Course requirements include write-ups on a subset of speakers, and a final report and presentation on an Internet marketing issue of the student's choice. NFA 638 is restricted to M.B.A. II's because the same information is available for M.B.A. I's in the strategy core.

NBA 639(6390) Data-Driven Marketing
Spring. 3 credits. S. Gupta.
Deals with the use of data to make marketing decisions. Introduces concepts, methods, and applications of decision modeling to address marketing problems, such as segmentation, targeting, positioning, promotions, advertising, and sales force decisions. Unlike marketing courses that focus on conceptual material, this course provides skills to translate conceptual understanding into specific operational plans—a skill in increasing demand in organizations today. The course is particularly valuable to students planning careers in management consulting, marketing, and market research. Taught in the Parker Center, is to develop proficiency with Excel's quantitative tools of Solver (for optimization) and @Risk (for simulation). Building on their brief introduction in the Managing Operations core course, students use these advanced tools to analyze problems and cases in finance, marketing, and operations. Although the bulk of this course is devoted to case analysis, occasional lectures introduce some advanced features of these two powerful modeling tools, including integer and nonlinear programming and sensitivity analysis within optimization, and correlated random variables, scenario analysis, and valid statistical analysis within simulation.

NFA 692(6920) Economics of Pricing
Fall. 1.5 credits. J. Johnson.
One of the most common and important decisions for a manager to make is the pricing decision. This course provides an economics perspective on the pricing decision. The goal is for students to learn to think rigorously about a variety of pricing issues. Specific topics include price discrimination, peak-load pricing, channel pricing, and durable goods pricing.

Operations Management

NBA 641(6410) Business Logistics Management
Spring. 3 credits. Prerequisite: NGC 508, ORIE 410, or permission of instructor. L. J. Thomas.
Covers supply-chain integration, which involves strategic management of the values chain from materials to customer. Students discuss operations issues that are important to both manufacturing and service. The course emphasizes written and oral communication skills. About a fourth of the classes are spent on case studies that are analyzed in teams. There is one midterm exam, but the majority of the grade is evaluated based on projects and class participation. There is an option of replacing some assignments with a "live case," a project with a local company.

NBA 643(6430) Managerial Spreadsheet Modeling
Fall, spring, 1.5 credits. L. Robinson.
The goal of this hands-on lab course, taught in the Parker Center, is to develop proficiency with Excel's quantitative tools of Solver (for optimization) and @Risk (for simulation). Building on their brief introduction in the Managing Operations core course, students use these advanced tools to analyze problems and cases in finance, marketing, and operations. Although the bulk of this course is devoted to case analysis, occasional lectures introduce some advanced features of these two powerful modeling tools, including integer and nonlinear programming and sensitivity analysis within optimization, and correlated random variables, scenario analysis, and valid statistical analysis within simulation.

NMI AND NRE RESEARCH AND ADVANCED STUDIES

NMI 500-502(5000-5020) Directed Reading and Research
Fall, spring. Prerequisite: approval of advisor and faculty members involved in research. Staff.
Students undertake special-interest research under the supervision of faculty members.

NMI 510(5100) Multicultural Work Environments
Spring. 1 credit. Prerequisite: students whose summer internships are in a country other than that of their citizenship or prior work experience. Students should register for course in spring semester before internship after obtaining an internship offer and completing paperwork for course instructors. International students obtain and process work authorization forms with the International Students office. See Charlotte Rosen (314 Sage Hall) for further details about academic and immigration requirements for NMI 510. C. Rosen and B. Mink.
Independent study. Promotes an understanding of the cultural assumptions we bring to the work environment and effects of cultural differences on organizational interactions and productivity. Grades are posted in the following fall semester after completion of the course project (a 10-page paper).

DOCTORAL SEMINARS

NRE 502(5020) Doctoral Seminar in Marketing
3 credits. Prerequisite: permission of instructor; graduate-level course in mathematical statistics or econometrics (may be waived in special cases). Staff.
Introduces students to empirical research in marketing. Although there is a strong focus on the historical development of econometric specifications of consumer choice models (with an emphasis on heterogeneity and issues of dynamic consumption patterns) and Bayesian methods in marketing, the content is to some extent driven by the students. Teaching is interactive, and each student is expected to present one of the papers studied to the rest of the class and to replicate the results of one of the papers, requiring him or her to write the necessary code and briefly discuss their findings. Students are welcome to sit in on parts of the class (e.g., the section on Bayesian Methods is broad enough that students from other areas may find the presentation useful).

FACULTY ROSTER

Adair, Wendi, Ph.D., Northwestern U. Asst. Prof., Management and Organizations
Bailey, Warren B., Ph.D., U. of California, Los Angeles. Assoc. Prof., Finance
BenDaniel, David J., Ph.D., Massachusetts Inst. of Technology. Don and Margi Berens Professor of Entrepreneurship
Bhomi, Sanjeev, Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Business Administration
Bloomfield, Robert J., Ph.D., U. of Illinois. Asst. Prof., Marketing
D'Souza, Julia, Ph.D., Northwestern U. Assoc. Prof., Accounting
Dyckman, Thomas R., Ph.D., U. of Michigan. Ann Whitney Olin Professor of Accounting
Farahat, Amr A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Operations Management
Frank, Robert, Ph.D., U. of California. Asst. Prof., Economics
Gavinelli, Srinagesh (Nagesh), Ph.D., Carnegie Mellon U. Asst. Prof., Operations Management
Greenberg, Donald P., Ph.D., Cornell U. Prof., Management Information Systems
Grinstein, Yaniv, Ph.D., Carnegie Mellon U. Asst. Prof., Finance
Gupta, Sachin, Ph.D., Cornell U. Assoc. Prof., Marketing
Hart, Stuart, Ph.D., U. of Michigan. Samuel C. Johnson Chair in Sustainable Global Enterprise; Prof., Management
Hass, Jerome E., Ph.D., Carnegie-Mellon U. James B. Rubin Professor of Finance, Krannep Faculty Fellow
Heffetz, Ori, Ph.D., Princeton U. Asst. Professor of Economics
Hilton, Ronald W., Ph.D., Ohio State U. Prof., Accounting
Hibar, S. Paul, Ph.D., U. of Iowa. Asst. Prof., Accounting
Huang, Ming, Ph.D., Stanford U. Professor of Finance
Huttenlocher, Daniel P., Ph.D., Massachusetts Inst. of Technology. John P. and Rilla Neafsey Professor, Computing and Information Systems and Business

Jensen, Alice M., Ph.D., Stanford U. S. C. Johnson Professor, Marketing.

Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Ronald P. and Susan E. Lynch Professor of Investment Management; Prof., Finance and Economics

Johnson, Justin, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Economics

Kadiyali, Vrinda, Ph.D., Northwestern U. Assoc. Prof., Marketing and Economics

Lee, Charles M. C., Ph.D., Cornell U. Prof., Accounting and Finance; Henrietta Johnson Louis Professor of Management; Director, The Park Center for Investment Research

Libby, Robert, Ph.D., U. of Illinois. David A. Thomas Professor of Management, Prof., Accounting and Behavioral Science

Mannix, Elisabeth A., Ph.D., U. of Chicago. Assoc. Prof., Management and Organizations

McAdams, Alan K., Ph.D., Stanford U. Prof., Managerial Economics

McClain, John O., Ph.D., Yale U. Prof., Operations Management

Michaely, Roni, Ph.D., New York U. Prof., Finance

Nelson, Mark W., Ph.D., Ohio State U. Prof., Accounting

Nichols, Craig D., Ph.D., Indiana U. Asst. Professor of Accounting

O'Connor, Kathleen, Ph.D., U. of Illinois. Assoc. Prof., Management and Organizations

O'Hara, Maureen, Ph.D., Northwestern U. Robert W. Purcell Professor, Management, Prof., Finance

Orman, Levent V., Ph.D., Northwestern U. Prof., Management Information Systems

Park, Young-Hoon, Ph.D., U. of Pennsylvania. Assoc. Prof., Marketing

Rao, Vithala R., Ph.D., U. of Pennsylvania. Deane W. Malott Professor of Management; Prof., Marketing and Quantitative Methods

Robinson, Lawrence W., Ph.D., U. of Chicago. Assoc. Prof., Operations Management

Saar, Gideon, Ph.D., Cornell U. Asst. Professor of Finance

Sine, Wesley, Ph.D., Cornell U. Asst. Prof., Management and Organizations

Smidt, Seymour, Ph.D., U. of Chicago. Nicholas H. Noyes Professor of Economics and Finance; Director, Leadership Skills Program

Stayman, Douglas M., Ph.D., U. of California, Berkeley. Assoc. Prof., Marketing

Swaminathan, Bhaskaran, Ph.D., U. of California, Los Angeles. Assoc. Prof., Finance

Thomas, L. Joseph, Ph.D., Yale U. Nicholas H. Noyes Professor of Manufacturing; Assoc. Dean, Academic Affairs

Thomas-Hunt, Melissa, Ph.D., Northwestern U. Asst. Prof., Management and Organizations

Waldman, Michael, Ph.D., U. of Pennsylvania. Prof., Economics; Charles H. Dyson Professor, Management

Weinbaum, David, Ph.D., New York U. Asst. Prof., Finance

Yehuda, Nir, Ph.D., Columbia U. Asst. Professor of Accounting

Zhang, Xiaoyan, Ph.D., Columbia U. Asst. Prof., Finance

**Lecturers**

ADMINISTRATION
Stewart J. Schwab, dean and professor of law
Barbara J. Holden Smith, associate dean for academic affairs and professor of law
Claire M. Germain, law librarian and professor of law
Richard D. Geiger, associate dean and dean of admissions and financial aid
Annie Lukingbeal, associate dean and dean of students
Richard F. Robinson, associate dean for administration and finance
Karen V. Comstock, assistant dean for public service
Charles D. Cramton, assistant dean for graduate legal studies
John R. DeRosa, assistant dean for student services
Nan A. Colvin, registrar
The Law School prepares attorneys for both public and private practice. Graduates are trained to provide the highest quality professional services to their clients and to contribute to the development and reform of law and legal institutions. The curriculum is designed to prepare students for admission to the bar in all American states and territories.

Students who pursue the three-year Doctor of Law degree (J.D.) must have a bachelor's degree or equivalent. Students wishing to concentrate in international law may be admitted to a program leading to the J.D. "with specialization in international legal affairs."

The Law School also offers a limited number of students an opportunity to earn both a J.D. degree and an LL.M. (Master of Laws) degree in international and comparative law.

Graduate students who wish to study contract law and related obligations, including the substantive reason for underlying the law rules and principles.

LAW 506(5061) Criminal Law
Yearlong. 4 credits. Letter grades only.
An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligations, including the substantive reasons underlying the law rules and principles.

LAW 508(5081) Lawyering
Yearlong. 4 credits. Letter grades only.
This course is designed to introduce first-year students to lawyering skills, with particular emphasis on legal writing, analysis, and research. In the context of a law office, students create some of the essential legal writings that lawyers produce. Students determine and investigate the essential facts to support their client's case by interviewing or deposing various witnesses. Students may also write a client letter, using plain English to explain to their client the law and the merits of the case, and advise the client on the best course of action. Finally, students develop their oral and written advocacy skills and strategies for litigation by researching and writing persuasive memoranda or legal briefs for a trial or appellate court. At the end of the year, students orally argue their case. Instruction occurs not only in meetings of the class as a whole but also in individual conferences.

Each student receives extensive editorial and evaluative feedback on each written assignment.

LAW 512(5121) Property
Spring. 4 credits. Letter grades only.
G. S. Alexander, E. L. Sherwin.
This basic property law course covers acquisitions of rights in property, estates in land, transfers of property, liens, and the determination of possession and use of property. It also covers the regulation of land use.

LAW 515(5151) Torts
Fall. 4 credits. Letter grades only.
This course introduces law students to basic legal research in U.S. materials that will be valuable to them in their course work at Cornell and in practice. The focus is on understanding and finding primary legal sources, including statutory codes, session laws, administrative regulations, and court decisions, as well as explanatory materials, such as law reviews and treatises. To a large extent, instruction uses online resources and materials that likely to be available to the students in their future careers. There are short introductory lectures as well as hands-on computer lab and Reading Room sessions. Students complete five exercises using the resources learned in class, and there is no final exam. The final grade is based on the five exercises (20% each).

LAW 622(6221) Contracts in a Global Society
Fall. 4 credits. Graduate program grading—H, S, U. Limited to graduate students.
W. F. Taylor.
This course is designed for foreign-trained lawyers who are familiar with basic contract law in their home country. It surveys the Anglo-American common law of contracts and related civil obligations. The pedagogic approach focuses on the case method and is Socratically based, similar to the traditional first-year course in Contracts. Graduate students who wish to study contract law are generally expected to take this course. They are free to enroll instead in the first-year Contracts course, but if they do so, they must take that course for the full year.

For further information, refer to the Law School web site, or contact the Office of the Registrar, Myron Taylor Hall. Course descriptions are current as of April 2006. For updated law descriptions visit: www.lawschool.cornell.edu
LAW 676(6761) Principles of American Legal Writing
Fall or spring. 3 credits. Graduate program grading: H, S, U. Limited enrollment.
Limited to graduate students. L. Knight. This course introduces for-literate-trained lawyers to the American legal system and essential principles of legal writing in the U.S. Students have an opportunity to practice some forms of writing common to American legal practice, by drafting documents such as client letters, motion papers, briefs, and pleadings, in the context of representing hypothetical clients.

LAW 898(8991) Thesis
Fall or spring. 5 credits. Graduate program grading: H, S, U; J.D./LL.M. program: Letter grades only. Limited to graduate students and students completing joint J.D.-LL.M. program.
Arrangements for a master's thesis are made by the student directly with a faculty member. A faculty member may require the student to submit a detailed outline of the proposed thesis, as well as a summary of previous work on the subject or other appropriate information. The work is completed during the academic year under the supervision of a law faculty member.

LAW 990(9901) Graduate Research
Fall or spring. Limited to J.S.D. students.

UPPERCLASS COURSES

LAW 600(6001) Accounting for Lawyers
Spring. 2 credits. S-U or letter grades. R. A. Sarachan. This course introduces students to the basic concepts and fundamentals of financial accounting. It focuses on (1) accrual accounting concepts, principles and conventions, (2) presentation of financial statements, (3) interpretation and analysis of financial statements, and (4) the use and misuse of accounting information. The goal is to enable students to critically review a company's financial statements. It is intended primarily for students with little or no prior background in bookkeeping or accounting and is limited to students who have had no more than 6 credit hours of accounting (or its equivalent) or permission of instructor.

Fall or spring. 3 credits. J. Siegal (fall), S-U option available; J. R. Rachlinski (spring).
Letter grades only. Limited enrollment.
An introduction to the constitutional and statutory law governing administrative agencies and the regulatory state. Topics include: (1) federal and state administrative law; (2) administrative procedures; (3) administrative agencies and their jurisdiction and the principal legal controls on their activity; (4) the constitutional and statutory principles that govern the interaction of the federal and state government with the private sector; (5) the administrative law of public utilities; (6) the administrative law of natural resources; (7) the administrative law of environmental protection; (8) the administrative law of public welfare and social services; (9) the administrative law of immigration; (10) the administrative law of taxation; (11) the administrative law of public health; (12) the administrative law of criminal justice; (13) the administrative law of education; (14) the administrative law of business; and (15) the administrative law of labor.

LAW 606(6061) Advanced Legal Research—International and Foreign Law
Fall. 2 credits. S-U or letter grades. Limited enrollment. T. Mills.
Globalization has led to the internationalization of the practice of law. This course provides an overview of research resources, methods, and strategies for international and foreign law. Topics include public and private international law, the European Union, and the United Nations. The course includes lectures followed by computer lab and library training sessions. Selected readings are available online and on reserve; there is no required textbook. There are seven assignments of equal weight on material covered in class, but no final exam.

LAW 610(6101) Antitrust Law
Fall. 3 credits. Letter grades only. G. A. Hay.
The antitrust laws of the U.S. protect competitive markets and limit the exercise of monopoly power. Topics include: price fixing, boycotts, and market allocation agreements among competitors; agreements between suppliers and customers; joint ventures; monopolization; and mergers.

LAW 612(6121) Bankruptcy
Fall. 3 credits. Letter grades only. Not open to students who have taken Debtor-Creditor Law. T. Eisenberg.
Selected topics in the law of bankruptcy. An overview of the various bankruptcy chapters and a detailed study of the bankruptcy provision of most general applicability. The relationship between the rights of an Article 9 secured creditor and the bankruptcy trustee's power to avoid liens. Related topics in the enforcement of money judgments and the law of fraudulent conveyance.

LAW 613(6131) Business Organizations [formerly Corporations]
An introduction to the legal rules and principles, as well as some of the economic factors, that pattern the conduct of productive enterprise in the U.S. The principal focus is on the large, publicly traded corporation that dominates much of the U.S. business environment, in particular, its financing, its control, and the potentially conflicting interests that the form must mediate. Legal topics include shareholder and executive compensation, basic fiduciary obligations, shareholder voting rights, shareholder suits, corporate reorganization and control transactions. We also devote some attention to partnerships, closely held corporations and other business forms.

LAW 616(6161) Comparative Law: The Civil Law Tradition
Spring. 3 credits. S-U or letter grades. M. Lasser.
This course introduces students to the constitutional and conceptual organization of "civil law" legal systems (which govern most of Western and Eastern Europe and Latin America as well as significant portions of Africa and Asia). It therefore provides a broad overview of "civilian" private law and procedure, criminal procedure, administrative law, and constitutional law. It is particularly interested in the differences between common law and civil law understandings of the relationship between law-making, legal interpretation, and the judiciary.

LAW 619(6191) Conflict of Laws
Spring. 3 credits. S-U or letter grades. B. Holdren-Smith.
This course focuses primarily on the choice-of-law methods used by courts in the U.S. to decide the applicable law in cases that, in their parties or events, involve more than one state or country. It examines in detail the nature, logic, and constitutionality of such methods. In addition, it devotes substantial attention to recognition and enforcement of judgments and, in particular, to the obligation
imposed by the Constitution's Full Faith and Credit Clause to respect the judgments of other states' courts.

**LAW 619(6192) Congress: Structure, Process and Product**
Spring. 3 credits. Letter grades only. Tentative offering. C. Farina. A course for those troubled by the idea of getting out of law school without knowing more about the institution that enacts statutes and passes the budget than that it is composed of the House and the Senate. We look at the make-up, operation, and formal and informal output of Congress from both the political and legal perspectives. Part of the grade involves using this information to examine the debate about methods of statutory interpretation.

**LAW 620(6201) Constitutional Law II: The First Amendment**
Spring. 3 credits. S-U or letter grades. S. H. Shifrin. A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause of the First Amendment are treated less extensively.

**LAW 623(6231) Copyright**
Spring. 3 credits. O. Lilivak. This course focuses on selected federal statutes affecting the employer-employee relationship, including union formation and collective bargaining. Common law topics include: the "employment at will" rule and its exceptions; employee duties of loyalty, trade secrets, covenants not to compete, and other post-termination obligations; and, employee reputation and privacy interests. Constitutional topics include free speech and privacy rights of public employees. Federal statutory topics include brief introductions to the Employee Retirement Income Security Act, and either federal antidiscrimination law, or the Occupational Safety and Health Act.

**LAW 624(6241) Corporate and White Collar Crime**
Fall. 3 credits. S-U or letter grades. S. P. Garvey. White collar crime is one of the fastest growing areas of specialization in the legal profession today. The collapse of the savings and loan industry, corruption in the health care industry, and the Enron scandal have contributed to a dramatic increase in federal white collar crime prosecutions over the past 20 years. This course examines some of the principal statutes used to prosecute corporate and white collar crime. Theories of liability we consider include traditional white collar offenses like mail and wire fraud, insider trading, false statements, perjury, and obstruction of justice and recent entries such as RICO, money laundering, and laws enacted to combat government contract fraud. In addition, we take an introductory look at both the 1999-2001 Financial Institutions Regulatory Reform (an Internet site or registrar's office).

**LAW 626(6261) Criminal Procedure I**
Fall. 3 credits. S-U or letter grades. J. H. Blume. This course surveys the law of criminal procedure, with emphasis on the constitutional constraints that regulate the pretrial stage of the criminal process. More specifically, it focuses on the law of interrogations and confessions, the admissibility of evidence, and the right to counsel throughout all stages of the criminal process.

**LAW 630(6301) Directed Reading**
Fall or spring. 1 or 2 credits. S-U or letter grades only. Arranged by instructor. Registration form available from registration site or registrar's office.

An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

**LAW 631(6311) Education Law**
Spring. 3 credits. S-U or letter grades. M. Heise. This course focuses on selected legal issues that arise in the public and private education context. With emphasis on the elementary and secondary school setting. Topics include the legal and policy dimensions of the rights of students, parents, educators, and the state with respect to such issues as access to, control over, and regulation of the education setting and institutions. Issues germane to equal education opportunity, school finance, and school governance and regulation receive particular attention.

**LAW 632(6321) Employment Discrimination and the Law (also ILRCB 684)**
Fall. 3 credits. S-U or letter grades. A. S. Hyde. Survey of common law doctrines and selected federal statutes affecting the employer-employee relationship, including union formation and collective bargaining. Common law topics include: the "employment at will" rule and its exceptions; employee duties of loyalty, trade secrets, covenants not to compete, and other post-termination obligations; and, employee reputation and privacy interests. Constitutional topics include free speech and privacy rights of public employees. Federal statutory topics include brief introductions to the Employee Retirement Income Security Act, and either federal antidiscrimination law, or the Occupational Safety and Health Act.

**LAW 635(6351) Environmental Federalism and Regulatory Design**
Fall. 1 credit. Meets for two weeks during first half of semester. W. W. Buzbee. This course uses regulatory federalism through close examination of debates and developments in the world of environmental federalism. After looking at recent Supreme Court cases and the constraints they impose, we cover materials about cooperative federalism, debates over the "race-to-the-bottom" rationale for federal regulation, and the legal rights of parents, children, and foster parents in situations of abuse and neglect.

**LAW 640(6401) Evidence**
Fall or spring. 3 credits. S. D. Clymer (fall), S-U or letter grades. F. F. Rossi (spring). Letter grades only. Limited enrollment. The rules of evidence in civil and criminal cases with emphasis on relevance, hearsay, authentication, witnesses, experts, and confrontation. The course focuses on the Federal Rules of Evidence, with some attention to how they diverge from the common law.

**LAW 642(6421) Family Law**
Spring. 3 credits. S-U or letter grades. C. Bowman. This course examines the various constitutional and judge-made doctrines that control access to the federal courts to vindicate federal rights. It is particularly valuable for those planning a career in public interest or the public sector, anyone else expecting to litigate extensively in federal court, and students who have an interest in obtaining a judicial clerkship. Topics include: case or controversy limitations, including standing; constitutional and statutory limits on jurisdiction; causes of action for constitutional and statutory rights, including 42 U.S.C.1983 and Bivens actions; bars to such actions, including the various abstention doctrines and the emerging law on 11th Amendment and sovereign immunities.

**LAW 644(6441) Federal Income Taxation**
Fall or spring. 4 credits. S-U or letter grades. R. A. Green (fall), R. A. Schnur (spring). Students without such background should consult with instructor. T. Morrison. An introduction to the regulatory structures, as well as some of the economic and technological factors, that pattern the conduct of financial intermediation in the U.S. The principal focus is on commercial banks, and to a slightly lesser extent investment companies (mutual funds), insurance companies, pension funds, and securities firms in so far as these institutions discharge a common set of economic functions and give rise to a common set of systemic economic risks. Legal topics include entry-, branching- and geographical restrictions, competition-promotion, capital adequacy, solvency-, and other forms of risk-regulation; community- reinvestment; self-regulation; insolvency and deposit insurance. We also devote some attention to "alternative"
dispute settlement) including issues such as

governing law, choice of forum, and applicable
treaties. Analysis of international implications
of US law including US Foreign Corrupt Practices
Act and US antitrust law.

**LAW 652**

**International Business Transactions with China**

Spring. 3 credits. Y. Tang.

This course is an introduction to business and
commercial law in the People's Republic of
China, and examines the legal and practical
aspects of doing business with China. After
a brief overview of China's political and legal
system, we examine basic areas of domestic
business legislation, including contracts and
corporate law; the regulation of foreign investment
business, the reform of state enterprises, the
development of company and securities laws.
More specialized topics include arbitration and
dispute resolution, the Chinese approach
to intellectual property issues, or the use of
joint ventures and other foreign investment
vehicles. Last, we work through the phases
of negotiating a typical equity joint venture
contract for the establishment of a Sino-foreign
manufacturing enterprise, from the letter of
intent and joint feasibility study to the final
contract, including the articles of association
of the venture and other relevant documents.

**LAW 653**

**International Commercial Arbitration**

Fall. 3 credits. S-U or letter grades.

(Students who have taken international
commercial arbitration course in Paris
program receive 1 credit; all others receive
3 credits.) J. J. Barceló III.

A study of arbitration as a dispute resolution
process for international trade and business
disputes. We analyze institutional and ad
hoc arbitration, the authority of arbitral
panels, enforcement of agreements to
arbitrate, challenging arbitrators, procedure
and choice of law in arbitral proceedings,
and enforcement of international arbitral
awards. We pay special attention to the
international convention on the recognition
and enforcement of international arbitral
agreements and awards (New York
Convention) and the UNCITRAL (U.N.
Commission of International Trade Law)
arbitral rules and model law. We focus on
commercial arbitration as a transnational
phenomenon and not on arbitration under
any particular national system.

**LAW 656**

**International Monetary Law**

Fall. 2 credits. Availability of S-U option.

TBA at first class. J. Lavič.

This course focuses on the legal analysis of
international monetary relations. Topics
include: the concept of money and monetary
systems; the principle of nominalism;
monetary sovereignty and exchange
arrangements; legal and institutional aspects
of the International Monetary Fund; the
European Monetary Union; and the role of
the Bank for International Settlements in
the cooperation between central banks.

**LAW 659**

**Labor Law**

Fall. 3 credits. S-U or letter grades.

A. S. Hyde.

This course focuses on federal law
regulating employee collective action
and labor unions. Topics include union
organization, collective bargaining, and
enforcement of collective agreements. We
also consider issues involving employee group
action without formal organization, or through
organizations other than labor unions.

**LAW 660**

**Land Use**

Fall. 2 credits. S-U or letter grades.

P. Enelow.

This course provides a broad introduction
to the theory, doctrine, and history of land
use regulation. Topics include zoning,
homeowners' associations, nuisance, suburban
sprawl, eminent domain and regulatory
takings. Readings are drawn from the leading
cases as well as commentary by scholars in
land use law, architecture, and planning.

**LAW 661**

**Law and Ethics of Business Practice**

Fall. 3 credits. S-U or letter grades.

Pre-or co-requisite: Corporations/Business
Organization or (for graduate students) equivalent
course elsewhere. Satisfies professional responsibility requirement.

Enrolling does not prohibit enrollment in
another professional responsibility course.

S. J. Schwab.

Each week a distinguished guest lecturer from
the business world presents a business-law
problem. The problems cover a wide variety
of topics, such as reincorporating a business from
a foreign jurisdiction into Delaware, or complying
with the Sarbanes-Oxley audit requirements.
Students are assigned to teams. Over the
semester, each student writes four 5-
page papers on a particular week's topic and
provides written comments to other student
papers in other weeks, as well as participates in
class discussions. No final examination.

**LAW 662**

**Law and Literature**

Fall. 3 credits. S-U or letter grades.

B. Meyer.

Articles in recent issues of the Yale Law
Journal and PMLA, the principal publication
from the Modern Language Association, have
asserted a crisis in the field of law and
literature. This course looks, for the first
half of the semester, at the relationship between
literary and legal form, and, for the second
half, at the relationship between literary and legal
texts and the context of the historical development
of particular concepts in law. New work has
illuminated certain correspondences between
literary and legal genres, and the relationship
between particular genres, like tragedy, and
traditional legal notions of justice: with the laws of marriage, property,
and inheritance, and insisted on the necessity
for their reform. Weekly readings consist in
literary works and critical essays on them.
The course concludes with a take-home exam.

**LAW 663**

**Law and Society in China**

Fall. 4 credits. S-U or letter grades.

E. Pilis.

This course provides a general introduction
to Chinese law and its historical and cultural
background, and a focused discussion of social
conflict and the law in contemporary China.

Special attention is paid to the legal and political
means available to citizens to protect their
rights and interests, particularly against the
government. Issues discussed include administrative
litigation, constitutional issues, the legal, economic and
political aspects of land disputes, and the causes
of social unrest. No special attention is paid to
criminal law related topics. The intent is to
allow students interested in the general questions of law and social justice to investigate these
in one interesting and interoperational context.
The goal is to use China as a case study to some
extent representative of other developing or
transitional societies. No particular background
in or knowledge of China is required.
is a take-home exam. Class participation and response papers on readings discussed in class also count toward the final grade.

**LAW 663(6631) Law for High Growth Companies (also NBA 689)**
Fall. 3 credits. S-U grades only. First priority to BRL students in both colleges. Limited enrollment. J. Z. Shulman. For description, see NBA 689.

**LAW 664(6641) The Law Governing Lawyers**
Spring. 3 credits. Letter grades only. Satisfies professional responsibility requirement. Enrolling in this course does not prohibit enrollment in another professional responsibility course.

W. B. Wendel.

This course is intended to provide a comprehensive overview of the law governing lawyers in a variety of practice settings, including transactional, counseling, and civil and criminal litigation. It is not focused merely on the ABA's Model Rules but draws extensively from judicial decisions in malpractice and disqualification cases, the new Restatement of the Law Governing Lawyers, and other recent developments. The major theme is the relationship between state bar disciplinary rules and the generally applicable law of tort, contracts, agency, procedure, and crimes. Another significant theme is the prevention of attorney discipline and malpractice liability through advance planning.

**LAW 665(6651) Law of Branding and Advertising: Trademarks, Trade Dress, and Unfair Competition**
Fall. 2 credits. S-U or letter grades. N. D. St. Landau.

Fundamental trademark, trade dress, and false advertising laws are examined in the context of assisting clients to execute branding and marketing strategies. Special focus is given to branding as it relates to: “consumer products companies,” the impact of e-business and online commerce on branding and marketing strategies, and complex proof issues in trademark and domain name litigation. Marketing strategies embody fundamental and long-established principles of the trademark laws. The Lanham Act is used to address issues ranging from confusingly similar words and designs, to false and unsubstantiated advertising claims, and public appropriation—and misappropriation—of long-established corporate icons in today's e-commerce world. This course examines the basics of this rapidly changing body of law.

**LAW 666(6661) The Law of the European Union**
Spring. 3 credits. S-U or letter grades. M. Lasser.

This course introduces students to the law and institutions of the European Union. It examines the composition, organization, functions and powers of the Union's governing bodies; analyzes the Union's governing treaties and constitutional law; and studies the Union's decision-making processes. It also explores broader questions of political, economic and legal integration, such as the proper relation between the Union's law and the domestic law of the Union's Member states, and the feasibility and feasibility of using the EU as a model on which to pattern other transnational agreements.

**LAW 668(6681) International Law and Direct Foreign Investment**
Spring. 3 credits. Letter grades only. M. B. Ndulu.

This course studies legal aspects of direct foreign investments and seeks to identify legal problems that are likely to affect a commercial investment in a foreign country. Inter alia, it deals with the public international law principles and rules governing the establishment by foreign businesses of various factors of production (persons and capital) on the territory of other states and the protection of such investments. Thus, it includes a discussion of economic development and foreign capital; obstacles to the flow of investments to developing countries; guarantees to investors and investment codes; bilateral treaties; nationalization; joint ventures; project financing, transfer of technology; arbitration, investment insurance, unification of trade law; and the settlement of investment disputes.

**LAW 672(6721) Mergers and Acquisitions**
Fall. 3 credits. Letter grades only. Prerequisite: Corporations/Business Organizations or equivalent for LLMs or permission of instructor. E. Nowicki.

This course examines the principal business and legal issues in the purchase and sale of publicly held businesses. Emphasis is placed on the duties of directors in the acquisitions of publicly held companies (including hostile takeovers).

**LAW 673(6731) Dispute Resolution: Negotiations, Mediation and Arbitration**
Fall. 3 credits. S-U or letter grades. Limited enrollment. J. Meyer, S. Yusen.

During the past decade, the field of alternative dispute resolution has virtually transformed the practice of law. Today, every lawyer has a professional responsibility to his or her clients to consider the most appropriate process available to resolve issues. The course explores the characteristics of negotiation, mediation and arbitration as well as the ethical considerations applying to them, employing not only Socratic dialogue but also interactive and videotape dispute simulations, enabling the student to engage as a negotiator, dispute resolution advocate, mediator and arbitrator.

**LAW 674(6742) Patent Law and Trade Secrets**
Fall. 3 credits. O. Livak.

This course focuses on U.S. patent law while also touching on the related law of trade secrets. It covers the core doctrinal elements and policy issues in the field. It explores patent law's impact in diverse areas such as computer-related inventions and biotechnology. No technical background is required.

**LAW 675(6751) Partnership Taxation**
Fall. 3 credits. S-U or letter grades. Prerequisite: Federal Income Taxation. R. Schnur.

Because of the emergence of limited liability companies as the entity of choice for many start-up and mature businesses, and because many investment funds and similar financing entities are now structured as partnerships or limited liability companies, the subject of partnerships has grown over the past decade or so become increasingly important in business and finance transactions. In addition, LLCs and partnerships retain their traditional role as the vehicles for most real estate ventures. This course covers the basic and intermediate principles governing the manner in which partnerships and LLCs are taxed under the Internal Revenue Code, and also explores current controversial issues relating to this subject.

**LAW 678(6781) Products Liability**
Spring. 3 credits. Letter grades only. J. A. Henderson, Jr.

Applications of products-liability doctrine and theory to a variety of problems drawn from or closely approximating actual litigation. An overview of the relevant case law, statutes, and administrative regulations, including the new Restatement Third of Torts: Products Liability.

**LAW 679(6791) Public International Law**
Fall. 3 credits. S-U or letter grades. M. Ndulu, D. Wippman.

An introduction to the legal rules governing the conduct of states vis-à-vis other states, individuals, and international organizations, with reference to major current events and issues. Topics include: jurisdiction, sources, and effectiveness of international law; the establishment and recognition of states; principles concerning state sovereignty, territory, and jurisdiction; the law of treaties; state responsibility, international criminal and human rights. Special attention is given to the law governing the use of force.

**LAW 679(6792) Real Estate Transactions and Deal Structuring (also CRP 629)**
Spring. 3 credits. S-U option available. D. Funk.

For description, see CRP 629.

**LAW 680(6801) Remedies in Litigation**
Fall. 3 credits. Letter grades only. E. Sherwin.

This course examines the remedial consequences of lawsuits and the remedial choices open to litigants: essential strategic information for students considering a litigation-oriented practice. It covers compensatory remedies, injunctions, and special remedies such as constructive trusts. It also clarifies the meaning of equity and the role of equity in modern American law, as well as the developing law of unjust enrichment. The focus is on private law, torts, contract, property, but we also cover remedies for enforcement of Constitutional rights and public law.

**LAW 681(6811) Secured Transactions**
Fall. 2 credits. S-U or letter grades. A. Shapiro.

A study of Article 9 of the Uniform Commercial Code, the law regarding security interests in personal property. In a secured transaction, a creditor may resort directly to particular assets of the debtor, whether tangible or intangible if an obligation is not met. Secured transactions are an integral part of the complex world of commercial finance. They help fuel the economy by enabling debtors to borrow more freely and lenders to better manage risk. On the other hand, if a debtor becomes insolvent, there might be nothing left for other creditors or tort victims because Article 9 enables lenders who take security to claim virtually all the debtor's assets. The first goal of the course is for students to become familiar with the substantive law, and particularly to learn to recognize when Article 9 applies to a transaction, which may not be immediately apparent. Second, working through the intricacies of Article 9 helps students sharpen
their skills in statutory interpretation. Finally, we address theoretical issues involved in security and debt. There is no prerequisite for this course. (Students with particular interest in commercial law may wish to study bankruptcy as well as secured transactions, but this can be done in either order.)

**LAW 682(6821) Securities Regulation**
Fall. 3 credits. S-U or letter grades. E. Nowicki.
This course focuses on the regulation of two key aspects of the U.S. capital markets: the primary markets for raising capital from private investors governed by the 1933 Securities Act (33 Act), and trading securities in the secondary market governed by the 1934 Securities Exchange Act (34 Act). We discuss the complex substantive and financial disclosure obligations required under U.S. federal securities laws, including the interaction between the 33 Act and 34 Act schemes via integrated disclosure, the preparation of disclosure documentation, exemptions from disclosure requirements and potential placements, the relationship between disclosure and various anti-fraud rules, and the duties of the main participants in securities transactions. Throughout, students are asked to consider the role and development of the Securities and Exchange Commission (SEC), first authorized under the 34 Act, as a significant actor in the rise of the modern regulatory state.

**LAW 682(6822) Social Science and the Law**
Spring. 3 credits. S-U or letter grades. V. Hans.
This course examines the relationship of social science to law, focusing on the growing use of social science in the legal system. Over the past several decades, increasing numbers of social scientists have conducted research on the operation of law and legal institutions. At the same time, social scientists themselves are testifying as experts in increasing numbers, encouraging lawyers and judges at both the trial and appellate levels to rely on social science evidence to decide cases. Social science research is also used as a tool in law reform. The aim is to develop a critical analysis of these uses of social science in law and litigation. Are social scientists asking the right questions? Are lawyers, judges, and legal reformers using social science findings appropriately? Is the law's increasing reliance on social science problematic or advantageous— or both?

**LAW 683(6831) Social Security Law**
Spring. 3 credits. S-U or letter grades. P. W. Martin.
The course focuses especially on how Social Security's benefit rules relate to employment, families, and household composition and how its procedures address the challenge of adjudicating the massive numbers of benefit claims that arise each year. It introduces the general features of the Social Security Act's entitlement, benefit formulae, and procedural rules; highlights those that pose the greatest difficulty to administrators and advocates; and surveys current proposals for change. All instruction and discussion takes place on-line.

**LAW 684(6841) Sports Law**
The course traces the development of sports law in the U.S. Particular attention is given to the relationship of sports with antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, franchise movement, and constitutional law are addressed.
handle traditional and electronic sources and formats and make efficient choices.

**LAW 705(7052) Advanced Persuasive Writing and Appellate Advocacy**
Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. B. Bryan.

Students master the art of persuasive writing and oral advocacy. Lecture topics include: knowing your audience; writing a Statement of Facts that appears objective but subjectively persuades; what good judges are taught about good writing; methods to achieve clarity, brevity and logic; issue selection; the effective use of revised credentials; understanding non-legal factors that influence decisions; the interplay between judges and their law clerks; appellate procedure and standards of review; the winning opening statement; and handling questions from the bench. Students critique actual briefs, judicial opinions and oral arguments for technique and persuasive value. Guest speakers, including judges of the U.S. Court of Appeals for the Second Circuit, provide advice and recommendations. Students apply what they have learned to the drafting of an appellate brief based on an actual court record. The brief is written in stages and followed by one-on-one critiques. Students also prepare an oral argument. Initial practice arguments are critiqued by the professor and student panels, and the final argument is judged by the professor.

**LAW 705(7051) African Americans and the Supreme Court**
Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. B. Holder-Smith.

Beginning with its first decisions related to the slavery question, the Supreme Court has at times aided and at other times hindered efforts to allow African Americans full citizenship. This seminar explores the relationship between blacks and the Supreme Court by examining the major Court decisions affecting African Americans and attempting to understand those decisions in their historical contexts. We begin with a review of the background and meaning of the constitutional provisions pertaining to the status of blacks in the new nation and end with an intensive look at Brown v. Board of Education.

**LAW 708(7081) Appellate Advocacy and Appellate Courts**
Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. J. B. Atlas.

This seminar examines the law and skills integral to representing a client on appeal. It is loosely divided into three parts: (1) principles of appellate law, including standards of review, the preservation doctrine, harmless-error analysis, and remedies; (2) the unique role of appellate counsel, including ethical duties to the court, the client, and the judicial system; (3) appellate skills, including client counseling, issue selection, brief-writing, and oral argument. Miscellaneous additional topics include motion practice, leave applications, and the role of law clerks in the decision-making process. Students read and analyze the record of a criminal proceeding, assess the record of a civil proceeding, and make efficient choices. Students master the art of persuasive writing and oral advocacy. Lecture topics include: knowing your audience; writing a Statement of Facts that appears objective but subjectively persuades; what good judges are taught about good writing; methods to achieve clarity, brevity and logic; issue selection; the effective use of revised credentials; understanding non-legal factors that influence decisions; the interplay between judges and their law clerks; appellate procedure and standards of review; the winning opening statement; and handling questions from the bench. Students critique actual briefs, judicial opinions and oral arguments for technique and persuasive value. Guest speakers, including judges of the U.S. Court of Appeals for the Second Circuit, provide advice and recommendations. Students apply what they have learned to the drafting of an appellate brief based on an actual court record. The brief is written in stages and followed by one-on-one critiques. Students also prepare an oral argument. Initial practice arguments are critiqued by the professor and student panels, and the final argument is judged by the professor.

**LAW 709(7091) Biblical Law**
Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. C. M. Carmichael.

Analysis of law and narrative in the Bible from the perspective of ancient law and legal history. Topics include the nature of the law codes, legal issues in the narratives, law and morality, law and religion, the transformation of extralegal relations into legal ones, legal interpretation in antiquity, social factors in legal development, and aspects of criminal, family, and private law.

**LAW 709(7092) Catholic Thought and the Law**
Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. E. Penalley.

With a Catholic majority on the Supreme Court, it is more important than ever to understand the distinctive features of the Catholic jurisprudential tradition. This course serves as a broad introduction to Catholic social teaching as it has developed since the Papal Synod of 1891 and recent encyclicals. Readings range from church documents to scholarly commentary. Topics include the relationship between morality and law, economic justice and the welfare state, the Catholic Theology of the death penalty, abortion, and assisted suicide.

**LAW 710(7101) Central Topics in Jurisprudence and Legal Theory**
Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. R. S. Summers, S. Goldstein.

This seminar addresses four related topics that arise in all disciplines: (1) the overall forms and complementary material or other components of the main functional legal units of a system of law, including those that are institutional such as legislatures and courts, preceptual such as rules and principles, and enforcive such as sanctions and remedies, (2) the distinctive bearing of various concepts of justice on the makeup and operation of functional legal units and other phenomena of law, with focus on procedural justice, (3) the special and extensive nature of the resources of reason and argument in the law, and (4) the major facets of the "legal positivism vs. natural law" debate. Assigned materials include a recent book by Prof. Summers: selected jurisprudential readings, judicial opinions, statutes, and other primary sources. There is extensive opportunity for class discussion. The grade is based on a paper and class discussion.

**LAW 716(7162) Contemporary American Jury**
Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. V. Hans.

This course evaluates claims about the legitimacy of imposing punishment for criminal and nontraditional remedies may be used to reduce the frequency and impact of corrupt activities, and the constitutional and statutory problems implicated by such approaches.

**LAW 716(7163) Contract Law in the Electronic Age**
Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. R. A. Hillman.

This seminar covers the law governing various aspects of E-Commerce, with a focus on the law of software contracts. Topics include electronic standard forms, terms after payment, copyright and patent preemption of software contracts, choice of law, software quality issues, and the open-source software movement.

**LAW 717(7171) Corruption Control**
Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. R. C. Goldstock.

This seminar analyzes the types of corruption that exist in both the public and private sectors, the means by which a variety of criminal and nontraditional remedies may be used to reduce the frequency and impact of corrupt activities, and the constitutional and statutory problems implicated by such approaches.

**LAW 716(7165) Criminal Law Theory**
Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. S. P. Garvey.

This seminar explores a variety of theoretical issues arising within the substantive criminal law. In particular, we discuss various justifications for state punishment; theories of excuse; the heat of passion defense; the legitimacy of imposing punishment for negligence; the relevance of resulting harm to criminal liability; the defenses of duress and insanity; and the doctrine of imperfect self-defense.

**LAW 719(7191) eLaw**
Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. P. W. Martin.

An exploration of the impact of the digital information and communication technology on how core activities of the law are carried out. The seminar traces the rapid spread of electronic systems of creation, storage, and dissemination of primary legal information, beginning with the emergence of viable commercial online systems in the 1980s. It looks at the current state of and issues raised by electronic self-publication on the part of legislative bodies, courts, and administrative bodies and investigate other issues of law and practice generated by the transformation of a paper and print-based legal system to one premised on nearly ubiquitous access to computers and electronic communication. Among the latter are questions of copyright, citation practice, "official publisher" designation, the role of the commercial sector and NGOs like Cornell's Legal Information Institute in the dissemination and application of law, post-release editorial revision, the privacy interests of those involved in legal proceedings, filing formats, and adjudicative procedures. While the course focuses initially on these phenomena and issues as they are playing out within the U.S., student projects may pursue any of these topics from a comparative perspective.

**LAW 717(7172) Estate Planning Issues for Gay and Lesbian Couples**
Fall. 3 credits. Letter grades only. Prerequisite: Trusts and Estates. Limited enrollment. Satisfies writing requirement. G. Alexander.
This course explores special problems and issues that gay and lesbian couples may face in planning their estates and the challenges facing lawyers who plan the estates of gay or lesbian clients. Topics include the status of gay and lesbian partners under intestacy laws and elective share statutes, the effective domestic partnership and civil union statutes on inheritance rights between gay and lesbian partners, special problems of adoption and its effect on interstate succession and construction of class gifts, and will contests involving wills of gay or lesbian decedents. Materials include cases, statutes, and articles. The grade is based on class participation and a final paper.

**LAW 726(7261) Feminist Jurisprudence**

Spring, 3 credits. Letter grades only.

Limited enrollment. Satisfies writing requirement. C. Bowman.

This seminar examines the role of law, and, more generally, the role of the state, in perpetuating and remedying inequities against women. After studying the historical emergence of sexual equality law in the U.S., we discuss pragmatic and paradigmatic feminist legal theories, including formal equality, MacKinnon's "dominance" theory, relational feminism, pragmatic feminism, and various anti-essentialist theories. We then apply these theories to substantive areas of law of particular concern to women, including but not limited to rape and other types of violence against women; abortion; surrogacy and other reproductive rights issues; pornography; prostitution; and problems encountered by women in the legal profession.

**LAW 729(7291) Global and Regional Economic Integration: The WTO, EU, and NAFTA**

Fall, 3 credits S-U or letter grades. Limited enrollment. Satisfies writing requirement. J. Barro.

The seminar studies the process of international economic integration occurring both globally and regionally. In the global context it takes up a basic introduction to WTO law and selected problems. In the regional context it takes up a basic introduction to the European Union, including the institutional and lawmaking processes, the direct effect and supremacy of EU law, and the development of the four freedoms (goods, services, persons, and capital). At basic introduction to NAFTA is also included. Student seminar papers may deal with issues arising within any of the three regimes.

Comparative studies are encouraged.

**LAW 731(7311) Immigration and Refugee Law**

Fall, 3 credits. S-U or letter grades.

Prerequisite: Constitutional Law. Limited enrollment. Satisfies writing requirement. S. W. Yale-Loehr.

This course explores the evolving relationship between U.S. policy and our national purposes. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. It also raises in acute form some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of nationalhood and sovereignty, fair treatment of competing claims to scarce resources, the imperatives of mass administrative justice, and pervasive discrimination. In approaching these questions, the course draws on diverse legal, judicial, administrative, and policy materials.

**LAW 732(7321) International Criminal Law**

Spring, 3 credits. Letter grades only.

Limited enrollment. Satisfies writing requirement. R. C. Hockett.

The seminar examines the questions surrounding international criminal law as a separate discipline and the sources of and basic principles underlying the subject. Particular attention is paid to the question of jurisdiction over crimes. It considers international crimes such as aggression, war crimes, crimes against humanity, terrorism, and torture. It also considers the treatment of past human rights violations in post conflict situations. It further considers procedural aspects of international criminal law and the forums that deal with international crimes. In that context, it looks at the structure, jurisdiction and jurisprudence of the International Criminal Court (The Rome Statute), the former Yugoslavia Tribunal; Rwanda Tribunal and extradition and mutual legal assistance. The format is class discussions of assigned readings. Evaluation is based on participation in class discussions and a written paper on a subject within the theme of the seminar. Paper topics must be submitted to the instructor for review no later than the third week of class. Each student gives a class presentation based on his or her paper.

**LAW 734(7341) International Environmental Law**

In recent decades, recognized environmental problems in post-pandemic societies have drawn from primarily national and regional threats into challenges of a truly global character. Correspondingly, international environmental law has grown from a relatively minor branch of international law primarily concerned with questions of state responsibility for cross-border pollution, into an expansive area of international law covering numerous environmental issues involving a wide range of international organizations. This seminar analyzes and assesses the various principles and rules of international law that have been developed to deal with problems of global environmental import, including the processes by which they have been drafted, implemented, and enforced. Specific topics may include control of air and water pollution, environmental disasters, disposal of hazardous wastes and trade in hazardous chemicals, ozone depletion, climate change, conservation of natural resources and biological diversity, management of international rivers, and the relationship between environmental protection and economic development. No prerequisites.

**LAW 735(7352) International Financial Institutions**

Spring, 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. R. C. Hockett.

An introduction to the practices and legal regulation of, as well as some opportunities and policy concerns raised by, cross-border financial intermediation. We begin with an overview of the principal instruments and institutions through which suppliers and users of financial capital and risk-bearing services are brought together. Next we cover the internationally relevant features of the domestic regulatory regimes that govern the largest and now increasingly "globalized" domestic financial intermediaries. Next we cover the principal gaps in and challenges faced by these domestic regimes. The discussion of global gaps and challenges takes us to the emerging "international financial architecture." Three main concerns animate our study: (a) the dangers of systemic risk that the international financial system must address, (b) the fairness and efficiency of the distribution of financial opportunity that the system yields, and (c) the political legitimacy of the processes by which the legal contours of the global financial system are established and structured. No specific degree of expertise in financial or international law or economics is required, but prior course work or experience in one or more of these fields enhances classroom discussions. Take-home exam or paper option.

**LAW 733(7332) International Women's Rights**

Fall, 3 credits. Letter grades only.

M. E. Greenberg.

Since the Fourth World Conference on Women in 1995 and the Beijing Platform for Action, the focus on women's rights has expanded in several ways: further engaging women all over the world, reaching beyond international frameworks to the national and community levels, focusing more on involving men as well as women in understanding and promoting respect for women's rights, and paying particular attention to economic and social rights. There has also been more regional collaboration for women's rights. This new seminar lays preliminary foundations regarding what a "right" is and reviews the history of international women's rights activism. It then covers the major international laws and institutions, most notably CEDAW and the Commission on the Status of Women, the Rome Statute and International Criminal Court, and the Beijing Platform for Action; and some regional illustrations as well. The seminar shifts midway to the problems of realizing rights at the national level and community levels. We look at Constitutions and national legislation with a focus on property, employment, and political rights. We consider issues of legal literacy and access to law, and look at work by regional women's networks and non-governmental organizations. Throughout, we consider how religion and culture, gender equality objectives, and gender mainstreaming relate to achieving lasting respect for women's rights. Requirements are participation in seminar discussions, suggesting discussion questions for one class session, a take-home midterm exam, and a final paper.

**LAW 737(7371) Islamic Law and History**

This course is designed to introduce law students to the terminology, principles, and concepts of classical Islamic law. After discussing the origins and evolution of Islamic law, we turn first to the organization of qadi courts (procedure and evidence) and then to specific areas of the law, e.g., personal status, the intergenerational transmission of property, commerce, and crime. The application of legal doctrine to actual disputes are analyzed
through the reading of expert judicial opinions or law (in English translation) issued in connection with medieval and modern court cases. No prerequisites.

**LAW 741(7411) Law and Higher Education**

Spring. 3 credits. S-U or letter grades. Prerequisite: Constitutional Law or Administrative Law. Limited enrollment. Satisfies writing requirement. J. J. Mingle. Higher education is a complex, idiosyncratic institution. Universities and colleges have a unique mission—teaching, research, and public service—and a uniquely challenging task of accommodating the various constituencies and organizations, both internal and external that influence how they are managed and how policies are shaped. This seminar explores the dynamic tensions, high expectations, and complex legal-policy issues universities and colleges face in fulfilling their mission.

**LAW 741(7412) Law and Humanities Colloquium**

Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. B. Meyer.

This colloquium brings together scholars working at the forefront of legal history, law and literature, law and culture, and critical theory from the institutional vantage points of both law and the humanities. Presenters are asked to speak not only about their specific research but about how their work is situated within new developments in law and humanities as a whole. The first three weeks are a seminar designed to apprise students of the history of law and humanities and to develop readings and development within this history. The rest of the course is organized around a series of speakers, some from Cornell and some from other universities. Students convene for a half hour at the beginning of the session, which is then opened to a larger community, including faculty members, for the talk itself. Students are required to write six three- to five-page papers responding to the speakers’ pre-circulated talks; these are due in advance of the class session devoted to those lecturing to prompt and enhance discussion. Those who wish to take the course for credit must attend the first class.

**LAW 754(7541) Law and Violence Against Women**

Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. E. A. Sussman.

This seminar examines violence against women from theoretical and practical perspectives. It begins with a general introduction to various feminist theories, including among them: equality feminism, difference feminism, dominance feminism, anti-essentialist feminism, and post-modernism. We examine these theories to provide us with frameworks for analyzing concrete manifestations of violence against women in society, including: domestic violence, rape, sexual harassment, pornography, and prostitution. We seek to apply these theories to practice and use them to address the issues that arise in legal practice to further cultivate/refine the theories. By focusing on both theory and practice, students collectively work toward developing legal strategies for combating violence against women. We encourage students to critique existing frameworks and to assume the role of social movement lawyers. Students write a substantial research paper focusing upon a substantive problem related to violence against women.

**LAW 756(7611) Legal Aspects of Commercial Real Estate Development**

Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. J. E. Bluth.

Through the use of several written memoranda and one oral presentation, this seminar addresses considerations basic to commercial real estate development. It focuses on purchase agreements, options, rights of refusal, and memorandum thereof; representations and warranties; disclosure required of brokers and sellers; attorneys as brokers; notarial misconduct; conveying and surveys; commercial leases; conventional financing, conflicts between commercial tenants and institutional lenders; alternatives to conventional financing; title insurance; attorney opinion letters; and choice of real estate entity. About half of the semester is devoted to commercial leases. Students prepare and present their own cases. After reading and discussing a selection of cases from these sources, each student prepares and presents his or her own case history of a case selected by the student, working from briefs, related legal material, secondary sources, and, if possible, contacts with lawyers and parties. Grades are based on papers and presentations.

**LAW 757(7571) Legal Narratives**

Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. E. L. Sherwin.

This seminar takes an in-depth look at the factual, legal, and social background of notable legal decisions. It is based on a recently published series of texts presenting the "stories" behind well-known first year cases. After reading and discussing a selection of cases from these sources, each student prepares and presents his or her own case history of a case selected by the student, working from briefs, related legal material, secondary sources, and, if possible, contacts with lawyers and parties. Grades are based on papers and presentations.

**LAW 759(7593) Income Taxations of Corporate Mergers and Acquisitions**

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. R. A. Schnur.

This advanced seminar first reviews the basic federal income tax principles governing taxable and non-taxable corporate mergers and acquisitions, and then introduces students to some of the more complex transactional tax issues and explores how these tax concepts are utilized in structuring acquisition transactions. The emphasis is on domestic rather than cross-border acquisitions. There is no final examination, but students are asked to prepare several planning memoranda directed at different merger and acquisition fact patterns.

**LAW 760(7601) Organized-Crime Control**

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. R. C. Goldstock.

This seminar explores the challenges organized crime poses to society and to traditional law enforcement techniques. Students undertake a simulated investigation using physical and electronic surveillance, the analysis of documentary evidence, and the examination of recanting witnesses before the grand jury. The RICO statute is explored in detail as well as a variety of non-criminal remedies including forfeiture and court-imposed trusteeships.

**LAW 761(7611) Philosophical Foundations of Legal Ethics**

Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement and professional responsibility requirement. W. R. Beswick.

This seminar examines legal ethics from the standpoint of moral and political philosophy. We examine such questions as the relationship between ordinary morality and professional obligations; whether professionals may be blamed morally for their clients’ ends or for activities taken pursuant to professional roles; and the relationship between legal and political institutions and moral values. In addition to reading classic and recent articles, we apply theoretical models to practical ethical dilemmas faced by lawyers. No background in philosophical ethics is presumed. We begin with a brief introduction to the subject through Bernard Williams’s book Ethics. This seminar satisfies law school and ABA professional responsibility requirements but is not intended as preparation for the MPRE or an introduction to the law governing lawyers.

**LAW 767(7671) Psychological Expert Testimony in the Courts**

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. J. J. Haugaard, A. J. Mooney.

This seminar is cross-listed in the Law School and in the College of Human Ecology. Second and third year law students, graduate students in the Department of Human Development and graduate students in the Psychology Department may enroll. Students explore the use of expert psychological testimony in legal proceedings. Law students and psychology students work together to present current, accurate psychological testimony in a simulated courtroom setting. Law students teach psychology students to offer testimony and to withstand cross-examination. Psychology students act as social movement lawyers to conduct cross and direct examinations in a particular area of psychological knowledge by educating the law student in that particular area. Together the students explore the scientific and ethical limitations of what an expert’s testimony must include. All students enhance their oral advocacy skills, and law students enhance their writing skills by preparing motion memos, trial briefs or written closing arguments.

**LAW 768(7682) Religion and the State**

Spring. 3 credits. S-U or letter grades. H. Shaffir.

An examination of legal, historical, sociological, theological, and political theoretical perspectives on the relationship between religion and the state.

**LAW 777(7771) The Supreme Court**

Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. T. W. Morris.

This seminar examines the U.S. Supreme Court from a variety of perspectives. From a historical standpoint, we look at the origins of the Court, variations in its work over time, and changes in its relationship to the other branches of government and American society more broadly. From a legal science standpoint, we consider the institutional development and behavior of the Court as well as empirical evidence about the Court’s decisions. From a doctrinal standpoint, we study trends in certain areas of the Court’s jurisprudence, and also examine some of the
LAW SCHOOL - 2006-2007

Incarcerated and many are out-of-state) Students communicate with clients (although some may be incarcerated and many are out-of-state).

Students may also locate expert and other witnesses and draft affidavits and motions. The cases provide a basis for more in-depth substantive learning as well as practical skills and attorney-client issues. In class, each team discusses the legal and practice issues that arise in their case, so all students can benefit from and assist with each case.

LAW 781(7811) Civil Capital Punishment Clinics: Post-Conviction Litigation Spring. 4 credits. S-U or letter grades. Prerequisite: permission of instructor. Criminal Procedure or criminal law experience preferred. Limited enrollment. J. H. Blume

Death penalty post-conviction litigation: investigation and the preparation of petitions, memoranda, and briefs. This course is taught as a clinic. Students work on two or possibly three capital cases. Case selection depends on pedagogical factors and litigation needs of the inmates. Students read the record and research legal issues. Some students are involved in investigation, while others assist in the preparation of papers. All students are included in discussions regarding the necessary investigation, research, and strategy for the cases.

LAW 783(7831) Criminal Defense Trial Clinic Spring. 4 credits. S-U or letter grades. Prerequisite: Evidence recommended or permission of instructor. Limited enrollment. L. Salisbury

Students represent defendants in non-felony, non-jury criminal cases. The course has both a classroom and courtroom component. The classroom component focuses on all aspects of handling a criminal case, including criminal law and procedure, ethics, trial strategy, plea bargaining and trials. The courtroom component involves attendance at court proceedings, including pre-trial conferences. Each student interviews clients and witnesses, prepares clients and witnesses for trial, conduct negotiations, and conducts fact investigation, prepares discovery demands and engages in motion practice.

LAW 783(7832) Criminal Defense Trial Clinic Spring. 4 credits. S-U or letter grades. Prerequisite: Evidence recommended or permission of instructor. Limited enrollment. G. G. Galbreath

Students represent defendants in non-felony, non-jury criminal cases. The course has both a classroom and courtroom component. The classroom component focuses on all aspects of handling a criminal case, including criminal law and procedure, ethics, trial strategy, plea bargaining and trials. The courtroom component involves attendance at court proceedings, including pre-trial conferences. Each student interviews clients and witnesses, prepares clients and witnesses for trial, conduct negotiations, and conducts fact investigation, prepares discovery demands and engages in motion practice.

LAW 783(7833) Full-Term Externship Fall or spring. 12 credits. S-U or letter grades. Prerequisite: permission of instructor. Limited enrollment. G. G. Galbreath

Students earn 12 credit hours as externs working full time at approved placement sites during the fall semester of their third year. Written application for the course must be submitted to the instructors in March of the preceding spring semester. The instructors review the applications and grant students conditional approval, contingent on acceptance by the placement and identification of an attorney at the placement who will supervise and mentor the extern. In addition to his or her work responsibilities for the placement, students engage in weekly journal entries, prepare and file pleadings and briefs as required. They may have the opportunity to represent unions at hearings, mediation or arbitration. Those who do not have that opportunity are invited to observe hearings before the National Labor Relations Board, State Board or attend an arbitration. Effort is made to expose students to a variety of legal issues and legal representations in different fora. Students communicate directly with union representatives and are required to sort through the facts, research the issues, and provide information and advice. Students routinely draft legal memoranda and briefs and meets individually with the faculty member.

LAW 787(7871) Labor Law Clinic Fall. 4 credits. S-U or letter grades. Limited enrollment. A. B. Cornell

Students are placed at the Tompkins County Labor Guardian office, where they work on behalf of clients who have petitioned to remain in the U.S. because they fear persecution or torture in their home countries. These clients have represented themselves pro se in Immigration Court. During the first part of the semester, students study substantive and procedural law and Convention Against Torture (CAT) law, such as the nature of persecution, grounds for asylum and CAT claims, and the practical and social effects of these laws on new immigrants who seek asylum or CAT relief. Class may also cover practical knowledge needed for effective representation, such as advanced research and writing skills. During the second half, students are placed in two on-attorney brieves that not only entail serious legal analysis but may require sociocultural and political research, so the students can effectively write about the conditions of the client's home country. Students communicate with clients (although some may be incarcerated and many are out-of-state).
abuse and neglect cases, juvenile delinquency proceedings, and PINS (Person in Need of Supervision) cases. Students also may have their own cases, in which they assume primary responsibility for the representation. Duties may include interviewing, investigation, drafting memoranda and motions, and trial preparation. Students meet several times with the instructor during the semester. Bi-weekly journals are also required.

**LAW 790(7901) Legislative Externship**
Fall and spring 3 credits. S-U or letter grades. Students selected by Assemblywoman Lifton. Limited enrollment. B. Strom.

Students work with the local New York State Member of Assembly. Work involves drafting legislation, tracking legislation for constituents, legal research and writing, and responding to constituent requests that particularly require legal research. Issues related to an explanation of law. The emphasis is on learning about legislative process, drafting of legislation, understanding the reasons for statutory ambiguity, and developing various skills. Students meet informally several times with the faculty supervisor related to the externship experience.

**LAW 791(7912-3) Neighborhood Legal Services Externship 1, 2 or 3**
Fall or spring 4 credits. S-U or letter grades. Limited enrollment. B. Strom.

Classroom component is provided by Clinical Skills 1, 2 (Fall), or 3 (Spring) depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 was a component. Cases involve the representation of clients of a legal services office. The Neighborhood Legal Services (NLS). Along with case handling, this externship includes a classroom component, provided by Clinical Skills 1,2, or 3. The classes are devoted to the development of lawyering skills and issues related to professional responsibility and the role of an attorney. In addition, each student meets periodically with the faculty supervisor for review of the placement experience.

**LAW 792(7921) Prosecution Trial Clinic**
Fall 4 credits. S-U or letter grades. Prerequisite: Evidence or permission of instructor. Limited enrollment. R. A. Sarachan.

This course gives students the opportunity to prosecute non-felony non-jury trials in Ithaca City Court. It has both a classroom component and a courtroom component. The classroom component involves lecture, discussion and trial simulation exercises. Topics include criminal law and procedure, prosecution ethics, trial strategy and preparation, trial conduct including direct and cross-examination, plea bargaining and professional judgment. The courtroom component involves regular attendance at Ithaca City Court's non-jury terms. Students observe and critique trials and prosecute offenses including traffic tickets, city codes violations, non-felony penal law violations among others. Each student is expected to conduct multiple trials during the semester, depending on docket volume. During the semester students are also expected to attend local (police officers), practice plea bargaining negotiations, case research and fact investigation, respond to discovery demands, and engage in motion practice and appellate practice as needed.

**LAW 793(7931) Public Interest Clinic 1**
Fall or spring 4 credits. S-U or letter grades. Limited enrollment. G. G. Galbreath, J. Miner, B. Strom.

Students handle civil cases for low-income clients of the Public Interest Clinic under the supervision of clinic faculty. Students interview and counsel; investigate and analyze facts; articulate substantive and procedural law with facts in the context of actual representation; develop strategies to handle clients' problems; identify and resolve professional responsibility issues; do legal writing; negotiate and settle cases; and represent clients in hearings. Classroom component is provided by the Clinical Skills 1 class, in which students develop interviewing, counseling, and advocacy skills through the use of readings, videotapes, discussions, and simulation exercises.

**LAW 793(7932) Public Interest Clinic 2**
Fall 4 credits. S-U or letter grades. Prerequisite: Public Interest Clinic 1 or a clinic course that included Clinical Skills 1 classroom component. Limited enrollment. G. G. Galbreath, J. Miner, B. Strom.

Students handle civil cases, participate in a classroom component, Clinical Skills 2, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest Clinic 1. Students represent the clinic's clients in both federal and state courts. Clinical Skills 2 builds on the skills taught in Clinical Skills 1.

**LAW 793(7933) Public Interest Clinic 3**
Spring 4 credits. S-U or letter grades. Prerequisite: Public Interest Clinic 1 or clinic course that included Clinical Skills 1 classroom component. Limited enrollment. G. G. Galbreath, B. Strom.

Students handle civil cases, participate in a classroom component, Clinical Skills 3, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in Public Interest Clinic 1. Students represent the clinic's clients in both federal and state courts. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and 2.

**LAW 795(7951-2) US Attorney's Office Clinic 1 or 2**
Fall or spring, 6 credits. S-U grades only. Limited enrollment. C. E. Roberts.

In this course law students work 12-15 hours per week for the U.S. Attorney's Office in Syracuse, N.Y. Each student works for an Assistant U.S. Attorney. Students perform research and writing and trial assistance as needed. They may qualify to appear in court under the supervision of their attorney and are encouraged to observe court proceedings in the U.S. Courthouse. They also attend a weekly two hours lecture (C. E. Roberts). The seminar focuses on writing in practice, including critiques of briefs, motions, and a petition for certiorari. Additional topics include federal criminal and civil practice, prosecutorial discretion, and harassment. Guest speakers may include judges, a special prosecutor, and U.S. Department of Justice officials.

**LAW 796(7961-2) Water Law in Theory and Practice 1 and 2**
Fall and spring 3 credits. S-U option only. Limited enrollment. Spring enrollment limited to students who were enrolled in Fall 2015. K. S. Porter.

This course presents water law in theory and in practice, providing students practical opportunities to learn water law and to experience its multiple aspects through meaningful contribution. Water law is the framework for protecting water resources and their uses. However, law relating to water is diverse, complex and often uncoordinated. This complexity is compounded by the inter-relationship between land and water. It is highly undesirable for those with any aspect of the water sector to be aware of and understand relevant water law. It is also desirable to also understand how and why our water law has evolved, and to what extent it is effective in meeting its purposes. Compared to the western U.S., eastern water law has long had a low profile. Evolving water resource issues in the east, especially in their watershed context, now compel greater recognition. This course provides for research and practical experience, working with leading agencies and partners engaged in these watersheds. Students select and undertake projects in conjunction with these partners. They communicate directly with the leaders and staff involved in the watershed issues and are expected to compile relevant facts, critically research the issues, and provide information and conclusions in appropriate forums. The students participate in a Water Law Colloquia. Depending on student interest there is opportunity to undertake a project in association with the Land Use Law Center, Pace University. Students interested in comparative aspects of water law have an opportunity for a project on U.S. and European Water Law. The Water Resources Institute has excellent contacts in the United Kingdom.

**NON-PROFESSIONAL COURSES NOT OPEN TO LAW STUDENTS**

**LAW 313 Government (3131) The Nature, Functions, and Limits of Law**
Spring. 4 credits. Letter grades only. Undergraduates only. A. Riles.

A general-education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of techniques for resolving conflicts and dealing with social problems. We analyze the roles of courts, legislatures, and administrative agencies in the legal process, considering also constitutional limits on their power and practical limits on their effectiveness. Reading consist of judicial and administrative decisions, social scientific articles, and commentaries on the legal process.

**LAW 402(4021) Competition Law and Policy**
Spring. 4 credits. S-U or letter grades. No legal training or background required. ECON 101 (Introduction to Microeconomics) or its equivalent is a prerequisite; no advanced mathematics is used. G. A. Hay.

This course is intended for non-law students; interested law students should take the Antitrust I-Law course. This course examines issues that arise when a country attempts to implement and maintain a "competition policy" as a way of promoting economic growth and efficiency. The basic reading material starts with actual cases (most of them arising under U.S. antitrust law) and uses those cases to probe the legal, economic and broad policy issues that the cases raise.
LAW 408(4081) Law, Science, and Sustainability
Fall. 4 credits. S-U or letter grades. Undergraduate and non-law graduate students only. D. A. Kysar.

This course concerns legal, scientific, and political dimensions of the emerging sustainability paradigm—that is, society’s efforts to promote development and economic growth while maintaining the collective impact of human activity within environmentally sustainable parameters. Topics include: alternative policy frameworks for the pursuit of sustainable development; the nature of environmental risk and how it is assessed by both experts and the public; the interaction between law, politics, and the scientific enterprise; the status of non-nationals, future generations, non-human life forms, and other political outsiders; and, most important, the variety of legal tools that have been or could be used to promote sustainability. These theoretical topics are examined in conjunction with case studies of specific domestic and global environmental issues. This course is intended for upper level undergraduate and graduate students from a variety of fields and adopts a broadly interdisciplinary approach. As a result, no prior study in law is required.
The Division of Nutritional Sciences (DNS) is offered to students enrolled in both colleges. The undergraduate program in Human Biology, Health, and Society (HBHS) is offered through the College of Human Ecology. This program offers biology majors courses in areas such as food science, animal science, plant science, advanced biology, and nutrition education.

Nutritional Sciences (NS), College of Human Ecology: This program provides students with a strong foundation in the broad field of nutritional sciences as well as thorough training in chemistry and biology. Students may prepare for a variety of career interests, including medicine and other health careers, fitness and sports nutrition, nutrition counseling, clinical nutrition, dietetics, nutritional biochemistry, community nutrition, and nutrition education.

Nutritional Sciences (NS), College of Agriculture and Life Sciences: This program is for students who want strong training in human nutrition combined with supportive course work in agriculture and the life sciences. Strong preparation in biology, chemistry, and math is required. Students in the Nutrition, Food, and Agriculture program supplement the nutrition curriculum with courses in areas such as food science, animal science, plant science, advanced biology, business and economics, education, and communication.

Human Biology, Health, and Society (HBHS), College of Human Ecology: Established in 1997, this program gives students a strong foundation in biology. It then goes on to explore human health issues from the perspectives of both biology and the social sciences. Students complete a rigorous curriculum in the natural sciences and then, choosing from a wide array of courses offered in the College of Human Ecology, focus their studies on health issues of their choice. Students can explore such topics as gene expression and metabolism related to disease states, biological aspects of growth and development, and policies and programs influencing health.

The division also offers the Program of Study in Human Nutrition for biological sciences majors who may be enrolled in the College of Agriculture and Life Sciences or College of Arts and Sciences. The Program of Study in Human Nutrition offers biology majors courses in the nature and biochemical function of essential and nonessential nutrients, nutrient requirements, the role of nutrients in gene expression, and the role of diet in both risk of chronic disease and treatment of existing disease states. Students in this program of study are encouraged to complete a diverse set of advanced courses that afford a perspective on current knowledge of nutrient requirements and function and how this knowledge can be put to use. With the exception of a core course in the structure and function of nutrients, the course requirements are unspecified.

Faculty advisors work with individual students to develop a curriculum that fits the students' interests. As part of their program, students are encouraged to obtain laboratory experience either through course work or research. Students completing the program in nutrition most often choose to pursue their education in medical or graduate school and pursue careers in the applied aspects of nutrition or in laboratory-based or epidemiological research.

The CURRICULUM

Undergraduate students in these programs complete the requirements of their colleges as well as the courses required by the program of their specific interest.

Both the NS and HBHS programs require a rigorous sequence of courses in chemistry and biology, including introductory chemistry and biology, organic chemistry, biochemistry, and physiology. A minimum competency in college algebra is required with an additional math and/or statistics requirement for some programs and career paths. Students in the HBHS major also complete a course in physics and two additional courses in advanced biology.

All students complete the introductory course NS 115 Nutrition, Health, and Society. The NS program requires the completion of four other core courses: NS 245 Social Science Perspectives on Food and Nutrition; NS 345 Nutritional and Physicochemical Aspects of Foods; NS 335 Physiological and Biochemical Bases of Nutrition; and NS 492 Methods in Nutritional Sciences. Students in these programs also must select a minimum of 9 credits in advanced courses in the nutritional sciences.

The HBHS major requires 15 credits of advanced electives that explore health issues from primarily a biological or a social perspective. These courses are offered by faculty in several departments within the College of Human Ecology.

Undergraduate students in these programs have a faculty advisor with whom they meet at least twice a year. Advisors help students plan their course schedules and can suggest opportunities for individual study or experience outside the classroom.

In both undergraduate programs the correct sequencing of biology, chemistry, and nutrition courses is very important. Students considering these programs should obtain detailed information about course requirements from the division's Academic Affairs office, 335 MVR. This office offers a wide range of advising materials to help students develop a program of study that matches their interests and needs.

CAREER OPTIONS AND COURSE PLANNING

Requirements for the programs are the minimum set of courses necessary for a bachelor's degree in these fields. Students should supplement their requirements with elective courses and other learning experiences that will prepare them for entry-level jobs or advanced study in their field(s).
of interest. A summary of suggested electives for different career interests follows.

**Medicine and Other Health Careers:** Recommended courses for pre-med students include two semesters of physics. Specific information about medical school admissions requirements can be obtained from the university's Health Careers office, 203 Barnes Hall. Students interested in other health careers should acquire specific information about these requirements. Courses of interest may include those related to the biological and social determinants of health, human growth, development, and behavior through the life course; interpersonal communications; advanced biology; sociology; psychology, and ethics.

**Dietetics:** Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition programs. For more information about meeting requirements, contact the DNS Academic Affairs office, 335 MVR.

**Exercise, Nutrition, and Health Promotion:** Students should complete a course in physiology and anatomy after introductory biology. Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics. Students who wish to apply to graduate schools to study physical therapy should complete a year of introductory physics, a course in statistics, a course in ethics, and three courses in psychology. Students should check the specific requirements of their schools of interest. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs office, 335 MVR.

**Biomedical Research/Nutritional Biochemistry:** Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

**Public Health and Community Nutrition:** Suggested electives include courses in communications, education, human development, policy analysis and management, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

**Nutrition, Food, and Business:** Recommended electives include courses in management, marketing, economics, communications, hotel administration, and food science.

**Nutrition and Agriculture:** Recommended electives include courses in food science, animal science, plant sciences, international agriculture, agricultural economics, biological sciences, and rural sociology.

**International Nutrition:** Recommended electives include courses in language anthropology, agricultural economics, policy, economics, rural sociology, international agriculture, and nutritional sciences related to maternal and child health and problems of developing nations.

**Biology and Behavior:** Recommended electives include courses in psychology, human development, and neurobiology.

**Food, Nutrition, and Health Policy:** Recommended electives include courses in economics, sociology, government, policy analysis, and management.

**SPECIAL EXPERIENCES**

Undergraduates can enhance their experiences by participating in structured field experiences or study abroad. Academic credit can be earned for field experiences in a community agency, health care facility, or business. The Urban Seminar at the College of Human Ecology provides students with an opportunity to study and gain field experience in New York City. All students intending to spend a semester off-campus in field experience or study abroad must plan their courses well in advance to be sure that all program requirements can be met.

**INDEPENDENT STUDY ELECTIVES**

Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty advisor and the approval of the director of undergraduate studies or consider applying to the honors program.

**HONORS PROGRAM**

The honors program, which leads to a B.S. degree with honors in the College of Human Ecology or a B.S. degree with distinction in research in the College of Agriculture and Life Sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major, students in the honors program take seminars in designing and evaluating research, complete an original piece of research (at least 6 credits of NS 499), and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. For more information, students should contact Professor J. Thomas Brenna, B38 Savage Hall, or Professor Carole Bisogni, 328 MVR.

**COURSES RECOMMENDED FOR NONMAJORS**

Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, communications, food science, human development, human services, and other fields.

NS 115 Nutrition, Health, and Society is open to all students. After NS 115, nonmajors with limited backgrounds in chemistry and biology may elect NS 245 Social Science Perspectives on Food and Nutrition; NS 247 Food for Contemporary Living; NS 275 Human Biology and Evolution; NS 306 Nutritional Problems of Developing Nations; NS 315 Obesity and the Regulation of Body Weight; NS 347 Human Growth and Development: Biological and Behavioral Interactions; NS 450 Public Health Nutrition; NS 451 Epidemiology and Health of Human Communities. Nonmajors with strong backgrounds in chemistry and the biological sciences may consider NS 331 Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses, such as NS 345 Nutritional and Physicochemical Aspects of Foods; NS 431 Mineral Nutrition and Chronic Disease; NS 441 Nutrition and Disease; NS 455 Nobel Prizes in Biomedical Research; and NS 475 Mechanisms Underlying Mammalian Development Defects.

**GRADUATE PROGRAMS**

Graduate study is administered by the field of nutrition, a group of about 40 faculty members from throughout the university who have a common interest in nutritional problems. In the M.S. and Ph. D. degree programs, students may specialize in molecular and biochemical nutrition, human or animal nutrition, community nutrition, or international nutrition. Research is emphasized in all graduate programs. Field experience may be an important component of concentrations in community, international, and public health nutrition and nutrition education. Teaching experience and participation in the graduate student seminar (NS 703) are important aspects of graduate training.

The specialties and interests represented by faculty in the field of nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choices and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy. Students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, students should visit the web site or contact the director of graduate studies, field of nutrition, Cornell University, 335 MVR Hall, Ithaca, NY 14853-4401, 255-2628, nutrition_gr@cornell.edu, or www.nutrition.cornell.edu/grad.html.

**COURSES**

**NS 115(1150) Nutrition, Health, and Society**

Fall. 3 credits. S-U grades optional.

D. Levitsky.

Discusses the facts and fallacies concerning the role that nutrition, exercise, and other health behaviors play in preventing disease, maintaining good health, and maximizing athletic performance. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise affect psychological and physical health.
NS 116(1160) Personalized Concepts and Controversies
Fall. 1 credit. Limited to 10 students per sec. Prerequisite: freshman or transfer standing. Corequisite: NS 115. S-U grades only. J. Swanson.
Provides students enrolled in NS 115 individualized assistance in many skills including using computers to analyze diets, finding and using scientific references, understanding and criticizing scientific articles, and reviewing material presented in lectures.

NS 120(1200) Nutrition and Health: Issues, Outlooks, and Opportunities
Prerequisite: freshman, sophomore, or junior standing or permission of instructor.
Not an introductory nutrition course for nonmajors. S-U grades only. C. You.
For students interested in exploring careers in the broad fields of food, nutrition, and health. Experts representing different areas discuss their work, focusing on current issues and trends as well as the requisite knowledge and skills. This course introduces many of the disciplines that are drawn upon in addressing human problems related to food, diet, and health. Students explore career opportunities through a variety of assignments.

NS 122(2220) Maternal and Child Nutrition
Fall. 3 credits. Prerequisite: one semester college biology or NS 115. P. Brannon.
The biology of the life cycle including development, growth, maturation and aging and its impact on nutritional requirements of humans from the zygote to the elderly is considered. How to meet these nutritional requirements is discussed relative to the feeding issues and context of each major life stage. The course emphasizes the critical analyses of beneficial and adverse outcomes of various nutrient intakes and dietary patterns on the nutritional status and well-being through integration of nutrition and other health sciences in understanding nutritional needs during the life cycle.

[NS 222(2220) Maternal and Child Nutrition]
Fall. 3 credits. Limited to 50 students. Prerequisites: NS 115 and college biology or permission of instructor. Students must preregister in 335 MVR. S-U grades optional. Not offered 2006-2007.
Focuses on the biological bases of nutritional requirements in pregnancy, lactation, infancy, and childhood through adolescence. Stresses critical analyses of beneficial and adverse outcomes of diverse nutrient intakes and dietary patterns on the nutritional status and the integration of nutrition, other life sciences, and social conditions in understanding nutritional needs during these life stages. Topics include oral contraception and health; relationships between maternal diet and pregnancy outcomes; breast-feeding and adolescent obesity; and the nutritional needs of young children and adolescents.

NS 230(2300) Sophomore Seminar: Functional Foods: Where Food Science Meets the Business World (also FD SC 230(2300))
Spring. 2 credits. Limited to 15 students; priority given to sophomores who have completed two first-year writing seminars and an introductory course in either food science or nutritional sciences. S. J. Mulvany and R. Parker.
Functional foods are foods whose nutrient composition has been modified to achieve targeted health outcomes. This course explores the interface where nutritional science and food business intersect and moves together to design and produce foods to meet certain health goals using a case study approach. Each case study involves interdisciplinary discussion and a writing assignment that includes both technical (e.g., scientific basis for diet-health claims) and non-technical (e.g., personal experience and opinions related to functional foods) content.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Special emphasis is given to strong thinking and writing, and to personalized instruction with top university professors.

NS 245(2450) Social Science Perspectives on Food and Nutrition
Fall. 3 credits. Prerequisite: NS 115. S-U grades optional. C. Bisogno and J. Sobal.
Uses theories, concepts, and methods from the social sciences to examine food, eating, and nutrition. Uses the food choice process as a conceptual model for examining the scope of social science aspects of nutrition.

NS 247(2470) Food for Contemporary Living
Fall and spring. 2 credits. Limited to 32 students per sec. Highly recommended: NS 115. Students must preregister in 335 MVR during course enrollment period. S-U grades optional. Lab coat required. E. Gier.
During this laboratory course, the understanding of food ingredients and techniques of food preparation is applied to positive nutritional practices and health promotion goals. Course content includes food science principles, nutrition principles, food safety and sanitation, sensory evaluation, and social-culinary influences on food choices. The course explores basic food science principles through food preparation, recipe modification, and sensory evaluation (taste testing required). The course introduces students to basic cooking skills and techniques and recipe modification. Each student prepares assigned recipes during each lab. Assignments and projects introduce students to basic menu planning and meeting requirements while restricted to a budget. Lab performance and a lab practical factor into final student evaluation; thus attendance at all labs is expected.

[NS 275(2750) Human Biology and Evolution (also BIOEE/ANTHR 275(2750))]
For description, see BIOEE 275.

NS 300(3000) Special Studies for Undergraduates
Fall or spring. Prerequisite: permission of instructor. S-U grades optional. DNS faculty.
Special arrangements can be made to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake using a form available from the college registrar's office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

NS 306(3060) Nutritional Problems of Developing Nations
Fall. 3 credits. Prerequisite: NS 115. S-U grades optional. Offered alternate years; next offered 2007-2008. J. Swanson.
Students gain an overview of the most important nutrition problems facing developing countries today and an in-depth understanding of the nutrition problems of one country, chosen as a case study for the course. The course uses the health/care/nutrition framework to analyze the causes of these nutrition problems. Instruction is through lectures and readings. Evaluation is through individual assignments, a group project, exams.

[NS 315(3150) Obesity and the Regulation of Body Weight (also PSYCH 613(3150))]
Spring. 3 credits. Prerequisites: junior or senior standing; NS 115, PSYCH 101. S-U grades optional. Offered alternate years, next offered 2007-2008. D. Loock.
Multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism in obesity, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

NS 320(3200) Introduction to Human Biochemistry
Fall. 4 credits. Prerequisites: one year college biology; one year college general chemistry; and CHEM 257 or 357-358, or permission of instructor. S-U grades optional. P. Stover.
Present's the principles of biochemistry within the context of human health and disease. Teaches the metabolism of carbohydrates, lipids, proteins, and selected micronutrients from a perspective that emphasizes their role in supporting the structure and physiological functions of the major organs of the body. Incorporates the concepts of enzyme catalysis, enzyme regulation, hormone action, and bioenergetics within this framework. Covers the fundamental concepts of eukaryotic DNA structure, function, and gene expression with reference to their importance in regulating metabolism and the impact of a changing nutrient environment.

NS 331(3310) Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. Prerequisites: BIOBM 330 or 331, or NS 115, or equivalent. S-U grades optional. C. McCormick.
Examines the biochemical and physiological bases of human nutritional requirements. Uses an integrated approach to cover the digestion and metabolism of nutrients (carbohydrates, proteins, lipids, vitamins, and minerals). Metabolic and chronic diseases related to nutrition are discussed throughout the semester. The discussion sections and problem
sets provide an opportunity to examine in greater depth selected topics from lecture.

**NS 332(3320) Methods in Nutritional Sciences**
Fall. 3 credits. Limited to 18 students per sec. Prerequisites: undergraduate biochemistry; NS 345, NS 331 preferred or concurrent registration. Students must preregister for lab in 335 MVR during course preregistration. One evening prelim. M. N. Kazarianoff. Laboratory introduction to principles and analytical techniques of nutritional research. Emphasizes analytical concepts and skills required to determine nutrient function and nutritional status of individuals. Topics include methods of nutrient, metabolite, and enzyme analysis in body fluids, methods for assessing individual food intake and nutritional status; and methods for assessing the composition of foods.

**NS 341(3410) Human Anatomy and Physiology**
Spring. 4 credits. Limited to 18 students per lab. Prerequisite: college biology; limited to DNS majors; must be NS, NS/CALS, or HISBS major. Recommended: NS 115. Students must complete lab permission forms in 335 MVR during course enrollment period. Attendance required at first lab or placement forfeited. For further information, go to 335 MVR. Letter grades only. V. Utermohlen. Introduces human anatomy and physiology with particular emphasis on aspects of relevance to the nutritional sciences and medicine. Covers all major organ systems. Laboratory exercises in structure, location, recognition, and description of anatomical structures. Testing of physiological functions focuses on tests with nutritional and medical relevance.

**NS 345(3450) Nutritional and Physicochemical Aspects of Food**
Spring. 3 credits. Prerequisite: college organic chemistry or biochemistry. S-U grades optional. C. Bisogni. Studies the nutritional, physical, and chemical properties of foods including composition, food structure, enzymic and nonenzymic phenomena, processing/preparation, and how these relate to nutrition. Also discusses issues related to food safety and regulation.

**NS 346(3460) Introduction to Physicochemical Aspects of Foods—Laboratory**
Spring. 1 credit. Limited to 18 students per sec. Prerequisites: dietetics students in DNS, NS 345 or concurrent registration; college organic chemistry and permission of instructor during course registration. Students must obtain permission of instructor during course registration. Forms must be returned to instructor within 335 MVR. Letter grades only. B. Parker. Studies the nutritional, physical, and chemical properties of foods. Includes composition, food structure, enzymic and nonenzymic phenomena, processing/preparation, and how these relate to nutrition. Also discusses issues related to food safety and regulation. For description, see HD 347.

**NS 361(3610) Biology of Normal and Abnormal Behavior (also PSYCH 361[3611])**
Spring. 3 credits. Limited to 40 students. Prerequisites: senior standing only; BIO G 101–102 and PSYCH 101 or permission of instructor; fundamental knowledge of biology and psychology. S-U grades optional. Not offered 2006–2007. B. Strupp. Serves as a critical evaluation of biological factors thought to influence behavior and/or cognitive functioning. Biological, psychological, and societal influences are integrated. Topics include nutrition and behavior, psychiatric disorders, developmental exposure to environmental toxins and abused drugs, biopsychology of learning, memory, intelligence, and related cognitive disorders.

**NS 398(3980) Research in Human Nutrition and Health**
Fall. Credit may be awarded for students in honors research program sponsored by DNS. Open to all students. S-U grades only. J. T. Brenna and C. Bisogni. Lecture course focusing on the structures and practice of professional research conducted in human nutrition and health. A field that encompasses questions ranging widely from subcellular components to population-level issues. Introduces the various approaches and methods used by researchers and addresses the topics of research controls. Describes the structure of scientific literature, preparation of research proposals, roles of scientific organizations, and funding sources. Students are required to attend and report on research seminars on campus.

**NS 400-401-402-403(4000-4010-4020-4030) Special Studies for Undergraduates**
Fall or spring. Variable to 3 credits. S-U grades only. DNS faculty. For advanced independent study by an individual or group of students who want to study a field of nutritional sciences not otherwise provided through course work in the division or elsewhere in the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the director of undergraduate studies. The form, available from the division office, is filed at course registration or within the change-of-registration period along with an add/drop slip in the Human Ecology registrar's office. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to the director of undergraduate studies as early as possible.

**NS 400(4000) Directed Readings**
Study that predominantly involves library research and independent reading.

**NS 401(4010) Empirical Research**
Study that predominantly involves data collection and analysis or laboratory or studio projects.

**NS 402(4020) Supervised Fieldwork**
Study that involves both responsible participation in a community setting and field research and independent reading.

**NS 403(4030) Teaching Apprenticeship**
Study that includes assisting faculty with instruction.

**NS 421(4210) Nutrition and Exercise**
Spring. 3 credits. Limited to 12 students per sec. Prerequisites: BIOAP 311 or NS 341 and NS 315 or NS 331; nutrition majors or permission of instructor; prior given to seniors. S-U grades optional. S. Travis. Examines the interrelationships between nutrition, exercise, and athletic performance. Topics include the biological, psychological, and sociological aspects of nutrition as it relates to exercise performance. Lectures cover current research in nutritional needs in response to exercise, including fluids, energy nutrient requirements and caloric distribution, supplementation, ergogenic aids, pre-/post-exercise event recommendations. Makes applications to various sports. Critical thinking skills are enhanced by critiques of studies on sports nutrition-related topics and the evaluation of popular sports nutrition claims. Students learn educational strategies for communicating with the recreational and professional athlete, coach, and trainer. S-U grades optional. Evening prelim. S. Travis.

**NS 425(4250) Nutrition Communications and Counseling**
Spring. 3 credits. Limited to 20 students. Prerequisites: NS 115, 245; junior or senior standing; dietetics/nutrition majors preferred. Letter grades only. S. Travis. Students learn the theoretical basis of effective health promotion communications and develop effective nutrition communication skills through application in a variety of settings. The course provides hands-on experience with counseling, educational program development, and oral and written communications.

**NS 431(4310) Mineral Nutrition and Chronic Disease**
Fall. 3 credits. Prerequisite: NS 331 or permission of instructor. S-U grades optional. C. McCormick. Studies and evaluates the evidence from primary literature that dietary calcium, sodium, and iron play an important role in the development of osteoporosis, hypertension, and anemia, respectively. An additional goal of the course is to study controlled research processes that are involved in the homeostasis of each mineral and the recommendations for daily nutrient intakes. Class discussion of key research articles is conducted and evaluated.

**NS 441(4410) Nutrition and Disease**
Fall. 4 credits. Prerequisites: NS 351 and psychology course. S-U grades optional. V. Utermohlen. Studies the anatomical, physiological, and metabolic abnormalities in acute and chronic illness and the role of nutritional therapy in their prevention and care. Topics include nutritional assessment, body fluid shifts, oral nutrition, enteral and parenteral nutrition, nutrition and obesity, nutrition and diabetes mellitus, and renal, cardiovascular, pulmonary, skeletal, neurological, liver, and gastrointestinal disorders.

**NS 442(4420) Implementation of Nutrition Care**
Fall. 3 credits. Prerequisites: NS 115, 247, concurrent registration in NS 441 (or equivalent background in either course). S-U grades optional. Evening prelim. E. Gier.
Develop skills necessary to implement medical nutrition therapy (MNT). Emphasizes the acute care setting, although long-term care and outpatient settings are addressed. Students develop a working knowledge of the nutrition care planning process and an understanding of the application of appropriate nutrition principles and interventions in clinical nutrition practice, including acute and chronic disease conditions. Course content includes principles of MNT, menu planning for disease states, the role of other allied health practitioners in assuring nutritional health, and reimbursement and legislation and dietetics practice. Students have the opportunity to perform basic nutrition assessment skills in a local clinical and/or long-term care setting.

**NS 450(4500) Public Health Nutrition**

Spring. 3 credits. Prerequisites: NS 115 and one course dealing with population-level studies (e.g., NS 245, HD 250, PAM 303, D SOC 101/200). Students must complete section forms in 335 MVR during course enrollment period. K. Rasmussen and D. Pelletier.

Public health nutrition is the major branch of the science of public health that is concerned with the health and nutrition of human populations. The course deals with efforts to improve the diets and nutritional status of whole populations by working at the community, state, and national levels. This course helps prepare students to work in public health nutrition by describing methods used in the assessment of nutrition problems, the development of nutrition-related policies, and the delivery of health, nutrition, and food assistance programs.

**NS 451(4510) Epidemiology and Health of Human Communities**

Fall. 3 credits. Prerequisite: one semester of statistics. Intended for advanced undergraduates and graduate students interested in health, human biology, nutrition, or epidemiology. E. Frey.

Examines through a series of case studies the role of epidemiological investigation in understanding, assessing, and improving the health and nutrition of human communities and populations. Students read and discuss scientific research and public policy literature on specific topics of current interest. Emphasis is on the conceptualization of epidemiology as an ecological science that studies the interdependence and interaction of humans with their social, cultural, and physical environment.

**NS 452(4520) Molecular Epidemiology and Dietary Markers of Chronic Disease**

Spring. 3 credits. Prerequisites: upper-level biology course, introductory statistics (can be taken concurrently), or permission of instructor. S-U grades optional. P. Cassano.

Introduces chronic disease epidemiology and covers the natural history of the major chronic diseases affecting the U.S. population. Focuses on food service and nutrition professionals in understanding the etiology of cardiovascular disease, cancer, and lung disease. Integrates biological and epidemiological information as well as public health considerations and concepts related to the prevention of disease.

**NS 455(4550) Nobel Prizes in Biomedical Research**

Spring. 3 credits. Prerequisites: college biochemistry and/or cell biology (e.g., BIOM 330, 331–332, 432, NS 320). S-U grades optional. D. Manor.

Covers in detail key topics in biomedical research through discussions of selected Nobel prizes. For each specific biomedical problem addressed, the discussion encompasses detailed analysis of the relevant experiments and ensuing data, evaluation of the impact of the findings on public health, and retrospective assessment in view of present-day knowledge. The course focuses mainly on breakthroughs associated with two major public health issues: infectious diseases and cancer. Other topics discussed include vitamins, lipid metabolism, prions, and technical breakthroughs such as DNA synthesis, mutagenesis, and PCR.

**NS 457(4570) Economics of Hunger and Malnutrition (also ECON 474[4740])**

Spring. 3 credits. Prerequisites: ECON 101 and introductory statistics, or permission of instructor. D. Kohn. Focuses on the analysis of global hunger and malnutrition. Students analyze the dimensions, causes, and solutions to hunger and malnutrition, particularly in developing countries. Grades are based on a midterm and a final exam, a term paper, and class participation.

**NS 475(4750) Mechanisms Underlying Mammalian Developmental Defects (also BIOAP 475[4750])**

Spring. 3 credits. Prerequisites: BIOM 330, 331–332 or 333 (may be taken concurrently). Offered alternate years; not offered 2006–2007. D. Noden and P. Stover.

Developmental defects are present in nearly 5 percent of humans. Drawing upon current research, this course explores the cause of birth defects, emphasizing the interplay between genetic and environmental factors in the regulation of developmental processes. Emphasis is on nutritional disruptors, teratogens, and regulatory gene networks that are well characterized through animal studies and are associated with morphological, physiological, reproductive, or behavioral abnormalities in humans.

**NS 488(4880) Applied Dietetics in Food Service Systems**

Spring. 3 credits. Limited to 27 students. Prerequisites: introductory food service management course, BIOM 290. White lab coat required. Fee for special supplies/training and activities: approx. $60. G. E. Gier.

Students gain experience in facility design, equipment selection, use, and care; job analysis and evaluation; human resources planning; management of financial resources; recipe development and volume food production; computer-assisted management; employee training; and applied safety and sanitation standards. Through planning and executing a themed event, students develop other skills required to operate/manage a food service program. The application of quality control and food safety principles is covered. Students are arranged through Cornell Dining. Completion of a professional portfolio is required. ServSafe training and examination is conducted; successful completion results in ServSafe certification.

**NS 490(4900) MANIPULATING THE MOUSE GENOME (also BIOAP 490[4900])**

Fall. 1 credit. Prerequisites: BIOC 280, 281, or 282 and BIOM 330, 332 or 333, or NS 320. S-U grades optional. P. Soule.

Focuses on the analysis of global hunger and malnutrition. Students analyze the dimensions, causes, and solutions to hunger and malnutrition, particularly in developing countries. Grades are based on a midterm and a final exam, a term paper, and class participation.

**NS 499(4990) Honors Problem**

Fall and spring. Credit TBA. Prerequisite: acceptance into honors research program. Students who have been accepted into the honors research program work on their projects under the guidance of their faculty mentor. Honors research projects must complete a minimum of 6 credits of NS 499 typically spread over two or more semesters. The student and the mentor determine the appropriate number of credits for each semester. Research activities may include reviewing the literature, writing a proposal, developing research methods, collecting data in the field or laboratory, analyzing data, and writing the honors thesis.

**NS 600(6000) Special Problems for Graduate Students**

Fall or spring. Credit TBA. Prerequisite: graduate students recommended by their chair and approved by instructor in charge. S-U grades optional. DNS faculty.

Emphasizes independent advanced work. Experience in research laboratories in the division may be arranged.

**NS 602(6020) LIPIDS (also BIOAP 619[6190])**

Advanced course on the molecular aspects of lipid transport. Topics include plasma lipoproteins, molecular biology of lipoprotein receptors, transcriptional regulation of cholesterol homeostasis, lipid transfer factors, lipolytic enzymes, and molecular aspects of atherosclerosis.

**NS 603(6030) Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also AN SC 603[6030])**

Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition courses. Letter grades only. Offered alternate years; not offered 2007–2008. X. G. Lei and C. C. McCormick.

Advanced course that emphasizes metabolism, gene regulation, antioxidant, and genetic defects related to mineral nutrition. Team-taught lectures cover topics ranging from single-gene mutation to social and environmental aspects of mineral nutrition and mineral-related disorders. Effective approaches to improves global mineral nutrition by agriculture and food systems are discussed.
that can modulate toxic effects, including polymorphic drug-metabolizing enzymes, stress-activated signal transduction, and DNA repair. Discusses the uses of molecular and cellular stress markers for assessment of toxicant exposure and health risks.\] [NS 614(6140) Topics in Maternal and Child Nutrition\] Fall. 3 credits. Prerequisites: for undergraduates only; NS 331, 222, or 347, BIOAP 311 or NS 341, and permission of instructor. Next offered 2007-2008.

K. Rasmussen

Advanced course on the role of nutrition during pregnancy and lactation. The feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized via lecture, discussions, and a term paper.

[NS 615(6150) Nuclear Hormone Receptors\] Spring. 2 credits. S-U grades optional.

N. Noy

Focuses on hormone-gene interactions mediated by the superfamily of ligand-inducible transcription factors termed nuclear hormone receptors. Lectures address the mechanisms of action, regulatory features, and biological activities of nuclear receptors, including steroid-, retinoic acid-, and peroxisome proliferator-activated receptors. Also discusses the use of nuclear receptors as therapeutic targets in disease states such as cancer and diabetes.

[NS 617(6170) Teaching Seminar\] Fall or spring. 0 credits. Prerequisite: DNS graduate students or permission of instructor. S-U grades only. DNS staff and D. Way.

Provides individualized instruction focusing on development of teaching skills for guiding learning in lecture, discussion, and laboratory setting, and reflection on the impact of these skills on teaching and learning. Students identify the aspects of the specific teaching assignments they wish to develop and work with instructors to learn how to develop projects that may include preparation for lecturing, preparation of exams, efficient grading, and so on. Optional videotaping provides opportunities for practice and analysis.

[NS 618(6180) Teaching Experience\] Fall or spring. 0 credits. Prerequisite: DNS graduate students or permission of instructor. S-U grades only. DNS staff and D. Way.

Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

[NS 619(6190) Field of Nutrition Seminar (also AN SC 619(6190))\] Fall or spring. 0 credits. S-U grades only.

Faculty and guest lectures. Lectures on current research in nutrition.

[NS 625(6250) Community Nutrition in Action\] Fall. 3 credits. Prerequisite: NS 341 or equivalent and permission of instructor. Offered alternate years; next offered 2007-2008.

J. Haas.

Topics in this lecture/lab course include current events in nutritional status assessment, quality control of anthropometric data, applications to special groups (infants, children, adolescents, pregnant women, and the elderly), statistical analysis, and presentation of anthropometric data, references standards and interpretation, measurement techniques of anthropometry, and body composition assessment.

[NS 635(6350) Introduction to Community Nutrition Research for Dietetic Interns\] Fall. 2 credits. Prerequisites: enrollment in Cornell Dietetic Internship Program or equivalent background and research placement. C. Bisogni.

Introduces the paradigms, concepts, methods, and issues involved in community nutrition research. Dietetic interns engage in individualized research projects at their community nutrition placement sites. Lectures, readings, and activities support students as they design their projects, develop research methods, collect data, and interpret findings. Students write a proposal, apply for human subjects approval, collect data, prepare a written report, and present an oral report and a poster session.

[NS 637(6370) Epidemiology of Nutrition\] Spring. 3 credits. Prerequisites: graduate standing; BTRY 601 and concurrent registration in BTRY 602 or equivalent knowledge; basic knowledge of nutritional sciences and biological basis of anthropometry; BTRY 602 or equivalent background and research placement sites. Lectures, readings, and discussions; permission of instructor; NS 637.

Spring or fall. 2 credits. Prerequisites: graduate standing; BTRY 601 and concurrent registration in BTRY 602 or equivalent knowledge; basic knowledge of nutritional sciences and biological basis of anthropometry; BTRY 602 or equivalent background and research placement sites. Lectures, readings, and discussions; permission of instructor; NS 637.

P. Cassano and J-P. Habicht.

Covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Presents principles of using nutritional information in decision making. Shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

[NS 638(6380) Epidemiology of Nutrition Seminar\] Spring. 3 credits. Prerequisites: graduate standing; permission of instructor, NS 637. Covers the meta-analysis, design, measurement, and analytic issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.

[NS 640(6400) Social Science Theories in Nutrition\] Fall. 3 credits. Limited to 20 students. Prerequisite: graduate standing. J. Sobal.
Social science theories from sociology, psychology, anthropology, economics, political science, geography, and history that contribute to understanding food, eating, and nutrition are discussed to understand how paradigms, theories, and models apply to nutrition topics, issues, and problems.

**NS 642(6420) Globalization, Food Security, and Nutrition (also AEM 6420)**
Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pinstrup-Andersen.

Directed reading course with a weekly 50-minute discussion session. The course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization affects poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. The discussion sessions are based on assigned readings for each week.

**NS 644(6440) Community Nutrition Seminar**
Fall and spring. 1 credit. S-U grades only. A. Gillespie.

Sponsored by the Cornell Community Nutrition Program. Graduate students and faculty learn about current research in the program and related fields within and outside Cornell and about community nutrition theories and research methodologies. The seminar also provides a forum to discuss participants' own research and current issues in community nutrition.

**NS 646(6460) Seminar in Physicochemical Aspects of Food**
Spring. 1-3 credits. Prerequisite: college organic chemistry or biochemistry. S-U grades optional. B. Parker and B. Lewis.

Introduces physicochemical aspects of food to graduate students who have had limited or no work in this area. Uses the lectures of NS 645 as a basis for supplementary readings and critical review of research on selected topics.

**NS 650(6500) Assessing Food and Nutrition in a Social Context**
Fall. 4 credits. Prerequisite: social sciences course. Letter grades only. D. Pelletier and G. Pezzuto.

Food and nutrition problems in developed and developing countries may manifest themselves in biological or functional terms, but their causes and solutions ultimately are rooted in the sociopolitical world. This course provides multidisciplinary perspectives and some policy analytic frameworks needed to assess and analyze the social context of nutrition problems. The course is relevant to developed and developing countries and to research and programs related to community nutrition as well as nutrition policy.

**NS 660(6680) Special Topics in Nutrition**
Fall or spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: permission of instructor. DNS faculty.

Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered.

**NS 680(6800) International Nutrition Problems, Policy, and Programs**
Spring. 3 credits. Prerequisite: permission of instructor. T. R. Taba. Offered alternate years. International Nutrition faculty.

Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can help poor countries and communities improve their nutritional and health status.

**NS 685(6850) Empirical Methods for the Analysis of Household Survey Data: Applications to Nutrition, Health, and Poverty (also Econ 771[771])**
Spring. 3 credits. Prerequisites: intermediate microeconomics, intermediate statistics or econometrics (through multiple regression and limited dependent variable models), or permission of instructor. D. Sahn.

Focuses on empirical methods for the analysis of household survey data. Students examine a series of measurement and modeling issues focused on health and nutrition, education, and poverty. In addition, they explore methods to evaluate social programs. Course readings and data that are used for hands-on empirical exercises are largely from Africa and Asia.

**NS 690(6900) Trace Element and Isotopic Analysis (also Chem 628[6280])**
Fall. 3 credits. Prerequisite: CHEM 288 or 350, 302 or CHEM 208 and MATH 112, or permission of instructor. J. T. Brenna.

Survey course in modern high-precision isotope ratio mass spectrometry (IRMS) techniques and trace surface methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic spectroscopy, and electron microprobes. X-ray and electron spectrometry and physical and biological and solid state applications. The first five weeks focus on IRMS instrumentation and are offered as a separate 1-credit special topics course (NS 660).

**NS 698(6980) International Nutrition Seminar**
Fall and spring. 0 credits. No grades given. E. A. Frongillo.

Consists of presentations by Cornell faculty and graduate students and invited outside speakers. Speakers cover a range of topics relating to international nutrition problems, primarily programs in nonindustrialized countries.

**NS 699(6990) Special Topics in International Nutrition**
Fall and spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: permission of instructor. International Nutrition faculty.

Designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. It consists of tutorial study on an agreed-upon topic.

**NS 702(7020) Seminar in Toxicology (also TOX 702(7020))**
Fall or spring. 1 credit. S-U grades only. Staff.

Covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Includes presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

**NS 703(7030) Seminar in Nutritional Sciences**
Fall and spring. 1 credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. DNS faculty.

Presentations of original articles pertinent to the nutritional sciences. Students read and learn how to critically analyze and interpret original articles published in a wide variety of journals. Students learn how to make professional presentations and how to critique the presentations given by others.

**NS 899(8990) Master's Thesis and Research**
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. DNS graduate faculty.

**NS 999(9990) Doctoral Thesis and Research**
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U grades optional. DNS graduate faculty.

Miller, Dennis, Prof., Food Science/Nutritional Sciences
OFFICER EDUCATION

Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914 and the establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917. The program evolves to keep pace with the latest military changes and emphasizes the development of leadership and managerial skills.

The Officer Education Programs prepare students for a commission as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

MILITARY SCIENCE

Lieutenant Colonel Brian R. Page, Artillery, United States Army, Professor of Military Science and Commanding Officer
Major Dean Swartwood, Brigadier, Executive Officer, Engineer, United States Army Reserves
Major Richard Brown, Engineer, United States Army Reserve
Captain Kurt Belaweske, Aviation, United States Army

United States Army ROTC Program

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to prepare students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential. These objectives are achieved through a program normally covering four years. A two-year program is available for those who qualify. The program includes general academic subjects that assure a well-rounded education, practical training in leadership through participation in the Cadet Corps (including attendance at one five-week summer camp at Ft. Lewis, Wash.), and the opportunity to participate in a number of extracurricular activities. This combination prepares the student for commissioning and effective performance in the many branches of the Army. The student's academic major, academic performance, leadership ability, personal desires, and the needs of the Army determine the branch of the Army into which the student is commissioned upon graduation.

Requirements for Enrollment

Applicants must be citizens of the United States and able to obtain a Secret level security clearance before being commissioned as lieutenants. (Noncitizens may enroll in selected portions of the program.) Students must meet Army medical requirements. Overall sound mental and physical condition is essential; students are required to undergo periodic physical fitness tests. Enrollment and continuation in the program is subject to the approval of the Professor of Military Science. Enrollment in specific courses by students not formally enrolled in the program must be approved by course instructors. Contracted students must register for letter-grade military science classes and leadership laboratories for the purpose of commissioning into the United States Army.

Four-Year Program

The Four-Year Program is open to students in their freshman year or, with the approval of military and university authorities, to sophomores in a five-year degree program. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing, if qualified. Under the Four-Year Program students enroll in the Basic Course (MIL S I and II) during the first two years, and the Advanced Course (MIL S III and IV) during the next two years. A total of 12 credits of military subjects are taken. In addition, academic enrichment courses are required in such fields as written communications, computer science, and military history. All cadets attend a five-week camp, with pay, between their junior and senior years. All cadets participate in physical fitness training three days per week. Each year selected cadets are sent to the Army Airborne School, Winter Survival School, and Aircraft Park, depending upon availability and student standings within the ROTC program.

Scholarships

Scholarships are awarded on the basis of merit and may be available for two, three, or four years. AROTC scholarships are awarded each year to entering freshmen and students in the freshman and sophomore classes. Scholarships pay up to full tuition and mandatory fees. Scholarship cadets and enrolled juniors and seniors also receive between $300 and $500 a month for up to 10 months a year. Scholarship cadets also receive $900 per year toward the cost of textbooks.

Service Obligations

ROTC graduates may serve on active duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the leadership abilities of the cadet. Officers beginning active duty attend the Officer Basic Course (normally 10 to 16 weeks) of their assigned branch. Upon completion, officers are assigned to a unit and location determined by the desires of the individual and the requirements of the Army. Officers selected for reserve duty attend the Officer Basic Course, after which they are released to reserve status.

ROTC graduates have the option of serving four years on active duty and four years in reserve status; however, some may serve eight years on reserve duty.

Graduate Study

Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of the needs of the service. Admission to graduate school is the student's responsibility.

Military Science Courses

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course.

Freshman Year (MIL S I)

MIL S 101(1101) Foundations of Officership
Fall. 1 credit. Required. K. Belaweske. Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among and between military forces and branches and departments of the government. The U.S. Army force structure is examined at all levels. The complexity and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction. Students develop skills in conducting oral and written presentations.

MIL S 102(1102) Foundations in Leadership
Spring. 1 credit. Required. K. Belaweske. Students understand and appreciate theories of leadership and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of various styles of leadership, resource management, motivation, and organizational effectiveness. The student is instructed in the concepts of integrity, ethics, and professionalism. Classes on historical events and strategy are also presented.

Sophomore Year (MIL S II)

MIL S 201(2201) Individual Leadership Studies/Teamwork
Spring. 1 credit. Required. C. McFall. Students learn the basic principles of group dynamics at the level of the smallest military unit, the squad. Troop-leading procedures are introduced through case studies and role-playing exercises. Leadership theories introduced in MIL S 102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations. The course also provides practical knowledge of the various forms of topographic representation. Students use maps...
in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences of physical, social, and climatic factors. Various focus the course offer experience in land navigation and orienteering.

MIL S 321(3321) Armed Conflict in Society
Fall. 2 credits. Required. R. Brown.
Provides practical knowledge in American military history. It is primarily an overview course; designed to provide an understanding of the art and nature of warfare and particularly how warfare has affected the United States. The course consists of three primary areas of instruction with an emphasis on American military history. The first area of the instruction addresses the art and theory of modern warfare. It analyzes America’s first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second phase focuses on America at war in the 19th century. It places particular emphasis on the American Civil War and the strategy of annihilation versus the strategy of attrition. The final phase looks at warfare in the 20th century and finishes with an analysis of the future of warfare for the military of the United States.

Junior Year (MIL S III)

MIL S 301(3301) Leadership and Problem Solving
Fall. 2 credits. Required. R. Brown.
After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to the leadership responsibilities of the commander as the team coordinator. This course helps students develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

MIL S 302(3302) Leadership and Ethics
Spring. 2 credits. Required. Prerequisite: MIL S 301. R. Brown.
Takes on the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing a leader’s decisions and the process of planning, coordinating, and directing the operations of military units through operation plans and orders.

Senior Year (MIL S IV)

MIL S 401(4401) Leadership and Management
Fall. 2 credits. Required. B. Page.
Provides an overview of the functions, responsibilities, and interrelationships among small-unit leaders, the commander, and the staff. Discussions focus on actions of small-unit leaders, communication skills, army operations, the logistical support of the army in the field, and the army training system. The course focuses on the dynamics of leadership in battle through the detailed analysis of a series of case studies. Just war theory, ethics, and professionalism are also addressed in a seminar fashion.

MIL S 402(4402) Officership
Spring. 2 credits. Required. B. Page.
A continuation of MIL S 401. Conferences and seminars examine the techniques of effective military leadership. Special attention is given to professionalism and ethical considerations in the armed forces during both peacetime and conflict. Army operations and basic doctrine are also discussed. This is a capstone course designed to prepare the student for commissioning.

Practical Leadership Training

All Army Officer-Education Students
No credit is given for leadership training, but participation is required for successful completion of the AROTC program. Students receive physical education credit for the laboratory. Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one or two weekend training exercises per semester.

MIL S I Leadership Laboratory I
Fall. Spring. 0 credits. Required. S-U.
MIL S 151(1111) MIL S 152(1111)
MIL S I cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, and physical fitness training.

MIL S II Leadership Laboratory II
Fall. Spring. 0 credits. Required. S-U.
MIL S 251(2211) MIL S 252(2211)
Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include drill and ceremonies, physical fitness training, first aid, tactics, and field exercises.

MIL S III Leadership Laboratory III
Fall. Spring. 0 credits. Required. S-U.
MIL S 351(3311) MIL S 352(3311)
Cadets meet for two hours a week and occasional weekends to prepare for a five-week summer camp that follows their junior year. Emphasis is placed on the development of individual practical and leadership skills. Cadets rotate through leadership positions to practice applying decision-making skills in a myriad of situations.

MIL S IV Leadership Laboratory IV
Fall. Spring. 0 credits. Required. S-U.
MIL S 451(4411) MIL S 452(4411)
Senior cadets plan and operate the leadership laboratory programs for MIL S I-III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. Includes two to three hours a week devoted to physical fitness.

Professional Military Education (PME) Requirements
In addition to the ROTC classes and leadership laboratories listed above, a number of courses are required as part of the contracted student's academic program. These courses are offered by the university and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: communication skills, military history, and an introduction to computers. These courses must be completed before graduation and commissioning. Courses that meet these requirements are approved by the Professor of Military Science.

NAVAL SCIENCE

TBA, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Lieutenant Colonel David Taylor, United States Marine Corps
Lieutenant Garland Buchanan, United States Navy
Lieutenant Raymond Gamicchia, United States Navy
Lieutenant Christopher Hedrick, United States Navy

The objective of the Naval Officer Education Program is to prepare students for service as commissioned officers in the United States Navy or United States Marine Corps; this is done by supplementing undergraduate education with instruction in essential concepts of naval science and by fostering qualities of leadership, integrity, and dedication to country. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs.

The program covers four years and combines specific courses in naval science and specified academic subjects. These courses supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Though the Navy–Marine Corps Program has been designed to prepare future officers, naval science courses are open to all students at Cornell as space limitations allow.

Requirements for Enrollment

An applicant for the Naval ROTC program at Cornell must be a citizen of the United States. Applicants must have reached the 17th birthday by June 30 of the entering year and be less than 27 years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical requirements. Interested students may visit the Naval ROTC Unit in Barton Hall or contact their local officer recruiter.

Programs

There are two programs: the Scholarship Program and the College Program. The two programs differ primarily in benefits given to the student.
Scholarship Program
The Scholarship Program provides approximately 1,000 scholarships in more than 70 communities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided to students during college preceding the award of the baccalaureate degree.

Benefits
The program offers scholarships that provide full tuition and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and a stipend of $250-$400 a month for a maximum of 40 months.

Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps Reserve. At Cornell University, over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Chief of Naval Education and Training.

Entering the Scholarship Program
There are three ways to enter the Scholarship Program:

1. by applying to the national competition each year. This process entails filling out an application on an appropriate application, being interviewed, having a physical examination, and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.

2. by enrolling in the College Program at Cornell and being recommended by the Professor of Naval Science for a scholarship after at least one semester in the program.

3. by entering through the Two-Year Scholarship Program.

College Program
Two College Programs are available. Both lead to a commission in the Naval or Marine Corps Reserve.

Starting in the junior year, each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of $350-$400 a month.

The regular College Program is four years long. Academic requirements for students in this program are somewhat fewer than those for scholarship students, as noted in the curriculum section of this book.

The Two-Year College Program begins the summer before the junior year; students attend a required program, with pay, at the Naval Science Institute in Newport, R.I.

Summer Training
Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship, or participate in a naval activity that may take place anywhere in the world, for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years.

Active Duty Requirements
Scholarship midshipmen commissioned in the Navy or Marine Corps Reserve serve on active duty for a minimum of four years. College program midshipmen commissioned in the Naval or Marine Corps Reserve serve a minimum of three years. In some cases, following commissioning, specialized training such as aviation or nuclear power will add additional active duty requirements.

Choice of Assignment
Graduates have the opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign newly commissioned officers to their duty of choice.

Among the assignments available are duties in naval aviation as either a pilot or naval flight officer, on submarines, and on surface ships. Other specialties, such as special warfare or medical service corps, may be available on a limited basis.

Marine Corps Options
The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine-oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Va., where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as second lieutenants, they are assigned to the Basic School at Quantico, Va. After the Basic School, the Marine officer is assigned duty as a Marine-oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Va., where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as second lieutenants, they are assigned to the Basic School at Quantico, Va. After the Basic School, the Marine officer is assigned duty as a Marine officer’s duties.

Graduates have the opportunity to request sea duty, power, different warfare communities involved in the physical development of naval forces, and study of resource management and naval science prospects for the future. Naval uniforms, customs, and traditions are also covered.

NAV S 300(101) Naval Science
Fall. 3 credits. G. Buchanan.

NAV S 201(1102) Leadership and Maritime Affairs
Spring. 3 credits. G. Buchanan.

Naval Professional Laboratories
NAV S 141-142, 241-242, 341-342, or 441-442(1141, 2241, 3341, 4441)
All students in the program participate in a two-hour professional development session each week. The session is held from 2:30 until 4:30 on Wednesday afternoons and consists of both drill and professional information briefings. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

Naval Science Courses
All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

Freshman Year (Navy and Marines)
NAV S 101(1101) Fundamentals of Naval Science
Fall. 0 credits. G. Buchanan.

Involves a study of fundamental aspects of naval science. This includes contributions to sea power, different warfare communities involved in the physical development of naval forces, and study of resource management and naval science prospects for the future. Naval uniforms, customs, and traditions are also covered.

NAV S 102(1102) Sea Power and Maritime Affairs
Spring. 3 credits. G. Buchanan.

Discussions examine the history of the Navy as a force in diplomacy and an instrument of U.S. foreign policy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues lends historical perspective throughout the course.

NAV S 157(1480) Small Boat Sailing (also PE 1480)
Fall and spring. Physical education credit. Instructor TBA.

This is a course of instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake. Focus is on U.S. Navy Class B inshore skipper certifications.

Sophomore Year (Navy and Marines)
NAV S 201(2201) Leadership and Management I
Fall. 3 credits. C. Klyne and D. Taylor.

The theme of the course is the "evolving role of the manager, organizational decision making, and leadership. The course is briefly covering the theoretical principles of management and progresses through practical skills used by managers and leaders. Lectures, reading assignments, films, and discussions provide the student with an excellent opportunity to consider complex managerial and leadership issues. The goal of this course is for students to begin to develop a sound personal leadership philosophy that will enable them to more effectively accomplish
the assigned responsibilities of leading men and women in today's demanding and high-tech naval environment.

(also M&A&E 201[2010])
Fall. 3 credits. C. Hedrick.
Introduces primary ship-systems and their interrelationships. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are covered.

Junior Year (Navy)
NAV S 301(3050) Principles of Navigation
(also BEE 305[3050])
Spring. 4 credits. R. Gamichia.
Introduces the fundamentals of marine navigation emphasizing piloting and electronic navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, and study of tides and currents. Electronic navigation systems are discussed.

NAV S 302(3302) Naval Operations
Fall. 3 credits. R. Gamichia.
Covers the application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

Senior Year (Navy)
NAV S 401(4401) Naval Ships Systems II (Weapons)
Spring. 3 credits. C. Hedrick.
Examines the principles and theories used in the development of naval weapons systems. Initially, extensive study is made of detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

NAV S 402(4402) Leadership and Ethics
Spring. 3 credits. TBA.
Reviews a variety of topics important to the naval officer for both professional and managerial development. The material is designed to provide the midshipman with an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role-playing, the student learns various aspects of naval leadership and ethical decision making. Marine-option students may also take this course.

Junior or Senior Year (Marine Options)
NAV S 310(3310) Evolution of War
Spring. 3 credits. D. Taylor.
A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and governing policy. This course examines the historical evolution of warfare, including principles of war, development of weapons and their effects on how war wages, and the political goals associated with specific adversaries through history.

NAV S 410(4410) History of Amphibious Warfare
Spring. 3 credits. D. Taylor.
The history of the development, theory, techniques, and conduct of amphibious operations from 490 B.C. to the present. Special emphasis is placed on amphibious operations conducted in the central Pacific during World War II and on the future of amphibious operations.

Other Required Courses

NAV-Option Scholarship Program
To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University, and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):

American military affairs or national security policy (one semester)

English (one year)

calculus (one year)

calculus-based physics (one year)

computer science (one semester)

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences so that they may be best prepared to meet the technological requirements of the modern Navy.

Navy-Option College Program
Navy-option College Program students must complete one year of college-level study in mathematics, physical science, and English as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year; the physical science course by the end of the senior year. In addition, one semester of computer science is required. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students if they wish to be eligible for a scholarship controlled by the Chief of Naval Education and Training.

Marine Option
Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major is eligible for a commission in the U.S. Marine Corps or U.S. Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students have slightly different naval science course requirements than their Navy-option counterparts. Two semesters of courses (a minimum of 3 hours each) in the area of American Military Affairs or National Security Policy are required. One semester of a modern foreign language must be completed.

Extracurricular Activities

The Air Force Officer Education Program is open to any qualified undergraduate or graduate student enrolled in any major field of study. An applicant must be a United States citizen to become a commissioned officer. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission. U.S. permanent residents who are naturalized by their date of graduation may receive a commission.

All applicants receive physical examinations at no cost and must meet certain physical requirements to be accepted. Students who are interested in qualifying for flying categories (pilot, navigator, or air battle manager) must meet more stringent physical requirements each semester. In addition, students enrolled in the commissioning program must meet specified physical fitness requirements each semester.

Though the program is designed to prepare future Air Force officers, academic courses in the Department of Aerospace Studies are open to all students at Cornell without incurring any military obligation.

Four-Year Program

The Four-Year Program is open to any qualified freshman. Sophomores may also enter a condensed version of the four-year program in coordination with the AFROTC staff.

Veterans of the U.S. armed forces, students entering Cornell from military schools, or high school students with documented JROTC or Civil Air Patrol involvement may receive advanced academic standing, subject to approval by the Professor of Aerospace Studies.
The Four-Year Program consists of General Military Courses (GMC) and Professional Officer Courses (POC). For four-year scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. For nonscholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

General Military Course
Students in General Military Courses (GMC) take a 1-credit Aerospace Studies course each semester. During the freshman year, the student examines the organization and mission of the United States Air Force and the environment of the Air Force officer. In the sophomore year, the student studies the history and development of American air power. In both years, officerhood and professionalism within the United States Air Force are emphasized.

Students also spend two hours a week in a leadership laboratory. Leadership laboratories provide cadets the opportunity to put into practice the skills they have learned in their aerospace studies classes. These laboratories focus on the development of officer qualities through activities such as drill and ceremonies, group leadership problems, confidence-building exercises, and guest lecturers. Typically, all students participate in summer field training for four weeks between their sophomore and junior years; some students may complete field training between their junior and senior years.

Professional Officer Course
The Professional Officer Courses (POC) provide a two-year advanced program of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if offered, a commission in the United States Air Force upon graduation.

Classroom study in the POC is a 3-credit course each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires two hours a week in the junior and senior years. In leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

Two-Year Program
The Two-Year Program consists of the last two years (Professional Officer Courses) of the regular Four-Year Program plus a five-week summer training course.

The Two-Year Program is open to all qualified students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools supported under a crosstown agreement. Availability of this program depends on the cyclical accession needs of the Air Force; therefore, interested students should contact the Unit Admissions Officer for current information.

Scholarships
The Air Force offers three- and four-year scholarships to high school seniors and one-, two- and three-year scholarships to college students. Four-year scholarships are offered on a competitive basis to high school seniors. Scholarship information can be obtained from a high school guidance counselor, from Air Force ROTC officers at Cornell (AFROTC phone number is 255-4004), from a local Air Force recruiter, via the web at www.afrotc.com, or from the Air Force ROTC scholarship section, Maxwell AFB, AL 36112-6106, 354-953-2869. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

Scholarships for two and three years.
Applications for these scholarships should be made to the Professor of Aerospace Studies during the freshman, sophomore, or junior years of college. All selections are based on the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's overall grade point average, and the recommendation of the Professor of Aerospace Studies. Scholarships include amounts ranging from $3,000 per year to full tuition and fees. There is a monthly $300-$450 non-taxable subsistence allowance during the school year. A $600 per year textbook allowance is included in every scholarship. Scholarships do not include the cost of room and board. All AFROTC scholarships are merit-based, not need-based.

Fees
An initial uniform deposit of $50 is required on entry into AFROTC. Before commissioning, cadets may purchase uniforms with their deposit or return uniforms and receive their deposit back.

Benefits
All cadets in the advanced program (POC)—whether they are on scholarship or not—receive a $400-$450-a-month, nontaxable subsistence allowance during the academic year. During the four- or five-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field site. Textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and advanced cadets (POC) are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training
Two types of field training are available: a four-week course for cadets in the Four-Year Program and a six-week course for Two-Year Program applicants.

Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training, physical training, small arms training; team building and leadership training. The six-week training program includes 60 hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses. Cadets are evaluated for their officer potential at field training.

Cadets may also volunteer for one of many Advanced Training Programs. These programs include but are not limited to the Air Force Academy Free-Fall Parachute Training, Technical Research and Development Internships, the Academy Scoring Program, Army Airborne Training, and language and cultural immersion programs.

Commissioning Obligations
All students who successfully complete the AFROTC advanced program (POC) must be awarded a baccalaureate degree and then tendered a commission, and enter the Air Force as second lieutenants.

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for 10 years after completing flying training. Navigators and Air Battle Managers serve eight and six years, respectively, after completing training.

Air Force Careers
The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers' preferences. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, astronautics, the biological sciences, computer design and maintenance, meteorology, space, or other engineering and scientific fields. Graduates in the non-engineering category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, public affairs, transportation, accounting on active duty, and other career fields. Specializations for language and cultural studies majors are also available.

Any undergraduate major is suitable for those who are qualified and interested in entering the space and missile career fields or in becoming pilots, navigators, or air battle managers. After completion of flying training, personnel are assigned to a specific type of aircraft.

Curriculum
Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years. There are no prerequisites for any Aerospace Studies courses.

Freshman Year
AER S 161(1161) The Foundations of the United States Air Force I
Fall. 1 credit. Instructor TBA.
This is a survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officerhood and professionalism, military customs and courtesies, Air Force officership opportunities, war and the American military, and Air Force heritage.
Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

**AIR S 162(1162) The Foundations of the United States Air Force II**

Spring. 1 credit. Instructor TBA.

Continuation of AIR S 161. Topics include Air Force core values, human relations, team building, communication skills, and officer leadership.

**Sophomore Year**

**AIR S 211(2211) The Evolution of USAF Air and Space Power I**

Fall. 1 credit. Colonel P. Gray.

This course is designed to examine general aspects of air and space power through a historical perspective. The course covers a time period from the first balloons and dirigibles to the role of air power in Afghanistan. Historical examples are provided to illustrate the development of Air Force capabilities and functions to demonstrate the evolution of what has become today’s USAF air and space power. The course examines several fundamental truths associated with war in the third dimension, and provides students with an understanding of the general element and employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, students continue to discuss the importance of the Air Force core values.

**AIR S 212(2212) The Evolution of USAF Air and Space Power II**

Spring. 1 credit. Colonel P. Gray.

Continuation of AIR S 211.

**Junior Year**

**AIR S 331(3331) Air Force Leadership Studies I**

Fall. 3 credits. Instructor TBA.

This course is a study of leadership required of an Air Force junior officer; it has applicability to any entry-level professional as a junior executive. The course investigates theories and styles of leadership, power and influence, the meaning and function of followership in the military context, critical thinking, problem solving and team building, group conflict management, situational leadership, and management functions and principles. Films and case studies are used for analysis of theories and principles studied. Students receive instruction and practice effective writing (e.g., background and position papers) and briefing skills (e.g., informative and advocacy briefings) for professional communications; students practice both modes of communication. The course also provides professional officer education in terms of defining professional and unprofessional relationships, working with civilian personnel, and the profession of arms. The course is open to any student. For officer candidates, a mandatory leadership laboratory complements this course.

**AIR S 332(3332) Air Force Leadership Studies II**

Spring. 3 credits. Open to any student. Instructor TBA.

A continuation of AIR S 331. The course investigates advanced skills in leadership: dynamic subordinacy; effective supervision; essentials of counseling; corrective supervision; professional authority, responsibility, and accountability. The course also investigates the meaning and application of ethical and moral leadership, professional officer ethics, military ethics in joint operations, and the core values of the USAF. Film and case studies are used for analysis of course content. Written and briefing practice continues. For officer candidates, a mandatory leadership laboratory complements this course.

**Senior Year**

**AIR S 401(4401) National Security Affairs/Preparation for Active Duty I**

Fall. 3 credits. M. Whitten.

This course is concerned with the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Other topics include the military as a profession, officer/honor, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Continued emphasis is given to refining communication skills. A mandatory leadership laboratory complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles described in this course.

**AIR S 402(4402) National Security Affairs/Preparation for Active Duty II**

Spring. 3 credits. M. Whitten.

Continuation of AIR S 401.

**Leadership Laboratory Courses**

All Air Force cadets spend two hours a week throughout the academic year in a leadership laboratory, for which no academic credit is given. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in a formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

**AIR S 141-142(1141) Initial Military Experiences**

Fall and spring. 0 credits. Required. S-U grades.

Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. This course includes a field trip to a local military installation.

**AIR S 241-242(2241) Intermediate Military Experiences**

Fall and spring. 0 credits. Required. S-U grades.

Designed to help students develop skill in giving commands for drill and ceremonies. Students are also introduced to the Air Force base environment in which the officer functions. Career areas available based on academic majors are described. Students participate in military drills and ceremonies and go on a field trip to a local military installation.

**AIR S 341-342(3341) Junior Officer Leadership Experiences**

Fall and spring. 0 credits. Required. S-U grades.

Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns of selected Air Force officer career fields.

**AIR S 441(4441) Advanced Leadership Experiences**

Fall. 0 credits. Required. S-U grades.

Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.
DEPARTMENT OF PHYSICAL EDUCATION AND ATHLETICS

ADMINISTRATION
Alan E. Gantert, director

COURSES
The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses, call 255-4286; for outdoor education courses, call 255-6183 or visit www.coe.cornell.edu.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at the physical education course registration or may be found on “Bear Access,” a package of software for accessing a variety of network services at Cornell. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed. Drop deadlines for outdoor education courses are earlier than university deadlines, and often earlier than physical education deadlines. Cornell Outdoor Education (COE) courses may be added any time by calling 255-6183, or registering at www.coe.cornell.edu.

Aquatic Courses
PE 1100 Swimming, Introduction to Fall, spring, and summer (six weeks). Instructs students in skills leading to passing the basic swimming proficiency test.

PE 1101 Swimming, Advanced Beginning Spring. Ideal for all who have taken one semester of Beginning Swimming, regardless of whether the test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective is to strengthen the student’s confidence and competence.

PE 1102 Swimming, Intermediate Fall and spring. Practice of basic skills and five basic strokes: front crawl, back crawl, elementary backstroke, breaststroke, sidestroke.

PE 1103 Swimming, Advanced Fall and spring. Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, inverted breaststroke, sidestroke, overarm sidestroke, treading, and butterfly.

PE 1104 Swimming Conditioning Fall and spring. Prerequisite: reasonable swimming ability. Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period. Primarily a conditioning and not an instructional course.

PE 1110 Lifeguard Training Fall and spring. Fee charged. Prerequisite: swimming test consisting of 500 yards, demonstrating three strokes, treading water without the use of hands, and retrieving a brick from 7 feet of water. Three classes per week.

American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR skills and techniques. Certification is awarded in lifeguarding, first aid, CPR, and CPR upon satisfactory completion of the course.

PE 1111 Lifeguard Training Instructor Spring. Fee charged. Prerequisites: current Red Cross ICT or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class. 2 classes a week.

American Red Cross Lifeguarding instructor and CPR-FPR certifications are awarded upon successful completion.

PE 1120 Water Safety Instructor Spring. Fee charged. Prerequisites: passing of written and skill water tests given on first day.

American Red Cross water safety instructor certification is awarded upon satisfactory completion of the course. This is not a course for a casual participant. Approximately 45 hours of work is required.

PE 1130 Scuba, Open-Water Fall, spring, and summer (six weeks). Fee charged.

Program includes classroom work, skill training in a pool, and open-water training in Cayuga Lake. P.A.D.I. open-water certification awarded upon successful completion.

PE 1131 Scuba, Advanced Open-Water Fall and spring. For those who have completed open-water course. Fee charged.

Advanced-level open-water training in Cayuga Lake.

PE 1132 Rescue Diver Fall and spring. For those who have completed Advanced Open-Water Scuba certification. Fee charged.

Advanced course for scuba divers interested in learning rescue and safety techniques.

PE 1133 Dive Master Fall and spring. Open only to those who have completed Rescue Diver course. Fee charged.

Advanced-level scuba course. Note: This is a long, time-consuming course, which requires the student to be in good physical and swimming shape.

PE 1134 Specialty Scuba Diving Fall and spring. Fee charged.

Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

PE 1135 Scuba Diving Trips Spring, offered during spring intersession period. Fee charged.

Scuba trips to various destinations such as the Bahamas. Locations change from year to year. See the information sheet at the registration table.

Bowling Courses
PE 1300 Bowling Fall and spring. Fee includes shoe rental. For the beginning and intermediate bowler.

PE 1301 Intermediate Bowling Fall and spring. Fee charged. For players with prior bowling experience (e.g., bowling classes, yaba, tournament). Skills emphasized are timing, balance, and release.

Dance Courses
Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to all advanced courses, since they require the mental and physical ability to perform more complex phrases in various styles.

PE 1150 Ballroom Dancing Fall, spring, and summer. Fee charged.

Students and their partners must sign up at course registration. Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

PE 1155 Belly Dancing I Fall and spring. Fee charged.

Belly dancing is an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class begins with warm-ups and continues with basic movements and rhythms, then puts them together in a dance to music of the Middle East.

PE 1156 Belly Dancing II Fall, spring. Fee charged.

Advanced belly dance movements and combinations that include putting basic and advanced movements to the Beladi, Masmouodi, and Kasirna dance rhythms of the Middle East. A drum solo, tarqum (fluid, graceful movements of the hands and drum), floor work (level changes with the dance), and techniques in playing finger cymbals are also a part of this class.

PE 1160 Latin Dance Fall and spring. Fee charged.

Partner sign-in required. This is an introductory course that teaches some Latin rhythms with precise detail and technique.

PE 1161 Latin-Israeli Dance Fall and spring.

Covers some of the hundreds of dances that make up Latin-Israeli dancing and the thousands of dances that make up Israeli dancing, with a clear emphasis on the dances of the past 10 years.
PE 1170 Introduction to Swing Dance  
Fall and spring. Fee charged.  
No partners are needed. Beginners can expect to develop significant capacity for enjoyment of all forms of swing dance: jitterbug and street boogie. Partners are rotated throughout the course. Effort are made at registration to equalize male and female ratios.

PE 1171 Swing Dance II  
Fall and spring. Fee charged.  
Those who have taken the introductory course.

PE 1180 Dance Technique I (also THETR 124(1240))  
Fall and spring.

First Aid/CPR Courses  
PE Emergency Response  
Fall. Fee charged.  
This advanced-level first aid course is the most comprehensive available without NYS certification. Sixty hours of training includes CPR for the Professional Rescuer and oxygen administration, as well as many of the first aid skills taught in a basic EMT class. American Red Cross certification is valid throughout the United States and is accepted by many states as a Certified First Responder equivalent. Certification is valid for three years. This certification would be appropriate for camp medical directors and those who work closely with pre-hospital medical staff.

PE 1210 NYS Emergency Medical Technician—Basic  
Two-semester course. Fee charged.  
Intensive 130-hour course taught throughout both fall and spring semesters. Includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, and defibrillation. Students qualify for the NYS EMT Certification Exam upon successful completion of this course. Rigid attendance and participation requirements are strictly enforced.

PE 1211 NYS Emergency Medical Technician—Core  
Two-semester course. Prerequisite: current certification as NYS EMT. Fee charged.  
Intensive 160-hour course taught throughout both fall and spring semesters. Includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, manual defibrillation, EKG interpretation, pharmacology, and IV administration. Clinical rotations, in the field and hospital, are also required. Students qualify for the New York State AEMT-CRITICAL CARE certification exam upon successful completion of the course. Attendance and participation requirements are strictly enforced.

Fishing Courses  
PE 1310 Introduction to Freshwater Angling  
Fall. Fee charged.  
Acquaints the student with freshwater spinning, casting, and fly fishing equipment; tackle; and techniques through on-the-water experiences. It also seeks to promote an awareness of the angling opportunities that exist close to Cornell and in the Finger Lakes region of New York. The course consists of an orientation and outings to various locations around the area such as Cayuga Lake and the Susquehanna River.

PE 1311 Fly Fishing and Basic Flytying Techniques, Level I  
Fall and spring. Fee charged.  
Learn the art of tying several of your own artificial flies while you learn the art of fly casting. Students must have a valid NYS fishing license and their own wader boots. All other materials provided.

Fitness Courses  
PE 1129 Cardio Combo  
Fall, spring, and summer (six weeks). Fee charged.  
Dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

PE 1130 Cardio Crazy  
Fall and spring. Fee charged.  
Designed to acquaint the student with the various types of indoor aerobic training equipment, rowing machines, stair mills, treadmill, exercise cycles, and Nordic Tracks, and to teach them to design a personal fitness program incorporating the equipment.

PE 1231 Aerobic Instructor  
Fall. Fee charged.  
Helps prepare the student to teach aerobics and prepares them for the AFAA Primary Aerobic Instructor or Step Certification. Topics include the theory behind all basic components of a good class, applications, and practical uses in the class settings.

PE 1233 Bootcamp  
Fall and spring. Fee charged.  
Designed as a modern military-style workout program with an emphasis on both aerobic and anaerobic fitness.

PE 1234 Athletic Performance Enhancement  
Fall and spring. Fee charged.  
Train like an athlete! Workouts are designed to enhance all aspects of athletic performance: strength, power, speed, balance, force application, dynamic flexibility, anaerobic, and aerobic conditioning.

PE 1235 8 O’Clock Rock  
Fall and spring. Fee charged.  Combines the best of the principles of weight training and cardio training.

PE 1240 Pilates Mat Work  
Fall and spring. Fee charged.  
Conditioning program designed to increase body awareness, improve alignment, breathing, and build endurance, flexibility, coordination, and strength through a highly focused flow of movement.

PE 1245 Spinning  
Fall and spring. Fee charged.  
Indoor stationary cycling class that combines basic cycling movements with motivational coaching, breathing awareness, and heart rate training.

PE 1246 Spinning Instructor  
Fall. Fee charged.  
Prepares students for the Johnny G Spinning Certification. The course is intended to provide the fundamental theoretical knowledge and the practical skills necessary to assume the role of a certified spinning program instructor.

PE 1261 Fitness and Conditioning  
Fall and spring. Fee charged.  
Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

PE 1265 Wellness and Fitness  
Fall and spring. Fee charged.  
"Here's to a Healthier You"—a wellness experience for the busy student. This course assesses the student's physical fitness status, blood-cholesterol levels, and overall lifestyle health habits. Each student receives an individual exercise prescription and has access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented. This course has been made possible through the generosity of the Bateman family in memory of Ms. Dorothy Bateman, Cornell's first director of women's sports and physical education (1920 to 1962).

PE 1270 Jogging  
Fall and spring.  
Covers running and stretching techniques. It comprises a conditioning program with the objective to develop the capacity to run 3 miles after 12 weeks of training.

PE 1271 Jogging Tours—Distance Running  
Fall and spring.  
Designed for the intermediate runner who can run an average of 3 miles in 30 minutes. Most tours are 3-4 miles long and go through campus and nearby countryside.

PE 1275 Triathlon  
Fall and spring.  
Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

Equitation Courses  
PE 1305 Basic, Intermediate, Advanced  
Fall, spring, and summer (six weeks). Fee charged.  
All riding classes are held at the Cornell Equestrian Center located on Pine Tree Road near East Hill Plaza. Detailed information will be offered by the equitation staff at the registration sign-up table. Basic—never ridden; Intermediate I—completed basic with knowledge of walk/trot/canter; Intermediate II—walk/trot/canter with control over two-foot-high jumping course; Advanced—strong jumping/dressage skills with experience hunting/showing/evening. Students must fill out a release form to participate in any riding class.

Golf Courses  
PE 1320 Golf, Introduction to  
Fall and spring. Fee charged.  
Equipment furnished. PGA program of instruction geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals.
PE 1321 Golf, Recreational
Fall and spring. Prerequisite: experienced golfers. Fee charged. Covers a semester's membership. Students must provide clubs. Students must play a minimum of 10 rounds of nine holes to receive credit.

Gymnastics Courses
PE 1290 Introduction to Gymnastics
Fall and spring. Open to both male and female participants. Deals with a majority of the Olympic events. Focuses on beginner-level skills.

Ice Skating Courses
PE 1540 Introduction to Skating
Fall and spring. For beginning to intermediate skaters. Fee charged; students provide skates or rent them at Lynah Rink. Covers forward and backward skating, turns, and stops.

Climbing Courses
OUTED 1640 Basic Rock Climbing
Fall, spring, and summer. Fee charged. Six indoor climbing sessions at the Lindseth Climbing Wall.

OUTED 1642 Women's Basic Rock Climbing
Fall, spring. Fee charged. Six indoor climbing sessions at the Lindseth Climbing Wall taught by and for women.

OUTED 1643 High Adventure
Fall, spring. Fee charged. Six sessions combining classes at the Lindseth Climbing Wall and the Hoffman Challenge Course.

OUTED 1644 Basic Outdoor Rock Climbing
Fall. Fee charged. Includes fall break trip. Two indoor classes and a four-day climbing trip to the Shawangunks introduce basic safety, techniques, equipment, and methods for outdoor rock climbing.

OUTED 1645 Basic Rock Climbing for 24 and Over
Fall. Fee charged. Noncredit course. Four indoor climbing sessions at the Lindseth Climbing Wall for people age 24 and older.

OUTED 1646 Wellness Rock Climbing
Fall, spring. Fee charged. Noncredit course. Nine one-hour climbing sessions at the Lindseth Climbing Wall for Wellness Program members only.

OUTED 1650 Performance Rock Climbing
Fall, spring. Fee charged. Six indoor sessions at the Lindseth Climbing Wall that introduce and practice more advanced climbing techniques.

OUTED 1651 Intermediate Outdoor Rock Climbing
Fall. Fee charged. Two indoor classes and two weekend trips to the Shawangunks introduce intermediate-level climbing techniques and systems for top-rope anchors.

OUTED 1652 Shawangunks Rock Climbing
Fall, spring. Fee charged. Includes fall-break or senior-week trip. Two indoor classes and a four-day advanced climbing camp at the Shawangunks introduce advanced climbing techniques and systems for outdoor multi-pitch rock climbing.

OUTED 1654 Ice Climbing
Spring. Fee charged. Basic top-rope ice climbing instruction, including a weekend trip.

OUTED 1655 Gunks Bouldering
Fall. Fee charged. In recent years bouldering, or climbing near the ground without ropes or harnesses, has
become a sport unto itself. Bouldering is easy to learn, requires very little gear, and is amazingly addictive. Gunks Bouldering will introduce you to the basics of climbing low locations, spotting, safety, and all those hand-earned climbing tips and tricks that make the impossible possible. We will spend one day at the climbing wall, then head out for a weekend of climbing and camping. Reserve the following weekend in case of rain!

**OUTED 1657 Tree Climbing**
Fall. Fee charged. All equipment is included in the course fee. No experience necessary. Whether you are a rain forest canopy researcher, an arborist, or just a kid at heart, everyone loves to climb trees. Recall the excitement and your sense of adventure when you first crawled into the branches to look inside a bird's nest. Then you swung from limb to limb without a thought of ropes and harnesses. But what about that big tree down the street you always wanted to climb, but couldn't reach the first branch? Cornell Outdoor Education’s Tree Climbing course will teach you how to get up into the canopy of any tree, to move around, even to climb from one tree to another without touching the ground.

**Backpacking Courses**

**OUTED 1606 Trail Maintenance**
Fall, spring. Fee with 100 percent attendance, otherwise fee charged. Fee charged for personal rental equipment. Learn basic trail construction and outdoor living skills on local outings and overnight trips. Programs may include designing and creating new trails, switchback construction, bridge building, water bar construction, and erosion control. Course includes day outings and one weekend trip.

**OUTED 1610 Backpacking the Finger Lakes**
Fall, spring. Fee with 100 percent attendance, otherwise fee charged. Escape from campus on day outings and two weekend trips to explore the glens, forests, waterfalls, vistas, and trails in the local area. This fantastic introduction to backpacking skills covers basic outdoor living skills, including hiking, navigation, camping equipment selection and use, backcountry cooking, and safety. No experience necessary. Fee charged for personal rental equipment.

**OUTED 1611 Southwest Backpacking**
Spring. Fee charged. Includes spring break trip. Spend your break exploring the wide open spaces of the Southwest. Destination changes year to year. Trip heads to either Utah’s stunning and remote Escalante Canyon country or Arizona’s Sonoran Desert wilderness of the Superstition Mountains. Visit www.co.edcornell.edu for trip destination and full details.

**OUTED 1619 Adirondack Winter Camping**
Spring. Fee charged. Includes winter break trip. Prerequisite: some backpacking experience; permission of instructor. Learn the fundamentals of winter travel and camping. Course covers trip planning, equipment selection, snowshoe travel, snow shelter construction, and winter safety. A four-day trip to the Adirondacks at the end of winter break includes a peak ascent attempt.

**Biking Courses**

**OUTED 1664 Mountain Biking**
Fall, spring. Fee charged. Participants provide own mountain bike.
Explore local bike trails and develop off-road riding skills. Course covers essential cycling skills for riding single track, managing steep terrain, and negotiating obstacles, as well as bike repair, riding etiquette, navigation, and outdoor safety.

**OUTED 1665 Mountain Biking in Vermont**
Fall. Includes full break trip. Fee charged. Participants provide own mountain bike and helmet.
Develop and hone skills for riding a variety of trails, ranging from moderate fire roads to technical single track.

**Canoeing Courses**

**OUTED 1670 Adirondack Canoe Camping**
Fall. Fee charged. Includes fall-break trip. Learn basic canoeing and wilderness camping skills. Experience the blazing Adirondack autumn foliage as this fall-break trip explores lakes and rivers of upstate New York.

**OUTED 1684 River Canoeing**
Spring. No prerequisites. Fee charged. Explore local rivers by canoe. Learn skills to safely navigate quick-moving currents and class I to easy class II water. Course covers strokes, braces, eddy turns, and waterways. River dynamics, self-rescue, and river safety. Culminates with a weekend river trip.

**Caving Courses**

**OUTED 1630 Caving**
Fall, spring. Fee charged. Learn about the basic safety, techniques, and equipment for caving, finishing with a weekend caving trip.

**Hiking Courses**

**OUTED 1605 Day Hiking**
Fall, spring. Fee charged. Hike and explore Ithaca’s spectacular gorges, state forests, and extensive trail system. Course covers planning and packing for a hike, dressing for the outdoors, map reading, outdoor safety, navigation, and natural history of the area.

**OUTED 1607 Snowshoeing**
Spring. Fee charged. Outings in the local state forests build skills and confidence in the winter. Learn winter safety; snowshoe history; equipment selection, care, and use; navigation; and natural history—all while enjoying a great workout.

**OUTED 1608 Trail Running**
Fall, spring. Fee charged. Covers stretching, basic trail-running techniques, navigation, injury prevention, training tips, and a scenic tour of local trails. Develop a training routine. Learn to stay found, set running goals. Prerequisite: ability to jog two consecutive miles easily.

**OUTED 1609 Snowshoeing, for 24 and Over**
Spring. Fee charged. Noncredit course. Learn basic winter travel and snowshoe skills while exploring some local winter hiking destinations.

**OUTED 1612 Wilderness Survival Skills**
Fall. Fee charged. Hands-on course covers principles of survival, shelter building, navigation, fire starting, and water procurement as well as natural observation skills and local natural history. Evening and weekend outings.

**Kayaking Courses**

**OUTED 1674 Sea Kayaking**
Fall, spring. Fee charged. Learn basic sea kayaking skills and enjoy a weekend trip to the Adirondacks. Course covers equipment, safety, paddling techniques, rescue, trip planning, navigation, considerations for overnight trips, and camping and travel skills.

**OUTED 1680 Pool Padding**
Fall, spring. Free with 100 percent attendance, otherwise fee charged. Learn a broad range of kayaking skills in the warm comfort and calm waters of the pool. Course introduces basic paddling skills, starting with strokes, eddies, and basic turning techniques, and progresses toward use of a sea kayak.

**OUTED 1681 Whitewater Kayaking**
Fall, spring, summer. Prerequisite: ability to swim with comfort in deep water without a flotation aid. Fee charged. Basic kayaking techniques and equipment use, culminating in a full weekend of whitewater paddling. Pool sessions and local outings develop skills to read water, scout, ferry, brace, power stroke, and execute eddy turns, peel outs, and Eskimo rolls.

**OUTED 1682 1,000 Islands Sea Kayaking**
Fall. Fee charged. Includes fall break trip. International travel documentation to Canada required. Learn fundamental sea kayaking skills in the Thousand Islands region of the St. Lawrence River. Course covers equipment, safety, paddling techniques, rescue, trip planning, navigation, considerations for overnight trips, camping, cooking, and travel skills.

**OUTED 1685 Kayak Rolling Seminar**
Fall, spring. Noncredit course. Fee charged. Learn kayaking techniques in two evening sessions. Classes take place at the Helen Newman pool.

**OUTED 1686 Introduction to Sea Kayaking**
Fall, spring, summer. Fee charged. Noncredit course. Class covers equipment, basic paddling techniques, deep water rescues, and considerations for day trips.

**Outdoor Leadership and Teambuilding Courses**

**OUTED 1618 Outdoor Leadership**
Spring. Prerequisite: backpacking and camping experience. Fee charged. Includes fall or spring break trip. Learn and practice the skills of outdoor leadership and education. Focus is on refining wilderness skills, outdoor judgment, group facilitation, decision making, and leadership skills. Course culminates in a fall- or spring-break trip where participants plan and lead portions of the trip.
First Aid Courses

OUTED 1620 Wilderness First Aid
Fall, spring, summer. Fee charged.
Full weekend of wilderness first aid. Includes CPR certification.

OUTED 1621 Wilderness First Responder
Fall, spring. Offered in Jan., over winter break; offered late May/early June. Fee charged.
Eight days of instruction and practical application of backcountry first aid. Participants earn nationally recognized CPR and Wilderness First Responder certifications. Taught by Wilderness Medical Associates.

CPR certification.

Skiing Courses

OUTED 1690 Cross-Country Skiing
Spring. Fee charged.
Four sessions learning basic cross-country skiing skills and exploring local trails.

OUTED 1691 Cross-Country Skiing, for 24 and Over
Spring. Noncredit course. Fee charged. Four sessions learning basic cross-country skiing skills and exploring local trails.

OUTED 1693 Basic Telemark Skiing
Spring. Fee charged.
Four classes at Song Mountain Ski Area.

OUTED 1694 Intermediate Telemark Skiing
Spring. Fee charged.
Four classes at Song Mountain Ski Area.

Skiing Courses

Personal Growth Courses

PE 1400 Body-Mind
Fall and spring.
Activities are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student first-hand experience of the interaction between their own bodies and minds.

PE 1401 Mindful Group Movement and Process
Fall and spring. Fee charged.
Teaches students to use the wisdom of the body, movement, and voice. Each class provides an opportunity to increase mindfulness of the present moment. By cultivating openness and respect, students provide the necessary foundation for working with others. Students practice processing and exploring spontaneous experiences of their own and others with precision, gentleness, and curiosity.

PE 1405 Living Routines
Fall and spring.
Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation.

PE 1410 Introduction to Massage
Fall, spring, and summer. Fee charged.
Provides an experiential introduction to several types of massage. Included are Swedish, shiatsu, polarity, and sports massage. Class members participate in group exercises and practice on each other during class time. All exercises and techniques can be done while wearing street clothing.

PE 1411 Shiatsu Massage
Fall and spring. Fee charged.
Gain an experimental understanding of your body and learn certain shiatsu massage techniques.

PE 1412 Swedish Massage
Fall, spring, and summer. Fee charged.
Learn to give a relaxing, stress-reducing Swedish massage. Students master the basic strokes of Swedish massage and learn about their application to the different parts of the body. Students use oils and lotions as a part of their training.

PE 1413 Swedish Massage II
Fall and spring. Fee charged.
Students build on skills learned in Swedish massage as they participate in instruction practice sessions every week. Additional massage techniques and applications are added to basic skills. Some techniques from other types of massage are also introduced.

PE 1414 Thai Massage
Fall and spring. Fee charged.
Thai massage is a holistic, intuitive style of healing from the East. It encourages the flow of energy through the receiver's body that promotes good health. The person giving Thai massage uses his or her hands and feet supported by body weight to apply pressure along the energy channels that run through the receiver's body.

PE 1415 Weekend Massage Workshop
Fall and spring. Fee charged.
This introductory course in massage is taught in an intensive, weekend workshop format. It includes sessions on Friday evening and Saturday and Sunday during the day. Students are introduced to massage skills and techniques and then practice on each other in a structured and supervised format. Basics of touch awareness, palpation skills, and techniques from Swedish and oriental (shiatsu) massage are taught. Students learn to massage the back, shoulders, neck, legs, feet, arms, and hands to reduce stress. Professional massage tables are used.

PE 1420 Introduction to Meditation
Fall and spring. Fee charged.
Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.

PE 1421 Relaxation and Stress Management
Fall and spring.
Introduction to basic relaxation techniques for the reduction of everyday stress. Teaches techniques that can be used in normal everyday living situations.

PE 1422 Meditation and Relaxation
Fall and spring. Fee charged.
Designed to help students in learning to meditate, or to deepen an existing practice. As students learn to practice meditation and relaxation exercises, they find that as little as 15 minutes a day can benefit physical, mental, emotional, and spiritual health.

PE 1425 The Winning Mindset
Fall and spring. Fee charged.
Contains a wealth of knowledge and experience to guide athletes of all levels and abilities to achieve outstanding levels of performance. Students learn the principles to help them achieve success, whether it be tapping inner strength or overcoming the obstacles that limit performance.

PE 1430 Yoga, Introduction to
Fall, spring, and summer (six weeks). Fee charged.
Fundamentals of hatha yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

Racquet Sports Courses

PE 1450 Badminton, Introduction to
Fall and spring. Helen Newman Hall. Fee charged.
Review of fundamental shots, scoring, and general play.

PE 1441 Badminton, Intermediate
Fall and spring. Fee charged.
Review basic strokes plus topspin and underspin. Doubles strategy emphasized.

PE 1445 Tennis, Introduction to
Fall, spring, and summer. Fee charged.
Advanced strokes and doubles play emphasized. Recommended for tournament players or those with previous team experience.

PE 1453 Tennis, Indoor-Recreational
Fall and spring. Fee charged. Prerequisite: high school or college tournament experience or a rating of 3.5 or higher from USTA. NO BLACK-SOLED SHOES ALLOWED ON COURTS!
Play is conducted at the new Reis Tennis Center. Matches are played in both doubles and singles. Equipment furnished.

PE 1460 Racquetball, Introduction to
Fall, spring, and summer. Fee charged; equipment furnished. Protective eyewear required. Instruction for beginners.

PE 1465-1466 Squash, Introduction to, Intermediate
Fall, spring, and summer. Fee charged. Equipment furnished. Protective eyewear required. Classes for appropriate level of play.

Sailing Courses

PE 1490 Small-Boat Sailing, Introduction to
Fall, spring, and summer (six weeks). Fee charged.
Learn basic skills necessary to sail small sailboats and basic keelboats safely.

PE 1481 Small-Boat Sailing, Competitive
Fall and spring. Fee includes one-year membership in university sailing team program.
Vanguard 420 sailboat used for the course. USYRA Rules Book used as a text for the course.

PE 1335 Water Sking
Fall only. Fee charged.
Introductory course for beginning water skiers. Classes are conducted from East Shore Marina.

PE 1482 Introduction to Large-Boat Sailing
Fall. Fee charged.
Students learn how to sail on 24- and 26-foot sailboats. Skills learned include sailing terminology, safety and etiquette, boat handling, sail trimming, use of spinnakers, and heavy wind selection and ship systems.

Skiing and Snow Boarding

**PE 1330, 1331 Downhill Skiing and Snowboarding**
Spring. Fee charged. Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

**Cross-Country Skiing**—See Outdoor Program.

Target Shooting Courses

**PE 1500 Archery, Introduction to**
Fall and spring. Fee charged. Two classes a week.
Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at 20, 30, and 40 yards.

**PE 1515 Handgun Safety, Introduction to**
Fall, spring, and summer (six weeks). Fee charged.
Instruction in use of pistol in the three modes of 50-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis on safety and responsibility while fitting.

**PE 1510 Riflery**
Fall and spring. Fee charged.
Instruction and practice in the techniques of target riflery from various shooting positions.

**PE 1505 Trap and Skeet**
Fall, spring, and summer (six weeks). Fee charged. Guns and shells furnished. Includes lectures and shooting at the Tompkins County Rod and Gun Club range.

Weight Training Courses

**PE 1570 Volleyball, Introduction to**
Fall and spring. Fee charged. Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes scrimmage.

**PE 1571 Volleyball, Intermediate**
Fall and spring. Passing and blocking strategy; scrimmages in class.

**PE 1572 Volleyball, Advanced**
Fall and spring. Offensive and defensive team strategy is emphasized in class scrimmages.

**PE 1550 Ice Hockey, Introduction to**
Fall and spring. Prerequisite: basic skating ability. Fee charged. Students provide own skates and sticks; all other equipment furnished.
Stick handling, passing, and shooting are stressed. Some scrimmaging.

**PE 1551 Ice Hockey, Intermediate**
Fall and spring. Fee charged. Prerequisite: beginning hockey or previous participation in organized hockey.
This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants.

**PE 1560 Basketball**
Fall and spring.
Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

**PE 1565 Soccer**
Fall and spring.
Introduction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

**PE 1580 Principles of Weight Training**
Fall and spring. Fee charged.
Introduces the proper use of Olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

Independent Study

**PE 1999 Independent Study**
Fall and spring. Designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities are based on personal fitness programs. A term paper is required. Permission to enter this program must be granted by the program director.
### ADMINISTRATION

Donald F. Smith, dean  
Robert O. Gilbert, associate dean  
Alfonso Torres, associate dean for veterinary public policy and director, NYS Animal Health Diagnostic Laboratory  
Hollis N. Erb, secretary of the college  
Katherine M. Edmondson, assistant dean for learning and instruction  
Robert F. Gilmour Jr., associate dean for research and graduate education  
Bonita S. Voiland, assistant dean for hospital operations  
Gene R. Wheeler, assistant dean for finance and administration  
Kevin Mahaney, executive director of alumni affairs and development  
Douglas F. Antczak, director, James A. Baker Institute for Animal Health  
Carol S. Gary, director of human resources  
Douglas D. McGregor, director of leadership and training initiatives  
Jennifer A. Mailey, director of admissions  
Jai Sweet, director of student services and multicultural affairs  

### DEPARTMENT CHAIRS

Biomedical Sciences: M. Kotlikoff  
Clinical Sciences: R. Page  
Microbiology and Immunology: D. Russell  
Molecular Medicine: G. Weiland  
Population Medicine and Diagnostic Sciences: Y. Grohn

### THE COLLEGE

The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease. Graduates of the college receive the doctor of veterinary medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice or academia, or become engaged in one of an increasing number of biomedical activities. Admission requires a minimum of three years of college work, including specific prerequisite courses and experience.

Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted. Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to doctors of veterinary medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of master of science or doctor of philosophy. More detailed information is available at the College of Veterinary Medicine web site, www.vet.cornell.edu. 

Note: 500- and 600-level courses are open only to veterinary students except by written permission from the instructor. The College of Veterinary Medicine's professional curriculum comprises courses (designated with the prefix "VTMED") in two categories: foundation courses and distribution courses.

The professional D.V.M. curriculum consists of two types of classes: foundation courses and distribution courses. Courses contributing to the D.V.M. degree begin with VTMED.

### FOUNDATION COURSES

Foundation courses are interdisciplinary and represent approximately 70 percent of the professional curriculum. In Foundation courses I, III, and IV (VTMED 510, 530, 540), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. In some courses, three two-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty are available to respond to questions that arise as a result of the case-based exercises. 

Tutorial sessions and all other organized learning programs are scheduled primarily during the mornings, thereby reserving time in the afternoon for independent study. By learning in a clinical context, students are better able to integrate material from the basic and clinical sciences and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Note: Courses listed in brackets [ ] are approved courses that are not offered during the 2006–2007 academic year.

**VTMED 510 (5100) The Animal Body (Foundation Course I)**  
Fall, 12 credits. Prerequisite: first-year veterinary students. Letter grades only. A. J. Bezuidenhout and staff.

Designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels. Emphasizes developmental anatomy to the extent that it reflects determining of adult form and species differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal structural anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

**VTMED 517 (5701) Animals, Veterinarians, and Society (Part A) (Foundation Course II)**  
Fall, 12 credits. Prerequisite: first-year veterinary students. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby and staff.

Complements and augments material learned in VTMED 510 (Foundation Course I—The Animal Body). The class is divided into small groups and each group meets for four to five hours each week during the first 11 weeks of the fall semester. Using live dogs, cats, horses, and cows as models for learning how to perform a physical examination, this laboratory course teaches the skills of observation, auscultation, palpation, and percussion as well as related basic diagnostic procedures. The body systems are examined sequentially and follow the order of study in Foundation Course I.

**VTMED 520 (5200) Cell Biology and Genetics (Foundation Course II)**  
Fall and spring, 8 credits. Prerequisite: first-year veterinary students. VTMED 510. Letter grades only. R. A. Levine and staff.

Designed to develop an appreciation of the molecular and cellular basis of animal health and disease. Students gain an understanding of the molecular mechanisms that regulate cell function, the molecular signaling processes that form the basis of integrated function and the response to disease, and the mechanisms underlying inherited traits and genetic disease. Emphasis is placed on defining and characterizing normal cell function and on understanding how mutations in specific genes promote disease. Students become familiar with the common molecular procedures being used to develop new diagnostic and therapeutic tools to maintain health and combat disease. The course is divided into two parts separated by a midterm exam. The first part is made up of three sections: Principles of Cell Biology, Cell Signaling, and Medical Genetics. The second half builds on and expands these principles, using examples from veterinary medicine including wound repair and cancer. In both parts, clinical cases are used to illustrate the concepts presented.
VTMED 522(5220) Neuroanatomy  
Spring. 1 credit. Prerequisite: first-year veterinary students. Letter grades only. M. FitzMaurice.

Designed to give students the necessary background for the understanding of neurophysiology and clinical neurology. Students will gain a basic understanding of the gross anatomy of the Central Nervous System (CNS), pathways involved in somatosensory and motor systems, as well as some exposure to modern imaging of the CNS (CT and MRI) correlates with gross coronal sections of the CNS.

VTMED 527(5702) Animals, Veterinarians, and Society (Part B: Ethics) (Foundation Course VIIb)  
Last part of Fall semester through end of winter session. 1.0 credit (Class of 2010); 1.5 credits (Classes of 2007-2009).  
Prerequisite: first-year veterinary students; VTMED 517. Letter grades only. Fee charged for course guide. Lectures partially complement materials learned in VTMED 520 (Foundation Course II—Cell Biology and Genetics) but for the most part focus primarily on veterinary medical ethical issues related to animal use, animal welfare, genetics counseling, and clinical day-to-day ethics. The laboratory reviews basic equine and bovine husbandry skills and the small-animal physical examination.

VTMED 530(5300) Function and Dysfunction: Part I (Foundation Course Illa)  
Spring. 2 credits. Prerequisite: first-year veterinary students; VTMED 520. Letter grades only. Live animals used on limited basis for demonstration or noninvasive procedures. R. Rawson and staff.

Designed to develop students' understanding of how an animal maintains itself as a functional organism; how the maintenance of function is achieved through the integration of different organ systems; how tissue structure relates to tissue function; how injury alters structure and leads to dysfunction, manifested as clinical signs; how organ function can be assessed; and how organ function can be modulated pharmacologically. The course incorporates aspects of physiology, biochemistry, cell biology, histology, pathology and histopathology, clinical pathology, and pharmacology.

VTMED 531(5310) Function and Dysfunction: Part II (Foundation Course Iib)  
Fall. 2 credits. Prerequisite: second-year veterinary students; VTMED 530. Letter grades only. R. Rawson and staff.

Continuation of VTMED 530 Function and Dysfunction: Part I.

VTMED 537(5703) Animals, Veterinarians, and Society (Part C) (Foundation Course VIb)  
Spring. 1 credit. Prerequisite: first-year veterinary students; VTMED 527. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby and staff.

Introduces students to medical record keeping and to the communication skills and techniques necessary for effective communication with clients. In addition, students are introduced to the human-animal bond and its implications for veterinary medicine, animal death, and grief counseling. This course gives students the opportunity to practice interviewing clients while refreshing their physical exam skills. The opportunity to gain an appreciation of the role of animal husbandry in veterinary medicine is provided through a milking experience at the college's dairy barn.

VTMED 540(5400) Host, Agent, and Defense (Foundation Course IV)  
Fall. 12 credits. Prerequisite: second-year veterinary students; VTMED 531. Letter grades only. D. Bowman (course leader) and staff.

This course seeks to develop an understanding of the interaction between the immunological system of the host and the most significant bacterial and viral agents that cause disease in animals. Lectures focus primarily on adaptive and innate immunity, as well as bacterial and viral pathogens and the mechanisms they cause. Autoimmunity, epidemiological methods to investigate infectious disease at the herd and individual levels, and techniques and tools to control infectious disease are also important components of the course. In the laboratory, animals are used to illustrate aspects of some infectious diseases.

VTMED 541(5410) Veterinary Parasitology  
Spring. 2.5 credits. Prerequisite: second-year veterinary students. Letter grades only. D. Bowman.

Provides a basic introduction to animal parasites of veterinary importance, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoan parasites. Emphasizes parasites representative of significant clinical importance to veterinarians. Elaborates on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced by the different groups of organisms. Laboratories stress certain aspects of some important parasite groups.

VTMED 547(5704) Animals, Veterinarians, and Society (Part D: Public Health and Preventive Medicine) (Foundation Course VId)  
Fall. 2.0 credits (Class of 2010); 1.5 credits (Class of 2009); 1.0 credit (Classes of 2007-2008). Prerequisite: second-year veterinary medical students; VTMED 537. Letter grades only. Fee for course guide. Live animals used in course instruction. N. L. Irby, L. D. Warnick, and staff.

Complements and augments material learned in VTMED 540 (Block IV—Host, Agent, and Defense). Emphasizes veterinary public health and preventive medicine. Topics include aggressive animals and animal bites, routes of disease transmission, rabies control programs, zoonotic diseases, emerging infectious diseases, emerging diseases and preventive health care programs including vaccination protocols in large and small animals. One rotation in the Community Practice service and small group discussions are required of each student.
and the role of USDA and specifically APHIS in these regulatory functions. The laboratory component consists of night treatments in the Equine and Farm Animal Hospital.

VTMED 560(5600) Ambulatory and Production Medicine
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Students can take more than one week early but a minimum of one week must be completed during Block VI. M. E. White and staff. Clinical service rotation in which students acquire competency in Carts on Rotations and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 561(5601) Community Practice Service: Medicine
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). W. E. Hornbuckle and staff. Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary medical care. Under the supervision of the clinical faculty, students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

VTMED 563(5602) Small-Animal Medicine
Fall, spring, winter, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). S. C. Barr, S. A. Center, J. F. Randolph, K. W. Simpson, and R. Goldenstein. Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals. Students participate directly with clients presenting their pets for primary or referral medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients.

VTMED 564(5603) Small-Animal Soft Tissue Surgery Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey and small-animal surgery faculty. Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in office hours, diagnostic techniques, planning of therapy, and daily care of dogs and cats under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room. Client communications and the basics of efficient practice are emphasized.

VTMED 564(6611) Small Animal Orthopedic Surgery Service
Fall, winter, spring, and summer. 2 credits. Letter grades only. E. Trotter and small animal surgery faculty. Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in office hours, diagnostic techniques, planning of therapy, and daily care of dogs and cats under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room. Client communications and the basics of efficient practice are emphasized.

VTMED 566(5604) Large-Animal Medicine Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. D. Ainsworth, T. Divers, G. Perkins, and M. Flaminio. Students assigned to this service assist the faculty, technicians, and residents of the Large-Animal Medicine Service in the diagnosis and care of patients. The goal of this course is to provide students working on this service to acquire knowledge and skills in history taking, physical examination, election and completion of appropriate ancillary tests, diagnosis, treatment, and patient care. Daily rounds and consultation are used to monitor the patient progress and further educate students. If time allows, sit-down rounds to discuss medical disorders are provided.

VTMED 567(5605) Large-Animal Soft Tissue Surgery Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. J. Nixon and staff. Clinical rotation structured to provide supervised clinical experience in the practice of large-animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 568(5606) Anesthesiology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). R. D. Gliedt, J. W. Ludders, A. A. Smith, and staff. Designed to provide clinical experience in the use of anesthetics in small companion animals, horses, and some food animals. Students participate in the diagnostic and anesthetic techniques for patients for the Cornell University Hospital for Animals and then implement those techniques under the supervision of faculty and residents. The goal is for students to learn the skills and thought processes necessary to perform safe anesthesia in a modern veterinary practice.

VTMED 569(5607) Dermatology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. H. Miller and D. W. Scott. During this clinical rotation students participate in the diagnosis and management of skin disorders in small and large animals. Patients are examined by appointment and through consultation with other hospital services.

VTMED 570(5608) Ophthalmology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. C. Ruis, T. Kern, and N. Irby. Combines clinical experience with beginning skills in diagnostically ophthalmology. Students learn how to apply the ophthalmic diagnostic tests. A competent ocular examination is the goal of this rotation. Confidence in using direct and indirect ophthalmoscopes, slit lamps, tonometers, gonioscopes, conjunctival cytology, and surgery comes with the practice provided by this rotation. Students are required to review the introductory orientation videotapes in the autotutorial center titled Ocular Examination I before the start of the rotation. This rotation provides surgical experience and consultations. A high percentage of the consultations are referral cases that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.

VTMED 571(5609) Pathology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). S. P. Donovan and staff. Involves hands-on diagnostic necropsies of cattle, swine, and miscellaneous species that are presented to the Section of Anatomic Pathology necropsy service. Students work in groups of three to five for the two-week rotation. Necropsies are performed under the guidance of pathology faculty and residents. Students prepare written reports of necropsies performed that are reviewed by the faculty. Twice each week, students meet with a clinical pathologist to review current cases of interest.

VTMED 572(5610) Radiology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. N. I. Dykes and staff. Two-week clinical experience in the imaging section of the Cornell University Hospital for Animals. Students use radiographic,
ultrasonographic, CT, MRI, and nuclear medicine imaging techniques to evaluate animal patients under treatment in the Cornell University Hospital for Animals. Students obtain and interpret radiographic studies with guidance from radiology faculty and technical staff. Autotutorial teaching films are used to familiarize students with radiographic examples of common diseases of large- and small-animal species. Small-group discussions are scheduled to present and discuss the teaching files and current cases. The safe use of X-ray-producing equipment and radioisotopes is discussed.

**VTMED 573(5612) Fourth-Year Seminar**
Fall and spring. 1 credit. Required component of Clinical Rotations (Foundation Course VI). First-, second-, and third-year students and all staff members also invited and encouraged to attend. S-U grades only. F. H. Fox, chair of Senior Seminar Committee. Given the student the responsibility and opportunity to study disease entity on the basis of a case or series of cases, or to conduct a short-term, clinically oriented research project under the direction of a faculty member. In either case, an oral report is presented at a weekly seminar. A written report is also submitted at the time of the seminar. All participants are encouraged to foster an atmosphere in which discussion, exchange of ideas, and the airing of controversial opinions might flourish.

**DISTRIBUTION COURSES**
Distribution courses comprise 30 percent of the curriculum and are usually scheduled during the first half of each spring semester. During the first two years, many of the distribution courses are oriented to the basic sciences. During years three and four, students have additional distribution course offerings from which to choose. Some emphasize clinical specialties, whereas others integrate basic sciences with clinical medicine and are co-taught by faculty representing both areas. Students from different classes have the opportunity to take many of these courses together.

Grading options for distribution courses are either letter or S-U.

**VTMED 601(6100) Anatomy of the Carnivore**
Spring. 3 credits. Prerequisite: VTMED 510 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. P. S. Maza. Students study carnivore anatomy by detailed systematic and regional dissection of the cat, with comparison to the dog. Student dissection is supplemented with preparations, radiographs, palpation of live cats, and exercises focusing on surgical approaches. There are opportunities to dissect other carnivores, such as the ferret and the fox, depending on availability of specimens. The lectures augment the laboratory dissection and introduce the student to clinical anatomy of the cat and functional morphological and comparative features in the Order Carnivore. Students do an independent project on the carnivore species of their choice and give an oral presentation on this to the class.

**VTMED 602(6101) Anatomy of the Horse**
Spring. 3 credits. Prerequisite: VTMED 510; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. A. J. Bezuidenhout. Organized as a traditional anatomy course that relies primarily on students learning the anatomy of horses through hands-on dissection laboratories augmented by lectures and highlighted by clinical correlations. An understanding of anatomy that provides the foundation for surgery and is directly relevant to clinical practice is emphasized in the regional approach to dissection. Microscopic anatomy is integrated into the course in selected areas to lay a foundation for the later study of pathology or when it reinforces concepts of structure and function that are difficult to understand by a study of the gross anatomy alone (i.e., hoof). Student dissection cadavers are supplemented by skeletal materials, radiographs, models, preserved prediseased specimens, and fresh specimens when available. A live horse will be available for palpation.

**VTMED 603(6102) Anatomy of the Ruminant**
Spring. 3 credits. Prerequisite: VTMED 510 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. L. A. Mizrow. Covers the regional anatomy of several ruminant species using dissection laboratories and lectures. Emphasizes the functional consequences of structural modifications and anatomical features relevant to clinical practice. Correlates microscopic anatomy with gross anatomy when appropriate to relate structure to function and to provide a foundation for later study in pathology. Student dissection material is supplemented by skeletal materials, radiographs, models, pre diseased specimens, and postmortem specimens. Students are required to complete an independent study project on a relevant subject of their choosing. Assessment includes written and practical exam.

**VTMED 605(6103) Comparative Anatomy: Pattern and Function**
Spring. 3 credits. Prerequisite: VTMED 510; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. J. Hermanson. The goal of this course is to study anatomical variability among amniate (mammals, birds, and reptiles) and amniote (amphibian and fish) species. This is accomplished by relating the anatomy of major organ systems in each species to a common basic pattern and considering the differences in a functional perspective. Five major systems are explored (integumentary, locomotory, cardiorespiratory, digestive, and urogenital) in a variety of species as available.

**VTMED 607(6720) The Literature and Subject Matter of Natural History**
Spring. 1 credit. Minimum enrollment 10; maximum 30. Prerequisite: third- and fourth-year veterinary students. S-U grades only. H. E. Evans. Introduces natural history literature. Shows and discusses materials relating to the earth sciences and the biology of plants and animals from around the world. Students are required to show and discuss a book that concerns natural history in a country of their choice and submit a one-page book report for duplication. A recommended reference text is The Cambridge Illustrated Dictionary of Natural History by W. J. Haggart and G. A. Boxshall, 1990. Golden Guides for mammals, birds, reptiles, fishes, insects, and plants may be given to participants.

**VTMED 609(6120) Anatomy and Histology of Fish**
Spring. 2 credits. Minimum enrollment 4; maximum 6. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. Letter grades only. P. R. Bowser. Provides an overview of the diversity of anatomy and histology of fish. Students participate in lecture, discussion, and laboratory exercises to review the major organ systems. Extensive use of library resources for assigned readings is expected. Each student prepares a term project and makes one oral presentation.

**VTMED 610(6721) Veterinary Aspects of Avian Biology**
Spring. 1.5 credits. Minimum enrollment 10; maximum 60. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. G. V. Kollas and A. J. Bezuidenhout. Introduction to avian biology for veterinary students. Includes lectures and laboratories involving avian anatomy, physiology, and natural history. One laboratory involves live birds to demonstrate physical examination. The course emphasizes the development of a strong foundation in avian biology that is applied in VTMED 616 Diseases of Birds and VTMED 652 Avian Medicine and Surgery.

**VTMED 613(6722) AQUAVET I: Introduction to Aquatic Veterinary Medicine**
Four weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 4 credits. Maximum enrollment 24 students from Cornell U., the U. of Pennsylvania, and other U.S. colleges and schools of veterinary medicine. Available, by competitive application process, to veterinary and graduate students. S-U grades only. Fee charged. P. R. Bowser. Sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutions at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. Introduces veterinary students to aquatic-animal medicine. The marine environment is described and visited on field trips in the Woods Hole area. Specific aspects of the course include: marine physiology, nutrition, microbiology, pathology, and medicine of a variety of marine and freshwater species are discussed. Some emphasis is placed on systems of aquaculture. The specific diseases of a few selected species are presented as examples. The course is taught by an invited faculty of 35 individuals who are leaders in their respective fields of aquatic-animal medicine. Students present seminars on appropriate topics.
VTMED 614(6521) AQUAVET II: Comparative Pathology of Aquatic Animals
Two weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 2 credits. Maximum enrollment 18. Prerequisites: formal course work in histology of aquatic animals or appropriate experience and permission of instructor. S-U grades optional. Fee charged. Available, by competitive application process, to veterinary and graduate students. P. Bowles.
Advanced course (sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service) covering the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented consists of discussions of the diseases of aquatic animals as well as extensive use of the microscope to examine the histopathology associated with these diseases. The course is taught by an invited faculty of 12 individuals who are leaders in their respective fields of aquatic-animal medicine.

[VTMED 615(6723) Veterinary Medicine in Developing Nations
Spring. 2 credits. Minimum enrollment 20. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S-U grades only. Offered even-numbered years; not offered 2006-2007; next offered 2007-2008. K. A. Schat.
This seminar course provides interested veterinary students with information and insight into the complex issues facing U.S. veterinarians working in developing nations.]

VTMED 616(6522) Diseases of Birds
Spring. 2 credits. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.
Designed to introduce second-, third-, and fourth-year veterinary students to a basic and practical knowledge of the most common infectious and noninfectious diseases affecting a variety of avian species. Emphasizes the latest diagnostic and control approaches. The course format is a combination of didactic lectures and discussions.

[VTMED 617(6523) Basic Nutrition for Veterinary Students
Introduction to nutrition, including basic concepts of the need for and metabolism of energy, protein, minerals, and vitamins in domestic animals.]

VTMED 622(6421) Foreign Infectious Diseases of Animals
Spring. 1 credit. Minimum enrollment 20. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. A. Torres, R. Gilbert, and D. Schlafer.
Describes the etiology, pathogenesis, clinical signs, gross pathology, differential diagnosis, methods of spread, surveillance, host, and control of the most important foreign and emerging animal diseases that present serious economic threats to the United States. Several foreign and emerging animal diseases are also important zoonoses affecting public health. The recent spread and impact of foot-and-mouth disease, avian influenza virus, bovine spongiform encephalopathy, and chronic wasting disease are good examples of the need to emphasize the importance to practicing veterinarians so they in turn could educate producers, consumers, and the public in general.

VTMED 624(6524) Feline Infectious Diseases
Spring. 1 credit, two 50-min. lect each week for eight weeks. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Barr.
Emphasizes the clinical aspects of feline infectious diseases common to cats in North America and complements knowledge acquired in Foundation Courses IV and V. The overall objective is to provide details about specific infectious diseases a future small-animal practitioner may need to know to effectively diagnose and treat diseases. Etiology, epidemiology (incidence, transmission), pathogenesis, clinical findings, diagnosis, pathologic findings, therapy prevention, and public health considerations are emphasized. Most lectures are presented from a clinician's point of view, and therefore the material is oriented toward practical skills in managing clinical cases. Grades are based entirely on the result of a written exam (usually multiple-choice format) given in the final period.

VTMED 625(6525) Osteoarthritis
Spring. 1 credit. Minimum enrollment 8; maximum 24. Prerequisite: graduate and second-, third-, and fourth-year veterinary students. Letter grades only. G. Lust.
Provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. Includes a description of the diarthrodial joint and the composition and metabolism of articular cartilage, subchondral bone, ligaments, meniscus, capsule, and synovium. Considers the interrelationships of synovium, synovial fluid, articular cartilage, joint lubrication, biomechanical considerations, and etervation are considered. Canine hip dysplasia is a focus during the early class sessions. The osteoarthritis associated with canine hip dysplasia serves as a basis for discussion of the etiopathogenesis of the disease. Canine osteoarthritis is emphasized, but the disease in animal models such as mice, guinea pigs, rabbits, and sheep is mentioned. Therapies such as nonsteroidal anti-inflammatory drugs, glucocorticoids, and others may be discussed.

VTMED 626(6421) Epidemiology of Infectious Diseases
Spring. 1 credit. Maximum enrollment 8. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. H. Mohammed and staff.
Introduces the students to the methods used in infectious disease investigations. Also discusses the importance of surveillance systems in detecting modern epidemics and in the development of effective disease prevention and control strategies. Emphasizes understanding the relationships between the host, the agent, and the environment as they relate to disease causation. Explores contemporary epidemiologic methods applicable to old diseases that remain real or potential problems, newly emerging infectious diseases, and nosocomial infections. Selected diseases are discussed to clarify the role of epidemiology in understanding the pathogenesis of infectious processes in individuals and groups of animals. Students have the opportunity to apply the methods learned to actual disease problems and write an epidemiologic report that might lead to a publication in a peer-reviewed scientific journal.

VTMED 628(6320) Clinical Pathology
Addresses a range of issues related to veterinary medicine and interpretation of laboratory results. General topic areas include hematology, clinical chemistry and immunology, and urinalysis. The primary mode of instruction is student-driven small-group (unuttered) exploration of case materials followed by faculty-moderated large-group discussions. Selected lectures and laboratory sessions supplement and expand on issues generated by the case discussions. This course builds on concepts previously addressed in Foundation Courses III and IV and provides additional experiences in practical clinical pathology procedures and microscopes.

VTMED 630(6422) Clinical Biostatistics for Journal Readers
Fall and spring. 0.5 credits for attending eight one-hour parasitology sessions; student usually can easily obtain 2 hours on each of the five participating rotations (Ambulatory, Community Practice Service, Dermatology, Pathology, and Wildlife). Prerequisite: VTMED 551; third- and fourth-year veterinary students. S-U grades only. M. K. Frongillo and D. D. Bowman.
Gives students experience in diagnosing parasitic infections. Students perform appropriate parasitological testing methods on clinical samples from patients on their rotation. They also evaluate the test results in terms of treatment or management of the infections. If clinical specimens are not available, appropriate materials are provided for study and evaluation. Ambulatory students typically do qualitative and quantitative flotation on samples from large animal cases they have encountered that week. In CPS, one hour is spent testing samples from current dog and cat patients, while a second hour is devoted to a discussion of the treatment of common endo- and ecto-parasites. Pathology students typically examine and identify intact parasites they retrieve from various organs at necropsy. This course is considered to be a logical extension to Foundation Course IV, Host, Agent, and Defense, and is expected to build on the didactic material presented in Large and Small Animal Parasitology.
VTMED 632(6724) Senior Seminar
Fall and spring. 1 credit. Does not fulfill 1-credit Set VII minimum. Prerequisite: first-, second-, and third-year veterinary students. Must be completed in two consecutive semesters (either fall to spring or spring to fall). 2 units salary only. R. Q. Gilbert. Attendance at 14 of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course.

VTMED 635(6726) Introduction to the Professional Literature
Spring. 1 credit. Minimum enrollment 6; maximum 20. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. S. Whitaker. Introduces veterinary students to the professional and biomedical literature, including development of critical reading skills. Students become familiar with the broad range of professional and biomedical literature and are encouraged to develop a rigorous approach to journal and scientific article review. Secondary emphasis is on developing skills in library and bibliographic search techniques and strategies for personal information management, as well as exploring the use of veterinary-related online information.

VTMED 637(6727) Introduction to Community Practice Service
Fall, winter, spring, and summer. 1 credit. Prerequisite: first- and second-year veterinary students, permission of instructor. S-U grades only. W. E. Hornbuckle. Introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Community Practice Service of the Cornell University Hospital for Animals. Students observe and assist with restraint, examination, and routine treatment of pets and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

VTMED 638(6526) Veterinary Nutrition
Spring. 2 credits. Minimum enrollment 10; maximum 90. Prerequisite: first- and second-year veterinary students or permission of instructor. Recommended for second- and third-year veterinary students. Letter grades only. F. A. Kallfelz. The first half of this course provides information on the requirements for and metabolic uses of the essential nutrients of dogs and cats as well as formulation and evaluation of practical rations for species of veterinary interest. These concepts are applied in discussion of life stage nutritional needs, including growth, adult maintenance, gestation, lactation, aging, performance, and production. The second half covers clinically relevant diseases of nutritional deficiency and excess, including obesity, as well as the role of nutrition in the management of diseases of the various organ systems—e.g., renal, lower urinary tract, cardiac, G-1, hepatic, and musculoskeletal system disease. Other topics include the role of nutrition in managing cancer and hypersensitivity disorders and in critical care, including enteral and parenteral nutrition. The course also includes an introduction to nutrition for exotic and zoo animals.

VTMED 639(6550) Small Animal Veterinary Dentistry
Spring. 0.5 credits. Prerequisite: second-, third-, and fourth-year veterinary students who have completed Block III. S-U grades only. J. Rawlinson. This is a senior-level course in small animal dentistry. Students will complete an online auto-tutorial course that covers the basics of oral examination, dental radiography, oral pathology, and treatment options in the disciplines of oral surgery, periodontology, endodontics, orthodontics, restorative dentistry, and prosthodontics. This will be complimented by eight non-mandatory, 1-hour question and answer sessions and two mandatory 3-hour laboratory sessions covering oral examination, dental radiography, basic periodontology, and simple and advanced extractions.

VTMED 640(6527) Veterinary Aspects of Captive Wildlife Management
Spring. 2 credits. Minimum enrollment 10; maximum 40. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. V. G. V. Kollars. Concentrates on principles of captive wildlife management, both clinical and nonclinical. Students are challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-range environment. These disciplines include but are not limited to species-specific (1) behavior and behavioral requirements, (2) nutritional requirements and problems, (3) natural history, (4) zoontic and toxicological problems, (5) medical restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course emphasizes non-North American wildlife species (e.g., African, Asian, Australian, and Central and South American species), and in odd-numbered years it focuses more on the North American (native) wildlife species.

VTMED 641(6424) Approaches to Problems in Canine Infectious Diseases
Spring. 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Burr. Emphasizes the clinical aspects of the more common canine infectious diseases. The overall objective is to provide details about specific infectious diseases a future small-animal practitioner may need to know to effectively diagnose and treat these diseases. Clinical signs, presentation, clinicopathologic data, diagnostic choices, treatment plans, and prevention are emphasized. Most lectures are presented by clinical faculty and therefore the material is oriented toward practical skills in managing clinical cases. Grading is based entirely on the in-class written exam (usually multiple-choice format) given in the final period.

VTMED 642(6321) Management of Fluid and Electrolyte Disorders
Spring. 2 credits. Minimum enrollment 20; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. R. Rawson. Students focus on clinical manifestations and the pathophysiologic mechanisms associated with fluid, electrolyte, and metabolic acid-base disturbances. The course is divided into segments dealing with salt and water imbalances, potassium abnormalities, metabolic acidosis, metabolic alkalosis, and mixed acid-base disturbances.

VTMED 644(6528) Equine Surgical and Anesthetic Techniques
Winter, one-week period over winter intersession. 1 credit. Minimum enrollment 1, maximum 21. Enrollment by lottery. Prerequisite: VTMED 602; preference given to students who have indicated interest in equine medicine and surgery; third- and fourth-year veterinary students. S-U grades only. S. Fubini (coordinator) and other large-animal surgeons. Consists of five laboratories performing surgical procedures on ponies and other species. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with some specialized surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating equine practice after graduation.

VTMED 645(6529) Food-Animal Surgical and Anesthetic Techniques
Winter, one-week period over winter intersession. 1 credit. Minimum enrollment 6; maximum 21. Enrollment by lottery. Prerequisite: VTMED 603; preference given to students who have indicated career interest in farm animals; third- and fourth-year veterinary students. S-U grades only. S. Fubini and other large-animal surgeons. Consists of five laboratories performing surgical procedures on sheep, calves, cadaver specimens, and adult cattle. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating food-animal practice after graduation.

VTMED 646(6530) Llama Tutorial
Fall, spring, summer. 1 credit. Prerequisite: VTMED 540; second-semester second-, third-, and fourth-year veterinary students. S-U grades only. Independent study. M. C. Smith. Autotutorial or group tutorial course covering common problems of llamas and alpacas. Participants are provided with study guides consisting of brief, case descriptions and sample study questions. Reference is made to textbooks, journal articles, videotapes, and (if available) a teaching llama or alpaca to assist students in finding the answers to the questions efficiently. Grading is based on an oral exam.

VTMED 647(6531) Poisonous Plants
Fall. 1 credit. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S-U grades only. M. C. Smith. Field trips demonstrate toxic plants growing in natural or cultivated settings. Lectures address economically important poisonous plants native to the United States. Information presented includes plant identification, natural habitat, toxic principles, clinical signs of toxicity, and treatment and prevention of poisoning in animals. Some of the major toxic principles found in plants and considered in detail in the course are nitrates, cyanide, oxalates, photodynamic agents, alkaloids, and mycotoxins.
VTMED 648(6728) Clinical Management of Native Wildlife
Fall, spring, summer. Credit (given in fall). 1 credit. Maximum enrollment 30 students per semester. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff. Introduces veterinary students to primary care for native wildlife and to wildlife issues that practicing veterinarians face on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Cornell University Hospital for Animals by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty and residents on a daily basis. Successful completion of the course requires 40 hours of satisfactory supervised participation per semester in the clinic. Clinic times are appropriately scheduled throughout the semester. Students are required to submit two case summaries, or alternatives approved by the course leader, before the end of the semester and a log of their clinical hours.

VTMED 649(6729) Introduction to Equine Practice
Spring. 0.5 credit. Maximum enrollment 30. Prerequisite: first- and second-year veterinary students. Intended for students with little or no experience working with horses. Letter grades only. R. Hackett and C. Collyer.

VTMED 652(6532) Avian Medicine and Surgery
Spring. 2 credits. Minimum enrollment 20; maximum 40. Prerequisite: third- and fourth-year veterinary students. Letter grades only. Live birds used in some laboratories. V. Kollias and staff. Designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical avian medicine and surgery. The course is taught in a basic didactic lecture and discussion format with laboratories that reinforce concepts presented in the lectures.

VTMED 653(6533) Advanced Equine Lameness
Spring. 1.5 credits. Minimum enrollment 7; maximum 21. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades only. Live birds used for learning. N. Ducharme, A. Nixon, A. Yeager, D. Dykes, L. Fortier, C. Allen, and staff. Designed to teach students the methodology of equine lameness diagnosis. Presents a strong emphasis on the hands-on approach to learning and is primarily laboratory-based. During laboratories, students work in small groups on live horses to diagnose the cause of their lameness. To this end, students learn both the practical skills, such as perineural and intra-articular blocks, as well as the methodology necessary to systematically work up a lameness case. Laboratories also provide students with the opportunity to practice field radiography and gain ultrasound skills as they pertain to equine lameness. Additionally, students have the opportunity to practice basic farrier skills. Lecture topics are intended to round out the students' understanding of lameness by providing them with a knowledge base of the common causes of lameness, organized by response to local anesthesia. Imaging interpretation is emphasized through case discussions.

VTMED 654(6534 lec, 6535 lab) Equine Theriogenology
Spring. Lec, 1 credit; lab, 0.5 credit. Minimum lab enrollment 12; maximum 24. Lab enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff. Covers advanced aspects of equine reproductive physiology. Discusses reproductive management of mares and stallions using natural and artificial breeding strategies. Stresses diagnosis, treatment, and prevention of common reproductive disorders. The laboratory component builds on skills acquired during foundation courses and provides experience in techniques important in equine theriogenology.

VTMED 655(6536 lec, 6537 lab) Advanced Dairy Reproduction
Spring. Lec, 1 credit; lab, 0.5 credit. Minimum lab enrollment 12; maximum 24. Lab enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades only. R. Perkins. Introduces dairy students to the principles and practical aspects of dairy cow reproductive management. The focus is on the medical care of hospitalized dairy patients under the close supervision of the attending veterinarian. Students are introduced to the medical care of dairy patients under the close supervision of the attending veterinarian.

VTMED 656(6528) Special Problems in Equine Medicine
Spring. 1.5 credits. Minimum enrollment 10; maximum 50. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades only. T. Divers and staff. Intended for students anticipating equine practice. In-depth study of important diseases, review of recent literature, management, and hands-on procedures or demonstrations are the core of this course.

VTMED 657(6539) Disorders of Large-Animal Neonates
Spring. 1 credit. Minimum enrollment 10; maximum 100. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. C. Schaffner. Intensive neonatology course. The focus is on the medical and surgical problems of foals in the early neonatal period with some information presented about calves, small ruminants, and camelid neonates. Students also spend several hours in the neonatal intensive care unit providing medical care of hospitalized patients under staff supervision.

VTMED 658(6540) Equine Soft-Tissue Surgery
Spring. 1 credit. Minimum enrollment 6; maximum 24. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades only. R. Hackett and staff. Intended for students anticipating equine practice after graduation. Builds on material presented in the foundation courses to provide supplemental instruction in surgical disorders of the horse. Lectures are case based and emphasize disorders likely to be encountered in equine practice (colic, traumatic injuries, upper respiratory tract disorders, prepuce problems). Laboratory emphasizes diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.

VTMED 659(6541) Surgical Pathology
Spring, summer, fall. 1–2 credits, variable; one or two weeks. Prerequisite: second-, third-, and fourth-year veterinary students by permission of instructor. Letter grades only. S. McDonough. Provides hands-on experience in the Surgical Pathology Service of the Department of Biomedical Sciences. Working with the attending pathologist, students examine tissue specimens histologically, propose diagnoses, and discuss their interpretations. Students may enroll in this course only through the Office of Student Records within the official add-drop period. All requests to enroll must be accompanied by the Supplemental Enrollment Form indicating Dr. McDonough’s approval of the enrollment and the amount of credit to be awarded. Second-year veterinary students should not enroll for any term other than summer unless they have actually reserved a Janauary or spring-break slot through Dr. McDonough.

VTMED 660(6542) Medical and Surgical Problems of Dairy Cattle: Emphasis on the Individual Animal
Spring. 1.5 credits. Minimum enrollment 6; maximum 28. Prerequisite: third- and fourth-year veterinary students. Letter grades only. S. Fubini and staff. Provides students who have a special interest in dairy practice the opportunity for in-depth discussions of special problems in bovine medicine and surgery. Emphasizes case discussions, physical examination techniques, and ethical practical matters. Emphasizes individual cow treatment.

VTMED 661(6500) Veterinary Clinical Oncology
Spring. 1 credit. Prerequisite: third- and fourth-year veterinary students. Letter grades only. K. M. Rassnick. This course presents the common cancers affecting companion animals. Emphasis is placed on etiology, biological behavior, and patient management. Surgery, chemotherapy, and radiation therapy as important methods to treat cancers in veterinary patients are discussed. Course format includes lectures. Attendance is required.

VTMED 662(6543) Special Problems in Small-Animal Medicine
Spring. 1 credit. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students. S-U grades only. K. Simpson (coordinator) and staff. Students work through selected problems in small-animal medicine in two-hour weekly seminars. The focus is on the medical
problems associated with cases using historic, clinical, clinical pathologic, and pathologic findings to elucidate basic pathophysiologic principles of disease. The overall objective is to give future small-animal practitioners skills in the ability to clinical problems with specific emphasis placed on history taking, clinical signs and examination skills, assessment of clinical pathology data and diagnostic materials (radiographs, ultrasonograms, treatment plans, and prevention. The course expands knowledge gained in Foundation Course V and under the instruction of a clinical faculty member, is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases.

VTMED 668(6544) Practice Management
Spring, 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students. S-U grades only. M. Kraus, J. Ludders, J. Morrisey, and K. Cummings. Professional practice and financial managers teach veterinary medical students the essential elements of a successful practice, concentrating on management and organizational skills. Topics include basic practice organization, leadership styles, career planning, communication skills, facility management, human resource management, marketing, building and maintaining clients, practice growth, personal finances, money management, insurance, animals and the law, malpractice, medical records, inventory and pharmacy management, and contracts.

VTMED 669(6545) Iec, 6546 lab) Sheep and Goat Medicine
Spring. Lec, 1 credit, lab, 0.5 credit. Prerequisite: third- and fourth-year veterinary students. Lab corequisite: Sheep and Goat Medicine lec. S-U grades only. M. C. Smith. Discusses diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants and of sheep and goat herds. Basic information on breeds, behavior, nutritional requirements, and management systems is supplied. Economic importance of contagious or metabolic diseases are discussed in depth. The diagnostic evaluation and differential diagnoses for common clinical presentations such as skin disease, neurologic disease, lameness, and mastitis are considered. Herd monitoring of economically important parameters and necropsy diagnosis of abortions and neonatal losses are addressed. Breeding systems, pregnancy diagnosis methods, conception of dicytosis, and common surgical procedures are discussed and demonstrated in laboratory sessions.

VTMED 672(6324) Antimicrobial Drug Therapy in Veterinary Medicine
Spring. 1 credit. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. W. S. Schwark. Familiarizes students with antimicrobial drugs used in veterinary practice. Builds on fundamental pharmacological and microbiological principles covered in Foundation Courses III and IV and considers antibacterial, antifungal, antiparasitic, and antiviral drugs from the point of view of unique pharmacokinetic properties, indications for clinical use, and potential toxicities as the basis for rational use.

VTMED 676(6547) Clinical Ophthalmology
Spring. 0.5 credit. Prerequisite: third- and fourth-year veterinary students. S-U grades only. R. Riss, N. Iby, and T. Kerr. The principles and practice of entry-level veterinary ophthalmology introduced in Foundation Course V, Introduction to Veterinary Ophthalmology, are supplemented by lectures and discussions that emphasize species differences, basic surgical decision making, and recognition of ocular conditions appropriate for referral. One of the four class periods is devoted to ocular surgical techniques performed in cadaver tissues.

VTMED 677(6548) Dairy Production Medicine
Fall. 2 credits. Minimum enrollment 6; maximum 14. Prerequisite: third- and fourth-year veterinary students. S-U grades only. C. Guard. Intermediate course in techniques and procedures used by veterinarians in modern dairy practice. Materials covered in this course are outside the traditional boundaries of medicine, surgery, and theriogenology and might include housing, facilities, manure management, and employee education. Data analysis, disease and production monitoring, and evaluation of deviations from targeted performance are used to plan cost-effective interventions or corrections, followed by continued surveillance to monitor their effect. Students are introduced to the fundamentals of dairy management currently used in dairy management. Local dairy herds serve as additional laboratories for class projects.

VTMED 678(6549) Small-Animal Theriogenology
Spring. 1 credit. Minimum enrollment 6; maximum 100. Prerequisite: third- and fourth-year veterinary students. Letter grades only. Therio faculty. Distribution course in a lecture-based format designed to complement the knowledge gained in the theriogenology component of Foundation Courses III and IV. Content includes discussion of breeding management, infectious and noninfectious causes of infertility, and pathology of the male and female reproductive tracts, their diagnosis, and management. The course emphasizes conditions affecting dogs and cats.

VTMED 679(6550) Clinical Pharmacology
Spring. 0.5 credit. Prerequisite: third- and fourth-year veterinary students. S-U grades only. W. S. Schwark. Offered after Foundation Courses I-V and formal exposure to pharmacology course work is completed. The course is designed to familiarize students with drug use in the clinical setting and uses ongoing cases in the Cornell University Hospital for Animals as a teaching tool. Drug concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxicities. This course is offered at the time the students are about to embark on their clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, using basic concepts obtained during formal course work. The onus is placed on the students to explain/rationalize drugs employed in clinical cases in the teaching hospital.

VTMED 680(6730) Behavior Problems of Horses
Spring. 1 credit. Prerequisite: one semester of veterinary curriculum; first-, second-, third-, and fourth-year veterinary students. S-U grades only. K. A. Houp. The goal of this course is to give veterinary students the ability to treat the behavior problems of horses. History-taking, counseling, diagnostic tests, follow-up, the implementation of behavior modification programs, recognizing veterinary, prevention of behavior problems, training techniques of value to the practitioner, and socialization of foals are presented.

VTMED 681(6731) Behavior Problems of Small Animals
Spring. 1 credit. Minimum enrollment 10. Prerequisite: one semester of veterinary curriculum; first-, second-, and third-year veterinary students. S-U grades only. K. A. Houp. The goal of this course is to give veterinary students the ability to treat the behavior problems of cats and dogs. History-taking, counseling, and follow-up methods are presented. Each student has the opportunity to participate in three cases. Behavioral and pharmacological treatments for behavior problems are presented.

VTMED 692(6327) Current Concepts in Reproductive Biology (also BIOAP 787/7750)
Fall. 3 credits. Minimum enrollment 6. Prerequisite: first-, second-, and third-year veterinary students and appropriate undergraduate/graduate training. Letter grades only. Offered only years; not offered 2006-2007; next offered 2007-2008. J. Fortune, W. R. Butler, and staff. Team-taught survey course in reproductive physiology/endocrinology. Lectures by reproductive biologists on various aspects of reproductive function. Student participation through discussions and/or presentations.

VTMED 696(6552) Fundamental Principles and Techniques of Small-Animal Anesthesia: Dogs, Cats, and Birds
Spring. 1 credit. Minimum enrollment 15. Prerequisite: third- and fourth-year veterinary medical students. J. W. Ludders and R. D. Gleed. Designed for the veterinary student interested in small-animal practice. Consists of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects include anesthetic management for elective and emergency surgery, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic management. While fundamental concepts and recent advances in anesthesia are discussed, the practical application of anesthetic principles and techniques are a major objective of the course.

VTMED 697(6553) Fundamental Principles of Large-Animal Invasive and Mixed Animal Practice
of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects include anesthetic management for reproductive surgery, field anesthesia, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic management. While fundamental concepts and recent advances in anesthesia are discussed, the practical application of anesthetic principles and techniques is a major objective of the course.

**VTMED 698(6798) Special Projects in Veterinary Medicine**
Fall, winter, spring. 1-4 credits. S-U grades only. TBA with College of Veterinary Medicine tenure-track faculty member. Provides students the opportunity to work individually with a faculty member to pursue an area of particular interest and, typically, not part of the established curriculum. Specific course objectives and course content are flexible and reflect the scope and academic expertise of the faculty.

**VTMED 699(6199, 6299, 6399, 6499, 6599) Research Opportunities in Veterinary Medicine**
Fall, winter, spring, summer. 1-4 credits, variable. S-U grades optional. TBA with College of Veterinary Medicine tenure-track faculty member. Provides students the opportunity to work in the research environment of faculty involved in veterinary or biomedical research. Specific course objectives and course content are flexible and reflect the specific research environment. Projects may be arranged to accumulate credit toward the following requirements in Distribution Sets I, II, III, IV, and V.

**VTMED 700(6600) Theriogenology Service**
Spring. 2 or 4 credits. Maximum enrollment 5 per rotation. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. C. Schweizer and staff. Exposure to clinical procedures in theriogenology as provided by Cornell University Hospital for Animals patient load and augmented by teaching herd animals.

**VTMED 701(6601) Cardiology Service**
Fall and spring. 2 credits. Minimum enrollment 1 per rotation; maximum 2. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. J. Harte and staff. Provides students with the opportunity to put into practice what they have learned in the foundation years. The management of the most common cardiac diseases is emphasized, including congestive heart failure, arrhythmias, and secondary cardiac diseases. All species are examined, large and small, although the majority are small animals. Diagnostics, including cardiovascular physical examination, electrocardiography, echocardiography, are taught. The rotation includes clinical work, didactic teaching, and self-initiated digging for information.

**VTMED 702(6602) Laboratory-Animal Medicine**
Fall and spring. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. M. Bailey and staff. The practice of laboratory animal medicine requires a combination of preventive programs, clinical skills, knowledge of various species' biology, familiarity with research methodology, and acquaintance with state and federal regulations. This course is an introduction to that specialty. Students accompany laboratory-animal veterinarians on clinical rounds of Cornell's research-animal housing and participate in laboratory diagnostic work. Review sessions are based on the biology, medicine, pathology, and husbandry of rodents, rabbits, and primates and on current legislation regulating the care and use of research animals. The course may include field trips to other institutions.

**VTMED 703(6603) Clinical Wildlife-, Exotic-, and Zoo-Animal Medicine**
Fall, winter, spring. 2 credits. Maximum enrollment 3 per rotation (plus one intern or extern). Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. G. V. Kollins and staff.
Introduces students to primary medical care of nontraditional pet species, zoo animals, and native wildlife. Students, directly supervised by the attending clinician, are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the Cornell University Hospital for Animals. Other opportunities available to assist in the development of clinical skills in wildlife-, zoo-, and exotic-animal medicine include work with the Wildlife Clinic, exotic animal research and service projects, and trips to the Rosamond Gifford Zoo. Successful completion of the course requires satisfactory performance during this 14-day clinical rotation.

**VTMED 704(6604) Quality Milk**
Fall. 2 credits. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. R. Gonzalez and OMPS staff.
Covers the causes, diagnosis, treatment, and prevention of bovine mastitis. Stresses the role of management practices. Includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Production Services. Participants are expected to complete a case study on a dairy farm with udder-health problems and present their findings to the producer and farm personnel. Grading is on performance during the course and a final exam.

**VTMED 705(6605) Special Opportunities in Clinical Veterinary Medicine**
Fall, spring, and summer. Prerequisite: VTMED 551; third- and fourth-year veterinary students. S-U grades only. W. Miller and N. Ducharme.
Provides opportunities for students finished with Foundation Course V to explore professional areas not available through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the assistant dean for learning and instruction for review and approval. On-site supervisors of the block are required to evaluate each student formally.

**VTMED 707(6607) Poultry Medicine and Production Rotation**
Fall, two-week rotation that takes place at University of St. Hilda or University of Guelph in alternating years. 2 credits. Prerequisite: VTMED 551; third- and fourth-year veterinary students.
Recommended: VTMED 616. K. A. Schat.
Provides an introduction to poultry medicine by a combination of lectures, discussions, and laboratory sessions including postmortem examinations. Students also visit hatcheries, broiler, layer, and turkey farms.

**VTMED 708(6608) Clinical Oncology**
Fall and spring. 2 credits. Maximum enrollment 4 per rotation. Prerequisite: VTMED 551; third- and fourth-year veterinary students. Letter grades only. K. M. Rassnick and staff.
Management and prevention of cancer in companion animals represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a comprehensive set of skills necessary for a veterinarian to become an advocate for the client/patient with cancer. These skills include appropriate initial evaluation of animals with cancer, sensitive and effective client and referring-veterinarian communication; ability to access relevant information from numerous sources related to cancer management, and ability to understand and apply principles of surgical, medical, and radiation oncology as well as techniques specifically related to minimize pain and treatment-related effects in cancer patients.

**VTMED 709(5611) Small-Animal Clinical Emergency and Critical Care Medicine**
Fall, winter, spring, and summer. 2 credits. Prerequisite: VTMED 551; third- and fourth-year veterinary students. S-U grades only. N. Dhupa and staff.
Management of both emergent and critical cases represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a knowledge base and a comprehensive set of skills necessary for a veterinarian to perform adequately in a structured format. These skills include the appropriate evaluation (triage) and stabilization of emergency patients, the management of post-operative and other critical patients, and sensitive and effective client communication. Participants access relevant information from various sources related to emergency and critical care medicine and understand and apply these principles to clinical cases. Participants have patient care responsibilities in the Intensive Care and Intermediate Care units and work closely with technicians and clinicians to develop familiarity with technical and nursing procedures. Students also participate in the management of incoming emergency cases. The clinical emergency and critical care medicine rotation are primarily an overnight rotation.

**VTMED 710(6609) Animal Behavior Clinic**
Fall, winter, spring, and summer. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 681; third- and fourth-year veterinary students. S-U grades only. K. A. Houpt and staff.
Students participate fully in the Animal Behavior Clinic: answering telephone, mail,
and e-mail inquiries, observing and taking charges of behavior cases. To answer inquiries, the student is expected to consult several behavioral textbooks or other sources. Taking charge of the cases includes reading the entire behavioral history, interviewing the owner, forming a diagnosis, conferring with Dr. Houpt or a behavioral resident, and referring to the properly behavioral and pharmacological treatment, demonstrating behavior-modification techniques and writing a letter to the client. Follow-up calls to earlier cases may be made.

**VTMED 711(6610) Herd Health and Biosecurity Risk Evaluation Using the NY State Health Assurance Program (NYSCHAP) Model**

Introduces students to the identification of disease risk and the evaluation of cattle operations, focusing on animal health, food safety, and the environment. The course combines information on risk assessment, creation of herd plans, biosecurity, Johnes' disease, standard operating procedures, global trade, and environmental issues. Additionally, two local farms are visited to give students the opportunity to implement knowledge gained in lectures.

**VTMED 712(6613) Equine Specialty Rotation**

The objective of the rotation is to teach students basic diagnostic and recognition and clinical skills for those interested in equine practice. These skills prepare students to respond on equine-related calls on their first day of work. The Cornell horse population is used to teach these practical skills.

The emphasis of this elective is hands-on discussion, rounds and lectures. The rotation includes lectures and corresponding discussion groups to cover the scientific basis, clinical aspects, and environmental issues. Additionally, two local farms are visited to give students the opportunity to implement knowledge gained in lectures.

**VTMED 714(6616) Veterinary Dentistry**

Fall, winter, spring, summer. 2 credits. Prerequisites: third- and fourth-year veterinary students who have completed Foundation Course V. Letter grades only. J. Rawlinson.

This rotation is designed to introduce students to clinical veterinary dentistry with an emphasis on small animals. The goal of this rotation is to prepare students for a career in private practice. The course covers the diagnosis, treatment, and prevention of oral diseases and oral pain in small animals. Students will learn to perform a thorough oral examination, identify common oral diseases, and develop skills necessary for effective communication with clients.

**VTMED 720(6425) Shelter Medicine I**

Spring, 1 credit. Minimum enrollment 5, maximum 40. Prerequisite: VTMED 540, third- and fourth-year veterinary students. Letter grades only. J. M. Scarlett and staff from American Society for the Prevention of Cruelty to Animals.

Shelter medicine is a new and exciting discipline in veterinary medicine. Caring for animals in animal shelters requires a "shelter health" as well as an individual animal perspective. This course covers the role of veterinarians working with and for animal shelters, the principles of preventive medicine and population health in companion animals, behavioral enrichment, temperament testing, and diagnosing and treating behavior problems in shelter animals, desexing and neutering, and the management of common infectious diseases in shelter cats and dogs.

**VTMED 726(6554) Reptile and Amphibian Medicine and Surgery**

Fall, winter, spring, summer. 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. J. M. Scarlett and staff from American Society for the Prevention of Cruelty to Animals.

Reptile and amphibian medicine and surgery is a new and exciting discipline in veterinary medicine. This course introduces students to the medical care of reptile and amphibian species commonly seen in veterinary practice. Topics include anatomy, physiology, nutrition, evaluating and treating reptile and amphibian diseases, and conservation of these species.

**VTMED 728(6554) Reptile and Amphibian Medicine and Surgery**

Spring. 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students. S-U grades only. D. D. Bowman.

Provides an overview of reptile and amphibian species commonly seen in veterinary practice. This course introduces students to the medical care of reptile and amphibian species commonly seen in veterinary practice. Topics include anatomy, physiology, nutrition, evaluating and treating reptile and amphibian diseases, and conservation of these species.

**VTMED 730(6428) Vaccines: Theory and Practice**

Fall, winter, spring, summer. 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students and graduate students. Letter grades only. G. V. Kollias.

This course introduces students to the basic principles and practice of veterinary medicine. Topics covered include immunology, vaccine technology, vaccine production, and the evaluation of vaccine efficacy.

**VTMED 732(6438) Veterinary Clinical Parasitology: Small-Animal**

Spring. 0.5 credit. Minimum enrollment 2. Prerequisite: third- and fourth-year veterinary students. S-U grades only. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to small-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.
VTMED 733(6429) Infectious Diseases and Management of Swine
Spring. 2 credits. Minimum enrollment 6; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. S-U grades optional. K. Earnest-Koons. Provides veterinary students with a solid introduction to concepts and principles of swine infectious diseases and how they are treated in the clinical setting. Students learn about specific infectious diseases, clinical signs in affected animals, and treatment protocols for the diseases in question. Students also gain an understanding of the clinical approach to suspected or unknown infectious agents, sample collection and handling, and resources available for infectious disease diagnosis. Good management practices for swine farmers are also reviewed and their relationship to disease is discussed. The course is conducted with three one-hour lectures per week and one hourlong large group discussion per week. Meets two days per week for one hour and on days off for two hours. Grades are based on weekly quizzes, a final exam, a short paper, and attendance/participation.

VTMED 735(6614) Special Topics in Ambulatory and Production-Animal Medicine
Fall, winter, spring, and summer. 1–2 credits. Prerequisite: second-, third-, and fourth-year veterinary students; VTMED 560 and permission of instructor. Letter grades only. M. E. White and staff. Provides specialized experiences in the Ambulatory and Production Medicine Service. Consists of participation in scheduled and emergency farm calls and completion of projects designed to provide experience in herd problem solving, records analysis, and implementing herd-health programs. Clinical service assignments are planned to meet individual student goals. Examples of focus areas available include livestock production medicine, dairy reproductive examinations, and small-ruminant medicine.

VTMED 736(6501) Veterinary Diagnostic Imaging
Spring. 1.5 credits. Minimum enrollment 20; maximum 80. Prerequisite: VTMED 540; third- and fourth-year veterinary students. Letter grades only. P. Scrivani. Designed to emphasize the relevance of a solid foundation in veterinary anatomy as it is clinically applied to diagnostic imaging. Additionally, the course is designed to provide students with an understanding of the strengths and limitation of diagnostic imaging by discussing interpretation principles, pitfalls, and interpretations, and measurements obtained through lectures, laboratory exercises, weekly quizzes, and reading assignments. Integration of these objectives culminates in weekly laboratory exercises where students must make or evaluate decisions regarding patient management based on evaluation of clinical signs and imaging examinations. The "Roentgen-Sign" approach to diagnostic imaging interpretation is used as a model.

VTMED 737(6619) Principles of Pathology
Spring. 1.5 credits. Minimum enrollment 6; maximum 40. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. McDonough. Intended for students who wish to strengthen and broaden their knowledge of the pathobiologic basis of disease. Fundamental biologic processes as revealed by gross and microscopic pathologic changes are emphasized. Molecular mechanisms are integrated into the discussion where appropriate. General pathologic processes are organized into a logical and uniform system to facilitate comprehension and learning with particular attention paid to definitions and proper usage of terminology. The course includes two lectures per week and a one-hour large-group discussion. The large-group discussion allows students to apply general knowledge gained in lecture to a specific problem.

VTMED 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure (also BEE 740[6430], BIOMI 740[6430])
Spring. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. D. D. Bowman. In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Includes two class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

VTMED 741(6431) Microbial Safety of Animal-Based Foods
Spring. 1 credit. Minimum enrollment 10; maximum 20. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. B. L. Nja and M. Wiedmann. In the first two weeks, the instructor provides an overview of food-safety issues relevant to the veterinary profession. The following four weeks are dedicated to student presentations on selected food-borne pathogens and food-safety issues. In the final two weeks, lectures and discussion led by the instructors focus on emerging new issues in food safety and on farm-to-table technologies and approaches that can be used to assure the safety of animal-based foods.

VTMED 742(6555) Dairy Business Management and Health Economics
Spring. 2 credits. Minimum enrollment 5; maximum 15. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. L. Warnick and C. Guard. Helps veterinary students understand basic principles of dairy economics and business management and develop specific skills used by veterinarians in herd economic decision making. Covers three main topical areas: (1) overview of dairy economics from regional, national, and global perspectives; (2) the terminology and concepts used in dairy business financial analyses and economic decision making; (3) dairy health economics, including the application of economic tools to decisions related to disease treatment, health maintenance, and productivity.

VTMED 743(6732) Interaction with the Animal Health Diagnostic Laboratory for Investigating Infectious Diseases
Spring. 1 credit. Minimum enrollment 5. Prerequisite: third- and fourth-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam and others. This seminar course uses an interactive format and multiple experts from their fields to introduce future veterinarians how best to use the services of a diagnostic laboratory when investigating herd-problem cases. The course combines logistical and factual matters such as appropriate sample submission, tests available for various pathogens, and relative test interpretation with practical case-based discussion of the various diagnostic modalities. Topics include virology (e.g., BVD, bacteriology (e.g., Salmonella), parasitology (e.g., Cryptosporidium), serology (e.g., Johne's Disease), molecular techniques (e.g., P. colit, herd-level test interpretation, and outbreak investigation.

VTMED 744(6733) Veterinarians and Food-Animal Production Systems: An Introduction
Spring. 1 credit. Minimum enrollment 5. Prerequisite: first- and second-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam and invited speakers. This seminar course uses an interactive format and multiple experts from their fields to introduce future veterinarians to various food-animal production systems, how veterinarians interact with them, and the synergy between these systems and veterinarians in society. Each week the production structure of the dairy, beef, swine, poultry, or aquaculture industry, veterinarians' role, and career opportunities and expectations are discussed. The offering is intended for first- or second-year students so that they can plan appropriately to take additional courses or set up externships in the following years.

VTMED 745(6556) Dynamics of Dairy Herd Health and Management
Spring. 1 credit. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. L. D. Warnick, D. V. Nydam, and Y. T. Grohn. Veterinarians are increasingly asked to advise dairy producers on productivity and management decision making. This course addresses the relationships of dairy cattle diseases with herd-performance parameters. Through a combination of lectures and laboratory exercises, students learn analytic techniques and computer software skills to evaluate dairy herd disease and production problems. Topics include: (1) how often disease occurs in dairy herds, (2) how they are identified, (3) the impact of disease on milk production, reproductive performances, and risk of culling, and (4) how to use this information in production medicine.

VTMED 746(6432) Fish Health Management
Spring. 1.5 credit. Minimum enrollment 8; maximum 16. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. S-U grades optional. P. R. Bowser. Lecture and laboratory course providing an overview of the aquatic environment and the important infectious and noninfectious
diseases of fish. Covers important diseases encountered in commercial aquaculture, aquarist conditions, and natural waters. The laboratory is designed to provide students with a knowledge base and hands-on diagnostic experience in diseases of fish. Students also maintain and manage aquatic systems during the course to gain an appreciation for the science behind the operation of those systems. The laboratory requires time outside the normal scheduled class sessions (to be scheduled by the student and instructor) and the manager of the laboratory. Each student also makes a presentation on a topic in aquatic animal health during the course.

VTMED 747(6557) Exotic Small Mammals as Pets
Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: third- and fourth-year veterinary students and graduate students. Students enrolled in VTMED 703 encouraged to enroll. Letter grades only. J. K. Morrisey.

Concentrates on the husbandry, clinical presentation, diagnosis, and treatment of common diseases of nontraditional small mammals that are kept as pets. These species include ferrets, rabbits, guinea pigs, chinchillas, rats, mice, hamsters, gerbils, hedgehogs, sugar gliders, and other animals. Grading is based on a midterm and final exam. Information regarding these species in the laboratory setting will also be discussed.

VTMED 748(6222) Canine and Feline Medical Genetics
Spring. 2 credits. Minimum enrollment 10; maximum 40. Prerequisites: VTMED 520, 530, and 531. S-U grades optional. V. N. Meyers-Wallen.

Covers the genetic and pathophysiologic mechanisms underlying inherited diseases in dogs and cats that may be encountered in small animal practice. Specific disorders of clinical importance are presented in a lecture format to illustrate the distribution, diagnosis, and control of inherited diseases in individuals and populations.Ethical considerations regarding treatment, prevention, and control measurements are discussed.

VTMED 749(6434) Keller Medicine II
Spring. 1 credit. Minimum enrollment 3; maximum 20. Prerequisite: third- and fourth-year veterinary students. Highly recommended: VTMED 720. Letter grades only. J. M. Scarlett.

Intended as a sequel to the Issues and Preventive Medicine in Animal Shelters course offered in the C Distribution block. In light of the time constraints in the Issues course, the principles of prevention and control to specific diseases (e.g., ringworm, kennel cough) common to small animal populations in shelters are discussed. This course encourages students to apply principles of infectious disease, epidemiology, and preventive medicine to infectious disease problems in small animal populations, with a particular emphasis on disease problems in shelters. Mention of modification to fit other small animal populations (e.g., catteries, kennels) is made.

VTMED 751(6558) Applied Dairy Nutrition for Practitioners
Spring. 2 credits. Minimum enrollment 5; maximum 20. Prerequisite: veterinary students or permission of instructor. S-U grades only. T. Overton, D. Nydam, and others.

Provides a foundation in the principles of dairy cattle nutrition with practical rational formulation with troubleshooting on dairy farms, both preventive and curative.

VTMED 752(6558) Advanced Small Animal Clinical Oncology

Elective course designed to complement the required course VTMED 666 Veterinary Clinical Oncology. Cancer is among the leading causes of death in dogs and cats and remains the number one concern of pet owners. Management and prevention of cancer in companion animals represents a significant component of the practice of small animal veterinary medicine. This advanced course emphasizes the biologic behavior and patient management of cancers in dogs and cats more thoroughly than addressed in VTMED 666. Additionally, molecular and cytogenetic methodologies that are likely to affect cancer diagnosis and management in the future are discussed. Finally, students are provided with the skills necessary to critically read and evaluate clinically based publications in the professional literature.

VTMED 753(6734) Companion Animal Welfare
Spring. 1 credit. Minimum enrollment 3; maximum 50. Letter grades only. J. M. Scarlett, L. Appel, and L. Miller.

Companion animal welfare issues have become a major emphasis for many American communities. Precipitated by the changing status of companion animals, the proliferation of free-roaming cats, and human safety issues, communities are considering (or have passed) breed-specific bans, restrictions on declawing and solutions for "free-roaming" cats. This course will address these and other issues such as pet surplus—animals entering shelters and those euthanized in shelters; the "no-kill" movement; reasons for relinquishment to shelters; recognition and documentation of animal abuse; the use of pediatric neutering in population control—studies relating to safety and potential adverse effects; dogs and cock fighting and the role of the veterinarian in the recognition and reporting of these activities. The objective of the course is to provide information for veterinary students such that they can assume leadership with regards to these issues in their future communities.

VTMED 754(6735) Conservation Medicine
Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: veterinary students, graduate students at CVM, others by written permission of instructor. Letter grades only. G. V. Kollias, A. J. Travis, and N. Abou-Maddi.

Conservation Medicine will introduce students to the basic concepts of free-ranging and captive wildlife conservation and will engage veterinary students in issues of sustainable development relating to wildlife. The course will present information not included in other courses within the curriculum that is fundamental for veterinarians contemplating a career in conservation medicine, wildlife health, or zoological medicine. This course will complement the conservation courses in the curriculum including, but not limited to, Introduction to Avian Biomedicine, Avian Diseases, Veterinary Aspects of Captive Wildlife, Veterinary Medicine in Developing Nations, The Literature and Subject Matter of Natural History, Comparative Anatomy, Foreign Animal Diseases, Epidemiology of Infectious Diseases, Anatomy and Histology of Fishes, and Fish Health Management. Students will learn how wildlife populations are regulated by their environment and how such populations are managed and assessed.

Various habitat preservation strategies will be presented and discussed. Conversely, for critical endangered species, the focus will be on ex situ recovery programs.

UNDERGRADUATE AND GRADUATE COURSES
These courses are taught by the faculty in the College of Veterinary Medicine but do not contribute to the D.V.M. degree requirements.

Biomedical Sciences
VTBMS 346(3460) Introductory Animal Physiology (also BIOAP 311[3110]) (Undergraduate)
Fall. 3 credits. Prerequisites: BIO G 105, 106, or 101, 102, 103, 104, 107, 108; CHEM 207, 208, or 206; or 215, 216; MATH 106, 111 or 191 only; and one of the above; or one year college-level biology, chemistry, and math. S-U grades optional. E. R. Loew.

General course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure-function relationships are stressed along with underlying physical-chemical mechanisms.

VTBMS 400(4000) A Genomic Approach to Studying Life
Fall. 3 credits. Prerequisites: one year introductory biology or equivalent plus BIOG 281 or BIOBM 330 or 333 or 331-332 or permission of instructor. Letter grades only. J. Schimenti.
Introduction to principles underlying the organization or genomes and the methods of studying organisms using genome-wide approaches to research. Covers the application of genomics methodologies for addressing issues including evolution, complex systems, genetic and gene:phenotype relationships. Includes periodic, in-depth discussions of landmark or timely genomic papers.

**VTBMS 401(4010) Genomic Analysis**
Spring. 3 or 4 credits. Prerequisites: upper-level undergraduates and graduate students; BIOGD/VTBMS 400 or equivalent by permission of instructor. Letter grades only. T. O'Brien.

Overview of approaches and tools used in genomic research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include high-throughput DNA sequencing and genotyping, genetic mapping of simple and complex traits, RNA expression profiling, proteomics, genome modification and transgenesis, and computational genomics.

**VTBMS 600(6000) Special Projects in Anatomy**
Fall, spring. 1 credit per 2.5-hour period. Prerequisite: permission of instructor. S-U grades only. Biomedical science staff.

**VTBMS 610(6100) Genomes as Chromosomes**
Fall. 1 credit. Prerequisites: upper-level undergraduates and graduate students; others by permission of instructor or BIOGD 281 and BIOBM 352. Letter grades only. T. O’Brien and P. Cohen.

The eukaryotic genome is partitioned into discrete structural units, the chromosomes. This course examines how chromosomes organization is related to chromatin structure, gene expression, DNA replication, repair and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

**VTBMS 611(6110) Genomes Maintenance Mechanisms**
Fall. 1 credit. Prerequisites: upper-level undergraduates and graduate students; BIOGD 281, BIOBM 350, or 355, or 351/352 or equivalents. S-U grades optional. R. Weiss.

Focuses on the molecular mechanisms used by eukaryotic cells to preserve genomic integrity. Topics include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addresses how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, including cancer.

**VTBMS 612(6120) Overview of Model Genetic Organisms**
Spring. 1 credit. Prerequisites: upper-level undergraduates and graduate students; BIOGD 281, or BIOGD/VTBMS 400 or permission of instructor. S-U grades optional. J. Schimenti.

Presents the features of various model organisms and their relative merits for conducting various types of genomics/genetics research. Model systems discussed are:

- Arabidopsis, yeast, Drosophila, C. Elegans, zebrafish, and mice.
- VTBMS 620(6200) Research Fellowship in Biomedical Sciences
Fall, spring. 1-2 credits. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S-U grades only. Offered by individual faculty members in the Department of Biomedical Sciences for DVM students undertaking research in research fellowship.

- VTBMS 628(6280) Graduate Research in Animal Physiology (also BIOAP 718(7190); Graduate)
Fall, spring. 1-3 credits. Prerequisite: written permission of department chairperson and faculty member who will supervise work and assign grade. S-U grades optional. Similar to BIOG 499 but intended for graduate students who are working with faculty members on an individual basis.

- VTBMS 700(7000) Predictions of Form or Phylogeny
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades optional. J. W. Hermanson.

Form and function are often discussed as a correlated entity in biology. This seminar group starts with the question, Does form really predict function? This is addressed initially with respect to the analysis of paleobiology but then encompasses examples of experimental functional morphology. In particular, there is a growing body of experimental data demonstrating that diverse functions can be achieved with nearly identical morphologies, and that the functional diversity may better be explained by behavior or environmental factors. Might these observations refute current theories about the origin of flight in extinct organisms (i.e., the cursorial or ground-up theory of flight versus the arboreal gliding theory of flight evolution)? Specific topics pursued are selected by participants in this course. Participation is open to interested graduate students, advanced undergraduate students, and veterinary students.

- VTBMS 701(7010) Mouse Pathology and Transgenesis (also TOX 701(7010))
Fall. 1 credit. Maximum enrollment 12 students. Priority given to graduate students, pathology residents, interns, and post-docs; third and fourth-year veterinary students may attend if space permits. Prerequisite: permission of instructor. Highly recommended: basic histology course (BIOAP 413) or equivalent. Letter grades only. A. Nikitin and staff.

Introductory course on contemporary mouse pathology explains principles and methods of pathology in animals and transgenesis. In addition to covering development, anatomy, histology and pathology of organs and systems, the course focuses on systematic evaluation of new genetically modified mice, with particular attention to such topics as experimental design, validation of mouse models, and identification of novel phenotypes. This course includes supervised mouse necropsy.

- VTBMS 702(7020) The Practice of Laboratory Animal Medicine
Fall, spring. 1 credit. Prerequisite: upper-level undergraduate or graduate standing; basic knowledge of anatomy and pathology in comparative animal species. S-U grades optional. T. O'Brien.

A laboratory animal veterinarian must be trained in the regulatory aspects of research and teaching utilizing animals; in addition, they must understand the principles of facility management and design. Animal veterinarians work with researchers who wish to study the workings of the specialized field that oversees and enables the use of animals in research and teaching. The topics covered include: Laboratory Animal Medicine; Historical Phylogeny; Veterinary Education and teaching; Design and Management of Animal Facilities; Anesthesia, Analgesia, and Euthanasia; Techniques of Experimentation; Control of Biohazards Used in Animal Research; Selected Zoonoses; Genetic Monitoring; Transgenic and Knockout Mice; Factors Influencing Animal Research; Animal Models in Biomedical Research; Research in Lab Animal and Comparative Medicine; Lab Animal Behavior.

- VTBMS 703(7030) The Biology and Diseases of Laboratory Animals
Fall, spring. 2 credits. Prerequisite: upper-level undergraduate or graduate standing; basic knowledge of anatomy and pathology in comparative animal species. S-U grades optional. M. E. Martin.

Intended for veterinary students. The course includes supervised mouse necropsy. The course will cover the main laboratory animal species (rodents, rabbits, non-human primates, ruminants, swine, dogs, cats, ferrets, reptiles, amphibians, and fish). The biology, husbandry, diseases, pathology, and main research uses of these species will be covered. The course will meet for 2 hours weekly and will extend over the course of two years.

- VTBMS 713(7130) Cell Cycle Analysis

Presents a brief historical review of the cell cycle; a summary of cell cycle regulatory processes; and practical methods for cell cycle analysis, including mathematical representations.

- VTBMS 720(7200) Special Problems in Physiology (Graduate)
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Laboratory work, conferences, collateral readings, and reports. Adapted to the needs of students.
VTBMS 788(7890) Seminar in Surgical Pathology
Fall, spring. 1 credit. Intended for residents in anatomic pathology; third- and fourth-year veterinary students may attend. Letter grades only. D. H. Zelizer, faculty and the Section of Anatomic Pathology and visiting pathologists.

Clinical Sciences

VETCS 702(7020) Pathophysiology of Cardiopulmonary Surgery (Graduate)
Fall. 1.5 credits. Prerequisite: D.V.M. or equivalent. S-U grades only. Offered every third year. R. P. Hackett, S. L. Fubini, and N. G. Ducharme. Using lectures and group discussions, the objective of this course is to explain the pathophysiology of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia under anesthesia) and airway disease (thoracic and upper-airway disease). As a basis for these abnormalities, cardiopulmonary hemodynamics and biomechanical aspects of ventilation are reviewed. The emphasis is placed on understanding these mechanisms and outlining the surgeon's response to them.

VETCS 703(7030) Surgical Principles and Surgery of the Integumentary System (Graduate)
Spring. 1.5 credits. Prerequisite: graduate D.V.M. or equivalent in residency or graduate training programs. S-U grades only. Offered every third year. S. L. Fubini. Designed for surgery residents and graduate students. It is largely discussion format and examines surgical principles and surgery of the integumentary system.

VETCS 704(7040) Pathophysiology of Urogenital Surgery (Graduate)
Fall. 1.5 credits. Prerequisite: graduate D.V.M. or equivalent in residency or graduate training programs. S-U grades only. Offered every third year. S. L. Fubini. Designed to review and discuss urogenital surgical procedures in animals and the rational basis for them. Pathophysiology is stressed. Some classes consist of reprints with discussion.

VETCS 705(7050) Animal Pain and Its Control
Spring. 2 credits. Prerequisite: permission of instructor. Open to third- and fourth-year veterinary medical students, interns, residents, graduate students, and postdoctoral associates interested in fundamental and applied concepts of pain in animals. S-U grades optional. Offered odd-numbered years. R. D. Gleed, J. W. Ludders, and P. F. Moon. Emphasizes the physiologic and pathophysiologic mechanisms involved in pain perception by animals, their responses (physiological and behavioral) to pain, and the pharmacologic mechanisms underlying anesthetic therapy. The subject material is presented through lectures, group discussions, group readings, and group evaluation of analgesic protocols.

VETCS 706(7060) Pathophysiology of Neurologic Surgery (Graduate)
Spring. 1.5 credits. Prerequisite: D.V.M., M.D., or equivalent or permission of instructor. S-U grades only. Offered every third year. A. J. Nixon. Provides special training in neurosurgical techniques, application and discusses pathophysiologic implications of neurological and neurologic diseases.

VETCS 710(7100) Advanced Veterinary Anesthesiology I
Fall. 1 credit. Prerequisite: VTMED 568 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. R. D. Gleed and J. W. Ludders.

VETCS 711(7110) Advanced Veterinary Anesthesiology II
Spring. 1 credit. Prerequisite: VTMED 568 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. R. D. Gleed and J. W. Ludders. Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

Microbiology and Immunology

VETMI 299(2990) Research Opportunities in Microbiology and Immunology
Summer, six-week session. 6 credits: minimum 120 hours lab time expected per 3 credits. Prerequisites: one year basic biology (scores of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIO G 100 level). Letter grades only. Clinical science faculty.

Mentored research apprenticeship program designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College.)

VETCS 618(6180) Principles of Medical Imaging (also BME 618(6180))
Fall. 3 credits. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. Letter grades only. Y. Wang and N. Dykes. For description, see BME 618.

VETCS 700(7000) Pathophysiology of Gastrointestinal Surgery
Fall. 1.5 credits. S-U grades only. Offered every third year. S. L. Fubini. Initially presents normal anatomy and physiology of the gastrointestinal system in carnivores, herbivores, and ruminants. This is followed by in-depth discussion of the pathophysiological and sequence of gastrointestinal obstructions including reperfusion injury, peritonitis, adhesions, and short bowel syndrome. This course emphasizes development of an advanced understanding of surgically relevant gastrointestinal problems leading to appropriate decision making.

VETCS 701(7010) Pathophysiology of Orthopedic Surgery (Graduate)
Spring. 1.5 credits. Prerequisites: D.V.M., M.D., or equivalents or permission of instructor. S-U grades only. Offered every third year; next offered 2007-2008. A. J. Nixon. Provides specialized training in the anatomic, physiologic, and pathologic process of musculoskeletal diseases in animals and humans, with special emphasis on surgical diseases of tendons, bones, and joints.

VETCS 707(7070) Surgical Principles and Surgery of the Musculoskeletal System (Graduate)
Spring. 1.5 credits. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S-U grades only. Offered every third year. A. J. Nixon. Provides the basic principles of the surgical treatment of musculoskeletal diseases in animals and humans. Emphasizes surgical principles and principles of surgical techniques in orthopedic surgery. S-U grades only. A. J. Nixon. Provides specialized training in the anatomic, physiologic, and pathologic process of musculoskeletal diseases in animals and humans, with special emphasis on surgical diseases of tendons, bones, and joints.
[VETMI 404(4040) Pathogenic Bacteriology and Mycology (also BIOMI 404[4040])
Spring. 2 or 3 credits; 3 credits with lab and sem. Seminar required for graduate students. Maximum enrollment for seminar portion 15. Prerequisites: BIOMI 290 and 291; undergraduate by permission of instructor. Not offered 2006-2007; next offered 2007-2008. Letter grades only. D. P. Debbie.
Course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. Emphasizes infection and disease pathogenesis.]

[VETMI 409(4090) Principles of Virology (also BIOMI 409[4090])
Fall. 3 credits. Prerequisites: BIOMI 290 and 291 or permission of instructor. Recommended: BIOMI 408, BIOMI 230-332, 432. G. Whittaker and S. Lazarowitz. Covers the principles of virology, focusing mainly on animal viruses but also including plant viruses and bacteriophage. Topics include the classification of viruses, virus entry, genome replication and assembly, and virus pathogenicity. Particular emphasis is placed on virus-host cell interactions and common features between different viral families.]

[VETMI 431(4310) Medical Parasitology (also BIOMI 431[4310]; Undergraduate)
Fall. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOEE 261, 263, 264, 267, 274, 275, 278; BIO G 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 170, 202, 207, BIOMI 192, 290, 298, or equivalent course. Letter grades only. D. D. Bowman.
Systematic study of arthropod, protozoan, and helminth parasites of public health importance, with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.]

[VETMI 605(6050) Special Projects in Microbiology (Undergraduate)
Fall, spring. 1-12 credits. Cannot be used to fulfill course requirements for DVM curriculum. Prerequisite: permission of instructor. S-U grades only. Faculty TBA. Offered by individual faculty members in the Department of Microbiology and Immunology for DVM students undertaking research in Research Fellowship.]

[VETMI 700(7000) The Biology of Animal and Plant Viruses (Graduate and Upper-level Undergraduate)
Fall. 2 credits. Letter grades only. Offered odd-numbered years; next offered 2007-2009. C. R. Parrish and virology faculty. Examines current topics in studies of animal and plant viruses. Topics examined in depth include the structures of viruses and their interactions with host cells.]
VETERINARY MEDICINE - 2006-2007

VETMM 470(4700) Biophysical Methods [also A&EP/BIONB 470(4700)]
Fall. 3 credits. Prerequisite: permission of instructor. Prerequisite: basic knowledge of physics and mathematics. Recommended: some knowledge of physical chemistry, molecular and cell biology, or neuro­biology. S-U grades only. M. Lindau. For description, see A&EP 470.

VETMM 571(5710) Biophysics Methods Advanced Laboratory [also A&EP 571(5710)]
Spring, taught daily during first three weeks of Jan. 3 credits. Prerequisites: VETMM 470. S-U grades optional. M. Lindau. For description, see A&EP 571.

VETMM 610(6100) Cellular and Molecular Pharmacology
Fall. 2 credits. Prerequisite: permission of instructors. S-U grades optional. Offered even-numbered years. C. M. S. Fewtrell and field of pharmacology faculty. Graduate-level course surveying the molecular and cellular aspects of receptor mechanisms, signaling pathways, and effector systems. Topics include drug-receptor interactions, ligand- and voltage-gated ion channels; G protein pathways; growth factor signaling; lipid turnover, receptor systems regulating various ion channels, and receptors involved in cell growth regulation. In-depth understanding of multidimensional, multimolecular NMR experiments.

VETMM 706(7060) Growth Factor-Coupled Signaling (also BIOBM 734(7340))
Fall. 0.5 credit. Prerequisite: permission of instructor. S-U grades optional. Offered even-numbered years. R. A. Cerione. Focuses on the mechanisms of action of GTP binding proteins. Examines several receptor-coupled signaling systems, including adenylyl cyclase, vertebrate vision, phosphatidylinositol lipid turnover, receptor systems regulating various ion channels, and receptors involved in cell growth regulation.

VETMM 707(7070) Topics in Cancer Cell Biology

VETMM 720(7200) Patch-Clamp Techniques in Biology
Spring, during second and third weeks of Jan. 2 credits. S-U grades only. L. M. Nowak. Students learn theoretical background for patch-clamp techniques in cancer biology. Students may select modules (sections) of interest. The experimental techniques of conventional and permeabilized patch whole-cell recording and single-channel recordings in cell-attached and -excised membrane patches are discussed.

VETMM 704(7040) CNS Synaptic Transmission
Fall. 2 credits. Prerequisite: senior or graduate standing; permission of instructor. S-U grades optional. Offered odd-numbered years; not offered 2006-2007. next offered 2007-2008. Instructor: M. Lindau. Survey course in vertebrate central nervous system physiology and pharmacology, that focuses on mechanisms of neuro-transmitter action at the membrane and cellular levels.

VETMM 705(7050) Chemistry of Signal Transduction
Fall. 2 credits. S-U grades optional. Offered even-numbered years. R. A. Cerione. Focuses on the mechanisms of action of GTP binding proteins. Examines several receptor-coupled signaling systems, including adenylyl cyclase, vertebrate vision, phosphatidylinositol lipid turnover, receptor systems regulating various ion channels, and receptors involved in cell growth regulation.

VETMM 709(7090) Directed Readings in Pharmacology
Fall, spring, and summer. 1-3 credits each year. Prerequisite: Senior or graduate standing or permission of instructor. S-U grades only. Offered odd-numbered years. R. A. Cerione; The Role of Calcium in Stimulus-Secretion Coupling—C. M. S. Fewtrell; Mechanisms of Neuron transmitter Release—M. Lindau; Central Nervous System Neurotransmitters—L. M. Nowak; Structure-Function of the Nicotinic Acetylcholine Receptor—R. E. Oswald.

VETMM 734(7340) Undergraduate Research in Pharmacology
Fall, spring, and summer. 3 credits. Prerequisite: coursework in pharmacology. Letter or S-U grades. Field of pharmacology faculty. Enables students to undertake research in an area related to the research interests of a faculty member in the graduate field of pharmacology. Topics include basic and advanced research in Mechanisms of Growth-Factor Action—R. A. Cerione; The Role of Calcium in Stimulus-Secretion Coupling—C. M. S. Fewtrell; Mechanisms of Neurotransmitter Release—M. Lindau; Central Nervous System Neurotransmitters—L. M. Nowak; Structure-Function of the Nicotinic Acetylcholine Receptor—R. E. Oswald.

VETMM 760(7600) Directed Readings in Pharmacology
Fall, spring, and summer. 1-3 credits each year. Prerequisite: Letter or S-U grades. Reading and discussion of relevant articles on current topics in pharmacology. Individual members of the graduate field of pharmacology offer directed readings and discussions on pharmacological topics to small groups or to individual students. Topics include basic and advanced research in new mechanisms of action of GTP binding proteins. Examines several receptor-coupled signaling systems, including adenylyl cyclase, vertebrate vision, phosphatidylinositol lipid turnover, receptor systems regulating various ion channels, and receptors involved in cell growth regulation.

VTPMD 299(2990) Undergraduate Research in Epidemiology
Fall, spring, and summer. 3 credits; minimum 120 hours of lab time expected per 3 credits. Prerequisite: undergraduate standing; one year of basic biology (score of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIO G 100 level) or permission of instructor. J. Scarlett, H. Efr, Y. Grohn, L. Warnick, H. Mohammed, and Y. Schukken. Mentored research apprenticeship program designed to give laboratory experience in applied epidemiology to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell undergraduates. Students are placed in a research laboratory with a designed project under the direct supervision of a research associate (upper-level graduate student, post­doc, or faculty member). Students are graded on performance in the laboratory academic unit and appropriate acquisition of techniques. At the end of the six-week session, they are expected to give a brief (15- to 20-minute) oral presentation on their
work and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating each student's work and assigning the grade.

VTPMD 664(6640) Introduction to Epidemiology (Graduate)
Fall. 3 credits. Corequisite: BTRY 601 (College of Agriculture and Life Sciences). S-U grades optional. Diagnostic laboratory faculty. Lectures and discussion deal with the fundamentals of epidemiology. Topics include outbreak investigation, causal association, data quality, the design and ethical constraints of clinical trials, and infectious-disease epidemiology.

VTPMD 665(6650) Study Designs (Graduate)
Spring. 2 credits. Prerequisites: VTPMD/ VETCS 664 and BTRY 601 (College of Agriculture and Life Sciences). S-U grades optional. H. N. Erb. Design and interpretation of cross-sectional, case-control, and cohort studies (including controlled clinical trial). Design issues include sample size, bias, and relative advantages and disadvantages. Course objectives are (1) to know the difference between different epidemiologic study designs and relative advantages and disadvantages of each; (2) given a problem (usually a field situation), be able to design an appropriate epidemiologic study; (3) be able to effectively analyze and criticize published epidemiologic studies. Consists of lectures on the principles of epidemiologic study design and related issues (sample size calculations, validity and precision, and identification and minimizing of bias); basic analysis of epidemiologic data; and discussion of published epidemiologic studies. These studies include observational cohort studies (prospective and retrospective), cross-sectional studies, case-control studies, and hybrid studies (ambidirectional and other hybrid designs).

VTPMD 666(6660) Advanced Methods in Epidemiology (Graduate)
Fall. 3 credits. Prerequisites: VTPMD/ VETCS 664 and BTRY 601 (College of Agriculture and Life Sciences). S-U grades optional. Y. T. Grohn. Concepts introduced in VTPMD 664 and 665 are developed further, with emphasis on statistical methods. Topics include interaction, effect modification, stratified analysis, matching and multivariate (logistic regression) methods, survival analysis, and strategies for the analysis of epidemiologic data.

VTPMD 700(7000) Special Projects in Diagnostic Endocrinology
Fall. Spring. 1–3 credits. Prerequisite: permission of instructor. Recommended: AN SC 427. Letter grades only. N. J. Place. Independent study course. Students have the opportunity to research a particular topic in diagnostic clinical endocrinology of animals.

VTPMD 701(7010) Special Projects in Infectious Diseases
Fall. Spring. 1–3 credits. Prerequisite: permission of instructor. S-U grades optional. Diagnostic laboratory faculty. Provides laboratory experience with attention to specific aspects of infectious disease problems.

VTPMD 702(7020) Special Topics in Infectious Diseases
Fall. Spring. 1–3 credits. Prerequisite: permission of instructor. S-U grades optional. Diagnostic laboratory faculty. Offers a broad exposure to various aspects of infectious diseases.

VTPMD 704(7040) Master's-Level Thesis Research (Graduate)
Fall. Spring. 1–3 credits. Prerequisite: permission of instructor. S-U grades only. Diagnostic Laboratory faculty. Research leading to an M.S. degree.

VTPMD 707(7070) Clinical Biostatistics (Graduate)
Spring. 2 credits. Minimum enrollment 2; maximum 15. Prerequisite: veterinary residents and graduate students. Letter grades only. Offered odd-numbered years. J. M. Scarlett, H. N. Erb and H. O. Mohammed. Explores the theory behind and interpretation of parametric and nonparametric statistical techniques commonly used in research/c clinical medicine. Students analyze small data sets using a commercial statistical-software package.

VTPMD 708(7080) Epidemiology Seminar Series (Graduate)
Fall. Spring. 1–3 credits. S-U grades only. Epidemiology faculty. Discusses advanced theoretical and analytical epidemiologic concepts and techniques.

VTPMD 766(7660) Graduate Research (Graduate)
Fall, spring. Summer. Credit TBA. Prerequisite: master's and Ph.D. students; permission and guidance of graduate faculty member concerned. S-U grades only. Epidemiology faculty. Enables students outside the section of epidemiology to receive graduate research credits for projects with epidemiological components.

VTPMD 769(7690) Doctoral-Level Thesis Research
Fall, spring, and summer. Credit TBA. Prerequisite: master's and Ph.D. students in epidemiology. S-U grades only. Epidemiology faculty. Enables students in the section of epidemiology to receive graduate research credits for their doctoral research.

VTPMD 799(7990) Independent Studies in Epidemiology
Fall. Spring. 1–3 credits. H. N. Erb, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett. The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

FACULTY ROSTER

Abou-Madi, Noha, D.V.M., U. of Montreal (Canada). Lec., Clinical Sciences
Ainsworth, Dorothy M., Ph.D., U. of Wisconsin, Madison, Prof., Clinical Sciences
Alcaraz, Ana, D.V.M., U. Autonoma Natl. de Mexico. Lec., Biomedical Sciences
Allen, Louise Clare V., D.V.M., U. of Cambridge (England). Instr., Clinical Sciences
Antczak, Douglas F., Ph.D., U. of Cambridge (England). Dorothy Havemeyer McConville Professor of Equine Medicine, Microbiology, and Immunology
Appel, Max J., Ph.D., Cornell U. Prof. Emeritus, Microbiology and Immunology
Appleyard, Judith A., Ph.D., U. of Georgia. Alfred H. Caspary Professor, Microbiology and Immunology
Baines, Joel, Ph.D., Cornell U. Prof., Microbiology and Immunology
Balman, Cheryl, D.V.M., Cornell U. Lec., Clinical Sciences

COLLEGE OF ARTS AND SCIENCES

ADMINISTRATION
G. Peter Lepage, dean—255-4146
Nelson G. Hairston, senior associate dean—255-4147
Harry E. Shaw, senior associate dean—255-4147
David DeVries, associate dean of undergraduate admissions and education—255-3386
Paul Sawyer, associate dean and director of writing programs—255-4061
Jane V. Pedersen, associate dean of administration—255-7507
Nicolas van de Walle, associate dean for international studies—255-1097

PROGRAM OF STUDY

Introduction
The College of Arts and Sciences is a community of about 4,300 undergraduates and 525 faculty members. It is also a graduate school and research center. Altogether it attracts faculty members whose research and scholarly and creative work require first-rate academic facilities and who bring to the college the profound questioning and exciting ideas of current scholarship. Finally, the college exists within a university of other colleges at Cornell—about 19,500 undergraduate and graduate students and 1,578 faculty members. This wider community provides depth and diversity of applied and professional studies beyond what a college of the liberal arts and sciences alone can offer. Students studying the liberal arts and sciences may draw upon the knowledge and facilities of the other colleges at Cornell to complement their studies. Abundant variety and outstanding quality in many fields, including interdisciplinary fields, and emphasis on individual academic freedom and responsibility give the college and the university their distinctive character.

The richness of the college's undergraduate curriculum is extraordinary; there is no course that all students must take, and there are nearly 2,000 from which they may choose. By choosing courses each semester, students design their own education. They develop known interests and explore new subjects. An education in the liberal arts and sciences means honing one's critical and imaginative capacities, learning about oneself in nature and culture, and gaining experience with views of the world radically unlike one's own. All this is highly individual, and the college relies on each student and faculty advisor to design a sensible, challenging, and appropriate course of study.

Yet the college faculty believes that each student's education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in the various disciplines and fields of study. In addition to these general areas of knowledge, students acquire effective writing and quantitative skills, study foreign languages, achieve cultural breadth, and concentrate on one particular field through which they deepen their imaginative and critical thinking as fully as possible. To accomplish these objectives, the college has certain requirements for graduation.

The College of Arts and Sciences awards one undergraduate degree, the Bachelor of Arts degree.

Summary of Requirements
1. First-year writing seminars: two courses. (See "John S. Knight Institute for Writing in the Disciplines," p. 576.)
2. Completion of one course at the nonintroductory level or above (Option 1) or at least 11 credits in one language (Option 2); one to three courses.
3. Distribution: nine courses (may overlap with courses counting toward a major).
4. Breadth: two courses (may overlap with courses for distribution, major, or electives).
5. Major (see individual department listings for major requirements).
6. Electives: four or five courses (at least 15 credits) not used to fulfill other requirements (other than the breadth requirements) and not in the major field.
7. Residence: eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meet the additional criteria to accelerate graduation. (See "Acceleration" below.)
8. 34 courses: a 3- or 4-credit course counts as one course. A 2-credit course counts as one half a course; a 1-credit course does not normally count toward the requirement; a 6-credit language course counts as one and one-half courses. (See "Courses and Credits" for some 1-credit courses in music, dance, and theatre performance that can be cumulated to count as one-half course.
9. Credits: a total of 120 academic credits, of which 100 must be taken in the College of Arts and Sciences at Cornell. (See "Noncredit Courses" below for courses that do not count as academic credits or courses.)
10. Physical education: completion of the university requirement (passing a swim test and two 1-credit nonacademic courses). Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester.
11. Application to graduate. (See "Graduation."
### Placement Tests and Advanced Placement Credit

1. The following language placement and advanced standing tests are scheduled at the beginning of each semester:
   - Chinese (Cantonese and Mandarin), Hindi, Japanese, and Korean (schedule available from Department of Asian Studies, 350 Rockefeller Hall);
   - German (schedule available from Department of German Studies, 183 Goldwin Smith Hall);
   - French, Italian, and Spanish (schedule available from Department of Romance Studies, 303 Morrill Hall);
   - Russian (schedule available from Department of Russian, 226 Morrill Hall).

   The advanced standing examination in French, German, Italian, Russian, and Spanish, is called the CASE (Cornell Advanced Standing Examination). Eligibility for the CASE may be determined from the placement tables. In Russian only, all students seeking placement take the CASE.

   Native speakers of Spanish who have completed their secondary education in a Spanish-speaking country do not take the CASE. For these students, the Spanish program offers a walk-in service, the Native Language Accreditation for Spanish, in the third week of September and the first week of February. Students interested in this service should contact Eleanor Dozier in 414 Morrill Hall. Speakers of Spanish who completed their secondary education in a non-Spanish-speaking country are required to present either SAT II or AP or LPS scores for placement, or for eligibility to take the CASE exam.

2. Arabic: departmental examination, Department of Near Eastern Studies, 409 White Hall.

3. Greek: ancient: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

4. Hebrew: departmental examination, Department of Near Eastern Studies, 409 White Hall.

5. Latin: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

6. Persian: departmental examination, Department of Near Eastern Studies, 409 White Hall.

7. Turkish: departmental examination, Department of Near Eastern Studies, 409 White Hall.

### Substitutions to the Language Requirement

Outright waivers of the requirement are never granted. However, rarely and as appropriate, alternatives to language acquisition are approved. Legitimate requests for substitutions require strong, convincing evidence of inability to learn foreign languages in a classroom setting. A poor grade in a Cornell introductory language course or taking the

LP exam repeatedly and unsuccessfully is not adequate evidence of disability.

Students who wish to request a substitution for this requirement should meet with Dean Peggy Walbridge, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall. If Dean Walbridge determines that the request has merit, the student meets with the Language Substitution Review Committee. This committee makes the final decision for or against a substitution. If a substitution is allowed, the committee works with the student to select appropriate substitute courses.

**Distribution Requirements**

In satisfying the distribution requirements, students become acquainted with a broad range of subject matter and points of view among disciplines in the college and explore areas that may be entirely new to them. Or, to look at it the other way, as first-year students explore subjects that interest them, they begin to satisfy distribution requirements. Consequently, first-year students should take courses to prepare for possible majors and to explore areas new to them and take no course only in order to satisfy a distribution requirement. Although students may complete distribution requirements over eight semesters, they can take advanced courses in subjects they (perhaps unexpectedly) find intriguing only if they have completed the introductory prerequisites. Consequently, students should not postpone satisfying distribution requirements until the last semesters. Once sure of a major, students should consider which distribution requirements are yet unfulfilled and how to fulfill them with courses that complement their overall program. Courses in the major may be applied to the distribution requirements (unless prohibited by one of the restrictions noted under restrictions on applying AP credit, transfer credit, and Cornell courses to distribution requirements).

Students must complete four courses in science and quantitative reasoning, identified below under the categories Physical and Biological Sciences (PBS) and Mathematics and Quantitative Reasoning (MQR). In addition, they must complete five courses of 3 or more credits each from five categories of courses in the humanities and social sciences; they must include at least one course from four different categories and no more than three in the same department. The five categories of courses fulfilling the distribution requirements in humanities and social sciences are: Cultural Analysis (CA), Historical Analysis (HA), Knowledge, Cognition, and Moral Reasoning (KCM), Literature and the Arts (LA), and Social and Behavioral Analysis (SBA). How an individual course is categorized is indicated with the appropriate abbreviation in its description under its department.

- **Cultural Analysis (CA)**
  Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

- **Historical Analysis (HA)**
  Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

- **Knowledge, Cognition, and Moral Reasoning (KCM)**
  Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

- **Literature and the Arts (LA)**
  Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

- **Social and Behavioral Analysis (SBA)**
  Courses in this area examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigma, conflict resolution).

- **Physical and Biological Sciences (PBS)**
  In fulfilling the four courses in science and quantitative reasoning, students must take at least two science courses. At least one of these must be from the primary list of courses in science departments in the College of Arts and Sciences.

**Primary list:**

(These courses listed individually are all cross-listed in an A&S science department.)
Psychology
111 Brain, Mind, and Behavior
322 Hormones and Behavior
324 Biopsychology Laboratory
330 Introduction to Computational Neuroscience
332 Biopsychology of Learning and Memory
396 Introduction to Sensory Systems
424 Neuroethology
429 Olfaction and Taste: Structure and Function
431 Effects of Aging on Sensory and Perception Systems
460 Human Neuroanatomy
492 Sensory Function

Science and Technology Studies
287 Evolution
447 Seminar in the History of Biology

Visual Studies
492 Sensory Function

Students may select additional science courses from the following supplementary list:

Animal Science
100 Domestic Animal Biology I
150 Domestic Animal Biology II
212 Animal Nutrition

Anthropology
101 Human Evolution: Genes, Behavior, and the Fossil Record
370 Environmental Archaeology
375 Evolutionary Theory and Human Behavior
390 Primate Behavior and Ecology
465 Zooarchaeological Method
464 Zooarchaeological Interpretation

Applied and Engineering Physics
110 Lasers and Photonics

Archaeology
370 Environmental Archaeology
465 Zooarchaeological Method
464 Zooarchaeological Interpretation

Cognitive Studies
220 The Human Brain and Mind

Dance
312 The Moving Body: Form and Function

Electrical Engineering
430 Lasers and Optical Electronics

Engineering
110 Lasers and Photonics

Entomology
201 Allen Empire: Bizarre Biology of Bugs (3 cr.)
203 Plagues and People (3 cr.)
212 Insect Biology
277 Natural Enemies: An Intro to Biological Control (3 cr.)
315 Spider Biology

Food
200 Introductory Food Science

Human Development
220 The Human Brain and Mind

Materials Science and Engineering
281 The Substance of Civilization

Natural Resources
201 Environmental Conservation
210 Introductory Field Biology
420 Forest Ecology

Nutritional Science
115 Nutrition and Health
361 Biology of Normal and Abnormal Behavior

Psychology
223 Introduction to Biopsychology
326 Evolution of Human Behavior
361 Biology of Normal and Abnormal Behavior

• Mathematics and quantitative reasoning (MQR)
  In completing four courses in science and quantitative reasoning, students must take at least one of the following courses (note that EDUC 115 Introductory College Mathematics counts neither toward the college degree nor toward distribution):

- Applied Economics and Management
- Biochemistry, Molecular and Cell Biology
- 321 Numerical Methods in Computational Molecular Biology

Biometry
301 (formerly 261) Statistical Methods

City and Regional Planning
321 Introduction to Quantitative Methods
328 Quantitative Methods in Policy Planning

Cognitive Studies
172 Computation, Information, and Intelligence
424 Computational Linguistics
476 Decision Theory
477 Decision Theory II

Computer Science
100 Introduction to Computer Programming
172 Computation, Information, and Intelligence
211 Computers and Programming
280 Discrete Structures
312 Data Structures and Functional Programming
321 Numerical Methods in Computational Molecular Biology
324 Computational Linguistics
466 Applied Logic

Ecology and Evolutionary Biology
362 Dynamic Models in Biology

Earth and Atmospheric Science
455 Statistical Methods in Meteorology and Climatology

Economics
319 Introduction to Statistics and Probability
320 Introduction to Econometrics
321 Applied Econometrics
325 Cross Section and Panel Econometrics
327 Time Series Econometrics
366 Game Theory
405 Auction Seminar
431 Monetary Economics
476/477 Decision Theory I and II

Engineering
115 Engineering Applications of OR&IE
172 Computation, Information, and Intelligence
211 Computers and Programming
321 Numerical Methods in Computational Molecular Biology

Industrial and Labor Relations
212 Statistical Reasoning

Linguistics
424 Computational Linguistics
483 Intensional Logic
485 Topics in Computational Linguistics

Mathematics
all 3- or 4-credit courses except 101 and 109

Philosophy
231 Introduction to Deductive Logic
330 Foundations of Mathematics
331 Deductive Logic
383 Choice, Chance, and Reason
431 Mathematical Logic
432 Topics in Logic
436 Intensional Logic

Physics
209 Relativity and Chaos

Policy Analysis and Management
210 Introduction to Statistics

Psychology
350 Statistics and Research Design

Sociology
301 Evaluating Statistical Evidence

If students choose two courses from this list to satisfy part of the distribution requirement, those two courses may not have significant overlap. For example, students may not choose two beginning courses in statistics. Nor may they earn credit toward the degree for overlapping courses: BTRY 301 (formerly 261) Statistical Methods I, CRP 223 Introduction to Statistical Reasoning, ECON 321 Applied Econometrics, ILRST 212 Statistical Reasoning, MATH 171 Statistical Theory and Application in the Real World, PSYCH 350 Statistics Research and Design, SOC 301 Evaluating Statistical Evidence.

Breadth Requirements
Students must include in their undergraduate program at least one Arts and Sciences course that focuses on an area or a people other than those of the United States, Canada, or Europe and one course that focuses on an historical period before the 20th century. Courses that satisfy the geographic breadth requirement are marked with an ☑ when described in this catalog. Courses that satisfy the historical breadth requirement are marked with an ✳. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. Students may use courses satisfying distribution, major, or elective—but not writing—requirements in satisfaction of either of the breadth requirements. They may also apply Cornell courses (not credit from an examination) conferring proficiency in a non-Western language toward the geographical breadth requirement.

Restrictions on Applying AP Courses and Credit from Other Institutions to the Distribution Requirements
Students may not apply AP credit or transfer credit from another institution to the breadth requirements or to any distribution requirement.

Students who transfer to the college from another institution are under the above rules for advanced placement credit, but are eligible to have credit for post high school course work taken during regular semesters (not summer school) at their previous institution count toward all distribution requirements. Transfer students receive a detailed credit evaluation when they are accepted for admission.
Restrictions on Applying Cornell Courses to the Distribution and Breadth Requirements

1. First-year writing seminars may not count toward any other college requirement.
2. No single course may satisfy more than one distribution requirement.
3. Students may count courses in their major toward distribution and breadth.

The Major

In their last two years, students devote roughly one-half their time to acquiring depth and competence in a major subject. The major does not necessarily define a student's intellect or character or lead directly to a lifetime occupation, although it sometimes does some of each. Through the major, students focus and develop their imaginative and intellectual capacities through a subject they find especially interesting.

Most departments and programs specify certain prerequisites for admission to the major; they are found on the following pages in the descriptions of each department and program. Students may apply for acceptance into the major as soon as they have completed the independent study of their choice. This may be as early as the second semester of freshman year, and must be no later than second semester of sophomore year. To apply, they take a copy of their official transcript to an appointment with the director of undergraduate studies in their prospective major. A department or program may refuse admission into the major if the applicant's performance does not meet established standards. A student without a major at the beginning of the junior year is not making satisfactory progress toward the degree. That student must meet with an advising dean and may not be allowed to continue in the college.

Available majors

Majors are offered by each of the departments. There are also majors in American Studies, Archaeology, Biology and Society, Information Science, Religious Studies, Science of Earth Systems, and Feminist, Gender, and Sexuality Studies. Some students want to pursue a subject that cannot be met within an established major. They may plan, with the help of their faculty advisor, an independent major that includes courses from several departments and even colleges. See "Independent Major Program," under "Special Academic Options." Whatever the major—chemistry, math, philosophy, or music—graduates from the College of Arts and Sciences earn the one degree the college awards, a Bachelor of Arts.

Double majors

Only one major is required for graduation. Some students choose to complete two or even more majors. No special permission or procedure is required; students simply become accepted into multiple majors and find an advisor in each department. All completed majors are posted on the official transcript. However, even though courses in a second major count among the required 15 credits of electives (see immediately below), double majoring can constrict the variety of electives that might be valuable for an education in the liberal arts and sciences. Students should "double major" only if their intellects and deep interests direct them to do so.

Electives

Of the 34 courses and 120 credits required for graduation, almost one-third are free electives. How students choose electives frequently makes the difference between an ordinary and a truly interesting course of study. Students must complete at least four courses and at least 15 credits offered outside the major field and not used to fill the requirement except breadth. AP credits not otherwise used may fulfill elective requirements. Students may group electives to complete one of the established interdisciplinary concentrations or may form their own unofficial concentration or "minor" separate from their major. Students may also group electives into a second major. Since only one major is required, students may count courses in a second major as electives. Some students choose to explore a variety of subjects; some develop a concentration in a department or subject outside Arts and Sciences to gain applied training or specialized knowledge.

Residence

The College of Arts and Sciences is a residential college for students who devote their energy and spirit to full-time study. The faculty believes that integrated, full-time study for a defined period best promotes intellectual and creative development and best prepares people for citizenship and careers. Consequently, eight semesters of full-time study in the College of Arts and Sciences are integral to earning the B.A. degree. Even if the minimum requirements can be met in fewer semesters, the faculty of the college expects students to take advantage of the resources of the university for eight full semesters and obtain as rich and advanced an education in the liberal arts and sciences as possible. Students may complete their undergraduate degrees with credits earned at other institutions or as part-time or summer students at Cornell only if they have completed their eight full-time semesters of residence or satisfied the criteria listed below under "Part-time study in final semester."

For transfer students from other institutions, each full semester of study at their previous institution counts as one of the eight semesters of residence. However, even if transfer students have completed more than four full semesters at their previous institution, they must spend a minimum of four semesters on the Cornell campus in Ithaca. The College of Arts and Sciences considers semesters of residence but not semesters on the Cornell campus. Students may spend no more than two semesters on such programs and must be on campus during their last semester. Students of extramural study in Cornell's School of Continuing Education, semesters of study at other institutions while on leave from Cornell, and summer sessions anywhere do not count as semesters of residence.

Accleration

Some students decide that they do not need eight semesters of residence to obtain a solid undergraduate education. These students must compress the first four semesters and spend four full semesters in the major. Benefiting from opportunities for advanced, seminar, and independent (sometimes honors) work is what best characterizes undergraduate education in the college. Students considering acceleration should discuss their plans with their major advisor.

Accelerants apply to graduate one semester before their intended new graduation date. They obtain an "Application to Graduate" for this purpose in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall. Accelerants must complete:

1. All graduation requirements except for the residency requirement (120 total credits, 100 Arts and Sciences credits, 34 courses, all college requirements, and the university's physical education requirement).
2. Either condition a or b:
   a. 60 credits before beginning their last four semesters in the college and the prerequisites for admission to the major in time to spend four semesters in the major.
   b. 48 credits in College of Arts and Sciences courses numbered 300 and above and prerequisites for admission to the major in time to spend four semesters in the major. Upper-level courses taken in other colleges at Cornell University may count toward the 48 credits only if approved as part of the major.
3. 100 credits at Cornell at "C" (not C-) or above. Courses completed with a grade of "S" will count toward the 100 credits. Advanced placement and transfer credits do not count toward this requirement.
4. Students may not use credits earned while on leave of absence to reduce their terms of residence. In other words, they must be eligible to avoid full-time study. Without applying any credit toward the degree that they earned while on leave.
5. Accelerants may not finish the degree with credits earned through part-time study (unless they meet the guidelines for part-time study), or at an off-campus program, including Cornell in Washington, SEA Semester, Urban Semester, or study abroad. That is, they may not exit through any program other than a full-time, full-time Cornell semester in Ithaca.

Students matriculating as freshmen may not compress their undergraduate education into fewer than six semesters of residence. Transfer students, both from other institutions and from other colleges at Cornell, must satisfy the eight-semester residence requirement and must spend at least four semesters in the college on campus in Ithaca.

Ninth semester

Students who can graduate in eight semesters should do so. If a worthy academic plan for a full ninth or tenth semester is approved, the student enrolls in the college as a special student for the additional work. Such a status allows enrollment in a full schedule of
Courses and full access to campus resources for full tuition, but allows financial aid only from outside agencies, not from Cornell funds. Students who need fewer than 12 credits in a ninth or tenth semester to graduate should complete the outstanding courses and pay prorated tuition. Students may spend a ninth semester with Cornell aid only with permission of the Committee on Academic Records. Such permission is normally granted only to:

1. Students who have been ill or experienced other untoward circumstances beyond their control.

2. Students who were academically underprepared for the curriculum at Cornell and needed to begin with a lighter schedule of courses than normal. (See Dean Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, about this option.)

**Part-time study**

Students in good academic standing may take a personal leave of absence and enroll in the School of Continuing Education, but such semesters of extramural study do not count as terms of residence and credits from such semesters may not be used to reduce the terms of residence.

**Part-time study in special circumstances**

The college and university support students (with financial aid and services) as best they can to make full-time study possible. Occasionally, however, extraordinary but nonfinancial personal, academic, or medical circumstances make studying part-time temporarily necessary and appropriate. Students in good academic standing who face extraordinary situations may petition the Committee on Academic Records for a part-time schedule and proration of tuition in the college.

**Part-time study in final semester**

Students may complete their degrees with part-time study and pay prorated tuition at Cornell after fewer than eight semesters of full-time residence only if:

1. They have completed all requirements by the end of the sixth or seventh semester, met the criteria for accelerated graduation, and are remaining to complete study beyond what is required for the degree.

2. They are writing an honors thesis in the eighth semester and can complete all degree requirements by taking exactly two courses, one of which is the thesis itself. They must register for the thesis and one additional course.

Students must obtain approval of an advising dean and complete the prorated tuition form in the semester before or during the first three weeks of the semester and confirm their status and registration with college registrar Sally O’Hanlon in 55 Goldwin Smith Hall.

**Courses and Credits**

**Counting courses and credits**

Students must complete at least 34 courses to graduate—that is, an average of four courses during each of six semesters and five courses during each of two semesters. A 3- or 4-credit course counts as one course, a 2-credit course counts as one-half course. Single-credit courses do not count as part of the 34 except in certain cases when they form a part of a series and two in the same series can be aggregated to count as one-half course (certain offerings in the Department of Theatre, Film and Dance fall into this category). Three 1-credit courses do not aggregate to count as one course. A 6-credit language course counts as 1 1/2 courses, while the summer FALCON Programs in Asian languages count as 8 credits and two courses each and regular semester FALCON counts as 16 credits and four courses. Archaeology and geology fieldwork for more than 6 credits counts as two courses each. BIOGD 281 counts as 1 1/2 courses. Other 5- or 6-credit courses count as one course. Courses students place out of with AP credit count toward the 34.

Students must also complete 120 credits, 100 of which must be from courses taken in the College of Arts and Sciences at Cornell. Liberal arts courses approved for study abroad during a semester or academic year of full-time study (not summer study) and courses taken in certain off-campus Cornell residential programs may be counted toward the 100 credits required in the College of Arts and Sciences. Advanced placement credits, credits earned in other colleges at Cornell, or credits earned in any subject at institutions other than Cornell do not count as part of the 100. The only exceptions to this restriction are for courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements (and substituting for A&S courses) and for up to two courses that an advisor accepts as part of a completed and formally established cross-college, interdisciplinary concentration.

**Using courses toward more than one requirement**

A course may fulfill more than one college requirement in the following situations:

1. A course may be used to fulfill a distribution, breadth, and also a major requirement (except as noted under previous section of restrictions on applying AP credits, transfer credits, and Cornell courses to distribution requirements).

2. A one-semester course in foreign language (not literature) or culture that is acceptable for achieving proficiency or certifying Option I in that language may also be applied to the relevant distribution requirement and, if appropriate, to the breadth requirement.

3. Courses may count toward breadth requirements and toward any other requirement except first-year writing seminars.

4. Courses in a second major may count as electives.

**Auditing**

The college encourages its students to take advantage of its rich curriculum by sitting in on courses that interest them but that they prefer not to take for credit. As long as the instructor agrees, students are welcome to visit courses. Small seminars and language courses are sometimes not open to visitors. Audited courses do not appear on the student's schedule or transcript.

**Repeating courses**

Students occasionally need to repeat courses. If the instructor certifies that the course content is different, credit is granted a second time. If the content is the same, both grades nonetheless appear on the transcript and are included in any GPA that is calculated, but the course and credit count toward the degree only once. Repeated courses do not count toward the 12 credits required for good standing. Students considering repeating a course under this circumstance should discuss the matter with their advisor and an advising dean. Students who plan to repeat a course submit a petition to the college registrar, Sally O’Hanlon, 55 Goldwin Smith Hall. If the original course grade was F, no petition is necessary.

**Courses that do not count toward the degree**

The college does not grant credit toward the degree for every course offered by the university. Courses in military training, training as emergency medical technician, service as a teaching assistant, physical education, remedial or developmental reading, remedial or developmentaf reading, keyboarding, courses in military training as emergency medical technician, English as a second language, keyboarding, and shorthand are among those for which degree credit and credit toward the 12 credits required for good academic standing are not given. Additional information can be found at: www.arts.cornell.edu/stu-adv/coursesnondcntoRstt.php.

Students enrolled in courses for undergraduate teaching assistants may petition once to have the nondegree credits count toward good academic standing. This would allow continued eligibility for graduating with distinction in all subjects, but would disqualify the student from being on the dean's list that semester.

**Advanced placement credit**

See p. 8. Advanced placement credits count as part of the 120 credits and 34 courses required for the degree. They do not count as part of the 100 credits required in Arts and Sciences at Cornell; their application to distribution and breadth requirements is restricted or prohibited, as explained previously under "Restrictions." AP credits are posted on the transcript during the sophomore but not the freshman and sophomore years, after students have decided whether to accept the credit or forfeit it by taking the Cornell course they had placed out of.

**Summer session credit**

A student may earn credit toward the degree by completing courses in Cornell's summer session or by successfully petitioning for credit for summer courses at other colleges. Students should consult their advisors regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available online, www.arts.cornell.edu, and in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. Transcripts for completed work at other institutions must be sent to Robin Ferry, 172 Goldwin Smith Hall. Credit approved for summer courses away from Cornell (including summer courses abroad) counts toward the 120 credits and 34 courses required for the degree, but not toward the 100 credits required in Arts and Sciences at Cornell. It may not be applied to breadth requirements but may be applied to elective...
requirements and to major requirements (with the approval of the department).

Entering students who want to receive credit toward the degree for courses completed before matriculation in a summer session away from Cornell should obtain approval forms as soon as possible and have transcripts sent to Robin Perry, 172 Goldwin Smith Hall. Credits completed in Cornell summer sessions will be awarded automatically.

Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement. Students are permitted to earn up to 12 credits in one summer.

Transferring credit earned away from Cornell while on leave of absence

See “Leaves of Absence.”

Transferring credit (for transfer students from another institution or from another Cornell college)

Transfer students must satisfy all normal requirements for the degree, including eight semesters of full-time study. They must always complete at least 60 credits and 16 courses at Cornell and be in residence on campus in the college for at least four regular semesters (summer session does not count toward the residence requirement). The college evaluates credit and residence earned either at another school or college at Cornell University or at another accredited institution of collegiate rank and determines the number of credits and courses the student may apply toward the various requirements for the bachelor of arts degree at Cornell. In addition, it reevaluates advanced placement credit allowed by another institution, including another college at Cornell. Evaluations of transfer credits are normally provided when students are notified of their admission. Once matriculated in Arts and Sciences at Cornell, transfer students must adhere to the same rules for transferring credit earned on leave as all other students.

SPECIAL ACADEMIC OPTIONS

Degree Programs

The following four programs allow students to alter the regular college or major requirements or to work toward more than one degree.

College Scholar Program

The College Scholar Program is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their advisor, a well-designed program of study. College Scholars design idiosyncratic programs: some pursue diverse interests; others integrate a variety of courses into a coherent subject. Up to 40 students in each class are accepted into the program.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, and, unless they receive permission from the program to accelerate, eight full terms of undergraduate study but are not required to fulfill the other regular college requirements for the degree. They must, however, also complete the university's physical education requirement. All college scholars must complete a senior project. Although they are not required to complete or fulfill the general education requirements, members of the College Scholar Advisory Board believe that the spirit of those requirements is good.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday of classes before final exams in spring of the freshman year. Students should contact the Dean of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges

The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study at other institutions. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and: (1) a bachelor of science degree from the College of Engineering, or (2) a bachelor of fine arts degree from the Department of Art in the College of Architecture, Art, and Planning; or (3) a bachelor of science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning; or (4) a bachelor of science degree in architectural history from the Department of Architecture in the College of Architecture, Art, and Planning. Students must complete at least 60 credits at Cornell and begin the Dual-Degree Program with the second college in the second year, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for 10 semesters with financial aid. For further information contact Dean Kay Wagner in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Independent Major Program

The Independent Major Program allows students to design their own interdisciplinary majors and pursue a subject that cannot be found in an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student's academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty advisor and are assessed by a board of faculty members.

Independent Majors are not established majors, but students must still satisfy all the other requirements for the bachelor's degree. Students should contact Dean Jim Finlay, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the calendar supplement for the College of Arts and Sciences.

Double Registration with and Early Admission to Professional Schools

Registration in the senior year of the College of Arts and Sciences and the first year of Cornell Law School or the Johnson Graduate School of Management is occasionally possible. A very few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register as a Cornell student and in one or another of these professional schools during the seventh and eighth terms. They earn the B.A. degree after the first year of professional school.

Students with 8 or fewer credits and two or fewer courses to complete may apply to enter the Master's of Engineering program during (but no earlier than) their eighth semester; dual-degree students may enter this program no earlier than the ninth semester. They earn the bachelor degree(s) after one semester of graduate school.

Students interested in the joint program with the Law School or the Graduate School of Management, or in early admission to the master's of engineering program should apply to the relevant program. All candidates should confirm their eligibility with an advising dean, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double-registered students must, of course, complete all requirements for the B.A. degree, including 100 credits in Arts and Sciences courses.

Teacher Education

Students at Cornell may pursue teaching credentials in agriculture, biology, chemistry, earth science, general science, mathematics, and physics. Cornell students from any college are encouraged to apply for admission to the Cornell Teacher Education Program during their sophomore or junior year. Those who are admitted complete their undergraduate major in an agricultural science, mathematics or one of the sciences, while taking education courses. They are then able to complete a master of arts in teaching (MAT) in one year and earn certification in New York State. Students in agricultural science may be able to complete certification requirements as undergraduates.

For more information, contact the program coordinator at 255-9573.

Special-Interest Options

The following options enable students to pursue special interests within the usual degree programs.

Concentrations

Established interdisciplinary concentrations, described in alphabetical order along with departments in which they are offered, provide structures for organizing electives. Completed concentrations are noted on the transcript.

Informal Minors

Some students organize electives within a discipline or department in Arts and Sciences or another college. Such informal minors can be developed with the help of the departmental directors of undergraduate studies. They are not noted on the transcript.

Independent Study

Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the independent course, must approve the proposal study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study (proposal forms are available in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall). In one semester students may...
SPECIAL ACADEMIC OPTIONS

earn up to 6 credits with one instructor or up to 8 credits with more than one instructor. Students who are being paid for assisting faculty in research cannot earn course credit for that work.

Undergraduate Research
An excellent way to benefit from being an undergraduate at a research university, at Cornell in particular, is to become an apprentice in ongoing faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and test their interest in pursuing a research career. Sometimes they publish their work.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work. See www.sro.cornell.edu/curb/.

Students interested in this program should consult Dean David DeVries in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall, or consult www.research.cornell.edu/undergrad/.

Language Study
FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities to pursue rapid and thorough beginning studies on campus with the objective of studying abroad in China or Japan. Students interested in this program should contact the Department of Asian Studies, 350 Rockefeller Hall; e-mail: falcon@cornell.edu.

Language House Program
A complement to classroom cultural and linguistic instruction, the Language House Program combines residential and academic opportunities for developing and practicing conversational skills in French, German, Italian, Japanese, Mandarin Chinese, and Spanish. It helps prepare students who plan to study abroad and helps returning students share their cultural experiences while further increasing their language skills. Students interested in this program should contact Clare McMillan, 726 University Ave., 259-6453.

PreLaw Study
Law schools seek students with sound training in the liberal arts and sciences; they neither require nor prefer any particular program of study. Students should therefore study what they love and do well. While doing that, they should also develop their powers of precise, analytical thinking and proficiency in writing and speaking. Students in the College of Arts and Sciences who are applying to law school may consult Lisa Harris in the Office of Arts and Sciences Career Services, 55 Goldwin Smith Hall.

The college offers a concentration in law and society. This program offers a broad scope, complements almost any major, and attracts many students not intending to become lawyers as well as a subset of those intending to.

Premedical Study
The breadth and depth afforded by a liberal arts education are invaluable for students planning medical careers, whether they intend to practice or go into research. Such education has a profound effect on the doctor's understanding of the world and hence usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 203 Barnes Hall.

The advisor for students in the College of Arts and Sciences who are planning careers in medicine is Dean Janice Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Off-Campus Programs
Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two semesters. Whether on campus, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed. It rarely approves students' participation in more than one off-campus program.

Study Abroad
The College of Arts and Sciences encourages study, both on campus and abroad, that provides a greater understanding of the world's peoples, cultures, economies, and environments, and prepares graduates for the challenges of international citizenship in the 21st century. Study abroad is open to students in any major who meet the college's requirements and have a strong academic goal. Well-chosen and well-planned study abroad contributes a global or comparative dimension to your chosen field, enhances critical thinking and communications skills, and provides firsthand immersion in and appreciation of another culture. Focused academic work in the right institution abroad can be excellent preparation for advanced study or honors work in your final semesters at Cornell, and can lead to a career with a global component.

Requirements
• acceptance into a major
• area-studies course work
• fulfillment of the College of Arts and Sciences residence requirement
• GPA of 3.0 or higher and good academic standing
• language study at the required level
• fulfillment of the requirements of the foreign university or program

Cornell Study Abroad students must study alongside degree candidates in their host institutions rather than in self-contained programs that offer courses specially designed for foreigners. The college will approve only those study-abroad proposals that demonstrate realistic and coherent academic goals that are consistent with the philosophy of a liberal arts education.

The college advocates study abroad that enables students to become competent in another language, so that they can engage fully in daily life in another culture, develop social relationships, and complete formal course work in that language. To study abroad in a country where the host language is not English, the student must demonstrate competence in the language as a prerequisite.

For study abroad in Western Europe and Latin America, students must complete at least two semesters of the appropriate foreign language at the 200 level at Cornell; additional course work is strongly encouraged to increase students' chances for acceptance into the most highly competitive programs. Consult this catalog for the required level of course work in specific languages. For study abroad in Asia, Eastern Europe, the Middle East, and parts of Africa, course work entirely in the host language is not always practical, even after several semesters of language preparation at Cornell. Students should still plan to complete as much language preparation as possible within the Cornell curriculum, at least one to two years of study, and may be approved for language-intensive programs (at least half of the permitted 15 credits) with appropriate course work in English. If Cornell does not offer instruction in the language of the proposed host country, the student may be approved for a program that combines intensive language instruction with subject course work in English. All students must continue to formally study the language of the host country while abroad.

For study abroad in English-speaking countries, direct university enrollment is approved and expected. Cornell students will engage in a full course of study, generally in their major field, alongside regular degree candidates in the host country. In general, the college requires that at least 50 percent of the classes the student enrolls in be advanced-level course work in their major field.

Students will need to acquire background knowledge of the country or region where they intend to study. At least one area-studies course or one course in the history, culture, economy, politics, or social relations of the country of destination (3 or more credits) in addition to language study should be part of every student's preparation for study abroad. Some especially competitive programs require substantial prior course work in the proposed course of study as a prerequisite to acceptance. Students who intend to enhance their major with study abroad may need advanced course work in that field. As with language study, area-studies preparation beyond the minimum is highly recommended.

All A&S students must be formally accepted into a major before going abroad, and should ideally be accepted into a major before beginning the application process. Most students plan a significant amount of academic work toward the major while abroad. Whether or not students intend to earn major credit, the college requires that time spent abroad will not impede their progress toward the degree. The student's faculty advisor and departmental director of undergraduate studies must review and approve the study-abroad plans before the application is submitted to the college.

Study abroad can earn up to 15 A&S credits per semester of full-time course work as long as the curriculum abroad is consistent
with that of the college. Completion of one trimester of study earns a maximum of 10 credits. Two terms at Oxford or Cambridge may earn up to 20 credits. You must carry a full course load as defined by the host institution, which should be equivalent to at least 15 credits at Cornell, and all courses must be taken for a letter grade. Courses that fall outside the scope of the liberal arts and sciences may only be taken with the prior approval of Dean Wasyliw, and will earn non-A&S credits. Some foreign universities offer courses for visiting students that do not carry any academic credit. Students may not earn additional credit for enrolling in extra courses during the semester or year abroad. Credit for study abroad will be awarded only after completion of the semester abroad, and after the college receives your official transcript. All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad do not become part of the Cornell GPA, since grades at other institutions are rarely equivalent to grades at Cornell. Students must save all written work from all courses until their grades are received and recorded on their Cornell transcript.

The maximum length of study abroad that can count toward A&S degree requirements is two semesters, which is also the amount of time recommended for true immersion in another culture and language. Approved semesters away from campus include: Cornell in Washington, Urban Semester, and SEA Semester as well as all Cornell Abroad destinations. Students who transfer to Cornell must complete four semesters of residence on campus in Ithaca and may not study abroad during any of those four semesters. Internal transfers must complete four semesters of residence on campus in the Integrated Transfer Division and/or the College of Arts and Sciences. Students interested in the Cornell in Rome Program should contact Dean Wasyliw.

All applicants for study abroad during the academic year must go through the Cornell Abroad office after being approved by the College of Arts and Sciences. For more information, see Dean Patricia Wasyliw, 55 Goldwin Smith Hall. The full A&S study-abroad policy can be found on the Cornell Abroad web site.

Summer Residential Programs In Archaeology

During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in Central America, Greece, Israel, Italy, Turkey, and New York State. Students should contact the Archaeology Program for information about the sites currently available. Students planning on attending field schools organized by other institutions should see Professor Peter Kuniholm, B44 Goldwin Smith Hall.

Marine Science

Shoals Marine Laboratory is a seasonal field station that offers a variety of courses and experiences designed to introduce undergraduates to the marine sciences. The laboratory is located on Appledore Island, six miles off the Maine/New Hampshire coasts. Students should contact the Shoals Marine Laboratory Office, G14 Stimson Hall, for further information.

Cornell in Washington

The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty members, conduct individual research projects, and work as externs. The Cornell in Washington program offers two study options: (1) studies in public policy, and (2) studies in the American experience. The program also offers unique externship opportunities: students serve as externs in a federal agency, congressional office, or nongovernmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty members. Potential externships are arranged through, and approved by, the Cornell in Washington program. For further information, see p. 22 or inquire at M101 McGraw Hall, 255-4090. Study in Washington during a final semester of residence is usually rare and only by petition. Students should consult with the dean of seniors, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

ACADEMIC INTEGRITY

Academic integrity is the heart of intellectual life—both in learning and in research. All members of the university community simply must support each other's efforts to master new material and discover new knowledge by sharing ideas and resources, by respecting each other's contributions, and by being honest about their own work. Otherwise the university will fail to accomplish its most central and important goals.

Cornell's Code of Academic Integrity and policy about acknowledging the work of others are among the documents new students receive. Students should read them carefully and not assume they understand what integrity and cheating are and are not. Academic integrity implies more here at the university than it usually did in high school. The standards of integrity are those that prevail in professional life. This means that students must acknowledge and cite ideas they adopt from others (not just direct quotations) and help they receive from colleagues or parents. With productive emphases on collaborative learning and writing, students must understand the general standards and policies about academic integrity and make sure that they understand the expectations in individual courses as well. When in doubt, ask the instructor. For more information, consult http://cunfo.cornell.edu/Academic/AIC.html.

ADVISING

The following advisors and offices provide academic advising, help with problems, and information on college procedures and regulations.

Faculty Advisors

Each new student is assigned a faculty advisor. Advisors help students plan programs of study and advise them about ways to achieve their academic goals. Advisors may also help students with study or personal problems or may direct them to other offices on campus where help is available. Academic difficulties may frequently be solved or avoided if students and advisors recognize and address problems early.

Advisors and new advisors meet first during orientation week to discuss course selection. New students are encouraged to see their advisors again early in the semester, before it is too late to drop courses, to discuss their academic progress and to become better acquainted. Advisors and advisees meet at least once each semester to discuss courses for the following semester, and more often if advisees wish to discuss academic or personal issues or to petition for an exception to college rules.

Student Advisors

Student advisors pass on lore about the college and life at Cornell and help new students understand requirements and negotiate the university.

Major Advisors

After acceptance into a major, students are assigned a major advisor, a faculty member in the major department, with whom they shape and direct their course of study. The advisor eventually certifies the completion of the major. Students should consult their major advisor about all academic plans, including honors, study abroad, acceleration, and graduate study. The advisor's support is especially important if a student petitions for an exception to the normal procedures or requirements.

Office of Undergraduate Admissions and Advising

This office, located in 55 Goldwin Smith Hall, 255-5004, and 172 Goldwin Smith Hall, 255-4835, is a resource for faculty and student advisors and for individual students and their parents. Advising deans are available to help students define their academic and career goals, to help with special academic options and exceptions to college rules, and to help when problems arise.

David DeVries, associate dean for undergraduate admissions and advising and undergraduate research, 255-3386

Yoland Clarke, juniors, seniors, internal transfers, and minority students, 255-4833

Juliette Corazon, minority students and liaison to Latino Studies Program, 255-4833

Maria Davids, juniors, seniors, Tanner Dean's Scholars, Cornell Presidential Research Scholars, Mellon Mays Fellows, and postgraduate fellowships, 255-4833

James Finlay, first- and second-year students, Independent Major Program, Tanner Dean's Scholars, Cornell Presidents, Cornell Presidents Fellows and Scholars Fellowships, undergraduate research, and peer advisors, 255-5004

Ken Gabard, first- and second-year students and College Scholar Program, 255-5004
REGISTRATION AND COURSE SCHEDULING

Enrollment in Courses in the College of Arts and Sciences

New Students
During orientation week, new students attend briefings and other information sessions, meet with faculty advisors, and sign into courses. The college reserves spaces in courses for its incoming students.

Continuing Students
Continuing students select and schedule up to five courses of 3 or more credits and as many 1- and 2-credit courses as they would like during the semester before the one in which the courses will be taken. Students who do not "pre-enroll" during the designated period must wait until the beginning of the semester and may have difficulty securing places in the courses they most want. Before enrolling in courses, students plan their programs and discuss long-range goals with their faculty advisors.

Limits on Numbers of Courses and Credits
To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students must average 15 credits per semester. (Note: AP credit and/or summer credits may reduce the average numbers of courses and credits required each semester.)

Maximum number of credits per semester
First-semester freshmen must petition to enroll in more than 18 credits; other students may enroll in up to 22 credits if their previous semester's average was 3.0 or higher and they are in good academic standing. No more than 22 credits may be taken in a regular semester without permission of the college faculty's Committee on Academic Records. Students who fail to receive approval for excess credits from the committee may count only 18 or 22 credits, depending on their previous semester's average, toward the degree for that semester.

Petitions
The college faculty takes graduation requirements seriously, and the faculty's Committee on Academic Records virtually never waives a requirement outright. However, some students, with the support of their advisors, propose structuring their educations or fulfilling the spirit of college requirements in ways other than the specified norms. The Committee on Academic Records decides on such requests. Students who find that their undergraduate education would be better realized by satisfying requirements or proceeding in a way that requires an exception to normal rules should meet with an advising dean in the Office of Undergraduate Admissions and Advising. The deans are expert in the college's expectations and procedures and can help the student formulate a petition, if appropriate. The committee decides petitions on the basis of their educational merit.

Actions
The College of Arts and Sciences has no minimum grade requirement for graduation beyond the guideline that at least 100 Cornell credits of the 120 total required for graduation be passed with grades of C (not C-) or above. Consequently, only through actions of the Committee on Academic Records, described below under "Academic Standing," does the college maintain the quality of the degree and attend to individual situations when things academic are not going well.
financial consequence of taking leaves after the semester has begun (see the Proration Schedule for Withdrawals and Leaves of Absence in the General Information section of this catalog), all leaves taken during the semester are granted at the discretion of the college. Students should discuss their need for a LOA with an advising dean.

Leaves of Absence are of four types:

1. **Personal leaves** impose no conditions concerning reentering the college except for the five-year limit (see "Return from Leave," below). Readmission is automatic upon written request made by August 1 for a fall semester, or January 1 for a spring semester.

2. **Conditional leaves** are granted by the college for students who wish to take a leave but are not in good academic standing, or for students who wish to take a leave during the current semester. In order to be readmitted to study, students must meet all the conditions, including those related to academic progress and financial obligations. The student's academic standing is subject to review at the time of the leave and on return. Students must then receive clearance from both Gannett and the advising dean.

3. **Medical leaves** are granted by the college only upon the recommendation of Gannett, and are usually issued for at least six months. The college may attach additional conditions appropriate to the individual situation. The student's academic standing is subject to review at the time of the leave and on return. Students wishing to return to a medical leave should contact Gannett several months in advance to initiate the return process, and only then contact the college.

4. **Required leaves** are granted by the college in accordance with the Committee on Academic Records set the conditions for the student's return. Students may not return from conditional leaves for at least two semesters. Reentry will be allowed only at the discretion of the college. The student's academic standing will be reviewed at the time of the leave and on return. "Required leave" is posted on the student's official transcript. Students wishing to return to a required leave of absence will not receive academic credit. They may not request to return in less than a year for withdrawal or for failure to make satisfactory progress toward the degree. See "Academic Actions." Students on conditional or required leaves of absence (LOA) may not attend any classes at Cornell through the School of Continuing Education and Summer Sessions. Students on a medical LOA may not register for classes at Cornell unless they obtain the permission of the college and a recommendation from Gannett. Courses taken without college permission will not count toward degree requirements.

**Return from Leave**

Students wishing to return from leave must submit their request to the advising dean or, where appropriate, provide documentation that all conditions for readmission have been satisfied. All requests for readmission must be received by the college by August 1 for the fall semester and January 1 for the spring semester. In the case of conditional and/or medical leaves, substantial advance consultation with both the college and Gannett: Cornell University Health Services is necessary. On readmission, the student's graduation date will be recalculated. Five years is the maximum length of time a student may be on leave before being withdrawn from the college.

**Transferring Credits Earned While on Leave**

Students who take courses elsewhere in the United States while on leave may petition to have credits transferred. Petitions are available in 55 and 172 Goldwin Smith Hall and at www.arts.cornell.edu. Approval depends on acceptable grades and the judgment of the relevant departments about the quality of the courses. If approved, these credits may be applied toward the 120 credits and 34 courses needed for graduation, but not toward the 100 credits required in the college. They may be applied to elective requirements or to the major, as allowed by the department, but not to any of the breadth or distribution requirements. Credits earned during a leave do not count toward the eight semesters of residence and may not be used to reduce the terms of residence below the required eight. See "Residence."

**Study Abroad and International Students on Leave of Absence**

Study abroad undertaken during a leave of absence will not receive academic credit. International students on leave of absence from the College of Arts and Sciences may enroll in courses at a college or university in their home country only, as such enrollment is not defined as study abroad. They may petition for transfer of credit upon return to Cornell. If approved, the credit will count as described in the previous paragraph. Withdrawals: A withdrawal is a permanent severance from the university and from candidacy for the degree. Students planning to withdraw should consult an advising dean. Students not requesting a leave and failing to register for a semester will be withdrawn from the college. The college faculty's Committee on Academic Records may require a student to withdraw because of a highly unsatisfactory academic record.

**Transferring within Cornell (Internal Transfer)**

Internal transfer from one college or school at Cornell into another is attractive for many students whose intellectual interests change (or become more focused). Students who want to transfer should discuss their eligibility with a counselor in the new school or college. In some cases, students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases, they may be referred to the Internal Transfer Division. During the semester immediately preceding transfer into the College of Arts and Sciences, students should complete at least 12 credits of courses in the College of Arts and Sciences with a 3.0 average and with no grades of Incomplete, S-U grades (unless only S-U grades are offered for that particular course), or grade below C (C- is below C). Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. It is also based on ability to complete the B.A. degree within a reasonable time. Internal transfers are required to spend four semesters in Arts and Sciences and thus should initiate the transfer process no later than the second semester of sophomore year. They also must complete at least 100 credits at Cornell with grades of C (not C-) or above. Interested students should see Dean Yolanda Clarke, 172 Goldwin Smith Hall.

**ACADEMIC STANDING**

Students are in good academic standing for the semester if they successfully complete at least 12 degree credits by the end of the semester and earn no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfying requirements for the degree and to earn grades of C (not C-) or better in at least 100 of the 120 credits for the degree. Courses listed under "courses that do not count toward the degree" do not count toward good academic standing in a semester.

**Academic Actions**

Students who are not in good academic standing will be considered for academic action by the college faculty's Committee on Academic Records or by one of the advising deans of the college. Students are urged to explain their poor academic performance and submit corroborating documentation. Students may appeal a decision or action of the committee if they believe that the committee's action is not valid. The student must submit a plan for completing the degree. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. "Required leave" is posted on the student's official transcript.

**Required leave of absence**

A student in serious academic difficulty may be required by the faculty Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not always or necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must document what they did on leave and how they resolved their problems, and they must submit a plan for completing the degree. In some cases students will be required to furnish evidence that they are ready to return or satisfy other conditions before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. "Required leave" is posted on the student's official transcript.

**Required withdrawal**

The faculty Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one semester or for failure to make satisfactory overall progress in grades, credits, or degree requirements. This action expels the student permanently from the college.
Forgery or Fraud on Forms

Forging signatures or credentials on college forms is an academic offense and constitutes academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated; such incidents will be recorded in the Academic Integrity Hearing Board's confidential file for forgeries. If the student forges more than once, or if the forgery would advance the student's academic standing unfairly or fraudulently, or if for any reason the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board might recommend further action, such as a notation on the student's transcript, suspension, or dismissal.

GRADES

Letter Grades

S-U Grades

The S-U (satisfactory-unsatisfactory) option allows students to explore unfamiliar subjects or take advanced courses in subjects relatively new to them without being under pressure to compete with better-prepared students for high grades. Students are expected to devote full effort and commitment to a course and complete all work in a course they take for an S-U grade. The S-U option is contingent upon the instructor's willingness to assign such grades. Students must select their grading option and obtain the instructor's approval for the S-U option during the first three weeks of the semester. No exceptions to this deadline are permitted, and consequently students adding courses after the third week of the semester must add them for a letter grade. A grade of S is equivalent to a grade of C- or higher; a grade of U, which is equivalent to any grade below C-, is a failing grade equal to an F. S means the student receives the grade was received.

Note of Incomplete

An incomplete (INC) signifies that a course was not completed before the end of the semester for reasons beyond the student's control and acceptable to the instructor. Students must have substantial (normally at least 50 percent) equity in the course, be able to complete the remaining work, and have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be completed, and the grade (or permanent—"frozen"—incomplete) earned if the work is not completed by that date. When a final grade is determined, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Students must resolve (make up or "freeze") any incompletes with their instructors before graduation.

Note of R (Yearlong Courses)

R is recorded for satisfactory progress at the end of the first semester of a two-semester course. Students enroll in such courses both semesters, each time for the full number of credits for the whole course. The grade recorded at the end of the second semester evaluates the student's performance in the course for the entire year.

Grade Reports

Grade reports are available online on just the Facts; they are not mailed to students. Students should periodically check their courses and grades to be sure that they are recorded correctly.

Class Rank

The college does not compute class rank.

Dean's List

Inclusion on the Dean's List is an academic honor bestowed by the dean of the college semester by semester. Based on grades, the criteria include about the top 30 percent of students and vary with the number of credits the student completes. The criteria are subject to slight changes from semester to semester and are available at www.arts.cornell.edu/stu-adv/deanslist.asp and in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

GRADUATION

The Degree

The College of Arts and Sciences grants only one degree (no matter the student's major): the A.B. (or B.A.). A.B. is the abbreviation of the Latin name for the degree, "artium baccalarius," or translated into English, B.A., "Bachelor of Arts."

Application to Graduate

In the first semester of their senior year, students complete an application to graduate. The application allows the college to check each student's plan for fulfilling college requirements. This process is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements. Nonetheless, meeting graduation requirements is the student's responsibility; problems that are discovered, even late in the final semester, must be resolved by the student before the degree can be granted.

Degree Dates

There are three degree dates in the year: May, August, and January. Students who plan to graduate in August may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December; they may also attend graduation ceremonies the following May.

Honors

Bachelor of Arts with Honors

Almost all departments offer honors programs for students who have demonstrated exceptional accomplishment in the major and succeeded in research. The honors programs are described by individual departments. The degree of Bachelor of Arts cum laude, magna cum laude, or summa cum laude will be conferred upon a student who, in addition to having completed the requirements for the degree of Bachelor of Arts, has been recommended for a level of honors by the major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

Bachelor of Arts with Distinction

The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:

1. completed at least 60 credits while registered in regular sessions at Cornell;
2. ranked in the upper 30 percent of their class at the end of the seventh semester, or next-to-last semester for transfers and accelerants;
3. received a grade below C- in no more than one course;
4. received no failing grade;
5. have no frozen Incompletes on their records; and
6. maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four semesters.

"Required withdrawal" is posted on the student's official transcript.
CALENDAR SUPPLEMENT
All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

Last day for adding courses without petition: Sept. 15
Last day for adding a first-year writing seminar: Sept. 8
Last day for changing grade option to S-U or letter: Sept. 15
First deadline for submitting independent major requests: Oct. 13
Deadline for requesting internal transfer to the College of Arts and Sciences: Dec. 2
Deadline for applying to the College of Arts and Sciences for the following semester: May 3
Deadline for applying to the College Scholar Program: May 3
Deadline for applying to the Office, to study abroad: See Cornell Abroad
Course enrollment (preregistration) for the following semester: TBA

AFRIKAAANS
See "Department of German Studies (Dutch)."

AFRICANA STUDIES AND RESEARCH CENTER
S. Hassan, Director (254-1592); N. Assié-Lumumba, A. Bekerie, L. Edmondson, R. Harris, A. Mazrui, A. Nanji, J. Turner. Offices: 510 Triphammer Road, 255-6625 or 255-4291.

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and African languages. African languages such as Swahili are consistently offered fall and spring semesters and also taught during summer/winter session.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and African-American), through the university’s Graduate School.

A student may major in Africana Studies; however, another attractive alternative is the center’s minor concentration program. This program enables the student to complete a major in any of the other disciplines represented in the college while at the same time fulfilling requirements for a minor in Africana Studies. This requires only a few more credits than is usually the case when one completes a single major course of study. Courses offered by the center are open to both majors and nonmajors and may be used to meet a number of college distribution requirements, including historical/temporal breadth (*) and geographical breadth (8) requirements, as well as first-year writing seminars, language (Swahili), expressive arts, humanities, social sciences, and history.

The center also brings distinguished visitors to the campus, sponsors a colloquium series, and houses its own library.

The Africana Major
The undergraduate major offers interdisciplinary study of the fundamental dimensions of the African-American, African, and Caribbean experiences. Because of the comprehensive nature of the program, it is to students’ advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major.

1. a statement of why they want to be an Africana Studies major;
2. a tentative outline of the area of study they are considering (African, African-American, or Caribbean) for the major; and
3. a full transcript of courses taken and grades received.

The center’s director of undergraduate studies, A. Bekerie, will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center’s courses while completing the major program. The Africana major must complete 36 credits in courses offered by the center, to include the following four core courses: AS&RC 205, 231, 290, and 422. Beyond the core courses, the student must take 8 credits of center courses numbered 200 or above and 15 credits numbered 300 or above. The program of an undergraduate major may have a specifically African American or African focus.

Joint Majors (Minor Concentration)
The center encourages joint majors (minor concentration) in the College of Arts and Sciences and in other colleges. Joint majors are individualized programs that must be worked out between the departments concerned. The center’s director of undergraduate studies, A. Bekerie, will assist students in the design and coordination of joint major programs. However, in any joint major program, the center will require that at least 16 credits be taken in Africana Studies courses, including AS&RC 290.

Double Majors
In the case of double majors (as distinct from joint majors) students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Certificate in African Studies
In conjunction with the Institute for African Development, the Africana Studies and Research Center administers an undergraduate Certificate in African Studies program. The certificate is offered as a minor concentration available to students in all of the undergraduate colleges at Cornell. Many of the courses in the program might be used to fulfill other course distribution requirements. By pursuing this certificate, students acquire an interdisciplinary understanding of Africa. After developing a foundation of knowledge on the culture, society, and development of Africa in the core course, AS&RC 191 Africa: The Continent and Its People, students pursue 15 credit hours in a humanities or development studies track or a combination of the two, including an additional core course, either AS&RC 205, African Civilizations and Cultures or CRP 477/677 Issues in African Development.

The requirements for the certificate are a minimum of 18 credit hours, including the core courses. Students interested in the certificate program must contact A. Bekerie (the center’s director of undergraduate studies), who will register them in the program and assign them a faculty advisor from their own college. The faculty advisor will be responsible for determining completion of the certificate requirements.

Honors
The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B- cumulative average in all courses and a B+ cumulative average in the center’s courses. Each student accepted into the honors program will have a faculty advisor from their own college. The honors program must have an honors faculty committee consisting of the student’s advisor and one additional faculty member, which is responsible for final evaluation of the student’s work. The honors committee must approve the thesis or project before May 1 of the student’s junior year. The completed thesis or project should be filed with the student’s faculty committee by May 10 of the senior year.

Language Requirement
Courses in Swahili, Arabic, and Yoruba may be used to satisfy the College of Arts and
AS&RC 111/112(1104/1105) Elementary Arabic I and II
Fall/spring. 4 credits. M. Younes.
For description, see NES 111/112.

AS&RC 113/212(1106/2101) Intermediate Arabic I and II (also NES 113/2103/2200)
Fall/spring. 4 credits. AS&RC 212 & satisfies Option 1. M. Younes.
For description, see NES 113/210.

AS&RC 121/122(1108/1109) Introduction to Yoruba I and II
Fall/spring. 4 credits. A. Ademoyo.
A two-semester beginner's course in Yoruba Language and Culture. Organized to offer Yoruba language skills and proficiency in speaking, reading, listening, writing, and translation. Focus is placed on familiar informal and formal contexts, e.g. home, school, work, family, social situations, politics, etc. Course uses Yoruba oral literature, proverbs, rhetoric, songs, popular videos, and theatre, as learning tools for class comprehension. First semester focuses on conversation, speaking and listening. Second semester focuses on writing, translation and grammatical formation. Through the language course students gain basic background for the study of an African culture, arts, and history both in the continent and in the diaspora. Yoruba language is widely spoken along the west coast of Africa and in some African communities in diaspora. Yoruba video culture, theatre, music, and arts have strong influence along the west coast and in the diaspora.

AS&RC 123(1110) Intermediate Yoruba I
Fall. 4 credits. A. Ademoyo.
The intermediate level course covers the development of the main language skills, reading, writing, listening, and conversation. The course deepens the development of correct native pronunciation, the accuracy of grammatical and syntactic structures, and the idiomatic nuances of the language. Students who take the course are able to (i) prepare, illustrate and present Yoruba texts such as poems, folktales, advertisements, compositions, letters, (ii) read Yoruba literature of average complexity, (iii) interpret Yoruba visual texts of average difficulty, (iv) comprehend Yoruba oral literature and philosophy—within the context of African oral literature and philosophy—at basic complexity. Through the Yoruba language students appreciate African oral literature and philosophy. The primary textual media are Yoruba short stories, poems, short plays, films, songs, and newspapers.

AS&RC 124/125(1112/1113) Elementary Twi/Akan I and II
Fall/ spring. 4 credits. Faculty.
A two-semester beginner's course in Twi/Akan language and culture. Twi/Akan is a major West African language spoken in Ghana, Côte d'Ivoire, and parts of Togo and Benin. This is an elementary course which introduces students to the basic structures of the language which are applied to rapidly develop the primary speaking, reading, and writing skills of the Twi/Akan people. The class will also explore traditional and contemporary cultures of Twi/Akan people.

AS&RC 131(1100) Swahili
Fall. 4 credits. Language lab times TBA. A. Nanji.
Beginner's Swahili. Part I—Grammar for speaking, reading, and writing. Requires no knowledge of language. Swahili is spoken in the East and Central parts of Africa.

AS&RC 132(1101) Swahili
Spring. 4 credits. Prerequisite: AS&RC 131. A. Nanji.
Continued study of the basic grammatical formation of the language and the introduction of reading material ranging from songs to short stories. A great many drills are used in this course to help develop the student's comprehension of the language. Swahili tapes are used during all of these sequences.

AS&RC 133(1102) Swahili
Fall. 4 credits. Prerequisites: AS&RC 131 and 132. A. Nanji.
Advanced study in reading and composition.

AS&RC 134(1103) Swahili
Spring. 4 credits. Prerequisite: AS&RC 133. A. Nanji.
Places more emphasis on the development of reading ability and the acquisition of writing skills. Students are expected to read and comprehend selected Swahili stories and write compositions on chosen topics. Ample consideration is given to oral practice in the classroom.

AS&RC 140/141(1114/1115) Elementary Zulu I and II
Fall/spring. 4 credits. Faculty.
Zulu, known by native speakers as IsiZulu, is one of the 11 official languages of South Africa. Out of the four Nguni languages (Zulu, Xhosa, Swati, and Ndebele), Zulu is the most widely spoken. The advantage of learning IsiZulu is that it forms the basis for understanding the other Nguni languages. This is a two-semester course which introduces students to the basic structures of the language which are applied to rapidly develop the primary speaking, reading, and writing skills of the Zulus. The class will also explore traditional and contemporary cultures of the Zulu people.

AS&RC 171(1600) Black Families and the Socialization of Black Children (SBA)
Fall. 3 credits. L. Wilson.
Examination of the evolution of the Black family from its roots in Africa, the evolution of family forms in the impact of social change, and a consideration of the literature stressing family and child well-being. Among the major topics considered are male/female relationships, childbearing and parental roles, the extended family, economic and health issues. The component of the course focusing on youth primarily covers child and adolescent development.

AS&RC 191(1300) African: The Continent and Its People @ (HA)
Fall. 3 credits. L. Edmondson.
Introductory interdisciplinary course focusing on Africa's geographical, ecological, and demographic characteristics; indigenous institutions and values; the triple cultural heritage of Africanity, Islam, and Western civilization; main historical developments and transitions; and contemporary political, economic, social, and cultural change. Africa's ties with the United States (from trans-Atlantic slavery to the present), its impact on the emerging world order, and its contribution to world civilization are also explored.

AS&RC 202(2100) Swahili Literature @ (LA)
Fall. 4 credits. Satisfies Option 1. Prerequisite: AS&RC 134. A. Nanji.
Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

AS&RC 203(1111) Intermediate Yoruba II @
Spring. 4 credits. Satisfies Option 1. A. Ademoyo.
The Intermediate Yoruba II is a follow-up to Intermediate Yoruba I. It is a fourth semester Yoruba Language course. The course assists students to acquire advanced level proficiency in reading, speaking, writing and listening in Yoruba language. Students are introduced to grammatical and syntactic structures in the language that will assist them in describing, presenting, and narrating information in the basic tenses. At the end of the course, students will be able to listen to, process and understand programs produced for native speakers in media such as television, radio, films etc. They will be able to read and understand short stories, novels, plays written for native speakers of the language.

AS&RC 205(2300) African Cultures and Civilizations I @ (CA)
Spring, summer. 3 credits. A. Belker.
Concerned with the peoples of Africa and the development of African cultures and civilizations from the earliest times to the present day. Focuses on the near modern civilizations of Africa south of the Sahara, and the ancient civilizations of Egypt and the Nile Valley, together with their contributions to the development of the major world civilizations. Also deals with the sociopolitical organization of African societies, technology and cultural systems, cross-cutting ties, rites of passage, gender relations, and arts (including music, dance, folklore, architecture, sculpture, painting, and body decoration).

AS&RC 212(2101) Intermediate Arabic II (also NES 210[2200]) @
Spring. 4 credits. M. Younes.
For description, see NES 210.

AS&RC 231(2601) Afro-American Social and Political Thought (SBA)
Spring. 3 credits. J. Turner.
This is an introductory course that reviews and analyzes the major theoretical and ideological formulations developed and espoused by African Americans in the struggle for liberation. We focus specifically on the political philosophy and historical significance of Malcolm X, and the work and movement of Marcus Garvey, as the prime movers of nationalism and pan-Africanism among Black people in this century. Such themes as slave resistance, nationalism, Pan-Africanism, emigration, anti-imperialism, socialism and international colonialism, and the political and social values of Black women are discussed. Black political thought is viewed in its development as responses to concrete conditions of oppression and expression.
436 ARTS AND SCIENCES - 2006-2007

AS&RC 241(2303) Riot and Revolution in 19C Africa (also HIST 241(2410) & # (HA)
Fall. 4 credits. S. Greene.
For description, see HIST 241.

AS&RC 256(2303) The Past and Present of Pre-colonial Africa (also HIST 255(2550))
Spring. 4 credits. S. Greene.
For description, see HIST 255.

AS&RC 277(2504) Literatures of the Black Atlantic (also ENGL 277(2770))
Spring. 4 credits. D. Woubshet.
For description, see ENGL 277.

AS&RC 290(2602) The Sociology of the African-American Experience (SBA)
Fall. 3 credits. J. Turner.
This is an introductory course to the field of Africana Studies. It assumes a historical/sociological approach to the examination of the African-American experience. The course surveys the African beginnings of humankind and the classical role of Black people in world civilization and focusing on the early ancestry.
The course treats issues in the humanities, social sciences, and history. The course is required for all undergraduate students majoring at the African Center.

AS&RC 308/312(3100/3101) Advanced Intermediate Arabic I and II (also NES 311/312(3201/3202))
Fall/spring. 4 credits. AS&RC 308 satisfies Option I. M. Younes.
For description, see NES 311/312.

AS&RC 310(3501) Introduction to African Art (also ART H 378(3501)) @ (LA)
Fall. 3 credits. S. Hassan.
Survey of the visual art and material cultural traditions of sub-Saharan Africa. Aims at investigating the different forms of visual artistic traditions in relation to their historical and sociocultural context. Explores the symbolism and complexity of traditional African art through the analysis of myth, ritual, and economy. Emphasizes in-depth analysis of particular African societies to examine the relationship of the arts to indigenous concepts of time, space, color, form, and sociopolitical order. Also explores new and contemporary art forms with major socioeconomic changes and processes of assimilation and acculturation. These include tourist art, popular art, and elite art.

AS&RC 311(3600) Government and Politics in Africa (also AS&RC 504(6201)) SBA
Spring. 3 credits. A. Mazrui.
This course deals with power and political participation in Africa. Topics include: the colonial background and its political consequences; the pre-colonial continuities in the political thought; ethnicity and allegiance in the African polity; and the monarchical tendency in African political culture. Discussion covers a spectrum of topics from the warrior tradition to the military organization, from the colonists to presidential gerontocracy, from the sage tradition to intellectual meritocracy. Other major topics include class versus ethnicity in African politics; the one-party versus the multiparty; economic versus socio-economic ideologies; the gender question in African politics; the soldier and the state; and the African political experience in a global context.

AS&RC 312(3101) Advanced Intermediate Arabic II (also NES 312(3202))
Spring. 4 credits. D. Bakhrir.
For description, see NES 312.

AS&RC 365(3302) West Africa and West: 1450-1850 (also HIST 365(3650))
Fall. 4 credits. S. Greene.
For description, see HIST 365.

AS&RC 375(1603) Black Child and Adolescent Development (also HD 375(3750)) (SBA)
Spring. 3 credits. L. Wilton.
This course will survey Black child and adolescent development and focus on conceptual and theoretical aspects of psychological development within an African Diasporic context. In particular, we explore how Black culture and Black communities have been instrumental in shaping the lives of Black youth. Within this context, we will focus on the psychological, biological, and sociocultural factors relating to Black childhood and adolescent development.

AS&RC 394(3204) Anthropology and the African Diaspora (also AM ST 384(3204), ANTHR 386)
Fall. 4 credits. W. Battle-Baptiste.
The primary objective of this course is to introduce students to the African Diaspora through the works of anthropologists of African descent. In the early twentieth-century anthropologists were pioneers in the field of Black intellectuals to celebrate African heritage, shape an ethnic identity, and fight for racial equality in the United States. The work of many of these trained anthropologists have blurred the boundaries between social science and art, folklore and fiction, ethnography and autobiography, and social analysis and journalism. This course will highlight the classical works of pioneers such as W. E. B. DuBois, Zora Neale Hurston, Katherine Dunham, St. Claire Drake, and Ellen Irene Diggins as anthropologists and emphasize their unique perspectives of particular points in the African Diaspora, such as Northern urban centers of the U.S., Haiti, and Cuba. We will then explore and reflect on the impact these pioneers have on practitioners of African Diaspora anthropology today.

AS&RC 396(3204) Arkeo and the African Diaspora
Spring. 3 credits. W. Battle-Baptiste.
This course is a comparative survey of the institution of slavery in the Americas from the sixteenth through the nineteenth-century. We will examine major themes, ideas, and discussions current in African Diaspora archaeology. An interdisciplinary perspective will be employed through readings, lectures, and discussions pertaining to the archaeology, ethnography and history of slavery at different points in the African Diaspora. These kinds of interdisciplinary approaches, complemented with historical documentation and oral history accounts, are essential for a more thorough interpretation of the African experience in the New World. We will also explore the recent trends in African Diaspora Archaeology and current dialogues between archaeologists working in West Africa, the Caribbean, South America and the United States. There will be a comparative analysis of plantation economics and issues related to society, culture, resistance, and identity formation.

AS&RC 404(4200) Afrocentricity: Paradigm and Critical Readings @
Fall. 4 credits. A. Bekerie.
What is Afrocentricity? It is a theoretical framework designed to study and interpret the histories and cultures of peoples of Africa and Afric經 descent by locating them at the center of their experiences. In other words, it is a method of knowing the life experiences of African peoples from the inside out. The course examines—through the writings of Asante, Keto, Clarke, Jean, Myers, Amin, Mazrui, Gates, Apagya, Richard Wurmbrand, and Thiong'o—the conception and depth of the paradigm, its relevance in the production and utilization of knowledge, particularly emancipatory knowledge, the history of the paradigm, and the debate it generates among a wide range of thinkers and scholars.

AS&RC 408(4604) Exhibiting Cultures (also AS&RC 608(6508), ART H/AM ST 408(4508), ART H 608(6508))
Fall. 4 credits. C. Finley.
For description, see ART H 408.

AS&RC 410(4300) African American Politics (HA)
Fall. 4 credits. J. Turner.
The central thesis of African-American politics has been its movements for political change and democratic access and human rights. This development since the seventeenth century is a complex political legacy. This course conducts a close study of African-American political practice and theoretical analysis of the American political system. Implications of the political systems may be compared to participation by Black people are analyzed. Critical historical stages in the presence of Black people are examined. The development of electoral offices in federal and statewide politics in critical industrial centers, as well as rural hamlets, center the course.

AS&RC 419 Transnational Method: Then and Now (also S HUM 419)
Fall. 4 credits. M. Seigel.
For description, see S HUM 419.

AS&RC 420(4605) Public Policy and the African-American Urban Community (SBA)
Spring. 4 credits. J. Turner.
The socio-economic conditions of the African-American urban community are the central focus of the course. Development models are explored in relationship to the social needs of the African-American population. The changing configuration of internal organization of the African-American community nationally is examined.
AS&RC 427 Caribbean Popular Literature (also S HUM 423)  
Spring. 4 credits. B. Edmondson.  
For description, see S HUM 423.

AS&RC 435(4502) African Cinema (also ART H 478(4578) @ (LA))  
Spring. 4 credits. S. Hassan.  
This course offers an overview of African cinema and filmmaking. It surveys historically the evolution of African cinema from its early days to the present. Through screening of selected African films, different trends within African cinema will be explored, such as "Return to the Sources" and the rediscovery of the pre-colonial past; the "Social Realist" narrative and critique of post-independence Africa; reconstructing the story of colonialism from the perspective of the colonized; and the entertainment genre. Techniques, styles, and aesthetics of African cinema will also be discussed.

AS&RC 442(4305) To Be Enslaved (also HIST 442(4421))  
Spring. 4 credits. S. Greene.  
For description, see HIST 442.

AS&RC 451(4600) Politics and Social Change in the Caribbean @ (SBA)  
Fall. 4 credits. L. Edmondson.  
Study of the historical, geostrategic, political, economic, and social (including racial and cultural) forces affecting the domestic and international relations of Caribbean societies. Special attention is given to conflicting definitions and perceptions of the Caribbean; containing theories of Caribbean social structure and models of development, the continuing salience of struggles for change and transformation; prospects of regional integration; and Caribbean challenges to the global system, especially with regard to the region's relations with the United States and the rest of the Third World in the context of the North-South cleavage.

AS&RC 453(4204) The Archaeology of Slavery (also AM ST 453(4204), ARKEO 453(4253), ANTHR 453(4253) @ (CA))  
Fall. 4 credits. W. Battle-Baptiste.  
Material culture and the built environment not only reflect human behavior, but also help archaeologists to recognize the functional and symbolic dimensions of people experiencing life within specific cultural spaces. This seminar is an exploratory effort to provide interdisciplinary methods for students engaged in the research and analysis of African American life and history. This course will also address the meaning and significance of how material culture enhances the interpretation of black cultural production and African Diaspora theory.

AS&RC 463(4201) Islam in Africa and its Diaspora (CA) (also NES 471(4710), AFR 471(4710))  
Fall. 4 credits. A. Mazrui.  
It has been estimated that one-third of the Muslim population of the world is in Africa and the African Diaspora. This course addresses the historical dimension of Islam in the Black experience examining Global Africa as a whole. Within the African continent, Islam is part of the triple religious heritage, which includes rivalry with Christianity and co-existence with African indigenous religions. In the Americas, Islam is up against Western secularism. We are concerned with how Islam has affected the politics and cultures of the African peoples worldwide, issue of slavery and Islam, and the interaction between Islam and contemporary ideologies of socialism, nationalism and race consciousness in the Black experience.

AS&RC 468-469(4900-4901) Honors Thesis  
468, fall; 469, spring. Prerequisite: permission of AS&RC director of undergraduate studies. Africana Center faculty.  
For senior Africana Studies majors working on honors theses, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

AS&RC 475(4301) Black Leaders and Movements in African-American History (LA)  

AS&RC 476(4606) The Family and Society in Africa (also SOC 476) @ (SBA)  

AS&RC 479(4602) Women and Gender Issues in Africa @ (SBA)  
Spring. 4 credits. N. Assie-Lumumba.  
There are two contrasting views of the status and role of women in Africa. One view portrays African women as dominated and exploited by men. According to another view women have a favorable social position in Africa: indigenous ideologies consider women to be the foundation of society; they are economically active and independent and they have an identity independent of men. In this seminar we discuss the status and role of women in Africa historically as well as in the contemporary period. Topics include women in non-westernized/colonial societies; the impact of colonial policies on the status of women; gender access to schooling, participation in the economy and politics; women and the law; women and health issues; gender issues in southern Africa; feminism and feminism; the United Nations Decade of Women; and the four World Conferences on Women (Mexico 1975, Copenhagen 1986, Nairobi 1985, and Beijing 1995).

AS&RC 484(4603) Politics and Social Change in Southern Africa @ (SBA)  
Spring. 4 credits. L. Edmondson.  
Focuses on the legacies of apartheid and the challenges of transformation and post-apartheid society in South Africa. Topics include the rise and decline of apartheid; the historical continuity of Black resistance against racism; women under, against, and after apartheid; South Africa's relations with its neighbors, geo-political, economic, and racial dimensions of the American connection; politics of negotiation and transition to majority rule; prospects for stability, democracy, and equality; and South Africa's new role in the African continental and global arenas. Instructor's lectures are supplemented by films and class discussions.

AS&RC 490(4302) Nile Valley Civilization: Ethiopia, Nubia, and Egypt @ (NA)  
Spring. 4 credits. S. Hassan.  
Focuses on Nile Valley civilizations and their contributions to African and world history. Since natural and human resources provide the foundation for civilizations, the course also examines the ecological and cultural compositions of the river. Concentrates on the Aksumite civilization of Ethiopia, Nubian civilizations of the Sudan, and the Kemetic civilizations of Egypt. Uses archaeological, literary, oral, biological, and textual sources to study civilization centers along the Nile. Students discuss civilizations as artifacts that have material, spiritual, social, and philosophical dimensions. Students are introduced to the Ethiopic writing system as a practical lesson in the conception and understanding of aspects of African civilizations.

AS&RC 498-499(4902-4903) Independent Study  
498, fall; 499, spring. Africana Studies faculty.  
For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

AS&RC 502(6600) Education and Development in Africa  
Spring. 4 credits. N. Assie-Lumumba.  
Human capital theory establishes a positive and linear relationship between formal education and individual productivity and socioeconomic attainment and economic growth and development of nations. While enjoying considerable popularity in industrial and developing countries, including African countries, education has also been perceived as a hindrance to development. The concept of human capital and paradigms of development including modernization, dependency, and Third World Forum are first introduced. Specific issues discussed include schooling and nonformal education; the role of primary, secondary, and higher education in development; and language, access, output, and outcome based on social class, ethnicity, race, and gender. Employment, migration and international brain drain, the information and communication technologies, indigenous knowledge systems, and the role of higher education in regional and international cooperation are also examined.

AS&RC 503(6508) African Aesthetics (also ART H 571(5571), VISST 503(5030))  
Fall. 4 credits. S. Hassan.  
The goal of this course is to investigate in depth the principles of aesthetics and philosophy of African arts. The course offers a critical survey of the different writings and the growing body of research on this relatively new area of inquiry. The objectives of the course are to review how African aesthetics have been studied to date, to provide a critical analysis of the different approaches to the subject and related issues, and to suggest future directions of research. In-depth analysis of particular African societies is used to examine the relationship of arts and aesthetics to indigenous concept of time, space, color, form, and sociopolitical order. In addition, issues related to African aesthetics
and arts such as style, gender, class, and social change are also explored.

**AS&RC 504(6201) Political Change in Africa (also AS&RC 311[3600])**

Spring. 4 credits. A. Mazrui.

The study of African can be approached dialectically (focusing on the tension between opposing forces) or thematically (focusing on themes of experience). This course borrows from both these approaches in their class assignments and examinations students are free to use either approach. The first approach explores the dialectic between continuity and change; tradition and modernity, sub-regional and continental Pan-Africanism; crisis of the African state; and Africa in World Politics.

**AS&RC 506(6500) Contemporary African Diaspora Art (also ART H 506[5505])**

Spring. 4 credits. C. Finley.

Since the 1950s, projects of black liberation and empowerment have influenced the work of African Diaspora artists in the black Atlantic. Pivotal historic events, such as the Civil Rights Movement, the dismantling of colonial rule in Africa and the Brixton race riots in England, have urged black artists to recognize the issues of memory, identity, history and belonging. This course considers those artists who trace a visual genealogy of the African Diaspora and work in what has been identified as a practice of remembrance. The focus is on artists working after 1960, but students also study the roots of this tradition in the beginning of the 20th century and in earlier periods.

**AS&RC 598-599(6900-6901) Independent Study**

598, fall; 599, spring. Variable credit. Prerequisite: graduate standing. Africana Studies faculty.

**AS&RC 601-602(6902-6903) Africana Studies Graduate Seminar**

601, fall; 602, spring. 4 credits. Africana Studies faculty.

Designed for first-year AS&RC graduate students. The seminar is coordinated and taught by three or four faculty members per semester. Each participating faculty member is responsible for a topical segment of the course related to her or his areas of specialization or an area of interest pertaining to theory and methodology of Africana Studies.

**AS&RC 608(6508) Exhibiting Cultures (also AS&RC 463[4204], ART H 408[4508], ART H 608[6508])**

Fall. 4 credits. C. Finley.

For description, see ART H 608.

**AS&RC 612(6203) Gender and Slavery in the Americas (also FGSS 622[6220])**

Spring. 4 credits. W. Battle-Baptiste.

This course provides an introduction to some of the main controversies and debates associated with slavery and slave societies in the Americas. We will seek to place New World African slavery as it related to women and place them in our understanding of African slavery thereby attempting to engender traditional notions of slavery in the Americas. By taking a historical approach, we will explore how, in various ways and specific places, the production and representation of difference as a mode of subordination was forged and resisted in the context of slavery and colonialism. We will explore the intersectionality of race, class, and genders as multiple sites of oppression experienced by enslaved African people in the United States, the Caribbean, and Brazil. This course also critically engages the ways in which gendered approaches raise new questions and reformulate traditional notions of the impact of slavery on African peoples in the New World. Through the use of film, literature, history and anthropological theory, we will address larger issues of kinship and the black family, community life, sexual exploitation, collective resistance, women in the plantation economy, and self-expression as transformative strategies used by enslaved women to survive slavery and positively contribute to black cultural production.

**AS&RC 615(6604) Psychology of Black Identity (also FGSS 615[6150], HD 615[6150])**

Spring. 4 credits. L. Wilton.

This course will provide students with an opportunity to examine the psychology of Black identity with a focus on critical works in this area (i.e., Daryl Michael Scott's *Contemporary Social Psychology of Race and Black Power Movements*, critical work on Black identity began to (re)emerge in the field of Black psychology. Through the development of Nigrescence, or the developmental process of Black identity focused on a Black self-hatred/deficit paradigm. With the advent of socio-historical and -political movements (i.e., Civil Rights and Black Power Movements), critical work on Black identity began to (re)emerge in the field of Black psychology. Through the development of Nigrescence, or the developmental process of Black identity theory has moved in the direction of exploring how Black identity influences Black people's perceptions, mental health, and behavior. In this course, students will examine a range of topics including theorizing Black identity in the African Diaspora; conceptualizing the psychology of Black identity in historical perspective; the intersection of Black, gender, and queer identities; Black identity and the psychology of Nigrescence; Black aesthetics; the impact of Black identity on the identity and culture for Black youth.

**AS&RC 620(6602) Black Communities and Politics and Health (also FGSS 621[6210], HD 622[6220])**

Fall. 4 credits. L. Wilton.

**The Major**

The major in American Studies, appropriate for a wide array of future professions, began as a program of coordinated study in the history, literature, and politics of the United States. These remain the core elements, but American Studies aims to be inclusive in its subject matter. Given the nation's diverse population and cultures, the program wants its majors to examine American experience in broad terms, drawing on the materials and methods of a variety of disciplines.

Students who contemplate becoming American Studies majors are encouraged to speak with the program director as early as possible to arrange for a major advisor.

All students majoring in American Studies must take a minimum of 12 courses selected from the American Studies roster. No more than six of these courses can come from any one discipline. Of the 12 courses at Roberts' Shattered Bonds: The Color of Child Welfare, Wesley Crichlow's Buller Men and Batty Bwoys: Hidden Men in Toronto and Halifax Black Communities. Building on a critical approach to the field of health, a critical emphasis will be placed on how power relations structure organizations and communities within their broader sociocultural, -political, -economic, and -cultural contexts. Students will engage in critical analysis and thoughtful reflection in exploring and challenging these values, perceptions, and biases related to health care, as well as a critique of service of micro- and macro sociopolitical processes that influence asymmetrical power relationships in Black communities (i.e., role of medical authority, development and professionalization of medicine).

**AS&RC 663(4205) Islam In Africa and Its Diaspora (also AS&RC 463[4201], NES 671[6710])**

Fall. 4 credits. A. Mazrui.

For description, see AS&RC 463.

**AS&RC 698-699(8900-8901) Thesis**

698, fall; 699, spring. Prerequisite: AS&RC graduate students. Africana Studies faculty.

**AKKADIAN**

See "Department of Near Eastern Studies."
least three must have a substantial focus on material before 1900, at least two must deal with American diversity (AM ST 109 and 110 are especially recommended), and at least one must be a 400 level seminar, either an American Studies 430 course or an appropriate substitute seminar at the 400 level (AM ST 500/501, taught in Washington, D.C., does not fulfill the seminar requirement though it counts as one course toward the major). Note: A single course may satisfy more than one of these requirements e.g., a course on Native Americans in the 1800s is both a course dealing substantially with pre-1900 material and one dealing with American diversity.

Although a good bit of freedom is encouraged in the selection of courses, American Studies majors, in consultation with their advisor, must define an area of concentration and complete six courses in that area. The area of concentration can be designed to fit the particular interests of a student, but it must include subjects in at least two disciplines. Possible areas of concentration include: “visual studies,” “cultural studies,” “race and ethnicity,” “legal and Constitutional studies,” “American institutions,” “class and social structure,” “the American environment.” Courses taken to satisfy the concentration may be used to fulfill other requirements for the major.

Students may find courses relevant to American experience that they wish to take but that are not on the American Studies course list. With their advisor’s approval, students may count two such courses toward fulfilling the major.

Honors

Candidates for honors must maintain an average of B+ in courses pertinent to the major and have taken at least one course in which they wrote a research paper. Normally, at the end of the junior year students who wish to write a senior honors essay must approach a member of the American Studies faculty and discuss their ideas for a project. With approval from the faculty member students may register in the fall of their senior year for AM ST 493, the honors essay tutorial. At the end of the fall semester, honors candidates meet with their advisor and a second member of the American Studies faculty to discuss their progress. If satisfactory, honors students complete their honors essays in the spring by enrolling in AM ST 494.

American Studies 430 Seminars

AM ST 430.5(4301) The Rabinor Seminar [also AAS 430(4301), ENGL 430(4303), HIST 448(4480)]

Spring. 4 credits. Prerequisite: permission of instructor. S. Wong.

The Rabinor Seminar explores the role of diversity in the formation of a distinct American tapestry. The specific topic varies each year, but the general subject is the promise and experience of pluralism. Topic for spring 2007: “The Stranger in American Literature.” Who, or what is a stranger? How is the category of the ‘stranger’ to be marked off from, for example, that of the foreigner, outsider, refugee, exile, wanderer, pariah, or barbarian? What is the history of the social function of the stranger in American life? What does this figure tell us about belonging or not belonging? How has the ‘stranger’ (across registers of race, class, sexuality, gender or nationality) figured in twentieth-century U.S.

AM ST 430.6(4300) The Milman Seminar

Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2007–2008. G. C. Altschuler.

AM ST 430.9(4308) American Political Culture From JFK to Bill Clinton

Fall. 4 credits. Limited to 15 students. Preference given to AM ST majors and seniors. N. Salvatores.

The course will examine the changes in American political culture across this forty year period. With a broad focus on the fluctuating frames of once dominant liberalism and an ever more powerful modern conservatism—and the impact of religious activism on both, we will also explore a series of specific issues at the center of these changes. Among these would be the role of social movements and the student movements of the 1960s, and reactions to them; the debates over abortion, the role of the federal government, and the direction of American foreign policy; and the re-emergence of an evangelical impulse in political discourse and its impact on liberal as well as conservative thought. Class discussions of that week's book, a series of short essays, and a research paper selected in consultation with the professor constitute the requirements.

AM ST 430.10(4309) The Cinema and the American City (also FILM 430(4300), VISST 430(4630))

Fall. 4 credits. Limited to 15 students. Priority given to AM ST majors and seniors. S. Haenni.

The emergence of the cinema in the late-nineteenth century coincided with the emergence of a new kind of metropolis, characterized, among other things, by new traffic systems (elevated train, subway, automobile), new racial, ethnic, and sexual regimes, and the cinema was inevitably affected by the ways in which the city developed, while at the same time it also made the city legible. In this course, we will examine how American cities and towns have been represented in film. We will also explore specific issues, as, for instance, musical revivals, and the role of the federal government, and the direction of American foreign policy; and the re-emergence of an evangelical impulse in political discourse and its impact on liberal as well as conservative thought. Class discussions of that week's book, a series of short essays, and a research paper selected in consultation with the professor constitute the requirements.

AM ST 230(2760) Survey of American Film (also FILM 276[2760], VISST 230[2300]) [LA]
Focusing mostly on Hollywood film, this course surveys some major developments in and approaches to 20th-century American cinema. We trace changes in film aesthetics and film style, the development of the American cinema as an institution that comprises an industrial system of production, social and aesthetic norms and codes, and particular modes of reception. The course introduces methodological issues in American film history—especially questions of narrative, genre, stardom, and authorship—and focuses on the ways films shape gender, race, class, ethnic, and national identities. Screenings include work by D. W. Griffith, John Ford, Howard Hawks, Orson Welles, Vincente Minnelli, Robert Altman, Charles Burnett, Spike Lee, and others and are supplemented by readings in film criticism and history.

AM ST 275(2750) The American Literary Tradition (also ENGL 275[2750])
N. Waligora-Davis.
The problem of an American national literature is explored through the reading, discussion, and close analysis of texts across the range of American literary history. Not a survey, this course focuses on the relations of the texts to each other, the shaping of national identities in those relationships, and the assumptions about history, language, and the self that underlie them.

AM ST 348(3480) Film Noir (also FILM 348[3480], VISST 348[3480]) [LA]
Spring. 4 credits. Recommended: some course work in film. S. Haenni.
At the close of World War II, the French coined the semester "film noir" to describe a new, "dark" and "gloomy" set of Hollywood films that were populated by femmes fatales, criminal gangs, private eyes, and lovers on the run, and that centered on issues of violence, crime, paranoia, betrayal, pessimism, and self-doubt. Deriving from hard-boiled detective fiction, and influenced by German expressionist cinema, film noir has now become one of the most acclaimed genres in Hollywood film. In this course we explore both the stylistic characteristics and thematic and cultural contexts of film noir. We examine the history and function of "noir" as a critical term; the evolution of noir style and noir narratives, the influence of hard-boiled fiction. We investigate how film noir articulates anxieties about postwar masculinity and about the sexual and social roles of women; how it popularizes psychology; how it portrays the city as an “urban jungle” and how it represents a response to fears about communism and the atomic bomb. Screenings include major studio features such as Double Indemnity and Laura, B-pictures such as Detour and Gun Crazy, and "neo-noirs" such as Chinatown and Devil in a Blue Dress. The discussion of films is guided by readings in film criticism and history.

AM ST 326(3031) Imagining America: Race and National Fantasy in European Travel Writing from De Tocqueville to Baudrillard (also COM L 341[3410], GOVT 303[3031], FRLIT 324[3240]) (CA)
Fall. 4 credits. D. Rubenstein. Addresses 19th- and 20th-century European travel writing about America from Alexis de Tocqueville’s landmark work, Democracy in America, to Jean Baudrillard’s polemical America and Umberto Eco’s Travels in Hyperreality. Concerned with the question of what America, as both “utopian” ideal and as a living example, represents for the European philosophical voyager. For example, what role does national fantasy play in the encounters revealed in Julia Kristeva’s excursus to American universities in The Samourai or in Simone de Beauvoir’s guided (by Richard Wright) tour as recounted in her diary America Day by Day? Also discusses Francois-René de Chateaubriand’s René and Atala as a literary limit case of intercultural exchange. Also considers how race is implicated in these writings (e.g., de Tocqueville, de Beauvoir, Kristeva’s consideration of “the foreigner”) and the pertinence of American genres such as the captivity narrative for readings of Chateaubriand or de Tocqueville and Beauvoir’s writings on prison.

AM ST 124(1240) Democracy and Its Discontents: Political Traditions in the United States (also HIST 124[1241])
Summer. 3 credits. N. Salvatore.

An examination of democracy and its critics. The course explores the evolution of democracy in America, focusing on some of the dramatic and important episodes in American history. It considers the struggles over the emancipation of slaves in the 19th century and expanded rights for women and working people in the 20th...
This course explores the social and cultural roots of modern American conservatism and its rise to political prominence in the post-1945 era. We examine the movement's intellectual origins, social and cultural attitudes, and the political figures who presented conservatism's analysis to the public. The interplay between this revived political movement and a more liberal approach deeply grounded in the New Deal and its legacy receives attention as well.

For description, see HIST 212.]

For description, see ILRCB 306.]

For description, see ILRCB 303.]

The emergence of the cinema in the late 19th century coincided with the emergence of a new kind of metropolis, characterized by among other things, new traffic systems (elevated train, subway, automobile); new racial, ethnic, and sexual regimes; and new urban planning. The cinema was inevitably affected by the ways in which the city developed; while at the same time it also made the city legible.
In this course we examine how American cities and towns have been represented in film in different ways, as, for instance, musical symphonies, mysteries to be deciphered, or post-apocalyptic wastelands. We explore how gender, racial, ethnic, class, and sexual identities are negotiated in the modern, cinematic city. Screenings range from silent and early sound films, such as The Crowd and 1930s gangster films, to contemporary cinema, such as Do the Right Thing and Blade Runner: our viewings are guided by readings in film and urban theory and history.]
For description, see HIST 314.

AM ST 324(3240) Varieties of American Dissent, 1880 to 1990 (also HIST 324(3240))
Spring. 4 credits. N. Salvatore.
The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in critiquing contemporary society, as an example of American dissent? This course explores the varieties of economic, political, and cultural dissent in American between 1880 and 1990, and examines how understanding dissent in its specific historical context illuminates major aspects of American life and culture.

Spring. 3 credits. J. Peraino.
For description, see MUSIC 221.

AM ST 227(2091) SSP: The Immigrant Imagination (also ART H 209[2190], AAS 209[2090])
Fall. 4 credits. T. Tu.
For description, see ART H 209.
ANTHROPOLOGY

Anthropology is one of the most diverse disciplines in the university. Spanning human evolution, the development and heterogeneity of language and humans from early, and the diversity of cultures past and present, the field has broad scope, uses a variety of methods, addresses basic issues about human origins and human life, and maintains commitment to understanding social life and using this understanding to improve society. Anthropology is an ideal "liberal arts" major. It also serves as a major that, when well designed by the student with his or her advisor, provides a wide range of professional careers, e.g., law, medicine, foreign service, human rights, social services, international development, and business, among others.

Courses for nonmajors: Anthropology welcomes nonmajors into many of its courses. Unless prerequisites are explicitly stated, 200- and 300-level courses do not have formal prerequisites and can be taken by students without prior experience in anthropology. Such students are welcome in these upper-level courses. For additional information to assist nonmajors and others interested in anthropology, contact the departmental advisor. Students interested in furthering their study beyond the introductory level courses may consult the anthropology department web page (falcon.arts.cornell.edu/Anthro/).

The Major

The major is structured to provide both general grounding in three subfields of anthropology (sociocultural anthropology, anthropological archaeology, and biological anthropology) and detailed focus on a particular area of concentration. Areas of concentration include a wide variety of subjects within and between these three subfields. Topics ranging from identity politics and globalization to prehistory and human evolution can be pursued in courses focused on every major geographical region in the world. Upper level courses span a range of topical and theoretical issues related to religion, gender, economics, colonialism, democratization, prehistoric cultures, race, behavioral evolution, and conservation, to name a few.

No prerequisites are required to enter the anthropology major. Students should see the director of undergraduate studies to apply to the major and obtain an advisor. Majors prepare a short statement about their interests and goals for the major, and then meet with their advisor. Majors and advisors collaboratively build a program of study that reflects the students individual interests and the intellectual breadth of the field. Our goal is to provide a close and supportive advising relationship and a strong and coherent structure for the student's major.

A total of 38 credits are necessary to complete the major. Students are required to take at least one course at any level in the curriculum in each of the three subfields (cultural anthropology, archaeology, and biological anthropology). At least 5 courses must be at the 300 level or higher. All majors must take a 400-level seminar course in their senior year (420, 458, 460, and 463 are not seminar courses and do not fill the requirement). When warranted, the advisor is free to approve additional courses from other departments totaling up to eight credit hours, to contribute to the 38-credit requirement.

The 400-level seminar serves as a space where students can synthesize their undergraduate work in anthropology. Although individual classes vary to some extent, most meet weekly, are discussion-based, and are limited to 15 students. Collaboration is encouraged between students to pursue their individual interests, and some form of student presentation is a typical part of the course.

Study abroad and off-campus study programs:
The Department of Anthropology encourages students to consider a semester of study abroad or off-campus study as an integral part of the student's major concentration. The director of undergraduate studies serves as the anthropology study abroad advisor.

The Cornell-Nepal Study Program: The Cornell-Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified juniors, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students may receive 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major advisor, the anthropology study abroad advisor, and Cornell Abroad.

Honors

Honors in anthropology are awarded for excellence in the major, which includes overall GPA and completion of an honors thesis. Anthropology majors interested in the honors program should consult the chair of the Honors Committee in their junior year. To qualify for entrance into the honors program, a student must have at least a 3.0 GPA overall and 3.3 GPA in the major, and the consent of a faculty member in anthropology who will guide the honors thesis. After applying to the program and being admitted as a candidate by the Honors Committee, the student conducts research and writes a thesis. This thesis is evaluated by the faculty research advisor and two other faculty members. Honors (i.e., cum laude, magna cum laude, or summa cum laude) are awarded based on the quality of the thesis and the student's overall record. Honors candidates must take this process by consulting their major advisor about the honors program early in their junior year.

In addition, students may enroll in ANTH 483 (fall or spring) Honors Thesis Research.
To complete the thesis, students must enroll in 491 (fall or spring) Honors Thesis Write-up. Only ANTHR 483 may count toward hours for completion of the anthropology major requirements. The credit hours for these courses are variable. Grades for these courses are given by the faculty research advisor and they are based on performance during thesis research and writing.

Any honors candidate whose research directly involves working with human subjects must receive approval for the project from the Cornell University Committee on Human Subjects.

Special Programs and Facilities

Collections: the department has an extensive collection of archaeological and ethnological materials housed in the Anthropology Collections. A limited number of students can make arrangements to serve as interns in the Anthropology Collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (165 McGraw Hall) houses an extensive collection of materials for teaching purposes, including (1) human skeletal remains, (2) articulated skeletons and cranial casts of primates, and (3) casts of important fossils in the human lineage.

Independent Study: specialized individual study programs are offered in ANTHR 497. Topics in Anthropology, a course open to a limited number of juniors and seniors who have obtained permission and supervision of a faculty member. Undergraduates should note that many 600-level courses are open to them by permission of the instructor.

Colloquia: The Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:30 P.M. in 215 McGraw Hall. Faculty members from Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend. For more information about the anthropology major, see the director of undergraduate Studies or visit the Department of Anthropology web page (falconn.arts.cornell.edu/anthro/).

I. Sociocultural Anthropology

Sociocultural anthropology is rooted in the precise observation and rigorous analysis of human cultural capacities and human social practices, relations, and institutions. All sociocultural anthropology involves both inquiry into the diversity of human cultures (ethnography) and comparative analysis of human social dynamics (social theory). Historically, sociocultural anthropology specialized in the study of non-western peoples, but today there are few places and domains of human social life that sociocultural anthropologists do not study. To give a few examples, sociocultural anthropologists study nuclear weapons scientists in California, the transformation of state power in Russia, and the politics of development in India. They study how television producers in Egypt contribute to nationalism, the social effects of truth commissions in Guatemala and South Africa, and the emergence of new religious and social movements in Latin America. What distinguishes sociocultural anthropology as a field is its engagement with the full abundance of human lived experience and its integrated, comparative effort to make sense of the key processes shaping this experience. As such, sociocultural anthropology is an excellent, flexible choice of major. It teaches core critical, analytical, and expressive skills and important perspectives on human cultural creativity and social life that are widely applicable. Many majors have gone into careers as diverse as academic scholarship, activism, advertising, consulting, design, film, journalism, marketing, medicine, NGO—work, and politics and government.

ANTHR 102(1400) The Comparison of Cultures @ (CA)

Spring. 3 credits. A. Riles. Introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The culture survey course is based on the work of small-scale societies to those of state societies. Throughout the course, students attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural practices as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology as a comparative enterprise that pose different cultural systems in belief are developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 103(1401) The Scope of Anthropology

Spring. 1 credit. Does not satisfy major requirement to take two broad introductory courses. Pre- or corequisite: ANTHR 101 or 102. S-U grades only. Staff. Intended for majors or prospective majors in anthropology. Each week a different member of the faculty in anthropology at Cornell makes a presentation on the nature of his or her work within a major. The course explores the range of approaches, from those of small-scale societies to those of state societies. Throughout the course, students attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural practices as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology as a comparative enterprise that pose different cultural systems in belief are developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 200(1420) Cultural Diversity and Contemporary Issues @ (SBA)

Fall. 3 credits. M. Fiskejo. Introduces students to the meaning and significance of forms of cultural diversity for understanding contemporary issues. Drawing from films, videos, and selected readings, students are confronted with different representations of culture that portray cultures in various parts of the world and they are asked to critically examine their own prejudices as they influence the perception and evaluation of cultural differences. The course approaches cultural diversity historically, assuming the inseparability of economies, kinship, religion, and politics, as well as interconnections and dependencies between world areas (e.g., Africa, Latin America, the West). Among the issues considered are: cultural correctness and truth; nativism and ecological diversity; race, ethnicity, and sexuality; sin, religion, and war; and global process and cultural integrity.

ANTHR 205(2405) SPS: The Anthropology of Sport @ (CA)

Spring. 4 credits. Limited to 15 students. Sophomore writing seminar. S. Sangren.

Long overlooked by anthropologists, sport and recreation are increasingly recognized as important windows into culture. Sport can be approached from a number of directions—interpreted as a ritual; viewed as a spectacle of ethnic, regional, or national identity; seen as a metaphor for life; understood as a major industry. This course will consider these and other approaches to sport, encouraging students to bring their own involvements in sport to reflect not only upon sport itself but also upon the reflection that can illuminate cultural, psychological, and political dimensions of social life. Why, for example, do we take sport (and other forms of recreation) so seriously? Why do many of us apparently invest more passion in such pursuits than to live allegedly more serious activities? How is sport integrated into people's identities? Readings will draw from popular literature and media as well as academic writing from a variety of disciplines (psychology, sociology, history) in addition to anthropology.

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program. Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, models of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

ANTHR 210(2410) SPS: South Asian Diaspora (also AAS 210(2110)) (CA)

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program. Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, models of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

ANTHR 221(2721) Anthropological Representation: Ethnicities on Latino Culture (also LSP 272[2721], AM ST 221[2721]) (CA)

Fall. 3 credits. Next offered 2007-2008. V. Santiago-Briziarry.

ANTHR 228(2428) Slavery and Human Trafficking # (CA)

ANTHR 230(2730) Cultures of Native North America (CA)

Fall. 4 credits. B. Lambert.

Survey of the principal Eskimo and American Indian cultures north of Mexico. Selected cultures are examined to bring out distinctive features of the sociocultural organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.
ANTHR 232(2432) Media, Culture, and Society (SBA)
Fall. 3 credits. D. Boyer.
Introduction to understanding the relationship between media and culture from an anthropological perspective. The primary goal is to help students develop an ethnographic awareness of the complex factors influencing mass media production, representation, and reception. The course works toward this goal by studying how technological effects influence the representation and reproduction of cultural identities, how mass media representations mediate the negotiation of national identities and moralities, how institutional situations and social practices influence media production, and how state and market forces both create and restrict possibilities of media expression. A wide range of social and historical cases are covered by both reading and lectures. Course materials include print, visual, and electronic media. Assignments encourage students to engage the contemporary American media both analytically and critically.

ANTHR 246(2546) South Asian Religions in Practice @ (CA)
Fall. 3 credits. A. Willford.
This course offers an anthropological approach to the study of religious traditions and practices in South Asia (India, Pakistan, Sri Lanka, and Nepal). The course begins with a short survey of the major religious traditions of South Asia: Hinduism, Buddhism, Jainism, Sikhism, and Islam. We look to the development of these traditions through historical and cultural perspectives. The course then turns to the modern period, considering the impact of colonialism, nationalism, and globalization upon religious ideas and practices. The primary focus of the course will be the ethnographic study of contemporary religious practices in the region. We examine phenomena such as ritual, pilgrimage, possession, devotionalism, monasticism, asceticism, and revivalism through a series of ethnographic case studies. In so doing, we also seek to understand the impact of politics, modernity, diasporic movement, social inequality, changing gender roles and mass mediation upon these traditions and practices.

ANTHR 250(2450) The Anthropology of Food and Cuisine @ (CA)
Spring. 4 credits. J. Fajans.
You are what you eat! This course examines the way food is produced, prepared, exchanged, presented, and given meaning in cultures around the world. It examines the symbolism of specific foodstuffs. Who prepares food and how is it done? Who feeds whom and how are these relations expressed and valued? In addition to looking at these questions, we analyze ideas about commodification, how food is used in public contexts for presentation or exchange, and how food is a marker of gender, class, status, ethnicity, and identity. In addition to looking specifically at food, we analyze cultural ideas about gender, the body, and identity in terms of how these cultural patterns are produced and expressed through concrete activities like eating, fasting, and special diets. In this class we stress critical and comparative thinking about subjects we tend to take for granted.

ANTHR 260(2560) Japanese Society Through Film @ (CA)
Fall. 3 credits. H. Miyazaki.
This is an anthropological introduction to Japanese society through a critical investigation of a wide range of films from Ozu Yasujirō's classic films to Miyazaki Hayao's animated films. Topics of investigation include kinship and marriage, work and workplaces, gender and sexuality, bureaucracy, crime and legal culture, nationalism and nostalgia, and technoscientific utopia.

ANTHR 303(3703) Asians in the Americas: A Comparative Perspective (also AAS 303[3030]) @ (CA)
Spring. 4 credits. V. Munasinghe.
The common perception of ethnicity is that it is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have won repute as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, are the "Asians"? On what basis can we label "Asians" an ethnic group? Although there is a significant Asian presence in the Caribbean, the category "Asian" itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course examines the dynamics between, namely, ethnicity, by comparing and contrasting the multicultural experience of Asian populations in the Caribbean and the United States. Ethnographic case studies focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

ANTHR 304(3104) Questioning Kin, Queering Family (also FGSS 305[3050]) @ (CA)
Fall. 3 credits. L. Ramberg.
For description, see FGSS 305.

ANTHR 310(3410) Nationalism and Revivalism (CA)

ANTHR 314(3514) Learning in Japan @ (SBA)

ANTHR 316(3516) Power, Society, and Culture in Southeast Asia @ (CA)

ANTHR 320(3420) Myth, Ritual, and Symbol (also RELST 320[3720]) @ (CA)
Spring. 4 credits. A. Willford.
Examines how systems of thought, symbolic forms, and ritual practice are formulated and expressed in primarily non-Western societies. Focuses on anthropological interpretations of space, time, cosmology, myth, classificatory systems (e.g., color, totems, food, dress, kinship), taboos, sacrifice, witchcraft, sorcery, and rites of passage (birth, initiation, marriage, death). Examines both the roles of specialists (e.g., spirit mediums, curers, priests, ascetics) and nonspecialists in producing these cultural forms.

ANTHR 321(3421) Sex and Gender in Cross-Cultural Perspective (also ANTHR 3521, FGS 321[3210], FGS 631[6320]) @ (SBA)
Fall. 4 credits. K. March.
Introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. Examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definitions around the world.

ANTHR 323(3423) Kinship and Social Organization (SBA)
Spring. 4 credits. H. Lambert.
Much of this course is a survey of forms of the family, descent groups, and marriage systems. The role of age and sex in the social structure is also considered. The last part of the course is devoted to a history of the British and American family and to its fate in utopian communities.

ANTHR 325(3425) Anthropology of the University (SBA)

ANTHR 327(3427) Anthropology and the Environment
What is nature? Is it something objectively real or is it a culturally variable social construction? If other people do not share our ideas of nature, what does this say about concepts such as conservation or sustainable development? Because it reveals the culturally specific ways in which people engage with a world that is not fully of their making, Environmental Anthropology constitutes a privileged window onto such questions. Accordingly, we will examine these by exploring how different people—from sub-arctic hunters to autistic animal scientists—actually go about engaging with the nonhuman world. And, instead of just asking ourselves what constitutes nature, we will look to them for possible answers.

ANTHR 328(3428) Conflict, Dispute Resolution, and Law in Cultural Context (SBA)

ANTHR 335(3535) The Situation of China's Minorities: Anthropological Perspectives @ (CA)

ANTHR 337(3537) Gender, Identity, and Exchange in Melanesia @ (SBA)

ANTHR 339(3545) Peoples and Cultures of the Himalayas (also ANTHR 739[7545]) @ (CA)
A comprehensive exploration of the peoples and cultures of the Himalayas. Ethnographic materials draw on the lifeways of populations living in the Himalayan regions of Bhutan, India, Nepal, and Tibet. Some of the cultural issues to be examined through these sources include images of the Himalayas in the West, forms of social life, ethnic diversity, political and economic history, and religious complexity.

ANTHR 342(3542) Culture and Ecology in the Global Pacific @ (CA)
Fall. 4 credits. J. Fajans.
This course will examine the multitude of problems which Pacific Island nations face in their attempts to participate in the modern
world. We will look at tourism, logging, mining, global warming, independence movements, and migration in Melanesia, Micronesia and Polynesia.

ANTHR 344(3554) Male and Female In Chinese Culture and Society (also FGSS 344(3554)(SBA)) Fall. 4 credits. S. Sangren.

This course explores the culture of gender, sex roles, and domestic relations in late traditional and modern Chinese society. Readings and courses range from ethnographic descriptions of the dynamics of Chinese family life, kin relations, and socialization to representations of male and female in mythologies and ritual activities. The course also considers developments subsequent to political changes in China. Although the course's analytical focus is anthropological, readings will draw from the writings of historians and political scientists as well. A premise of the course is that understanding sex and gender in China is essential to understanding Chinese culture and its most fundamental values. The course also aims to introduce students interested in Chinese to techniques of anthropological analysis.

ANTHR 351(3451) Global Movements of Cultural Heritage (CA)

ANTHR 353(3453) Anthropology of Colonialism (also AIS 353(3530), AM ST 353(3453)) (CA) Fall. 4 credits. A. Simpson.

Examines the relationship between colonialism and anthropology and the ways in which the discipline has engaged this global process locally in North America. One of the aims of this course is to gain an appreciation of colonialism both as a theory of political legitimacy and as a set of governmental practices. As such, North America is reimagined in light of the colonial project and its technologies of rule such as education, law, policy that worked to transform indigenous notions of gender, relations and territory. This is done to appreciate the ways in which these forms of knowledge and practice advanced the settlement of space and place and both settled and unsettled peoples. This course is comparative in scope but is grounded within the literature from Native North America.

ANTHR 354(3754) Amazonia and Personhood

Why might people feed hallucinogens to their dogs before talking to them? Why were missionaries so easily convinced Amazonians of the existence of heaven but not hell? What transformations occur when an Amazonian politician dons a feather headdress in addition to a watch and a briefcase? What is it like to encounter a dead grandfather, now transformed into a jaguar, in the forest? All of these seemingly disparate examples are intimately related to Amazonian notions of personhood. As such, they challenge our own understandings of who or what counts as a person. Accordingly, in this course we will engage Amazonian ethnography to help us think through fundamental questions associated with what it means to be a person.

ANTHR 361(3461) Anthropology of Organizations (also ANTHR 661(6461))
Spring. 4 credits. D. Greenwood.

Organizations are at once economic/social/political/cultural entities and organizational studies are found in all these social science fields. Anthropology's approaches to the study of organizational behavior, cultures, and political economies approaches to organizations are holistic, integrative, multi-method and emphasize ethnographic fieldwork. This course emphasizes both the analysis of organizational and change-oriented strategies to transform organizations. Cases from manufacturing, service organizations, and educational institutions are used.

ANTHR 362(3462) Democratizing Research: Participation, Action, and Research (also ANTHR 662(6462)) (SBA)
Fall. 4 credits. D. Greenwood.

This course poses an alternative to distanted, "objectivist" social science by reviewing some of the many numerous approaches to socially engaged research. Among the approaches discussed are those centering on the pedagogy of liberation, feminism, the industrial democracy movement, and "Southern" participatory action research, action science, and participatory evaluation.

ANTHR 363(3463) Socialism (SBA)
Spring. 4 credits. J. Rigi.

The course deals with the theories and practices of socialism and post-socialism. The course has two main focuses: (1) to provide an understanding of the culture and societies of post-socialist societies with reference to their past; (2) to investigate critically the values and horizons of the contemporary utopian movements. Socialism and liberalism are the two major grand narratives of modernity. While liberalism, in various guises, has become an unquestionable dogma and its proponents represent it as the truth of human nature, the media and academia have declared socialism dead. Such a claim on socialism is contradicted by the following facts: (1) there is a strong desire for socialism among the dispossessed classes of the former Soviet Bloc; (2) the anti-globalization movement has put on its agenda some of the major values of socialism such as equality, justice, and freedom; (3) in some parts of the world, particularly in Latin America, parties that claim to be socialists have won elections. The course investigates the relevance of socialist values for the twenty-first century. This is an interdisciplinary course that will attract students from both the social sciences and the humanities.

ANTHR 366(3466) Introduction to Anthropological Theory (CA)
This seminar course is designed for anthropology majors to give them an introduction to classical and contemporary social and anthropological theory and to help prepare them for upper-level seminars in anthropology. The seminar format emphasizes close reading and active discussion of key texts and theorists. The reading list will vary from year to year but will include consideration of influential texts and debates in 19th, 20th and 21st century anthropological theory especially as they have sought to offer conceptual and analytical tools for making sense of human social experience and cultural capacities.

ANTHR 368(3468) Marx: An Overview of His Thought (also ANTHR 668(6468)) (SBA)

ANTHR 377(3777) The United States (also LSP/AM ST 3777(3777)) (CA) Fall. 4 credits. Next offered 2007-2008. V. Santiago-Irizarry.

ANTHR 379(3479) Culture, Language, and Thought (CA)
Spring. 4 credits. V. Santiago-Irizarry.

The relationship among culture, language, and thought has been a core concern in anthropology. Language and culture are commonly defined as processes that are public and shared yet they also operate within and upon subliminal experiential realms. In this course we shall examine how anthropologists have explored this relationship, which is engendered in the interaction between culture and language as parallel mediating devices for the constitution, interpretation, and expression of human experience.

ANTHR 382(3482) Human Rights, Cultural Rights, and Economic Rights (SBA)

ANTHR 384(3664) Africa in the Global Economy (also ANTHR 784(7684)) (SBA)

ANTHR 388(3488) Masks of Power and Strategies of Resistance and Subversion (also ANTHR 688) @ (SBA)
Fall. 4 credits. J. Rigi.

The aim of the course is to provide a broad theoretical and ethnographic orientation on various forms of power relations, strategies of resistance/subversion and the role of human agency in historical change. It will explore various concepts of power on both micro and macro levels, tracing their genealogies and looking comparatively at relevant ethnographies. Although a pillar of the course will be the comparative anthropology of state, it will also examine power relations in stateless societies. Various forms of state will be contrasted to each other on the one hand and to forms of political power in the stateless societies on the other. The course will also cover micro processes of power relations related to gender relations and body politics.

ANTHR 403(4403) Ethnicnogic Field Methods (also ANTHR 603(6403)) (SBA)

ANTHR 406(4406) The Culture of Lives (also FGSS 406(4060)) @ (CA)
Spring. 4 credits. K. March.

This seminar will look at persons, lives, cultures, and methods in anthropological life history materials. Throughout the seminar we will attend to the evolution of interest in, forms of, and uses for life history materials in anthropology, with special attention to differences in men's and women's lives and life (re)presentations.
I new studies. We read selected works of last analysis, is.

Operations is essential in developing a understanding ideology and its alienating theory, neoMarxist) on how best to conceive postmodernist, poststructuralist, practice-ethnographic case studies. We discuss other This course focuses on the linkages social, production, on the one hand, and are each society's particular social arrangements. These ideologies play an important role in social production, on the one hand, and are also products of social processes, on the other. This course focuses on the linkages between ideology and social production in readings drawn from social theory and ethnographic case studies. We discuss strongly diverging views (psychoanalytic, - postmodernist, poststructuralist, practice-theory, neoMarxist) on how best to conceive social processes. An integrating theme is that understanding ideology and its alienating operations is essential to developing a coherent understanding of what culture, in the last analysis, is.

ANTHR 420(4420) Gender Symbolism @ (CA)

ANTHR 413(4513) Religion and Politics in Southeast Asia [also ASIAN 413(4413)] @ (CA)
Spring. 4 credits. A. Willford.
This course explores how religious beliefs and practices in southeast Asia have been transformed in the combined forces of colonialism, nationalism, and globalization. By examining both diversity and resurgency in one of the world's most rapidly modernizing regions, we aim to understand the common economic, political, and cultural conditions that are contributing to the popularity of contemporary religious movements. At the same time, we also consider the unique ideological, theological, and cultural understandings behind different religions and movements. Through this process we also rethink conceptions of modernity.

ANTHR 420(4420) Development of Anthropological Thought [also ANTHR 720(7420)] @ (SBA)
Fall. 4 credits. Prerequisite: for undergraduates, two prior anthropology courses or permission of instructor. H. Miyazaki.
Examination of the history and development of anthropological theory and practice. Focuses on the differences and continuities among the various national and historical approaches that have come to be regarded as the schools of anthropology.

ANTHR 423(4523) Making History on the Margins: The China–SE Asia Borderlands [also ANTHR 723(7523)] @ (HA)

ANTHR 426(4426) Ideology and Social Production [also ANTHR 726(7426)] @ (SBA)
Spring. 4 credits. S. Sangren.
This course is premised on the notion that understanding social life requires understanding how social institutions are produced and sustained through time - that is to say, one must understand “society” as a process of production. By the same token, all cultures produce ideas or “representation” (e.g., about reality, nature, society, gender, authority) that serve to legitimize or validate each society’s particular social arrangements. These ideologies play an important role in social production, on the one hand, and are also products of social processes, on the other. This course focuses on the linkages between ideology and social production in readings drawn from social theory and ethnographic case studies. We discuss strongly diverging views (psychoanalytic, - postmodernist, poststructuralist, practice-theory, neoMarxist) on how best to conceive social processes. An integrating theme is that understanding ideology and its alienating operations is essential to developing a coherent understanding of what culture, in the last analysis, is.

ANTHR 428(4428) Deconstruction and Anthropology (CA)
Fall. 4 credits. J. Siegel.
Deconstruction offers a challenge to the idea of the study of the other and also suggests new studies. We read selected works of Jacques Derrida in particular alongside ethnographic studies of death, witchcraft and language.

ANTHR 429(4429) Anthropology and Psychoanalysis @ (SBA)

ANTHR 432(4432) Revolution (HA)
Fall. 4 credits. J. Siegel.
Revolution as we know it was born in France. Inflected further by the Bolshevik revolution, recent work in France and England has made the idea itself interestingly suspect. It is seldom any longer a source of hope built into a program of social action and is even ridiculed as bringing only disappointment if not catastrophe. And yet if the class basis of revolution has been questioned, scholars, at least, cannot yet throw the idea into the wastebasket. We will look first at the ideas underlying the notion and then at the anti colonial revolutions, in particular the Indonesian revolution, asking whether they deserve the name or should merely be called one more subclass of social action.

ANTHR 436(4436) Tourist Encounters in Tourist Spots (SBA)
Fall. 4 credits. J. Schooss.
The course examines tourism as a complex social setting in which a variety of encounters and exchanges occur. Using cases from Africa, Asia, the Caribbean and the US, we will examine tourism through the lenses of culture, economics and the environment. The course is organized as a seminar and will address such issues as: tourism as a strategy for economic development; eco-tourism, wildlife and environmental conservation and postcolonial traditions. The final portion of the course looks critically at the emergence of discourses such as participation, empowerment, social capital, civil society, and sustainability in mainstream development.

ANTHR 437(4437) Anthropology of Development [also ANTHR 737(7437)] @ (CA)
Fall. 4 credits. M. Welker.
This course provides an anthropological perspective on international development. After reading orthodox theories of development and considering them in historical context, we examine ethnographic accounts of postcolonial development that draw on political economy and poststructuralist traditions. The final portion of the course looks critically at the emergence of discourses such as participation, empowerment, social capital, civil society, and sustainability in mainstream development.

ANTHR 439(4439) Sovereignty and Biopolitics @ (CA)
Spring. 4 credits. M. Fiskejo.
This seminar course's starting point is Agamben's widely discussed ideas about "bare life" in relation to modern state sovereignty and to continuities with earlier "bare life" in relation to modern state sovereignty and to continuities with earlier. If Che Guevara were cruising across the Americas now, what would be seen? Using theoretical and ethnographic material, this course travels from the Southern Cone, through the Central American isthmus, Caribbean and Mexico—troubling pat distinctions between cultures), nation states, and trajectories of people, technologies and capital. We will consider mestizaje, indigeneity and ethnicity; diaspora, migrations and mobility; genocides, state violence and repression; sexuality, gender roles, kinismos, neo-colonialisms and neo-liberalisms; resistance, revolution and rights; and the commodification of life and labor. Stretching from the wastebasket. We will look first at the ideas underlying the notion and then at the anti colonial revolutions, in particular the Indonesian revolution, asking whether they deserve the name or should merely be called one more subclass of social action.

ANTHR 442(4442) Ethnographic Approaches to Studying Professionals and Institutions @ (SBA)

ANTHR 443(4452) Violence, Symbolic Violence, Terror, and Trauma in South Asia and the Himalayas [also ANTHR 642(6542)] @ (CA)
Fall. 4 credits. D. Holmberg.
This seminar will focus on violent conflict in South Asia. Key texts on social, ethnic, religious, and political violence in Sri Lanka, India, Nepal, and Pakistan as well as theoretical literature on violence, trauma, and human rights will provide the basis for general reassessment of the anthropological study of violence.

ANTHR 444(4444) God(s) and the Market @ (CA)

ANTHR 445(4445) Gift and Exchange @ (SBA)

ANTHR 450(4562) Europe [also ANTHR 750(7652)]
Fall. 4 credits. D. Boyer, D. Greenwood, and J. Rigi.
Rotating seminar dealing with diverse topics related to the anthropology of Europe. Examples are postsocialist transitions, the ethnographic reconsideration of international relations and institutions in Europe, integration in the West and disintegration in the East of Europe, immigration, regionalism, and ethnic conflict. Each year it is staffed by one of the three Europeanists in the Department of Anthropology—Dominic Boyer (post-Socialist transition), Davydd Greenwood (ethnicity and nationalism), and Jakob Rigi (post-Socialist capitalism). The course serves to balance the area curriculum of the department by adding Europe to our offerings. It also serves the Modern European Studies Concentration and the International Relations Concentration as an additional, much-needed offering at the upper levels. Because the topics and projects and the seminars may take more than one of these seminars.

ANTHR 452(4152) Latin America: Politics and Practice of Culture [also LAT A 452(4520)] @ (CA)
Fall. 4 credits. C. Howe.
If Che Guevara were traveling across the Americas now, what would be seen? Using theoretical and ethnographic material, this course travels from the Southern Cone, through the Central American isthmus, Caribbean and Mexico—troubling pat distinctions between cultures), nation states, and trajectories of people, technologies and capital. We will consider mestizaje, indigeneity and ethnicity; diaspora, migrations and mobility; genocides, state violence and repression; sexuality, gender roles, kinismos, neo-colonialisms and neo-liberalisms; resistance, revolution and rights; and the commodification of life and labor. Stretching from the wastebasket. We will look first at the ideas underlying the notion and then at the anti colonial revolutions, in particular the Indonesian revolution, asking whether they deserve the name or should merely be called one more subclass of social action.
ANTHR 455(4455) Anthropology in the Real World (SBA)
Spring. 4 credits. J. Schoess.
Designed to expose students to the range of ways and fields within which practitioners employ anthropological theory, methods and perspectives. Course format includes both seminar discussions and workshop sessions with invited speakers. Both the invited speakers and the discussion topics represent different broadly defined fields in which anthropologists practice. Through class discussion and writing, students are expected to carefully consider such issues as: research ethics, professional responsibility, the academic versus activist role, methodological practices, and the relationship between individual practitioners and the national, international, and organization contexts within which they work. Students produce a major research paper examining a particular field of "practical" anthropology of their interest.

ANTHR 475(4475) Governmentality, Citizenship, and Indigenous Political Theory (SBA)
Spring. 4 credits. A. Simpson.
This seminar explores the ways in which Indigenous peoples have theorized, deployed, critiqued notions of "nationhood", "citizenship" and "sovereignty" in order to articulate and claim rights to territory, to jurisdiction over their past. Our aim is to gain an appreciation of what these critical concepts mean in the literature of anthropology, political theory and Native American Studies as well as to examine the ways in which Indigenous peoples have theorized and critique state practices, maintain and construct their own modes of governance and mobilize politically to achieve these ends. This course is comparative in scope; literature and cases will be drawn from various sites but will dwell largely within Native North America.

ANTHR 476(4476) Semiotics Beyond the Social (also ANTHR 776[7476]) (CA)
Fall. 4 credits. E. Kohn.
Where do signs come from? Do they exist outside of cultural, social, and linguistic worlds? Most semiotic approaches confine the study of meaning to (primarily) human realms. By doing so, they fail to understand the role that representation plays in domains beyond the human (e.g., in biology) and the various ways in which signs can be entangled with materiality. As a result we are left with a sort of ontological dualism—a study of meaning separate from that of things. If we wish to understand the proliferation of technoscientific "hybrids," material culture, ecological crises, or human evolution, such a division is untenable. Much of social theory, even when it attempts to overcome this division, is still hampered by theories of representation that implicitly reproduce it. By contrast, we will explore a more promising representaional framework, which grows out of the work of the philosopher Charles Peirce. Throughout his life Peirce tried to understand the continuity that lies between the material and the meaningful. To get at this continuity we immerse ourselves in Peirce's system through close readings of carefully selected portions of his voluminous work. Our aims will be to understand Peirce's semiotics within the context of his writings on phenomenology, logic, pragmatism and to think about how we can apply Peirce to current challenges that social theory faces.

II. Anthropological Archaeology
Archaeological archaeology studies the diverse societies of the past using the material traces they left behind in the archaeological record. In addition to studying artifacts, archaeologists use unique methods to study the settings in which artifacts were produced and used by examining regional settlement patterns, the structure of sites and communities, the organization of activities, and ancient symbolism and social relations. The concerns of anthropological archaeology range from basic questions about continuity and change in the past, to application of hard science methods to date sites and determine the sources of artifacts, criticism of the uses to which the past is put in contemporary society, and perspectives of the archaeological record. Anthropological archaeology can be distinguished from other forms of archaeological research (such as Classical or Art Historical archaeology) based on its emphasis on holistically studying past cultural systems, and by the theories and approaches it shares with sociocultural and biological anthropology. There are numerous career opportunities for anthropological archaeologists, including work with museums, government agencies, and historic preservation groups in addition to academic employment. Private companies engaged in federally mandated cultural resource management (or CRM) archaeology employ anthropological archaeologists in the United States, and similar management programs exist in many other countries.

ANTHR 100(1200) Ancient Peoples and Places (also ARKEO 100[1200]) # (HA)
Fall. 3 credits. F. Gleach.
Broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ANTHR 203[2200] Early People: The Archaeological and Fossil Record (also ARKEO 203[2200]) # (HA)
Spring. 3 credits. T. Volman.
Survey of the archaeological and fossil record of human evolution. Highlights contributions by researchers from various disciplines as well as the discoveries that have enhanced the study of human evolution for more than a century. Stresses critical evaluation of evidence and interpretation. Demonstrations and films supplement the lectures.

ANTHR 215[2215] Stone Age Art (also ARKEO 215[2215]) # (CA)
Fall. 3 credits. T. Volman.
When did "art," however defined, appear during the human career, how was it produced and for what purposes? These are some of the questions we will investigate through a survey of the evidence from the analysis and interpretation of the earliest art. The course will cover a variety of finds from the Old World, including the well-known cave art of southwestern France and Spain. The student will consider art and decoration. The contributions of new analytical techniques and interpretive approaches are highlighted.

ANTHR 235(2235) Archaeology of North American Indians (also ARKEO 235[2235]) A/AM ST 235[2350] # (HA)
Spring. 3 credits. K. Jordan.
Introductory course surveying archaeology's contributions to the study of American Indian cultural diversity and change in North America. Lectures and readings examine topics ranging from the debate over when the continent was first inhabited to present-day conflicts between Native Americans and archaeologists over excavation and the interpretation of the past. Reviews important archaeological sites such as Chaco Canyon, Cahokia, Llamolka Lake, and the Little Bighorn battlefield. A principal focus is on major transformations in lifeways such as the adoption of agriculture, the development of political-economic hierarchies, and the disruptions that accompanied the arrival of Europeans to the continent.

ANTHR 242(2201) Early Agriculture (also ARKEO 242[2201]) # (HA)
Spring. 3 credits. N. Russell.
Throughout most of human history, people survived by hunting and gathering wild foods. The advent of food production is one of the most profound changes in prehistory. This course examines the current evidence for the appearance and spread of agriculture (plant and animal domestication) around the world. We will consider definitions of agriculture and domestication, the conditions under which it arises, the consequences for those who adopt it, and why it has spread over most of the world.

ANTHR 317(3217) Stone Age Archaeology (also ARKEO 317[3217])
Fall. 4 credits. T. Volman.
Survey of current approaches to the archaeological record of Stone Age peoples, from the earliest sites to those of recent times. Case studies are used to illustrate the nature of archaeological occurrences,
excavation procedures, and analytical methods. Multidisciplinary efforts to expand our knowledge of prehistoric lifeways and behaviors are a major concern of the course.

ANTHR 332(3232) Politics of the Past (also ARKEO 332(3232)) @ # (HA)
Fall. 4 credits. N. Russell.

Archaeology has never operated in a vacuum. This course examines the political context of the study of the past, and the uses to which accounts of the past have been put in the present. Archaeology is often implicated in nationalist claims to territory, or claims of ethnic, racial, or religious superiority. Museum exhibits and other presentations to the public always have an agenda, consciously or otherwise. Archaeologists are increasingly required to interact with descendant communities, often in the context of postcolonial tension. The antiquities trade and the protection of archaeological sites connects archaeologists to commercial and law enforcement sectors. We will consider the internal politics of the practice of archaeology in various settings, including the implications of the funding sources that support archaeological work. This course is open to students of anthropology, archaeology, and other disciplines with an interest in the past.

ANTHR 348(3248) Iroquois Archeology (also ANTHR 648[6248], ARKEO 348/648[3248/6248], AIS 348/648[3248/6480]) @ (HA)

ANTHR 355(3255) Ancient Mexico and Central America (also ARKEO 355[3255]) @ # (CA)
Spring. 4 credits. J. Henderson.

Survey of the cultural history of ancient Mexico and Central America, emphasizing Aztec and Maya civilizations. The use of ethnographic and historical information to enrich archaeological interpretation is a general theme. Specific topics include the emergence of settled farming life, the rise of civilization and the state, and the development of mechanisms that linked the many societies in the region into a single sphere of interaction.

ANTHR 356(3256) Archaeology of the Andes (also ARKEO 356[3256]) @ (HA)

ANTHR 369(3269) Gender and Age in Archaeology (also ANTHR 668[6269], ARKEO 369/668[3269], FGG 370/670[3700/6700]) (SBA)

In recent years, feminist theory has begun to have an impact on archaeological thought. It is now recognized that gender is likely to have been a relevant dimension of social organization in past societies. Some archaeologists are also trying to take into account the differing interests and experiences of children, adults of reproductive age, and the elderly. This course is not limited to any period or geographical area, but ranges widely in examining how feminist theory has been applied to archaeological data and models. Classes will be arranged by the instructor. Permission of instructor. Permission of instructor. Next offered 2007-2008.

ANTHR 456(4256) Mesosamerican Religion, Science, and History (also ARKEO 456[4256]) @ # (CA)

ANTHR 460(4260) Field and Analytical Methods in Archaeology (also ARKEO 460[4260]) @ (SBA)
Spring. 6 credits. K. Jordan.

This course provides a hands-on introduction to field, laboratory, and analytical methods in archaeology, focusing on historic-period American Indian sites in the Finger Lakes region. Students collectively will generate new archaeological data, beginning the semester with study of an under-considered archaeological museum collection, and moving to surveying and testing on an archaeological site as the weather permits. Students will have an opportunity to formulate and test their own research designs in laboratory and field settings. Readings will provide an in-depth look at both theoretical and laboratory methodology, research design, and the culture history and material culture typologies appropriate to the site and era. In addition to laboratory and field work, students will write a 15-page term paper based on original data which can draw on museum collections, field data, documentary sources, or a combination of these sources. Most class time will be spent off-campus; transportation will be arranged by the instructor. Permission of the instructor is required.

ANTHR 462(4262) Catalhoyuk and Archaeological Practice (also ARKEO 462[4262]) @ [HA]
Spring. 4 credits. N. Russell.

Catalhoyuk is a famous and extraordinary Neolithic site in Anatolia. It has intrinsic interest as one of the earliest human settlements in the world at this time, for its spectacular wall paintings and other art, and for many claims of myths of origin that have been made about it (first city, first domestication, first drum, first town plan, etc.). In addition to the fascinating aspect of the site itself, it is also the nexus of many key issues in current archaeology. The current excavations not only employ a wide range of the latest scientific methods, but they aim to forge a new humanistic approach that puts together the different methods and postprocessual archaeology into practice. The site has been adopted as a sacred place by the goddess movement, and plays a role in local, national, and international politics as well as the construction of national identity. Thus it exemplifies the intersections of politics and archaeology. Both the earlier and the current project have made explicit efforts to communicate with non-archaeologists, thus engaging the issues and archaeology. It is a key site, in the context of other work in the region, for the understanding of animal domestication, Neolithic ritual and religion, gender relations in the prehistoric Near East, and the effects of aggregated settlement. In this course, we will use the site as a laboratory to focus on examining the different issues in archaeological practice in general and the Neolithic of the Near East in particular.

ANTHR 463(4263) Zooarchaeological Method (also ARKEO 463[4263]) (PBS Supplementary List)

ANTHR 464(4264) Zooarchaeological Interpretation (also ARKEO 464[4264]) (PBS Supplementary List)

ANTHR 467(4267) Origins of Agriculture (also ARKEO 467[4267]) (SBA)

ANTHR 470(4270) Political Economy in Archaeology (also ARKEO 770[7270], ARKEO 470/770[4270/7270]) @ (SBA)
This seminar uses archaeology to examine the responses of nonstate indigenous peoples across the world to European expansion with lesser emphasis on Africa and the Pacific. The seminar provides a comparative perspective on indigenous-colonial relationships, in particular exploring the hard-fought spaces of relative autonomy created and sustained by indigenous peoples.

III. Biological Anthropology

Biological anthropology is the subfield of anthropology that explores the physical diversity, evolutionary history, and behavioral potential of our species. Consistent with anthropology more generally, biological anthropology is concerned with human variation. The distinctive perspective of this subfield is that it examines human variation within the framework of evolutionary theory. Analyses of both biology and culture, and of the interaction between the two, mark the broad boundaries of this discipline. Within that wide scope, specific areas of inquiry are diverse, including fossil studies, primate behavior, nutrition and development, sexual behavior, parental investment, molecular and population genetics, adaptation to environmental stress, disease evolution, life history analysis, and more. Some of the most pressing social issues of our time fall within the domain of biological anthropology as well as a range of professions: the controversy over evolution and intelligent design, race, gender, and genetic determinism; the control of disease; the roots of aggression; and conservation and the role of humans in ecological systems. Although the number of Anthropology courses offered in this subfield is limited, students can pursue their interests through a variety of related courses in other departments and by constructing independent study courses with specific faculty members.

ANTHR 472(4272) Historical Archaeology of Indigenous Peoples (also ANTHR 722[727], ARKEO 472[772][4272/2727], AM ST 472[4720]) (HA)
Spring. 4 credits. K. Jordan.
This seminar uses archaeology to examine the responses of nonstate indigenous peoples across the world to European expansion with lesser emphasis on Africa and the Pacific. The seminar provides a comparative perspective on indigenous-colonial relationships, in particular exploring the hard-fought spaces of relative autonomy created and sustained by indigenous peoples.

ANTHR 494(4294) Seminar in Archaeology: The Anthropology of Human Origins (also ARKEO 494[4294]) (HA)
Spring. 4 credits. T. Volman.
Exploration of the archaeological record associated with early modern and near-modern humans as well as their nonmodern contemporaries, such as the Neandertals. Major issues include: what behaviors and capabilities are indicated for various populations, and how and why did these change over the course of the later Pleistocene? To what extent does the archaeological record support the “Out-of-Africa” hypothesis of a recent, African origin for all modern humans?

ANTHR 101(1300) Human Evolution: Genes, Brains, and the Fossil Record (PBS Supplementary List)
Fall. 3 credits. Lab usage and maintenance fee: $5. A. Clark Arcadi.
This course provides a broad introduction to biological anthropology, the subfield of anthropology that explores the physical diversity, evolutionary history, and behavioral potential of our species. In addition to lectures, the class includes a weekly lab and discussion section. In sections, students have the opportunity to study our substantial collection of casts of early human fossils, as well as our comparative primate and non-primate skeletal materials. Sections also include a series of discussions on the influence of culture on biology, and of biology on culture, related to pressing social issues such as race, genetic determinism, cloning, sexual taboos, and the controversy surrounding evolution and intelligent design.

ANTHR 211(2411) Sophomore Seminar: Nature and Culture @ (SBA)
Special seminar sponsored by the John S. Knight Institute Sophomore Seminars Program. Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlined, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

ANTHR 275(2750) Human Biology and Evolution (also BIOEE/NS 275[2750]) (PBS)
Fall. 3 credits. Offered alternate years; next offered 2007–2008. J. D. Haas.

ANTHR 305(3305) Anthropology of Parenting @ (SBA)
Spring. 4 credits. M. Small.
Human children are packets of genes that represent individual reproductive success. Like all animals, humans are selected by evolution to care for their offspring, but human infants and children require more intense parental investment than the offspring of most other species. Why is this so? Human parents are also influenced by cultural belief systems and ideology that play out in parenting styles. How do various belief systems influence parent-offspring interaction? In this course we will examine the human infant as a biologically designed organism that has co-evolved with caretakers, and then look at the various parenting styles across cultures that also mold our young. Prerequisites: Anthr 101.

ANTHR 375(3375) Evolutionary Theory and Human Behavior (also ANTHR 675[3375]) (PBS Supplementary List)

ANTHR 390(3390) Primate Behavior and Ecology (PBS Supplementary List)

ANTHR 490(4390) Topics in Biological Anthropology
Spring. 4 credits. Prerequisites: ANTHR 101, 390, or permission of instructor.
Current topics in biological anthropology are explored. Topics change each semester. For further information, contact the professor or department office. Topic for Spring 2007: Scenarios of Hominid Evolution. M. Small.

IV. Honors, Field Research, and Independent Study

ANTHR 483(4980) Honors Thesis Research
Fall or spring. Credit TBA. Prerequisite: permission of Honors Committee: Staff. Independent work under the close guidance of a faculty member selected by the student.

ANTHR 491(4990) Honors Thesis Write-Up
Fall or spring. Credit TBA. Staff.

ANTHR 497(4910) Independent Study: Undergrad I
Fall or spring. Credit TBA. Prerequisite: undergraduate standing. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 498(4920) Independent Study: Undergrad II
Fall or spring. Credit and Times TBA. Prerequisite: undergraduate standing. Staff. For description, see ANTHR 497, section II, “Honors and Independent Study.”

Relevant courses in other departments

BIOPL 247(2470) Ethnobiology
Fall. 3 credits. D. M. Bates. For description, see BIOPL 247.

BIOPL 348(3480) The Healing Forest
Spring. 2 credits. D. M. Bates and E. Rodriguez.

BIOPL 442(4420) Current Topics in Ethnobiology
Fall. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. D. Bates.

[MUSIC 104(1302)] Introduction to World Music II: Asia

MUSIC 245(1311) Gamelan in Indonesian History and Culture
Fall. 3 credits. Prerequisite: permission of instructor. M. Hatch.

NSHD 347(3471), B & SOC 347(3471) Human Growth and Development: Biological and Social Interactions
Spring. 3 credits. J. Haas and S. Robertson.

V. Graduate Seminars

The graduate program in anthropology is described in much greater detail on the anthropology department web page at falcon. arts.cornell.edu/Anthro/. The seminars
described immediately below pertain to the program in sociocultural anthropology. For information about graduate study in archaeology and biological anthropology, see the anthropology department web page.

A core set of seminars is required of all graduate students in sociocultural anthropology: ANTHR 600 and 601. ANTHR 603 is strongly recommended. These courses are open to graduate students from other related fields. This sequence, and the graduate curriculum in general, is premised on the idea that anthropology is best defined as the comparative study of human social life. This definition of anthropology places pressure in the academy to distinguish social science from humanistic or cultural studies and scholarly from more worldly applications. Our most important method, ethnography, is at one science for understanding human behavior and disciplinary aspirations refuse to view cultural interpretation and analytic explanation as separable values. Furthermore, theory in anthropology is directly related to practice in the world whether in relation to research or more action-oriented pursuits. Consequently, the core sequences as well as most other courses for graduate students are oriented explicitly toward subverting an ideological construction of social life as separable into cultural and social (or political-economic) domains.

ANTHR 600(6000) Proseminar: Culture and Symbol
Fall. 6 credits. D. Boyer.
Focuses on an appreciation of symbolic, expressive, and representational forms and processes both within producers and products of social activities. Through the study of symbolic anthropology, structuralism, exchange, myth and ritual, religion, gender, personhood, linguistics, semiotics, etc., the course indicates how identity and meaning are linked to the practical exigencies of social life. While emphasizing aspects of the discipline generally associated with cultural anthropology, the course endeavors to set the stage for a deeper understanding of social, political, economic, and symbolic activities as interrelated phenomena. The works of de Saussure, Levi-Strauss, Dumont, Geertz, Victor Turner, Sahlin, among others, as well as contemporary theories are given careful attention.

ANTHR 601(6010) Proseminar: Social Organization
Spring. 6 credits. J. Rigi.
Focuses on linkages between culture and social institutions, representations and practices. The nature of these linkages is debated from strongly contrasting points of view in social theory (structuralist, poststructuralist, utilitarian, hermeneutic, Marxist). Unlike debates in critical theory where the form of contestation has been mainly philosophical, in anthropology, these issues have developed in ethnographic analyses. The course briefly surveys Kinship theory and economic anthropology with a focus on implications for general issues in social theory. Discussion of attempts to develop dialectical syntheses around the motion of "practice" follows. The issues addressed in this section carry over into the next, colonialism and post-colonialism, in which poststructuralist visions of history are counterposed to Marxist ones. Finally, Lacanian and Marxist visions of ideology as they relate to anthropological theory and ethnographic analysis are examined with particular emphasis on the cultural and social production of persons.

[ANTHR 603(6403) Ethnographic Field Methods (also ANTHR 403(4403))]
Fall. 4 credits. Next offered 2007-2008.
V. Santiago-Irizarry.

ANTHR 606(6508) The Political Culture of Contemporary Indonesia
Spring. 4 credits. J. Siegel.
Now that the New Order has passed it is recognized that it was not a popular regime. At the same time, it had the support of the great majority of Indonesians. An explanation of this situation raises questions of the relation to state and nation and of both to the family. These issues will be discussed in the context of nationalist thinking on the one hand and the massacres that initiated the New Order and that were central to its ideology.

ANTHR 612(6412) The Oedipus Complex in Political Perspective
Spring. 4 credits. J. Siegel.
Freud described the Oedipus complex as an element of individual psychology. And yet his discovery was based on a play in which the political and the psychological were intertwined. Without the movement out of the family that the complex resolves there is no political society. The nature of the relationship between the two is the subject of the seminar.

ANTHR 621(6421) Sex and Gender in Cross-Cultural Perspective (also ANTHR 321(3421), FGSS 321/631(6310))
Fall. 4 credits. Corequisite: attendance at lectures and films of ANTHR/FGSS 321 and permission of instructor. K. March.
For description, see ANTHR 321.

ANTHR 624(6424) Ethnoracial Identity in Anthropology, Language, and Law (also LSP 624(6424))
Fall. 4 credits. V. Santiago-Irizarry.
This seminar focuses on preparing a full-scale proposal for anthropological fieldwork for a dissertation. Topics include identifying of appropriate funding sources, defining a researchable problem; selecting and justifying a particular fieldwork site; situating the ethnographic case within appropriate theoretical contexts; selecting and justifying appropriate research methodologies; developing a feasible timetable for field research; ethical considerations and human rights protection procedures; and preparing appropriate budgets. This is a writing seminar, and students will complete a proposal suitable for submission to a major funding agency in the social sciences.

ANTHR 648(6248) Iroquois Archaeology (also ANTHR 348/648, ARKEO 348/648(3480/6484), AIS 348/648/3480/6480)
K. Jordan.

ANTHR 650(6450) Social Studies of Economics and Finance
Fall. 4 credits. Next offered 2007-2008.
H. Miyazaki.

ANTHR 652(6452) Evidence: Ethnography and Historical Method
Fall. 4 credits. Next offered 2008-2009.
H. Miyazaki.

ANTHR 655(7550) East Asia: Readings in Special Problems
Fall or spring. Credit TBA. Staff.
Independent reading course on topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 656(6256) Maya History (also ARKEO 656(6256))
Fall. 4 credits. Next offered 2008-2009.
J. Henderson.

ANTHR 661/6461 Anthropology of Organizations (also ANTHR 361/3461) Spring. 4 credits. D. Greenwood. For description, see ANTHR 361.

ANTHR 662/6462 Democratizing Research: Participation, Action, and Research (also ANTHR 362/3462) Fall. 4 credits. D. J. Greenwood. For description. see ANTHR 362.

ANTHR 669/6269 Gender and Age in Archaeology (also ANTHR 469/4269, ARKEO 469/669/4269) Fall. 4 credits. Next offered 2007–2008. N. Russell.

ANTHR 680/6480 Anthropology and Globalization (also ANTHR 460/4267) Fall. 4 credits. A. Willford. For description, see ANTHR 480.

ANTHR 682/6482 Perspectives on the Nation Fall. 4 credits. V. Munasinghe. Critical examination of the key texts that have informed our understanding of the nation and nationalism. Beginning with some of the founding texts such as Hahn Kohn's "The Idea of Nationalism: A Study in its Origins and Backgrounds" (1994). Planer-Nevo's "Two Types of Nationalism" (1976), and Renan's "What is a Nation" (1939). The course moves on to more contemporary writings by Gellner, Hobsbawm and Anderson and ends with alternate analytical approaches that have been informed by the "national question" in the "Third World" such as Partha Chatterjee's "Nationalist Thought and the Colonial World." A central theme is how notions of culture, power, and history are implicated in constructions of the "Nation." Also explores the possibilities of an ethnographic approach to the nation and ask if such an analytical/methodological move may help us better grapple with the perplexing emic-dimensions of nationalisms. The intersection of gender and nation also form a section of this course.

ANTHR 688/6488 Masks of Power and Strategies of Resistance and Subversion (also ANTHR 388/3488) Fall. 4 credits. J. Rigi. For description, see ANTHR 388.

ANTHR 701/7910 Independent Study: Grad I Fall or spring. Credit TBA. Prerequisites: graduate standing. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 702/7920 Independent Study: Grad II Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff. For description, see ANTHR 701, section VII, "Graduate Seminars."

ANTHR 703/7930 Independent Study: Grad III Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff. For description, see ANTHR 701, section VII, "Graduate Seminars."

ANTHR 720/7420 Development of Anthropological Thought (also ANTHR 420/4420) Fall. 4 credits. H. Miyazaki. For description, see ANTHR 420.

ANTHR 726/7426 Ideology and Social Production (also ANTHR 426/4426) Spring. 4 credits. S. Sargren. For description, see ANTHR 426.

ANTHR 739/7545 Peoples and Cultures of the Himalayas (also ANTHR 339/3545) Spring. 4 credits. K. March. For description, see ANTHR 339.

ANTHR 750/7852 Europe (also ANTHR 450/4582) Fall. 4 credits. D. Boyer, D. Greenwood, and J. Rigi. For description, see ANTHR 450.

ANTHR 762/7262 Catalhoyuk and Archaeological Practice (also ANTHR 462/4262, ARKEO 462/762/4262/7262) Spring. 4 credits. N. Russell. For description, see ANTHR 462.

ANTHR 772/7272 Historical Archaeology of Indigenous Peoples (also ANTHR 472/4272, ARKEO 472/772/4272/7272, AM ST 472/4720) Fall. 4 credits. K. Jordan. For description, see ANTHR 472.

ANTHR 776/7476 Semiotics Beyond the Social (also ANTHR 476/4476) Fall. 4 credits. E. Kohn. For description, see ANTHR 476.

ARABIC AND ARAMAIC

See "Department of Near Eastern Studies."

ARCHAEOLOGY

Archaeology is an interdisciplinary field at Cornell, which is one of the few universities in the United States to offer a separate archaeology major and a master's degree. Program faculty members, affiliated with several departments, coordinate course offerings and help students identify opportunities for fieldwork, graduate study, and professional positions.

The Major

Prospective majors must complete ARKEO 100 or one of the basic courses as defined below before they will be admitted to the major. This course is not counted toward the major requirements.

Because the major draws on the teaching and research interests of faculty from many departments to present a broad view of the archaeological process, interested students should discuss their course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

Once admitted to the major, students must take at least 32 additional credits from the courses listed below, or from related fields
selected in consultation with a major advisor of their choosing. The courses chosen should provide exposure to a broad range of cultures known through archaeology and the methods of uncovering and interpreting them. Sixteen of the credit hours should be at the 300 level or above. At least two courses must be taken from each of the following categories: II. Anthropological Archaeology; III. Classical, Near Eastern, and Medieval Archaeology; and IV. Methodology and Technology. Only 4 credits of ARKEO 300 Individual Study or other supervised study can count toward the major.

Courses basic to the discipline of archaeology are marked with the word "Basic" after the number of credit hours. It is recommended that majors who are planning to pursue graduate studies in archaeology take at least two of the basic courses in each category. Further courses in languages and geology are also recommended.

Honors. Honors in archaeology are awarded on the basis of the quality of an honors essay and the student's overall academic record. Prospective honors students should have at least a 3.5 GPA in the major and a 3.0 grade point average overall. They should consult with the director of undergraduate studies before the beginning of the senior year. The honors essay is normally prepared over two semesters in consultation with a faculty advisor during the senior year. Students enroll in ARKEO 481 Honors Thesis Research, and to complete the thesis, they enroll in ARKEO 482 Honors Thesis Writeup. Both courses are offered in the fall and spring. Only ARKEO 481 may count toward hours for completion of the archaeology major requirements. The credit hours for these courses are variable.

Fieldwork. Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her advisor. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Concentration

Students in Cornell schools and colleges other than Arts and Sciences may elect a concentration in archaeology. To concentrate in archaeology, the student must complete five courses, all with a grade of C or better. The five courses must consist of either (1) ARKEO 100 and four other courses from categories II–IV (described above), at least three of which must be basic courses, or (2) five courses from categories II–IV, at least four of which must be basic courses. Concentrators are encouraged to gain some fieldwork experience. They are eligible for Hirsch Scholarships in support of fieldwork on the same basis as majors.

First-Year Writing Seminars

For course descriptions, see the First-Year Writing Program brochure.

I. Introductory Courses and Independent Study Courses

ARKEO 100(1200) Ancient Peoples and Places (also ANTHR 100[1200]) # @ (HA)
Fall. 3 credits. Basic. F. Gleach
Broad introduction to archaeology; the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ARKEO 203(2200) Early People: The Archaeological and Fossil Record (also ANTHR 203[2200])
Spring. 3 credits. Basic. T. P. Volman.
For description, see ANTHR 203.

ARKEO 215(2215) Stone Age Art (also ANTHR 215[2215])
Fall. 3 credits. Basic. T. P. Volman.
For description, see ANTHR 215.

ARKEO 235(2225) Archaeology of North American Indians (also ANTHR 235[2225], AIS/AM ST 235[2350]) # Spring. 3 credits. K. Jordan.
For description, see ANTHR 235.

ARKEO 242(2201) Early Agriculture (also ANTHR 242[2201])
Spring. 3 credits. Basic. N. Russell.
For description, see ANTHR 242.

ARKEO 317(3217) Stone Age Archaeology (also ANTHR 317[3217])
Fall. 4 credits. Basic. T. P. Volman.
For description, see ANTHR 317.

ARKEO 330(3230) Humans and Animals (also ANTHR 330[3230])
Fall. 4 credits. N. Russell.
For description, see ANTHR 330.

II. Anthropological Archaeology

ARKEO 481(4981) Honors Thesis Research
Fall or spring. 4 credits, variable.
Prerequisite: admission to honors program. Independent work under the close guidance of a faculty member.

ARKEO 482(4982) Honors Thesis Writeup
Fall or spring. 4 credits, variable.

ARKEO 600(6000) Special Topics in Archaeology
Fall and spring. 4 credits, variable.
Students pursue advanced topics of particular interest under the guidance of a faculty member(s).

ARKEO 681-682(8901-8902) Master's Thesis
681, fall; 682, spring. 4 credits, variable.
Prerequisite: master's students in archaeology. S-U grades only. Students, working individually with faculty member(s), prepare a master's thesis in archaeology.

ARKEO 494(4294) Seminar in Archaeological Practice (also ARKEO 394(3294), AIS/AM ST 394[3294])

ARKEO 498(4298) Thesis Writeup
Fall or spring. 4 credits, variable.
Prerequisite: admission to honors program. Independent work under the close guidance of a faculty member.

ARKEO 100(3200) Ancient Peoples and Places (also ANTHR 100[3200]) # @ (HA)

ARKEO 355(3255) Ancient Mexico and Central America (also ANTHR 355[3255])
Spring. 4 credits. Basic. J. Henderson.
For description, see ANTHR 355.

ARKEO 356(3256) Archaeology of the Andes (also ANTHR 356[3256]) # @ (HA)

ARKEO 369(3269) Gender and Age in Archaeology (also ARKEO 669[3269], ANTHR 369[669/3269, 6269], FGSS 370/370(670/6700))

ARKEO 372(3272) Hunters and Gatherers (also ARKEO 672(3272), ANTHR 372[672/3272, 6272])

ARKEO 453(4253) The Archaeology of Slavery (also AS&RC 453[4253], ANTHR 453[4253, 4253], AM ST 453[4253])
Fall. 4 credits. W. Battle-Baptiste.
For description, see AS&RC 453.

ARKEO 456(4256) Mesoamerican Religion, Science, and History (also ANTHR 456[4256])

ARKEO 462(4262) Cataloyuk and Archaeological Practice (also ARKEO 762[4262], ANTHR 462[4262, 4262])
Spring. 4 credits. N. Russell.
For description, see ANTHR 462.

ARKEO 470(4270) Political Economy in Archaeology (also ARKEO 770[4270], ANTHR 470[4270, 4270])

ARKEO 472(4272) Historical Archaeology of Indigenous Peoples (also ARKEO 772[4272], ANTHR 472[4272/7272, AM ST 472(4272)]
Spring. 4 credits. K. Jordan.
For description, see ANTHR 472.

ARKEO 494(4294) Seminar in Archaeology: The Archaeology of Human Origins (also ANTHR 494[4294, 4294])
Spring. 4 credits. T. P. Volman.
For description, see ANTHR 494.

ARKEO 648(6248) Iroquois Archaeology (also ARKEO 348[6248], ANTHR 348[648/3248, 6248], AIS 648[3480, 6480])

ARKEO 656(6256) Maya History (also ANTHR 656[6256])
Fall. 4 credits. Next offered 2008-2009. J. Henderson.)
ARKEO 667(6267) Contemporary Archaeological Theory (also ANTHR 667(6267))
Spring. 4 credits. Limited to 14 students. Prerequisite: permission of instructor for undergraduates. Next offered 2008-2009. N. Russell.

ARKEO 699(6269) Gender and Age in Archaeology (also ARKEO 369[3269], ANTHR 369/669[3269/6269])

ARKEO 770(7270) Political Economy in Archaeology (also ARKEO 470[4270], ANTHR 470/770[4270/7270])

ARKEO 772(7272) Historical Archaeology of Indigenous Peoples (also ARKEO 472[4272], ANTHR 472/772[4272/7272], AM ST 472[4272])
Fall. 4 credits. K. Jordan.
For description, see ANTHR 472.

III. Classical, Near Eastern, and Medieval Archaeology

ARKEO 221(2726) Minoan-Mycenaean Art and Archaeology (also CLASS 221[2726], ART H 221[2226])
For description, see CLASS 221.

ARKEO 260(2662) Daily Life in the Biblical World (also NES/JWST/RELST 262[2662])
Fall. 3 credits. Basic. J. Zorn.
For description, see NES 262.

ARKEO 266(2666) Jerusalem through the Ages (also NES/JWST/RELST 266[2666])
Spring. 3 credits. Basic. J. Zorn.
For description, see NES 266.

ARKEO 268(2668) Ancient Egyptian Civilization (also NES/JWST 268[2668])
Fall. 3 credits. Basic. C. Monroe.
For description, see NES 268.

ARKEO 321(3721) Mycenaean and Homer (also CLASS 321[3721], ART H 321[3226])
Fall. 4 credits. Basic. Prerequisite: at least one course in archaeology, classics, or history of art. Next offered 2008-2009. J. Coleman.
For description, see CLASS 321.

ARKEO 334(3734) Archaeology of Slavery in the Roman World (also CLASS 334[3734])
Spring. 4 credits. K. McDonnell.
For description, see CLASS 334.

ARKEO 364(3764) Ancient Iraq: Mesopotamian Civilization (also NES/JWST 364[3664], 664[6664])
Fall. 4 credits. Basic. D. Owen.
For description, see NES 364.

ARKEO 380(3800) Introduction to the Arts of China (also ART H 380[3800])
Fall. 4 credits. A. Pan.
For description, see ART H 380.

ARKEO 434(4340) The Rise of Classical Greece (also ART H 434[4254], CLASS 434[4734])
Spring. 4 credits. Recommended: CLASS 220 or 221 or ART H 220 or 221, or permission of instructor. Next offered 2008-2009. Staff.

ARKEO 435(4207) Seminar on Roman Art and Archaeology (also CLASS 435[4735])
Spring. 4 credits. Prerequisite: permission of instructor. Next offered 2008-2009. Staff.

ARKEO 520(5200) Seminar in Classical Archaeology (also CLASS 630[7750])

ARKEO 529(7729) The Prehistoric Aegean (also CLASS 629[7729])
4 credits. Prerequisite: graduate standing; advanced undergraduates by permission of instructor. Next offered 2008-2009. J. E. Coleman.

CLASS 220(2700) Introduction to Art History: The Classical World
Fall. 4 credits. Basic. K. McDonnell.
For description, see CLASS 220.

CLASS 237(2607) Greek Religion and Art and Archaeology (also RELST 237)

CLASS 240(2725) Greek Art and Archaeology

CLASS 322(3722) Greeks and Barbarians
Fall. 4 credits. Prerequisite: CLASS 220 or 221, or permission of instructor. Next offered 2007-2008. J. Coleman.

CLASS 329(3729) Greek Sculpture

CLASS 333(3643) Greek and Roman Mysteries Cults and Early Christianity (also RELST 333)
Fall. 4 credits. Recommended: previous course in classics (civilization or language) or RELST 101. Next offered 2007-2008. K. Clinton.

ART H 322 Arts of the Roman Empire (also CLASS 350[3740])
Spring. 4 credits. A. Ramage.
For description, see ART H 322.

[LA 545(5450) The Parks and Fora of Imperial Rome
Spring. 3 credits. Prerequisites: advanced standing in design field, classics, or history of art, or permission of instructor. Next offered 2007-2008. K. Gleason.

IV. Methodology and Technology

ARKEO 220(2727) Art and Archaeology in the Ancient Mediterranean World (also ART H 227[2227], CLASS 227[2727])
Fall. 4 credits. S. Manning.
For description, see CLASS 227.

ARKEO 256(2756) Practical Archaeology (also CLASS 256[2756])
Spring. 3 credits. J. Coleman.
For description, see CLASS 256.

ARKEO 261(2610) Urban Archaeology (also LA/CRP 261[2610])
Fall. 3 credits. Basic. S. Baugher.
For description, see LA 261.

ARKEO 262(2620) Laboratory in Landscape Archaeology (also LA 262[2620])
Spring. 3 credits. S. Baugher.
For description, see LA 262.

BIOEE 275(2750) Human Biology and Evolution (also ANTHR 275[2750], NS 275[2850])
Fall. 3 credits. Offered alternate years. Next offered 2007-2008. J. D. Haas.

ARKEO 309(3900) Introduction to Dendrochronology (also ART H 309[3250], CLASS 330[2870])
Spring. 4 credits. Limited to 10 students. Prerequisite: permission of instructor. Letter grades only. S. Manning.
For description, see CLASS 330.

ARKEO 370(3270) Environmental Archaeology (also ARKEO 670[6270], ANTHR 370[670]2670/6270])

ARKEO 402(4202) Designing Archaeological Exhibits (also ARKEO 602[6202])
Spring. Variable credit. Letter grades only. S. Baugher.
Presenting archaeology to the public has become an educational goal for many professional archaeological societies and museums. Class discussions will focus on the theories and techniques of exhibit design. To evaluate different academic approaches to exhibiting objects, the class will visit art and historical museums. Students will then design and install an archaeological exhibit using artifacts that have been catalogued in an archaeological laboratory course. ARKEO 262. These artifacts are from archaeological excavations completed over the last two years in an archaeological field methods class. ARKEO 261. The excavation was at a 19th-century site at Robert Treman State Park.

ARKEO 437(4370) Geophysical Field Methods (also EAS 437[4370])
Fall. 3 credits. Prerequisite: PHYS 213 or 208 or permission of instructor. Next offered 2007-2008. I. D. Brown.

ARKEO 458(4258) Archaeological Analysis (also ARKEO 658[6258], ANTHR 458/658[4258/6258])
Spring. 4 credits. Limited to 15 students. Prerequisite: archaeology course or permission of instructor. Next offered 2007-2008. J. S. Henderson.

ARKEO 463(4263) Zooarchaeological Method (also ANTHR 463[4263], PBS Supplementary List)

ARKEO 464(4264) Zooarchaeological Interpretation (also ANTHR 464[4264], PBS Supplementary List)
Spring. 4 credits. Prerequisites: ARKEO ANTHR 463; permission of instructor. Next offered 2007-2008. N. Russell.

ARKEO 467(4267) Origins of Agriculture (also ANTHR 467[4267])
ARKEO 600(6000) Special Topics in Archaeology  
Fall and spring. 4 credits. Staff.

ARKEO 602(6020) Designing Archaeological Exhibits (also ARKEO 402(4020))  
Spring. Variable credit. Letter grades only. S. Baugher.  
For description, see ARKEO 402.

ARKEO 670(6270) Environmental Archaeology (also ARKEO 370[3270], ANTHR 370/670[3270/6270])  
Fall. 4 credits. Next offered 2007-2008. T. P. Volman.

[BIOEE 671(6710) Paleontarchology of South Asia (also ANTHR 671[6371], ASIAN 620[6620])  
Fall. 3 credits. Next offered 2008-2009. K. A. R. Kennedy]

V. Relevant Courses at Ithaca College  
Contact Sherene Baugher in Landscape Architecture, at sbaugh@cornell.edu or the Ithaca College Anthropology Department at 274-1331 for further information or visit their web site at www.ithaca.edu/anthro/.  
Prehistory of South America. M. Malpass. Every other year.  
New World Complex Societies. M. Malpass. Irregular offering.  
Archaeological Methods and Techniques. M. Malpass. Irregular offering.  
World Prehistory. J. Rossen. Every semester.  
People, Plants, and Culture: Archaeobotany and Ethnobotany. J. Rossen. Every other year.  
Archaeoarchaeology. J. Rossen. Every other year.  
Archaeological Field School.

ASIAN STUDIES  
The Department of Asian Studies encompasses the geographical areas of East Asia, South Asia, and Southeast Asia and offers courses in most of the disciplines of the social sciences and the humanities. Forty-five members of the department specialize in languages, linguistics, literatures, and religions, while associated faculty throughout the university teach courses on Asia in their own disciplines, from art history and government to rural sociology. Asian Studies courses through the 400 level (ASIAN is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments, others fulfill various distribution requirements.

The Major  
A student majoring in Asian Studies normally specializes in the language and culture of one country and often chooses an additional major in a traditional discipline. 
A student majoring in Asian Studies receives thorough training in at least one Asian language and is required to complete two courses at the 200-level (minimum of 6 credits) or to demonstrate that minimal level of proficiency in one the Asian languages offered at Cornell. The major consists of at least 30 additional credits (which may include up to 6 credits of further language study) from courses numbered 200 and above selected by the student in consultation with his or her advisor from among the Asian content courses offered by the Department of Asian Studies and by Asian specialists in other departments. 
The applicant for admission to the major in Asian Studies must have completed at least two Asian content courses, one of which may be a language course. Students must receive permission for admission to the major from the director of undergraduate studies. The student must have received a minimum grade of C in those courses and in all other courses counted toward the major.

Honors  
To be eligible for honors in Asian Studies, a student must have a cumulative GPA of 3.0, and an average of 3.7 in all Asian Studies area courses, exclusive of language study only, and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second semester of their junior year. The application must include an outline of the proposed project and the endorsement of a supervisor chosen from the Asian Studies faculty. During the first semester of the senior year the student does research for the essay in conjunction with an appropriate Asian Studies course or ASIAN 401. By the end of the first semester the student must present a detailed description of the essay or other appropriate written work and have it approved by the project supervisor and the director of undergraduate studies. The student is then eligible for ASIAN 402, the honors course, which entails writing the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student's area of concentration.

Concentration in Asia East Asia Studies  
A candidate for the bachelor of arts or science degree at Cornell may take a concentration in East Asia Studies by completing at least 18 credits of course work in East Asia Studies. A student majoring in East Asian Studies may take a concentration in East Asian Studies by completing at least 18 credits of course work in East Asia Studies. Students normally take five courses in East Asian Studies at the 200 level or above from those East Asian courses listed (China, Japan, Korea) either under Asian Studies or Asian-related courses. Of these, two courses might be Asian language courses at the 200 level or beyond. East Asian graduate courses may also be counted toward the concentration. Students concentrating in East Asian Studies should select an advisor from the East Asia Program faculty for consultation on their course of study. For more information, contact the Department of Asian Studies at 350 Rockefeller Hall, 255-5095.

Concentration in South Asia Studies  
A candidate for the bachelor of arts or science degree at Cornell may take a concentration in South Asia Studies by completing at least 18 credits of course work (typically five courses) in South Asia courses numbered 200 or above. These courses are selected from South Asia courses listed under the Department of Asian Studies, or from other Asia-related courses. Of these, two courses may be South Asian language courses at the 200 level or above. Appropriate South Asian graduate course work may be included in the concentration with consent of the instructor and the advisor. One South Asia-related course with a research paper on a South Asia subject may be included with the consent of the advisor and the director of undergraduate studies.

Students concentrating in South Asian Studies are considered members of the South Asia Program and will have an advisor from the program faculty. (This advisor will supervise a student's concentration and does not substitute for a student's major advisor.)

Concentration in Southeast Asia Studies  
A candidate for the bachelor of arts or science degree at Cornell may take a concentration in Southeast Asian Studies by completing 18 credits of course work in Southeast Asian Studies. A recommended plan would include ASIAN 208 and four courses at the intermediate or advanced stage, two of which could be a Southeast Asian language. Students taking a concentration in Southeast Asian Studies are members of the Southeast Asia Program and are assigned an advisor from the program faculty. Such students are encouraged to commence work on a Southeast Asian language either at the 10-week intensive course offered by the Southeast Asia Studies Summer Institute (SEASSI) or by studying for one semester at IKIP Malang, Indonesia; Khon Kaen University, Thailand; or Hanoi University. Vietnam. Fellowships are available for undergraduates through the Cornell Abroad Program.

Intensive Language Program (FALCON)  
The FALCON Program offers intensive instruction in Japanese or Chinese. Aside from the exclusions noted above, all students enrolled at Cornell, and not just those taking a concentration in East Asian Studies at Cornell, may participate in the program. FALCON is the only program in the world that offers a full year of intensive instruction beginning at the elementary level and continuing to the advanced level. FALCON is a full-time program for language study only, and is open to all students at Cornell University. Fall and spring. Variable credit. Letter grades only. S. Baugher.  
For description, see ARKEO 402.

[BIOEE 671(6710) Paleontarchology of South Asia (also ANTHR 671[6371], ASIAN 620[6620])  
Fall. 3 credits. Next offered 2008-2009. K. A. R. Kennedy]
program; the degree of intensity does not allow students to enroll simultaneously in other courses or to work, except perhaps on weekends. Students typically take the entire sequence of 160, 161, and 162, but they may take any other portion of the program if they have the necessary background as determined by a placement interview. Students often choose to apply only to the summer portion. The spring semester of the Chinese program is expected to be offered in Beijing.

Students must formally apply to the program. To guarantee course availability, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. Applications are available in 388 Rockefeller Hall or on the FALCON web site at http://falcon.cornell.edu/falcon.

Study Abroad

There are many strong options for study abroad in Asia. Cornell Abroad helps students plan a year or semester abroad as part of their Cornell undergraduate degree. Cornell has affiliations with several programs and institutions in Asia and sends students to those and others.

Cornell is affiliated with IUP, the Inter-University Program for Chinese Language Studies in Beijing (at Tsinghua University) and is a member of CIEE and IES, organizations sponsoring study abroad programs offering Chinese language instruction at several levels as well as courses in Chinese studies in the humanities and social sciences. Students may also study at other programs in China, Hong Kong, and Taiwan. The Chinese FALCON program includes a spring semester in Beijing.

Cornell is a member of the consortium of the Kyoto Center for Japanese Studies, an undergraduate semester or year program in Japanese language and Japanese studies. An agreement with International Christian University (ICU), outside Tokyo, permits Cornell students to attend that institution. Cornell students have attended CIEE and IES programs as well as other programs and institutions in Japan.

Cornell is a member of the American Association of Indian Studies, which offers fellowships for intensive study in India or Hindi, Bengali, and Tamil. There are study abroad options in universities or other organizations in various regions of India.

In cooperation with Tribhuvan National University of Nepal, Cornell organizes the Cornell-Nepal Study Program for undergraduate and graduate students wishing to spend a semester or year studying and conducting research in Nepal.

Students may spend a semester or year in Mongolia, Korea, Vietnam, Indonesia, Thailand, Singapore, or the Philippines or choose to study about Asia at the School of Oriental and African Studies in London, or the Faculty of Asian Studies at the Australian National University. Undergraduates should consult Cornell Abroad; graduate students should inquire at the East Asia Program, Southeast Asia Program, or South Asia Program offices.

Students may apply up to 15 credits from abroad to the major.

First-Year Writing Seminars

See John S. Knight Institute brochure for times, instructor, and descriptions.

General Education Courses

**ASIAN 191(1911) Introduction to Modern Asian History (also HIST 191[1910] @ (HA)**

Fall. 4 credits. D. Ghosh and E. Tagliacozzo.

For description, see HIST 191.

**ASIAN 192(1192) Introduction to World Music: Asia (also MUSIC 104[1302] @ (CA)**

Fall. 3 credits. M. Hatch.

For description, see MUSIC 104.

**[ASIAN 201(2201) SSP: Buddhist Felicities @ (CA)**

Spring. 4 credits. Next offered 2007-2008. A. Blackburn.)

**[ASIAN 206(2026) SSP: The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also HIST 206[5070/2005070] @ (CA)**

Fall. 4 credits. Next offered 2007-2008. T. Loos.)

**[ASIAN 208(2208) Introduction to Southeast Asia @ (CA)**

Fall. 3 credits. T. Chaloemtiarana.

For anyone curious about the most diverse part of Asia, defines Southeast Asia both as the nation-states that have emerged since 1945 (Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literacy and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, and business and marketing. The course teaches both basic information and different ways of interpreting that information.

**ASIAN 211(2211) Introduction to Japan: Japanese Texts in History @ # (HA)**

Fall. 3 credits. T. LaMarre.

Introduction to Japanese studies for nonmajors. Takes up diverse cultural artifacts and demonstrates how the meanings and readings generated by these artifacts have changed over time. Considers the eighteenth-century *Kojiki*, the Courtly narrative *Tale of Genji*, puppet theater, Ainu autobiography, and films and comic books dealing with themes of nuclear warfare.

**ASIAN 212(2212) Introduction to China @ (CA)**

Spring. 3 credits. B. Rusk.

Interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies. Explores literature, history, religion, art and archaeology, and other aspects of China's rich and diverse heritage, from earliest times to the present.

**ASIAN 215(2215) Introduction to South Asian Civilization @ (HA)**

Spring. 3 credits. Next offered 2007-2008. A. Blackburn.)

**ASIAN 218(2218) Introduction to Korea (also HIST 218[2800]) @ (CA)**

Fall. 3 credits. Staff.

Multidisciplinary introduction to Korean history, society, and culture. The first part of the course examines sources of Korean tradition in their historical contexts. The second part, on the transition to a modern society, covers the mid-19th century to the Korean War. The last part is devoted to contemporary society.

Asian—Literature and Religion Courses

The following courses are taught entirely in English and are open to any Cornell student.

**[ASIAN 219(2219) Women in South Asia (also HIST/FGSS 219[2190]) @ (HA)**

Fall. 4 credits. Next offered 2008-2009. D. Ghosh.)

**ASIAN 225 Literature, Politics, and Genocide in Cambodia @ (CA)**

Summer. 3 credits. G. Chigas.

Will examine various literary and political responses to the Cambodian genocide. The course posits the following: in the aftermath of genocide or mass destruction, there are two means by which survivors and bystanders attempt to confirm the event, identify the victims and the perpetrators and thereby restore a sense of justice. One of these is personal accounts or literary testimony. The other is government sanctioned legal proceedings. The course will consider how the literary and political responses to the Cambodian genocide have paralleled, complemented, and opposed each other. The course will also ask whether their overall effect contributes to or detracts from the servings of justice and process of healing for our survivors. To pursue these questions, we will read selections from novels and poetry written by Cambodian survivors side by side with accounts of political activities of the Cambodian government and the international community to bring the perpetrators of genocide to justice.

**ASIAN 226(2226) Society and Religion in China (also HIST 226[2261]) @ # (HA)**

Fall. T. Hinrichs.

For description, see HIST 226.

**[ASIAN 228(2228) The Indian Ocean World (also HIST 228[2280]) @ (HA)**

**[ASIAN 236(2236) Crimes Against Humanity (also HIST 231[2310]) @ (HA)**

Fall. 3 credits. Next offered 2008-2009. V. Korschman.

For description, see HIST 231.)

**[ASIAN 241(2241) China's Literary Heritage: An Introduction in Translation @ # (LA)**

**ASIAN 245(2245) Gamelan in Indonesian History and Culture (also MUSIC 245[1241]) @ (CA)**

Fall or spring. 3 credits. Permission of instructor M. Hatch.

For description, see MUSIC 245.
ASIAN 250(2250) Introduction to Asian Religions (also RELST 250[2250]) @ (HA)
Spring. 3 credits. J. M. Law.
Explores religious traditions in South Asia (Pakistan, India, and Sri Lanka) and East Asia (China and Japan) including Hinduism, Buddhism (South Asian and East Asian), Sikhism, Confucianism, Daoism, and Shinto. Encounters a wide range of religious expressions as well, including myth, ritual, pilgrimage, mysticism, meditation, and other spiritual technologies.

ASIAN 257(2257) China Encounters the World (also HIST 257[2571]) @ (HA)
Fall. 3 credits. J. Chen.
For description, see HIST 257.

ASIAN 277(2277) Meditation in Indian Culture (also RELST 277[2277]) @ (CA)
Spring. 3 credits. D. Gold. Probes the truths behind traditional claims of the priority of internal practice in Indian traditions. Students are expected to experiment with some basic meditation practices and situate them within larger South Asian worldviews as suggested by doctrines, rituals, iconic forms, and literary texts. Grades are based on short papers.

ASIAN 279(2279) Chinese Mythology @ (LA)
Fall. 3 credits. R. McNeal. Students will study Chinese myths from the earliest times down to the late imperial era. Focus will be on understanding the form Chinese myths take, how they are related to religion, literature, historical accounts and intellectual trends.

ASIAN 282(2282) Japanese Animation and New Media @ (CA)

ASIAN 294(2294) History of China in Modern Times (also HIST 294[2940]) @ (HA)
Spring. 4 credits. Staff.
For description, see HIST 294.

ASIAN 296(2296) The U.S.–Vietnam War (also HIST 296[2960]) @ (HA)

ASIAN 301(3301) Schools of Thought—Ancient China @ (HA)

ASIAN 302(3302) Art of War in Ancient China @ (HA)

ASIAN 306(3306) Zen Buddhism @ (KCM)
Spring. 4 credits. Limited to 15 students. Prerequisites: any university-level course in Buddhism or ASIAN/RELST 250, or permission of instructor. Graduate students can take this course for credit and sign up for an additional credit hour for an extra session. J. M. Law.

ASIAN 312(3312) Intellectuals in Early Modern Korea @ (HA)

ASIAN 328(3328) Construction of Modern Japan (also HIST 328[3280]) @ (HA)

ASIAN 335(3335) Japan from War to Prosperity @ (HA)
Fall. 3 credits. R. McNeal.
For description, see HIST 330.

ASIAN 342(3342) History of Modern South Asia 1700 to 1947 (also HIST 342[3420]) @ (HA)

ASIAN 346(3346) Modern Japanese Politics (also GOVT 346[3463]) @ (SBA)
Spring. 4 credits. R. Weiner.

ASIAN 347(3347) Tantric Traditions (also RELST 349[3349]) @ (CA)

ASIAN 348(3348) Indian Devotional Poetry (also RELST 348[3348]) @ (LA)

ASIAN 351(3351) Indigenous Religions of South Asia (also RELST 351[3351]) @ (CA)
Fall. 4 credits. D. Gold. A study of religious traditions as lived today in the Indian subcontinent. Alongside some underlying similarities, attention will be paid to differences in piety and practice within alternative environments: urban and rural, male and female, more and less orthodox. In addition to several Hindu traditions, Sikh, Jain, Buddhist, and Muslim traditions may also be treated. Readings will include ethnographies and perhaps a novel.

ASIAN 354(3354) Indian Buddhism (also ASIAN 654[6654], RELST 354/654[3354/6654]) @ (HA)

ASIAN 355(3355) Japanese Religions (also RELST 355[3355]) @ (CA)
Fall. 4 credits. J. M. Law.
Addresses the complexity of religion in Japanese history through a focus on the dominant ideological system commonly referred to as Shinto. Focuses on methodological issues surrounding tradition formation, invention, continuity, change, and revision and explores the Shinto tradition as follows: (1) how a central corpus of values, tastes, practices, beliefs, and concerns were formulated and how this system interacts with other religious systems; (2) the academic sources contributing to this identity; (3) views of this religious system from those actively shaping its discourse; (4) views of this religious system from those peripheralized by its ideology; (5) the relationship of ideology and aesthetic taste; and (6) the relationship between this religious system and imperialism, war, and historical revisionism.

ASIAN 359(3359) Japanese Buddhism: Texts in Context (also RELST 359[3359]) @ (HA)

ASIAN 373(3373) Modern China (also HIST 373[3730]) @ (LA)
Fall. 4 credits. E. Gunn.
A survey of the principal works in English translation, the course introduces fiction, drama, essays, and poetry of China beginning with the Republican era and continuing up to the present in the People's Republic and Taiwan, with attention to social and political issues and literary theory.

ASIAN 374(3374) Chinese Narrative Literature @ (LA)
Spring. 4 credits. L. Paterson.
Selected works in classical Chinese fiction are read in translation. Major novels, such as The Dream of the Red Chamber and Water Margin, are emphasized.

ASIAN 379(3379) Southeast Asian Literature in Translation @ (LA)
Fall. 4 credits. L. Paterson.
An introduction to modern Southeast Asian literature in translation, concentrating on short stories and novels from the mainland. We will begin by briefly exploring some "traditional" literary precursors, before concentrating on literature from the second half of the twentieth century. Themes include: decolonization, modernization, and the urban-rural split.

ASIAN 380(3380) Vietnamese Literature in Translation @ (LA)
Fall. 4 credits. L. Paterson.
An introduction to Vietnamese literature in translation, concentrating on some traditional Vietnamese texts, we will examine some of the literary legacies of the Vietnam Wars, as well as themes such as the role of nationalism, changing gender roles, representations of the urban-rural divide and the effects of censorship.

ASIAN 385(3385) History of Vietnam (also HIST 385[3850], RELST 385/685[3385/6850]) @ (HA)
Fall. 4 credits. Meets concurrently with ASIAN 685. Graduate students may enroll and attend a seminar sec. K. Taylor. Survey of Vietnam's history and culture from earliest times to the present.

ASIAN 386(3386) Southeast Asia through Film @ (CA)
Spring. 4 credits. L. Paterson.
In Western films, Southeast Asia has been portrayed as an exotic locale of romance, haunting landscapes, and "incusable" smiling natives. This class will explore how the countries of Southeast Asia have been portrayed in Western cinema, in juxtaposition with films produced in the countries themselves. No background in film studies or Southeast Asia is required.

ASIAN 387(3387) Literature and Film of Southeast Asia (also COM L 387[3870], VISST 387[3870]) @ (CA)

ASIAN 388(3388) Theorizing Gender and Race in Asian Histories and Literatures (also ASIAN 688/6688, FGSS 688/6688) @ (CA)

ASIAN 391(3391) East Asian Martial Arts and Society and Religion (also HIST 391[3391]) @ (HA)
Fall. 4 credits. T. Hinrichs.
For description, see HIST 319.
ASIAN 392(3392) Divination Sciences in Antiquity @ # (HA)
Fall. 4 credits. C. Minkowski.

ASIAN 395(3395) Classical Indian Philosophical Systems @ (KCM)
Spring. 4 credits. Prerequisite: some background in philosophy or in classical culture. C. Minkowski.

ASIAN 396(3396) Southeast Asian History from the 18th century (also HIST 396(3960)) @ (HA)
Spring. 4 credits. E. Tagliacozzo.
For description, see HIST 396.

ASIAN 397(3397) Premodern Southeast Asia (also HIST 395(3950)) @ # (HA)

ASIAN 409(4409) Archipelago: The Worlds of Indonesia (also HIST 410(4100)) @ (HA)

ASIAN 410(4410) Chinese Film (LA)
Spring. 4 credits. E. Gunn.
Additional film viewing hours TBA. The course surveys Chinese films from the 1920s to the present and various responses to them. Films from mainland China, Hong Kong, and Taiwan are included, together with critical studies employing a variety of different critical methods.

ASIAN 411(4411) History of the Japanese Language (also LING 411(4111), JAPAN 410(4110)) @ # (HA)
Fall. 4 credits. J. Whitman.
For description, see LING 411.

ASIAN 412(4412) Linguistic Structure of Japanese (also LING 412(4122)) (KCM)
Spring. 4 credits. J. Whitman.
For description, see LING 412.

ASIAN 413(4413) Religion and Politics in Southeast Asia (also ANTHR 413(4133)) @ # (CA)
Spring. 4 credits. A. Willford.
For description, see ANTHR 413.

ASIAN 416(4416) Gender and Sexuality in Southeast Asian History (also HIST/FGSS 416(4160)) @ # (CA)

ASIAN 421(4421) Religious Reflections on the Human Body (also RELST 421(4212)) (KCM)
Spring. 4 credits. Prerequisites: one religious studies course or permission of instructor. Next offered 2008-2009.
J. M. Law.

ASIAN 424(4424) Scars and Bars: Asian Trauma Memoirs @ # (CA)
Spring. 4 credits. L. Paterson.
From the Chinese Cultural Revolution to Khmer Rouge Cambodia, social upheaval in Asia has given rise to a genre of trauma memoir. In this course, we will discuss how periods of societal terror are represented and remembered within these personal narratives. Through reading such accounts in conjunction with secondary scholarship, students examine various issues of representation such as intended audience, construction of memory, and framing of individual experience.

ASIAN 425(4425) Theories of Civilization (also HIST 494(4940)) @ # (HA)

ASIAN 430(4430) Structure of Korean (also LING/KOREA 430(4430)) (KCM)
For description, see LING 430.

ASIAN 436(4436) Topics in Indian Film (LA)
Spring. 4 credits. No knowledge of an Indian language required. D. Gold.
Treats various aspects of Indian film, with focal topics to vary from year to year. These topics include religion in Indian film, Indian art films, and the golden age of Indian film. All topics are discussed in relation to the conventions of mainstream Bollywood cinema and their social and cultural significances. Attendance at weekly screenings is required.

ASIAN 438(4438) Monks, Texts, and Relics: Transnational Buddhism in Asia (also ASIAN 638(6638)) (CA)
Fall. 4 credits. Prerequisites: one 300-level or above course in ASIAN or RELST or permission of instructor. Next offered 2007-2008. A. Blackburn.

ASIAN 439(4439) Japanese Politics (also GOVT 439(4439)) @ # (SBA)

ASIAN 441(4441) Mahayana Buddhism (also RELST 441(4441)) @ # (CA)

ASIAN 449(4449) History and Methods of the Academic Study of Religion (also RELST 449(4449)) @ (KCM)
Spring. 4 credits. Prerequisite: one course satisfying religious studies major.
D. Boucher.
Provides advanced students in religious studies or the humanities familiarity with important methodological issues in the academic study of religion. Following a brief historical outline, major approaches to the academic study of religion currently used and discussed in religious studies are examined. Students read works from the following approaches to the study of religion: anthropology, sociological hermeneutics, phenomenology, history of religions, the sociology of religion and critical ideological studies. In the final segment, the course focuses on recent developments in the field of religious studies.

ASIAN 452(4452) Global Martial Arts Film and Literature (also S HUM 408, COM L 450(4503))
Fall. 4 credits. Limited to 20 students.
P. Liu.
For description, see S HUM 408.

ASIAN 454(4454) Animal Philosophy and Animation (also COM L 431(4310)) (CA)
Spring. 4 credits. T. LaMarre.

ASIAN 460(4460) Indian Meditation Texts (also RELST 460(4600)) @ (KCM)
Fall. 4 credits. No knowledge of Indian languages required. D. Gold.
Draws on approaches from literary criticism, anthropology, and religious studies to explore texts that record religious experience. Readings are drawn from classical meditation manuals of Hinduism and Buddhism and later yogic and devotional texts.

ASIAN 462(4462) Religion, Colonialism, and Nationalism in South and Southeast Asia (also ASIAN 662(6662)) (CA)
Spring. 4 credits. Prerequisites: one course in ASIAN, RELST, HIST, ANTHR at 300 level or above or permission of instructor.
Next offered 2008-2009 A. Blackburn.

ASIAN 468(4468) Arendt, Morisaki, Weil (also ASIAN 668(6668), COM L 438(4380), COM L 624(6240))
Fall. 4 credits. Limited to 20 students.
B. deBarry.
Examines contributions to 20th-century philosophy of three women—Hannah Arendt, Morisaki Kazue, and Simone Weil. Writing from sites that spanned Paris, Berlin, New York, and Fukuoka, Japan, the three formulated ethical and political responses to twentieth century issues that were global in scope: the rise of fascism, the emergence of anti-colonial movements, communism, and the situation of stateless persons, refugees, and state-adopter. Not restricted to philosophy majors, this course seeks to expand our understanding of the range of twentieth century philosophical writings across linguistic, national, and gender boundaries. Students able to read Weil in French and Morisaki in Japanese are particularly welcome.

ASIAN 469(4469) Medicine and Healing in China (also HIST 496/S&TS/B&SOC/4961), COM L 408(4080)
Fall. 4 credits. T. Hinrichs.
For description, see HIST 496.

ASIAN 481(4481) Translation and Identities (also COM L 470(4700)) @ (KCM)
Fall. 4 credits. N. Sakai.
Problems concerning translation are explored. Although there are many different models of translation, we tend to be confined to the very narrow conception of translation as a transnational transfer of significance between two national or ethnic languages. We survey theories of translation with a special emphasis on relationships between trans-national translation and transnational transference. Translation establishes a division of two spheres and thereby marks the limit of what can be expressed in one medium. Broadly understood, translation can take place not only between two national languages but also at a variety of boundaries within a single society. Will investigate different economics of translation by which different social and cultural identities are constructed, emphasizing the disappearance of multi-lingualism in modern nation-state and mutation of translation economies which has given rise to new ways of imagining organicist unity of the society. Historical transformation of translation and accompanying genesis of linguistic and cultural identity will be examined in reference to historical materials.

ASIAN 483(4483) Internationalism, Nationalism, and Modern Japanese Discursive Space @ (KCM)

ASIAN 487(4487) Vedanta Among the Shastras @ # (HA)
Spring. 4 credits. Prerequisite: primarily for seniors/majors and graduate students; background in subject; permission of instructor. C. Minkowski.
ASIAN 489 (4489) Religion and Sustainability: Traditional Discourses in the Twenty-First Century (also RELST 489(4489))

Fall. 4 credits. Prerequisite: permission of the instructor. J. M. Law.

The natural world and the relationship of human beings and animals to it and within it is a central component of cosmogonic myths and religious ideologies in most major religious traditions. In this course, we explore how mythological, textual, ritual and ideological understandings of the relationship between human beings and the natural world inform understandings of the contemporary environmental crisis and the responsibility of human beings to address it. We will focus on cases from Hindu, Buddhist, Jain, Jewish, Christian and Muslim discourses on the natural world. We explore a variety of models of formulating the human/natural relationship: dominion, stewardship, illusion, primary sacrality and alienation. We challenge the view that grounding environmental activism in religious discourse is an effective way for environmental work to proceed and look at concrete case studies of religious communities working for, or against, environmental sustainability. Readings from primary sources in translation in the major religious traditions, and secondary sources relating to case studies.

[ASIAN 493 (4493) Problems in Modern Chinese History (also HIST 493/693(4930/6930)] @ (HA)

Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2007-2008. S. Cochran.

ASIAN 496 (4496) Tokugawa Literature and Thought @ # (HA)

Spring. 4 credits. N. Sakai.

Introduction (in English translation) to literary, theatrical, and intellectual works of the Tokugawa period (1600-1868). Examines the characteristics of the literary and theatrical works of the Tokugawa Japan. Students read the philosophical and philological works on the classics by writers such as Ogyu Sorai and Motoori Norinaga to discuss the issues of literary modernity.

[ASIAN 499 (4499) Problems in Modern Chinese History (also HIST 499/699(4990/6990)] @ (HA)

Spring. 4 credits. Prerequisite: permission of instructor. Next offered 2007-2008. Cochran.

[ASIAN 507 (5507) The Occidental Tourist (also HIST 207/507(2070/5070)]

ASIAN 206(2206)

Asia—Graduate Seminars

For complete descriptions of courses numbered 600 or above, consult the director of graduate studies.

ASIAN 602 (6602) Southeast Asia Seminar: Contemporary Thailand

Spring. 4 credits. T. Chaloemtiarana.

ASIAN 603 (6603) Southeast Asia Field Seminar

Fall. 4 credits. T. Chaloemtiarana.

ASIAN 604 (6604) Southeast Asia Topical Seminar

Spring. 3-4 credits. T. Chaloemtiarana.

ASIAN 610 (6610) SLA and the Asian Languages (also LING 609(6609))

Fall. 4 credits. Y. Shirai.

ASIAN 612 (6612) Japanese Bibliography and Methodology

Fall. 1 credit. Requirement for honors students and M.A. candidates. Prerequisite: permission of instructor. F. Kotas.

ASIAN 613 (6613) Southeast Asian Bibliography and Methodology

Fall. 1 credit. Requirement for honors students and M.A. candidates. Prerequisite: permission of instructor. Recommended: reading knowledge of at least one Southeast Asian language or other Asian language (especially Chinese or Japanese) and a major European language (especially French, Spanish, or Dutch). Staff. Designed to instruct students in methods of identifying and locating resources for the study of Southeast Asia. Emphasis is on the practical use of various types of bibliographical tools to identify both primary and secondary sources in Southeast Asian and Western languages. Electronic databases and online services as well as traditional printed resources are covered. Relevant arcanas of library science is explained as necessary.

ASIAN 615 (6150) Histories of Tokugawa Japan (also HIST 615(6150))

Fall. 4 credits. K. Hirano.

For description, see HIST 615.

ASIAN 618 (618) Gender and Sexuality in Southeast Asian History (also ASIAN 416(4416), HIST 416(4160) Spring. 4 credits. Prerequisite: graduate standing. Next offered 2008-2009. T. Loos.

ASIAN 619 (6191) Graduate Seminar: Translation in Theory (also VIST 619(6191))

Spring. 4 credits. B. de Bary.

The study of translation, often figured as invisible, brings hidden histories to light. Translation may be a practice of power, or its undoing, it may consolidate hegemonies, or decenter them. Translation is a prominent motif in philosophy and art. The course introduces theories of translation significant for post-modern, post-colonial, and visual studies.

ASIAN 626 (626) The 18th Century and the Emergence of Literary Modernity

ASIAN 634 (6343) Buddhist Studies Seminar

Spring. 4 credits. Prepares graduate students studying Asian religions for a; examination; other graduate students may enroll with permission of instructor. Next offered 2007-2008. A. Blackburn.

ASIAN 638 (638) Monks, Texts, and Relics: Transnational Buddhism in Asia

Fall. 4 credits. Prerequisites: one 300-level or above course in ASIAN or RELST or permission of instructor. Next offered 2007-2008. A. Blackburn.

ASIAN 650 (6500) Seminar in Asian Religions (also RELST 650(6650))

ASIAN 654 (6654) Indian Buddhism (also ASIAN 354(3354), RELST 354/654(3354/654))

Fall. 4 credits. Graduate students attend ASIAN 354 and arrange additional meetings with instructor. Next offered 2007-2008. D. Boucher.

ASIAN 662 (6662) Religion, Colonialism, and Nationalism in South and Southeast Asia

Fall. 4 credits. Prerequisites: one course in ASIAN, RELST, HIST, ANTHR at 300 level or above or permission of instructor. Next offered 2008-2009. A. Blackburn.

ASIAN 667 (6667) Commerce Late Imperial China (also ASIAN 467(4467))

Spring. 4 credits. R. Rusk.

Graduate seminar (open to undergraduates by permission of instructor) focusing on the relationship between commercialization and culture from Song to Qing (10th to 19th centuries). Was there a commercial revolution in premodern China (or more than one)? Was there capitalism? Can Chinese culture be said to help or hinder commerce, or to have been changed by it? Should art and literature be interpreted through the lens of economic relations? These questions have been raised by Western scholars since Hegel and Marx, but were of concern to Late Imperial observers as well. Through readings in English and in English translation, this seminar traces the development of such arguments in various genres and fields of study.

ASIAN 668 (6668) Arendt, Morisaki, Well (also ASIAN 468(4468), COM L 438(4380), COM L 624(6240))

Fall. 4 credits. Prerequisite: ASIAN 468.

For description, see ASIAN 468.

ASIAN 671 (6717) Paleanthropology of South Asia (also BIOEE 671(6710), ANTHR 671(6717))

ASIAN 676 (6767) Southeast Asia Reading Seminar: The Early Thai Novels

ASIAN 680 (6860) Vietnamese Literature in Translation (also ASIAN 380 (3380))

Fall. 4 credits. L. Paterson.

For description, see ASIAN 380.

ASIAN 685 (6855) History of Vietnam (also HIST 388/688(3880/6880) and ASIAN 385(3385))

Fall. 4 credits. R. Taylor.

For description, see ASIAN 385.

ASIAN 688 (6688) Theorizing Gender and Race in Asian Histories and Literature (also ASIAN 380(3380), FGSS 358/658(3580/6580))

ASIAN 693 (6693) Problems in Modern Chinese History (also HIST 493/693(4930/6930))

Honors Courses

ASIAN 401(4401) Asian Studies Honors Course
Fall or spring. 4 credits. Prerequisite: senior standing; admission to honors program. Staff. Supervised reading and research on the problem selected for honors work.

ASIAN 402(4402) Asian Studies Honors: Senior Essay
Fall or spring. 4 credits. Prerequisite: admission to honors program. Staff. The student, under faculty direction, prepares an honors essay.

ASIAN 403-404(4403-4404) Asian Studies Supervised Reading
Fall, spring, or both. 1-4 credits. Prerequisite: permission of instructor; majors and other qualified students. Intensive reading under the direction of a member of the staff.

Bengali

BENGL 121-122(1121-1122) Elementary Bengali
121, fall; 122, spring. 4 credits each semester. Prerequisite: for BENGL 122, BENGL 121 or examination. S. Mukherjee. Enables students to read and comprehend basic Bengali texts as well as speak and write in the language. The introduction of the Bengali script is complemented by detailed instruction in grammar.

BENG 201-202(2201-2202) Intermediate Bengali Composition and Conversation
201, fall; 202, spring. 4 credits each semester. BENGL 201 satisfies Option 1. Prerequisites: for BENGL 201, BENGL 121 or examination; for BENGL 202, BENGL 201 or examination. S. Mukherjee. Building on skills mastered at the elementary level and continuing grammar instruction, this course is designed to advance students' oral competence and enhance comprehension skills through reading and listening. Its aim is to enable students to interact productively when immersed in the environment and/or to carry out research in primary material in the language.

BENG 203-204(2203-2204) Intermediate Bengali Composition and Conversation
203, fall; 204, spring. 2 credits each semester. Prerequisites: for BENGL 203, BENGL 122 or examination; for BENGL 204, BENGL 203 or examination. S. Mukherjee. Complements the verbal skills developed in BENGL 201-202 by improving writing skills.

BURM 300(3000) Directed Studies
Fall or spring. 1-4 credits. Prerequisite: permission of instructor. Times TBA with instructor. S. Mukherjee. Taught on a specialized basis to address particular student needs.

BURM 303-304(3303-3304) Bengali Literature I, II @
303, fall; 304, spring. 4 credits each semester. Prerequisites: BENGL 203-204 or equivalent. BENGL 303 satisfies Option 1. S. Mukherjee. Designed in consultation with students to address their specific needs. Through reading literary texts organized around social and cultural theme-clusters, the course aims to refine the students' breadth of understanding and develop literary/critical skills.

BURM 305-306(3305-3306) Bengali Conversation Practice
123, fall; 124, spring. 2 credits each semester. Prerequisites: for BURM 304, BURM 305 or equivalent. S. Mukherjee. Refine and develop skills in oral communication and reading abilities.

BURM 307-308(3307-3308) Bengali Literature I, II @
307, fall; 308, spring. 4 credits each semester. Prerequisites: for BURM 305, BURM 307 or equivalent. S. Mukherjee. Taught on a specialized basis to address particular student needs.

BURM 309-310(3309-3310) Bengali Conversation Practice
123, fall; 124, spring. 2 credits each semester. Prerequisites: for BURM 310, BURM 309 or equivalent. S. Mukherjee. Taught on a specialized basis to address particular student needs.

Chinese

Note: Testing for placement, except for those with near-native abilities (particularly those schooled in a Chinese setting up until the age of about 12), takes place in registration week, before classes begin. Time and place will be posted at http://lrc.cornell.edu/asiang/programs/placement and on the bulletin board outside 350 Rockefeller Hall. Students with some Chinese schooling who want to obtain 3 credits for their proficiency will be tested at the beginning of the second week of classes. Again, the time and place will be announced.

ASIAN STUDIES 461
CHIN 101-102(1101-1102) Elementary Standard Chinese (Mandarin)
101, fall; 102, spring. 6 credits each semester. Limited to 10-12 students per sec. Prerequisites: for CHIN 102, CHIN 101 or permission of instructor. Students must enroll in lec and one sec. Because of limited sec size, students missing first two class meetings without university excuse are dropped so others may register.

For beginners only, providing a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (because Chinese is spoken at home) but who do not read characters should take 109-110. Students who read Chinese, but who speak "dialects," such as Cantonese or Amoy, should enroll in CHIN 215.

CHIN 109-110(1109-1110) Beginning Reading and Writing (Standard Chinese)
109, fall; 110, spring. 4 credits each semester. Prerequisite: permission of instructor. Students who complete CHIN 110 normally continue with CHIN 209 and 210. Because of high demand, students missing first two meetings without university excuse are dropped so others may register. Y. Lee-Mehta.

Intended primarily for students who speak some Chinese (e.g., at home), but who have had little or no formal training. The focus is on characters, reading comprehension, basic composition, standard grammar, and reading aloud with standard Chinese (Mandarin) pronunciation.

CHIN 111-112(1111-1112) Elementary Cantonese I and II
111, fall; 112, spring. 4 credits each semester. Prerequisite: for CHIN 111, permission of instructor; for CHIN 112, CHIN 111 or equivalent. Students with Mandarin background should enroll in CHIN 112. H. Huang.

CHIN 111 is for beginners with no or very limited Chinese/Cantonese language background from heritage or previous formal training. CHIN 111-112 gives comprehensive training in oral/aural reading/writing in Cantonese spoken and used in Canton and Hong Kong. CHIN 111 focuses more on oral and aural skills training than on reading and writing Cantonese characters. CHIN 112 covers more training on reading and writing Cantonese characters than does CHIN 111. For more details, see http://lrc.cornell.edu/asian/courses/ch/chin111

CHIN 201-202(2201-2202) Intermediate Standard Chinese (Mandarin) @
201, fall or summer; 202, spring or summer. 4 credits each semester. CHIN 201 satisfies Option I. Prerequisites: for CHIN 201, CHIN 102 with grade of C+ or above or equivalent; for CHIN 202, CHIN 201 or equivalent. Q. Teng and staff.

Continuing instruction in written and spoken Chinese with particular emphasis on consolidating basic conversational skills and improving reading confidence and ability.

CHIN 209-210(2209-2210) Intermediate Reading and Writing @
209, fall, 210, spring. 4 credits each semester. CHIN 209 satisfies Option I. Prerequisites: for CHIN 209, CHIN 110 or equivalent; for CHIN 210, CHIN 209. After completing 210, students may take only 400-level courses in Chinese. Staff.

Continuing focus on reading and writing for students with spoken background in standard Chinese; introduction of personal letter writing and other types of composition.

CHIN 211-212(2211-2212) Intermediate Cantonese I and II @
211, fall; 212, spring. 4 credits each semester. CHIN 211 satisfies Option I. Prerequisites: for 211, permission of instructor and completion of CHIN 112 or elementary conversational skills in Cantonese from heritage but very limited formal training in Cantonese character reading and writing. For 212, CHIN 211 or equivalent. H. Huang.

Gives comprehensive training in oral and written Cantonese at a higher level than CHIN 111-112. Oral training covers conversational Cantonese expression on daily life topics. Written training includes reading aloud and writing Cantonese characters as well as simple composition writing skills in Chinese characters. For more details, see http://lrc.cornell.edu/asian/courses/ch/chin211

CHIN 213-214(2213-2214) High Intermediate Cantonese I and II @
213, fall; 214, spring. 4 credits each semester. CHIN 213 satisfies Option I. Prerequisite: for 213, basic oral/aural skill in Cantonese and a higher level than CHIN 111-112. Oral training covers conversational Cantonese expression on daily life topics. Written training includes reading aloud and writing Cantonese characters as well as simple composition writing skills in Chinese characters. For more details, see http://lrc.cornell.edu/asian/courses/ch/chin211

CHIN 215(2215) Mandarin for Cantonese Spakers @
Fall. 4 credits. Satisfies Option I. Limited to 15 students. Prerequisite: advanced Cantonese with native-like reading and writing ability. Staff.

Works on standard Chinese pronunciation and differences in vocabulary and grammar between Cantonese and Mandarin.

CHIN 300(3000) Directed Studies
Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff.

Taught on a specialized basis to address particular student needs.

CHIN 301-302(3301-3302) High Intermediate Chinese @
301, fall; 302, spring. 4 credits each semester. CHIN 301 satisfies Option I. Prerequisites: for CHIN 301, CHIN 202 or equivalent; for CHIN 302, CHIN 301. Y. Lee-Mehta.

Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

CHIN 304(3304) Advanced Mandarin Conversation
Spring. 1 credit. Limited to 10 students. Prerequisite: CHIN 202, 215, 301, or permission of instructor. Staff.

Offers a wonderful speaking and listening opportunity to students who wish to maintain or increase their language proficiency by engaging in guided discussions of various topics.

CHIN 309/310(3309/3310) Business Chinese in Cultural Context (also CHIN 509/510)
Fall, spring. 4 credits each semester. CHIN 309 satisfies Option I. Prerequisite: permission of instructor only. Z. Chen.

A two-semester sequence for those who have studied Mandarin to the advanced level (or equivalent). Aims to enhance students' language skills in the business context and to promote understanding of the macro and micro business environment and culture in China. An emphasis on case study is adopted along with task-based language teaching. Based on 10 real cases from real companies. Six are multinational companies that have successfully operated in China by adapting their strategies to the special needs of the Chinese market; four are Chinese companies that have pursued a larger presence in domestic and global markets. Goals are to equip students with language skills, cultural awareness, and software literacy necessary to do business in China. Class will be conducted in Chinese.

CHIN 411-412(4411-4412) Advanced Chinese: Fiction, Reportage, Current Events @
411, fall; 412, spring. 4 credits each semester. Prerequisites: for CHIN 411, CHIN 302 or equivalent; for CHIN 412, CHIN 411 and permission of instructor. Q. Teng.

Reading, discussion, and composition at advanced levels.

CHIN 425(4425) Special Topics: Historical Documents on Modern China (also MIST 465/665, CHIN 625)@
Fall. 4 credits. Prerequisite: permission of instructor. Z. Chen.

CHIN 509/510(5509/5510) Business Chinese in Cultural Context @
Fall, spring. 4 credits each semester. Z. Chen.

For description, see CHIN 509/510.

CHIN 625(6625) Special Topics: Historical Documents on Modern China (also CHIN 425, MIST 465/665) Spring. 1 credit. Limited to 10 students. Prerequisite: CHIN 625.

For description, see CHIN 425.

Chinese FALCON (Full-Year Asian Language Concentration)

For full information, brochures, etc., see the FALCON Program coordinator in 388 Rockefeller Hall or e-mail: falcon@cornell.edu or http://lrc.cornell.edu/falcon

FALCON is designed to help students develop "copability" in Chinese by bringing them to the level where they can make progress on their own with no further instruction.
The full-year program provides over 1,800 hours of language exposure—which exceeds even the exposure that students living in China typically receive. This allows students to develop levels of fluency, accuracy, and control that are not achieved in other academic settings. By taking the entire full-year sequence, students can complete as much Chinese in one calendar year as they would complete in three or more years of regular study at most academic institutions. The full-year sequence is Chinese 160 (summer), 161 (fall), and 162 (spring). Students typically take the entire sequence, but they may take any other portion of the program if they have the necessary background as determined by a placement interview. Students often choose to apply only to the summer portion. The spring semester of the Chinese program is expected to be offered in Beijing at Tsinghua University. In the summer and fall, three small interactive classes per day are conducted entirely in Chinese, and one lecture is conducted in both Chinese and English. In the spring semester, all four classes are conducted entirely in Chinese. In the fall, students are also required to spend two one-hour sessions per day in the language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings.

Students must formally apply to the program. To guarantee course availability, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. Applications are available in 388 Rockefeller Hall or at http://lrc.cornell.edu/falcon.

CHIN 160(1160) Introductory Intensive Mandarin
Summer only. 8 credits. Students who complete this course with grade of at least B are normally eligible to enroll in CHIN 201. S. Divo and staff.

Introduction to spoken and written Mandarin. Lectures on linguistic and cultural matters, intensive practice with native speakers, and laboratory work.

CHIN 161-162(1161-1162) Intensive Mandarin @
161, fall; 162, spring. 16 credits each semester. CHIN 161 satisfies Option 1. Prerequisites: for CHIN 161, CHIN 160 or equivalent permission of instructor, for CHIN 162, CHIN 161 or placement by FALCON staff before beginning of spring semester. Students must apply formally to program; open to all Cornell students and students from other institutions. S. Divo and staff.

Work on spoken and written Chinese from an intermediate to an advanced level. This is a full-time program and full academic load; the demands of the program do not normally permit students to take other courses simultaneously. With a sequence of 160, 161, and 162, in only one calendar year a student can complete as much Chinese as would be gained in three or more years of regular study at most academic institutions. This course sequence also serves to fulfill the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. CHIN 162 is scheduled to be held in Beijing, People's Republic of China. For more information and application forms, please contact the FALCON Program office.

CHLIT 213-214(2213-2214) Introduction to Classical Chinese \# (LA)
213, fall; 214, spring. 3 credits each semester. CHLIT 213-214 does NOT satisfy Option 1. Prerequisite: for 213, qualification in Chinese or permission of instructor; for 214, 213 or permission of instructor. May be taken concurrently with CHLIT 101-102, 201-202, 301-302. Open to students who have studied at least two years of any language that employs Chinese writing system (e.g., Mandarin, Cantonese, Japanese). Staff.

Two-part introductory course. Students learn the fundamental grammar and vocabulary of classical Chinese by analyzing and translating short passages.

CHLIT 300(3000) Reading from the Early Masters \# (HA)
Fall. 4 credits. Prerequisites: CHLIT 213-214 or permission of instructor. D. X. Warner and B. Rusk.

This course surveys texts—primarily in prose—from the ancient and medieval periods. Through close reading, students expand their knowledge of the dialect, syntax, and various genres, themes, and literary styles that were foundational for the later Chinese literary tradition.

ASIAN 352(3352) Technologies of Knowledge
Fall. 3 credits. B. Rusk.

Undergraduate seminar on the role of information technologies in the history of culture and society, using Chinese and Western examples as points of comparison and the writing, print and electronic communications as tests of hypotheses about the significance of technology in cultural history. Readings, all in English, from anthropology, archeology, history, sociology, linguistics and law.

CHLIT 420(4420) Tang Poetry: Themes and Contexts (also CHLIT 620(6620)) \# (LA)
Fall. 4 credits. Prerequisite: minimum three years of Chinese and/or one year of Classical Chinese or permission of instructor. D. X. Warner.

A guided reading in Chinese of selected works on shared themes written by selected poets of the Tang dynasty (618-907). Focuses on developing the essential skills for reading Tang poems while giving attention to their social, cultural, and historical contexts.

CHLIT 421-422(4421-4422) Directed Study
Fall or spring. 2-4 credits each semester. Prerequisite: permission of instructor. Staff.

Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

CHLIT 423(4423) Readings in Chinese History @
Spring. 4 credits. Satisfies Option 1. Staff.

CHLIT 435(4435) Chinese Buddhist Texts \# (LA)
Fall. 4 credits. Prerequisite: one year of classical Chinese or permission of instructor. Open to students in any area of East Asia with an interest in developing skills in Buddhist texts. Next offered 2007-2008. D. Boucher.

CHLIT 497(4497) Disjuncture: Text and Exegesis \# (LA)
Spring. 4 credits. Prerequisite: permission of instructor; completion of equivalent of CHLIT 214 and any CHLIT course at 300 level. Next offered 2007-2008. R. McNeal.

CHLIT 603(6603) Seminar in Chinese Fiction and Drama
Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2007-2008. E. Gunn.

CHLIT 605(6605) Seminar in Chinese Fiction and Drama
Spring. 4 credits. Prerequisite: permission of instructor. Next offered 2007-2008. Staff.

CHLIT 610(6610) Chinese Cultural Criticism

CHLIT 615(6615) Seminar: Ideas and Literature of Medieval China
Spring. 4 credits. D. X. Warner.

Offers study of the language and genres of Medieval Chinese literature in the context of Medieval Chinese intellectual history. Students read from a range of primary works—including poetry, prose, literary treatises, philosophical essays, and historical writings—from the Later Han to the Sui and early Tang, in addition to a selection of modern scholarly essays in the field. Topic varies from year to year. The primary aim is to re-examine the interrelationship between the history of ideas and the formations of a medieval poetics during the period of Chinese literary history.

CHLIT 618(6618) Seminar on Ancient China
Fall. 4 credits. Also fulfills Humanities requirement. Prerequisite: CHLIT 213-214 or permission of instructor. Next offered 2007-2008. R. McNeal.

CHLIT 621-622(6621-6622) Advanced Directed Reading: Chinese Historical Syntax
621, fall; 622, spring. 2-4 credits. Prerequisite: permission of instructor. Staff.

Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

CHLIT 687(6697) Disjuncture: Text and Exegesis
Spring. 4 credits. Prerequisite: permission of instructor; completion of equivalent of CHLIT 214 and any CHLIT course at 300 level. Next offered 2007-2008. R. McNeal.
Hindi

HINDI 101-102[1101-1102] Elementary Hindi-Urdu [also NES 105-106(1310-1311)]

101, fall; 102, spring. 6 credits each semester. Prerequisite: for HINDI 102, HINDI 101 or equivalent. S. Singh and Staff.

For those students who have had very little or no exposure to Hindi-Urdu. Designed to enable such students to read, write, and converse in the language with confidence and enjoyment. Hindi and Urdu are sister languages and share an identical grammar and elementary vocabulary. The language presented is colloquial. The Hindi script is taught first and the Urdu script is taught as an additional course in the spring semester. Students who have some experience of Hindi-Urdu or a closely related language are suited for HINDI 109-110 and should check with the instructor.

HINDI 109-110[1109-1110] Accelerated Elementary Hindi-Urdu

109, fall; 110, spring. 3 credits each semester. Prerequisite: for HINDI 110, HINDI 109 or equivalent. Completion of this sequence, including satisfactory performance on exam given at end of HINDI 110, constitutes level of performance equal to 101-102 sequence and is thus considered to fulfill qualification for language requirement plus eligibility for 200-level Hindi-Urdu courses. Check with instructor regarding placement. S. Singh and Staff.

Entry-level sequence for students with some prior exposure to Hindi-Urdu or a closely related language. Provides a thorough grounding in all the language skills: listening, speaking, reading, and writing.

HINDI 201-202[2201-2202] Intermediate Hindi Reading @

201, fall; 202, spring. 3 credits each semester. HINDI 201 satisfies Option 1. Prerequisites: for HINDI 201, HINDI 102 for HINDI 202, HINDI 201 or permission of instructor. S. Singh and Staff.

Practical language course on an advanced level in which the students read materials in their own field of interest, write reports, and meet with the instructor for two hours a week for 2 credits and twice a week for 4 credits.

HINDI 203-204[2203-2204] Intermediate Composition and Conversation @

203, fall; 204, spring. 3 credits each semester. HINDI 203 satisfies Option 1. Prerequisites: for HINDI 203, HINDI 102 for HINDI 204, HINDI 203 or permission of instructor. J. Pandin.

Develops all four skills: reading, writing, speaking, and comprehension.

HINDI 300[3000] Directed Studies

Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. J. Pandin.

JAPANESE

Japanese

JAPAN 101-102[1101-1102] Elementary Japanese

101, fall; 102, spring. 6 credits each semester. Prerequisite for 102: JAPAN 101 or placement by instructor during registration period. Intended for beginners or those who have been placed in the course by examination. Students must enroll in onelec and one sec. Undergraduates may not enroll for S-U grade option. Graduate students must enroll for S-U by permission of instructor. R. Sukle, Y. Nakanishi, and staff.

Gives a thorough grounding in all four language skills—speaking, listening, reading, and writing—at the beginning level but with a special emphasis on oral communication and use of the language in social contexts. Homework is largely worked on the skill aspects through practice on the Internet, with CDs, or with tapes. The lecture provides explanation, analysis, and cultural background necessary for successful interaction with Japanese people. Sections are conducted entirely in Japanese. Materials covered are not the same as for JAPAN 141-142.

JAPAN 141-142[1141-1142] Beginning Japanese at a Moderate Pace

141, fall; 142, spring. 4 credits each semester. Prerequisites: for JAPAN 141, JAPAN 140 or placement by instructor during registration. Y. Nakanishi and Staff.

Beginning-level training in listening, speaking, reading, and writing, with more emphasis on written skills than JAPAN 101-102. Classroom activities focus on oral communication skills. Homework for the course is largely written exercises. Fewer credits and fewer class contact hours than JAPAN 101-102; the course meets five hours per week (M T W R F).

Background and current status of all courses taught at Cornell. Materials covered are not the same as for JAPAN 101-102.

JAPAN 201-202[2201-2202] Intermediate Japanese Conversation @

201, fall and summer; 202, spring and summer. 4 credits each semester. JAPAN 201 satisfies Option 1. Prerequisites: for JAPAN 201, JAPAN 102 or placement by instructor during registration; for JAPAN 202, JAPAN 201 or placement by instructor during registration. Students must enroll in onelec and one sec. Y. Katagiri.

For students with an elementary level of Japanese to continue study of the language and acquire widely applicable oral proficiency. Sections are conducted entirely in Japanese to develop listening comprehension and speaking ability through practical situational practices. Lectures give versatile knowledge of essential structural patterns systematically, with audiovisual aids (e.g., Japanese TV) to demonstrate use in actual situations.

JAPAN 300-304[3305-3306] Directed Individual Study

305, fall; 306, spring. 2-4 credits. Prerequisites: for JAPAN 305, 306 or equivalent knowledge of Japanese or Malay. J. Pandin.

Practice the language in an advanced level in which the students read materials in their own field of interest, write reports, and meet with the instructor for two hours a week for 2 credits and twice a week for 4 credits.

Indonesian

Students who have completed INDO 109-110 or 123 or its equivalent have the option of taking a one-semester program in Malang, East Java, during the junior year. The program combines a variety of cultural and artistic options with area course work and advanced language study. Complete information is available through Cornell Abroad.

Students who have completed a minimum of 18 credits or the equivalent are eligible to apply for a summer program in the Advanced Indonesian program. Further information is available from the Southeast Asia Program (180 Uris Hall, 255-2378).

INDO 121-122[1121-1122] Elementary Indonesian

121, fall; 122, spring. 4 credits each semester. Prerequisite for INDO 121, INDO 122. J. Pandin.

Gives a thorough grounding in basic speaking and listening skills with an introduction to reading.

INDO 123[1123] Continuing Indonesian

Fall. 4 credits. Prerequisite: INDO 122 or equivalent. J. Pandin.

Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings and sharpenes listening skills.

INDO 203-204[2203-2204] Intermediate Composition and Conversation @

203, fall; 204, spring. 3 credits each semester. INDO 203 satisfies Option 1. Prerequisites: for INDO 203, INDO 123; for INDO 204, INDO 203 or permission of instructor. J. Pandin.

Indonesian

Students who have completed INDO 109-110 or 123 or its equivalent may continue study of the language and culture in an Advanced Indonesian program. Further information is available from the Southeast Asia Program (180 Uris Hall, 255-2378).

INDO 205-206[2205-2206] Intermediate Indonesian @

205, fall; 206, spring. 3 credits each semester. INDO 205 satisfies Option 1. Prerequisites: for INDO 205, INDO 123 or equivalent; for INDO 206, INDO 205 or equivalent. J. Pandin.

Develops all four skills: reading, writing, speaking, and comprehension.

INDO 300[3000] Directed Studies

Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. J. Pandin.

INDO 305-306[3305-3306] Directed Individual Study

305, fall; 306, spring. 2-4 credits. Prerequisites: INDO 305-306 and 303-304 or equivalent knowledge of Indonesian or Malay. J. Pandin.

Practice the language in an advanced level in which the students read materials in their own field of interest, write reports, and meet with the instructor for two hours a week for 2 credits and twice a week for 4 credits.
JAPAN 301-302 Communicative Competence @
301, fall; 302, spring. 3 credits each semester. JAPAN 301 satisfies Option 1. Prerequisites: for JAPAN 301, JAPAN 202 or 242 and placement by instructor during registration; for JAPAN 302, JAPAN 301 or placement by instructor during registration. Y. Kawasaki and staff.
For students who have learned basic Japanese grammar and oral skills and would like to use the language for natural conversation and effective oral communication. The course is intended to (1) expand vocabulary for daily life use; (2) brush up on knowledge of basic grammar for fluency; and (3) develop communicative skills for varied situations.

JAPAN 303-304(3303-3304) Intermediate Japanese Reading II @
303, fall; 304, spring. 4 credits each semester. JAPAN 303 satisfies Option 1. Prerequisites: for JAPAN 303, JAPAN 202 or placement by instructor during registration; for JAPAN 304, JAPAN 303 or placement by instructor during registration. K. Selden.
Reading of selected modern texts, including excerpts and brief complete pieces by outstanding writers of Japanese prose.

JAPAN 401-402(4401-4402) Oral Narration and Public Speaking
401, fall; 402, spring. 2 credits each semester. Prerequisites: for JAPAN 401, JAPAN 302 or placement by instructor during registration; for JAPAN 402, JAPAN 401 or placement by instructor during registration. Conducted entirely in Japanese, using Japanese audiovisual and written materials. Y. Katagiri.
Advanced course to develop skills in oral delivery in formal settings. Students increase vocabulary and patterns used in public occasions, e.g., class presentations, speeches, discussions, interviews and debates. Fluency and listening comprehension are emphasized. Also for those interested in academic settings, e.g., research students or conference participants.

JAPAN 403-404(4403-4404) Advanced Japanese Readings
403, fall; 404, spring. 4 credits each semester. Satisfies Option 1. Prerequisite: JAPAN 304 or permission of instructor.
Section I: Area of humanities. May not be used for distribution. Reading of selected modern texts, including newspaper columns and writings by representative authors and critics. K. Selden.
Section II: Area of economics and social science. May not be used for distribution. Y. Kawasaki. Reading of selected modern texts with emphasis on expository style.

JAPAN 410(4410) History of the Japanese Language (also LING/ASIAN 411) @ [HA]
Fall. 4 credits. Prerequisite: permission of instructor. J. Whitman.
For description, see LING 411.

JAPAN 421-422(4421-4422) Directed Readings
421, fall; 422, spring. 1-4 credits. Prerequisites: for 421, students, placement by instructor during registration. Selected texts from modern and contemporary short stories. K. Selden.

Japanese FALCON (Full-year Asian Language Concentration) @
Web site: http://flc.cornell.edu/falcon.
Director: R. Sukle, 388 Rockefeller Hall, 255-0734 or rjs19@cornell.edu.
Program coordinator: 388 Rockefeller Hall, 255-6457 or falcon@cornell.edu.
FALCON is designed to develop "capability" in students by bringing them to the level where they can make further progress on their own even with no further instruction.
The full-year program provides over 1,800 hours of language exposure—which exceeds even the exposure that students living in Japan typically receive. This intensive work in Japanese allows students to develop levels of fluency, accuracy, and control of the language that is not achieved in any other type of academic setting.
The full-year FALCON sequence is Japanese 160 (summer), 161 (fall), and 162 (spring). By taking this entire sequence, students can complete as much Japanese in one calendar year as they would complete in three or more years of regular study at most academic institutions. Because of FALCON's intensive nature, graduate students can complete their language work in minimal time. Undergraduates, including freshmen, achieve levels of competency that far exceed what is normally achieved in a four-year program, provided that they continue studying Japanese after FALCON.
Three small interactive classes per day are conducted entirely in Japanese, and one lecture is conducted in both Japanese and English. The interactive classes are conducted by experienced and highly trained teachers, and the lecture is taught by an expert in the structure of the Japanese language. In addition to time spent in these classes, students also are required to spend two one-hour sessions per day in the language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings.

JAPAN 160(1160) Introductory Intensive Japanese (FALCON) @
Summer only. 8 credits. R. Sukle and staff.
Formal application to FALCON is required. Admission is open to all students, not just those planning to take the full year. Students from other institutions are also welcome to apply. Applications must be received by March 1. After the deadline, applications are considered provided that space is available.
This is the first semester of FALCON. It is a full-time, intensive, nine-week course that meets Monday through Friday from 8:30 A.M. to 4:30 P.M.; 160 starts at the absolute beginning level, in terms of speaking, listening, and rudimentary reading and writing. Students who complete this course and plan to continue at Cornell may take spring FALCON courses (JAPAN 161 and 162). Students interested in other options for continuing after FALCON should consult the FALCON director, Robert Sukle, at rjs19@cornell.edu or 255-0734.

JAPAN 161-162(1161-1162) Intensive Japanese (FALCON) @
161, fall; 162, spring. 16 credits each semester. Satisfies Option 1. Prerequisites for 161: JAPAN 160, JAPAN 102 at Cornell, or placement by FALCON staff before beginning of fall semester; for 162, JAPAN 161 or placement by FALCON staff before beginning of spring semester. R. Sukle and staff.

Formal application to FALCON is required. Admission is open to all students, including those from other institutions. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. Work on oral and written Japanese from an intermediate level to an advanced level. This is a full-time program and a full academic load. The schedule is Monday through Friday, approximately 9:00 A.M. to 4:30 P.M. The demands of the program do not permit students to take other courses simultaneously. The 160-161-162 sequence fulfills the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies.

Literature in Japanese

JPLIT 456(4456) Heian Narrative @ (LA)
Fall. 4 credits. Recommended; some knowledge of classical Japanese. Next offered 2007-2008 T. LaMarre.

JPLIT 617(6617) Modern Japanese Philosophy
Fall. 4 credits. Satisfies Option 1. Intended for students who have completed JAPAN 403/404 sequence or equivalent. Prerequisite: JPLIT 460 or permission of instructor. K. Selden.
Readings of excerpts and complete brief pieces from representative premodern Japanese literature mostly with the use of standard modern annotated editions. Different selections and themes are introduced each year.

JPLIT 421-422(4421-4422) Directed Readings
421, fall; 422, spring. 2-4 credits. Prerequisite: for JPLIT 421, JAPAN 404 or equivalent; for JPLIT 422, JAPAN 421 or equivalent. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

JPLIT 456(4456) Heian Narrative @ (LA)
Fall. 4 credits. Recommended; some knowledge of classical Japanese. Next offered 2007-2008 T. LaMarre.

JPLIT 617(6617) Modern Japanese Philosophy
Fall. 4 credits. N. Sukai.
Seminar on modern Japanese philosophy. Students are expected to read texts in Japanese and discuss epistemic, historical, and practical issues involved in them. Supplemantary reading of European and U.S. philosophical texts is also required.

JPLIT 618(6618) Japanese Philosophical Discourse II
Spring. 4 credits. Prerequisite: reading knowledge of Japanese. N. Sukai.
This seminar is designed to offer students an opportunity to read, analyze, and evaluate the philosophical discourse of modern Japan in conjunction with contemporary European and American developments. The main concern of this course is in fact the operation of "comparison." At the seminar which will be organized neither as a search for the national (or oriental) character of Japanese philosophy nor as a project of explaining philosophical arguments in terms of the traits of the
national culture, but rather as an attempt to comprehend how philosophy participates in the construction and transformation of given social formations, we will read excerpts from philosophical works in Japanese and English. In order to enroll in this course, students are required to have a reading knowledge of Japanese.

JPLIT 624/6624 Advanced Readings in Modern Japanese Literature
Fall. 4 credits. Prerequisite: permission of instructor. T. LaMarre.

JPLIT 625/6625 Directed Readings
Fall or spring. 4 credits. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

Khmer (Cambodian)

KHMER 121-122-123(1121-1122-1123) Elementary Khmer
121, fall; 122, spring; 123, fall. 4 credits each semester. Prerequisite: for KHMER 122, KHMER 121; for KHMER 123, 122, for beginners or those placed in course by examination. H. Phan.
Gives a thorough grounding in speaking and reading.

KHMER 201-202(2201-2202) Intermediate Khmer Reading @
201, fall; 202, spring. 3 credits each semester. KHMER 201 satisfies Option 1. Prerequisites: for KHMER 201, KHMER 102; for KHMER 202, 201. H. Phan.
Continuing instruction in spoken and written Khmer.

KHMER 203-204(2203-2204) Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each semester. KHMER 203 satisfies Option 1. Prerequisites: for KHMER 203, KHMER 102; for KHMER 204, 203. H. Phan.

KHMER 300(3000) Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff.

KHMER 301–302(3301–3302) Advanced Khmer @
301, 302, fall. 4 credits each semester. KHMER 301 satisfies Option 1. Prerequisites: for KHMER 301, KHMER 202 or equivalent; for KHMER 302, 301. H. Phan.
Continuing instruction in spoken and written Khmer: emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

KHMER 401-402(4401-4402) Directed Individual Study
401, fall; 402, spring. 2–4 credits each semester. Prerequisite: advanced students; permission of instructor. H. Phan.

Korean

KOREA 101-102(1101-1102) Elementary Korean
101, fall; 102, spring. 6 credits each semester. Prerequisites: for KOREA 101, 102 or examination. H. Diffloth and staff.
Covers basics of speaking, reading, and writing. Introduces Hangul writing system and grammar.

KOREA 109-110(1109-1110) Elementary Reading
109, fall; 110, spring. 3 credits each semester. Prerequisites: permission of instructor. H. Diffloth and staff.
For students who have spoken some Korean in the home, but whose reading and writing skills are limited or nonexistent. If in doubt about eligibility, see instructor.

KOREA 201-202(2201-2202) Intermediate Korean @
201, fall; 202, spring. 4 credits each semester. KOREA 201 satisfies Option 1. Prerequisites: for KOREA 201, KOREA 102 or permission of instructor; for KOREA 202, 201. H. Diffloth and staff.
Covers the basics of speaking, reading, and writing at the intermediate level.

KOREA 209-210(2209-2210) Intermediate Reading @
209, fall; 210, spring. 4 credits each semester. KOREA 209 satisfies Option 1. Prerequisites: for KOREA 209, KOREA 110 or permission of instructor; for KOREA 210, 209 or permission of instructor. If in doubt about eligibility, see instructor. M. Song.
Intermediate level of reading comprehension and writing course for students who have acquired basic oral proficiency. Introduces some reading and writing with Chinese characters.

KOREA 300(3000) Directed Studies
Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. H. Diffloth.
Taught on a specialized basis to address particular student needs.

KOREA 301-302(3301-3302) Advanced Korean @
301, fall; 302, spring. 4 credits each semester. KOREA 301 satisfies Option 1. Prerequisites: for KOREA 301, KOREA 202 or placement by instructor; for KOREA 302, 301 or placement by instructor. H. Diffloth and staff.
Reading of advanced texts, including newspapers and Chinese character material, together with advanced use of the spoken language.

KOREA 430(4430) Structure of Korean [also LING/ASIAN 430(4430)] (KCM)
For description, see LING 430.

Literature in Korean

KRLIT 405(4405) Readings in Korean Literature @ (LA)
Fall. 4 credits. Prerequisite: three years of Korean language study or permission of instructor. Staff.
Readings of 20th-century Korean literature in the original. Short stories and novels are selected to provide a mixture of canonical and contemporary authors. Students also read some academic works of literary history and criticism.

KRLIT 432(4432) Middle Korean (also LING 432(4432)) @ (LA)
Spring. 4 credits. Prerequisite: KOREA 301 or equivalent. J. Whitman.
For description, see LING 432.

KRLIT 615(6615) Development of Literary Modernity in Korea
Fall. 4 credits. Prerequisite: graduate standing; fluency in Korean. Next offered 2008-2009.

KRLIT 617(6617) Colonial Modernity in Korea

Nepali

The Cornell Nepal Study Program
Cornell and the central campus of Tribhuvan National University (in Kirtipur, Kathmandu) cosponsor a semester or year in Nepal at the Cornell Nepal Study Program for both undergraduate and graduate students. North American students live and study with Nepali students at the Cornell program houses near the university, taking courses taught in English by faculty from Tribhuvan University. After an intensive orientation, semester courses include intensive spoken and written Nepali language, Contemporary Issues in Nepal, and Research Design and Methods in a wide variety of fields in the social and natural sciences and the humanities. (Language instruction in Tibetan and Newari may also be arranged.) There is a 10-day study tour and field trip during the semester, and students execute their research proposal during four weeks of guided field research, writing up their findings for presentation at the end of the semester.

Juniors, seniors, and graduate students from any field may apply. Students should have a desire to participate in a program featuring relatively intense cultural immersion and to undertake rigorous field research. Instruction is in English, but prior study of Nepal or language is strongly recommended for Cornell students. Those interested in the program should consult Cornell Abroad (cuabroad@cornell.edu).

NEPAL 101–102(1101–1102) Elementary Nepali
101, fall; 102, spring. 101–102, summer. 6 credits each semester. Prerequisite: for NEPAL 102, NEPAL 101 or examination. S. Oja.
Intended for beginners. The emphasis is on basic grammar, speaking, and comprehension skills, using culturally appropriate materials and texts. Devanagari script for reading and writing is also introduced.

NEPAL 201–202(2201–2202) Intermediate Nepali Conversation @
201, fall; 202, spring. 201–202, summer. 3 credits each semester. NEPAL 201 satisfies Option 1. Prerequisites: for NEPAL 201, NEPAL 102 or examination; for NEPAL 202, 201 or examination. S. Oja.
Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students' professional fields.
NEPAL 203-204(2203-2204) Intermediate Nepali Composition

203, fall, 204, spring; 203–204, summer. 3 credits each semester. NEPAL 203 satisfies Option 1. Prerequisites: for NEPAL 203, NEPAL 102 or examination; for NEPAL 204, 203 or examination. S. Oja. Systematic review of written grammar and reading comprehension, with special attention to the technical vocabularies, necessary of advanced students' professional fields. Taught on a specialized basis to address particular student needs.

NEPAL 301-302(3301-3302) Advanced Nepali

301, fall; 302, spring; 301–302, summer. 3 credits each semester. NEPAL 301 satisfies Option 1. Prerequisite: NEPAL 204 or permission of instructor. S. Oja. Reading of advanced texts, together with advanced drill on the spoken language.

Pali

(PALI 131-132(1131-1132) Elementary Pali

131, fall; 132, spring. 3 credits each semester. This language series may not be used to satisfy language requirement. Next offered 2007–2008. Staff.)

(PALI 151(1151) Accelerated Elementary Pali

Spring. 3 credits. Prerequisite: background in Sanskrit or permission of instructor. Next offered 2007–2008. A. Blackburn.)

PALI 300(3000) Directed Studies

Spring. 1–4 credits, variable. Prerequisite: PALI 152, 151, or two years of Sanskrit. Taught on a specialized basis to prepare students for research and teaching.

Sanskrit

[SANSK 131-132(1131-1132) Elementary Sanskrit (also CLASS 191-192(1331-1332), LING 131-132(1131-1132)]

131, fall; 132, spring. 4 credits each semester. Offered alternate years; next offered 2007–2008. Staff.)

[SANSK 251-252(2251-2252) Intermediate Sanskrit (also CLASS 291-292(2251-2252), LING 251-252(2251-2252)]

251, fall; 252, spring. 3 credits each semester. SANSK 251 satisfies Option 1. Prerequisite: SANSK 132 or equivalent. Offered alternate years. Staff.)

SANSK 322(3322) Buddhist Hybrid Sanskrit

Fall. 4 credits. D. Boucher. An introduction to Buddhist Hybrid Sanskrit, the idiom of a number of (particularly Mahayana) Buddhist texts composed from roughly second century CE through (and possibly beyond) the fourth century CE. The aim will be to familiarize students with Middle Indo-Aryan phonology and its appearance in disguised form in BHS texts. Students will also be introduced to reading Buddhist texts in manuscripts, especially with texts which have been preserved in independent recensions, so as to explore the problems of redactional criticism.

Literature in Sanskrit

SNLIT 467-468(4467-4468) Reading in Sanskrit Literature: The Vedas @

Spring. 3 credits. Prerequisite: permission of instructor. C. Minkowski.

Sinhala (Sinhalese)

SINHA 101-102(1101-1102) Elementary Sinhala

101, fall; 102, spring. 6 credits each semester. Prerequisite: for SINHA 102, SINHA 101 or equivalent. W. Liyanage. Semi-intensive course for beginners. A thorough grounding is given in all the language skills; listening, speaking, reading, and writing.

SINHA 201-202(2201-2202) Intermediate Sinhala Reading @

201, fall; 202, spring. 3 credits each semester. SINHA 201 satisfies Option 1. Prerequisites: for SINHA 201, SINHA 102; for SINHA 202, 101 or equivalent. W. Liyanage.

(SINHA 203-204(2203-2204) Intermediate Composition and Conversation @

203, fall; 204, spring. 3 credits each semester. SINHA 203 satisfies Option 1. Prerequisites: for SINHA 203, SINHA 102 or permission of instructor; for SINHA 204, 203 or equivalent. W. Liyanage.

SINHA 300(3000) Directed Studies

Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff. Taught on a specialized basis to address particular student needs.

Tagalog

(TAG 121-122(1121-1122) Elementary Tagalog

121, fall; 122, spring. 4 credits each semester. Prerequisite: for TAG 122, TAG 121. T. Savella. Gives a thorough grounding in basic speaking and listening skills with an introduction to reading.

TAG 123(1123) Continuing Tagalog

Fall. 4 credits. Prerequisite: TAG 122 or equivalent. T. Savella. Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings; and sharpens listening skills.

TAG 205-206(2205-2206) Intermediate Tagalog @

205, fall; 206, spring. 3 credits each semester. TAG 205 satisfies Option 1. Prerequisites: for TAG 205, TAG 123 or equivalent; for TAG 206, 205 or equivalent. T. Savella. Develops all four skills: reading, writing, speaking, and comprehension.

TAG 300(3000) Directed Studies

Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. T. Savella. Taught on a specialized basis to address particular student needs.

TAG 301-302(3301-3302) Advanced Tagalog @

301, fall; 302, spring. 3 credits each semester. TAG 301 satisfies Option 1. Prerequisite: TAG 206 or equivalent. T. Savella. Continuing instruction on conversational skills but with emphasis on reading and writing. Selected core readings in contemporary Tagalog literature are used, but students, in consultation with the instructor, may select some of the reading materials.

Thai

(THAI 101-102(1101-1102) Elementary Thai

101, fall; 102, spring. 6 credits each semester. Prerequisite: for THAI 102, THAI 101 or equivalent. Intended for beginners or students placed by examination. N. Jagacinski.

Continuing instruction in spoken and written Thai.

THAI 201-202(2201-2202) Intermediate Thai Reading @

201, fall; 202, spring. 3 credits each semester. THAI 201 satisfies Option 1. Prerequisites: for THAI 201, THAI 102; for THAI 202, 201 or equivalent. N. Jagacinski. Continuing instruction in spoken and written grammar and reading comprehension.

THAI 203-204(2203-2204) Intermediate Composition and Conversation @

203, fall; 204, spring. 3 credits each semester. THAI 203 satisfies Option 1. Prerequisites: for THAI 203, THAI 201; for THAI 204, 203. N. Jagacinski. Intermediate instruction in spoken and written language.

THAI 300(3000) Directed Studies

Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. N. Jagacinski. Taught on a specialized basis to address particular student needs.

THAI 301-302(3301-3302) Advanced Thai @

301, fall; 302, spring. 4 credits each semester. THAI 301 satisfies Option 1. Prerequisite: THAI 202 or equivalent. N. Jagacinski. Selected readings in Thai writings in various fields.

THAI 303-304(3303-3304) Thai Literature @

303, fall; 304, spring. 4 credits each semester. THAI 303 satisfies Option 1. Prerequisite: THAI 302 or equivalent. N. Jagacinski. Reading of significant novels, short stories, and poetry written since 1850.

THAI 401-402(4401-4402) Directed Individual Study

401, fall; 402, spring. 4 credits each semester. For advanced students or students with special problems or interests. Prerequisite: permission of instructor. N. Jagacinski.
URDU 125(1125) Introduction to the Urdu Script (also NES 107[1312])
Spring. 1 credit. Prerequisite: HINDI 101 or permission of instructor. S. Singh. Provides instruction in the basics of the Urdu script. Intended primarily for students who have had some exposure to Hindi or Urdu but who have had little or no formal training in the script. The course focuses on mastering the script and pronunciation. It does not provide instruction in grammar.

URDU 300(3000) Directed Studies
Fall or spring. 1–4 credits, variable.
Prerequisite: permission of instructor.
Times TBA with instructor. S. Singh. Taught on a specialized basis to address particular student needs.

VIETnamese

VIET 101-102(1101-1102) Elementary Vietnamese
101, fall; 102, spring. 6 credits each semester. Prerequisite: for VIET 102, VIET 101 or equivalent. Intended for beginners or students placed by examination. T. Tranviet.
Gives a thorough grounding in all language skills: listening, speaking, reading, and writing.

VIET 201-202(2201-2202) Intermediate Vietnamese @
201, fall; 202, spring. 3 credits each semester. VIET 201 satisfies Option I. Prerequisites: for VIET 201, VIET 102 or equivalent; for VIET 202, 201. T. Tranviet.
Continuing instruction in spoken and written Vietnamese.

VIET 203-204(2203-2204) Intermediate Vietnamese Composition and Reading @
203, fall; 204, spring. 3 credits each semester. VIET 203 satisfies Option I. Prerequisite: permission of instructor. T. Tranviet.
Designed for students and “native” speakers of Vietnamese whose speaking and listening are at the advanced level, but who still need to improve writing and reading skills.

VIET 300(3000) Directed Studies
Fall or spring. 1–4 credits variable.
Prerequisite: permission of instructor.
Times TBA with instructor. T. Tranviet. Taught on a specialized basis to address particular student needs.

VIET 301-302(3301-3302) Advanced Vietnamese @
301, fall or spring; 302, fall or spring. 3 credits each semester. VIET 301 satisfies Option I. Prerequisites: for VIET 301, VIET 202 or permission of instructor; for VIET 302, 301. T. Tranviet.
Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

VIET 401-402(4401-4402) Directed Individual Study
401, fall; 402, spring. 2–4 credits, variable, each semester. Prerequisite: permission of instructor. Intended for advanced students. T. Tranviet.
Various topics according to need.

VIETnamese Literature

VTLIT 222-223(2222-2223) Introduction to Classical Vietnamese @
222, fall; 223, spring. 3 credits. VTLIT 222 satisfies Option I. Prerequisite: qualification in Vietnamese or permission of instructor. K. Taylor. VTLIT 222 is the first semester of a two-semester sequence of courses introducing students to Han (classical Chinese as used in the Vietnamese language) and Nom (vernacular Vietnamese character writing). Students learn to read Han and Nom texts, from the 17th through 19th centuries, including historical records, prose writings, and poetry. VTLIT 223 is the second semester of a two-semester sequence of courses.

Asian American Studies Program
The Asian American Studies Program is a university-wide academic program housed administratively within the College of Arts and Sciences. Its aim is to promote teaching, research, and educational activities related to Asians in the Americas and to serve as a resource to the campus and regional communities. The program's undergraduate...
American Studies. The program does not offer a graduate course of study, but students can undertake graduate work in Asian American Studies within selected disciplines of the university.

Undergraduate Concentration
The program's undergraduate concentration affords students an opportunity to develop a multidisciplinary approach to the study of Asians in the hemispheric Americas. The course of study stresses developments within the United States, but also underscores the transnational and comparative contexts of Asian America and the field's connections with African American, American Indian, Latino, and Women's Studies. Students must work with a faculty advisor from among the program's affiliated faculty and must complete at least 15 units of credits as follows: (1) AAS 110 and two additional courses in Asian American Studies; (2) one course in African American, American Indian, U.S. Latino Studies, or Feminist, Gender, & Sexuality Studies*; and (3) one course in East Asian, South Asian, or Southeast Asian Studies.* (These courses must be approved by the student's faculty advisor, and they should address issues of race, gender, or the histories and cultures of Asian peoples.) Students must file an application for the concentration with the Asian American Studies Program.

Resource Center
The program's Asian American Studies Resource Center, located in 420 Rockefeller Hall, provides meeting space for the more than 40 undergraduate student organizations of the Cornell Asian Pacific Student Union and the graduate student Asian Pacific American Graduate Association. It also holds a modest print collection of books, periodicals, and newspapers; a current news clipping file; a comprehensive database of publications on Asian Americans since 1977; and a sizable collection of videotapes as well as music CDs on the Asian American experience.

Research
The program encourages faculty and student research on Asian Americans by sponsoring guest lectures, conferences, film festivals, readings, and exhibits. It also funds research projects and student travel to conferences and research sites. The Asian American Studies Workshop is the program's principal research initiative, engaging Cornell's faculty and students with invited faculty from other universities in a year-long intensive study of selected themes.

Core Faculty
D. Chang, C. Lai, V. Munasinghe, T. Tu, S. Wong

Courses
AAS 110(1110) Introduction to Asian American Studies (CA)
Spring. 3 credits. Can be used to satisfy either social science or humanities distribution requirement. T. Tu.

The purpose of this course is fourfold: (1) to introduce students to the multifaceted experiences of Asians in the United States; (2) to examine how a diverse group of people came to be identified as "Asian Americans"; (3) to understand the role of difference—gender, class, ethnic—in the formation of "Asian American" identities; and (4) to link historical experiences with contemporary issues.

AAS 111(1110) Introduction to American Studies: New Approaches to Understanding American Diversity, the 20th Century (also AM ST 110(1110)) (HA)
Fall. 4 credits. Next offered 2007-2008. D. Chang and M. C. Garcia.

AAS 209(2090) SSP: The Immigrant Imagination (also ART H 209[2190], AM ST 227[3270]) (HA)
Spring. 4 credits. Limited to 15 students. T. Tu.

For description, see ART H 209. This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. These seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

AAS 210(2110) SSP: South Asian Diasporic Locations (also ANTHR 210[2110]) (CA)

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. These seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

AAS 211(2110) SSP: Race and the American City: Reading San Francisco and New York (LA)

AAS 262(2620) Asian American Literature (also AM ST/ENGL 262[2620])
Fall. 4 credits. S. Wong.

For description, see ENGL 262.

AAS 303(3030) Asians in the Americas: A Comparative Perspective (also ANTHR 303[3030]) (CA)
Spring. 4 credits. V. Munasinghe.

For description, see ANTHR 303.

AAS 347(3470) Asian American Women's History (also HIST 347/FGSS 347/AM ST 351/AM ST 351[3470])
Spring. 4 credits. D. Chang.

For description, see HIST 347.

AAS 380(3800) Asian American Urban Experience (also CRP 395 sec 9 and CRP 628)
Fall. 3 credits. C. Lai.

For description, see CRP 395.9

AAS 413(4130) Race, Technology, and Visuality (also ART H 413[4113]) (CA)
Fall. 4 credits. Next offered 2007-2008. T. Tu.

Examines how new information and communication technologies have altered the ways we visualize and perform racial identities. Questions the popular assumption that the "information revolution" has made it possible and even desirable to transcend racial differences by exploring the following: how racial hierarchies have informed debates around techno-literacy, creativity, ownership, and agency; how race is embodied (through visual and linguistic cues) in the ostensibly disembodied domains of virtual media; and how the emergence of interactive, online, electronic entertainment, and mobile technologies have allowed artists to generate new images of and ideas about racial and ethnic identities.

AAS 414(4140) Popular Culture in Asian America (also ART H 414[4141]) (CA)
Spring. 4 credits. Prerequisite: permission of instructor. T. Tu.

For description, see ART H 414.

AAS 424(4240) Asian American Communities (also HIST/AM ST 420[4220]) (HA)

AAS 430(4301) Topics in American Studies: The Rabinor Seminar (also AM ST 430.5[4301], ENGL 430[4030], HIST 448[4480])
Fall. 4 credits. S. Wong.

For description, see AM ST 430.5.

AAS 453(4530) 20th-Century American Women Writers of Color (also ENGL 453[4530]) (LA)

AAS 479(4790) Ethnicity and Identity Politics: An Anthropological Perspective (also ANTHR 479[4749]) (SBA)

AAS 495(4950) Independent Study
Fall or spring. 1-4 credits. Topic and credit hours TBA arranged between faculty and student. Independent study forms must be approved by Asian American Studies Program office. Staff.

AAS 497(4970) Jim Crow and Exclusion Era America (also HIST 497[697]) (SBA)

Seminar examining America during the overlapping eras of segregation and immigration exclusion. Beginning with contests over the meaning of freedom during reconstruction and running through the institution of Jim Crow legislation and immigration exclusion, the course ends with an evaluation of mid-20th century movements for civil rights and equality. Themes include the links between racial and economic oppression, legal and de facto restriction, everyday resistance, and struggles for equality.
Astronomy

Cornell's Astronomy faculty, research staff, graduate, and undergraduate students are active in diverse areas of modern astronomy ranging from theoretical astrophysics and general relativity to radio and radar astronomy, infrared and optical astronomy, and the exploration of the solar system. Cornell operates two local optical observatories, the world's largest optical telescope at Arecibo, Puerto Rico, and with two other institutions, the 200-inch optical telescope at Mt. Palomar in California. With Caltech, Cornell is carrying out a design study for a large submillimeter telescope in the high Atacama desert. Several members of the department faculty are also principle investigators on major NASA space and planetary exploration missions.

The department offers a number of courses to satisfy a general interest in astronomy. These courses have few or no prerequisites and are not intended to form the training of professional astronomers. Among the introductory courses, several choices are available, depending on background and on the requirements to be fulfilled. The 100-level courses are designed primarily for nonscience majors. The alternative introductory sequence ASTRO 211–212 is geared toward sophisticated science and engineering majors and requires co-registration in beginning calculus. ASTRO 201 and 202 are intended for students with an interest in astronomy but no scientific background; they are topical rather than survey-oriented. ASTRO 392 is designed for physical science and engineering majors as an introduction to astrophysics. Other courses at the 200 and 300 levels appeal to students of various backgrounds and interests, as indicated in the individual course descriptions.

Courses numbered above 400 are intended for students who have had two to three years of college physics and at least two years of college mathematics. ASTRO 440 Independent Study permits students to engage in individual research projects under the guidance of a faculty member.

Interested students are encouraged to become members of the undergraduate Cornell Astronomy Club. The club has access to the Fuehs Observatory on campus and conducts regular observing and astrophotography sessions. All students are invited to visit the Space Sciences Building, see the exhibits on display there, and consult faculty members about career plans or choice of courses.

The Major

The purpose of the major in Astronomy is to provide in-depth knowledge and education about the nature of the universe. Astronomy relies heavily on preparation in physics and mathematics. Consequently, many courses in these fields are included as prerequisites. In preparation for the major, students normally elect the introductory physics sequence PHYS 112–213–214 or 116–217–218 and the complementary pathway in mathematics, MATH 111–122–221–222 or 191–292–293–294 (or equivalent). Students who anticipate undertaking graduate work are urged to elect the honors physics sequence PHYS 116–217–218–318–327 if possible. The sophomore seminar ASTRO 233 Topics in Astronomy and Astrophysics provides an introduction to current research in astronomy and astrophysics for prospective majors, but is not required of students who elect to major in Astronomy after the sophomore year. Students are also urged to acquire computer literacy.

ASTRO 343 is designed to give students hands-on experience with the methods of analysis, visualization, and simulation needed in astrophysical research. Acceptance to the major is first considered after completion of three semesters of introductory physics and mathematics and in general requires a GPA of 3.2 in physics and mathematics courses.

The major requirements stress the importance of building a strong preparation in physical science. The following upper-level courses are normally required:

PHYS 314 or 318, 316, 323 or 327, 341 and 443
A&EP 321–322 (or equivalent, e.g., MATH 420 and 422)
ASTRO 410, 431, and 432.

With permission of the major advisor, students interested in planetary studies may substitute appropriate advanced courses or may pursue an independent major under the program in the Science of Earth Systems. Majors are encouraged to supplement the above courses with any astronomy, physics, or other appropriate courses at or above the 300 level. Advanced seniors can enroll in astronomy graduate courses with the permission of the instructor. Students are also encouraged to work with faculty members on independent study projects under the course ASTRO 440 or to apply to a variety of programs at Cornell, Arecibo, and elsewhere that offer undergraduate summer employment as research assistants. Nearly all undergraduate majors and concentrations become involved in research projects in the junior and senior years. Students whose interest in astronomy is sparked somewhat late in their undergraduate career are encouraged to discuss possible paths with the director of undergraduate studies in Astronomy.

Honors: A student may be granted honors in Astronomy upon the recommendation of the Astronomy Advisors Committee of the Astronomy faculty.

Double Majors: A double major in Astronomy and another subject is possible in many circumstances. However, the set of courses used to fulfill the requirements for each major must be completely independent.

Concentration: The concentration in Astronomy for other majors normally requires 12 credits, at least eight of which must be at the 300 level or above. ASTRO 233 is recommended for students planning to concentrate in Astronomy.

Distribution Requirement

All courses in astronomy, except ASTRO 233, may be used to fulfill the science distribution requirement in the College of Arts and Sciences.

Courses

ASTRO 101(1101) The Nature of the Universe (PBS)
Fall. 3 credits. Limited to 30 students per disc. T. Herter.
Introduces students to the cosmos. The birth, evolution, and death of stars, the formation of the chemical elements, and the nature of white dwarfs, neutron stars, and black holes are discussed. An introduction to the theories of special relativity and general relativity is given. The course research for other worlds outside the solar system and the possible existence of life and intelligence elsewhere in the universe. Modern theories of cosmology are presented, and the origin, structure, and fate of the universe are discussed. Most of the course notes as well as sample exams and simulations are made available on the web.

ASTRO 102(1102) Our Solar System (PBS)
Spring. 3 credits. Limited to 30 students per disc. S. Squyres and J.-L. Margot; labs. P. D. Nicholson and staff.
The past few decades have seen incredible advances in the exploration of our solar system. In this course students learn about the current state and past evolution of the Sun and its family of planets, moons, asteroids, and comets. The course emphasizes images and other data obtained from current and past NASA space missions and how these data provide insights into the processes that have shaped the evolution of solar system objects. General astronomical concepts relevant to the study of the solar system are also discussed. Critical focus is on developing an understanding of the Earth as a planetary body and discovering how studies of other planets and satellites inform our understanding of the climatic, geologic, and biologic history of our home world. Other topics include impact hazards, the search for life in the solar system, and future missions.

ASTRO 103(1103) The Nature of the Universe (PBS)
Fall. 4 credits. Limited to 22 students per lab, 30 students per disc sec. T. Herter, labs. P. Nicholson, and staff.
Identical to ASTRO 101 except for addition of the laboratory.

ASTRO 104(1104) Our Solar System (PBS)
Spring. 4 credits. Limited to 22 students per lab, 30 students per disc sec. J.-L. Margot and S. Squyres.
Identical to ASTRO 102 except for addition of the laboratory.

ASTRO 105(1105) An Introduction to the Universe (PBS)
Summer. 3 credits. Recommended: high school physics. D. Kornreich.
How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements, and how are they formed in stars? What are white dwarfs, neutron stars, and black holes? How was the solar system formed? What are the environments of other planets like? What is the basic structure of Earth and the other planets? Will we catastrophically alter the earth? Does life exist
elsewhere in the universe? How can we find out? Each student has an opportunity to make observations with small telescopes.

ASTRO 106(1106) Essential Ideas in Relativity and Cosmology (PBS)  
Summer. 3 credits. Prerequisites: high school algebra and trigonometry. T. Nikone and F. Martinache.  
Explanation of the theories of special and general relativity, which brought about a fundamental change in our conceptual understanding of space and time. Correspondence to, and conflicts with, common sense. Applications to various areas in special relativity (space travel, the equivalence of mass and energy, nuclear fission and fusion, and thermonuclear processes in the sun) and in general relativity (motion of light and particles in curved spacetime, cosmological models, and the question of whether the universe is open or closed).

ASTRO 107(1107) An Introduction to the Universe (PBS)  
Summer. 4 credits. D. Kornreich. Identical to ASTRO 105 except for the addition of the afternoon laboratory that emphasizes mathematics, problem-solving. This option is recommended for potential majors in science and engineering.

ASTRO 195(1195) Observational Astronomy (PBS)  
Fall. 3 credits. Limited to 24 students. Prerequisite: permission of instructor (forms available in S6610). J. Lloyd  
Provides a "hands-on" introduction to observational astronomy intended for liberal arts students at the freshman and sophomore level. High school mathematics is assumed, but otherwise there are no formal prerequisites. The course objective is to teach how we know what we know about the universe. The course is set up with two lectures and one evening laboratory per week. Not all of the evening sessions are used. Planned activities include five or six observational labs (star gazing with binoculars and small telescopes, telescopic observations and CCD imaging of star clusters, nebulae, and the planets, solar observations, radio observations of the Milky Way Galaxy), plus a selection of exercises from the following: experiments in navigating by the stars; construction and use of simple instruments such as optical spectroscopes and sun dials; laboratory spectroscopy; experiments in planetary cratering; collection and study of micrometeorites; computer simulations of the orbits of planets and their satellites; and cosmological explorations using data from the Hubble Space Telescope available on the web.

ASTRO 201(2201) Our Home in the Universe (PBS)  
Fall. 3 credits. Prerequisite: freshman or sophomore standing. No scientific background assumed. R. Giovaneli. General discussion of our relation to the physical universe and how our view of the universe has changed from ancient to modern times. Several main themes are covered over the course of the semester: the evolution of our view of the sky from that of ancient cultures to that of space telescopes; the death of stars and the formation of black holes; dark matter and the structure of galaxies; and the origin, evolution, and fate of the universe. Presents a nonmathematical introduction to these subjects and discusses uncertainties and unresolved issues in our understanding.

ASTRO 202(2202) Our Home in the Solar System (PBS)  
Spring. 3 credits. Prerequisite: freshman or sophomore standing; some background in science. J. Veverka. Writing course designed to develop an understanding of our home planet as a member of a diverse family of objects in our solar system. Discussion centers on how studies of other planets and satellites have broadened our knowledge and perspective of Earth, and vice versa. We study, debate, and learn to write critically about important issues in science and public policy that benefit from this perspective. Topics discussed include global warming, the impact threat, the searches for extraterrestrial planets and extraterrestrial intelligence, and the exploration of Mars.

ASTRO 211(2211) Astronomy: Stars, Galaxies, and Cosmology (PBS)  
Fall. 4 credits. Intended for first- and second-year engineering and physical sciences students. Prerequisite: introductory calculus and co-registration in MATH 111 or 191 or permission of instructor. R. Bean. Topics discussed include: the formation and evolution of normal and extreme stars, the structure and evolution of galaxies, and cosmology.

ASTRO 212(2212) The Solar System: Planets, Satellites, and Rings (PBS)  
Spring. 4 credits. Intended for first- and second-year engineering and physical sciences students. Prerequisite: introductory calculus or co-registration in MATH 111 or 191; some knowledge of classical physics (mechanics and thermodynamics). P. Nicholson. Introduction to the solar system, with emphasis on the application of simple physical principles. Topics include: the Sun, nucleosynthesis of the elements, radioactive dating, seismology and planetary interiors, planetary surfaces and atmospheres including greenhouse models, orbital mechanics and resonances, interplanetary and interstellar inflation, meteoroids, asteroids, and meteorites, the Jovian planets, icy moons and ring systems, and the search for extra-solar planets.

ASTRO 233(2233) SSP: Topics in Astronomy and Astrophysics  
Fall. 2 credits. Limited to 15 students. Intended for sophomores planning to major in Astronomy or related fields. Prerequisites: PHYS 112 or 116 and 213 or 217, MATH 112, 122 or 192 or permission of instructor. Home page: wwwastro.cornell.edu/academics/courses/astro233. M. Haynes.

The course theme may change yearly. The fall 2006 course will be offered as a Knight sophomore seminar and will explore the theme "Star Formation: From the Early Universe to the Modern Phoenix." We will explore how star formation in different locations within the Milky Way and other galaxies has varied throughout cosmic time, how local environment may play a role in the formation of multiple star and/or planetary systems, and the connections between stellar birth and stellar death in supernovae. We will also look at starbursting systems such as infrared luminous galaxies and quasars and the relationship of star, galaxy, and black hole formation in the early universe.

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines of knowledge, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

ASTRO 220(2220) Space Exploration (PBS)  
Fall. 3 credits. No special background in physical sciences, math, or engineering assumed. S. Squyres. Provides an overview of space science, with particular emphasis on the solar system, and a detailed examination of a few selected objects, including the planet Mars, the satellites in the outer solar system, and comets. The focus is on methods of collecting information and especially on spacecraft and space missions. Topics include the design and limitations of instruments. Ethical and political questions associated with space exploration are discussed. Intended for students with an interest in science, technology, and associated policy issues.

ASTRO 229(2299) Search for Life in the Universe (PBS)  
Spring. 4 credits. Prerequisites: two courses in any physical science subject or permission of instructors. J. Cordes and T. Terzian. Surveys the contents of the universe. Reviews theories of cosmic and stellar evolution, and of the formation and evolution of planetary systems, planetary atmospheres, and surfaces. Questions regarding the evolution of life and the development of technology are discussed. Methods to detect extraterrestrial life with emphasis on radio telescopes and associated instrumentation are presented. Hypothetical communication systems are developed and discussed.

ASTRO 310(3310) Planetary Imaging Processing (PBS)  
Fall. 3 credits. Intended for sophomores or juniors majoring or concentrating in Astronomy or related fields. Prerequisites: two semesters of introductory physics and some experience with computer programming; permission of instructor required (form available in S5610). Next offered 2007-2008. J. Bell. Reviews basic techniques employed in the collection and processing of spacecraft images of solar system objects. See www.astrophysics.cornell.edu/courses/astro310/main.html for course details]
ASTRO 331(3331) Climate Dynamics
(also EAS 305[3050]) (PBS)
Fall. 4 credits. Prerequisite: MATH 112 or 192 or equivalent permission of instructor. K. Cook.
Introduction to climate and quantitative methods for predicting climate change, focusing on the structure and behavior of the atmosphere and climate system. Includes an introduction to the mathematics of climate change.

ASTRO 332(3332) Elements of Astrophysics (PBS)
Spring. 4 credits. Prerequisites: MATH 112, 122, 192, or equivalent, PHYS 213 or 217 J. Houck.
Introduction to the modern understanding of the universe, including topics such as the composition of the universe, the evolution of galaxies, and the properties of black holes. The course also covers the principles of astrophysics and the use of astrophysical models to understand the universe.

ASTRO 334(3334) Modern Astrophysical Techniques (PBS)
Spring. 3 credits. Intended for sophomores majoring or concentrating in Astronomy or related fields. Prerequisites: two semesters of introductory physics and two semesters of calculus. Recommended: ASTRO 233. J. Lloyd.
This course focuses on the modern techniques used in astrophysics, including the use of telescopes, data analysis, and computational methods. Students will gain hands-on experience with these techniques through laboratory exercises and projects.

ASTRO 342(3424) Atmospheric Dynamics
(also EAS 342[3420]) (PBS)
Spring. 3 credits. Prerequisites: one year each of calculus and physics. K. H. Cook. For description, see EAS 542.
This course provides an introduction to atmospheric dynamics, including topics such as the atmospheric circulation, weather systems, and climate. It covers both theoretical and observational aspects of atmospheric dynamics.

ASTRO 410(4410) Experimental Astronomy (PBS)
Fall. 4 credits. Prerequisites: PHYS 214/218 (or 310 or 360), PHYS 323/327 (or coregistration) and permission of instructor required (form available in NS610). J. Bell, J. Cordes, and J. Houck.
Observational astrophysics. Major experiments involve techniques in CCD (charge-coupled-device) imaging, optical photometry, optical spectroscopy, radiometry, radio spectroscopy and radio astronomy. The experiments involve use of the Hartington-Boothroyd Observatory, 24-inch telescope, a laboratory two-element radio interferometer, and a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and data analysis as applied to celestial phenomena: asteroids, normal stars, supernova remnants, globular clusters, planetary nebulae, the interstellar medium, OH masers, and galaxies.

ASTRO 431(4431) Introduction to Astrophysics and Space Sciences (PBS)
Fall. 4 credits. Prerequisites: mathematics above 200 level and physics above 300 level. Recommended: PHYS 443. I. Wasserman.
Overview of modern astrophysical concepts for physical science majors. Major topics include stellar formation, structure, and evolution; stellar atmospheres; compact objects (white dwarf, neutron star, and black holes); planets; and brown dwarfs. Current research problems in these areas are introduced along the way. The emphasis is on using fundamental principles of physics to explain astronomical phenomena. A variety of physics, including elements of atomic and molecular physics, solid state physics and fluid mechanics, are introduced or reviewed in a quick, practical fashion to be put to use in solving astrophysics puzzles.

ASTRO 432(4432) Introduction to Astrophysics and Space Sciences II (PBS)
Spring. 4 credits. Prerequisite: ASTRO 431 or permission of instructor. D. Chernoff and R. Bean.
Covers two broad topics: the astrophysics of the interstellar medium and cosmology. The interstellar medium section covers thermal equilibrium and radiative transport in HII regions, atomic gas regions, and molecular clouds. The cosmology section includes expansion of the universe, metrics, Friedmann equations, dark matter, cosmological tests, the early universe, and the cosmological production of the elements.

ASTRO 440(4940) Independent Study in Astronomy
Fall or spring. 2-4 credits. Prerequisite: permission of instructor to register; obtain an independent study form in department office, 610 Space Sciences Bldg. E. Flanagan. For description, see PHYS 445.
Individual study on an advanced topic in astronomy, with advisor and instructor.

ASTRO 445(4445) Introduction to General Relativity (also PHYS 445[4445]) (PBS)
Fall. 4 credits. E. Flanagan. For description, see PHYS 445.
Introduction to general relativity, including the concepts of spacetime, curvature, and gravitation. The course covers the mathematical foundations of general relativity and its applications to astrophysics and cosmology.

ASTRO 449(4490) Senior Seminar
Fall. 3 credits. Prerequisites: none. Open to all students. Y. Terzian.
Critical thinking in scientific and non-scientific contexts with selections from the history of astronomy. Topics include elements of classical logic, including standards of evidence. Case studies include examples of competing hypotheses in the history of science, as well as examples from borderline sciences. Stress is put on creative generation of alternative hypotheses and their winnowing by critical scrutiny. Topics include the nature and history of the universe, the nature of time, the nature of reality, the possibilities of life on other planets, and artificial intelligence. Fallacies, illusions, and fallacies will also be discussed. The course includes debates by the students on controversial topics such as: Can machines think? Is science and technology to be blamed for Hiroshima and 9/11? Should the genome be improved? Is the future determined?

ASTRO 509(6509) General Relativity
(also PHYS 553[6553])
Fall. 4 credits. Prerequisite: knowledge of special relativity and methods of dynamics at level of Classical Mechanics by Goldstein. J. York.
Systematic introduction to Einstein's theory using both modern and classical methods of computation. Topics include review of special relativity, differential geometry, foundations of general relativity (GR), laws of physics in the presence of gravitational fields, GR as a dynamical theory, experimental tests of GR.

ASTRO 510(6510) Applications to General Relativity (also PHYS 554[6554])
Spring. 4 credits. Prerequisite: ASTRO 509. J. York.
Continuation of ASTRO 509 that emphasizes applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves and cosmology, units of dynamics to formulate astrophysical and cosmological computations in the flourishing field of numerical relativity.

ASTRO 511(6511) Physics of Black Holes, White Dwarfs, and Neutron Stars (also PHYS 525[6525])
Spring. 4 credits. Prerequisites: all of physics at upper-division undergraduate level. D. Lai. Covers two broad topics: the astrophysics of the interstellar medium and cosmology. The interstellar medium section covers thermal equilibrium and radiative transport in HII regions, atomic gas regions, and molecular clouds. The cosmology section includes expansion of the universe, metrics, Friedmann equations, dark matter, cosmological tests, the early universe, and the cosmological production of the elements.

ASTRO 520(6520) Radio Astronomy
Fall. 4 credits. Covers radio astronomy telescopes and electronics; antenna theory; observing procedures and data analysis; concepts of interferometry and aperture synthesis.

ASTRO 554(6554) Galactic Structure and Stellar Dynamics
Introduction to the study of the structure of galaxies via the laws of modern physics. Topics include the observed kinematics and spatial distribution of the stars, the luminous stars, and the globular clusters. The course also covers the structure of the Sun, shapes and properties of stellar orbits, the gravitational N-body problem, collisional relaxation in stellar systems, spiral structure, galaxy classification and evolution, and cosmological results in galaxy formation.

ASTRO 561(6516) Galactic Structure and Stellar Dynamics
Fall. 4 credits. J. Cordes and D. Campbell.
Covers radio astronomy telescopes and electronics; antenna theory; observing procedures and data analysis; concepts of interferometry and aperture synthesis.
ASTRO 523(6523) Signal Modeling, Statistical Inference, and Data Mining in Astronomy
Fall. 4 credits. J. Cordes.
Aims to provide tools for modeling and detection of various kinds of signals encountered in physical sciences and engineering. Data mining and statistical inference from large and diverse databases are also covered. Experimental design is to be discussed. Basic topics include probability theory, Fourier analysis of continuous and discrete signals; digital filtering; matched filtering and pattern recognition; spectral analysis; Karhunen-Loeve analysis; wavelets; parameter estimation; optimization techniques; Bayesian statistical inference; deterministic, chaotic, and stochastic processes; image formation and analysis; maximum entropy techniques. Specific applications are chosen from current areas of interest in astronomy, where large-scale surveys throughout the electromagnetic spectrum are used. Non-electromagnetic signals (e.g., neutrinos and gravitational waves) are ongoing and anticipated. Applications are also chosen from topics in geophysics, plasma physics, electronics, artificial intelligence, expert systems, and genetic programming. The course is self-contained and is intended for students with thorough backgrounds in the physical sciences or engineering.

ASTRO 525(6525) Techniques of Optical/Infrared and Submillimeter Astronomy
Spring. 4 credits. T. Herter and G. Stacey.
Optical/infrared and submillimeter telescopes and instrumentation are discussed and related to current research in these fields. Includes telescope design and general optical design (ray tracing), CTD, photodetector, photovoltaic, bolometer, impurity band conduction, and heterodyne detection systems are presented. The instrumentation discussion includes general instrument design and specific applications to cameras, spectrogaphers, and interferometers. Detection limits of various systems, cryogenic techniques, and astronomical data analysis techniques are also discussed. Special topics include speckle interferometry and adaptive optics.

ASTRO 530(6530) Astrophysical Processes
Spring. 4 credits. Offered every other year. P. Gierasch.
Fundamentals of radiative transfer, bremsstrahlung, synchrotron radiation, Compton scattering, spectral line transfer, gas heating and cooling and topics in atomic and molecular spectroscopy topics are discussed within the framework of astrophysical sources and problems.

ASTRO 560(6560) Theory of Stellar Structure and Evolution (also PHYS 667/7667)
Fall. 4 credits. D. Chernoff.
Intended to provide a systematic development of stellar astrophysics, both theory and observations. Topics include hydrostatic equilibrium; equation of state; radiation transfer and ionization; convection and stellar turbulence; nuclear burning and nucleosynthesis; solar neutrinos, star formation; pre-main sequence stars; brown dwarfs, end states of stellar evolution (white dwarfs, neutron stars, and black holes); supernovae, interacting binary stars; stellar rotation and magnetic fields; stellar pulsations, winds and outflows. The prerequisites for the course are all undergraduate-level physics. Though helpful, no astronomy background is required.

ASTRO 570(6570) Physics of the Planets
Introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbits, tidal interactions, resonances, and ring dynamics. An introduction to the theory of planetary interiors, gravitational fields, heat sources, and rotational mechanics. An introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbits, tidal interactions, resonances, and ring dynamics. An introduction to the theory of planetary interiors, gravitational fields, heat sources, and rotational mechanics. Intended for graduate students and seniors in astronomy, physics, and engineering. Intended for graduate students and seniors in astronomy, physics, and engineering.

ASTRO 571(6571) Mechanics of the Solar System (also T&AM 673/6730)
For description, see T&AM 673.

ASTRO 575(6575) Planetary Atmospheres (also EAS 575/5750)
Fall. 4 credits. Offered every other year. P. Gierasch.

ASTRO 577(6577) Planetary Surface Processes (also EAS 577/5770)
Spring. 3 credits. Offered every other year. J. Bell.
Survey of processes involved in the formation and evolution of the surfaces of solar system bodies. Surface morphology and landforms of terrestrial planets, planetary satellites, asteroids, and comets. Fundamentals of impact cratering, volcanism, tectonism, and erosion as applied to planetary surfaces, with significant emphasis on terrestrial field examples as analogs and study sites. Basic introduction to physical, geochemical, and "space" weathering of planetary surfaces. Basic introduction to field methods and related geologic field techniques and data sets (terrestrial, spacecraft). Students enrolled in the course can participate in an optional field trip over Spring Break to a "classic" planetary surface process analog field site (e.g., Askov, Halley, Grand Canyon, Death Valley) for 1 additional credit. Grading based on participation in discussions, critical literature reviews, and final project/presentation.

ASTRO 578(6578) Planet Formation and Energy (also EAS 578/5780)
Fall. 4 credits. J-L. Margot and M. Pritchard.
Survey of chemical and physical processes important to the origin and evolution of planetary systems. The first part of the course will cover the formation including the astronomical context, nucleosynthesis, meteoritics, condensation sequence, accretion, dynamical evolution, and observational constraints (disks, exoplanets, major planets, satellites, and small bodies). The second part of the course will cover planetary internal structure and evolution including melting, differentiation, core formation, convection, thermal evolution, and magnetic fields.

ASTRO 579(6579) Celestial Mechanics (also T&AM 672/6720)
For description, see T&AM 672.

ASTRO 590(6590) Galaxies and the Universe
Fall. 4 credits. R. Giovanelli and M. Haynes.
The universe, its constituents, its large-scale structure, and its history are the major thrusts of extragalactic research. The morphology, photometry, dynamics, and kinematics of galaxies and their subsystems. Determination of masses, mass-to-light ratios, and the "missing mass." Activity in Seyferts, radio galaxies, and quasars. binaries, groups, clusters, and superclusters. The extragalactic distance scale. Galaxy formation and evolution. Confrontation of cosmological theories with observational results.

ASTRO 599(6599) Cosmology (also PHYS 599/6599)
Intended to provide a detailed theoretical development of current ideas in cosmology. Topics include observational overview; growth of irregularities, galaxy formation, and clustering; big bang cosmology, recombination, nucleosynthesis; very early universe, symmetry breaking, inflationary scenarios. At the level of Principles of Physical Cosmology by Peebles.

ASTRO 620(7620) Seminar: Advanced Radio Astronomy
Spring. 2 credits. Prerequisites: for advanced undergraduates, by permission of instructor. Recommended: some background in astronomical spectroscopy. R. Giovannelli, M. Haynes, and J. Houck.
"Dwarf Galaxies: The View from 1 Meter to 1 Micron." CDK theory describes the growth of structure through the merger of small halos formed in large numbers early-on, and while these small halos serve as the building blocks of galaxies and clusters, many low mass objects are nonetheless expected to survive to the present epoch. In this seminar, we will explore our current understanding of dwarf galaxies, their impact on hierarchical structure development and the clues about galaxy formation and evolution they carry with them especially as viewed using today's very-long-wavelength instruments Spitzer, ALFA and the VLA and, in the future, ALMA and CCAT.
ASTRO 621(7621) Seminar: Planetary Radar Astronomy
Spring. 3 credits. Prerequisites: upper-level undergraduates and graduate students in Astronomy, engineering, and geology; good background in undergraduate mathematics and physics. Next offered 2007–2008. D. Campbell and J.-L. Margot. Discussion of radar techniques and the results from the application of these techniques to the study of solar system bodies including the Earth.

ASTRO 640(6940) Advanced Study and Research
For fall or spring. Credit TBA. Guided reading and seminars on topics not currently covered in regular courses.

ASTRO 652(7652) Advanced Atmospheric Dynamics (also EAS 652(6520))

ASTRO 660(7660) Cosmic Electrodynamics (also A&EP 608(6080))

ASTRO 671(7671) Seminar: Planetary Science
Fall. 3 credits. Next offered 2007–2008. Special topics on topics not currently covered in regular courses. 

ASTRO 671(7671) Seminar: Planetary Science
Spring. 3 credits. Next offered 2007–2008. J. Houck, T. Herter, J. Lloyd, and C. S. Soy. Covers topics of current interest in infrared and submillimeter astrophysics, including extrasolar planets; star formation in the galaxy; nearby dwarf, starburst, and ultraluminous galaxies, and distant "proto"-galaxies. Recent results obtained with Spitzer Space Telescope and ground-based facilities are covered. The seminar includes lectures from faculty and staff and also student presentations from the readings during the course.

ASTRO 673(7673) Seminar: Planetary Atmospheres
Spring. 2 credits. Next offered 2007–2008. P. Gierasch. Deals with motions in planetary atmospheres. Among the topics discussed are the Venus general circulation, dust and water transports on Mars, alternating jets on the outer planets, and compositional layering in the outer planets.

ASTRO 690(7690) Seminar: Computational Physics (also PHYS 480/680(4480/680))
Spring. 3 credits. Prerequisite: working knowledge of FORTRAN. Staff. For description, see PHYS 480/680.

ASTRO 699(7699) Seminar: Problems in Theoretical Astrophysics (also PHYS 665/7665)
Fall. 2 credits. D. Lai. For Fall 2006, ASTRO 699/PHYS 665 will focus on astrophysical gas dynamics. A knowledge of gas dynamics is important for understanding many of the most interesting problems in astrophysics: e.g. star and planet formation, compact objects, active galaxies, galaxy formation (the baryonic components). This course will review hydrodynamics and magnetohydrodynamics in an astrophysics context. It is intended for both theory and observational/experimental students. No previous exposure to gas dynamics is required.

BIOLOGICAL SCIENCES

The biological sciences ("biology") major is distinguished from other life sciences majors by its focus on basic, as opposed to applied, aspects of biology. All biology majors take courses in genetics, evolutionary biology, and biochemistry—subjects fundamental to understanding questions spanning the full spectrum of biology in the age of genomics. In addition to taking these core courses, each student completes a Program of Study ("concentration") that affords the opportunity for acquiring a more detailed knowledge of particular subject areas: Animal Physiology, Biochemistry, Computational Biology, Ecology and Evolutionary Biology, Genetics and Development, Insect Biology, Molecular and Cell Biology, Microbiology, Neurobiology and Behavior, Nutrition, Plant Biology, and Systematics and Biotic Diversity. Alternatively, students may choose to explore three or more of these areas in the General Biology Program of Study.

The continuing rapid advances in biology are built on an ever-greater integration with the physical sciences and mathematics. Thus, the biology major is designed to provide students with a strong foundation not only in core areas of modern biology, but also in chemistry, organic chemistry, physics, and mathematics. Students work with faculty, staff, and student advisors in selecting their Program of Study and in choosing the course options that each offers.

The Office of Undergraduate Biology (OUB) in 216 Simson Hall oversees advising for biology majors, and also coordinates the extensive program undergraduate biology research, including the biology research honors program.

The biology major is very popular among students of both the College of Agriculture and Life Sciences and the College of Arts and Sciences. It provides excellent preparation for careers in medicine, veterinary medicine, and other health professional fields. It is also popular for students considering graduate study in basic biological sciences or science-related careers in the physical sciences, economics, business, and law.

BIOLOGY & SOCIETY MAJOR

The Biology & Society major is suited for students who wish to combine training in biology with perspectives from the social sciences and humanities. The major requires courses in biology, history, philosophy, and social studies of science and technology, and also coordinates the Biology and Society minor.

The Biology & Society major, which involves faculty from throughout the university, is offered by the Department of Science and Technology Studies. Students in the College of Arts and Sciences, the College of Human Ecology, and the College of Agriculture and Life Sciences are eligible for the major. The major is coordinated for students in all colleges through the Biology & Society Office. Students can get information, specific course requirements, and application procedures for the major from the Biology & Society Office in 306 Rockefeller Hall, 255-6047.

Because the major is multidisciplinary, students must attain a basic understanding of the several disciplines it comprises. The curriculum includes courses in ethics; statistics; history, philosophy, and social studies of science and biology; and basic biology (e.g., genetics and development, biochemistry and molecular-cell biology; ecology; evolutionary biology), as well as integrative courses offered through Biology & Society. Majors are required to take a more courses offered through Biology & Society. Majors are required to take a core course and must develop a theme: an intellectually coherent grouping of courses representative of their special interest in Biology & Society. Recommended themes in the Biology & Society major include biology, behavior, biology and human population, biology and public policy, environment and society, and health and society. Students may also develop their own individually tailored themes (which in
recent years have included topics such as biotechnology and society and agriculture, environment, and society. In consultation with their faculty advisor, students select courses that meet the foundation and core course requirements so as to build a coherent theme. Sample curricula for the recommended themes and for several student-developed themes are available in the Biology & Society office. Faculty members are available (according to posted office hours or by appointment) in the Biology & Society offices, 306 Rockefeller Hall, to answer questions and to provide assistance.

Admission to the Major
All students should have completed a year of college-level biology before submitting an application during their sophomore year. Juniors are considered on a case-by-case basis. Upper-division applicants should consult with their advisor, accepting that the major requirements will be met within the two years in which the major is completed. Freshmen admitted to the Colleges of Agriculture and Life Sciences and Human Ecology as Biology & Society majors are considered to have been admitted to the major on a provisional basis, contingent on successful completion of the course sequence in introductory biology and submission of the application to the university major. The application includes (1) a one-page statement explaining the student's intellectual interests in the Biology & Society major and why the major is consistent with the student's academic goals and interests; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of courses fulfilling Biology & Society requirements, including courses already taken and those the student plans to take; and (4) a transcript of work completed at Cornell University (and elsewhere, if applicable), current as of the date of application. 

Acceptance into the major requires completion of the course sequence in introductory biology. Sophomores in the process of completing this prerequisite may be admitted to the major on a provisional basis. It is the student's responsibility to assure that final acceptance is granted upon satisfactory completion of the introductory biology sequence. Only introductory biological science is a prerequisite for acceptance; students find it useful to have completed some of the other requirements (listed below) by the end of their sophomore year, preferably by the end of the first semester. Students who are considering the major may also find it beneficial to take SKTS 201, What Is Science, in their freshman or sophomore year. Students who are biology students should also consult the current Human Ecology guide and meet with the college advising coordinator, Nancy Breen, 205 Martha Van Rensselaer Hall, 255-1928.

Major Requirements
No single course may satisfy more than one major requirement. All courses must be taken for a letter grade.

1. Basic courses
   b. College calculus (one course): MATH 106, 111, 112 or any higher-level calculus.
   c. Recommended but not required: General chemistry (one-year sequence) (prerequisite to biochemistry and other chemistry courses): CHEM 103–104, 206, 207–208, or 215–216.

2. Foundation Courses (should be completed by end of junior year). Foundation courses are intended to provide a broad introduction to methodology and theory in their area.
   These courses must be above the 100 level, at least 3 credit hours, and taken for a letter grade.
   a. Ethics: one course; B&SOC 205 (also SKTS 205) or B&SOC 206 (also SKTS 206, PHIL 246).
   b. Social sciences/humanities foundation: two courses; one from any two of the following subject areas: history of science; philosophy of science; sociology of science; politics of science; and science communication.
   c. Biology foundation (breath requirement): three courses; one each from three of the following subject areas: biochemistry, molecular and cell biology (BIOM 280 or 351 or 355 or BIOGD 221); general biology (BIOE 261, BIOSM 364, BIOSM 375); genetics and development (BIOGD 281 or 282 or PL BR 225); evolutionary biology (BIOE 278); animal behavior (BION 221, BIOSM 329); neurobiology and behavior (BION 222); physiology and anatomy (BIOAP 311 but not BIOAP 212); biological diversity (BIOPI 241 or BIOMI 290 or BIOE 373 or 274 or 470 and 472 or 475 or 476 or ENTO 212 or PL PA 301 or 309 or BIOSM 310 or 374 or 377 or 449); nutrition (NS 115).
   d. Biology foundation (Depth requirement): one biology course for which one of the above (2c) is a prerequisite.
   e. Statistics: one course selected from MATH 221, AEM 210, SOC 301, PSYCH 350, ECON 319, PAM 210, ILRST 212.

3. Core Course**: (one course). Should be completed by end of junior year.
   B&SOC 301 Life Sciences and Society (also SKTS 301); or SKTS 286 Science and Human Nature (also PHIL 286).

4. Theme (five courses that correspond to the theme selected by the student). These courses must be above the 100-level, at least 15 credit hours, and taken for a letter grade. Choose these courses as follows:
   a. Natural science issues/biology elective (two courses). Select from the list of B&SOC approved natural science issues courses or choose course(s) with introductory biology as a prerequisite.
   b. Humanities/social sciences electives** (two courses). Courses from the list of senior seminars may be used as theme electives if not used to meet another requirement, or select humanities or social sciences courses in consultation with the faculty advisor.
   c. Senior seminar** (one course taken senior year). Courses change yearly.

* Students may petition to take a second statistics course (an advanced course, in sequence with the statistics course taken in the foundation) in place of the calculus requirement.

** Among the courses taken to meet the social sciences and humanities requirements (2.A, 2.B, 3, 4.B, and 4.C), a minimum of two social science courses and two humanities courses must be chosen. History of science, philosophy of science, and ethics courses may be counted toward the humanities requirement for the major.

*** A list of approved depth courses using NS 115 as a prerequisite is available in 306 Rockefeller Hall.

Independent Study
Projects under the direction of a Biology & Society faculty member are encouraged as part of the program of study in the student's theme area. Applications for independent study projects are accepted by individual faculty members. Students may enroll for 1–4 credits in B&SOC 375 Independent Study with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology & Society office, 306 Rockefeller Hall. Independent study credits may not be used in completion of the major requirements.

The Honors Program
The honors program is designed to provide independent research opportunities for academically talented undergraduate students whose major is Biology & Society (B&SOC). Students who enroll in the honors program are expected, with faculty guidance, to do independent study and research dealing with issues in Biology & Society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society majors are considered for entry into the honors program at the end of the second semester of the junior year. Application forms for the honors program are available in the Biology & Society office, 306 Rockefeller Hall. The honors program is available to Biology & Society majors from the Colleges of Arts and Sciences and Agriculture and Life Sciences. Biology & Society majors in the College of Human Ecology must be selected by an honors committee within their college. To qualify for the Biology & Society honors program, students must have an overall Cornell cumulative grade point average (GPA) of at least 3.3, have formulated a research topic, and have found a project supervisor (with an academic appointment at Cornell) and another faculty member willing to serve as their advisor. At least one of these two must be a member of the Biology & Society major. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the honors program only by permission of the department. Students must enroll for both the fall and spring semesters. B&SOC 499 is now cross-listed with the College of Agriculture and Life Sciences as ALS 499. Students wishing
explore ethical questions that arise in a number of substantive contexts, including the doctor-patient relationship, medical decision making near the end of life, human experimentation, genetics and reproductive technology, public health, and the allocation of scarce resources.

**B&SOC 206(2061) Ethics and the Environment (also S&TS 206[2061], PHIL 246[2460] (KCM))**
Spring. 4 credits. Limited to 50 students. Open to all undergraduates; freshmen by permission of instructor. Staff. Aims to acquaint students with moral issues that arise in the context of the environment and environmental policy. Our concerns about the environment bring to our attention the importance of economic, epistemological, legal, political, and social issues in assessing our moral obligations to other humans and the natural world. The attempt is then to explore how different factors come into play in defining our responsibilities to the environment and to examine the grounds for our environmental policy decisions. A background in basic ecology or environmental issues or ethics is helpful.

**R Social Sciences/Humanities Foundation (two courses, one from any two areas)**

### 1. History of Science

**HIST 315(3150) Environmental History: The U.S. and the World (also AMST 349)**
Spring. 4 credits. A. Sachs.
For description, see HIST 315.

**NTRES 232(2320) Nature and Culture**
Spring. 3 credits. J. Tantillo.
For description, see NTRES 232.

**NTRES 336(3360) History of Environmental Sciences**
Fall. 3 credits. M. Muskett.
For description, see NTRES 336.

**S&TS 233(2331) Agriculture, History, and Society: From Squanto to Biotechnology**
Fall. 3 credits. M. Rossiter.
For description, see S&TS listings, S&TS 233.

**S&TS 282(2821) Science in Western Civilization (also HIST 282[2820])**
Spring. 4 credits. P. Dear.
For description, see HIST 282.

**S&TS 287(2871) Evolution (also BIOEE 207[2070], HIST 287[2870])**
Fall or summer. 3 credits. May not be taken for credit after BIOEE 278. W. Provine.
For description, see BIOEE 207.

**S&TS 355(3551) Computers: From the 17th Century to the Dot.com Boom (also INFO 355[3551], COMM 355[3551])**
Fall 4 credits. S&TS 355 and 356 may be taken separately or in any order. K. Lambert.
For description, see S&TS listings, S&TS 355.

**S&TS 356(3561) Computing Cultures (also COMM 356[3561], INFO 356[3561], VISST 356[3560])**
For description, see S&TS 356.

### 2. Philosophy of Science

**S&TS 201(2011) What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210[2100])**
Spring. 3 credits. K. Lambert.
For description, see S&TS listings, S&TS 201.

**S&TS 286(2861) Science and Human Nature (also PHIL 286[2860])**
Spring. 4 credits. May be used to meet philosophy of science requirement if not used to meet core course requirement. R. Boyd.
For description, see PHIL 286.

**S&TS 381(3811) Philosophy of Science: Knowledge and Objectivity (also PHIL 381[3810])**
Fall. 4 credits. R. Boyd.
For description, see PHIL 381.

### 3. Sociology of Science

**B&SOC 301(3011) Life Sciences and Society (also S&TS 301[3011] (SBA)**
Fall. 4 credits. May be used to meet sociology of science requirement if not used to meet core course requirement. M. Lynch.
For description, see "Core Courses," B&SOC 301.

**HS 452(4520) Culture and Human Development**
For description, see HS 452.

**NS 245(2450) Social Science Perspectives on Food and Nutrition**
Fall. 3 credits. C. Bisogni and J. Sobal.
For description, see NS 245.

**D SOC 220(2200) Sociology of Health and Ethnic Minorities (also LSP 220[2200])**
Fall. 3 credits. P. Parra.
For description, see D SOC 220.

**S&TS 201(2011) What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210[2100])**
Spring. 3 credits. K. Lambert.
For description, see S&TS listings, S&TS 201.

**S&TS 311(3111) The Sociology of Medicine**
Spring. 4 credits. Not open to freshmen. C. Leuenberger.
For description, see S&TS 311.
S&TS 411(4111) Knowledge, Technology, and Prophecy
Fall, Spring. 4 credits. S. Hilgartner.
For description, see S&TS 411.

4. Politics of Science

B&SOC 407(4071) Law, Science, and Public Values (also S&TS 407(4071))
Spring. 4 credits. M. Lynch.
For description, see S&TS listings. S&TS 407.

[CRP 380(3800) Environmental Politics]
Fall. 4 credits. R. Booth.
For description, see CRP 380.

PAM 230(2300) Introduction to Policy Analysis
Fall. 4 credits. R. Avery and J. Gerner.
For description, see PAM 230.

S&TS 324(3241) Environment and Society (also D SOC/SOC 324(3240))
Fall and spring. 3 credits. C. Geisler and G. Gillespie.
For description, see D SOC 324.

S&TS 391(3911) Science in the American Polity: 1890 to Now (also GOVT 390(3901), AM ST 389(3891))
Spring. 4 credits. S. Hilgartner.
For description, see S&TS 391.

5. Science Communication

COMM 260(2600) Scientific Writing for Public Information
Fall and spring. 3 credits. Limited to 25 non-freshmen or graduate students per section. Not open to freshmen. S. Conroe.
For description and prerequisites, see COMM 260.

COMM 421(4210) Communication and the Environment
Spring. 3 credits. May be used in Foundation only if not taken as senior seminar. Offered odd-numbered years.
J. Shanahan.
For description, see COMM 421.

S&TS 285(2851) Communication in the Life Sciences (also COMM 285(2850))
Spring. 3 credits. B. Lewenstein and S. Conroe.
For description, see COMM 285.

S&TS 352(3521) Science Writing for the Mass Media (also COMM 352(3520))
Fall. 3 credits. B. Lewenstein and S. Conroe.
For description and prerequisites, see COMM 352.

S&TS 466(4661) Public Communication of Science and Technology (also COMM 466(4660))
Spring. 3 credits. Limited to 15 students. May be used in Foundation only if not taken as senior seminar. B. Lewenstein.
For description and prerequisites, see COMM 466.

C. Biology Foundation (breadth requirement): Three courses: one from three of the following subject areas:

1. Biochemistry, Molecular and Cell Biology

BIOM 330(3300) Principles of Biochemistry, Individual Instruction
Fall and spring. 4 credits. J. Blankenship, P. Hinkle, and staff.
For description and prerequisites, see BIOM 330.

BIOBM 331(3310) Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. May not be taken for credit after BIOM 330 or 333. G. Feigenson.
For description and prerequisites, see BIOM 331.

BIOBM 333(3330) Principles of Biochemistry, Lectures
Summer. 4 credits. H. Nivison.
For description and prerequisites, see BIOM 333.

NS 320(3200) Introduction to Human Biochemistry
Fall. 4 credits. P. Stover.
For description and prerequisites, see NS 320.

2. Ecology

BIOEE 261(2610) Ecology and the Environment
Fall and summer. 4 credits. Not open to freshmen. Fall, A. Flecker and J. Sparks; summer, A. Vawter.
For description and prerequisites, see BIOEE 261.

BIOEM 364(3640) Field Marine Science
Summer. 6 credits. Taught at the Shools Marine Laboratory, for more information and application, contact the SML office at G14 Simson Hall.
For description and prerequisites, see BIOEM 364.

BIOEM 375(3750) Field Marine Biology and Ecology
Summer. 6 credits. Taught at the Shoals Marine Laboratory, for more information and application, contact the SML office at G14 Simson Hall.
For description and prerequisites, see BIOEM 375.

3. Genetics and Development

BIOGD 281(2810) Genetics
Fall, spring, and summer. 5 credits. Limited to 200 students. Not open to freshmen fall semester. M. Goldberg, T. Fox, R. MacIntyre, and D. Nero.
For description and prerequisites, see BIOGD 281.

BIOGD 282(2820) Human Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281); must be taken for 3 credits to fulfill Biology & Society requirements. Limited to 25 students per disc. M. Goldberg.
For description and prerequisites, see BIOGD 282.

4. Evolutionary Biology

BIOEE 276(2760) Evolutionary Biology
Fall and spring and summer. 3 or 4 credits. Fall, I. Lovette; spring, M. Shulman.
For description, see BIOEE 276.

5. Animal Behavior

BIOEB 221(2210) Neurobiology and Behavior II: Introduction to Behavior
Fall. 3, 4, or 5 credits. C. Walcott.
For description and prerequisites, see BIOEB 221.

BIOEM 329(3290) Ecology of Animal Behavior
Summer. 4 credits. Taught at the Shoals Marine Laboratory, for more information, contact the SML office at G14 Simson Hall.
For description and prerequisites, see BIOEM 329.

6. Neurobiology and Behavior

BIOEB 222(2220) Neurobiology and Behavior I: Introduction to Neurobiology
Spring. 3 or 4 credits. R. Booker and staff.
For description and prerequisites, see BIOEB 222.

7. Physiology and Anatomy

BIOAP 311(3110) Introductory Animal Physiology, Lectures (also VTBMS 346)
Fall. 3 credits. E. Loew and staff.
For description and prerequisites, see BIOAP 311.

BIOEM 290(2900) General Microbiology Lectures
Fall, spring, and summer. 2 or 3 credits; must be taken for 3 credits to fulfill major requirement. B. Batzing (summer) and W. Ghirose.
For description and prerequisites, see BIOEM 290.

BIOL 241(2410) Introductory Botany
Fall. 3 credits. K. Niklas.
For description, see BIOL 241.

BIOEE 274(2740) The Vertebrates: Structure, Function, and Evolution
Spring. 4 credits. K. Kamio.
For description and prerequisites, see BIOEE 274.

BIOE 373(3730) Biology of the Marine Invertebrates
For description and prerequisites, see BIOE 373.

BIOEE 450(4500) Mammalogy (Lecture)
Spring. 3 credits. B. A. McGuire.
For description and prerequisites, see BIOEE 450.

BIOE 470(4700) Herpetology, Lectures
Spring. 2 credits; must be taken in conjunction with 472 to count for major credit. H. Greene.
For description and prerequisites, see BIOE 470.

BIOE 472(4720) Herpetology, Laboratory
Spring. 2 credits; must be taken in conjunction with 470 to count for major credit. Offered alternate years. H. Greene.
For description and prerequisites, see BIOE 472.

BIOE 475(4750) Ornithology
For description and prerequisites, see BIOE 475.

BIOE 476(4760) Biology of Fishes
Fall. 4 credits. A. McCune.
For description and prerequisites, see BIOE 476.
BIOSM 310(3100) Marine Symbiosis
Summer. 4 credits. Taught at the Shoals Marine Laboratory, for more information, contact the SML office at G14 Stimson Hall. Staff. For description and prerequisites, see BIOSM 310.

BIOSM 374(3740) Field Ornithology
Summer. 4 credits. Taught at the Shoals Marine Laboratory, for more information, contact the SML office at G14 Stimson Hall. Staff. For description and prerequisites, see BIOSM 374.

BIOSM 377(3770) Diversity of Fishes
Summer. 4 credits. Taught at the Shoals Marine Laboratory, for more information, contact the SML office at G14 Stimson Hall. Staff. For description and prerequisites, see BIOSM 377.

BIOSM 449(4490) Seaweeds, Plankton, and Seagrass: the Ecology and Systematics of Marine Plants. Summer. 4 credits. Taught at the Shoals Marine Laboratory, for more information, contact the SML office at G14 Stimson Hall. Staff. For description and prerequisites, see BIOSM 449.

ENTOM 212(2120) Insect Biology Fall. 4 credits. C. Gilbert. For description and prerequisites, see ENTOM 212.

PL PA 301(3010) Plant Disease Management Fall. 3 credits. M. Milgroom. For description, see PL PA 301.

PL PA 309(3090) Fungi Fall. 3 credits. K. Hodge. For description and prerequisites, see PL PA 309.

9. Nutrition

NS 115(1150) Nutrition, Health, and Society Fall. 3 credits. D. Levisky. For description, see NS 115.

D. Biology foundation (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite.

E. Statistics (one course)

AEM 210(2100) Introductory Statistics Spring. 4 credits. C. VanEs. For description and prerequisites, see AEM 210.

BTRY 301(3010) Statistical Methods I Fall and summer. 4 credits. F. King and staff. For description and prerequisites, see BTRY 301.

ECON 319(3190) Introduction to Statistics and Probability Fall and spring. 4 credits. Y. Hong. For description and prerequisites, see ECON 319.

ILRST 212(2120) Statistical Reasoning Fall. 3 credits. P. Wellemann. For description, see ILRST 212.

MATH 171(1710) Statistical Theory and Application in the Real World Fall and spring. 4 credits. Staff. For description, see MATH 171.

PSYCH 350(3500) Statistics and Research Design Fall. 4 credits. Staff. For description, see PSYCH 350.

SOC 301(3010) Evaluating Statistical Evidence (also D SOC 302(3020)] Fall. 4 credits. Limited to Arts and Sciences students. Staff. For description, see SOC 301.

IV. Core Courses

B&SOC 301(3011) Life Sciences and Society (also S&T S 301[3011]) (SBA) Fall. 4 credits. Limited to 50 students. Prerequisite: two semesters of social science or humanities and one year of introductory biology or permission of instructor. M. Lynch. Critical thinking about the diverse influences shaping the life sciences. Topics include evolution and natural selection, heredity and genetic determinism, biotechnology, and reproductive interventions. Students interpret episodes from the past and present, in biology in light of scientists' historical location, economic and political interests, use of language, and ideas about causality and responsibility. Readings, class activities, and written assignments are designed so that students develop interpretive skills and explore their own intellectual and practical responses to controversies in biology and society.

S&T S 286(2861) Science and Human Nature (also PHIL 286(2860)) Spring. 4 credits. R. Boyd. For description, see PHIL 286.

V. Themes

A. Natural Science Issues/Biology: Elective (two courses). Select from the following list of B&SOC approved natural science issues courses or choose course(s) with intro biology as a prerequisite.

B&SOC 214(2141) Biological Basis of Sex Differences (also BIOAP/FFSS 214[2140]) (PBS) Fall. 3 credits. J. Fortune. For description, see BIOAP 214.

B&SOC 347(3471) Human Growth and Development: Biological and Behavioral Interactions (also HD/NS 347[3470]) Spring. 3 credits. Offered alternate years. J. Haas and S. Robertson. For description and prerequisites, see HD 347.

BIOLOGY & SOCIETY MAJOR 479

NS 331(3310) Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. C. McCormick.
For description and prerequisites, see NS 331.
[NS 361(3610) Biology of Normal and Abnormal Behavior (also PSYCH 361(3610))]
Spring. 3 credits. Prerequisite: junior or senior standing. Next offered 2007-2008.
B. Strupp.
For description and prerequisites, see NS 361.
NS 452(4520) Molecular Epidemiology and Dietary Markers of Chronic Disease
Spring. 3 credits. P. Cassano.
For description and prerequisites, see NS 452.
[NS 475(4750) Mechanisms of Birth Defects]
Spring. 3 credits. T. Falhey.
For description, see NTRES 201.
NTRES 201(2010) Environmental Conservation
Spring. 3 credits. T. Falhey.
For description, see NTRES 201.
NTRES 428(4280) Principles and Practices of Applied Wildlife Science
Spring. 3 credits. M. Richmond, P. Curtis and R. Malecki.
For description, see NTRES 428.
PSYCH 223(2230) Introduction to Biopsychology
Fall. 3 credits. Staff.
For description, see PSYCH 223.
PSYCH 326(3260) Evolution of Human Behavior
Spring. 4 credits. Staff.
For description and prerequisites, see PSYCH 326.
Examples of biology electives
AN SC 300(3000) Animal Reproduction and Development
Spring. 3 credits. J. Parks.
For description, see AN SC 300.
HD 366(3660) Psychobiology of Temperament and Personality
Fall. 3 credits. R. DePue.
For description and prerequisites, see HD 366.
NS 331(3310) Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. C. McCormick.
For description, see NS 331.

B. Humanities: Social Science elective (two courses)
Courses listed earlier as social science/humanities foundation courses (2B) are particular appropriate as social science/humanities electives. However, a single course cannot be used to meet both requirements. Examples of recommended social science or humanities electives are listed below. A more complete list is available in 206 Rockefeller Hall.
Examples of social science electives
AEM 464(4640) Economics of Agricultural Development (also ECON 464(4640))
Fall. 3 credits. R. Christy.
For description, see AEM 464.

For description, see ANTHR 211.]
B&SOC 331(3311) Environmental Governance (also S&TS 331(3311), NTRES 331(3310))
Spring. 3 credits. S. Wolf.
For description, see NTRES 331.
[BIOEE 671(6710) Paleoanthropology of South Asia (also ANTHR 671(6371)) Fall. 3 credits. Next offered 2008-2009. K. Kennedy.
For description, see BIOEE 671.1]
CRP 451(4510) Environmental Law (also CRP 551(5510))
Fall. 4 credits. R. Booth.
For description, see CRP 451.
D SOC 205(2050) Rural Sociology and International Development (also SOC 206(2060))
Spring. 3 credits. P. McMichael.
For description, see D SOC 205.
SOC 410(4100) Health and Survival Inequalities (also D SOC 410(4100), FGSS 410(4100))
Fall. 4 credits. A. Basu.
For description, see SOC 410.
HD 251(2510) Social Gerontology: Aging and the Life Course
Spring. 3 credits. Limited to 60 students.
Highly recommended: HD 250 or equivalent, to be determined by instructor.
E. Wethington.
For description, see HD 251.
[HD 336(3360) Connecting Social, Cognitive, and Emotional Development
Fall. 3 credits. Next offered 2007-2008.
P. Casasola.
For description and prerequisites, see HD 336.]
[HD 362(3620) Human Bonding
Fall. 3 credits. Next offered 2007-2008.
C. Hazan.
For description, see HD 362.]
HD 370(3700) Adult Psychopathology (also PSYCH 325(3250))
Spring. 3 credits. H. Segal.
For description, see HD 370.
[HD 457(4570) Health and Social Behavior (also SOC 457(4570))
Fall. 3 credits. Next offered 2007-2008.
E. Wethington.
For description, see HD 457.]
NS 421(4210) Nutrition and Exercise
Spring. 3 credits. Limited to nutrition majors, others by permission of the Instructor. S. Travis.
For description and prerequisites, see NS 421.
NS 450(4500) Public Health Nutrition
Spring. 3 credits. K. Rasmussen and D. Pelletier.
For description and prerequisites, see NS 450.
NS 650(6500) Food and Nutrition Assessment in a Social Context
Fall. 3 credits. D. Pelletier and G. Pelto.
For description and prerequisites, see NS 650.
NTRES 323(3330) Environmental Issues and Indigenous People
Spring. 3 credits. M. Muskett.
For description, see NTRES 333.
NTRES 431(4310) Environmental Strategies
Spring. 3 credits. S. Wolf.
For description, see NTRES 431.
NTRES 435(4350) Tribal Governance and Environmental Policy
Fall. 3 credits. M. Muskett.
For description, see NTRES 435.
PAM 303(3030) Ecology and Epidemiology of Health
Fall. 3 credits. Staff.
For description, see PAM 303.
PAM 350(3500) Contemporary Issues in Women’s Health (also FGSS 350(3500))
Fall. 3 credits. A. Parrot.
For description, see PAM 350.
PAM 380(3800) Human Sexuality
Spring. 4 credits. A. Parrot.
For description, see PAM 380.
PAM 435(4350) U.S. Health Care System
Fall. 3 credits. R. Battistella.
For description, see PAM 435.
PAM 437(4370) Economics of Health Policy
Spring. 3 credits. K. Simon.
For description and prerequisites, see PAM 437.
Examples of humanities electives
PHIL 241(2410) Ethics
Fall. 4 credits. N. Sturgeon.
For description, see PHIL 241.
S&TS 481(4811) Philosophy of Science (also PHIL 481/4811(4810/6810))
Spring. 4 credits. R. Boyd.
For description, see PHIL 481.
C. Senior Seminars
B&SOC 420(4201) The Darwinian Scientific Revolution (also S&TS 420(4201) (HA)
Fall. 4 credits. K. Lambert.
Looks at the emergence of Darwinism in the social and scientific context of 19th-century industrial Britain, asking how both scientists and a newly emerged mass audience viewed the controversies raised by Darwinian and non-Darwinian theories of evolution. By listening in on these conversations about class, race, sex, and religion, the class explores science as an integral part of the culture and society of the Victorian period.
B&SOC 447(4471) Seminar in the History of Biology (also BIOEE 447(4470), HIST 415(4150), S&TS 447(4471)) (PBS)
Summer. six-week session. 4 credits.
W. Provine.
For description, see BIOEE 447.
B&SOC 461(4611) Environmental Policy (also BIOEE/ALS 461) (PBS)
Fall and spring (yearlong); must be started in fall. 3 credits each semester. Limited to 12 students. D. Pimentel.
For description and prerequisites, see BIOEE 461.
VI. Other Courses

B&SOC 375(3751) Independent Study
Fall or spring. 1-4 credits. Prerequisite: biology and society major or written permission of faculty supervisor. Projects under the direction of a Biology and Society faculty member are encouraged as part of the program of study within the student's concentration area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1 to 4 credits in B&SOC 375 Independent Study with written permission of the faculty supervisor and may elect either the letter grade or the S/U option. Students may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology and Society Office, 306 Rockefeller Hall. Independent study credits may not be used in completion of the major requirements.

B&SOC 499(4991/4992) Honors Project I and II (also ALS 499(4991/4992))
Fall and spring (yearlong). Prerequisite: senior biology and society students by permission of department; overall GPA of 3.3. Students should apply in 306 Rockefeller Hall. Arts and Sciences students should enroll in B&SOC 499 to receive Arts and Sciences credit. CALS students should enroll in ALS 499 to receive College of Agriculture and Life Sciences credit.

Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research, and the completed work should be of wider scope and originality than is normal for an upper-level course. The student must find a project supervisor and a second faculty member willing to serve as faculty reader; at least one of these must be a member of the Biology and Society faculty.

Students who are admitted to the honors program must register for the total credits desired for the whole project each semester (e.g., 8 credits for fall and 8 credits for spring). After the fall semester, students receive a letter grade of "R"; a letter grade for both semesters is submitted at the end of the second semester whether or not the student completes a thesis or is recommended for honors. Minimally, an honors thesis outline and bibliography should be completed during the first semester. In consultation with the advisor, the director of undergraduate studies will evaluate whether the student should continue working on an honors project. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements.

If students do not complete the second semester of the honors project, they must change the first semester to independent study
CHEMISTRY AND CHEMICAL BIOLOGY

The Department of Chemistry and Chemical Biology offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry. In addition to their teaching interests, chemistry and chemical biology faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be provided with the most advanced information and perspectives and affords opportunities for students to participate in research.

The Major
To fit the widely varying needs of our undergraduate majors, the department offers two different tracks that both lead to the same undergraduate degree:

Standard Major—The standard major provides a comprehensive background in all fields of chemistry. Most students who complete the standard major go on to graduate study in chemistry or to medical school, although some students proceed directly to a position in the chemical industry. With additional independent research (which is not required), the standard chemistry major is fully accredited by the American Chemical Society.

Alternative Major—The alternative major offers a flexible program of study that is primarily designed for students who intend to double major in another field. For example, students majoring in biology can complete the alternative major with little additional class work. This program might also be attractive for students interested in law (especially patent law), as a double major in government or economics plus chemistry is quite feasible. This program is not suited to further graduate work in chemistry. With few exceptions, students in the alternative major are not chosen to participate in the honors program in chemistry. The alternative major is not accredited by the American Chemical Society. Either version of the major can be completed in three years of study. Most students, however, complete all of the requirements in their first three years with the exception of CHEM 410.

Inorganic Chemistry, which is usually taken in the fall semester of the senior year. The typical chemistry course sequence is:

- first year: general chemistry and mathematics
- second year: organic chemistry, analytical and organic laboratories, and physics
- third year: physical chemistry lectures and laboratories
- fourth year: inorganic chemistry

Admission to the Major
Admission to the chemistry major requires the satisfactory completion of a number of introductory courses which, when taken together, demonstrate an ability to complete the major. These courses include (1) CHEM 215-216 or 207-208 (CHEM 211 or 206 may be substituted for 207 but this is not recommended); (2) CHEM 300; (3) PHYS 207 or 112 or 116; and (4) MATH 111 or 191. Second-semester sophomores (or beyond) who have completed all but one of these requirements may be admitted to the major provided that they have a plan for completing the major on schedule.

The Standard Major
The following courses must be completed for the standard major:

- General chemistry: CHEM 207 + 208 or CHEM 215 + 216. (CHEM 211 or 206 may be substituted for CHEM 207, but is not recommended).
- Organic chemistry: CHEM 357 + 358 or CHEM 359 + 360
- Physical chemistry: CHEM 389 + 390
- Inorganic chemistry: CHEM 410

The Alternative Major
The following courses must be completed for the alternative major:

- General chemistry: CHEM 207 + 208 or CHEM 215 + 216. (CHEM 211 or 206 may be substituted for CHEM 207, but is not recommended).
- Organic chemistry: CHEM 257 (CHEM 357 + 358 or CHEM 359 + 360 may be substituted)
- Physical chemistry: CHEM 287 (CHEM 389 + 390 may be substituted)
- Inorganic chemistry: CHEM 410

CENTER FOR APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of graduate studies of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

A listing of selected graduate courses in applied mathematics can be found in the description of the center under "Interdisciplinary Centers, Programs, and Studies."

CENTER FOR INTERNATIONAL STUDIES

See "Interdisciplinary Centers, Programs, and Studies."
government, or education. Many students who double major use courses from their second major to satisfy this requirement. Like the standard majors, many alternative majors perform independent research, either in the chemistry department or in another department.

Honors
Any student who completes the requirements for a standard major in chemistry with a cumulative GPA of 3.5 or higher shall be awarded a degree with honors (cum laude). In addition, senior chemistry majors who have superior grades in chemistry and related subjects and who have had good performance in at least 8 credits of undergraduate research (or the equivalent) in chemistry or a related field (e.g., biochemistry) may be nominated for the honors program. To ensure that the nomination process runs smoothly, all students who are interested in the honors program should discuss this possibility with their advisor early in the fall semester of the senior year. Admission to the honors program is by invitation only. Students completing the alternative major are only eligible for the honors program in exceptional cases. Students in the honors program participate in the honors seminar (CHEM 490) and write a senior thesis. The successful completion of the honors program leads to the degree of bachelor of arts with honors or high honors in chemistry.

Program for Science Teachers
Chemistry majors who wish to become teachers will be interested to know that Cornell University offers a certification program for teachers of secondary (grades 7–12) science. Interested students apply to the program during their sophomore or junior years. If accepted, students integrate some course work in education with the rest of their undergraduate studies. All chemistry majors who enter this program will remain in the College of Arts and Sciences to complete the major.

After earning the bachelor’s degree, certification students enter the graduate field of education to complete a fifth year of study at Cornell. Following this fifth year, students are eligible for a master’s degree from Cornell and a teaching certificate from New York State. Additional information is available from Susie Slack, 424 Kennedy Hall, 255-9255, or Professor Deborah Trumbull, 426 Kennedy Hall, 255-3108.

Laboratory Course Regulations
Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their registration in that course.

Students and members of the teaching staff are required to wear safety goggles and lab aprons in all chemistry laboratories. Closed-toed footwear is required (no sandals). Students are reminded to bring safety goggles and lab aprons to the first laboratory session. Those who fail to cooperate with the safety program will be asked to leave the laboratories.

Students in organic and analytical labs are required to pay for glassware and any other items broken or missing from their laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time in the presence of their instructor are charged a $20 fee in addition to charges for any breakage.

Courses
Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

Preliminary examinations for all courses may be given in the evening.

[CHEM 105(1150) The Language of Chemistry (PBS)]

In his autobiography, A. Kornberg (Nobel Laureate in Medicine, 1959) wrote, “much of life can be understood in rational terms if expressed in the language of chemistry. It is an international language, a language for all time, a language that explains where we came from, what we are, and where the physical world will allow us to go.” Through careful examination of a few milestone investigations of naturally occurring biologically important compounds (e.g., the antimalarial quinine, bombylkol, and the sperm attractants of algae), the principles of chemistry to which Kornberg refers are developed. Methods of analyzing chemical problems are emphasized, rather than the memorization of specific results or formulas. There is an opportunity for students, working in small groups, to prepare and present short reports on topics of particular current interest at the interface between chemistry and biology.

[CHEM 106(1160) The World of Chemistry (PBS)]
Spring. 3 credits. Contributing to satisfying CALS physical science requirement of one course in chemistry. S-U or letter grades. Loc. M W F; prelims, March 6, April 5. P. Houston.

Chemistry is the art, craft, business, and science of substances and their transformations. At the microscopic level, where chemistry is done, these substances underlying transformation are groups of atoms called molecules. The World of Chemistry is a course that looks at the way chemistry occurs on the microscopic level and aspects of the everyday world and the way it interacts with culture and the economy. Students will gain a feeling for the way science is done and grasp the interplay of chemistry and biology.

[CHEM 207-208(2070-2080) General Chemistry (PBS)]
Fall or summer (207); spring or summer (208). 4 credits each semester. CHEM 207 is a prerequisite for CHEM 208. (CHEM 206 is accepted, but not recommended.) CHEM 207 has a $20 nonrefundable lab fee which covers cost of safety goggles, lab apron, and breakage. Exceptionally well-prepared students may receive credit for CHEM 207 by demonstrating competence in an examination given once a year before the start of fall classes. Taking CHEM 208 after 215 may be done only by permission of the Director of Undergraduate Studies. Loc. T R; lab, M T W R F; secs, M T W R F; prelims, Oct. 5, Nov. 9, Feb. 27, Apr. 10. Fall: J. A. Marohn/R. F. Loring; spring: H. F. Davis.

Covers fundamental chemical principles, with considerable attention given to the quantitative aspects and techniques important for further work in chemistry.

[CHEM 211(2110) Chemistry for the Applied Sciences (PBS)]
Fall or spring. 4 credits. Limited enrollment. Prerequisite: high school chemistry or permission of instructor. Corequisite: calculus course at level of MATH 111 or 191. Recommended for students who intend to take only one semester of chemistry. Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall. Nonrefundable lab fee (covers cost of safety goggles, lab apron, and breakage): $20. Loc. M W F; lab, M T W R F; prelims, Oct. 5, Nov. 9, Feb. 27, Mar. 15. Fall: B. R. Crane; spring: G. K. Chadd.

Covers important chemical principles and facts with the objective of understanding the role of chemistry in other fields. Emphasis is on topics such as solid-state materials, periodic trends, and specific classes of compounds, such as polymers and semiconductors.

[CHEM 215-216(2150-2160) Honors General and Inorganic Chemistry (PBS)]
Fall, 215; spring, 216. 4 credits each semester. Limited enrollment. Prerequisites: two years high school chemistry or permission of instructor, physics, and mathematics. Corequisite: calculus course at level of MATH 111 or 191 for students who have not taken high school calculus; for CHEM 216, CHEM 215. Recommended for students who intend to specialize in chemistry or in related fields. Taking CHEM 208 after CHEM 215 may be done only by permission of director of undergraduate studies. Nonrefundable lab fee (covers cost of safety goggles, lab apron, and breakage): $20. Loc. M W F; lab, M T W R F; prelims, Oct. 5, Nov. 9, Feb. 27, Apr. 10. Fall: P. J. Chirik; spring: S. Lee.

Intensive systematic study of the laws and concepts of chemistry, with considerable emphasis on qualitative aspects. First semester covers thermodynamics, kinetics, and equilibrium. Second semester includes systems of inorganic chemistry. Laboratory work covers qualitative and quantitative
an analysis, transition metal chemistry, and spectroscopic techniques.

**CHEM 251(2510) Introduction to Experimental Organic Chemistry**
Fall, spring, or summer. 2 credits. Limited enrollment. Corequisite: CHEM 257 or 357. Not recommended for chemistry majors considering graduate school in chemistry. Lec., lab, or T. R. or F; prerequisites: CHEM 208 or 216 or advanced placement in chemistry. Lec., R, lab, M T W R; prerequisites, Oct. 19. D. B. Zax.

Volumetric, spectrophotometric, and potentiometric methods are emphasized. Techniques are learned by practice of knowns, and then are used on unknowns. Lectures and problem sets stress the relationship between theory and applications.

**CHEM 301(3010) Honors Experimental Chemistry I (PBS)**
Spring. 4 credits. Prerequisites: CHEM 300 or 357 or 359. Lec., M W F, 2 labs, M W T R, T. McCarrick. Introduction to the techniques of synthetic organic chemistry. A representative selection of the most important classes of organic reactions is explored in the first half of the semester, augmented by lectures on the reaction chemistry and the theory of separation and characterization techniques.

**CHEM 302(3020) Honors Experimental Chemistry II (PBS)**
Fall. 4 credits. Limited enrollment; priority given to chemistry majors. Prerequisite: CHEM 301. Lec., M W F, 2 labs, M W T R, T. McCarrick. Instrumental methods of analysis, including chemical microscopy, visible and infrared spectroscopy, and gas chromatography. Basic concepts of interfacing are covered.

**CHEM 303(3030) Honors Experimental Chemistry III (PBS)**
Spring. 4 credits. Limited to 10 students per lab. Prerequisites: CHEM 302, 389, 390; co-registration in both. Lec., M W F; prerequisites, Feb. 15, Mar. 13, Apr. 10.

Introduction to organic chemistry with an emphasis on those structures and reactions of organic compounds having particular relevance to biological chemistry.

**CHEM 267-280(270-280) Introductory Physical Chemistry (PBS)**
267; fall; 280; spring 3 credits each semester. Prerequisite: CHEM 208 or 216 and MATH 111-112 and PHYS 208, or permission of instructor; for CHEM 288, CHEM 287 or 389. Lec., M W F, 278; rec., M or W, T, 288; rec., M or W; prerequisites, 287; Oct. 5, Nov. 21, 288; rec., M or W; Apr. 17.

Fall: B. Widom, spring, P. Chen.

Survey of the fundamental principles of physical chemistry, focusing in the fall on thermodynamics, chemical and enzyme kinetics, and an introduction to quantum mechanics. In the spring the course is oriented to the application of physical chemistry to biological systems, including statistical mechanics, phenomena in condensed phases, transport, electrochemistry, spectroscopy. CHEM 287 satisfies the minimum requirement for physical chemistry in the alternative chemistry major.

**CHEM 300(3000) Quantitative Chemistry**
Fall. 2 credits. Prerequisite: CHEM 209 or 216 or advanced placement in chemistry. Lec., R, lab, M T W R; prerequisites, Oct. 19. D. B. Zax.

**CHEM 303(3030) Honors Organic Chemistry I and II (PBS)**
359; fall, 360; spring, 4 credits each semester. Laboratory enrollment. Prerequisite: CHEM 216 with grade of B or better, CHEM 208 with grade of A or better, or permission of instructor for CHEM 360. CHEM 359. Recommended: co-registration in CHEM 305-301-302. Recommended for students who intend to specialize in chemistry or closely related fields. Lec., M W F, disc., W; prerequisites, Sept. 21, Oct. 17, Nov. 7, Spring. Fall, 15; Sun., Apr. 12.

Fall: J. Njardarson; spring, T. P. Begley. Rigorous and systematic study of organic compounds, their structures, the mechanisms of their reactions, and the ways they are synthesized in nature and in the laboratory.

**CHEM 389-390(3890-3900) Honors Physical Chemistry I and II (PBS)**
Fall; 389, spring; 3890, 3900 credits each semester. Prerequisites: MATH 213 or, ideally, 221-222; PHYS 208; CHEM 208 or 216 or permission of instructor; for CHEM 390. CHEM 389. Lec., M W F; rec., M or W; T. McCarrick. CHEM 389; prerequisites, 389, Sept. 26, Oct. 24, Nov. 21, 390, Feb. 15, Mar. 13, Apr. 12. Fall, M. A. Hines, spring, 390: G. S. Ezra.

Studies the principles of physical chemistry from the standpoint of the laws of thermodynamics, kinetic theory, statistical mechanics, and quantum chemistry.

**CHEM 404(4040) Entrepreneurship in Chemical Enterprise**
Spring. 1 credit. Lec., T. B. Ganem.

Designed to acquaint students with the problems of planning, starting, and managing a new scientifically oriented business venture, the course consists of six weekly 90-minute meetings focusing on case studies and assigned reading, as well as outside lectures by entrepreneurs in the chemical, pharmaceutical, and biotechnology industries. Topics include new technology evaluation and assessment, business formation, resource allocation, management development, as well as manufacturing and sales issues.

**CHEM 410(4100) Inorganic Chemistry**
Fall. 4 credits. Prerequisites: CHEM 358 or 360, and 287 or 390. Lec., M W F; prerequisites, Sept. 19, Oct. 19, Nov. 14. R. C. Fay.

Systematic study of the synthesis, structure, bonding, reactivity, and uses of inorganic, organometallic, and solid-state compounds.

**CHEM 421(4210) Introduction to Inorganic Chemistry Research**
Fall or spring. 2-4 credits. Prerequisites: CHEM 303 and 389-390, or 287-288, and 299-290 with average of B- or better, or permission of instructor. Selected faculty.

Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

**CHEM 433(4330) Introduction to Analytical Chemistry Research**
Fall or spring, 2-4 credits. Prerequisite: CHEM 303 and 390 with average of B- or better or permission of instructor. Selected faculty.

Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

**CHEM 440(4400) Bio-Inorganic Chemistry (PBS)**

Addresses important aspects of inorganic chemistry in biological systems. Topics include: (1) the distribution and properties of metals in biology; (2) coordination chemistry of biological metals; (3) properties of metal-containing macromolecules; (4) redox processes and long-range electron transfer; (5)
metallocofactors and metal clusters, (6) Lewis acid catalysis; (7) metal-organic reactions in biology; and (8) metal trafficking and metalloprotein assembly.

CHEM 450(4550) Principles of Chemical Biology (I) (PBS)
Fall. 3 credits. Prerequisites: CHEM 357–358, 359–360 or equivalent. Lect, T. R. T. Belegl. Covers topics at the interface of chemistry and biology with a focus on problems where organic chemistry has made a particularly strong contribution to understanding the mechanism of the biological system. Topics include the organic chemistry of carbohydrates, proteins and nucleic acids, strategies for identifying the cellular target of physiologically active natural products, combinatorial chemistry, and chemical aspects of signal transduction, cell division and development.

CHEM 461(4610) Introduction to Organic Chemistry Research
Fall or spring. 2–4 credits. Prerequisites: CHEM 302 and 358 or 360 with grade of B- or better or permission of instructor. Selected faculty. Research in organic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 477(4770) Introduction to Physical Chemistry Research
Fall or spring. 2–4 credits. Prerequisite: CHEM 390 with average of B- or better or permission of instructor. Selected faculty. Research in physical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 498(4980) Honors Seminar
Spring. 0 credits. Admission only by department invitation. Additional pre- or corequisites: outstanding performance in two coherent 4-credit units of research in course such as CHEM 421, 433, 461, 477; or equivalent amount of research in another context. Lect. W. D. T. McQuade.
We will cover two topics in CHEM 498, writing and oral presentation. The goal is to prepare graduate students to communicate well in a competitive scientific world. Students will present their research in writing and through oral presentation.

CHEM 600–601(6000–6010) General Chemistry Colloquium
600, fall; 601, spring. 0 credits. R. Staff. Series of talks representative of all fields of current research interest in chemistry given by distinguished visitors and faculty members.

CHEM 602(6020) Information Literacy for the Physical Scientist
Spring. 1 credit. Primarily for graduate students and undergraduate chemistry majors doing research. Lect, T. L. Solts. Introduction to physical science information research methods, with hands-on exploration of print and electronic resources. Much important information can be missed and valuable time wasted without efficient information research strategies. Topics include finding chemical and physical properties, reaction and analytical information, patents, web resources, using specialized resources in chemistry, physics, biochemistry, and materials science, and managing citations.

CHEM 605(6050) Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity
Fall. 4 credits. Prerequisite: CHEM 389–390 or equivalent or permission of instructor. Lect. M W F. P. Wolczanski.
Introductions to the current literature and applications of group theory, including valence bond theory; and spectroscopy as applied to main group and transition-metal coordination compounds. An introduction to reactivity covers substitution, electron transfer, and related reactions. Readings are at the level of Bishop's Group Theory and Chemistry and Jordan's Reaction Mechanisms of Inorganic and Organometallic Systems.

CHEM 606(6060) Advanced Inorganic Chemistry II: Synthesis, Structure, and Reactivity of Coordination Compounds, and Bioinorganic Chemistry
Synthesis, structure, and reactivity of main group and modern coordination compounds and bioinorganic systems. The mechanisms of transition-metal reactions are emphasized, and evaluation of the current literature are stressed. Background readings are at the level of Reaction Mechanisms of Inorganic and Organometallic Systems by Jordan.

CHEM 607(6070) Advanced Inorganic Chemistry III: Solid-State Chemistry
Fall. 4 credits. Prerequisite: undergraduate inorganic chemistry and permission of instructor. Lect. M. W. F. S. Lee.
Third in a three-semester sequence. Interdisciplinary approach to solids. Topics include solid-state structure and X-ray diffraction, phase diagrams, electronic structure, and physical properties of solids. Texts: Mueller: Structural Inorganic Chemistry; Glusker and Trueblood: Primer on X-ray Crystallography; and Hoffmann: Solids and Surfaces. Readings from inorganic chemistry and solid-state primary literature.

CHEM 608(6080) Advanced Inorganic Chemistry II: Organometallic Chemistry
Spring. 4 credits. M W F. P. T. Wolczanski.
Synthesis, structure, and reactivity of organometallic compounds. Evaluation of the current literature is emphasized, and background readings are at the level of Reaction Mechanisms of Inorganic and Organometallic Systems by Jordan and Principles and Applications of Organotransition Metal Chemistry by Collman, Hegecuz, Finke, and Norton.

CHEM 622(6220) Chemical Communication
For description, see BIONB 623.

CHEM 625(6250) Advanced Analytical Chemistry I
Spring. 4 credits. Prerequisite: CHEM 288 or 390 or equivalent. Lect. M. W. F.; occasional prelims, W. D. B. Zax.
Application of high-resolution NMR spectroscopy to chemical problems. Depending on the time and class interest, either infrared and mass spectroscopy or some practical experience in NMR are offered.

CHEM 627(6270) Advanced Analytical Chemistry II
Spring. 3 credits. Primarily for graduate students and advanced undergraduates. Prerequisite: CHEM 793 or equivalent or permission of instructor. Lect. M. W. F. Next offered 2007–2008. D. B. Zax.
Modern techniques in nuclear magnetic resonance. Little overlap is expected with CHEM 625, as this course focuses on more general questions of experimental design, understanding of multipulse experiments, and aspects of coherent averaging theory.

CHEM 628(6280) Isotopic and Trace Element Analysis (also NS 690/6900)
Fall. 3 credits. Primarily for graduate students and advanced undergraduates. Prerequisite: CHEM 288 or 390 or 302, or CHEM 208 and PHYS 208, or permission of instructor. Lect. T. R. Offered alternate years. J. T. Brennan.
Survey course in modern high-precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS; thermal ionization MS; inductively coupled plasma MS; atomic spectroscopy, ion and electron microscopies, X-ray and electron spectroscopies, and biological and solid state applications.

CHEM 629(6290) Electrochemistry
Fundamentals and applications of electrochemistry. Topics include the fundamentals of electrode kinetics, electron transfer theory, the electrical double layer, diffusion, and other modes of transport.

CHEM 650–651(6500–6510) Organic and Organometallic Chemistry Seminar
Fall, 650; spring, 651. 0 credits.
Requirement for graduate students majoring in organic or bioorganic chemistry. Juniors and seniors encouraged to attend. T. R. Staff.
Series of talks representative of all fields of current research interest in organic organometallic chemistry, given by research associates, faculty members, and distinguished visitors.

CHEM 665(6650) Advanced Organic Chemistry
Fall. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisites: CHEM 358 or 360, and CHEM 390 or equivalents, or permission of instructor, some knowledge of elementary quantum mechanics. Lect. M. W. F. T. McQuade.
Discussion of the properties and reactivities of organic molecules and the underlying physical phenomena that affect them.

CHEM 666(6660) Synthetic Organic Chemistry
Spring. 4 credits. Primarily for graduate students and upperclass undergraduates.
Prerequisite: CHEM 358 or permission of instructor. Lect. T. R. J. Njardarson.
Modern techniques of organic synthesis, applications of organic reaction mechanisms and retrosynthetic analysis to the problems encountered in rational multistep synthesis,
with particular emphasis on modern developments in synthesis design.

**CHEM 668(6680) Chemical Aspects of Biological Processes**
Fall. 4 credits. Prerequisite: CHEM 360 or equivalent. Lec. T. R. H. Lin.
Examines a representative selection of the most important classes of enzyme-catalyzed reactions from a mechanistic perspective. Topics include the chemical basis of enzymatic catalysis, techniques for the elucidation of enzyme mechanism, cofactor needs, and the biosynthesis of selected natural products. The application of chemical principles to understanding biological processes is emphasized.

**CHEM 669(6690) Organic and Polymer Synthesis Using Transition Metal Catalysts**
Spring. 4 credits. Prerequisite: primarily for graduate students; CHEM 359/360 or equivalent or permission of instructor. G. W. Coates.
Transition metal-based catalysts are invaluable for both organic and polymer synthesis. This course begins with a brief overview of organometallic chemistry and catalysis. Subsequent modules on organic and polymer synthesis are then presented. Topics of current interest are emphasized.

**CHEM 670(6700) Fundamental Principles of Polymer Chemistry**
Fall. 4 credits. Prerequisite: CHEM 389/390 and 359/360 or equivalent or permission of instructor. Primarily for graduate students and advanced undergraduates. G. W. Coates.
Emphasizes general concepts and fundamental principles of polymer chemistry. The first part of the course deals with general introduction to classes of polymers, molar masses and their distributions, and a brief survey of major methods of polymer synthesis. The second part deals with characterization and physical properties. Topics include: solubility and solubility parameters, solution viscosity, molecular weight characterizations (gel permeation chromatography, viscometry, light scattering, osmometry), bulk properties—thermodynamic properties, properties of polymer solutions; dynamic mechanical properties; and structure-property relationships.

**CHEM 671(6710) Synthetic Polymer Chemistry (also M&SE 671(6710), CHEMIE 675(6750))**
Emphasizes application of organic synthetic methods to the development of polymerization methods and control of polymer architecture. Emphasizes modern concepts in synthetic polymer chemistry and topics of current interest: the study of new methods of polymer synthesis, the control of polymer stereoregularity and topology, and the design of polymers tailored for specific uses and properties.

**CHEM 672(6720) Kinetics and Regulation of Enzyme Systems**
Spring. 4 credits. Primarily for graduate students with interests in biophysical chemistry. Prerequisite: CHEM 288 or 360, BIOMB 351, or equivalents or permission of instructor. Lec. M. W. F. B. Baird.
Focus is on protein interactions with ligands and consequent changes in structure and activity. Topics include protein structure and dynamics, thermodynamics and kinetics of ligand binding, steady state and transient enzyme kinetics; enzyme catalysis and regulation; and the role of cell membrane receptors in regulating cellular activities.

**CHEM 677(6770) Chemistry of Nucleic Acids**
Structure, properties, synthesis, and reactions of nucleic acids from a chemical point of view. Special topics include RNAi, antisense and antisense technology, ribosome reactions (including the ribosome), mutagens, PCR, recent advances in sequencing, DNA as a computer, and alternative genetic materials.

**CHEM 681(6810) Introduction to Quantum Chemistry**
Fall. 4 credits. Prerequisites: one year of undergraduate physical chemistry; three semesters of calculus; one year of college physics. Lec. T. R. Next offered 2007–2008. G. S. Ezra.
Introduction to the application of quantum mechanics in chemistry. Covers many of the topics in CHEM 793–794 as a more descriptive, less mathematical level.

**CHEM 686(6860) Physical Chemistry of Proteins**
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 288 or 390 or equivalents. Letter grades for undergraduate and graduates. Lec. M. W. F. P. Chen.
Protein studies using physical methods are presented, with focuses on using single molecule spectroscopic methods and on metalloproteins. Topics include: (1) physical concepts, chemical structure and conformation of proteins; protein folding energy landscape; electron transfer theory; enzyme kinetics; protein-protein interactions; protein-DNA interactions. (2) Experimental methodologies: absorption/emission spectroscopy; fluorescence resonance energy transfer; confocal microscopy; total internal reflection microscopy; single molecule spectroscopy; time correlated single photon counting; fluorescence correlation spectroscopy; atomic force microscopy; optical/magnetic tweezers. (3) Protein structure and function: oxygen binding and activation proteins; electron transfer proteins; oxygenases and antioxygenases; metalloregulatory proteins; green fluorescent proteins; motor proteins (kinases, dynein and F1-ATPase).

**CHEM 700(7000) Baker Lectures**
Fall, on dates TBA. 0 credits. Lec. T. R. P. L. Houston.
This year's lecturer: Robert H. Grubbs, California Institute of Technology. Distinguished scientists who have made significant contributions to chemistry present lectures for approximately six weeks.

**CHEM 701(7010) Introductory Graduate Seminar**
Fall. 0 credits. Highly recommended for all senior graduate students in any field of chemistry. Lec. W. Next offered 2007–2008. R. Hoffmann.
Discussion of professional issues facing young chemists as well as life skills: academic and industrial trends, presentations, employment, immigration, publication, research funding, and ethics.

**CHEM 716(7160) Introduction to Solid State Organic Chemistry**
Spring. 3 credits. Recommended: CHEM 607 or some exposure to or course in solid state chemistry and quantum mechanics; good undergraduate physical chemistry course may be sufficient for quantum theory; PHYS 443 or CHEM 793 or 794 are at substantially higher level than what is needed. Lec. M. W. F. Next offered 2007–2008. S. Lee.
Examines some principles of crystallography and also electronic structure theory of solids. We then consider properties such as conduction, superconductivity, ferroelectricity and ferromagnetism. The final portion of this course is concerned with structure-property relations.

**CHEM 765(7650) Physical Organic Chemistry I**
Explores contemporary tools for calculating molecular structures and energies of species of all sizes. The course uses computers extensively but requires only a limited knowledge of mathematics (mainly linear algebra).

**CHEM 774(7740) Chemistry of Natural Products: Combinatorial Chemistry**
Combinatorial chemistry has revolutionized the way organic chemists think about structure function studies on biological systems and the design of inhibitors. This course explores the design, synthesis, screening, and use of natural (i.e., peptide, protein, nucleic acid, carbohydrate) and unnatural (i.e., totally synthetic) libraries.

**CHEM 780(7800) Chemical Kinetics and Molecular Reaction Dynamics**
Fall. 4 credits. Prerequisite: CHEM 681 or permission of instructor. Lec. T. R. P. L. Houston.
Principles and theories of chemical kinetics and molecular reaction dynamics. Topics include potential energy surfaces, transition state theory, and statistical theories of unimolecular decomposition. Depending on class interest, the course also includes special topics such as surface reactions and photochemistry.

**CHEM 787(7870) Mathematical Methods of Physical Chemistry**
Fall. 4 credits. Prerequisite: one year of undergraduate physical chemistry, three semesters of calculus, and one year of college physics. Lec. T. R. G. S. Ezra.
Provides the mathematical background for graduate courses in physical chemistry such as quantum mechanics and statistical mechanics, as well as for research in
CHEM 788(7880) Macromolecular Crystallography [also BIOBM 738(7380)]
Fall. 3 credits. Prerequisite: permission of instructor. Lect, T. R. S. E. Eafiek. Lectures cover the fundamentals of x-ray crystallography and focus on methods for determining the three-dimensional structures of macromolecules. Topics include crystallographic, data collection, phasing methods, model building, refinement, structure validation, and structure interpretation.

CHEM 791(7910) Spectroscopy
Fall. 4 credits. Prerequisite: CHEM 793 or PHYS 443 or equivalent. Lect, T. J. Freed. Molecular Spectroscopy and Magnetic Resonance Spectroscopy are offered alternate years. Molecular Spectroscopy includes: principles of molecular rotational, vibrational, and electronic spectroscopy; interaction of molecules with radiation; Born-Oppenheimer approximation; diatomic molecules; polyatomic molecules; molecular symmetry groups. At the level of Molecular Rotation Spectra by Kroto. Magnetic Resonance Spectroscopy includes: quantum mechanics of electron and nuclear spins; Fourier Transform and Two Dimensional experiments; spin relaxation; multiple quantum coherence; imaging. At the level of The Principles of Magnetic Resonance by Slichter.

CHEM 792(7920) Molecular Collision Theory
Spring. 4 credits. Lect, T. R. Next offered 2007-2008. G. S. Ezra. The concepts and methods of scattering theory are described with particular emphasis on applications to problems of chemical interest. At the level of Child's Molecular Collision Theory and Taylor's Scattering Theory.

CHEM 793(7930) Quantum Mechanics I
Fall. 4 credits. Prerequisites: CHEM 390 or PHYS 443 or equivalent or permission of instructor. Lect, T. J. P. Parry. Topics include Schrödinger's equation, wave packets, uncertainty principle, matrix and operator mechanics, orbital and spin angular momentum, exclusion principle, perturbation theory, and the variational principle. At the level of R. Shankar, Quantum Mechanics.

CHEM 794(7940) Quantum Mechanics II
Spring. 4 credits. Prerequisites: CHEM 793 or equivalent and CHEM 787 or equivalent or co-registration in A&EP 322, or CHEM 787 or equivalent or permission of instructor. Lect, M. W. F. J. A. Marohn. Topics include WKB theory; virial theorems; Born-Oppenheimer approximation; noncrossing rule; nonadiabatic transitions; time-dependent perturbation theory; electromagnetic radiation interacting with matter; density matrices; line shape; scattering theory; Hartree-Fock and density-functional theories of electronic structure; energy bands in extended structure.

CHEM 795(7950) Statistical Thermodynamics
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 390 or equivalent. Lect, M. W. F. J. Chan. Classical thermodynamics at the level of Thermodynamics and an Introduction to Thermostatistics by Callen and statistical thermodynamics at the level of the first 12 chapters of Statistical Mechanics by McQuarrie. Topics in the first part include the first and second laws, free energy and Legendre transforms, convexity, thermodynamic potentials, densities and fields, phase equilibrium, thermodynamics of dilute systems, and the third law. Topics in the second part include ensembles and partition functions, fluctuations, ideal gases, ideal harmonic crystals and black-body radiation, the third law (again), chemical-equilibrium constants, imperfect gases, and the quantum ideal gases (Fermi-Dirac and Bose-Einstein statistics).

CHEM 796(7960) Statistical Mechanics
Spring. 4 credits. Prerequisite: CHEM 795 or 793 or equivalent. Lect, T. R. B. Widom. Continuation of CHEM 795. Statistical mechanics of interacting systems. Topics include liquid state theory, computational statistical mechanics, critical phenomena, renormalization group theory, and an introduction to nonequilibrium statistical mechanics.

CHEM 798(7980) Bonding in Molecules
Spring. 4 credits. Prerequisite: some exposure to quantum mechanics; good undergraduate physical chemistry course or CHEM 681 PHYS 433 or CHEM 793-794 are at substantially higher level than what is needed; students should consult instructor if in doubt. Lect, T. R. Next offered 2007-2008. R. Hoffmann. Aims to build a qualitative picture of bonding in all molecules, including organic, inorganic, organometallic systems and extended structures (polymer, surfaces, and three-dimensional materials).

CHINA AND ASIA-PACIFIC STUDIES

China and Asia-Pacific Studies (CAPS) offers a unique approach to the study of China's language, history, politics, society, and foreign relations by providing students with experience both on- and off-campus, including three years in Ithaca, one semester in Washington, D.C., and one semester in Beijing.

The Major
There are no prerequisites to the major. Students are encouraged to take one of the gateway courses, CAPS 282 (GOVT 282) or CAPS 257 (HIST 257), during their first two years at Cornell, but they may declare the CAPS major before taking either of these or any other CAPS courses. The other required courses are:

- All of the following language courses: CHIN 101-102, 201-202, and 301-302 or CHIN 109-110 for heritage learners or the equivalent for FALCON students (all in Ithaca or Washington before senior year).
- Two of the following lecture courses: CAPS 385/GOVT 385, CAPS 313/HIST 313, CAPS 314/HIST 314, CAPS 352/HIST 352, and CAPS 469/ECON 469.
- All of the following seminars: CAPS 300 and CAPS 500 (during fall of junior year at Cornell in Washington), CAPS 301 and CAPS 302 (during fall of senior year at Peking University), and CAPS 400 (during spring of senior year in Ithaca).

Students interested in the CAPS major should speak to the program director to arrange for a major advisor.

Exterships
CAPS majors hold externships in government, business, law, the media, museums, non-governmental organizations, or other organizations during their semesters in Washington, D.C. or Beijing. They are encouraged to coordinate the two experiences. For example, in successive years they might hold externships at the China desk of the Washington Post in Washington and the China bureau of the Washington Post in Beijing.

Honor
To become a candidate for honors, a CAPS major must maintain a grade average of B+ and have approval for a senior essay proposal from a faculty advisor. During senior year, a CAPS honors student completes the research and writing of a senior essay by taking two tutorials, CAPS 401 in Beijing and CAPS 402 in Ithaca.

Gateway Courses
CAPS 257(2570) China Encounters the World [also HIST 257(2571)] @ (MA)
Fall. 4 credits. J. Chen.

This is a lecture and discussion course focusing on how China has encountered the world since the 17th century, with an emphasis on the late 19th and 20th centuries. In particular, it will analyze the age-old Chinese "Central Kingdom" conception and how the conception was challenged during modern times as the result of Western and Japanese incursion and China's inability to deal with the consequences of the incursion. It will further analyze the impact of the Chinese "victim mentality" in order to pursue a deeper understanding of why radical revolutions have dominated China's modern history. While the emphasis of this course is on China's external relations, foreign policy issues will be examined in the context of China's political, economic and social developments in a broader context. The course's purpose is not just to impart information but also to cultivate a basic understanding of the significance of the Chinese experience in the age of worldwide modernization. Grades in this class will be calculated on the basis of class participation, quizzes, midterms and final exams, and one essay assignment.
COURSES IN ITHACA

CHIN 101-102 Elementary Standard Chinese (Mandarin) 101, fall, 102, spring. 6 credits each semester. (also GOVT 282(2827)) [HA] For description, see CHIN 101-102 under “Asian Studies.”

CHIN 201-202 Intermediate Standard Chinese (Mandarin) 201, fall, 202, spring. 4 credits each semester. (also GOVT 282(2827)) For description, see CHIN 201-202 under “Asian Studies.”

CHIN 301-302 High Intermediate Chinese 301, fall, 302, spring. 4 credits each semester. (also GOVT 400(4000)) For description, see CHIN 301-302 under “Asian Studies.”

CAPS 352(3520) Twentieth Century Asian-American Relations 352(3520) [HA] Spring. 4 credits. Next offered 2007-2008. J. Chen. For description, see HIST 352.1

CAPS 385(3857) American Foreign Policy 385(3857) [SBA] Spring. 4 credits. J. J. Suh. For description, see GOVT 385.

CAPS 314(3140) U.S. Foreign Relations, 1914 to Present 314(3140) [SBA] Spring. 4 credits. Next offered 2007-2008. F. Logevall. For description, see HIST 314.1

CAPS 469(4690) China’s Economy Under Mao and Deng 469(4690) Spring. 4 credits. Next offered 2007-2008. T. Lyons. For description, see ECON 469.1

COURSES IN BEIJING

[CAPS 301(3301) High Intermediate Chinese Fall. 4 credits. For description, see CHIN 301 under “Asian Studies.”

CHINESE

FALCON Program (Chinese) For description, see Department of Asian Studies.

CLASSICS

The Department of Classics at Cornell is one of the oldest in the country. It offers both the traditional core training in the languages, literature, philosophy, art, and history of ancient Greece and Rome, and also newer approaches developed from the comparative study of Mediterranean civilizations, peace studies, and feminist and literary theory. The broad range of instruction includes courses offered by professors with appointments in the Departments of History, Philosophy, Comparative Literature, History of Art, Linguistics, and Near Eastern Studies, and in the Programs of Archaeology, Medieval Studies, and Religious Studies. The department offers a wide variety of classical civilization courses in English translation on such subjects as Greek mythology, ancient mystery religions, early Christianity, and Greek and Roman society; ancient epic, lyric, tragedy, comedy, satire, novels, and love-poetry; Periclean Athens, Republican Rome, the Roman Empire, and Plato, Aristotle, and Hellenistic philosophy. These courses are designed to introduce aspects of classical antiquity to the students with very divergent primary interests. Courses in art, archaeology, and dendrochronology also have wide appeal. These courses make use of the university's large collections of ancient coins, reproductions of sculptures, inscriptions, and other ancient objects. For example, since 1976 over 500 Cornell students have worked in the Aegean Dendrochronology Project's laboratory, measuring the annual rings on thousands of samples of wood and charcoal, and using the rings to date structures as old as 7000 bc. In the summers selected students have participated in collecting trips around the eastern end of the Mediterranean (see website at www.arts.cornell.edu/dendro). Students who wish to gain first-hand archaeological experience may also join one of several summer Cornell-sponsored field projects in Greece and Turkey.

The study of language is a vital part of classics. Offerings range from 100-level classes designed to further the understanding of English through the study of the Latin and Greek sources of much of its vocabulary, to courses in linguistics on the morphology and syntax of the ancient languages, comparative grammar, the Indoeuropean (the reconstructed source of the family of languages that includes Greek, Latin, Sanskrit, and most modern European languages).

The core function of the department is the study of ancient Greek and Latin. Elementary Greek and Latin are taught in both two-semester courses and intensive summer courses. (For students whose Latin is a bit rusty, the department also offers a rapid, one-semester review class.) Students with a more advanced knowledge of Greek or Latin can choose from a wide selection of courses, from intermediate language classes at the 200 level, which refresh and broaden knowledge of syntax and vocabulary, to graduate and faculty reading groups. All of these courses concentrate on existing literary texts, whether the poems of Catullus and Virgil, or the dialogues of Plato and Xenophon, at the 200 level, or, in the advanced reading groups, the latest papyrological discoveries, such as the "new" fragments of Empedocles' cosmic poem or the "new" epigrams of Posidippus.

The primary purpose of language instruction is to make possible the study at first hand of the extraordinary range of powerful and challenging ideas embodied in Greek and Latin texts. The department offers undergraduate and graduate seminars on literary, linguistic, historical, and philosophical topics, studied through the Greek and Latin works of authors from Homer (probably from the eighth century bc) to Boethius (sixth century ad), and occasionally from later writers such as Dante, Petrarch, or Milton.

The department strives to adapt its program to the needs of individual students from all disciplines.

MAJORS IN CLASSICS

The major in Classics offers four tracks, which are Greek, Latin, classics, and classical civilization. Only classes passed with a C- or better may be applied to the classics major.

CLASSICS

The classics track requires: (1) six courses in Greek and Latin numbered 201 or above; and (2) three courses in related subjects selected in consultation with the student's departmental
advisor (see below). Classics majors are required to take a minimum of two 300-level courses in one language and one 300-level course in the other.

Students who are considering graduate study in classics are strongly advised to complete the classics major.

Greek
The Greek track requires: (1) GREEK 104; (2) five courses in Greek numbered 201 or above; and (3) three courses in related subjects selected in consultation with the student's departmental advisor (see below). The courses in Greek must include at least three at the 300 level.

Latin
The Latin track requires: (1) LATIN 109 or 205; (2) five courses in Latin numbered 206 or above; and (3) three courses in related subjects selected in consultation with the student's departmental advisor (see below). The courses in Latin must include at least three at the 300 level.

Classical Civilization
The classical civilization track requires: (1a) two 200-level courses in either ancient Greek or Latin or (1b) one course at the 200-level in both ancient Greek and Latin; (2) CLASS 211, 217 or HIST 265; CLASS 212 or HIST 267 and 268; and one course at the 200-level in both ancient Greek or Roman material culture; (3) six additional courses in classical civilization, classical archaeology, ancient history, ancient philosophy, ancient Greek or Latin (at 200-level or above), or related subjects (this last may number up to two).

Related Subjects
Classics is an interdisciplinary field concerned with the study of Mediterranean civilizations from the 15th century BCE to the sixth century CE. Subjects in the field include Greek and Latin language, literature, and linguistics; ancient philosophy, history, archaeology, and art history; papyrology, epigraphy, and numismatics. In addition to the required courses in language and literature, the majors include a requirement for related courses intended to give breadth and exposure to the other disciplines within the field and to enrich the student's study of classical languages and literature. Since the influence of the Greek and Roman world extended far beyond antiquity, a related course may focus on some aspect of the classical tradition in a later period. Students select related courses in consultation with their departmental advisors or the director of undergraduate studies.

Honors
Candidates for the degree of bachelor of arts with honors in classics, Greek, Latin, or classical civilization must fulfill the requirements of the appropriate major and complete the two-semester honors course. CLASS 472. (Credit for the honors course may be included in the credits required for the major.) Candidates for honors must have a cumulative average grade of 3.0 and an average of 3.5 in their major. Students choose an honors advisor by the end of their sixth semester, in consultation with the departmental honors committee or the DUS. By the second week of their seventh semester, they submit an outline of their proposed research to their advisor and the committee. The thesis is written in the second semester of the course, under the supervision of the student's honors advisor. The level of honors is determined by the committee, in consultation with students' advisors. Copies of successful honors theses are filed with the department. Further details about this program are provided in the brochure Guidelines for Honors in Classics, available in the department office. 120 Goldwin Smith Hall, or on the department web page: www.cornell.edu/classics/honors.asp.

Independent Study
Independent study at the 300 level may be undertaken by undergraduates upon completion of one semester of work at the 300 level in the relevant field and only with the permission of the director of undergraduate studies.

Study Abroad
Cornell is associated with four programs that provide opportunities for summer, semester, or yearlong study abroad in Greece and Italy. The American School of Classical Studies at Athens offers a summer program for graduate students and qualified undergraduates; College Year in Athens offers semester-long courses (consult Cornell Abroad for details). The Intercolligate Center for Classical Studies in Rome provides semester-long courses in Latin, Greek, art, archaeology, and Italian; the American Academy in Rome offers both full-year and summer programs for qualified graduate students. The Department of Classics awards several travel grants each year for graduate students from the Townsend Memorial Fund; undergraduates are eligible for the Caplan Travel Fellowships (see "Caplan Fellowships," below). Detailed information on these programs is available in the department office, 120 Goldwin Smith Hall.

Summer Support for Language Study
The Department of Classics has at its disposal resources to assist students who wish to enroll in intensive Latin or Greek in the Cornell summer session. These courses are designed to enable students to enter second-year Latin or Greek the following fall. Preference is given to undergraduate majors in classics and other students needing Latin or Greek for completion of their majors or graduate programs; dylectic students are accorded additional preference. Two different kinds of support are available: (1) The Kanders-Townsend Prize Fellowship provides a $3,225 stipend to cover living expenses and full tuition for either CLASS 103 or 107, and is open only to freshmen or sophomore classics majors (or potential classics majors) who have already begun one classical language and wish to start the other in the summer. (2) Classics department tuition support is open to Cornell undergraduate and graduate students and provides some level of tuition support, up to the full amount; no stipend for living expenses is offered. Applications are due to the chair of the Department of Classics by March 31. See also "Caplan Fellowships," below.

Placement in Greek and Latin
Placement of first-year undergraduates in Greek and Latin courses is determined by examinations given by the Department of Classics during orientation week. For details concerning these examinations, contact the director of undergraduate studies.

Satisfying the College Language Requirements with Ancient Greek or Latin
Greek: option 1 is satisfied by taking GREEK 201 or above. Option 2 is satisfied by taking either (a) GREEK 101, 102, and 104 or (b) GREEK 105 and 104. GREEK 105 counts as two courses. Although credits for 103 and 104 add up to only 9, this sequence does satisfy Option 2 of the college's language requirement.

Latin: option 1 is satisfied by taking LATIN 205 or above. Option 2 is satisfied by taking either (a) LATIN 105, 106 and 109 or (b) LATIN 107 and 109. (LATIN 107 counts as two courses. Although credits for 107 and 109 add up to only 9, this sequence does satisfy Option 2 of the college's language requirement.) The sequence Latin 106-109 does not satisfy Option 2. Students can place into LATIN 205 with an A- or better in LATIN 106, 107 or 108. Upon completing 205, they satisfy Option 1. LATIN 108 overlaps with LATIN 106 therefore cannot be taken (or counted toward the degree) after completing LATIN 106 or 107.

First-Year Writing Seminars
The department offers first-year writing seminars on a wide range of classical and medieval topics. Consult John S. Knight Writing Seminar Program brochures for times, instructors, and descriptions.

Caplan Fellowships
The Harry Caplan Travel Fellowships are awarded annually to one or two outstanding juniors by the College of Arts and Sciences for summer travel or projects in Europe or the Near East. Interested juniors should consult the director of undergraduate studies.

Classical Civilization
CLASS 171(1609) English Words: Histories and Mysteries (also LING 109[1109]) # (HA)
Spring. 3 credits. W. Harbert.
For description, see LING 109.

CLASS 211(2501) The Greek Experience # (CA)
Fall. 3 credits. Limited to 50 students. F. Ahl.
Introduction to the literature and thought of ancient Greece. Topics include epic and lyric poetry, tragedy and comedy, and historical, political, philosophical, and scientific writings. Some attention is also given to the daily life of ordinary citizens, supplemented by slides of ancient art and architecture.

CLASS 212(2620) The Roman Experience # (CA)
Spring. 3 credits. D. Mankin.
Introduction to the civilization of the Romans as expressed in their literature, religion, and social and political institutions.
Since all texts are in translation. What is necessary is the willingness to participate in three one-hour seminars each week and also a supplementary one- or two-hour session during which the class participates in workshops with specially invited guests. This course covers a wide range of Greek literary and philosophical works as well as modern critical and philosophical writings on the Greeks. The focus throughout is on the status of language, the many forms of discourse that appear in the literature, and the attempts the Greeks themselves made to overcome the perceived inadequacies and difficulties inherent in language as the medium of poetry and prose. The course explores the history of the development of philosophy in the context of a culture infused with traditional, mythological accounts of the cosmos. It asks how poetic forms such as tragedy responded to and made an active contribution to philosophical discourse while creating an intense emotional effect on the audience; how the first historians, using literary and philosophical discourse, created space for their own inquiry; and discusses how the questions persist and are formulated in our own thinking.

**CLASS 223(2641) The Comic Theater (also THETR 223[2230])** (LA) Spring. 3 credits. J. Rusten. The origins of comic drama in ancient Greece and Rome, and its subsequent incarnations especially in the Italian renaissance (Commedia dell'arte) and Elizabethan England, 17th-century France, the English Restoration, and Hollywood in the thirties and forties. Chief topics include the growth of the comic theatrical tradition and conventions, and the use themes of comic plots (trickster, parody, farce, caricature); and the role of comedy in society. All readings in English.

**CLASS 226(2646) Atheism Then and Now (also RELST 226[2646])** (KCM) Spring. 3 credits. Limited to 18 students. J. Coleman. Introduction to atheism, defined as the belief in the non-existence of gods or the denial of the existence of the divine. Students then read and discuss a selection of later readings illustrating the historical development of atheism and its relationship with deism, naturalism, and modern science. Students are encouraged to make critical use of some of the extensive resources available on the web at atheist, freethinker, and secular humanist sites. Particular themes considered in class discussions and student presentations include: faith vs. reason as means of knowledge; scientific evidence for and against the existence of deity; the companion of nonreligious moral and ethical codes with religious ones; atheist critiques of historical Christian attitudes toward science and slavery; the problem of the existence of multiple exclusive religions; and the positive aspects of atheism. Students must give two oral presentations of particular questions chosen in consultation with the instructor that are subsequently written up as 12-page papers, two in-class preliminary exams and a final exam.

**CLASS 229(2650) War and Peace in Greece and Rome (also HIST 265[2650])** (HA) Spring. 4 credits. T. Strauss. For description, see HIST 250.

**CLASS 231(2661) Ancient Philosophy (also PHIL 211[2110])** (KCM) Fall. 4 credits. T. Irwin. For description, see PHIL 211.

**CLASS 236(2604) Greek Mythology (also COM L 236[2360])** (LA) Summer and fall. 3 credits. Limited to 50 students in summer, 200 in fall. D. Mankin. Survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

**CLASS 237(2607) Greek Religion and Mystery Cults (also RELST 237[2607])** (CA) Spring. 3 credits. Next offered 2007-2008. K. Clinton. A representative variety of cults and their history are studied with special emphasis on mystery cults.

**CLASS 238(2640) The Ancient Epic and Beyond** (LA) Spring. 3 credits. Next offered 2007-2008. K. Clinton. Readings in Greek and Roman epic, and extending to later writers such as Dante, Melville, and Walcott.

**CLASS 258(2682) Periclean Athens (also HIST 258[2580])** (HA) Spring. 4 credits. H. R. Rawlings, III. The first five weeks provide a synoptic view of Athens' historical and cultural achievements in the fifth century B.C.—the traditional pinnacle of "The Glory that was Greece." Readings are taken from Greek historians, philosophers, poets, and documentary texts. At least two of the 75-minute lectures are devoted to art history and delivered by a guest speaker. The next seven to eight weeks follow the course of the Peloponnesian War to its interwoven contemporaneous texts composed by the dramatists (Sophocles, Euripides, and Aristophanes) and the sophists (supplemented with readings from Plato). The remaining classes consider the fate of Socrates and a few other fourth-century developments. The basic aim of the course is to approach an understanding of how and why a vital and creative society came undone. There are weekly discussion sections.

**CLASS 265(2650) Ancient Greece from Homer to Alexander the Great (also HIST 265[2650])** (HA) Fall. 4 credits. Open to freshmen. B. Strauss. For description, see HIST 265.

**CLASS 267(2683) History of Rome I (also HIST 267[2670])** (HA) Fall. 4 credits. Open to freshmen. E. Rebillard. Rome's beginnings and the Roman Republic. A general introduction to Roman history from the foundation of Rome in the middle of the eighth century BC to the end of the Republic (31 BC). The course includes a two-semester survey of Roman history up to the deposition of the last Roman emperor in the West (AD 476). Examines the rise of Rome from a village in Italy to an imperial power over the Mediterranean world and considers the political, economic, and social consequences of that achievement.

**CLASS 268(2671) History of Rome II (also HIST 268[2671])** (HA) Spring. 4 credits. Open to freshmen. E. Rebillard. Roman History II: the Roman Empire. This course, the second part of a two-semester survey of Roman history, examines the history of the Roman Empire from the beginnings of the Augustan Principate (31 BC) to the fall of the Western Empire in the fifth century AD (476). Students consider the creation and development of the imperial regime, explore the various types of challenges (military, cultural, and religious) to the hegemony of the Roman state, and try to understand the transformations of Roman society and culture down to the middle of the fifth century AD.

**CLASS 332(3644) Sages and Saints/ Ancient World (also HIST 338[3644], RELST 332[3644])** (HA) Spring. 4 credits. Next offered 2008-2009. E. Rebillard. This seminar considers the continuities and changes in the representations of the holy man, from the sages of classical antiquity to the saints of early Christianity.

**CLASS 333(3643) Greek and Roman Mystery Cults and Early Christianity (also RELST 333[3643])** (CA) Fall. 4 credits. Recommended: classics course (civilization or language) or RELST 101. Next offered 2007-2008. K. Clinton. After a brief survey of classical mystery cults and Hellenistic religion, the course focuses on Hellenistic and Roman cults.

**CLASS 339(3669) Plato (also PHIL 309[3090])** (KCM) Fall. 4 credits. Prerequisite: at least one philosophy course. T. Irwin. For description, see PHIL 309.

**CLASS 340(3664) Aristotle (also PHIL 310[3100])** (KCM) Spring. 4 credits. T. Irwin. Aristotle's practical and productive works (his Ethics, Politics, Rhetoric, and Poetics), with attention to their grounding in his theoretical works.

**CLASS 341(3661) Hellenistic Philosophy (KCM)** Fall. 4 credits. Prerequisite: CLASS 231 or philosophy course. Next offered 2007-2008. C. Brittain. Topics include scepticism, Stoic and Epicurean psychology of action, theories of
language, concept development and content, determinism and responsibility, virtue ethics, and scientific epistemology.]

**CLASS 345(3465) The Tragic Theater (also COM L 344(3440), THTR 345(3450)) # (LA)**
Fall. 4 credits. Limited to 40 students.
F. Ahl.
Tragedy and its audiences from ancient Greece to modern theater and film. Topics: origins of theatrical conventions; Shakespeare and Seneca; tragedy in modern theater and film. Works studied include: Aeschylus' Agamemnon; Sophocles' Oedipus Tyrannus, Philoctetes, Electra, Helen, Iphigenia in Aulis, Orestes; Seneca's Thyestes, Trojan Women; Shakespeare's Julius Caesar, Titus Andronicus, Othello; Strindberg's The Father; Dürrenmatt's The Visit; Bergman's Seventh Seal; Cacoyannis Iphigenia.

**CLASS 357(3685) Ancient Athens and Sparta # (HA)**
L. Abel.
Herodotus and Thucydides tell us much of what we know about Athens and Sparta in the sixth and fifth centuries B.C.—about the development, flourishing, and disastrous conflict of these two very different emblematic city-states. Students read Herodotus and Thucydides in English translation, compare what they tell us with other evidence (including Aristotle and Xenophon), and analyze their narratives as historical, historiographical, and literary texts. Students attend to how these formative thinkers and writers created an authoritative version of events.

**CLASS 382(3642) Greeks, Romans, and Victorians # (LA)**
F. Ahl.
Explores how 19th-century (and especially Victorian English and Irish) poets, dramatists, and to a lesser extent, novelists, present Greco-Roman antiquity.

**CLASS 387(3686) Independent Study in Classical Civilization, Undergraduate Level**
Fall and spring. Up to 4 credits.

**CLASS 405(4685) Augustine's Confessions [also RELST 405(4665)] (KCM)**
C. Brittain.
This course studies Augustine's conception of the mind, focusing on his analysis of memory, desire, and understanding and its relation to Greek and Latin philosophical antecedents.

**CLASS 436(4320) Topics in Ancient Greek History**
Spring. 4 credits. Limited to 15 students.
K. Clinton.

**CLASS 441(4410) Fourth Century and Early History of Greece [also HIST 441(4411)] # (HA)**
Fall. 4 credits.
B. Strauss. Undergrads and grads will meet for two hours; grad students must stay for one additional hour. For description, see HIST 441.

**CLASS 442(4662) Topics in Ancient Philosophy [also PHIL 413(4130)] # (KCM)**

**CLASS 447 Gender, Sexuality, and the Body in Late Antiquity [also NES 445, RELST 445, FGSS 447]**
Fall. 4 credits.
K. Haines-Eitzen.
For description, see NES 445.

**CLASS 464(4684) Women and Gender in Ancient Greek Literature and Society**
Spring. 4 credits.
Prerequisite: seniors and juniors with at least one course in ancient Greek history or literature. L. Abel.
Greek literature presents many strong female characters, characters who persevere into our modern culture, and one influential poet of lovely songs, Sappho. On the other hand, Greek law and philosophy (with the important perhaps exception of Plato) define women as less than fully human in bodily, intellectual, and moral capability. Evidence from Greek social history (legal cases, pots, and inscriptions) is contradictory. How can we make sense of these fundamental contradictions and paradoxes? How does attending to gender help us understand ancient Greek literature, ideas, and society? Readings will be in English translation. However, students who can read Greek will be encouraged to make use of their skill, especially in writing their papers.

**CLASS 475(4625) The Christianization of the Roman World, 300 to 600 CE [also RELST 475(4625), HIST 483(4831)] # (HA)**
E. Rebillard.
Christianization of the Roman world is concerned by the impact of Christianity on the late antique society and by the resistance and/or persistence of the old belief and practices.

**CLASS 545(7345) Graduate TA Training**
Fall and spring. 1 credit.
Staff.
Pedagogical instruction and course coordination. Requirement for all graduate student teachers of CLASS 105–106 and Classics first-year writing seminars.

**CLASS 632(7682) Topics in Ancient History [also HIST 630(6300)]**
Spring. 4 credits.
E. Rebillard.
Topic: Religion and Authority in Late Antique Roman North Africa from the reign of Constantine to the Vandal invasions.

**CLASS 638(7686) Ancient Warfare [also HIST 638(6360)]**
Spring. 4 credits.
B. Strauss.
A survey of recent theories, methods and publications as well as readings in Greek and Latin. At least one course in ancient history and permission of the instructor, reading knowledge of Greek or Latin.

**CLASS 700(9900) Doctoral Dissertation Research**
Fall and spring. 0 credits. Letter grades only. Staff.

**CLASS 703(7690) Independent Study for Graduate Students in Classical Civilization**
Fall and spring. Up to 4 credits.

**Greek**

**GREEK 101(1101) Elementary Ancient Greek I**
Fall. 4 credits.
A. Ruppel.
Introduction to Attic Greek. Designed to enable the student to read the ancient authors as soon as possible.

**GREEK 102(1102) Elementary Ancient Greek II**
Spring. 4 credits.
Prerequisite: CLASS 101 or equivalent. A. Ruppel.
Continuation of CLASS 101. prepares students for CLASS 104.

**GREEK 103(1103) Intensive Greek**
Summer. 6 credits.
Staff.
Intensive introduction combining the fundamentals of ancient Greek grammar with readings from a variety of classical authors in the original Greek. Prepares students in a single semester for CLASS 104.

**GREEK 104(1105) Elementary Ancient Greek III #**
Fall. 3 credits.
Prerequisite: CLASS 102, 103, or placement by departmental exam.
A. Nussbaum.
Introduces students to reading Greek literary texts (Xenophon's Anabasis) and a dialogue of Plato. Covers complex syntax and reviews the grammar presented in CLASS 102 or 103.

**GREEK 201(2101) Greek Prose # (LA)**
Spring. 3 credits.
Satisfies Option I.
Prerequisite: CLASS 104. H. Rawlings III.

**GREEK 202(2105) The Greek New Testament [also RELST 202(2105)] # (LA)**
Spring. 3 credits.
Prerequisite: at least one year of ancient Greek (CLASS 101–103 or 104) or permission of instructor. Next offered 2008–2009.
E. Rebillard.
Sequel to NES 229/CLASS 215. Selections in Greek from all four gospels, the letters of Paul, and Acts.

**GREEK 203(2103) Homer # (LA)**
Spring. 3 credits.
Satisfies Option I.
Prerequisite: CLASS 104. D. Mankin.
Readings in the Homeric epic.

**GREEK 204(2104) Euripides: Alcestis # (LA)**
Spring. 3 credits.
Satisfies Option I.
Prerequisite: CLASS 104. D. Mankin.

**GREEK 301(3101) Greek Epic # (LA)**
Spring. 4 credits.
Satisfies Option I.
Prerequisite: one 200-level Greek course.
P. Pucci.
Undergraduate seminar.

**GREEK 302(3102) Greek Historiography and Oratory # (HA)**
Fall. 4 credits.
Satisfies Option I.
Prerequisite: one 200-level Greek course.
P. Pucci.
Undergraduate seminar.

**GREEK 303(3103) Undergraduate Seminar: Greek Drama (LA)**
Fall. 4 credits.
Satisfies Option I.
Prerequisite: one 200-level Greek course.
P. Pucci.
Topic: TBA.
Undergraduate seminar.

GREEK 305(3262) Introduction to the New Testament Seminar [also RELST 325(3262)] Fall. 1 credit. Offers extra credit option for students who have had one year of Greek, to read portions of New Testament and other Christian writings in Greek. Does not count toward classics major requirement as 300-level Greek course. Prerequisite: one year of Greek. Corequisite: enrollment in NES 229/CCLASS 215. Next offered 2008–2009.

GREEK 310(3110) Special Topics in Greek Literature # (LA) Fall and spring. 4 credits. Satisfies Option I. Prerequisite: one 200-level Greek course or permission of instructor. Next offered 2007–2008.

The Hellenistic Greek poetry of Callimachus, Theocritus, Apollonius of Rhodes and others is often studied as the bridge between archaic and classical Greek poets and Latin poets such as Catullus, Virgil and Ovid. This course gives consideration to these important interrelationships only after attempting to understand and appreciate the accomplishments of the Hellenistic authors on their own terms.

GREEK 385(3185) Independent Study in Greek, Undergraduate Level Fall and spring. Up to 4 credits. Prerequisite: permission of DUS in the case of documented schedule conflict. Staff.

GREEK 419(4116) Advanced Greek Composition (LA) Fall. 4 credits. Prerequisite: CLASS 316 or equivalent. J. Rusten.

GREEK 605-606(7105-7106) Graduate Survey of Greek Literature 605, fall; 606, spring. 4 credits each semester. Prerequisite: Linguistic proficiency to be determined by instructor. Next offered 2007–2008. Staff. Survey of Greek literature in two semesters. 605: Greek literature from Homer to the mid-fifth century. 606: Greek literature from the late fifth century to the Empire.

GREEK 610(7310) CorHiLa Seminar Spring. 2 credits. P. Pucci. Topic: The gods in Hesiod's Theogony.

GREEK 611(7111) Greek Philosophical Texts [also PHIL 411(4110)] Fall and spring. Up to 4 credits. Prerequisites: knowledge of Greek and permission of instructor. G. Fine. Readings of Greek philosophical texts in the original.

GREEK 701(7910) Independent Study for Graduate Students in Greek Fall and spring. Up to 4 credits. Was CLASS 701–702.

Latin

LATIN 105(1201) Elementary Latin I Fall. 4 credits. Staff. Introductory course designed to prepare students to start reading Latin prose at the end of a year. The class moves swiftly and meets daily. Work includes extensive memorization of vocabulary and paradigms, study of Latin syntax; and written homework, quizzes, tests, and oral drills.

LATIN 106(1202) Elementary Latin II Spring. 4 credits. Prerequisite: 105 or equivalent. Staff. Continuation of CLASS 105, using readings from various authors; prepares students for CLASS 109.

LATIN 108(1204) Latin in Review Fall. 4 credits. Prerequisite: placement by departmental exam. Fall, A. Ruppel; spring, M. Fontaine. Designed to accommodate students who have had some Latin, but are insufficiently prepared to take 106. It begins with review of some material covered in 105 and then continues with second-semester Latin material (106). The class moves swiftly and meets daily. Work includes extensive memorization of vocabulary and paradigms; study of Latin syntax; and written homework, quizzes, tests, and oral drills. Students should be ready for LATIN 109 by the end of the course, but may take LATIN 205 if they pass with A- or better.

LATIN 109(1205) Elementary Latin III Fall and spring. 3 credits. Prerequisites: CLASS 106, 107, 108 or placement by departmental exam. Fall, A. Ruppel, spring, K. Clinton. Introduces students to reading a literary Latin text (Cicero's Speeches against Catiline). Covers complex syntax and reviews the grammar presented in CLASS 106, 107, or 108.

LATIN 205(2201) Latin Prose # (LA) Fall and spring. 3 credits. Satisfies Option I. Prerequisite: CLASS 109 or grade of A- or above in CLASS 106, 107, 108 or placement by departmental exam. Fall, M. Fontaine; spring, A. Ruppel. Fall. Reading of Cicero's speech in defense of Milo on a charge of murder, with attention paid to the ancient commentary on the speech by Asconius. Spring: Cicero's philosophical texts—reading selections from "De republica" and "de natura deorum."

LATIN 207(2203) Catullus # (LA) Fall. 3 credits. Satisfies Option I. Prerequisite: CLASS 109. Next offered 2007–2008. Staff. Aims to present the poems of Catullus within their historical and cultural context. The poems are read and translated, and their significance both individually and as products of Late Roman Republican culture discussed in class. Selections from the works of Catullus's contemporaries are assigned in translation.

LATIN 208(2204) Roman Drama # (LA) Spring. 3 credits. Satisfies Option I. Prerequisite: CLASS 109. M. Fontaine. Topic: Selected Tragedies of Seneca.

LATIN 210(2206) Roman Letters # (LA) Spring. 3 credits. Satisfies Option I. Prerequisite: CLASS 109. Next offered 2007–2008. Staff. Offer an overview of prose letter-writing in the Late Republic and Empire. Selections from the correspondence of Cicero, Seneca, and Pliny are read, translated, and discussed in class. Selections from other authors are assigned in translation. Among other topics, the discussion focuses on the issues of transmission, circulation, and publication of letter-collections, as well as on the political and cultural context in which the letters were written.

LATIN 306(3201) Roman Epic # (LA) Spring. 3 credits. Satisfies Option I. Prerequisite: CLASS 109. M. Fontaine. Topic: Greek Epic equivalents. Staff.

LATIN 307(3202) Roman Historiography # (LA) Fall. 4 credits. Satisfies Option I. Prerequisite: one semester of 200-level Latin or permission of instructor. H. R. Rawlings, III. Undergraduate seminar. Close reading of several Roman historians, particularly Sallust and Livy. Students will focus upon Latin prose style, Roman historical traditions and historiographical analysis: source criticism, study of narrative technique and the rhetoric of speeches, and appreciation of irony and implied meaning. The course will also touch upon Greek historiographical models.
[LATIN 308(3203)] Roman Poetry: Virgil, Eclogues and Georgics (LA)

[LATIN 309(3204)] Roman Prose # (LA)

[ LATIN 314(3205)] The Augustan Age # (LA)
Fall. 4 credits. E. Rebillard. Satisfies Option 1. Prerequisite: one semester of 200-level Latin or permission of instructor. Introduction to the literature of the age of Augustus. Reviews the fall of the Republic, the rise to power of Augustus, and a new political system.

[ LATIN 315(3215)] Imperial Latin

[ LATIN 317(3217)] Latin Prose Composition # (LA)

[ LATIN 306(3266)] Independent Study in Latin, Undergraduate Level
Fall and spring. Variable to 4 credits. Prerequisite: permission of DUS in the case of documented schedule conflict. Staff.

[ LATIN 411(4201)] Advanced Readings in Latin Literature # (LA)
Fall. 4 credits. D. Mankin. Topic: Horace.

[ LATIN 412(4202)] Advanced Readings in Latin Literature # (LA)
Spring. 4 credits. C. Britain. Topic: Seneca.

[ LATIN 413(4213)] Survey of Medieval Latin Literature (also MEDVL 413/613(4103/6103), LATIN 613(7213))
Fall. 3 credits. C. Ruff. For description, see MEDVL 413.

[ LATIN 414(4216)] Advanced Latin Prose Composition # (LA)
Spring. 4 credits. Prerequisite: graduate standing; undergraduates who have completed LATIN 317 and have permission of instructor. Next offered 2007–2008. Staff.

[ LATIN 423(4223)] Topics in Medieval Latin Literature (also MEDVL 423/623(4201/6201), LATIN 623(7223))
Spring. 3 credits. C. Ruff. For description, see MEDVL 423.

[ LATIN 603(7207)] Later Latin Literature: Late Antique and Medieval Hagiography

[ LATIN 612(7213)] Survey of Medieval Latin Literature (also MEDVL 412/612(4103/6103), LATIN 612(7213))
Fall. 3 credits. C. Ruff. For description, see MEDVL 413.

[ LATIN 622(7222)] Latin Paleography (also MEDVL 622/61201, LATIN 622(7222))
Fall. 3 credits. C. Ruff. For description, see MEDVL 621.

[ LATIN 623(7223)] Topics in Medieval Latin Literature (also MEDVL 423/623(4201/6201), LATIN 423/623(4223))
Spring. 3 credits. C. Ruff. For description, see MEDVL 621.

[ LATIN 625-626(7205-7206)] Graduate Survey of Latin Literature
Fall, fall; 626, spring. 4 credits each semester. Prerequisite: linguistic proficiency to be determined by instructor. Next offered 2008–2009. Staff. Survey of Latin literature in two semesters.

[ LATIN 679(7271)] Graduate Seminar in Latin Catullus and Neoteroi
Fall. 4 credits. M. Fontaine. A close reading of the Catullan corpus and Neocritic fragments, with special attention to questions of text, imagery, and influence.

[ LATIN 680(7272)] Graduate Seminar in Latin
Spring. 4 credits. E. Rebillard. Topic: Intellectual World of Rome in the Fourth and Fifth Century ad. Through the reading of Latin writings of the fourth and fifth centuries we will study the tensions between the old and the new in the intellectual world of the Roman Empire.

[ LATIN 702(7920)] Independent Study for Graduate Students in Latin
Fall and spring. Up to 4 credits. Staff.

Classical Art and Archaeology

[CLASS 220(2700)] Introduction to Art History: The Classical World # (HA)

[CLASS 221(2726)] Minoan-Mycenaean Art and Archaeology (also ARKEO 221[2726]) # (CA)
Spring. 3 credits. Next offered 2007–2008. J. Coleman. The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.

[CLASS 227(2727)] Art and Archaeology in the Ancient Mediterranean World (also ARKEO 227[2727]), ART H 227[2277])
Fall. 4 credits. S. Manning. This course introduces students to a selection of the major themes and issues in the archaeology and art of the ancient Mediterranean region from the later prehistoric period (the Bronze Age) through to the Roman era. Emphasis is placed on: (i) study of some key evidence and issues from the various periods/contexts; (ii) the history of the field (temporal and intellectual) and the impact of this on our experience of the past, and (iii) placing material culture into a social and historical context and analysis. The course is divided into the following sections: (a) discovery of the past and the invention of Classical art and archaeology, (b) prehistoric art, archaeology and material culture studies, (c) Greek art and archaeology, (d) Roman art and archaeology.

[CLASS 240(2725)] Greek Art and Archaeology # (CA)

Introduction to the material culture of Greece from the Early Iron Age to the coming of the Romans (ca. 1000 bc to 31 bc). Focuses not only on famous monuments such as the Parthenon but also on the evidence for daily life and for contact with other civilizations of the Mediterranean. A critical attitude is encouraged toward the interpretation of archeological remains and toward contemporary uses (and misuses) of the past.

[CLASS 256(2756)] Practical Archaeology (also ARKEO 256[2756]) # (HA)
Fall. 3 credits. J. Coleman.

Introduction to the tools and methods of field archaeology. Topics include remote sensing (satellite images and aerial photos), surface survey; subsurface investigations by magnetometer, ground penetrating radar; the layout and development of a land excavation, underwater excavations; the collection, description, illustration, and analysis of artifacts and data, such as pottery, lithics, botanical samples, and radiocarbon samples. Hands-on experience with potshards and other artifacts from prehistoric and Classical Greece and Cyprus in the university's collections is intended to prepare students for work in the field.

[CLASS 321(3721)] Mycenae and Homer (also ARKEO 321[3721]) # (HA)
Fall. 4 credits. Prerequisite: at least one course in archaeology, classics, or history of art. Next offered 2007–2008. J. Coleman.

Studies the relationship between the Mycenaean period of Greece (known primarily from archaeology) and the Homeric Iliad and Odyssey. Topics include Mycenaean architecture, burial customs, kingship, and military activities; the reasons for the collapse of the Bronze Age palatial economies; the archaeological evidence for society in the "Dark Ages" that followed; the writing systems of Mycenaean Greece (Linear B) and the Iron Age (the Semitic/Greek alphabet); the nature of the Homeric poems and their value as historical sources.

[CLASS 322(3722)] Greeks and Their Neighbors (also ART H 328[3222]) # (HA)
Fall. 4 credits. Prerequisite: CLASS 220 or 221, or permission of instructor. Next offered 2007–2008. J. Coleman.

Studies the archaeological and other evidence for the interaction between Greek civilization and the peoples of the eastern and western Mediterranean from the 13th to the fourth centuries BCE. Focuses on Greek relationships with Egypt, Phoenicia, Cyprus, Anatolia, and Italy in the post-Bronze Age period.
CLASS 325(3725) Greek Vase Painting  
(also ART H 325[3205]) # (LA)  
For description, see ART H 325.]  
CLASS 330(3750) Introduction to  
Dendrochronology (also ARKEO 309)  
(NA)  
Spring. 4 credits. Limited to 10 students.  
Prerequisite: permission of instructor. Letter grades only. S. Manning.  
Mediterranean and New World applications to archaeology, art-history and environment.  
Introduction and training in dendrochronology and its applications through participation in  
a research project dating ancient to modern tree-ring samples from both the Mediterranean  
and the Upper New York State region. Supervised reading, laboratory/project work,  
fieldtrip(s) in local area. A possibility exists for  
summer fieldwork in the Mediterranean.  
CLASS 334(3734) Archaeology of Slavery  
in the Roman World (also ARKEO  
334[3734])  
Spring. 4 credits. K. McDonnell.  
This course will examine the archaeological and historical evidence for slavery in the  
classical world, focusing on the Roman Empire. We will also consider current  
approaches to slavery in historical archaeology and use comparative evidence from those  
studies to illuminate the appearance of slaves and freedmen in the archaeological record.  
CLASS 350(3740) Arts of the Roman  
Empire (also ART H 322[3202]) #  
(NA)  
Fall. 4 credits. Staff.  
For description, see ART H 322.  
CLASS 434(4734) The Rise of Classical  
Greece (also ARKEO 434[4734]) #  
(NA)  
Spring. 4 credits. Recommended: CLASS  
220 or 221, ART H 220 or 221, or permission of instructor. Next offered  
For description, see ARKEO 434.]  
CLASS 435(4735) Seminar on Roman  
Art and Archaeology (also ARKEO  
435[4207]) # (CA)  
Spring. 4 credits. Prerequisite: permission of instructor. Next offered 2008-2009. Staff.  
For description, see ART H 427.]  
CLASS 629(7729) The Prehistoric  
Aegean (also ARKEO 629[7729])  
Seminar with focus on the Aegean and neighboring regions in the Neolithic and Early  
Bronze Ages.]  
CLASS 705(7970) Independent Study  
for Graduate Students in Classical  
Archaeology  
Fall and spring. Up to 4 credits. Staff.  

Greek and Latin Linguistics  
[CLASS 421(4451) Greek Comparative  
Grammar (KCM)  
Spring. 4 credits. Prerequisite: thorough familiarity with morphology of classical  
The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed  
by comparison with the other Indo-European languages.]  
[CLASS 422(4452) Latin Comparative  
Grammar (also LING 452[4452])  
(KCM)  
Fall. 4 credits. Prerequisite: thorough familiarity with morphology of classical  
The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed  
by comparison with the other Indo-European languages.]  
[CLASS 425(4455) Greek Dialects (also  
LING 455[4455]) (KCM)  
Fall. 4 credits. A. Nussbaum.  
Survey of the dialects of ancient Greek through the reading and analysis of  
representative epigraphical and literary texts.]  
[CLASS 426(4456) Archaic Latin (also  
LING 456[4456]) (LA)  
Spring. 4 credits. Prerequisite: reading knowledge of Latin. Next offered 2007-  
Reading of epigraphic and literary preclassical texts with special attention to archaic  
and dialectical features. The position of Latin among the Indo-European languages of  
ancient Italy, the rudiments of Latin historical grammar, and aspects of the development  
of the literary language.]  
[CLASS 427(4457) Homeric Philology  
(also LING 457[4457]) # (LA)  
Spring. 4 credits. Prerequisite: ability to read Homeric Greek. Next offered 2008-  
2009. A. Nussbaum.  
The language of the Homeric epics: dialect background, archaisms, modernizations. The  
notion of a Kunsprache: its constitution, use, and internal consistency. The phonological  
and morphological aspects of epic compositional technique.]  
[CLASS 429(4459) Mycenaean Greek  
(also LING 459[4459]) (LA)  
Spring. 4 credits. Prerequisite: thorough familiarity with morphology of Classical  
Sanskrit  
[CLASS 191-192(1331-1332) Elementary  
Sanskrit (also LING/SANSK 131- 132[1131-1132])  
191, fall; 192, spring. 4 credits each  
Introduction to the essentials of Sanskrit grammar. Designed to enable the student to  
read classical and epic Sanskrit as quickly as possible.]  
[CLASS 291-292(2351-2352) Intermediate  
Sanskrit (also LING/SANSK 251- 252[2251-2252]) #  
291, fall; 292, spring. 3 credits each  
semester. CLASS 291 satisfies Option I.  
Prerequisite: CLASS 192 or equivalent. A. Ruppel.  
Readings from the literature of Classical  
Sanskrit. Fall: selections from the two Sanskrit epics, the Mahabharata and the  
Ramayana. Spring: more selections from the epics, and from either Sanskrit story literature  
and from Sanskrit dramas.]  
[CLASS 391(3391) Independent Study in  
Sanskrit, Undergraduate Level  
Fall and spring. Variable to 4 credits. Staff.  
[CLASS 490(4490) Sanskrit Comparative  
Grammar (also LING 460[4490])  
Survey of the historical phonology and  
morphology of Sanskrit in relation to the  
Indo-Iranian and Indo-European comparative  
evidence.]  
CLASS 704(7950) Independent Study for  
Graduate Students in Sanskrit  
Fall and spring. Variable to 4 credits. Staff.  

Honors Courses  
CLASS 472(4720) Honors Course: Senior  
Essay  
Fall and spring. 8 credits. Student must  
choose advisor by end of sixth semester.  
Topics must be approved by Standing  
Committee on Honors by beginning of  
seventh semester. See “Honors” under Classics front matter.

CONCEPTUAL STANDARDS PROGRAM

M. Spivey (psychology); director, G. Gay, J. Hancock (communication); C. Cardie, and methodological approaches. It is this as a result of the various Cognitive Studies structures and processes that constitute these are biologically represented in the brain. At the broadest level, the specific level are questions regarding the abstract operating principles of individual components of the mind, such as those underlying visual perception, language ability, and understanding of concepts. These principles concern the organization and behavior of the components and how they are biologically represented in the brain. At the most specific level are questions about the properties of the elementary computational structures and processes that constitute these components.

Important insights into issues of these kinds have been achieved in recent years as a result Cognitive Studies disciplines converging in their theoretical and methodological approaches. It is this convergence, in fact, that warrants grouping the disciplines together under the single term "Cognitive Studies." Even greater progress can be expected in the future as a consequence of increasing cooperation among the disciplines.

Undergraduate Concentration

An interdisciplinary undergraduate concentration in Cognitive Studies is available to Cornell University undergraduates in the College of Arts and Sciences. Students from other colleges who seek such a concentration should discuss such possibilities with the Cognitive Studies office, which will provide information and contacts concerning such concentrations.

The undergraduate concentration in Cognitive Studies is designed to enable students to engage in a structured program directly related to the scientific study of cognition and the mind. The concentration provides a framework for the design of structured, supervised programs of study in this growing interdisciplinary field. Such programs of study serve as complements to course work in a single discipline as represented by an individual department. It is considered crucial that students gain a strong background in their major, independent of their work in the concentration. Independent majors and college scholars may also apply. Colleges vary in their procedures for formal recognition of this concentration (contact the Cognitive Studies office for details). The Cognitive Studies Program faculty have designed five structured "tracks" that offer students different ways of satisfying the concentration. In addition, students are always able to construct their own programs of study subject to approval by their concentration advisor. The courses listed under each track are program suggestions. The student should consult with his or her Cognitive Studies advisor to develop a more customized curriculum. In some cases, students may want to combine or cross tracks.

In general, it is expected that students in the concentration will take COGST 101 or COGST 214 as their introductory course requirement; either COGST 412, COGST 450/HD 457/LING 450/PSYCH 437 as their introductory course requirement; and three courses at the 200 level as their introductory course requirement. Independent majors and college scholars may also apply. Colleges vary in their procedures for formal recognition of this concentration (contact the Cognitive Studies office for details). The Cognitive Studies Program faculty have designed five structured "tracks" that offer students different ways of satisfying the concentration. In addition, students are always able to construct their own programs of study subject to approval by their concentration advisor. The courses listed under each track are program suggestions. The student should consult with his or her Cognitive Studies advisor to develop a more customized curriculum. In some cases, students may want to combine or cross tracks.

1. Perception and Cognition

This track focuses on psychological, computational, and neurobiological approaches to the interface between perception and cognition. Students will develop a grasp of the continuum between sensory impressions and complex thought.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102 Introduction to Cognitive Science

PSYCH 440 The Brain and Sleep

5. Independent Study

With approval from the Cognitive Studies undergraduate curriculum committee, a student and advisor in the Cognitive Studies program can arrange their own unique collection of courses that do not belong to the above categories for satisfying the concentration requirements.

COGST 470 Undergraduate Research in Cognitive Studies
COGST 471 Cognitive Studies Research Workshop

A Cognitive Studies undergraduate laboratory and computer facility is available for all students in a Cognitive Studies concentration. This facility will help link resources from different laboratories across the Cornell campus as well as providing a central location for developing and conducting experimental research in Cognitive Studies.

Students who complete the concentration requirements will have their concentration in Cognitive Studies officially represented on their transcript. In addition, students who have made substantial progress toward completing the requirements for the concentration will be eligible for enrollment in the graduate courses in Cognitive Studies during their senior year.

Concentration Application Procedures. Initial inquiries concerning the undergraduate concentration should be made to the Cognitive Studies Program coordinator, Julie Simmons-Lynch, cogst@cornell.edu, 255-6431, who will provide application materials and set up a meeting with a relevant member of the Undergraduate Concentration Committee. This committee will assist the student in selecting a concentration advisor with expertise in the student's main area of interest.

To formally initiate the concentration in Cognitive Studies, a student must gain approval for the selection of courses from a concentration advisor (one of the program faculty). The courses selected must form a coherent cluster that makes sense to both the advisor and the student. To be admitted to the concentration, the student must submit this plan of study to the Cognitive Studies undergraduate faculty committee for final approval.

In addition to assisting in and approving the student's selection of courses, the concentration advisor serves as a general source of information about the field of Cognitive Studies, relevant resources around the university, and job and graduate school opportunities. Often, the advisor can help the student develop independent research experience.

Independent Research. The concentration encourages each student to be involved in independent research that bears on research issues in Cognitive Studies, if possible. COGST 470 is available for this purpose. It is recommended that students report on their research activities in an annual undergraduate forum. The Undergraduate Concentration Committee is committed to helping students find an appropriate research placement when needed.

The Committee for Undergraduate Concentration in Cognitive Studies consists of: Bart Selman, Computer Science, 255-5643, 4144 Upson Hall, selman@cs.cornell.edu; Draga Zec, linguistics, 255-0728, 217 Morrill Hall, DZ17@cornell.edu; Michael Spivey, psychology, 255-5565, 238 Uris Hall, spivey@cornell.edu. The current director of undergraduate studies is Draga Zec.

Graduate Minor

Entering graduate students, as well as advanced undergraduates, who are interested in cognition and in the cognitive sciences are advised to take the introductory course COGST 101 Introduction to Cognitive Science in the fall semester. Enrolling in the 4-credit version, which involves a weekly section meeting with the instructor, will satisfy the introductory course requirement.

Graduate students minorng in Cognitive Studies will take additional courses recommended by their graduate committee to complete their course requirements.

For more information, consult the program office (278G Uris Hall, 255-0431, cogst@cornell.edu) or the director of graduate studies, Michael Spivey (255-9365, spivey@cornell.edu).

Courses

Cognitive Studies

COGST 101(1110) Introduction to Cognitive Science (also COM S 101[1170], LING 170[1170], PHIL 191[1190], PSYCH 102[1200](KCM)
Fall. 3 or 4 credits; 4-credit option involves writing section instead of exams. M. Spivey

Surveys the study of how the mind/brain works. Examines how intelligent information processing can arise from biological and artificial systems. Draws primarily from five disciplines that make major contributions to cognitive science: philosophy, psychology, neuroscience, linguistics, and computer science. The first part of the course introduces the roles played by these disciplines in cognitive science. The second part focuses on how each of these disciplines contributes to the study of five topics in cognitive science: language, vision, learning and memory, action, and artificial intelligence.

COGST 111(1110) Brain, Mind, and Behavior (also BIONB/PSYCH 111[1110]) (PBS)
Spring. 3 credits. Intended for freshmen and sophomores in humanities and social sciences; seniors not allowed. Not recommended for psychology majors; biology majors may not use course for credit toward major. Letter grades only.
R. Hoy and E. Adkins Regan

Understanding how the brain creates complex human behavior and mental life is a great scientific frontier of the next century. This course enables students with little scientific background from any college or major to appreciate the excitement. What are the interesting and important questions? How are researchers trying to answer them? What are they discovering? Why did the brain evolve this remarkable capacity?

COGST 172(1720) Computation, Information, and Intelligence (also COM S/ENGR/INFO 172[1700]) (MQR)
Fall. 3 credits. Prerequisite: some knowledge of calculus. Staff.

Introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, computer-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets are assigned. Not open to students who have completed the equivalent of COM S 100.
This course explores the biology that underlies cognitive processes like language, decision making, and emotion. What do we know about the biology of the mind? As long ago as the 1600s, when the philosopher Descartes speculated on how the mind and body interact, humans have been fascinated by how the brain works. The process by which cells communicate within the brain can give rise to all the complexity that is human behavior. This course is designed as an introduction to the biology underlying human behavior. After studying basic concepts in neurophysiology and neuroanatomy, the course will explore a variety of topics, such as how our brain underlies our perception, thought, language, emotions, memories, and desires. In addition, we will discuss relevant human clinical disorders throughout the course. This course will give background necessary for other courses in HD that focus on biological mechanisms of human development and serves as a prerequisite for many of them.

**COGST 230(2300) Cognitive Development (also HD 230[2300])**
 Designed to help students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to apply various analyses of developmental research. Discusses how children's thinking changes over the course of development and evaluate psychological theories and research on various aspects of cognitive development. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills. Students also have hands-on research experiences with "real" kids.

**COGST 231(2310) SSP: Borges and I: A Quest for Self-Knowledge (also PSYCH 231/BIONB 231)**
Spring. 4 credits. Limited to 15 students. S. Edelman.
 This seminar will survey the state of the art in theoretical neuroscience, a discipline whose ultimate goal is finding the mind in the brain. Our journey through the scientific literature on minds and brains, covering topics such as memory and identity, love, solitude and society, language, creativity, religion, and morality, will be accompanied by a choice of short stories by Jorge Luis Borges.

**COGST 333(3330) Problems in Semantics—Quantification in Natural Language (also LING 333[3333], PHIL 333[3330]) (KCM)**
Spring. 4 credits. Prerequisites: course in logic or semantics or permission of instructor. M. Rooth.
 Looks at problems in the semantic analysis of natural languages, critically examining work on particular topics of current interest.

**COGST 334(3340) The Growth of the Mind (also HD 334[3340])**
Spring. 4 credits. Prerequisite: course in human experimental psychology, cognitive psychology, statistics, HD 115, or equivalent, or permission of instructor. Primarily intended for sophomores through seniors. Offered alternate years, next offered 2007–2008. B. Lust.
 The fundamental issues of cognition are introduced in this course. What is the nature of human intelligence? Of logical and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to their final representation? What are the relations of thought and thought? In the study of these issues, how can epistemology and experimental psychology be related through the experimental method? Basic debates within the study of cognition are introduced and discussed throughout. The course will analyze Piaget's comprehensive theory of cognitive development and experimental results. Current research in 'cognitive development will be contrasted.'

**COGST 342(3420) Human Perception: Applications to Computer Graphics, Art, and Visual Display (also PSYCH 342/642/3420/6420, VISIT 342[3342])**
Fall. 3 or 4 credits; 4-credit option involves term paper. Prerequisite: PSYCH 101 or permission of instructor. Highly recommended: PSYCH 205. D. Field.
 Our present technology allows us to transmit and display information through a variety of media. To make the most of these media channels, it is important to consider the limitations and abilities of the human observer. The course considers a number of applied aspects of human perception with an emphasis on the display of visual information. Topics include “three-dimensional” display systems, color theory, spatial and temporal limitations of the visual systems, attempts at subliminal communication, and “visual” effects in film and television.

**COGST 412(4120) Laboratory in Cognition and Perception (III) (also PSYCH 412)**
Spring. 4 credits. Limited to 15 students. Prerequisite: statistics and one course in cognition or perception recommended. Graduate students, see PSYCH 612. M. W. Du.
 Laboratory course designed to introduce students to experimental methods in perception and cognitive psychology. Students take part in a number of classic experiments and develop at least one independent project. Computers are available and used in many of the experiments although computer literacy is not required. Projects are selected from the
areas of visual perception, pattern recognition, memory, and concept learning.

[COGST 414(4140) Comparative Cognition (also PSYCH 417(4170)/714(7140)) (KCM)]

Spring. 3 credits. Limited to 20 students. Prerequisite: senior standing or permission of instructor. Next offered alternate years.

Examine some of the conceptual and empirical work resulting from and fueling the recent surge of interest in animals thinking. Specific topics may include whether nonhuman primates are trained in human-like language behavior. Cognition in nonhuman nonhumans are trained in human-like language. Cognition in nonhuman primates is a specific focus throughout. The course is a mix of lecture and discussion, emphasizing the latter as much as possible.

[COGST 416(4160) Modeling Perception and Cognition (also PSYCH 416(4160)/616(6160))]

Spring. 4 credits. Prerequisites: PSYCH 205, 209, 214, or 215, or permission of instructor. M. Spivey.

Offers a survey of several computational approaches to understanding perception and cognition. Explore linear systems analysis, connectionist models, dynamical systems, and production systems, to name a few. Emphasis is placed on how complex sensory information gets represented in these models, as well as how it gets processed. This course covers computational accounts of language processing, language acquisition, visual perception, and visual development, among other topics.

[COGST 424(4240) Computational Linguistics (also COM S 324[3470], LING 424(4244)])]

[COGST 426(4260) Learning Language (also PSYCH 428)]

Spring. 4 credits. Limited to 20 students. Prerequisite: PSYCH 214 or by permission of the instructor. S. Edelman.

In this seminar, we shall survey a promising new approach to the understanding of the cognitive function that is at the core of the human nature: language. Thematicallly, the material to be covered focuses on two aspects of the study of language: (1) psychological studies and their interpretation, and (2) algorithmic studies and computational modeling. In psycholinguistics, we shall read key papers that shed light on the nature of linguistic knowledge ("grammar") possessed by normal adults, and on the acquisition of this knowledge by children. In computation, the focus is on acquisition of grammar from raw data.

[COGST 427(4270) Evolution of Language (also PSYCH 427/627(4270/6270))]

Fall. 3 credits. Limited to 20 students. Prerequisite: senior standing or permission of instructor. Offered alternate years; next offered 2007-2008. M. Christiansen.

Fueled by theoretical constraints derived from recent advanced research in various species and experiments in which signals provide a "window on the mind" plays the material to be covered focuses on the human nature: language. Thematically, emphasizing the latter as much as possible. In discussing all of these questions, we will also consider developmental aspects of scientific reasoning, such as whether "magical thinking" in children is qualitatively different than what adults do.

[COGST 433(4330) Developmental Cognitive Neuroscience (also HD 433/4330)]

Spring. 3 credits. Limited to 25 students. Prerequisite: HD 115 or PSYCH 101 and one semester of biology, permission of instructor. Next offered 2007-2008. E. Temple.

What are the brain mechanisms underlying human behavior and cognition? How do these mechanisms differ from those underlying behaviors exhibited by other species? What is the relationship between phylogeny and ontogeny?

[COGST 428(4280) Connectionist Psycholinguistics (also LING/PSYCH 428/628/6280)]

Fall. 3 credits. Prerequisite: senior standing or permission of instructor. Offered alternate years; next offered 2007-2008. M. Christiansen.

Connectionist psycholinguistics involves using (artificial) "neural" networks, which are inspired by brain architecture, to model empirical data on the acquisition and processing of language. As such, connectionist psycholinguistics has had a far-reaching impact on language research. This course surveys the state of the art of connectionist psycholinguistics, ranging from speech processing and word recognition, to inferential morphology, sentence processing, language production, and reading. An important focus of discussion is the methodological and theoretical issues related to computational modeling of psychological data. The broader implications of connectionist models of language are discussed, not only for psycholinguistics, but also for computational and linguistic perspectives on language.

[COGST 432(4320) Cognitive, Social, and Developmental Aspects of Scientific Reasoning (also HD 432)]

Fall. 3 credits. Prerequisites: HD 115 or PSYCH 101. Offered alternate years. Not offered 2006-2007. B. Koslowsky.

The first section of the course will examine case studies of examples of scientific reasoning, such as identifying the causes of "childbed fever," whether a prehistoric population engaged in "magical thinking," whether T. Rex was a fierce hunter or a wimpy scavenger, whether a primitive nomadic tribe might have included warrior women, etc. The case studies will be examined to try to identify the sorts of principles that an adequate description of scientific reasoning would need to include.

We will then consider various models of scientific reasoning with an eye towards understanding the extent to which the models can account for the sort of thinking that is exemplified in the case studies. Along the way, we will consider such questions as the role of theory in scientific reasoning, strategies for responding to anomalous or disconfirming data, when disconfirming data ought to (and do) prompt rejection rather than modification of a theory. Confirmation bias, magical thinking in children, other developmental differences, sociocultural influences on scientific reasoning, etc. In discussing all of these questions, we will also consider developmental aspects of scientific reasoning, such as whether "magical thinking" in children is qualitatively different than what adults do.

[COGST 434(4340) Current Topics in Cognitive Development (also HD 434)]

Spring. 3 Credits. Prerequisites: Course HD 234/COGST 234 (simultaneously); permission of instructor. Offered alternate years. Not offered 2006-2007. The course will supplement survey course HD 254/COGST 254 with additional discussion of current research in the area of cognitive development. Selected current papers will be read and discussed in parallel with the HD 234/COGST 234 survey course. Modern interpretations and challenges to Piaget's theory will be evaluated in light of current literature in the field. A small group format will be adopted to encourage discussion.

[COGST 435(4350) Mind, Self, and Emotion: Research Seminar (also HD 431/4310)]

Fall. 3 credits. Limited to 20 students. Prerequisite: undergraduate or graduate standing. Letter grades only. Next offered 2007-2008. Q. Wang.

Examines current data and theory concerning memory, self, and emotion from a variety of perspectives and at multiple levels of analysis, particularly focusing on the interconnections among these fields of inquiry. A special emphasis is given to cross-cultural studies on memory development, self-construal, and conception of emotion.
COGST 436(4360) Language Development (also HD 237[2370], LING 434[4436], PSYCH 436[4360]) (KCM)
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HD 655, LING 700, or PSYCH 600, a supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S-U grades optional. B. Lust.
Surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental linguistic issues of “Universal Grammar” and the biological foundations for acquisition are discussed, as are the issues of relations between language and thought. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child. An optional lab course supplement is available (see COGST 450/HD 457/LING 450/PSYCH 437).

COGST 437[4370] Thinking and Reasoning (also HD 238[2380])
Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101. B. Koslowski.
Examines problem solving and transfer, precausal thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and nonrational reasoning. Two general issues run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

COGST 450[4500] Lab Course: Language Development (also HD/PSYCH 450[4500], LING 450[4500])
Spring. 2 credits in conjunction with COGST/HD/LING/PSYCH 436. B. Lust.
Optional supplement to the survey course Language Development (COGST/HD/LING/PSYCH 436). The lab course provides students with a hands-on introduction to scientific research, including design and methods, in the area of first-language acquisition.

COGST 452[4520] Culture and Human Development (also HD 452[4520])
Takes an interdisciplinary approach to address the central role of culture in human development. Draws on diverse theoretical perspectives, including psychology, anthropology, education, ethnography, and linguistics, to understand human difference, experience, and complexity. Empirical reflections are taken upon major developmental topics such as cultural aspects of physical growth and development, culture and cognition; culture and language; culture, self, and personality; cultural construction of emotion; culture issues of sex and gender; and cultural differences in pathology.

COGST 465[4650] Topics in High-Level Visual [also COM S 392[3910], PSYCH 465[4650]/6650[6650]) (KCM)
For description, see PSYCH 465.

COGST 470[4700] Undergraduate Research in Cognitive Studies
Fall or spring. 1–4 credits. Prerequisite: permission of instructor; written permission of Cognitive Studies faculty member who supervises research and assigns grade. S-U grades optional. Cognitive Studies faculty.
Experience in independent research, and reporting independent laboratory, field, and/or library research in an interdisciplinary area relevant to Cognitive Studies.

COGST 471[4710] Cognitive Studies Research Workshop
Fall or spring. Variable credit. Prerequisites: enrollment in an independent research course either in Cognitive Studies (e.g., COGST 470) or in a related department or in honors thesis research in one of the departments relevant to Cognitive Studies. Staff (interdisciplinary faculty from Cognitive Studies).
Provides a research workshop in which undergraduate students who are engaged in research in a particular area relevant to cognitive science can meet across disciplines to learn and practice the essentials of research using interdisciplinary approaches. In this workshop, students critique and discuss the existing literature in a field of inquiry, individual students present their research designs, methods, and results from their independent research studies, debate the interpretation of their research results, and participate in the generation of new research hypotheses and designs, in a peer group of other undergraduate students involved in related research.

COGST 474[4740] Introduction to Natural Language [also COM S 474[4740], LING 474[4743])
Fall. 4 credits. C. Cardie.
For description, see COM S 474.

COGST 476[4760]/4770 Decision Theory I and II (also COGST/ECON 476[4760]/4770, ECON 476[4760]/4770)
Fall and spring. 4 credits each semester. In fall, course is lecture based. Students are required to complete several problem sets and there is a final exam. In spring, there are additional lectures as well as visiting speakers. Students are required to read speakers’ papers, participate in discussions, and complete a research project. L. Blume, D. Esley, and J. Halpern.
Research on decision theory resides in a variety of disciplines including computer science, economics, game theory, philosophy, and psychology. This new course attempts to integrate these various approaches. The course is taught jointly by computer scientists, game theorists, and a computer scientist. The course covers several areas: (1) basic decision theory. This theory, sometimes known as “rational choice theory,” is part of the foundation for the disciplines listed above. It applies to decisions made by individuals or by machines. (2) the limitations of and problems with this theory. Issues discussed here include decision theory paradoxes revealed by experiments, cognitive and knowledge limitations, and computational issues. (3) new research designed in response to these difficulties. Issues covered include: an alternative approach to the foundations of decision theory, adaptive behavior, and shaping the individual decisions by aggregate-evolutionary forces.

COGST 491[4910] Research Methods in Psychology (also COGST 491[4910], PSYCH 491/691[4910/6910])
Spring. 4 credits. Limited to 15 students. Recommended: permission of instructor, PSYCH 350, experience in upper-division psychology courses, or graduate standing. Graduate students, see COGST 691.

Intensive examination of the basic research methods used in social, personality, cognitive, and developmental psychology. The course focuses on designing and conducting experiments, i.e., how to turn vague theories into concrete and testable notions, evaluate studies, avoid common pitfalls, and, finally, remain ethical. Beyond learning methods of “correct” and rigorous experimentation, we also discuss what makes a research study actually interesting. The course, in addition, covers test construction, survey methods, and “quasi experiments.” Students concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

Computer Science

COM S 101[1010] Introduction to Cognitive Science [also COGST 101[1010], LING 170[1700], PSYCH 191[1910], PSYCH 102[1020])
Fall. 3 or 4 credits. M. Spivey.

Graduate Courses and Seminars

The following courses and seminars are generally for graduate students only. However, some may be appropriate for advanced undergraduates. The director of the concentration main campus uses any of these for satisfying the concentration requirements.

[COGST 501[5150] Issues in Biological Information Processing (also LING 501[5501], PSYCH 501[5501])

Introduces graduate students interested in cognition (especially those who plan to pursue the Cognitive Studies minor) to the central issues in computational cognitive psychology. It consists of a series of advanced-level discussions of selected examples from the material covered in COGST 101 (also COM S 101, LING 170, PHIL 191, PSYCH 102) and COGST 214 (also PSYCH 214/614). The material from those courses includes perception, attention and consciousness, memory, thinking, and language. The course focuses on the development of skills required for critical evaluation of research in cognitive science, backed by an in-depth understanding of the relevant concepts and theories.]

[COGST 530[6300] Representation of Structure in Vision and Language (also LING 530[5530], PSYCH 530[5300])
Spring. 4 credits. Limited to 20 students. Graduate seminar. Prerequisites: graduate standing or undergraduates by permission of instructor; one course each in cognitive psychology, linguistics, and computer science, or permission of instructor. Offered alternate years; next offered 2007-2008. S. Edelman.

Concentrates on the nature of the representation of visual objects and scenes in the brain and compares it with the structural framework that serves as the main explanatory tool in current theories of language processing. Data and ideas are drawn from visual psychophysics, neurophysiology, psycholinguistics, computational cognition, and linguistics, and philosophy. Students present published research papers and preprints, which are then discussed and critiqued.]

[COGST 550 Special Topics in Cognitive Science (also PSYCH 550[5500])
Fall or spring. 4 credits. Topics and schedule available in Psychology Department main office just before start of classes each semester. Next offered 2007-2008. M. Spivey.]

[COGST 614 Cognitive Psychology (also PSYCH 614[6140])
Fall. 5 credits. Includes (M W F) Iec of COGST/PSYCH 214 and a sec. S. Edelman.

Introduces the idea of cognition as an information processing, or computation, using examples from perception, attention and consciousness, memory, language, and thinking. Participants acquire conceptual tools that are essential for following the current thought on the nature of mind and its relationship to the brain.]
COGST 633(6330) Language Acquisition Seminar (also HD 633[6633], LING 633[6633])
Fall or spring. 1-4 credits. Prerequisite: COGST/HD/LING/PYCH 430 or equivalent, or permission of instructor. B. Lust.
Reviews and critiques current theoretical and experimental studies of first-language acquisition, with a concentration on insights and experimental studies of first-language acquisition, with a concentration on insights and experimental studies of first-language acquisition.

COGST 710(7100) Research in Human Experimental Psychology (also PSYCH 710[7100])
Fall or spring. Credit TBA. Prerequisite: permission of instructor.

COM S 664(6670) Machine Vision
Fall. 4 credits. R. Zabih.

[COM S 671(6762) Introduction to Automated Reasoning (also COGST 671)]
Fall. 4 credits. Next offered 2007-2008.

COM S 672(6700) Advanced Artificial Intelligence
Spring. 4 credits. Prerequisite: COM S 472.

COM S 674(6740) Natural Language Processing
Spring. 4 credits. Prerequisite: COM S 472.

[COM S 676(6764) Reasoning about Knowledge]
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2007-2008.

COM S 772(7797) Seminar in Artificial Intelligence
Fall and spring. 2 credits.

COM S 775(7794) Seminar in Natural Language Understanding
Fall and spring. 2 credits. C. Cardie.

EDUC 611(6110) Educational Psychology
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. D. Schradar.

EDUC 614(6140) Gender, Context, and Epistemological Development (also FGSS 624[6240])
Fall. 3 credits. D. Schradar.

EDUC 714(7140) Moral Development and Education
Spring. 3 credits. Offered alternate years. D. Schradar.

HD 633(6330) Language Acquisition Seminar (also COGST/LING 633[6633])
Fall. 1-4 credits. Prerequisite: COGST/HD/LING/PYCH 436 or equivalent. B. Lust.

HD 600/700 Graduate Seminars

[LING 501(5501) Issues in Biological Information Processing (also COGST 501)]

[LING 530(5530) Representation of Structure in Vision and Language (also COGST/PYCH 530[6150]) Spring. 4 credits. Offered alternate years; next offered 2007-2008. S. Edelman.]

[LING 609(6609) Second Language Acquisition and the Asian Languages (also ASIAN 610[6610]) Fall. 4 credits. Prerequisite: LING 414-415. Next offered 2007-2008. Y. Shirai.]

[LING 628 Connectionist Psycholinguistics (also COGST/LING 428, PSYCH 428/628[4280/6280]) Fall. 3 credits. Offered alternate years. M. Christiansen.]

LING 633(6633) Language Acquisition Seminar (also COGST/HD 633[6330])
Fall. 1-4 credits. Prerequisite: COGST/HD/LING/PYCH 436 or equivalent. B. Lust.

LING 700(7700) Graduate Seminars

MATH 681(6810) Logic
Spring. 4 credits.

MATH 781-782(7810-7820) Seminar in Logic
Fall and spring. 4 credits each.

MATH 788(7880) Topics in Applied Logic
Fall. 4 credits.

NBA 663(6630) Managerial Decision Making
Fall. 3 credits. J. Russo.

PHIL 700(7000) Graduate Seminars

PSYCH 519(6830) Affects and Cognition (also NRE 507)
Fall. 4 credits. A. M. Isen.

PSYCH 521(6210) Behavioral and Brain Sciences
Fall and spring. 4 credits each semester.

[PSYCH 530(6300) Representation of Structure in Vision and Language (also COGST 530[6300], LING 530[5530])
Spring. 4 credits. Offered alternate years; next offered 2007-2008. S. Edelman.]

PSYCH 550(5500) Special Topics in Cognitive Science (also COGST 550[5510])
Spring. 4 credits. M. Spivey.

[PSYCH 614(6140) Cognitive Psychology (also COGST 614)]
Fall. 5 credits. S. Edelman.

PSYCH 616(6160) Modeling Perception and Cognition (also COGST/PSYCH 416[4160])
Spring. 4 credits. M. Spivey.

PSYCH 618(6180) Psycholinguistics (also PSYCH 418[4180])
Spring. 4 credits. C. Krumhansl.

[PSYCH 628(6280) Connectionist Psycholinguistics (also COGST/PSYCH 428[4280], LING 428/628[4428/6628])
Fall. 3 credits. Next offered 2007-2008. M. Christiansen.]

PSYCH 631(6310) Effects of Aging on Sensory and Perceptual Systems (also BIONB 421[4210], PSYCH 431[4310])
Fall. 3 or 4 credits. B. Halpern.

[PSYCH 665(6650) Topics in High-Level Vision (also COM S 392, COGST 465, PSYCH 465[4650])]
Spring. 4 credits. Offered alternate years; next offered 2007-2008. S. Edelman.

PSYCH 691(6910) Research Methods in Psychology (also COGST 491/6910)
Spring. 4 credits. D. Dunning.
cooperation with related departments in the humanities, the department encourages the interdisciplinary study of literature—in conjunction with anthropology, history, philosophy, sexuality studies, psychology, sociology, and so forth. The course offerings reflect current theories to media, literature, and the arts—hermeneutics, semiotics, deconstruction, cultural criticism, Marxism, postcolonialism, reception aesthetics, feminism, and psychoanalysis.

Requirements for the Major

All majors in Comparative Literature are expected to have completed 10 courses, half of which must be devoted to the study of works in cultures other than English in their original languages. Five of these courses must be taken in the Department of Comparative Literature. One of these must be a Core Course, to be taken in the junior or the senior year. The designated core courses change each semester (for 2006-2007, COM L 470 [fall], COM L 448 [spring]). If elected, an honors essay will also count as one of these required five courses. An honors essay (COM L 493) of roughly 50 pages is optional and to be written during the senior year under the direction of a faculty member, preferably from within the department, who has agreed to work in close cooperation with the student. Students are urged to begin research on their thesis topic during the summer preceding their senior year.

Students who elect to do a double major with another literature department may count up to three courses from that major toward their requirements in Comparative Literature.

The department encourages students to study abroad in pursuit of their cultural and linguistic interests, and the number of courses that may be counted toward the major will be determined in consultation with the faculty advisor and with the approval of the director of undergraduate studies. The major enables students to pursue this commitment to a comparative study that includes a substantial non-English component by offering two tracks:

A. Comparative Literary Studies. This track is designed for students who wish to place greater emphasis on literary study in their course work. Students who select this track are required to complete:

1. Five courses in Comparative Literature at the 200 level and above.
2. Five courses in literature or other areas of the humanities at the 200 or higher level, to be taken in one or more foreign literature departments.

B. Literary, Visual, and Media Studies. This track is designed for students who wish to pursue their comparative study of literature and theory by integrating rigorous work on film, video, or other arts and media. Students who select this track are required to complete:

1. Four courses in literary study at the 200 or higher level offered by the Department of Comparative Literature or other humanities departments or programs.
2. Six courses in visual arts or media studies at the 200 or higher level offered by the Department of Comparative Literature or other humanities departments or programs.

The following guidelines might be used to determine whether a course in Literary, Visual, and Media Studies may be counted toward the five courses in English composition study required of all majors. Where the media involve a large component of speech or writing (such as film, video, or hypertext), the student would need to work with this material in the original foreign language. Where text or speech in a foreign language is peripheral in a course that focuses on visual material (such as art or architecture) from non-English cultures, the student would need to draw on primary and secondary materials in a foreign language for oral reports, papers, and so forth. Because of the flexibility and interdisciplinary range of this track, students who select it should work closely with their faculty advisor to organize a coherent plan of study and to determine, with the approval of the Director of Undergraduate Studies, which courses satisfy the foreign language requirement of the major.

Honors

A student who completes the requirements for the major is eligible for the degree of Bachelor of Arts with honors in Comparative Literature. The department bases its decision on the students achieving grades of at least B+ on the senior essay, in course work for the major, and in their overall academic performance at Cornell.

First-Year Writing Seminars

Most 100-level courses may be used toward satisfying the first-year writing seminar requirements. See "John S. Knight Institute for Writing in the Disciplines" for a full description of the first-year seminar program.

Courses

Spring. 4 credits. T. Murray.

For description, see VISS 200.

COM L 201(2010) Great Books # (LA)
Fall. 4 credits. COM L 201 and 202 may be taken independently of each other. Next offered 2007-2008. Staff.

A reading of seminal texts that represent and have shaped Western culture and hence form an essential part of the student's intellectual education. By evaluating and interpreting selections from the Bible, Homer, Virgil, Lady Murasaki, Dante, Castiglione, and Shakespeare, students gain practice in critical reading, thinking, and writing.

COM L 202(2020) Great Books (LA)
Spring. 4 credits. A. Banerjee.

The course traces the evolution of the story of the road as theme, trope, and organizing principle of seminal books from the Renaissance to the postmodern. Through readings of Rabelais, Cervantes, Swift, Sterne, Twain, Gogol, Conrad, Hemingway, Nabokov, and Krouvac, we will explore how literary adventures structure our experience of the world.
American poetry to post-modern critical format of the course is designed to acquaint persistently asked by undergraduates: "What is comparative literature, anyway?" The format of the course is designed to acquaint students with the range and variety of the field by having members of the Department present those aspects that reflect their areas of expertise and their methods of teaching. Of the three meetings each week, the first will generally take form of a lecture; the second will be a discussion of the assigned text. Text and topics range from bawdy tales by Chaucer and Boccaccio to the naturalism of Thomas Mann and the trauma of post-colonial identity politics, and from modern American poetry to post-modern critical theory. All readings in English translation. Open to majors and prospective majors as well as students intending majors other than Comparative Literature.

COM L 204(2040) Global Fictions (CA)
Summer, 5-week. 4 credits. B. Maxwell.
What does the world write when it has a story to tell? Literature courses frequently define themselves according to geographies of nation or continent. By contrast, this course considers the globe as the limit-unit for the production of fiction. Are endless (and illuminating) differences all that we discover, or can we validly and gainfully observe shared features of fictions from markedly different parts of the globe. Can we take up the dare that fiction puts before us, to learn about the world from stories and novels! Can we take up the dare that translation puts before us, to read in literatures from places wholly unfamiliar to us? Readings are drawn mainly, but not only, from the contemporary period.

COM L 205(2050) Introduction to Poetry (LA)

COM L 219(2190) SSP: Comparative American Literature [also AM ST 215(2150)]

COM L 220(2200) Thinking Surrealisms [also ART H 219(219), VISST 219(2190)]
Spring. 4 credits. B. Maxwell.
Borrowing its title from a formulation of the Marxist philosopher Ernst Bloch, and beginning from the "forays of demoralization" instigated by the Dadas, who bequeathed to us? Readings are drawn mainly, but not only, from the contemporary period.

COM L 232(2320) Christianity and Judaism [also RELST 326(3260)]
Spring. 4 credits. C. Carmichael.
Study of the New Testament as a product of the first thousand years of Christian and Jewish history. Textual history of the Gospels; the life and teaching of Jesus of Nazareth; the development of the Christian Church; and the growth of the Jewish communities. The sources of Christian doctrine and the influence of Christianity on Jewish thought.

COM L 236(2360) Greek Mythology [also CLASS 236]
Summer. 3 credits. D. Mankin.
For description, see CLASS 236.

COM L 276(2760) Desire [also ENGL 276(2760), THETR 278(2780), FGSS 276(2760)] (LA)
Spring. 4 credits. E. Hanson.
For description, see ENGL 276.

COM L 277(2770) Literatures of the Black Atlantic: Reading the Contemporary [also ENGL 277(2770), AS&RC 277(27504)] (LA)
Spring. 4 credits. D. Woubshet.
For description, see ENGL 277.

COM L 282(2820) Japanese Animation and New Media [also ART H 282(2822), VISST 282(2820)] @ (CA)
For description, see ASIAN 282.

COM L 293(2930) SSP: Middle Eastern Cinema [also NES 293(2973), FILM 293(2930), VISST 293(29193), JWS 29(2973)] @ (LA)
Fall. 4 credits. Limited to 15 students. D. Starr.
For description, see NES 293.

COM L 302(3020) Literature and Theory [also COM L 622(6220), ENGL 302(6020)/3020(6020)] (LA)
Fall. 4 credits. J. Culler.
For description, see ENGL 302.

COM L 304(3040) Europe and its Others: An Introduction to the Literature of Colonialism @ (LA)

COM L 306(3060) Comparative Martial Arts Film and Literature @ (LA)

COM L 317(3170) Postcolonial State Theory (CA)

COM L 319(3190) Objects on Objects: Women Writers and the Aesthetics of the Modern [also FGSS 341(3410)] (LA)
Fall. 4 credits. D. Reese.
For description, see FGSS 341.

COM L 325(3260) Christianity and Judaism [also RELST 326(3260)] @ (LA)
Spring. 4 credits. C. Carmichael.
Study of the New Testament as a product of the first thousand years of Christian and Jewish history. Textual history of the Gospels; the life and teaching of Jesus of Nazareth; the development of the Christian Church; and the growth of the Jewish communities. The sources of Christian doctrine and the influence of Christianity on Jewish thought.

COM L 326(3280) Literature of the Old Testament [also RELST 328(3280)] @ (LA)
Fall. 4 credits. C. M. Carmichael.
Analysis of small sections of well-known material for in-depth discussion.

COM L 332(3320) Technologies of Knowledge [also ASIAN 352(3352)] @ (CA)
Fall. 4 credits. B. Rusk.
For description, see ASIAN 352.

COM L 335(3350) Modern Western Drama, Modern Western Theater: Theory and Practice [also THETR 339(3350), VISST 335[3735]] (LA)
Fall. 4 credits. S. Warner.
For description, see THEIR 335.

COM L 341(3410) Imagining America: Race and National Fantasy in French and Italian Writing [also AM ST 326(3031), FRLIT 324(3240), GOVT 303(3031)] (CA)
Fall. 4 credits. D. Rubenstein.
For description, see AM ST 326.

COM L 344(3440) Tragic Theatre [also CLASS 345(3464), THETR 345(3450)] @ (LA)
Fall. 4 credits. F. Ahl.
For description, see CLASS 345.

COM L 348(3480) Shakespeare and Europe [also ENGL 349(3490)] (LA)
Fall. 4 credits. W. J. Kennedy.
In their own times, Shakespeare's plays registered a strong interest in the culture and society of Renaissance Europe beyond England. In later times, they cast a powerful spell over culture and society in 19th- and 20th-century Europe. This course will examine their debts to and influences upon continental drama. Readings will focus upon Shakespeare's plays in relation to Italian comedy, early French tragedy, and plays by Anton Chekhov, Bertolt Brecht, and Yasmina Reza.

COM L 350(3500) Education and Philosophical Fantasies [also RUSSL 350(3530)] @ (LA)
Fall. 4 credits. P. Carden.
For description, see RUSSL 350.

COM L 353(3530) Monsters A-X-files [also FRLIT 353/FGSS 353(3530)]
Fall. 4 credits. K. Long.
For description, see FRLIT 353.

COM L 355(3550) Decadence [also ENGL 355(3550)] (LA)
Fall. 4 credits. E. Hanson.
For description, see ENGL 355.

COM L 356(3560) Renaissance Literature [also ENGL 320(3200)] # (LA)
Spring. 4 credits. W. J. Kennedy.
An introduction to Renaissance literary texts with some attention to cultural backgrounds and intellectual history. Readings from Machiavelli, Erasmus, Rabelais, Shakespeare, Cervantes, and others.

COM L 362(3620) The Culture of the Renaissance II [also ENGL 325(3250), MIST 364(3640), MUSIC 390(3242), ART H 351(2420), FRLIT 362(3620)] @ (CA)

COM L 363(3630) The European Novel # (LA)
Fall. 4 credits. N. Saccamano.
This course will survey the history of the novel until the mid-19th century, focusing on the social, literary, and philosophical significance of its narrative forms. Topics to
be discussed: the novel as a site of conflict between "high" and "low" culture; the relation of fictional narrative to historical and autobiographical narrative; the gender politics and class ideology of romance. Texts may include Lazarillo de Tormes or Cervantes' Don Quixote, Fielding's Tom Jones, Laclos's Dangerous Liaisons, Goethe's The Sorrows of Young Werther, Bronte's Wuthering Heights.

COM L 421(4210) Terrorism and its Representations (also ENGL 459[4570]) (LA)
Fall. 4 credits. E. Hyman.
In this course, we will examine authors whose work corresponds to particular moments both in the development of the novel and the development of terrorism as a feature of modern life. From anarchist acts of the late 19th century to the transnational terror of the 21st, we will investigate how writers have attempted to understand the phenomenon of revolutionary and terrorist violence, exploring how terrorism at one time depends upon representation (a sort of symbiotic relationship with the media) and defies representation altogether. Consequently, we will look not only at realistic/historicist accounts of terrorist acts, but also avant-garde notions of the act gratuit, "the mythology of ends," and pure expenditure. Ultimately, we will explore how the gratuitous, excessive or spectacular nature of these acts comes to underscore a crisis around language and rationality in the twentieth century.

COM L 442(4420) New Testament Seminar (also RELST 426[4260]) (HA)
Spring. 4 credits. Limited to 15 students. C. Carmichael.
Topic: Sex and religion in the Bible. Identification and discussion of problems in the New Testament. Discussing attitudes to sexuality in the Bible, we will examine in Old and New Testament texts the clash between ancestral behavior and subsequent laws, as well as the contrast between legal and religious ideas. Topics will include: marriage and divorce, incest, intermarriage, gender discrimination, guilt and shame, homosexuality, women and purity, sexual language and symbolic moulds to be possible to something new about the topics and also, because of the perennial nature of the issues, to say something that is relevant to contemporary life.

COM L 448(4480) The City as Text (also SPANL 442[4420])
A reading of Cervantes' Don Quixote, Melville's Moby-Dick, and Joyce's Ulysses that brings together a formalist interest in self-referentiality with a culturalist, postcolonial concern with the development of inter-ethnic relations. Emphasis on the ways in which a radical commitment to realist narrative paradoxically ends up calling the very enterprise of realism into question. The resulting formal originality raises epistemological doubts that are in turn linked to a social critique, the latter arising from the authorial incorporation of marginal voices. The broader aim of the course, aided by some attention to criticism of the three texts and theories of fiction, is thus to reject the separation of aesthetic from sociological concerns.

COM L 449(4490) Renaissance Poetry (also ITAL 450[4500]) (CA)
Spring. 4 credits. W. J. Kennedy.
A reading and discussion of key texts in lyric poetry from Italian, French, English, and other European literatures of the Renaissance. Topic for Spring 2007: Economic transactions and exchanges in the poetry of Petrarch, Michelangelo, La, Ronsard, Shakespeare, Mary Wroth, and others.

COM L 452(4520) Renaissance Humanism (also COM L 652[6520]) (HA)
Spring. 4 credits. Limited to 15 students. W. J. Kennedy.
The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in Computer Science. For details, visit our web site at www.cs.cornell.edu/ugrad.

**The Major**

CS majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- three semesters of calculus (MATH 111–122 or (112–221 or 191–192–294)
- two semesters of introductory computer programming (COM S 100 and 211)
- a 1-credit project (COM S 212)
- a seven-course Computer Science core (COM S 290, 312, 314, or 316; one of 321, 322, 421, or 426, 514, and 482)
- two 400+ Computer Science electives, totaling at least 6 credits (COM S 490 not allowed)
- a Computer Science project course (COM S 413, 415, 419, 433, 468, 473, 501, 514, or 604)
- a mathematical elective course (e.g., ENGRD 270, MATH 222 or 293, MATH 300–T & &AM 310)
- two 300+ courses that are technical in nature and total at least 6 credits
- a three-course specialization in a topic area other than Computer Science. These courses must be numbered 300 level or greater.

**Note:** All of the field electives described above must be courses of 3 or more credit hours with the exception of the COM S project course, which is 2 credits or more.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or medicine. With the advisor, the Computer Science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of liberal education.

**Admission**

All potential affiliates are reviewed on a case-by-case basis relative to the following criteria:

- a grade of C or better in all COM S courses and MATH courses
- a GPA of 2.5 or better in COM S 211, 212, and 280
- a GPA of 2.5 or better in MATH 112, 122, or 192 and COM S 280

Courses used in the affiliation GPA computations may be repeated if the original course grade was below a C. The most recent grade will be used for all repeated courses. Qualifying courses must be taken at Cornell.

Departmental honors in Computer Science is granted to students who have maintained a cumulative GPA greater than or equal to 3.5 and completed a set of coherent courses and research activities that satisfy the following requirements:

- at least one COM S course (at least 3 credit hours) at or above the 500 level with a grade of A- or better; no seminars.
- at least two semester-long 3-credit courses of COM S 490 (Independent Research) with a COM S faculty member, with grades of A- or better each semester.

Latin Designations (appended to the degree), awarded by the field of Computer Science for all who qualify as stated above, are based on the final cumulative GPA, as follows:

- **cum laude,** 3.50 or above
- **magna cum laude,** 3.75 or above
- **summa cum laude,** 4.00 or above

**Computing in the Arts Undergraduate Concentration**

A concentration in Computing in the Arts with an emphasis on computer science is available both to Computer Science majors and to students majoring in other subjects. For more information, see p. 509.

**Courses**

For complete course descriptions, see "Computer Science" under "Computing and Information Science (CIS)."

**COM S 099(1109) Fundamental Programming Concepts**

Summer. 2 credits. Freshmen only. Prerequisites: none. U-G grades only.

**COM S 100(1110, 1112) Introduction to Computer Programming (MQR)**

Fall, spring, summer. 4 credits. Four versions of COM S 100 are offered: COM S 100J, COM S 100M, and COM S 100R are offered in the fall. COM S 100H, COM S 100J, and COM S 100M are offered in the spring. COM S 100H is offered in the summer. All versions are described in the "Computing and Information Science (CIS)" section.

**COM S 101(1110) Introduction to Cognitive Science (also COGST 101[1110], LING 170[1170], PHIL 191[1910], PSYCH 102[1200]) (KCM)**

Fall, summer. 3 credits. For description, see COGST 101.

**COM S 113(2000) Introduction to C**

Fall, spring, usually weeks 1–4. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Credit granted for both COM S 113 and 215 only if 113 taken first. S-U grades only.

**COM S 114(2006) Unix Tools**

Fall, usually weeks 5–8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S-U grades only.

**COM S 130(1300) Introductionary Design and Programming for the Web**

Fall. 3 credits. Prerequisites: none. No computer background necessary.
COM S 165(1610) Computing in the Arts (also ART 175, CIS 165[1610], DANCE 165[1540], ENGR 165[1610], MUSIC 165[1465], PSYCH 165[1650])
Spring. 3 credits. Recommended: good comfort level with computers and some of the arts.

COM S 167(1620) Visual Imaging in the Electronic Age (also ART 170[1700], CIS 167[1620], ENGR 167[1670])
Spring. 3 credits. For description, see ART 170.

COM S 172(1700) Computation, Information, and Intelligence (also COGST 172, ENGR 172[1700], INFO 172[1700]) (MQR)
Fall. 3 credits. Prerequisite: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100.

COM S 201(2710) Cognitive Science in Context Laboratory (also COGST 201, PSYCH 201[2010]) (KCM)
Fall or spring. 4 credits. Limited to 24 students. Recommended: concurrent or prior registration in PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191. Knowledge of programming languages not assumed.
For description, see COGST 201.

COM S 211(2110) Computers and Programming (also ENGRD 211[2110]) (MQR)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or equivalent course in Java or C++.

COM S 212(2111) Java Practicum
Fall, spring. 1 credit. Pre- or corequisite: COM S/ENGRD 211. Letter grades only.

Spring, usually weeks 5-8. 1 credit. Prerequisite: COM S 114 or equivalent. S-U grades only.

COM S 215(2004) Introduction to C #
Fall, spring, usually weeks 5-8. 1 credit. Prerequisite: COM S/ENGRD 211 or equivalent experience. S-U grades only.

COM S 230(2300) Intermediate Design and Programming for the Web (also INFO 230[2300])
Spring. 3 credits. Prerequisite: COM S 130 or equivalent knowledge.

COM S 280(2800) Discrete Structures (MQR)
Fall, spring. 3 credits. Prerequisite: COM S 100 or permission of instructor.

COM S 305(3050) Creative Problem-Solving in Computer Science
Spring. 3 credits. Prerequisites: COM S 211 and 280.

COM S 312(3110) Data Structures and Functional Programming (MQR)
Fall, spring. 4 credits. Prerequisite: COM S 211 and 212 or equivalent programming experience. Should not be taken concurrently with COM S 314 or 316.

COM S 314(3420) Computer Organization (also ECE 314[3140])
Spring. 4 credits. Prerequisite: COM S 211 or ENGRD 230. Should not be taken concurrently with COM S 312.

COM S 316[3410] Systems Programming
Fall. 4 credits. Prerequisites: COM S 211 or equivalent programming experience. Should not be taken concurrently with COM S 312.

COM S 321[3510] Numerical Methods in Computational Molecular Biology (also BIOBM 321[3210], ENGRD 322[3210]) (MQR)
Fall. 3 credits. Prerequisites: at least one course in calculus (e.g., MATH 210, 211, or 191) and course in linear algebra (e.g., MATH 221 or 294 or BTRY 417); COM S 160 or equivalent and some familiarity with iteration, arrays, and procedures; knowledge of discrete probability and random variables at the level of COM S 280. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421. Offered odd-numbered years; next offered 2007-2008.

COM S 322(3220) Introduction to Scientific Computation (also ENGRD 322[3220])
Spring, summer. 3 credits. Prerequisites: COM S 100 and MATH 221 or 294; knowledge of discrete probability and random variables at the level of COM S 280. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 324(3470) Computational Linguistics (also COGST 424[4240], LING 424[4240][4242]) (MQR)
Fall or spring. 4 credits. Prerequisites: LING 203. Labs involve work in UNIX environment; COM S 114 recommended. For description, see LING 424.

COM S 330(3300) Data-Driven Web Applications (also INFO 330[3300])
Fall. 3 credits. Prerequisite: COM S/ENGRD 211. Letter grades only.

COM S 381(3810) Introduction to Theory of Computing
Fall, summer. 3 credits. Prerequisite: COM S 280 or permission of instructor. Credit not granted for both COM S 381 and 481; corrective transfers between COM S 381 and 481 (in either direction) encouraged during first few weeks of instruction.

COM S 400(4150) The Science of Programming
Fall. 3 credits. Prerequisite: COM S 211.

COM S 411[4110] Programming Languages and Logic
Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor.

COM S 412(4120) Introduction to Compilers
Spring. 3 credits. Prerequisites: COM S 312 or permission of instructor.

COM S 413(4121) Practicum in Compilers
Spring. 2 credits. Corequisite: COM S 412. A compiler implementation project related to COM S 412.

COM S 414(4410) Operating Systems
Fall, spring, summer. 3 credits. Prerequisite: COM S 314 or 316. Corequisite: COM S 415 in spring only.

COM S 415[4411] Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: COM S 414.

COM S 416[4420] Computer Architecture (also ECE 475)
Fall. 4 credits. Prerequisites: ENGRD 230 and COM S/EC E 314.
For description, see ECE 475.

COM S 419(4450) Computer Networks
Spring. 4 credits. Pre- or coerequisites: COM S 414 or permission of instructor.

COM S 421[4210] Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming; COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 426(4520) Introduction to Bioinformatics
Spring. 4 credits. Prerequisites: COM S/ENGRD 211. COM S 280.

COM S 428(4510) Introduction to Computational Biophysics
Fall. 4 credits. Prerequisites: COM S 100, CHEM 211 or equivalent, MATH 221, 293, or 294, PHYS 112 or 213, or permission of instructor. Recommended: BIOBM 330.

COM S 430(4300) Information Retrieval (also INFO 430[4300])
Fall. 3 credits. Prerequisite: COM S 211 or equivalent.

COM S 431(4302) Web Information Systems (also INFO 431[4302])
Spring. 3 credits. Prerequisite: COM S 211 and some familiarity with web site technology.

COM S 432(4320) Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312 or 411, 412, and permission of instructor.

COM S 433(4321) Practicum in Database Systems
Fall. 2 credits. Prerequisite: COM S 432 or coregistration in COM S 432. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.

COM S 465(4620) Computer Graphics I (also ARCH 374)
Fall. 4 credits. Prerequisite: COM S/ENGRD 211. May not be taken for credit after completion of COM S 417.

COM S 467(4630) Computer Graphics II
Spring. 3 credits. Prerequisite: COM S 465.

COM S 468(4631) Computer Graphics Practicum
Spring. 2 credits. Prerequisite: COM S 465. Corequisite: COM S 467.

COM S 472(4700) Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S 211 and 280 (or equivalent).

COM S 473(4701) Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.
COM S 474(4740) Introduction to Natural Language Processing (also COGST 474[4740], LING 474[4474])
Fall or spring. 4 credits. Prerequisite: COM S 211.

COM S 475(4702) Artificial Intelligence: Uncertainty and Multi-Agent Systems
Spring. 4 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 or equivalent.

COM S 478(4780) Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.

COM S 480(4870) Introduction to Cryptology (also MATH 335[3350]) (MQR)
Fall, spring: 3 credits. Prerequisite: COM S 100 and MATH 222 or 294. Students with prior coursework may not also receive credit for MATH 336. For description, see MATH 335.

COM S 482(4820) Introduction to Analysis of Algorithms
Spring, summer: 4 credits. Prerequisites: COM S 280 and 312.

COM S 485(4850) Mathematical Foundations for the Information Age
Spring: 4 credits. Prerequisite: COM S 381.

COM S 486(4860) Applied Logic (also MATH 486[4860]) (MQR)
Fall or spring: 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (e.g., MATH 352, 452, 483, 481), and some additional course in mathematics or theoretical computer science. For description, see MATH 486.

COM S 490(4999) Independent Reading and Research
Fall, spring: 1-4 credits.

COM S 501(5150) Software Engineering
Spring: 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

COM S 513(5430) System Security
Fall: 4 credits. Prerequisites: COM S 414 or 419 and familiarity with JAVA, C, or C# programming languages.

COM S 514(5410) Intermediate Computer Systems
Spring: 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 516(5420) Parallel Computer Architecture (also ECE 572[5720])
Spring: 4 credits. Prerequisite: ECE 475. For description, see ECE 572.

COM S 530(5300) The Architecture of Large-Scale Information Systems (also INFO 530[5300])
Spring: 4 credits. Prerequisite: COM S/INFO 390 or COM S 432.

COM S 565(5640) Computer Animation (also ART 273, CIS 565[5640])
Fall: 4 credits. Prerequisite: none. For description, see ART 273.

COM S 566(5642) Advanced Animation (also ART 372/CIS 566[5642])
Spring: 4 credits. Prerequisites: none. For description, see ART 372.

COM S 572(5722) Heuristic Methods for Optimization (also ECE 509[5090], CIS 572[5722], OR&E 533[5340])
Fall: 3 or 4 credits. Prerequisites: COM S/ENGRD 211 or 222 or COM S/ENGRD 241, or graduate standing, or permission of instructor.
For description, see ECE 509.

COM S 578(5780) Empirical Methods in Machine Learning and Data Mining
Fall: 4 credits. Prerequisites: COM S 280 and 312 or equivalent.

COM S 611(6110) Advanced Programming Languages
Fall: 4 credits. Prerequisite: graduate standing or permission of instructor.

COM S 616(6120) Compiler Design for High-Performance Architectures
Spring: 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

COM S 619(6140) Advanced Systems
Fall or spring: 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 620(6210) Matrix Computations
Fall: 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.

COM S 622(6220) Numerical Optimization and Nonlinear Algebraic Equations
Spring: 4 credits. Prerequisite: COM S 621.

COM S 624(6240) Numerical Solution of Differential Equations
Spring: 4 credits. Prerequisites: exposure to numerical analysis (e.g., COM S 421 or 621), differential equations, and knowledge of MATLAB. Offered even-numbered years; next offered 2007-2008.

COM S 626(6510) Computational Molecular Biology
Spring: 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods.

COM S 628(6522) Biological Sequence Analysis
Fall: 4 credits. Prerequisites: none.

COM S 630(6300) Human Language Technology (also INFO 630[6300])
Spring: 4 credits. Prerequisite: basic knowledge of linear algebra and probability theory; basic programming skills.

COM S 632(6320) Database Systems
Spring: 4 credits. Prerequisite: COM S 432/433 or permission of instructor.

COM S 633(6322) Advanced Database Systems
Spring: 4 credits.

COM S 664(6670) Machine Vision
Fall: 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent.

COM S 665(6620) Advanced Interactive Graphics
Fall or spring: 4 credits. Prerequisites: COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming.

COM S 667(6630) Physically Based Rendering
Fall or spring: 4 credits. Prerequisites: COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus.

COM S 671(6762) Introduction to Automated Reasoning
Fall or spring: 4 credits. Prerequisite: COM S 611 and graduate standing or permission of instructor. Not offered every year.

COM S 672(6700) Advanced Artificial Intelligence
Spring: 4 credits. Prerequisite: COM S 472 or permission of instructor.

COM S 673(6724) Integration of Artificial Intelligence and Operations Research (also CIS 673[6724])
Spring: 3 credits.

COM S 674(6740) Natural Language Processing
Spring: 3 credits. Prerequisite: COM S 472 or permission of instructor.

COM S 676(6764) Reasoning about Knowledge
Fall: 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.

COM S 677(6765) Reasoning about Uncertainty
Fall: 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.

COM S 678(6780) Advanced Topics in Machine Learning
Spring: 4 credits. Prerequisites: COM S 478 or equivalent, or COM S 578 or equivalent, or permission of instructor. Not offered every year.

COM S 681(6820) Analysis of Algorithms
Fall: 4 credits. Prerequisite: COM S 482 or graduate standing.

COM S 682(6810) Theory of Computing
Spring: 4 credits. Prerequisite: COM S 381 or 481 and COM S 482 or 681 or permission of instructor. Not offered every year; next offered 2007-2008.

COM S 683(6822) Advanced Design and Analysis of Algorithms
Spring: 4 credits. Prerequisite: COM S 681 or permission of instructor.

COM S 684(6840) Algorithmic Game Theory
Fall or spring: 4 credits. Prerequisite: background in algorithms and graphs at level of COM S 482. No prior knowledge of game theory or economics assumed.
COMPUTING IN THE ARTS

COM S 685(6850) The Structure of Information Networks [also INFO 685(6850)]
Fall or spring. 4 credits. Prerequisite: COM S 482.

COM S 686(6860) Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486.

COM S 709(7090) Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S-U grades only.

COM S 711(7191) Seminar in Advanced Programming Languages
Fall or spring. 3 credits.

COM S 713(7461) Seminar in Systems and Methodology
Fall, spring. 4 credits. Prerequisites: graduate course employing formal reasoning (e.g., COM S 611, 613, 671), a logic course, or permission of instructor. Not offered every year.

COM S 714(7410) Topics in Systems
Fall or spring. 3 credits. Prerequisite: permission of instructor.

COM S 715(7192) Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.

COM S 717(7430) Topics in Parallel Architectures
Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year.

COM S 718(7690) Computer Graphics Seminar
Fall, spring. 3 credits.

COM S 719(7190) Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 721(7210) Topics in Numerical Analysis
Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year.

COM S 726(7590) Problems and Perspectives in Computational Molecular Biology
Fall, spring. 1 credit. Open to all from life sciences, computational sciences, and physical sciences. S-U grades only.

COM S 732(7320) Topics in Database Systems
Fall, spring. 4 credits. S-U grades only.

COM S 733(7390) Database Seminar
Spring. 1 credit. Prerequisite: COM S 633 or permission of instructor. S-U grades only.

COM S 750(7726) Evolutionary Computation and Design Automation [also CIS 750(7726), M&AE 650(6500)]
Fall. 4 credits. Prerequisite: programming experience or permission of instructor.

COM S 754(7490) Systems Research Seminar
Fall. spring. 1 credit. S-U grades only.

COM S 764(7670) Visual Object Recognition
Spring. 3 credits. Prerequisite: none.

COM S 772(7790) Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 775(7794) Seminar in Natural Language Understanding
Fall, spring. 2 credits.

COM S 785(7850) Seminar on Information Networks
Fall. 4 credits. Prerequisites: COM S 485 or 685 or permission of instructor.

COM S 786(7860) Introduction to Kleene Algebra
Spring. 4 credits. Prerequisites: COM S 481. Recommended: COM S 482 or 681, COM S 682, elementary logic (MATH 481 or 681), algebras (MATH 432).

COM S 789(7890) Seminar in Theory of Algorithms and Computing
Fall. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790(7999) Independent Research
Fall, spring. Prerequisite: permission of a Computer Science advisor. Independent research for master of engineering project.

COM S 990(9999) Thesis Research
Fall, spring. Prerequisite: permission of a Computer Science advisor. S-U grades only.

Doctoral research.

COMPUTING IN THE ARTS UNDERGRADUATE CONCENTRATION

The computer plays a role in almost every aspect of human life, and its influence and potential now extend routinely not only to technical and commercial pursuits but also into the realms of the imaginative and the aesthetic. The Computing in the Arts concentration offers students opportunities to use computers to realize works of art, to study the perception of artistic phenomena, and to think about new, computer-influenced paradigms and metaphors for the experiences of making and appreciating art. Faculty from several departments in the college offer courses toward the concentration, drawing on disciplines in the arts, the social sciences, the humanities, and the physical sciences. Currently, the concentration is offered in five tracks: computer science, dance and film, music, and psychology, each described in more detail below. Students may concentrate in the same area as their major, or in a different area.

It is likely that additional tracks in other disciplines will be added to the concentration, indeed possible that this will have occurred after the publication deadline for this year's Courses of Study but in time to take effect in the 2006-2007 academic year. The director and area representatives listed below will always have the latest information.

Director
Graeme Bailey

Applying for the Concentration and Choosing Courses

Students should meet with the track representative in their chosen discipline for initial advising about the concentration. For 2006-2007, these representatives are Graeme Bailey (computer science track), Kevin Ernst (music track), Allen Fogelsanger (dance track), Marilyn Rivchin (film track), and Carol Krumhansl (psychology track).

Regardless of which track they choose, all students in the concentration are required to take the core course, Computing in the Arts (COM S 165, cross-listed as ART 175, CIS 165, ENGR 165, MUSC 165, and PSYCH 165). This course combines fundamental background in cognitive modeling, statistics, programming, and algorithmic thinking, as preparation for more specialized work; hence, though it is not a formal prerequisite to other courses, it should be taken as early as possible in the student's program. For students who have already gained an equivalent background through other courses, however, it may be waived by permission of the director.

In addition to the core course, each student chooses another five courses satisfying the following requirements:

1. At least one must entail a significant computing component, regardless of its home department (marked * in the lists below).

2. At least two must entail a significant artistic component (marked f in the lists below).

3. For students majoring in a field offering a track, none of the courses from that track may be double-counted as also satisfying major requirements.

The goal is to encourage the development of reasonable depth within one area, without neglecting the interdisciplinary nature of the field. Hence, rather than choosing courses at random from the lists below or focusing too narrowly on one particular corner of the field, each student should work actively with an advisor from his or her concentration in building an appropriate program.

Course Lists

Computer Science track. In addition to the core course, COM S 165, any five of the following. Note that some of these courses have COM S prerequisites.

1ART 170, Visual Imaging in the Electronic Age (also CIS 167, COM S 167, ENGR 167)

2* CIS 300, Introduction to Computer Game Design

3* CIS 211, Computers and Programming + 212, Java Practicum (together these count as one course)

4* COM S 465, Computer Graphics I

5* COM S 467, Computer Graphics II + 468, Computer Graphics Practicum (together these count as one course)

6* COM S 472, Foundations of Artificial Intelligence

7* COM S 474, Introduction to Natural Language Processing

8* COM S 478, Machine Learning

9* COM S 565, Computer Animation

10* COM S 566, Advanced Computer Animation
**ARTS AND SCIENCES - 2006-2007**

*COM S 578, Empirical Methods in Machine Learning and Data Mining
*INFO 345, Human-Computer Interaction Design
*INFO 440, Advanced Human-Computer Interaction Design
INFO 450, Language and Technology

Up to two courses from another track.

**Dance track.** In addition to the core course, DANCE 165 (for description, see COM S 165), any five of the following. Note that some of these courses have DANCE pre- and/or co-requisites. Note also that for this track, two courses marked * should be taken, and they should not be I and II of any one series for the purposes of satisfying the * requirement.

**Dance**

See “Department of Theatre, Film, and Dance.”

**Dutch**

See “Department of German Studies.”

**Earth and Atmospheric Sciences**

The Department of Earth and Atmospheric Sciences covers the breadth of modern earth sciences. We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is a naturally powerful planet, with geologic hazards such as earthquakes and volcanic eruptions that alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important to both future policymakers and ordinary citizens, who must find new energy sources and sustain the quality of our environment.

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the destruction of the ozone layer, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The department has been the home of two majors in the College of Arts and Sciences: geological sciences and science of earth systems (SES). The geological sciences major emphasized the study of the earth and its history, while the science of earth systems major emphasized study of the interactions among rock, water, air, and life in our planet's operation. The SES major grew out of recognition of the fundamentally interconnectedness of the components of the earth system, and the importance of understanding both the system's operation at present and in the geological past. The SES major reflects the new strategy of modern earth science. Thus, starting in Fall 2006, the geological sciences major will become a concentration within the SES major. The geology concentration within SES provides an equivalent to the geological sciences major, but with an increased breadth. Other concentrations include atmospheric sciences, ocean sciences, and biogeochemistry. The SES major will be the only major offered by the department for students graduating in 2009 or later.

The SES major prepares students for a number of career paths in basic or applied sciences of our planet. The major can lead to graduate study and research in geology, geophysics, geochemistry, biogeochemistry, atmospheric sciences, ocean sciences, hydrology, or environmental science and engineering. Career opportunities with university research groups, governmental agencies or the private sector deal with energy, mineral and water resources; natural hazards; weather and climate forecasting; ocean resources; and a host of environmental issues. The major can also prepare students for careers in environmental management and policy, law or medicine, science journalism, and K–12 science teaching.

**Requirements for the Science of Earth Systems major**

1. The science of earth systems curriculum includes strong preparation in mathematics, physics, chemistry and biology, including the following:

   **MATH** 111–112 (or **MATH** 191–192); Two semesters of chemistry. **CHEM** 207–208 or **CHEM** 211–215;
PHYS 207–208 or 112–213; BIO G 109–110, 101/103–102/104 or 105–106 (a second semester of biology can be replaced by CHEM 257 if CHEM 207–208 is selected; or replaced by a third semester of mathematics).

2. The required introductory course in earth science, EAS 220, The Earth System.

3. The core courses emphasize the interconnectedness of the earth system, and are founded on the most modern views of the planet as an interactive and ever-changing system. Each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major.

   - EAS 301 Evolution of the Earth System
   - EAS 303 Biogeochemistry
   - EAS 304 Interior of the Earth
   - EAS 305 Climate Dynamics

4. The concentration is achieved by four intermediate to advanced-level courses (300 level and up) that build on the core courses and have prerequisites in the required basic sciences and mathematics courses. Note that additional basic math and science courses given by the Shoals Marine Laboratory are available for students taking EAS 131. Students interested in dinosaurs may be required to complete the concentration courses, depending upon the student's choice of concentration.

The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. Four concentrations are defined for the major: geological sciences, biogeochemistry, atmospheric sciences, and ocean sciences. Other concentrations can be tailored to a student's interests in concert with the student's advisor and approval of the curriculum committee. The concentration should be chosen during the junior year or before in consultation with the student's advisor and approval of the Director of Undergraduate Studies.

5. Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. Means of satisfying this requirement generally include 3 credits of course work. Possibilities for fulfilling the field/observation requirement include the following:

   - courses in the Hawaii Environmental Semester program;
   - courses given by the Shoals Marine Laboratory;
   - EAS 250 Meteorological Observations and Instruments;
   - EAS 352 Synoptic Meteorology I;
   - EAS 417 Field Mapping in Argentina;
   - EAS 491 and/or 492 Undergraduate Research, with appropriate choice of project;
   - Field courses taught by another college or university;

For more information contact Bryan Jacks, Department of Earth and Atmospheric Sciences. bli@cornell.edu, and visit the web site: www.eas.cornell.edu.

Honors. An honors program is offered by the Department of Earth and Atmospheric Sciences for superior students. Candidates for honors must maintain an overall 3.0 GPA, a cumulative average of 3.5 in the major, and complete and honors thesis (EAS 491 or 492). Students interested in applying should contact the director of undergraduate studies during the second semester of the junior year.

Courses

EAS 101(1101) Introductory Geological Sciences (To Know Earth) (PBS)
Fall. 3 credits. Staff.
Designed to enhance an appreciation of the physical world. Emphasizes natural environments, surface temperatures, and dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (earth system science). Water, mineral, and fuel resources; environmental concerns. Field trips in the Ithaca region.

EAS 102(1102) Evolution of the Earth and Life (also BIO G 170[1700]) (PBS)
Spring. 3 credits. J. L. Cisne.
Earth systems and their evolution. Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; co-evolution of life and the atmosphere; precedents for ongoing global change; dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil collecting on field trips.

EAS 108(1108) Earth in the News (PBS)
Summer. 3 credits. S. L. Losh.
Provides an introduction to physical geology and earth systems science and explores the scientific basis for informed decision making regarding many timely environmental issues, including global warming and use; geologic hazards such as floods, earthquakes, and volcanoes; fossil fuel distribution and use; and land use. A field trip is taken in the Ithaca area.

EAS 109(1109) Dinosaurs
Fall. 1 credit. J. L. Cisne.
An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 121(1121) Introduction to MATLAB (also CIS 121[1121]) (PBS)
Fall, spring. 8-week course. 2 credits.
Prerequisites: MATH 111, 119, or equivalent.
For description, see CIS 121.

EAS 122(1220) Earthquake! (also ENGRD 1122[1120]) (PBS)
Spring. 3 credits. Staff.
Explores the science of natural hazards and strategic resources. Techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic minerals; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 131(1310) Basic Principles of Meteorology (PBS)
Fall. 3 credits. M. W. Wysocki.
Simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, and cyclones, and hurricanes, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems. The optional 1-credit laboratory for this course is offered as EAS 133.

EAS 133(1330) Basic Meteorology Lab
Fall. 1 credit. Requirement for atmospheric science majors; optional for other students taking EAS 131. Corequisite: EAS 131.
M. W. Wysocki.
Laboratory course covering topics presented in EAS 131. This course is required for atmospheric science majors, but is optional for other students taking EAS 131.

EAS 150(1500) ForTRAN Applications in Earth Science (also CIS 112[1122])
Spring, seven-week course. 2 credits.
Prerequisite: CIS/EAS 121 or equivalent.
Letter grades only. A. J. Pershing.
Emphasizes the application of scientific computing in the Earth sciences, including data processing and modeling of the Earth, its atmosphere, and oceans. Extends the procedural programming concepts developed in CIS/EAS 121 and considers their implementation in high-performance, compiled languages. Topics include the structure and syntax of a FORTRAN program, data input/output, compilation, and debugging.

EAS 154(1540) Introductory Oceanography, Lecture (also BIOEE 154) (PBS)
Fall, summer. 3 credits. Fall. B. C. Monger and C. H. Greene; summer: B. C. Monger.
Intended for both science and nonscience majors. Covers the basic workings of the ocean including its physics, chemistry, and biology. Following this basic description, the course examines threats to the health of the ocean and the important role the ocean plays in global climate change. Non-science majors should pay particular attention to this course while taking other majors, because they learn broadly how the earth works (physically, chemically and biologically) in just a single class.

EAS 155(1550) Introductory Oceanography, Laboratory (also BIOEE 155[1550]) (PBS)
Laboratory course covering topics presented in EAS/BIOEE 154.

EAS 201(2010) Introduction to the Physics and Chemistry of the Earth (also ENGRD 201[2010]) (PBS)
Fall. 3 credits. Prerequisites: PHYS 112 or 207. J. Phillips Morgan.
Topics include formation of the solar system: accretion and evolution of the earth; the rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport; and the weathering cycle: chemical cycles. CO2 (weathering), rock cycle; controls on
global temperature (CO2 or ocean currents), oil, and mineral resources.

EAS 213(2130) Marine and Coastal Geology (PBS)

Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Staff. A special two-week course offered at Cornell’s Shedd Marine Laboratory (SML), located on an island near Portsmouth, N.H. For more details and an application, contact SML office. G14 Stimson Hall. Estimated cost for 2005 (including tuition, room, board, and ferry transportation): $2,120.

EAS 220(2220) The Earth System (PBS)

Spring. 4 credits. Letter grades only. Staff. Integrated introduction to the earth system stressing the biological, chemical, geological, and physical interactions among the atmosphere, ocean, and solid earth. Topics include biogeochemical cycles, climate dynamics, and the evolution of the atmosphere, biosphere, cryosphere (ice), hydrosphere (oceans and inland waters), and lithosphere (solid earth).

EAS 233(2220) Seminar—Hawaii’s Environment

Fall. 1 credit. S-U grades only. A. Moore and C. H. Greene.

For students interested in the unique environmental systems of the Hawaiian Islands. Designed to bring together students returning from field studies in Hawaii with students interested in going there to study. Through discussion and field excursions students explore the biology, geology, ocean, atmosphere, and culture of the Hawaiian environment.

EAS 240(2400) Field Study of the Earth System (PBS)

Spring. 5 credits. Prerequisites: enrollment in Earth and Environmental Sciences Semester in Hawaii; one semester of calculus (MATH 191/192/193 or 111/112), and two semesters of any of the following: PHYS 207/208 or 112/213; CHEM 207/208; BIO 101; 103–102/104 or 105/106 or 109/110; or equivalent course work. A. Moore.

Interdisciplinary field course covering fundamental concepts of the Earth system. Topics include global circulation patterns in the solid Earth, atmosphere, and ocean; energy and mass transfer; change and variability of Earth, atmosphere, and ocean systems; the temporal record of change preserved in the geologic record; and Earth, oceanic, and atmospheric controls on ecosystem processes. The course is project-based with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 250(2500) Meteorological Observations and Instruments

Fall. 4 credits. Prerequisite: EAS 131. M. W. Wysocki and B. Monger. Methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Topics include instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Includes laboratory exercises in observation and data analysis.

Intended to serve as preparation for Observers Examination.

EAS 268(2680) Climate and Global Warming (PBS)

Spring. 3 credits. Prerequisite: basic college math. S-U grades optional.

A. T. DeGaetano.

Students from a range of disciplines become familiarized with such contemporary issues in climatology as global warming and El Niño. Introductions to the natural greenhouse effect, past climates, observed and projected climate changes and impacts. Also natural climate variability and their consequences and predictability. Weekly student-led discussions of issues appearing in journals such as Nature.

EAS 296(2960) Forecast Competition

Fall and spring. 1 credit. may be repeated for credit. Students enroll for two consecutive semesters; credit awarded after second semester. Prerequisite: sophomore standing in atmospheric science or permission of instructor. S-U grades only.

D. S. Wilks.

Two-semester course providing daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully.

EAS 301(3010) Evolution of the Earth System (PBS)

Fall. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Four Saturday field trips. T. E. Jordan, S. Riha, and W. D. Paterson.

Covers the co-evolution of life and the earth system: Earth’s early history; plate tectonics, continental drift, and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past 10 million years. Serves as an introduction to the methods of interpreting information preserved in the rock record.

EAS 303(3030) Introduction to Biogeochemistry (also NTRES 321(3210)) (PBS)

Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry.

Control and function of the Earth’s global biogeochemical cycles. Begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, controls on atmospheric carbon dioxide, and mathematical models. Interactions between global biogeochemical cycles and the components of the Earth system are discussed.

EAS 304(3040) Interior of the Earth (PBS)

Spring. 3 credits. C. A. Andrault.

This class will investigate the geology of the solid earth with emphasis on igneous and metamorphic petrology, structure of the continents and ocean basins, and large scale tectonics. Interactions between deformation, melt generation and metamorphism will be examined as mechanisms by which the crust is differentiated from the underlying mantle. Geophysical and geochemical techniques for probing the deep interior of the earth will be investigated. Plate tectonics will be used as a unifying theme to understand processes operating in the solid earth.

EAS 305(3050) Climate Dynamics (also ASTRO 331(3331)) (PBS)

Fall. 3 credits. Prerequisites: two semesters of calculus and one of physics. K. H. Cook.

Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

EAS 315(3150) Geomorphology (PBS)

Fall. 3 credits. Prerequisite: 3-credit EAS 220. B. L. Isacks.

A study of the processes that sculpt the Earth’s terrestrial landscapes. Landforms constructed by Earth’s internal processes are the point of departure as students examine their modification by physical interaction with the atmosphere. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and digital elevation models of examples from around the globe. Includes two Saturday field trips.

EAS 322(3220) Biogeochemistry of the Hawaiian Islands (PBS)

Spring. 4 credits. Prerequisites: enrollment in Earth and Environmental Sciences Semester in Hawaii; EAS 220, EAS 303, or permission of instructor. L. Derry.

Field-oriented study of biogeochemical processes and ecosystem interactions across the Hawaiian islands. Field, class, and laboratory work focus on how landscape age and climate strongly control biogeochemical cycling and ecosystem development in Hawaii. Other topics include successions of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The class is structured around field projects, carried out both in groups and individually.

EAS 326(3260) Structural Geology (PBS)

Spring. 4 credits. Prerequisite: one semester of calculus, plus introductory geology course or permission of instructor. One weekend field trip. Alternate years; next offered 2007–2008. R. W. Allmendinger.

EAS 334(3340) Microclimatology (PBS)

Spring. 3 credits. Prerequisite: physics course. Offered alternate years; next offered 2007–2008. D. S. Wilks.

EAS 341(3410) Atmospheric Thermodynamics and Hydrostatics (PBS)

Spring. 4 credits. Prerequisites: one year of calculus and one semester of physics. A. T. DeGaetano.

Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics include thermodynamic processes of dry air, water vapor, and moist air and concepts of hydrostatics and stability.

EAS 342(3420) Atmospheric Dynamics (also ASTRO 342(3420)) (PBS)

Spring. 3 credits. Prerequisite: MATH 192, 213, or equivalent; one year of physics. K. H. Cook.

Introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). The governing equations of atmospheric flow are derived from first principles and applied to middle latitude and tropical meteorology. Topics include balanced...
**EARTH AND ATMOSPHERIC SCIENCES**

flow, atmospheric waves, circulation, and vorticity. Text used is *An Introduction to Dynamic Meteorology* by Holton.

**EAS 350(3500) Dynamics of Marine Ecosystems (also BIOEE 350(3500)) (PBS)**
Fall. 3 credits. Prerequisite: one year of calculus and a semester of oceanography (i.e., EAS 154), or permission of instructor. Offered alternate years; next offered 2007–2008. C. H. Greene and R. W. Howarth.

**EAS 351(3510) Marine Ecosystems Field Course (also [EAS 3510] (PBS))**
Spring. 4 credits. Prerequisite: EAS 240: enrollment in Earth and Environmental Sciences Semester in Hawaii. Recommended: oceanography course C. H. Greene, R. Monger, and C. D. Harvell. Covers the interactions of physical and biological processes in marine ecosystems. Starts by looking at these processes on ocean basin to regional scales and works down to the smaller scales relevant to individual organisms. Students will be introduced to modern techniques of marine-ecosystems research, including remote sensing, oceanographic-survey methods, and experimental marine ecology. This course is field and laboratory intensive with students engaged in hands-on, active learning that takes advantage of local resources.

**EAS 352(3520) Synoptic Meteorology (PBS)**
Spring. 3 credits Prerequisite: EAS 341. Corequisite: EAS 342. M. W. Wysocki. Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course strengthens previously introduced meteorological concepts which are applied to forecasting mid-latitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

**EAS 353(3530) Physical Oceanography (PBS)**
Fall. 3 credits. Prerequisites: MATH 112 or 192, or one year of physics, or permission of instructor B. C. Monger. The course covers thermohaline and wind-driven circulation and surface-ocean boundary-layer dynamics. Mathematical expressions for describing conservation of momentum, mass, and heat in a fluid are used to explain the ocean’s responses to wind and buoyancy forcing, but the course will emphasize the basic physical principles at play, and not just the mathematical results. Student presentations of recent research papers will elaborate principles learned in the course.

**EAS 355(3550) Mineralogy (PBS)**
Fall. 4 credits. Prerequisites: EAS 101, 201, or 220 and CHEM 207 or 211 or permission of instructor. S. Mahlburg Kay. Covers chemical and physical properties and identification of minerals, with emphasis on the rock-forming minerals that are the principal constituents of the Earth and nearby planets. Topics include internal and external crystallography, crystal chemistry, introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock-forming minerals. Independent project includes use of electron microprobe (EPMA) and x-ray facilities.

**EAS 358(3560) Petrology and Geochemistry (PBS)**
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay. Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

**EAS 388(3880) Geophysics and Geotectonics (PBS)**
Spring. 3 credits. Prerequisites: MATH 192 (or 112) and PHYS 213. Offered alternate years, next offered 2007–2008. M. Pritchard.

**EAS 401(4010) Fundamentals of Energy and Mineral Resources (PBS)**

**EAS 404(4040) Geodynamics**
Spring. 3 credits. Prerequisite: calculus and calculus-based physics or permission of instructor. J. C. Ingham. Quantitative study of the deformation, heat transport, and melting processes that have shaped the evolution of the solid Earth. Familiar physical and chemical principles and concepts are applied to the study of plate tecnotonics, fluid dynamics, mantle convection, melting, and mountain building.

**EAS 405(4050) Active Tectonics (PBS)**
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 326/388. S. U. grades optional. Offered alternate years. M. Pritchard. The class develops the techniques necessary to understand how the Earth deforms—from individual earthquakes to the construction of mountain ranges. We discuss the driving forces of deformation, and how these forces interact with different geologic materials to cause deformation.

**EAS 417(4170) Field Mapping in Argentina (PBS)**
Summer. 3 credits. Prerequisite: introductory EAS course and EAS 326. S. Mahlburg Kay. Field mapping course in Argentina that fulfills field requirement for majors with interests in geological Sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierras Pampeanas, Preandes, and Main Cordillera Ranges of the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of deformed sedimentary, metamorphic, and igneous rocks. The course further provides an introduction to the tectonics and magmatic processes of the central Andes with emphasis on comparable processes in the U.S. Exercises are done in combination with students and faculty of the University of Buenos Aires.

**EAS 420(4200) The Linux Supercomputing Environment**
Fall. spring. 3 credits. Prerequisite: EAS 150 or introductory programming. M. Wysocki and V. Manakkal. This course will introduce the use of computers and software for research. An understanding of basic operating systems and computer hardware will tie into a survey of available software packages for programming and data presentation as well as computational techniques such as parallel processing. Students will be required to formulate and conduct a project using tools of their choice and demonstrate in a report and oral presentation that is open to other students and faculty that they have used the Linux supercomputer cluster and acquired significant skills. Undergraduates may work in a team.

**EAS 425(4250) European Discovery of Impacts and Explosive Volcanism**
Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. Letter grades only. Meets one day per week plus field trip during spring break. Fee probably charged for required weeklong field trip. Offered alternate years; next offered 2007–2008. J. Phipps Morgan.

**EAS 434(4340) Reflection Seismology (PBS)**
Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. Offered alternate years; next offered 2007–2008. L. D. Brown. Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic reflection analysis, traveltime inversion, vertical seismic profiling, shear wave exploration, and ground-penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling, and interpretation software from LandMark.

**EAS 435(4350) Statistical Methods in Meteorology and Climatology (MGR)**
Fall. 3 credits. Prerequisite: AEM 210 and calculus. S. D. Wilks. Covers statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications; some statistical characteristics of meteorological data, including probability distributions and correlation structures; operational forecasts derived from multiple regression models, including the MOS system; and forecast evaluation techniques.

**EAS 437(4370) Geophysical Field Methods (also ARKEO 437(4370)) (PBS)**
Fall. 3 credits. Prerequisite: PHYS 213 or 208, or permission of instructor. Offered alternate years; next offered 2007–2008. L. D. Brown.

**EAS 447(4470) Physical Meteorology (PBS)**
Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years; next offered 2007–2008. A. T. DeGaetano.

**EAS 451(4510) Synoptic Meteorology II (PBS)**
Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci. Structure and dynamics of large-scale, midlatitude weather systems, such as cyclones, anticyclones, and waves, with considerations of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of
the atmosphere to study selected large-scale, mid-latitude weather events.

[EAS 453(4530) Advanced Petrology (PBS)]
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years; next offered 2007–2008. R. W. Kay.

[EAS 454(4540) Advanced Mineralogy (PBS)]
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. Mathloub Kay.
Covers crystallography and crystal chemistry of minerals and the methods of their study. Includes X-ray diffraction, optical methods, and computer simulation of crystal structures. Emphasizes effects of high pressures and temperatures with implications for understanding the Earth's interior.

[EAS 455(4550) Geochemistry (PBS)]
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years; next offered 2007–2008. W. M. White.

[EAS 456(4560) Mesoscale Meteorology (PBS)]
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Next offered 2007–2008. S. J. Colucci.

[EAS 457(4570) Atmospheric Air Pollution (PBS)]
Fall. 3 credits. Prerequisites: EAS 341 or thermodynamics course, and one semester of chemistry, or permission of instructor. M. W. Wysocki.
Examines sources, effects, transports, measurement, and controls of air pollution. Discusses the basic principles in each area with an emphasis on their local, regional, and global impacts.

[EAS 458(4580) Volcanology (PBS)]
Fall. 3 credits. Prerequisite: EAS 356 or equivalent. Offered alternate years. R. W. Kay and W. White.

[EAS 460(4600) Late Quaternary Paleocology (PBS)]
Fall. 4 credits. M. Goman.
Explores topics in Late Quaternary paleocology. Broadly divided into two sections: (1) lectures that cover a variety of topics, such as philosophy of paleocology, radiometric dating methods, and paleoenvironmental proxies; (2) field and laboratory based research. The field research provides students with hands-on experience in sediment core collection while in the laboratory students learn the basics of core description, pollen, and macrofossil analysis.

[EAS 462(4620) Marine Ecology (also BIOEE 462(4620) (PBS)]
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. C. D. Harvell and C. H. Greene.
For description, see BIOEE 462.

[EAS 470(4700) Weather Forecasting and Analysis (PBS)]
Spring. 3 credits. Prerequisites: EAS 352 and 451. TBA. M. W. Wysocki.
Applied course with an opportunity to focus on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student's knowledge of atmospheric dynamics, thermodynamics, and computer-data analysis to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions, write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe-weather outlook for the forecast region, and lead class discussion on assigned readings.

[EAS 471(4710) Ground Water Hydrology (also BEE 471(4710) (PBS)]

[EAS 475(4750) Special Topics in Oceanography]
Fall, spring. 2-6 credits, variable. Prerequisites: one semester of oceanography or permission of instructor. Fall, spring. C. H. Greene, summer. B. C. Monger.
Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

[EAS 476(4760) Sedimentary Basins: Tectonics and Mechanics (PBS)]
Fall. 3 credits. Prerequisite: EAS 301 or permission of instructor. Offered alternate years; next offered 2007–2008. T. E. Jordan.

[EAS 478(4780) Advanced Stratigraphy (PBS)]
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.
Covers modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks. Emphasizes techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Considers physical correlation, dating techniques, and time resolution in sedimentary rocks as well as physical controls on the stratigraphic record and numerical modeling.

[EAS 479(4790) Paleobiology (also BEE 479(4790) (PBS)]
Fall. 4 credits. Prerequisites: one year of introductory biology and either BEE 274, 373, or EAS 475, or permission of instructor. Offered alternate years. W. Allmon.
Surveys the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

[EAS 481(4810) Senior Survey of Earth Systems]
Fall, spring. 2 credits each semester. Fall, J. Case; spring, R. Kay.
Weekly seminar for seniors in the Science of Earth Systems. Explores current topics in Earth System Science. Readings, presentations and discussions will focus results from the recent literature, including how to analyze a scientific paper, and exploration of connections across the sub-disciplines in the field. The course will serve as both a review of key concepts, and a vehicle to explore developing concepts in the field.

[EAS 483(4830) Environmental Biophysics (also CSS 483(4830) (PBS)]
Spring. 3 credits. Offered alternate years; next offered 2007–2008. S. J. Rha.

[EAS 484(4840) Inverse Methods in the Natural Sciences (PBS)]
Spring. 3 credits. Prerequisite: MATH 294. D. L. Hysell.
An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, route processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

[EAS 487(4870) Introduction to Radar Remote Sensing (also ECE 487(4870) (PBS)]
Fall. 3 credits. Prerequisite: PHYS 208 or 213 or equivalent. D. L. Hysell.
Covers the fundamentals of radar, antennas, and remote sensing. Students are exposed to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. They also encounter both a mathematics, or more practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasis is placed on radar applications in geology, geophysics and atmospheric sciences, astronomy and space sciences. Radar remote sensing of the Earth from spacecraft receives special attention.

[EAS 491-492(4910-4920) Undergraduate Research]
Fall. Spring. 1-4 credits. Students should fill out form at 2124 Snee Hall. Staff (B. L. Isacks, coordinator).
Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

[EAS 494(4940) Special Topics in Atmospheric Science]
Fall, spring. 8 credits max. Undergraduate level. 400 grade option. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and are by a staff member. A short written report is required, and outstanding projects are prepared for publication.
EAS 496(4960) Internship Experience
2 credits. Prerequisites: EAS 240 enrollment in Earth and Environmental Sciences Semester in Hawaii. A Moore. During the last three and a half weeks of the semester students carry out a service learning project with a local NGO, environmental business, government agency, research lab, or educational facility. Projects are carefully designed with the student, sponsoring agency, and faculty member. A final report is required.

EAS 497(4790) Individual Study in Atmospheric Science
Fall or spring. 1-6 credits. S-U grades optional. Students must register using independent study form. Staff. Topics are arranged at the beginning of the semester for individual study or for group discussions.

EAS 498(4980) Teaching Experience in Earth and Atmospheric Sciences
Fall, spring. 1-4 credits. S-U grades only. Staff. The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

EAS 499(4990) Undergraduate Research in Atmospheric Science
Fall or spring. Credit TBA. S-U grades only. Students must register using independent study form. Staff. Independent research on current problems in atmospheric science.

EAS 500(5000) Design Project in Geohydrology
Fall, spring: may continue over two or more semesters. 3-12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. Next offered 2007-2008. L. M. Cathles.

EAS 502(5020) Case Histories in Groundwater Analysis

EAS 575(5750) Planetary Atmospheres (also ASTRO 575(5755))
Fall. 4 credits. Offered alternate years. P. Gierasch.

EAS 577(5770) Planetary Surface Processes (also ASTRO 577(5777))
Spring. 3 or 4 credits. Offered alternate years. J. Bell.

EAS 578(5780) Planet Formation and Evolution (also ASTRO 578(5785))
Fall. 4 credits. Offered alternate years. J. L. Margot, M. Pritchard.

EAS 584(5840) Inverse Methods in the Natural Sciences
Spring. 3 credits. Prerequisite: MATH 294. D. Hysell. An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include: nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms. Students taking the course for advanced (500-level) credit will be expected to complete and present a substantial class project to be negotiated with the instructor.

EAS 620(6200) The Linux Supercomputing Environment
Fall and spring. 3 credits. Prerequisite: EAS 150 or introductory programming. M. Wysocki and V. Marukkala. This course will address the use of computers and software for research. An understanding of basic operating concepts and computer hardware will tie into a survey of available software packages for programming and data presentation as well as computational techniques such as parallel processing. Students will be required to formulate and conduct a project using tools of their choice and demonstrate in a report and oral presentation that is open to other students and faculty that they have used the Linux supercomputing environment and acquired significant skills. Graduate students will be expected to conduct an independent project and solve a computational problem in their domain of expertise.

EAS 622(6220) Advanced Structural Geology I
Fall. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years, next offered 2007-2008. R. W. Allmendinger and C. Andronico.

EAS 624(6240) Advanced Structural Geology II
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years, next offered 2007-2008. R. W. Allmendinger.

EAS 626(6260) Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. Next offered 2007-2008. Staff.

EAS 641(6410) Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry. Covers dynamics of biogeochemical systems; kinetic treatment of biogeochemical cycles; box models, residence time, response time; analytical and numerical solutions of model systems; Eigen-analysis of linear systems; feedback and nonlinear cases; problems of uncertainties in natural systems; modeling software such as MATLAB; and applications to current research of participants or from recent literature.

EAS 652(6520) Advanced Atmospheric Dynamics (also ASTRO 652(6525))
Spring. 3 credits. Prerequisite: EAS 341 and 342 or equivalent. Offered alternate years; next offered 2007-2008. S. J. Colucci.

EAS 656(6560) Isotope Geochemistry
Fall. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White.

Nucleosynthetic processes and the isotopic abundance of the elements: geochronology and cosmochronology using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 14C and 36Cl. Use of radiogenic and stable isotopes in petrology and the application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.

EAS 666(6660) Applied Multivariate Statistics
Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two statistics courses. Offered alternate years; next offered 2007-2008. D. S. Wilks.

EAS 675(6750) Modeling the Soil-Plant-Air System (also CSS 675[6750])
Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. Next offered 2008-2009. S. J. Riha.

EAS 692(6920) Special Topics in Atmospheric Science
Fall or spring. 1-6 credits. S-U grades optional. Staff. Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

EAS 693(6930) Special Topics in Geologic Sciences
Fall or spring. 1-3 credits. Variable. S-U grades optional. Staff. Study of specialized advanced topics in the Earth sciences through readings from the scientific literature, seminars, and discussions.

EAS 700-799(7000-7990) Seminars and Special Work
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Advanced work on original investigations in earth and atmospheric sciences. Topics change from semester to semester. Students should contact appropriate professor for more information.

EAS 701-702(7010-7020) Thesis Research
Fall, 701; Fall, 702; spring. 1-15 credits, variable. Staff.

EAS 711(7110) Upper Atmospheric and Space Physics
Fall or spring. 1-6 credits. Seminar course. TBA. D. L. Hysell.

EAS 722(7220) Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731(7310) Advanced Topics in Remote Sensing and Geophysics
M. Parchard.

EAS 733(7330) Advanced Topics in Geodynamics
Spring. J. Phipps Morgan.

EAS 750(7500) Remote Satellite Sensing in Biological Oceanography
Summer. 3 credits. B. C. Menger. The intensive summer course meets from 9 a.m. to 5:00 p.m. for a two-week period. The goal of the course is to teach participants the skills needed to work independently to acquire data sets derived from a variety of
satellite sensors (SeaWiFS, MODIS, AVHRR, SeaWinds and Topex-Poseidon) and to merge these data sets to examine biological responses in the physical environment.

Course time is split equally between lectures and computer lab work. Lectures cover the fundamentals of bio-optics, pigment algorithms, primary production algorithms and the underlying physical principals leading to the measurement of sea surface temperature, ocean wind speed and ocean topography.

Computer labs focus on developing the IDL (Research Systems, Inc.) programming skills needed to process, analyze and visualize satellite image data. See the course syllabus for more details on the topics covered in this course.

EAS 751(7510) Petrology and Geochemistry
R. W. Kay.

EAS 755(7550) Advanced Topics in Geodynamics
Fall. 3 credits. J. Phinps Morgan.

EAS 757(7570) Current Research in Petrology and Geochemistry
S. Mahburg Kay.

EAS 762(7620) Advanced Topics in Paleobiology
W. D. Allmon.

EAS 771(7710) Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773(7730) Paleobiology
J. C. Cisne.

EAS 775(7750) Advanced Topics in Oceanography
C. H. Greene.

EAS 780(7800) Earthquake Record Reading
Fall. M. Barazangi.

EAS 781(7810) Exploration Geophysics
L. D. Brown.

EAS 783(7830) Advanced Topics in Geophysics
B. L. Isacks.

EAS 793(7930) Andes-Himalayas Seminar

EAS 795(7950) Low Temperature Geochemistry

EAS 796(7960) Geochemistry of the Solid Earth
W. M. White.

EAS 797(7970) Fluid-Rock Interactions
L. M. Cathles.

EAS 799(7990) Soil, Water, and Geology Seminar
Spring. L. M. Cathles and T. S. Steenhuis.

EAS 850(8500) Master's-Level Thesis Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students specifically in the master's program in atmospheric science.

EAS 950(9500) Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students in the atmospheric science Ph.D. program only before "A" exam has been passed.

EAS 951(9510) Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy in the atmospheric science Ph.D. program after "A" exam has been passed.

EAST ASIA PROGRAM
140 Uris Hall
E. Gunn, director, T. LaMarre, associate director, D. Boucher, J. Chen. Z. Chen.
P. J. Katzenstein, Y. Kawasaki, J. S. Kil.

The East Asia Program draws together faculty from departments and fields throughout the university who participate in a program of research and teaching on the civilizations and cultures of East Asia. Courses are offered through departments in the humanities and social sciences, as well as in the fields of business, city and regional planning, international and comparative labor relations, and rural sociology. The Department of Asian Studies offers language courses in Mandarin, Cantonese, Korean, and Japanese, in addition to the Full-year Asian Language Concentration (FALCON) in Japanese and Mandarin.

Undergraduates major in the Department of Asian Studies and concentrate on the language and culture of one East Asian country, while graduate students may work toward an M.A. in East Asian Studies, a dual M.B.A./M.A., or an M.A./Ph.D. in a discipline such as agricultural economics, anthropology, city and regional planning, government, history, history of art, linguistics, literature, rural sociology, or sociology. Graduate students concentrating on East Asia may apply for a variety of fellowships and travel grants offered by the East Asia Program. The formal program of study is enriched by numerous events and extracurricular activities, including films, workshops, art exhibits, lectures, symposia, and cultural and artistic performances on East Asia. With nearly 600,000 holdings in Chinese, Japanese, Korean, and western languages, the Wason Collection in Kroch Library is a major national resource for research on East Asia. A 5,000-piece collection representing the full range of Chinese, Japanese, and Korean art may be seen at the George and Mary Rockwell Galleries in the Herbert F. Johnson Museum of Art.

ECONOMICS
The study of economics provides an understanding of the way economies operate and an insight into public issues. The department offers a broad range of undergraduate courses in such fields as money and banking; international and comparative economics; econometrics; theory; history; growth and development; and the organization, performance, and control of industry.

The Major
Prerequisites
ECON 101 and 102 and MATH 111 (or equivalents) are required, all with grades of C or better, MATH 112 (or equivalent) is recommended. For further information, see “Math for Economics 313–314” at the department’s web site: www.arts.cornell.edu/ econ/major.html.

ECON 301 with a grade of C or better substitutes for 101; ECON 302 with a grade of C or better substitutes for 102.

Requirements
Eight courses listed by the Department of Economics at the 300 level or above, or approved by the student’s major advisor, all with grades of C- or better. (S-U grade option is not allowed.)

These eight courses must include:
1. ECON 313 and 314
2. ECON 321, or ECON 319 and 320 (ECON 313, 314, 321 or 319, 320 should be completed before senior year.)
3. at least three courses from the following: ECON 318, 320, 322–399
ECON 301 with a grade of B or better substitutes for both 101 and 313; ECON 302 with a grade of B or better substitutes for both 102 and 314.
If ECON 321 is applied toward the major, neither 319 nor 320 can be applied.
ECON 498 and 499 cannot be counted toward the eight-course requirement.
If ECON 313 is applied to the major, ECON 301 cannot be.
If ECON 314 is applied to the major, ECON 302 cannot be.
If both ECON 367 and ECON 368 are taken, only one can be applied to the major.

Honors Program
An honors program is currently being offered. Students should consult the director of
undergraduate studies before May of their junior year for more information.

**Recommended Courses**

Students planning graduate work in economics should select ECON 319-320 rather than 321 and should consider including some of the following courses in their majors:

- ECON 325 (Cross Section and Panel Econometrics) or ECON 327 (Time Series Econometrics)
- ECON 337 (Equilibrium and Welfare Economics)
- ECON 405 (Auction Seminar)
- ECON 367 (Game Theoretic Methods) or ECON 368 (Game Theory)
- ECON 416 (Intertemporal Economics)
- ECON 351 or 352 (Industrial Organization)
- ECON 358 (Behavioral Economics)
- ECON 361-362 (International Trade and Finance)
- ECON 440-441 (Analysis of Agricultural Markets and Commodity Futures Markets)
- ECON 443 (Compensation, Incentives, and Productivity)

In addition to completing the economics major, such students should also consider courses in accounting and subjects such as finance, marketing, entrepreneurship, business administration, and business law. Courses in these subjects are offered by the Department of Applied Economics and Management, the School of Hotel Administration, and the Johnson Graduate School of Management.

Students planning to attend law school should consider including some of the following courses in their majors:

- ECON 351 or 352 (Industrial Organization)
- ECON 354 (Economics of Regulation)
- ECON 361-362 (International Trade and Finance)
- ECON 404 (Economics and the Law)

In addition to completing the economics major, such students should inquire at Career Services, College of Arts and Sciences, concerning recommended courses offered by other departments.

**Courses**

**ECON 101(1110) Introductory Microeconomics (SBA)**

Fall, spring, winter, and summer. 3 credits. ECON 101 is not a prerequisite for 102. Explanation and evaluation of how the price system operates in determining what goods are produced, how goods are produced, who receives income, and how the price system is modified and influenced by private organizations and government policy.

**ECON 102(1120) Introductory Macroeconomics (SBA)**

Fall, spring, winter, and summer. 3 credits. ECON 101 is not a prerequisite for 102. Analysis of aggregate economic activity in relation to the level, stability, and growth of national income. Topics may include the determination and effects of unemployment, inflation, balance of payments, deficits, and economic development, and how these may be influenced by monetary, fiscal, and other policies.

**ECON 204(2040) Networks (also SOC 209[2090]) (SBA)**

Spring. 4 credits. Cannot be applied to ECON major. This interdisciplinary course examines network structures and how they matter in everyday life. The course examines how each of the computing, economic, sociological and natural worlds are connected and how the structure of these connections affects each of these worlds. Tools of graph theory and game theory are taught and then used to analyze networks. Topics covered include the web, the small world phenomenon, markets, neural networks, contagion, search and the evolution of networks.

**ECON 230(2300) International Trade and Finance (SBA)**

Cannot be applied to ECON major. For description, see AEM 230.

**ECON 301(3010) Microeconomics (SBA)**

Fall. 4 credits. Prerequisite: calculus. Intended for students with strong analytical skills who have not taken ECON 101, 102. May be used to replace both ECON 101 and 313 (may replace 313 only with grade of B or better). Covers the topics taught in ECON 101 and 313. An introduction to the theory of consumer and producer behavior and to the functioning of the price system.

**ECON 302(3020) Macroeconomics (SBA)**

Spring. 4 credits. May be used to replace both ECON 102 and 314 (may replace 314 only with grade of B or better). Prerequisite: calculus. Intended for students with strong analytical skills who have not taken ECON 101, 102. Covers the topics taught in ECON 102 and 314. An introduction to the theory of national income determination, unemployment, growth, and inflation.

**ECON 307(3070) Introduction to Peace Science (also CRP 495.18[3850]) (SBA)**

Winter session. 3 credits. Prerequisites: ECON 101-102 or permission of instructor. Introduction to the theories of and research on conflict resolution. Topics include conflict, its role and impact on society; theories of aggression and altruism; causes of war; game theory; conflict management procedures and other analytical tools and methods of peace science; and alternatives to war.

**ECON 313(3130) Intermediate Microeconomic Theory (SBA)**

Fall, spring, and summer. 4 credits. Prerequisites: ECON 101--102 and calculus. The pricing processes in a private enterprise economy are analyzed under varying competitive conditions, and their role in the allocation of resources and the functional distribution of national income is considered.

**ECON 314(3140) Intermediate Macroeconomic Theory (SBA)**

Fall, spring, and summer. 4 credits. Prerequisites: ECON 101--102 and calculus. Introduces the theory of national income determination and economic growth in alternative models of the national economy. Examines the interaction and relation of these models to empirical aggregate economic data.

**ECON 319(3190) Introduction to Statistics and Probability (MQR)**

Fall and spring. 4 credits. Prerequisites: ECON 101--102, 319, or equivalent. Introduction to the theory and application of econometric techniques. How econometric models are formulated, estimated, used to test hypotheses, and used to forecast; understanding economists' results in studies using regression model, multiple regression model, and introduction to simultaneous equation models.

**ECON 321(3210) Applied Econometrics (MQR)**

Fall or spring. 4 credits. Prerequisites: ECON 101--102 and calculus. Provides an introduction to statistical inference and to principles of probability. Topics include descriptive statistics, principles of probability, discrete and continuous distributions, and hypothesis testing (of sample means, proportions, variance). Regression analysis and correlation are introduced.

**ECON 320(3200) Introduction to Econometrics (MQR)**

Fall and spring. 4 credits. Prerequisites: ECON 101--102 and MATH 111-112. Provides an introduction to statistical inference and to principles of probability. Topics include descriptive statistics, principles of probability, discrete and continuous distributions, and hypothesis testing (of sample means, proportions, variance). Regression analysis and correlation are introduced.

**ECON 322(3220) World Economic History # (HA)**

Spring. 4 credits. Prerequisites: ECON 101 and 102 or equivalent. An economist's perspective on the comparative evolution of selected economic and social institutions, with emphasis on trade, finance, population growth and technological change.

**ECON 323(3230) American Economic History # (SBA)**

Fall or spring. 4 credits. Prerequisites: ECON 101-102 or equivalent. Surveys problems in American economic history from the first settlements to early industrialization.

**ECON 324(3240) American Economic History # (SBA)**

Spring. 4 credits. Prerequisites: ECON 101-102 or equivalent. Surveys problems in American economic history from the Civil War to World War I.

**ECON 325(3250) Cross Section and Panel Econometrics (MQR)**

Spring. 4 credits. Prerequisite: ECON 320. Introduction to cross-section and panel econometrics. Topics include multiple-regression analysis with qualitative information to models, simple and advanced panel data methods, informal variable estimation, simultaneous equation models.
ECON 327(3270) Time Series Econometrics (MQR)
Spring. 4 credits. Prerequisite: ECON 320. Introduction to time-series econometrics. Topics include stationary time series, ARMA models, multivariate models, non-stationary models and unit roots, and co-integration.

ECON 331(3310) Money and Credit (SBA)
Spring. 4 credits. Prerequisites: ECON 101–102 and 314. A systematic treatment of the determinants of the money supply and the volume of credit. Economic analysis of credit markets and financial institutions in the United States.

ECON 333(3330) Financial Economics (SBA)
Fall. 4 credits. Prerequisites: ECON 313 and 314. Examines the theory and decision making in the presence of uncertainty and the practical aspects of particular asset markets.

ECON 335(3350) Public Finance: The Microeconomics of Government (SBA)
Fall. 4 credits. Prerequisites: ECON 101–102 and 313, or equivalent, and one semester of calculus. Analyzes the role of government in a free market economy. Topics include public goods, market failures, allocation mechanisms, optimal taxation, effects of taxation, and benefit-cost analysis. Current topics of an applied nature vary from semester to semester.

ECON 336(3360) Public Finance: Resource Allocation and Fiscal Policy (ILRLE)
Spring. 4 credits. Prerequisites: ECON 101–102, 313 or equivalent and one semester of calculus. Covers the revenue side of public finance and special topics. Subjects include the federal debt, the budget, and government regulation and transfers, as well as problems like local public goods, health care, education, the hierarchy of governmental structure, plus a variety of applied problems.

ECON 337(3370) Equilibrium and Welfare Economics (SBA)
Fall. 4 credits. Prerequisites: ECON 313, 314, 319. Introduction to the theory of competitive equilibrium and economic efficiency. Begins with a review of the Walrasian model and identifies conditions under which a price-guided decentralized competitive economy achieves an optimal allocation of resources. Presents a number of celebrated examples and applications: the standard 2x2x2 model of international trade, Leontief's input-output model, Malmquist's interpretation of labor theory of value, Arrow's analysis of uncertainty and Amartya Sen's analysis of famines. Finally, problems of market failure are reviewed.

ECON 339(3390) State and Local Public Finance (SBA)
Spring. 4 credits. Prerequisite: ECON 313. Next offered 2007–2008. Examines the role of subnational governments and jurisdictions in the economy. Among the broad questions addressed are: what tasks are optimally assigned to local governments? What impact can such assignment have on efficiency and equity? How do intergovernmental financial relations affect these outcomes? The theory and evidence on these issues are analyzed, with frequent application to current issues, like debates surrounding local, school district-based provision of education.

ECON 341(3410) Economics of Wages and Employment II (SBA)
For description, see ILRLE 440.

ECON 342(3420) Economic Analysis of the University
For description, see ILRLE 648.

ECON 344(3440) Development of Economic Thought and Institutions
For description, see ILRLE 344.

ECON 347(3470) Economics of Education
For description, see ILRLE 647.

ECON 351(3510) Industrial Organization I (SBA)
Fall. 4 credits. Prerequisite: ECON 313 or equivalent. Examines markets with only a few firms (i.e., oligopolies), and the primary focus is the strategic interactions between firms. Topics include static competition in oligopolies, cartels and other forms of collusive behavior, competition between firms producing differentiated products, behavior, and government interventions in oligopoly industries (e.g., antitrust laws).

ECON 352(3520) Industrial Organization II (SBA)
Spring. 4 credits. Prerequisite: ECON 313 or equivalent. Focuses primarily on the pricing decisions of firms. The course does not consider the strategic response of other firms to these pricing decisions. The pricing decisions include price discrimination, commodity bundling, pricing a product line and pricing a durable good. In addition to pricing decisions, the course considers topics associated with private information such as adverse selection, signaling, and moral hazard. Numerous theoretical models are presented and empirical results are discussed.

ECON 354(3540) The Economics of Differentiated Products, Entry Behavior, and Government Interventions in Oligopoly Industries (e.g., antitrust laws).

ECON 358(3580) Behavioral Economics (SBA)
Fall. 4 credits. Prerequisite: ECON 313 or equivalent. Regulation constrains individual and institutional behavior. These interfaces between the private and public sectors are explored in terms of their rationale, efficacy, and economic consequences. Regulation is examined as a system of incentives that guides the development and efficient functioning of markets, that molds the behavior of regulated industries like utilities and that elicits socially desirable levels of pollution, congestion, risk and benefits from externality-generating activities. How the various professions (law, accounting and engineering) view and address these challenges are examined in light of their economic effects.

ECON 361(3610) International Trade Theory and Policy (SBA)
Fall. 4 credits. Prerequisites: ECON 101–102 and 313. Surveys the sources of comparative advantage. Studies current policy and analyzes the welfare economics of exchange countries. Some attention is paid to the institutional aspects of the world trading system.

ECON 362(3620) International Monetary Theory and Policy (SBA)
Spring and summer. 4 credits. Prerequisites: ECON 101–102 and 314. Surveys the determination of exchange rates and theories of balance of payments adjustments. Also explores open economy macroeconomics and analyzes some of the institutional details of foreign exchange markets, balance of payments accounting, and the international monetary system.

ECON 367(3670) Game Theoretic Methods (SBA)
Fall. 4 credits. Prerequisites: ECON 101 or equivalent. ECON 367 is not a prerequisite for ECON 368. Introduces students to the use of game-theoretic methods for the social sciences. This leads to an analysis of the social and political foundations of economics that prepares students to think strategically on social and economic matters and thus serves as a background for more advanced courses in economics, game theory, and related social sciences.

ECON 368(3680) Game Theory (MQR)
Spring. 4 credits. Prerequisites: ECON 313 and 319. ECON 367 is not a prerequisite for ECON 368. Studies mathematical models of conflict and cooperation in situations of uncertainty (about nature and about decision makers).

ECON 371(3710) Economic Development (SBA)
Fall. 4 credits. Prerequisite: ECON 313 or equivalent. Studies the problem of sustaining accelerated economic growth in less-developed countries. Examines trade-offs between growth, welfare, and equity; the legacy of colonialism; relevance of history and economic theory; problems of capital formation, economic planning and international specialization, and the interaction of industrialization, agricultural development, and population change.

ECON 372(3720) Applied Economic Development (SBA)
Spring. 4 credits. Prerequisite: ECON 101–102. Examines several special topics in the economics of developing countries. Recent topics are the concepts of development and underdevelopment, the debate over development economics, the peasant household and its place in the world economy, the debt crisis, the state vs. market debate and the role of the state in economic development, and the question of sustainable development.

ECON 404(4040) Economics and the Law (SBA)
Fall. 4 credits. Prerequisite: ECON 101. Examines, through the lens of economic analysis, of legal principal, special topics from various branches of law, including contracts, torts, and property. Cases are assigned for class discussion; in addition, there are several writing assignments.
ECON 408(4080) Production Economics and Policy (SBA)
For description, see AEM 608.

ECON 405(4050) Auction Seminar (MQR)
Spring. 4 credits. Prerequisites: ECON 314, 319, 320, and 368.
Uses theoretical and empirical methods to analyze bidding behavior in auctions. The first part of the course studies theoretical models of auctions. The role of private information is discussed in the context of two empirically important auction formats: the first-price-sealed-bid and the open-ascending-bid auction. Bid-shading and the winner's curse are explained in these models. Optimal selling strategies as well as the issue of bidder collusion are analyzed. In the second part, empirical evidence on these topics is discussed in the context of outer continental-shelf oil auctions, Internet auctions, and treasury bill and spectrum auctions. One session is devoted to an auction experiment in class. In the final part of the course, students present and debate the issues of their semester papers. Readings are assigned weakly from the reading packet.

ECON 409(4090) Environmental Economics (SBA)
For description, see AEM 451.

ECON 416(4160) Intertemporal Economics (SBA)
Fall. 4 credits. Prerequisite: ECON 313.
Intended for advanced economics majors who are especially interested in economic theory. Topics include (1) review of the one good Ramsey model of optimal savings and accumulation; conditions for intertemporal efficiency in production; comparative dynamics and sensitivity analysis; (2) some earlier models of capital accumulation; the roles of present value and internal rate of return in guiding investment decisions; (3) growth, exhaustible resources; pollution and conservation; discussion of the trade-offs facing a society.

ECON 417(4170) History of Economic Analysis # (HA)
Spring. 4 credits. Prerequisites: ECON 101–102 or permission of instructor.
Covers early writings in economics and their relationship to current economic analysis and policy issues. Examples include: ancient and medieval philosophers on justice in exchange; mercantilist arguments for trade protection; early theories about the effect of monetary expansion (D. Hume); the role of the entrepreneur (Camton); and general competitive equilibrium (the Physiocrats). The most recent reading assignment in this course is Adam Smith's Wealth of Nations but the emphasis is on the relationship between the precursors of Adam Smith and his Wealth of Nations to modern economics analysis and current efforts to answer some of the questions raised in the early writing on economics.

ECON 419(4190) Economic Decisions under Uncertainty
Fall. 4 credits. Prerequisites: ECON 313 and 319. Next offered 2007–2008.
Provides an introduction to the theory of decision making under uncertainty with emphasis on economic applications of the theory.

ECON 430(4300) Policy Analysis: Welfare Theory, Agriculture, and Trade (SBA)
For description, see AEM 630.

ECON 431(4310) Monetary Economics (MQR)
Covers monetary theory, history, and policy. Topics include transaction costs, centralized and bilateral trading, media of exchange, international exchange and monetary arrangements, and central bank and its policy.

ECON 434(4340) Financial Economics, Derivatives, and Risk Management (SBA)
Summer only. 4 credits. Prerequisite: ECON 313.
Helps students understand, design, and price derivative contracts. Topics include pricing of forwards, options, and swaps; developing trading strategies with derivatives; using derivatives for financial risk management; and the importance of flexibility in various economic settings.

ECON 440(4400) Analysis of Agricultural Markets
ECON 440 and 441 together, count as one course for economics majors.
For description, see AEM 640.

ECON 441(4410) Commodity Futures Markets
ECON 440 and 441, together, count as one course for economics majors.
For description, see AEM 641.

ECON 443(4430) Compensation, Incentives, and Productivity
For description, see ILRLE 443.

ECON 444(4440) Evolution of Social Policy in Britain and America
For description, see ILRLE 444.

ECON 445(4450) Industrial Policy (SBA)
Spring. 4 credits. Prerequisite: ECON 313.
Highlights of the course include (1) the role of the state in an industrial society; the drive for industrialization; the prevention of de-industrialization; the views of the Nobelists—Friedman, the Libertarian vs. the North, the institutionist; the original intent of laissez-faire; (2) the major debates—the pros and cons of the Washington Consensus ("liberalization"); IMF and "conditionality"; market failure vs. government failure as roots for crises; (3) the East Asian episodes; Komiyama on the Japanese MITI—early successes/recent problems; Linus Kim about Korean policy—are subsequent difficulties the necessary price for the early triumphs? Industrial policy without protectionism (the cases of Singapore and Pennan, Malaysia)—viable approaches under the WTO rules; (4) present developments and implications; trade frictions (the export expansion of the PRC); environmental concerns.

ECON 447(4470) Economics of Social Security (SBA)
For description, see PAM 346.

ECON 450(4500) Resource Economics (SBA)
For description, see AEM 450.

ECON 451(4510) Economic Security (SBA)
For description, see ILRLE 340.

ECON 455(4550) Income Distribution (SBA)
For description, see ILRLE 441.

ECON 456(4560) The Economics of Employee Benefits (SBA)
For description, see ILRLE 442.

ECON 457(4570) Women in the Economy (also FGSS 446[4460]) (SBA)
For description, see ILRLE 445.

ECON 458(4580) Topics in 20th-Century Economic History (SBA)
For description, see ILRLE 448.

ECON 459(4590) Economic History of British Labor 1750 to 1940 (SBA)
For description, see ILRLE 446.

ECON 460(4600) Economic Analysis of the Welfare State (SBA)
For description, see ILRLE 642.

ECON 461(4610) The Economics of Occupational Safety and Health (SBA)
For description, see ILRLE 644.

ECON 469(4690) China's Economy under Mao and Deng (SBA)
Spring. 4 credits. Prerequisite: ECON 101–102 or permission of instructor. Next offered 2007–2008.
Examines the development of the Chinese economy and the evolution of China's economic system between the early 1990s and late 1990s.

ECON 473(4730) Economics of Export-Led Development (SBA)
Spring. 4 credits. Prerequisites: ECON 313, 314, or equivalent.
Examines the phenomenon of export-led development from both the theoretical and empirical points of view. Concentration is on experiences within the West Pacific Rim.

ECON 474(4740) Economics of Hunger and Malnutrition
For description, see NS 457.

ECON 475(4750) The Economy of India (SBA)
Fall. 4 credits. Prerequisite: ECON 101–102 or equivalent background. Next offered 2007–2008.
Presents the major economics and development problems of contemporary India and examines the country's future economic prospects. The aim is, however, to discuss these problems in their proper historical perspectives. Hence, the course starts with a brief outline of the social and political history of India. It then turns to a more detailed account of the economic history of India in two stages.

ECON 476(4760) Decision Theory I (also ECON 676[6760], CIS 576[5846]) (MQR)
Fall. 4 credits.
Research on decision theory resides in a variety of disciplines including computer science, economics, game theory, philosophy, and psychology. This course attempts to integrate these various approaches. The course is taught jointly by faculty from Game Theory and Computer Science. The course covers several areas: (1) basic decision theory; this theory, sometimes known as "rational choice theory," is part of the foundation for the disciplines listed above. It applies to decisions made by individuals or by machines; (2) the limitations of and problems with this
theory. Issues discussed here include decision theory paradoxes revealed by experiments, cognitive and knowledge limitations, and computational issues; (3) new research designed in response to these difficulties. Issues covered include alternative approaches to the foundations of decision theory, adaptive behavior and shaping the individual decisions by aggregate/evolutionary forces and more computationally based approaches.

ECON 477(4770) Decision Theory II (also ECON 677(6770), CIS 577(5847) (MQR))
Spring. 4 credits. Prerequisite: ECON 476 or 676 or CIS 576. A continuation of ECON 476.

ECON 480(4800) The Family in Asia
For description, see D SOC 480.

ECON 494(4940) Economic Methods for Engineering and Management
For description, see CEE 594.

ECON 498(4980) Independent Study in Economics
Fall or spring. Variable credit. Independent study.

ECON 499(4990) Honors Program
Fall and spring. 8 credits. Prerequisites: ECON 313, 314, 321 (or 319-320).

Students should consult the director of undergraduate studies for details. Admission is competitive. Interested students should apply to the program in the spring semester of their junior year.

Graduate Courses and Seminars

ECON 609(6090) Microeconomic Theory I
Fall. 4 credits. Topics in consumer and producer theory.

ECON 610(6100) Microeconomic Theory II
Spring. 4 credits. Topics in consumer and producer theory, equilibrium models and their application, externality and public goods, intertemporal choice; simple dynamic models and resource depletion, choice under uncertainty.

ECON 613(6130) Macroeconomic Theory I
Fall. 4 credits. Covers the following topics: static general equilibrium; intertemporal general equilibrium; infinitely lived agents models and overlapping generations models; welfare theorems; equivalence between sequential markets and Arrow-Debreu Markets; Ricardian proposition; Modigliani-Miller theorem; asset pricing; recursive competitive equilibrium; the Neoclassical Growth Model; calibration; and introduction to dynamic programming.

ECON 614(6140) Macroeconomic Theory II
Spring. 4 credits. Covers the following topics: dynamic programming; stochastic growth; search models; cash-in-advance models; real business-cycle models; labor indivisibilities and lotteries; heterogeneous agents models; optimal fiscal and monetary policy; sustainable plans; and endogenous growth.

ECON 617(6170) Intermediate Mathematical Economics I
Fall. 4 credits. Prerequisites: calculus II and intermediate linear algebra.

Covers selected topics in Matrix algebra (vector spaces, matrices, simultaneous linear equations, characteristic value problem), calculus of several variables (elementary real analysis, partial differentiation, convex analysis), classical optimization theory (unconstrained maximization, constrained maximization).

ECON 618(6180) Intermediate Mathematical Economics II
Spring. 4 credits. Next offered 2007–2008. Continuation of ECON 617. Develops additional mathematical techniques for applications in economics. Topics may include study of dynamic systems (linear and nonlinear difference equations, differential equation, chaotic behavior), dynamic optimization methods (optimal control theory, nonstochastic and stochastic dynamic programming), and game theory (repeated dynamic and evolutionary games).

ECON 619(6190) Econometrics I
Fall. 4 credits. Prerequisite: ECON 319–320 or permission of instructor.

Gives the probabilistic and statistical background for meaningful application of econometric techniques. Topics include probability theory probability spaces, random variables, distributions, moments, transformations, conditional distributions, distribution theory and the multivariate normal distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation, statistics: sample statistics, sufficiency, exponential families of distributions. Further topics in statistics are considered in ECON 620.

ECON 620(6200) Econometrics II
Spring. 4 credits. Prerequisite: ECON 619. A continuation of ECON 619 (Econometrics I) covering statistics: estimation theory, least squares methods, methods of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing; and econometrics: the general linear model; generalized least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

ECON 669(6690) Economics of Information
Spring. 4 credits. Prerequisite: ECON 609. Classical models of “perfect competition” require that economic agents are fully informed, or at least equally informed, about all relevant economic information. Prices, descriptions of commodities, and so forth. This course will study theoretical models that examine the difficulties of resource allocation when this assumption fails. The course will discuss models of: Auctions, adverse selection, bargaining, mechanism design, moral hazard, screening, searching and sorting. The course will begin with a survey of rudimentary incomplete information games that will be useful in understanding the literature to follow. Evaluation will be through problem sets and exams.

ECON 676(6760) Decision Theory I (also ECON 476(4760), CIS 576(5846))
For description, see ECON 476.

ECON 677(6770) Decision Theory II (also ECON 477(4770), CIS 577(5847))
For description, see ECON 477.

ECON 691(6910) Health Economics I
For description, see PAM 691.

ECON 692(6920) Health Economics II
For description, see PAM 692.

ECON 699(6990) Readings in Economics
Fall or spring. Variable credit. Independent study.

ECON 703(7030) Seminar in Peace Science
Fall. 4 credits. Topics covered at an advanced level are: game theory, coalition theory, bargaining and negotiation procedures, cooperative procedures, microbehavior models, macroeconomic processes, and general systems analysis.

ECON 710(7100) Stochastic Economics: Concepts and Techniques
Spring. 4 credits. Prerequisites: ECON 609, 610, 613, 614, 619, and 620. Reviews a number of techniques that have been useful in developing models of economic behavior. These include discrete-time Markov processes, dynamic programming under uncertainty, and continuous-time diffusion processes. Examples of economic models developed in the course include optimal capital accumulation and portfolio selection problems; permanent income hypothesis; and dynamic models of price adjustment. Advanced graduate students will be encouraged to write an expository paper on aspects of economic theory and econometric theory contrasted with exposure to current research.

ECON 712(7120) Advanced Macroeconomics
4 credits. Prerequisites: ECON 613, 614. Introduces students to some of the topics and analytic techniques of current macroeconomic research. The course has three parts: dynamic programming, new Keynesian economics, and recent theories of economic growth. The dynamic programming section introduces models of consumption, investment, and real business cycles. The new Keynesian section covers models of wage and price rigidity, coordination failure, and credit markets. The section on endogenous growth looks at recent efforts to add nonconvexities to models of optimal growth. These topics are geared to complement the material on overlapping generations covered elsewhere.

ECON 713(7130) Advanced Macroeconomics II
Spring. 4 credits. Prerequisites: ECON 613, 614. Reviews the most recent research in endogenous growth theory. This theory is little more than a decade old, but it has produced a large number of both empirical and theoretical results that have substantially reshaped the general field of macroeconomics. It is perhaps no exaggeration to say that most of the work at the frontier of today’s macroeconomics belongs to this field. An increasing number of papers have been touching important issues such as learning by doing, RD investment, market structure, private and public organization of RD, education financing, human capital accumulation, technological unemployment, growth and business cycles, inequality and growth, political economy, democracy, self-reference, and growth, instability, social conflict, capital accumulation, intergenerational and vested interests and barriers to technology adoption, international transfers of technologies, and sustainable development. This course aims to orient the student in this large and variegated literature consisting of recently published articles and working papers. Understanding this literature is a sound training in the analytical methods used at the frontier of theoretical research, but it also provides a...
number of empirical results at the center of the economic debate.

**ECON 714(7140) Empirical Microeconomics**
Spring. 4 credits. Prerequisites: ECON 613 and 614.
Advanced graduate-level course emphasizing empirical applications. Students learn how to deal with data and how to estimate and test macroeconomic theories, and can develop research topics in applied microeconomics for their dissertations.

**ECON 717(7170) Mathematical Economics**
4 credits. Prerequisites: ECON 609-610 (or equivalent training in micro theory) and MATH 413-414 (or equivalent training in analysis).
The primary theme of this course is to explore the role of prices in achieving an efficient allocation of resources in dynamic economies. Some of the classical results on static equilibrium and welfare economics are examined through an axiomatic approach. Some basic issues on capital theory are also analyzed.

**ECON 718(7180) Topics in Mathematical Economics**

**ECON 719(7190) Advanced Topics in Macroeconomics**
Fall. 4 credits. Prerequisite: ECON 619-620 or permission of instructor.
Covers advanced topics in macroeconomics, macroeconomic growth and development, and current developments in distributional theory, errors in variable and latent variable models, qualitative and limited dependent variables, and estimation in models with integrated regressors including, unit root tests, cointegration, and permanent vs. transitory components.

**ECON 720(7200) Advanced Topics in Econometrics II**
Spring. 4 credits. Prerequisite: ECON 619-620 or permission of instructor.
Covers advanced topics in time-series analysis and their applications, especially in finance, econometrics, and other fields. Topics include the theory of stationary stochastic processes including univariate ARMA(p,q) models, spectral density analysis, and vector autoregressive models; parametric and semi-parametric estimation; current developments in distributional theory, and estimation and testing in models with integrated regressors, including, unit root tests, cointegration, and permanent vs. transitory components.

**ECON 722(7210) Topics in Time Series Econometrics**
Spring. 4 credits. Prerequisite: ECON 721. Covers topics not treated by ECON 721. These include co-integration, fractional integration, long memory, and ARCH/GARCH models. Other topics may also be considered based on the interests of the students.

**ECON 723(7230) Semi/Non Parametric Econometrics**
Fall. 4 credits. Prerequisite: ECON 619-620 or permission of instructor.
Covers econometric techniques influencing the location of economic activity, its spatial equilibrium structure, and dynamic forces. Analyzes the ways identification problems limit the conclusions that may be drawn in empirical economic research and studies how identified and partially identified parameters can be estimated. In the first part of the course, the focus is on nonparametric models. Ways data can be combined with weak assumptions to yield partial identification of population parameters are discussed.

**ECON 731(7310) Monetary Economics**
Spring. 4 credits. Prerequisites: ECON 614 or permission of instructor.
Covers advanced topics in monetary economics, macroeconomics, and economic growth—such as economic volatility, the “burden” of government debt, restrictions on government borrowing, dynamic optimization, endogenous growth theory, technological evolution, financial market frictions, and cyclical fluctuations.

**ECON 732(7320) Monetary Economics**
Fall. 4 credits. Prerequisites: ECON 731 or permission of instructor.
Covers advanced topics in monetary economics, macroeconomics, and economic growth—such as economic volatility, the “burden” of government debt, restrictions on government borrowing, dynamic optimization, endogenous growth theory, technological evolution, financial market frictions, and cyclical fluctuations.

**ECON 735(7350) Public Finance: Resource Allocation and Fiscal Policy (also AEM 735(7350))**
Fall. 4 credits.
Develops a mathematical and highly analytical understanding of the role of government in market economies and the fundamentals of public finance and related issues. Topics include generalizations and extensions of the fundamental theorems of welfare economics, in-depth analysis of social choice theory, and the theory in implementation in economic environments, public goods and externalities, and other types of market failure associated with asymmetric information. The theoretical foundation for topics in direct and indirect taxation is also introduced along with the development of various consumer surplus measures and an application to benefit cost analysis. Topics of an applied nature vary from semester to semester depending on faculty research interests.

**ECON 736(7360) Public Finance: Resource Allocation and Fiscal Policy**
Spring. 4 credits.
Spends a large part of the semester covering the revenue side of public finance. Topics include the impact of various types of taxes as well as the determination of optimal taxation. The impact of taxation on labor supply, savings, company finance and investment behavior, risk bearing, and portfolio choice are explored. Other topics include the interaction of taxation and inflation, tax evasion, tax incidence, social security, unemployment insurance, deficits, and interactions between different levels of government.

**ECON 737(7370) Location Theory and Regional Analysis**
Fall. 4 credits. Prerequisites: ECON 609, 617, and econometrics course. Next offered 2007-2008.
Covers economic principles influencing the location of economic activity, its spatial equilibrium structure, and dynamic forces. Topics include spatial pricing policies, price competition, and relocation by firms; residential location patterns, patterns of regional growth and decline, and patterns of urbanization.

**ECON 738(7380) Public Choice**
Spring. 4 credits. Prerequisites: ECON 609, 610.
This course has two parts. It begins with an introduction to economic theories of political decision making. Reviews the theory of voting, theories of political parties and party competition, theories of legislative decision making and interest group influence. Also discusses some of the classical results on static fundamental theorems of welfare economics, and discusses the problem of doing policy analysis, which takes into account political constraints.

**ECON 739(7390) Advanced Topics in State and Local Public Finance**
Spring. 4 credits. Prerequisites: ECON 609, 610.
Provides an in-depth examination of microeconomic theory surrounding the role of subnational governments and jurisdictions in the economy. Among the broad questions addressed are: What tasks are optimally assigned to local governments? What impact can such assignment have on efficiency and equity? In addition to the theoretical foundations on these issues, the course explores recent empirical evidence in this area, with particular attention to the research designs and data used in relevant papers.

**ECON 741(7410) Seminar in Labor Economics**
For description, see ILRLE 744.

**ECON 742(7420) Seminar in Labor Economics**
For description, see ILRLE 745.

**ECON 743(7430) Seminar in Labor Economics**
For description, see ILRLE 746.

**ECON 746(7460) Economics of Higher Education**
For description, see ILRLE 746.

**ECON 747(7470) Economics of Higher Education**
For description, see ILRLE 747.

**ECON 748(7480) Applied Econometrics I**
For description, see ILRLE 741.

**ECON 749(7490) Applied Econometrics II**
For description, see ILRLE 742.

**ECON 751(7510) Industrial Organization and Regulation**
Fall. 4 credits. Prerequisites: ECON 609, 610.
Focuses primarily on recent theoretical advances in the study of industrial organization. Topics include market structure, nonlinear pricing, quality, durability, location selection, repeated games, collusion, entry deterrence, managerial games, switching costs, government intervention, and R&D and patents. These topics are discussed in a game-theoretic context.
ECON 752(7520) Industrial Organization and Regulation
Spring. 4 credits. Prerequisites: ECON 609, 610, 751.
Rounds out some topics in the theory of industrial organization with the specific intent of addressing the empirical implications of the theory. Reviews empirical literature in the SCP paradigm and in the NEIO paradigm.

ECON 756(7560) Noncooperative Game Theory
Fall. 4 credits. Prerequisites: ECON 609–610 and 619.
Surveys equilibrium concepts for noncooperative games. Covers Nash equilibrium and a variety of equilibrium refinements, including perfect equilibrium, proper equilibrium, sequential equilibrium and more. Pays attention to important special classes of games, including bargaining games, signalling games, and games of incomplete information. Most of the analysis is from the strict decision-theoretic point of view, but also surveys some models of bounded rationality in games, including games played by automata.

ECON 757(7570) Economics of Imperfect Information
Spring. 4 credits. Prerequisites: ECON 609–610 and 619.
Considers some major topics in the economics of uncertain information. Although the precise topics considered vary from year to year, subjects such as markets with asymmetric information, signalling theory, sequential choice theory, and record theory are discussed.

ECON 758(7580) Psychology and Economic Theory
Fall, spring. 4 credits. Prerequisites: economics graduate core or permission of instructor.
Explores the ways in which insights from psychology can be integrated into economic theory. Presents evidence on how human behavior systematically departs from the standard assumptions of Economics and how this can be incorporated into modeling techniques.

ECON 760(7600) Topics in Political Economy
Fall. 4 credits. Prerequisite: economics graduate core or permission of instructor.
Develops critiques and extensions of economic theory, taking into account the political and social moorings of economic activity and equilibria. The formation and persistence of social norms, the meaning and emergence of property rights; the role of policy advice in influencing economic outcomes; and the effect of political power and ideology on economic variables are studied. While these topics were popular in the classic works of political economy, recent advances in game theory and, more generally, game-theoretic thinking allows a new approach to these topics. Hence, the course begins by devoting some lectures to elementary ideas in game-theory and strategic analysis.

ECON 761(7610) International Economics: Trade Theory and Policy
Fall. 4 credits. Prerequisites: ECON 609, 610.
Surveys the sources of comparative advantage. Analyzes simple general equilibrium models to illustrate the direction, volume, and welfare effects of trade. Topics in game theory and econometrics as applied to international economics may be covered.

ECON 762(7620) International Economics: Inference, Finance and Open Economy Macroeconomics
Spring. 4 credits. Prerequisite: ECON 761.
Surveys the determination of exchange rates and theories of balance of payments. Explores open economy macroeconomics by analyzing models of monetary economics. Topics in monetary economics and econometrics as applied to international economics are covered.

ECON 763(7630) Topics in International Economic History
Spring. 4 credits. Prerequisite: solid understanding of international trade and finance.
Covers selected topics in modern economic history. Focusses on the process of international economic integration, or globalization. Traces the roots of globalization and its evolution in the last several centuries. Special attention is paid to the relationship between international market integration and economic growth.

ECON 770(7700) Topics in Economic Development
For description, see AEM 667.

Spring. 4 credits. Prerequisites: economics graduate core.
Focuses on empirical methods for the analysis of household survey data. Explores the hands-on use of such data to address policies issues related to welfare outcomes, particularly nutrition, health, education, and poverty. Covers empirical methods as they apply to a series of measurement and modeling issues, as well as the valuation of interventions. While underlying theory is reviewed briefly, the course attempts to bridge the gap between theory and practice, addressing issues such as model identification, functional form, estimation techniques to control for endogeneity and heterogeneity, and so forth. The course grade is based primarily on two empirical exercises, and related write-up, as well as class participation. Students are given actual household data sets and software with which to conduct exercises. These data enable students to apply analytical techniques discussed. Data sets are provided from African, Asian, and Latin American countries.

ECON 772(7720) Economics of Development (also IRLE 749(7490))
Spring. 4 credits. Prerequisite: first-year graduate economic theory and econometrics.
Analytical approaches to the economic problems of developing nations. Topics include old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

ECON 773(7730) Economic Development
Fall. 4 credits. Prerequisites: ECON 609, 610, and 611.
Concerned with theoretical and applied works that seek to explain economic development, or lack thereof, in countries at low-income levels. Specific topics vary each semester.

ECON 774(7740) Economic Systems
Spring. 4 credits. Prerequisite: economics graduate core.
Deals with economic systems, formerly centrally planned economies, and economies in transition.

ECON 775(7750) Development Microeconomics
Spring. 4 credits. Prerequisites: economics graduate core.
Explores the application of microeconomic analysis to economic issues in developing countries. Focuses on household behavior and the analysis or rural institutions. Covers the neoclassical agricultural household model and development innovations in the theory of the household, topics in rural economics, financial arrangements, program evaluation and the interaction of social norms and economic organization. Designed to prepare students for applied research in micro development economics by giving an overview over the current state of research in that discipline.

ECON 784(7840) Seminars in Advanced Economics
Fall and spring. 4 credits.

ECON 785(7850) Third-Year Research Seminar
Fall. 4 credits.

ENGLISH
The Department of English offers a wide range of courses in Anglophone literature as well as in creative writing, expository writing, and film analysis. Literature courses focus variously on close reading of texts, study of particular authors and genres, questions of critical theory and method, and the relationship of literary works to their historical contexts and to other disciplines. Writing courses typically employ the workshop method in which students develop their skills by responding to criticism of their work by their classmates as well as their instructors. Many students supplement their formal course work in English by attending public lectures and poetry readings sponsored by the department or by writing for campus literary magazines. The department
seeks not only to foster critical analysis and lucid writing but also to teach students to think about the nature of language and to be alert to both the rigors and the pleasures of reading texts of diverse inspiration.

**First-Year Writing Seminars**

As part of the university-wide First-Year Writing Seminars program administered by the John S. Knight Institute for Writing in the Disciplines, the department offers many one-semester courses dealing with various forms of writing (e.g., narrative, autobiographical, and expository), with the study of specific areas in English and American literature, and with the relation of literature to culture. Students may apply any of these courses to their first-year writing seminar requirement. Detailed course descriptions may be found in the first-year writing seminars program listings available from college registrars in August for the fall semester and in November for the spring semester.

Freshmen interested in majoring in English are encouraged to take at least one of the department's 200-level first-year writing seminars. ENGL 270 Introduction to Fiction; ENGL 271 The Reading of Poetry, and ENGL 272 Introduction to Drama. These courses are open to all second-semester freshmen. They are also open, as space permits, to first-semester freshmen with scores of 700 or above on the CEEB College Placement Tests in English composition or literature, or 4 or 5 on the CEEB Advanced Placement Examination in English, as well as to students who have completed another first-year writing seminar.

**Courses for Nonmajors**

For students majoring in fields other than English, the department provides a variety of courses at all levels. A number of courses at the 200 level are open to qualified freshmen, and all are open to sophomores. Courses at the 300 level are open to all sophomores, juniors, and seniors; they are also open to freshmen who have received the instructor's prior permission. The suitability of courses at the 400 level and above depends in part on the course topics, which are subject to change from year to year. Permission of the instructor is sometimes required; prior consultation is always strongly advised.

**The Major in English**

Students who major in English develop their own programs of study in consultation with their major advisors. Some choose to focus on a particular historical period or literary genre or to combine sustained work in creative writing with their study of the literature. Others pursue interests in such areas as women's literature, African-American literature, literature and the visual arts, or critical theory.

The department recommends that students prepare themselves for the English major by taking one or more of its preparatory courses, such as ENGL 270 Introduction to Fiction, ENGL 271 The Reading of Poetry, or ENGL 272 Introduction to Drama. (The "ENGL" prefix identifies courses sponsored by the Department of English, all of which appear on the department's supplementary lists of courses; it also identifies courses sponsored and taught by other academic units and cross-listed with English.) These courses concentrate on the skills basic to the English major and to much other academic work—responsive, sensitive reading and lucid, strong writing. As first-year writing seminars, any one of them will satisfy one half of the College of Arts and Science's first-year writing requirement. ENGL 201, 280, 281, 288, and 289 are also suitable preparations for the major and are open to students who have completed their first-year writing seminar requirement. ENGL 201 and 202, which together constitute a two-semester survey of major British writers, though not required, are strongly recommended for majors and prospective majors. ENGL 201 and 202 (unlike ENGL 280, 281, 288, and 289) are also "approved for the major" in the special sense of that phrase explained below.

To graduate with a major in English, a student must complete with passing letter grades 10 credits at the 200 level and pre-1800 requirements may be satisfied with either English or to satisfy the pre-1800 requirement are so identified in the department's Guide to the Courses of Study. Many English majors use ENGL 201 to begin meeting this requirement since it provides an overview of earlier periods of British literature and so enables them to make more informed choices of additional courses. ENGL 202 does not qualify as a pre-1800 course. Neither do courses offered by other departments unless they are cross-listed with English. Advanced courses in foreign literature may not be used to fulfill the pre-1800 requirement, but they may be used for English major credit provided they are included within the 12-credit limit described below. The three-course concentration requirement may be satisfield with courses approved for the major. The department's Guide to the English Major" suggests areas of concentration and offers examples of courses that fall within those areas, but majors define their own concentrations in consultation with their advisors.

As many as 12 credits in appropriate courses offered by departments and programs other than English may be used to satisfy English major requirements. Courses in literature and creative writing offered by academic programs representing neighboring or allied disciplines (German Studies, Romance Studies, Russian, Asian Studies, Classics, Comparative Literature, Africana Studies, the Society for the Humanities, American Studies, Feminist, Gender and Sexuality Studies, Religious Studies, Asian American Studies, American Indian Studies, Latino Studies, and Theatre, Film, and Dance) are routinely counted toward the 40 hours of major credit provided they are appropriate for juniors or seniors, as most are courses at the 300 level and above. ENGL 270, 271, and 272 are also appropriate preparations for the major. Credit from non-ENGL courses may be included within the 12 credits of nondepartmental courses approved for the major only when the student is able to demonstrate to the advisor's satisfaction their relevance to his or her individual program of study.

**Planning a Program of Study**

few students know from the moment they decide to pursue a major in English exactly what they wish to study. Moreover, it is natural for interests to change in the course of time. The effort of each academic unit in creating a coherent pattern in the courses selected is itself a valuable part of a literary (as well as a liberal) education, and English majors are expected to discuss their overall program of study when seeking their advisors' approval of courses each semester. While the Department leaves a great deal to the discretion of its individual majors and their academic advisers, it expects them to choose courses with an eye to breadth and variety of hand and focus and coherence on the other.

Students with a special interest in developing their skills as writers of verse or prose will find a variety of workshop courses in expository and creative writing. As a rule, a student may not enroll in more than one such course in any given semester, although exceptions are sometimes allowed where one of these is ENGL 288 or 289. A number of English majors do part of their coursework at a foreign institution, usually during their junior year; some spend a single semester away from campus, others an entire year. The Cornell Abroad office has information on a variety of programs at universities around the world. Many English majors study abroad in the United Kingdom and other English speaking countries, but some choose other locations. As long as they continue to meet all College and Department requirements or can complete them upon returning to Cornell, studying abroad poses no serious problems. Students spending their entire junior year abroad will be challenged to complete the Department's Honors program since they will be unable to take the required Honors seminar in the junior year and will have to take it when they return as seniors.

They can make arrangements through the chair of the Honors Committee before leaving campus.

Credit for literature courses taken abroad can in most instances be applied to the 40-hour minimum for the English major, and to requirements like the concentration and pre-1800 requirements. Applicants for a major are encouraged to apply credit for study abroad to the English major is granted by the DUS rather than the
academic advisor, however, and students must confer with the DUS in advance of going abroad as well as on their return. The first conference includes a review of catalogue descriptions of courses the student expects to take while abroad (along with a few alternatives) and presentation of transcripts or equivalent documentation of successful completion of the work proposed, together with papers and exams.

No more than 16 credits per year, or 8 credits per semester, of non-Cornell credit may be applied to the English major. This restriction applies to study abroad even when that study is conducted under Cornell auspices.

The Major in English with Honors
Second-semester sophomores who have done superior work in English and related subjects are encouraged to seek admission to the departmental program leading to the degree of bachelor of arts with honors in English. Following an interview with the chair of the Honors Committee, qualified students will be admitted provisionally to the program. During their junior year these students complete at least one honors seminar (ENGL 491 or 492) and are encouraged to take an additional 400-level English course in the area of their thesis topic. On the basis of work in these and other English courses, a provisional honors candidate must select a thesis topic and secure a thesis advisor by the end of the junior year. A student who has been accepted by a thesis advisor becomes a candidate for honors rather than a provisional candidate.

During the senior year, each candidate for honors in English enrolls in a year-long tutorial (ENGL 493–494) with a faculty member chosen as thesis advisor. The year's work culminates in the submission of a substantial scholarly or critical essay to be judged by at least two members of the faculty. More information about the Honors Program may be found in a leaflet available in the English offices.

First-Year Writing Seminars Recommended for Prospective Majors

ENGL 270(2700) The Reading of Fiction
Fall, spring, summer. 3 credits. Each section limited to 17 students. Recommended for prospective majors in English. This course does not satisfy requirements for the English major.

This course examines modern fiction, with an emphasis on the short story and novel. We'll read critical essays on authors who flourished between 1870 and the present, such as James, Joyce, Woolf, Hurston, Lawrence, Fitzgerald, Faulkner, Byatt, Salinger, and Morrison. Reading lists vary from section to section, and some may include a novel, but close, attentive, and imaginative reading and writing are central to all.

ENGL 271(2710) The Reading of Poetry
Fall, spring. 3 credits. Each section limited to 17 students. Recommended for prospective English majors. This course does not satisfy requirements for the English major.

How can we become more appreciative, literate readers of poetry and at the same time better writers of prose? This course attends to the rich variety of poems written in English, drawing on the works of poets from William Shakespeare to Sylvia Plath, John Keats to Li-Young Lee, Emily Dickinson to A. R. Ammons. We may read songs, sonnets, odes, villanelles, even limericks. By engaging in thorough discussions and varied writing assignments, we explore some of the major periods, modes, and genres of English poetry, and in the process expand the possibilities of our own writing.

ENGL 272(2720) Introduction to Drama
Fall, spring. 3 credits. Each section limited to 17 students. Recommended for prospective English majors. This course does not satisfy requirements for the English major.

Students in this seminar study plays, older and newer, in a variety of dramatic idioms and cultural traditions. Plays being performed by the theatre department are included, if possible. A typical reading list might include works by Sophocles, Shakespeare, Chekhov, Brecht, Miller, Beckett, and Shange. Course work consists of writing and discussion, and the occasional viewing of live or filmed performances.

Expository Writing

ENGL 288-289(2880-2890) Expository Writing (LA)
Fall, spring, summer. 3 credits. Each section limited to 16 students. Students must have completed their college's first-year writing requirements or have the permission of the instructor. S. Davis and staff. Web site: http://instruct1.cit.cornell.edu/Courses/engl288-289. This course does not satisfy requirements for the English major.

ENGL 288-89 offers guidance and an audience for students who wish to gain skill in expository writing. Each section provides a context for writing defined by a form of exposition, a disciplinary area, a practice, or a topic intimately related to the written medium. Course members will read in relevant published material and write and revise their own work regularly, while reviewing and responding to one another's essays. Since these seminar-sized courses depend on members' full participation, regular attendance and submission of written work are required. Students and instructors will confer individually throughout the semester. ENGL 288-89 does not satisfy requirements for the English major.

ENGL 381(3810) Reading as Writing, Writing as Reading (LA)
Fall. 4 credits. Limited to 15 students. Prerequisite: permission of instructor based on a writing sample. S. Davis.

Every reading is a rewriting, arguably, every original imaginative work reads and rewrites itself and its predecessors, as it goes along. We'll read 19th- and 20th-century works that illustrate this process while attending to one another's critical writing as collaborators and commentators. This is a course for English majors and non-majors who wish to extend their mastery of critical and interpretive prose and their understanding of what they do when they write it. Tentatively for 2007: fiction by Vladimir Nabokov, Emily Bronte, Jean Rhys, Joseph Conrad, Tayeb Salih, Oscar Wilde, and Virginia Woolf, and poetry by William Wordsworth and Edgar Allan Poe. See http://instruct1.cit.cornell.edu/~sad4/fpf/.

ENGL 386(3860) Philosophic Fictions (LA)
Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor based on a writing sample. S. Davis.

"Fictions" of thought and language abound in works that deliberately test and play with ideas: dialogues, satires, parables, philosophic tales, and "thought-experiments." Students will write critically about such works and will experiment with writing in similar forms in order to argue flexibly, ridicule vice and folly, or involve readers in pleasingly or disturbingly insoluble problems. Readings may include Plato's Republic, Swift's Gulliver's Travels, parables by Jesus and Kafka, dystopias by Ursula Le Guin and Caryl Churchill, science fiction by Philip K. Dick and Octavia Butler, short stories by Jorge Luis Borges and Flannery O'Connor, and essays by Richard Rorty and Jacques Derrida. See http://instruct1.cit.cornell.edu/~sad4/fpf/.

ENGL 387(3870) Autobiography: Theory and Practice (LA)
Fall. 4 credits. Limited to 15 students. By permission of instructor on the basis of writing samples. K. Gottschalk.

In this seminar, students engage in the study and practice of autobiographical writing through frequent writing assignments (resulting in production of a final portfolio of selected polished work) and through the examination of texts by writers such as Manette Ansay and Henry Louis Gates (both having strong ties to Cornell), Jamaica Kincaid, and Anne Lamott. Course limited to 15 students. Prerequisite: permission of the instructor on the basis of a writing sample, which should reach the instructor before the first day of class.

ENGL 388(3880) The Art of the Essay (LA)
Fall. 4 credits. Limited to 15 students. By permission of instructor on the basis of writing samples. Interested students should submit one or more pieces of recent writing (prose) to the instructor before the beginning of the semester, preferably at pre-enrollment. J. Carlacio.

For both English majors and nonmajors who have done distinguished work in first-year writing seminars and in other courses such as ENGL 280 and 281, and who desire intensive practice in writing essays as a kind of creative nonfiction. The course assumes a high degree of self-motivation, a capacity for independent work, and critical interest in the work of other writers; it aims for a portfolio of conceptually rich and stylistically polished writing.

Creative Writing
Students usually begin their work in Creative Writing with ENGL 280 or 281, and only after completion of the First-Year Writing Seminar requirement. Please note that either ENGL 280 or ENGL 281 is the prerequisite for 300-level creative writing courses. ENGL 280 and 281 may satisfy a distribution requirement.
in your college (please check with your college advisor). ENGL 382-383, 384-385, and 480-481 are approved for the English major.

**ENGL 280-281 (2800-2810) Creative Writing (LA)**
Fall, spring, summer, winter. 3 credits. Limited to 18 students. Prerequisite: completion of the First-Year Writing Seminar requirement. Majors and prospective majors, please note: Although recommended for prospective English majors, ENGL 280-281 cannot be counted toward the 40 credits required for completion of the English major. It is a prerequisite for ENGL 380-381 level courses in creative writing, which count toward the major. ENGL 280 is not a prerequisite for ENGL 281.

An introductory course in the theory, practice, and reading of prose, poetry, and allied forms. Students are given the opportunity to try both prose and verse writing and may specialize in one or the other. Many of the class meetings are conducted as workshops.

**ENGL 382-383 (3820-3830) Narrative Writing (LA)**
Fall, spring, 383. 4 credits each semester. Each section limited to 15 students. Prerequisite: ENGL 280 or 281 and permission of instructor based on submission of a manuscript (bring manuscript to first day of class). Fall: sec 1, H. Viramontes; sec 2, S. Vaughn; sec 3, R. Morgan; Spring: sec 1, M. Koch; sec 2, E. Quinonez; sec 3, M. McCoy.

The writing of fiction; study of models; analysis of students' work.

**ENGL 384-385 (3840-3850) Verse Writing (LA)**
Fall or summer, 384; spring, 385, 4 credits. Each section limited to 15 students. Prerequisite: ENGL 280 or 281 and permission of instructor based on submission of manuscript (bring manuscript on first day of class). Fall: sec 1, L. Van Clef-Stefanon; sec 2, M. McCoy; Spring: sec 1, A. Fulton; sec 2, staff.

The writing of poetry; study of models; analysis of students' poems; personal conferences.

**ENGL 480-481 (4800-4810) Seminar in Writing (LA)**
Fall, spring, 481. 4 credits each semester. Each section limited to 15 students. Prerequisite: permission of instructor, normally on the basis of a manuscript. The manuscript should be submitted to the instructor no later than the first day of class. Previous enrollment in ENGL 280 or 281 and at least one 300-level writing course recommended. Successful completion of one half of the 480-481 sequence does not guarantee enrollment in the other half; students must receive permission of the instructor to enroll in the second course. Fall: Sec 1, L. Van Clef-Stefanon; sec 2, M. McCoy; spring: K. McClane and J. Lennon. Intended for majors who have already gained a basic mastery of technique. Although ENGL 480 is not a prerequisite for ENGL 481, students normally enroll for both semesters and should be capable of a major project—a collection of stories or poems, a group of personal essays, or perhaps a novel—to be completed by the end of the second semester. Seminars are used for discussion of the students' manuscripts and published works that individual members have found of exceptional value.

**Courses for Freshmen and Sophomores**

These courses have no prerequisites and are open to freshmen and nonmajors as well as majors and prospective majors.

**Introductions to Literary Studies**

**ENGL 200 (2000) Introduction to Criticism and Theory (LA)**
Fall. 4 credits. S. Mohanty.

This is an introductory course that explores some of the key concepts and methods used in literary studies. Focusing on a few literary texts and some drawn from popular culture, we will try to answer such basic questions as: what does it mean to read and analyze texts well? What roles do history and social ideology play in our readings? What, after all, is "art"?

We will also focus on literary and cultural theory, examining both contemporary questions and historical ones. Readings on aesthetics and critical theory from a variety of cultural traditions will be analyzed—from classical writings on beauty and the nature of art to contemporary works that focus on such issues as gender, race, and sexuality.

**ENGL 201-202 (2010-2020) The English Literary Tradition I (LA)**
Fall, 201; fall, 202; spring, 4 credits each semester. ENGL 201, not a prerequisite for 202, may be used as one of the three pre-1800 courses required of English majors.

D. Fred. Fall (201): An introduction to the study of English literature, examining its historical development and achievements from its beginnings to the middle of the 17th century. Readings will include Bunyan and Sir Gawain and the Green Knight in modern translation, selections from Chaucer's Canterbury Tales and the writings of medieval women, Book 1 of Spencer's Faerie Queene, Elizabethan sonnets, a play by Shakespeare, poems by Donne, Marvell and Herbert, and selections from Milton's Paradise Lost. Lectures are supplemented by small discussion groups once a week.

Spring (202): An introductory survey of English literature from the late 17th century to the 20th century. We begin with the satires of the Restoration and 18th century including Pope's mock epic The Rape of the Lock and Swift's Gulliver's Travels, and selections from Johnson's poems and criticism. Selections from the Romantic era will include Blake's Songs of Innocence and Experience, poems and prose of Wordsworth, Coleridge, Shelley, and Keats; and a novel by Jane Austen. We will read poetry and prose from the Victorian era by Tennyson, Browning, Arnold, and Hopkins, plus Wilde's play The Importance of Being Earnest, and approach early 20th-century literature through Hardy, Forster, and Eliot. Lectures will be supplemented by small discussion groups once a week.

**ENGL 203 (2030) Introduction to American Literature: Writing America, from Colonialism to the "American Renaissance" (also AM ST 206 [2030]) (LA)**
Fall. 4 credits. A. Galloway.

This course may be used as one of the three pre-1800 courses required of English majors.

This class will explore some of the writing from and about America, from pre-colonial times until about 1850. We will start with writings that defined the terms in which British thinkers and American colonists understood the "New World" and its political possibilities, such as Thomas Paine, Benjamin Franklin and Thomas Jefferson, and some early Native American poetry and stories. Then we will spend the bulk of the term with selected writers from the 17th century into the "American Renaissance": Jonathan Edwards, Charles Brockden Brown, Ralph Waldo Emerson, Margaret Fuller, Nathaniel Hawthorne, Frederick Douglass, Herman Melville, Edgar Allen Poe, Emily Dickinson, and Walt Whitman.

**ENGL 204 (2040) Introduction to American Literatures: The Making of America: Reconstruction to the Present (also AM ST 207 [2040]) (LA)**
Spring. 4 credits. J. Carlaw.

As the Civil War came to an end, the United States attempted to come to terms with a racialized past. America continued to struggle to identify itself broadly as a democratic nation and specifically as a "melting pot" of individuals fighting for their civil and sovereign rights. We will examine texts that exemplify how American writers articulated their desire for citizenship as well as for the right to act out a politics of difference. To this end, we will read texts that engage in a conversation about these issues, such as those authored by Native Americans, African Americans, Asian Americans, Latino/a Americans, and Anglo-Americans. This course will blend lecture with discussion and include both short and long writing assignments.

**ENGL 205 (2050) Introduction to World Literatures in English (LA)**

**ENGL 206 (2060) The Great American Cornell Novel (also AM ST 210 [2060]) (LA)**

**ENGL 207 (2070) Introduction to Modern Poetry (LA)**
Spring. 4 credits. R. Gilbert.

This course will survey English-language poetry written in the 20th century, with primary emphasis on American poets. We will consider poems written in traditional verse as well as in innovative forms; short poems and long poems; poems that are relatively easy to read and poems that are extremely challenging; poems that deal with issues of war, race, gender, sex, science, and other topics; important poetic movements like Imagism and the Confessional mode. Poets to be studied may include Yeats, Frost, Pound, H.D., Williams, Stevens, Stein, Eliot, Hughes, Cullen, Bishop, Brooks, Berryman, Ginsberg, Ammons, Plath, Rich, and Fulton. Students will submit weekly reading responses, some of which may take the form of original poems. Two essays and a final exam.

**ENGL 208 (2080) Shakespeare and the 20th Century (LA)**
Spring. 4 credits. S. Davis.

This course may be used as one of the three pre-1800 courses required of English majors. What can we learn about Shakespeare's plays from their reception in the 20th and 21st centuries? What can we learn about modern cultures from their appropriations of these
texts? We will study four or five plays and their adaptations in film and theater and use the resources made of Shakespeare in education, advertising, and public culture and by the "Shakespeare industry" itself. For spring 2007, tentatively: Titus Andronicus, Twelfth Night, Merchant of Venice, Hamlet, and Macbeth, together with Tom Stoppard's Dog's Hamlet, Cabot's Macbeth, and films directed by Michael Radford, Trevor Nunn, Julie Taymor, Grigori Kozintsev, Michael Almereyda, and Akira Kurosawa. See http://instruct1.cit.cornell.edu/~sad4/208.

[ENGL 209(2090) Introduction to Cultural Studies (CA)]

[ENGL 227(270) Shakespeare (also THETR 277[2770]) (LA)]
Fall. 4 credits. May be used as one of the three pre-1800 courses required of English majors. B. Correll. A lecture and discussion course that offers students a survey of representative Shakespearean comedies, tragedies, and history plays. Our study will include attention to forms, themes, and historical contexts, including history of the early modern English theater. We read nine plays, including The Merchant of Venice, Twelfth Night, The Tempest, Otello, King Lear, Richard II, Henry IV Part One, and Henry V.

[ENGL 275(2790) The Essay in English (LA)]

[ENGL 287(2740) Scottish Literature] (LA)
Fall. 4 credits; may be taken for 3 or 4 credits; those choosing 4 credits will complete an additional writing project. May be used as one of the three pre-1800 courses required of English majors. H. Shaw and T. Hill. Although Scotland, which was long a separate nation, is now politically united with England, it preserves its distinctiveness. This course provides an introduction to Scottish literature, with special emphasis on the medieval period and the 18th through the 20th centuries. The course should appeal to those who wish to learn about their Scottish heritage, and also those who simply wish to encounter a remarkable national culture and the literature it has produced. Some of the texts will be read in Scots, but no familiarity with Scots or earlier English is presumed. We welcome readers of literature who are not English majors.

[ENGL 276(2760) Desire] (also COM L 276[2760], FGSS 276[2760], THETR 278[2780]) (LA]
Spring. 4 credits. Letter grades only. E. Hanson. "Language of skin," the critic Roland Barthes once wrote: "I rub my language against the other. It is as if I had words instead of fingers, or fingers at the tip of my words. My language trembles with desire." Sexual desire has a history, even a literary history, which we will examine through an introductory survey of European dramatic literature from Plato and Aristophanes to Jean Genet and Gairy Churchill, as well as a survey of classic readings in Western sexual theory. We will explore Freud and Foucault to contemporary feminism and queer theory. Topics for discussion will include pederasty, mysticism, hysteria, sadomasochism, pornography, cybersex, and other performative pleasures.

[ENGL 277(2770) Literatures of the Black Atlantic: Reading the Contemporary (LA)]
Spring. 4 credits. D. Woubshet. This course will examine contemporary African and African Diasporic literatures. Through aesthetic, generic, and contextual approaches we will consider how relationships in the black Atlantic world (Africa, the Caribbean, and the United States) are reconfiguring themselves. We will ask what are the recurring themes within such literature? Upon what history and what fiction is such a world brought together? How is globalization fueling the intercourse between the various black Atlantic worlds? We will consider literature across genres to bring out some of the central motifs of our contemporary moment: geography, nationality, race, class, gender and sexual difference. Readings may include: Morrison's Tar Baby, Kincaid's A Small Place, Walcott's "The Antilles: the Fragments of Epic Memory"; and Baldwin's Just Above My Head.

[ENGL 293(2930) Survey in African American Literature] (also AM ST 293[2930]) (LA]
Fall. 4 credits. The course is designed for majors but will be open to all interested students. Next offered 2007–2008.

Special Topics

[ENGL 210(2100) Medieval Romance: Voyage to the Otherworld] (LA)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2007–2008. T. Hill.

[ENGL 217(2170) History of the English Language] (also LING 217[2170])
Fall. 4 credits. W. Harbert. For description, see LING 217.

[ENGL 263(2630) Studies in Film Analysis: Hitchcock] (also FILM 265[2650]) (LA]
Fall. 4 credits. Limited to 20 students. L. Bogel. Through detailed analysis of at least 15 of Hitchcock's major films—from British silents such as Blackmail and the British talkies of the 30s (The Thirty-Nine Steps) to the early 40s work in Hollywood (Spellbound, Notorious), and the major American films of his late period (Rear Window; Psycho) we will consider Hitchcock as a major technical and stylistic innovator in the history of cinema. As texts for psychoanalytic and feminist approaches to psychoanalysis and film we will use psychoanalytic and feminist approaches to film and the mediations of film, the ethics of spectatorship, and the nature of desire and sexuality. Frequent short essays and viewing exercises encourage students to engage through their writing the course's critical concerns. Regular required screenings after class.

[ENGL 264(2640) The Private I and the Public Eye: Exploring Latino/a Identity in Poetry, Fiction, and Non-Fiction] (also LSP 264[2640])
Fall. 4 credits. H. Viramontes. For the most part literary theories have assumed that autobiography (the private) and the political (the public) can be considered as separate or irreconcilable domains. This course, however, will explore ways that private expression can be used to investigate and engage the political. Through textual analysis of personal essays, poetry, and fiction, we'll read and discuss how Latino/a writers succeed in questioning or challenging boundary lines between public and private. We'll ask how they aspire, through their imagination and their own social location, to inspire their work. Using various genres introduced in class, students will have the opportunity to explore and ground their own understanding of identities. Authors may include: Norma Cantú, Alicia Gaspar de Alba, Minnie Bruce Pratt, Judith Ortiz Cofer, Julia Alvarez, Gustavo Firmet, Elías Miguel Muñoz, Luis Rodríguez.

ENGL 292(2920) Introduction to Visual Studies (also VISS 200[2000]) (LA)
Spring. 4 credits. T. Murray.
For description, see VISS 200.

ENGL 297(2970) Sophomore Seminar: Sustainable Literature (CA)

Courses for Sophomores, Juniors, and Seniors
Courses at the 300 level are open to sophomores, juniors, and seniors and to others with the permission of the instructor.

ENGL 302(2020) Literature and Theory (also ENGL 602[6020], COM L 302/3022[3022][3022][L]) (LA)
Fall. 4 credits. J. Culler.
Study of issues in contemporary theoretical debates with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings by Roland Barthes, Judith Butler, Jacques Derrida, Michel Foucault, Barbara Johnson, Jacques Lacan, and others. No previous knowledge of literary theory is assumed.

[ENGL 308(3080) Icelandic Family Sagas # (LA)

[ENGL 310(3100) Old English in Translation # (LA)

ENGL 311(3110) Old English (also ENGL 611[6110]) # (LA)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. T. Hill.
The course is intended as an introduction to the Old English language. We will begin with simple prose texts and proceed to poetic texts such as Maldon, The Wanderer, The Seafarer, and The Dream of the Rood. The primary aim of the course is to learn Old English, but we will discuss the literary issues the texts we cover present. There will be a mid-term and a final exam.

ENGL 312(3120) Beowulf (also ENGL 612[6120]) # (LA)
Spring. 4 credits. Recommended: one semester's study of Old English or equivalent. May be used as one of the three pre-1800 courses required of English majors. S. Zacher.
A close reading of Beowulf. Attention is given to relevant archaeological, literary, cultural, and linguistic issues.

[ENGL 316(3160) Beasts, Bodies, and Boundaries # (LA)

ENGL 319(3190) Chaucer # (LA)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. M. Raskolnikov.
Chaucer became known as the "father of English poetry" before he was entirely cold in his grave. Why is what he wrote more than six hundred years ago still riveting for us today? It's not just because he is the granddaddy of this language and its literature, it's because what he wrote was funny, fierce, thoughtful, political, philosophical and, oh yes, notoriously bawdy. We'll read some of Chaucer's brilliant early work, and then dig into his two greatest achievements: the epic Troilus and Cressida and The Canterbury Tales, his oft-censored panorama of medieval English life. Chaucer will be read in Middle English, which will prove surprisingly easy and pleasant.

ENGL 320(3200) Renaissance Literature (also COM L 356[3560])
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Informal lecture and discussion. C. Kaske.
Paired selections covering about half of Malory's Morte d'Arthur and half of Spenser's Faerie Queene. The French Prose Arthurian Cycle, Chretien's romances, Sir Gawain and the Green Knight, and some of Spenser's minor poems are mentioned occasionally as background. Comparisons assess possible literary influence, the distinctive vision, style, and narrative technique of each author as a writer of romance, and the development of Arthurian romance from the Middle Ages to the Renaissance.

[ENGL 327(3270) Shakespeare: Staging Women # (LA)
Fall. 4 credits. Next offered 2007–2008.]

[ENGL 328(3280) The Bible in Literary and Cultural Perspective # (LA)

ENGL 329(3290) Milton # (LA)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. R. Kalas.
An introduction to the poetry and prose of John Milton in light of the political, social, and religious upheavals of the 17th century. Rather than dividing the poetry from the prose, this course will foreground the integration of poetic and polemical concerns in Milton's work. Readings will include selected short poems, Comus, Samson Agonistes, Paradise Regained, all of Paradise Lost, Areopagitica, The Doctrine and Discipline of Divorce, and excerpts from Milton's other prose works.

ENGL 330(3300) Restoration and 18th-Century Literature # (LA)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. F. Bogel.
Close reading of texts in a variety of genres (poetry, fiction, drama, autobiography) will be guided by such topics as: the nature of satire, irony, and mock-forms; the languages of the ridiculous and the sublime; the politics of gender and sexuality; the authority and fallibility of human knowledge; connections among melancholy, madness, and imagination. Works by such writers as Rochester, Behn, Finch, Dryden, Swift, Gay, Defoe, Johnson, Boswell, Sterne, and Cowper.

[ENGL 333(3330) The 18th-Century English Novel # (LA)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2007–2008. F. Bogel.]

ENGL 335(3350) Modern Western Drama, Modern Western Theater: Theory and Practice (also THETR 335/COM L 335/VISS 335[3350])
Fall. 4 credits. N. Salvato.
For description, see THETR 335.

ENGL 340(3400) English Romantic Period # (LA)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. R. Parker.
Readings from early 1790s to early 1820s—among them Blake, Wordsworth, Wollstonecraft, Coleridge, Byron, Hazlitt, Mary Shelley, Percy Shelley, and Keats—with major emphasis on poetry but with substantial attention to prose fiction, drama, letters, and political and literary essays. The course is concerned with close reading of formal experiments in narrative, lyric, and dramatic representation and with analysis of political and cultural issues and contexts in an age of national reform and international revolution and conflict.

ENGL 345(3450) Victorian Controversies # (LA)
Fall. 4 credits. S. Siegel.
This course explores the questions that men and women in England and Ireland asked about themselves and their time. What was their century marked by progress or decline? Would machines degrade or ennable workers? Did aesthetic experience complement or compete with religious doctrine? Were art and science dependent upon or opposed to each other? Should all forms of expression be permitted or should certain forms be censored? Should the colonies be permitted to rule themselves or remain dependent on England? Would prestige be gained if institutions of higher learning awarded degrees to women? Was "manliness" revealed through "character" or through "behavior"? Authors include Arnold, Barrett Browning, Carlyle, Gregory, Hyde, Hobey, Mill, Morris, Parnell, Pater, Ruskin, Wilde, and Yeats.

ENGL 348(3480) Studies in Women's Literature: The Feminist Literary Tradition (also FGSS 348[3480]) (LA)
Spring. 4 credits. K. McCullough.
Is there a feminist literary tradition and if so what might it look like? In this class we will examine a range of texts, primarily but not exclusively fiction, texts that explore questions of female subjectivity and creativity. What issues have been most pressing for feminist writers? What political questions most vexing? We will read primarily British and U.S. writers and will examine what use they make of both canonical and experimental literary forms. To what extent, that is, does the need to tell a new story force or enable a writer to develop a new form in which to write?

ENGL 349(3490) Shakespeare and Europe (also COM L 348[3480]) (LA)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. W. Kennedy.
For description, see COM L 348.
Critical study of major works by Hardy, Conrad, Lawrence, Joyce, Woolf, Eliot, Yeats, Hugo, Wilde, Ford, Stevens, and others. While the emphasis will be on close reading of individual texts, we shall place the authors and works within the context of literary, political, cultural, and intellectual history. The course will seek to define the development of literary modernism (mostly but not exclusively in England), and relate literary modernism in England to that in Europe and America as well as to other intellectual developments. We shall be especially interested in the relationship between modern literature and modern painting and sculpture; on occasion, we shall look at slides. Within the course material, students will be able to select the topics on which they write essays.

In the first years of the 20th century, British and Irish writers were able to wrest out of the chaos of their times some of the most inventive, troubling, and beautiful novels ever composed. In this course we will consider not only how the British and Irish modernist novel broke new ground in literary form, but also how and why it said things about art, love, politics, empire, terror, imagination, and desire not said before and perhaps never said so well again. Authors studied may be drawn from among Woolf, Conrad, Ford, Joyce, Lawrence, Forster, Bowen, Beckett, Wyndham Lewis, and Rebecca West.

ENGL 355(3550) Decadence (also COM/LFGSS 355(3550)) (LA) Fall. 4 credits. E. Hanson.
"My existence is a scandal," Oscar Wilde once wrote, summing up in an epigram the effect of his carefully cultivated style of perversity and paradox. Through their valorization of aestheticism and all that was considered artificial, unrelated to the "real," the so-called "Decadent" writers of the late-19th century sought to free the pleasures of beauty, spirituality, and sexual desire from their more conventional ethical moorings. We will discuss literary and visual texts by Charles Baudelaire, Edgar Allan Poe, K.-H. Huysmans, Leopold von Sacher-Masoch, A. C. Swinburne, Walter Pater, René Vivien, James McNell Whistler, and Aubrey Beardsley, with a particular focus on Oscar Wilde. Students may read French and German texts in the original or in English translation.

ENGL 362(3620) Studies in U.S. Literature after 1850: Reconstructing America (also AM ST 364[3640]) (LA) Fall. 4 credits. N. Waligora-Davis.
Taking up his turn of the century argument that the problem of the 20th century will be the problem of the "stranger," this course reads W.E.B. DuBois' articulation backwards and forwards, tracing shifting representations of race and American identity from the Civil War through the beginning of WWII. Topics range from abolitionism to race science, from circus "freaks" to "diseased" immigrants, from negrophobia to negrophilia. This course studies constitutional, immigration, marriage, and seduction laws and works within the context of literary, political, cultural, and intellectual history. The course will seek to define the development of literary modernism (mostly but not exclusively in England), and relate literary modernism in England to that in Europe and America as well as to other intellectual developments. We shall be especially interested in the relationship between modern literature and modern painting and sculpture; on occasion, we shall look at slides. Within the course material, students will be able to select the topics on which they write essays.

ENGL 364(3640) Studies in American Literature After 1950: American Literature, the 1980s (also AM ST 373[3730]) (LA) Fall. 4 credits. D. Woubshet.
This course will explore literature of the 1980s against the broader cultural and historical landscape of 80s America. In many ways, we live in the immediate shadow of the 1980s, but our slight remove from the decade affords us a chance to look back at the literature and culture of the decade with some distance (and familiarity). In this course, we will give particular emphasis to the following themes: postmodernism, the blurring of literary genres, the blurring of taste (high vs. low culture), the emphasis on (racial, gender, and sexual) difference, pop culture, and history. Authors may include: Don DeLillo, Kurt Vonnegut, Maxine Hong Kingston, Thomas Pynchon, Toni Morrison, Norman Mailer, Ishmael Reed, Audre Lorde, and Gloria Anzaldua.

Reading carefully some of the most fascinating novelists in the 19th-century United States, we examine patterns of social and political awareness in these writers. In particular, we think about the relations among stylistic concerns in fiction and the construction of identities formed by national, racial, gendered, and sexual allegiances. Writers may include: Mark Twain, Charles Chesnutt, Nathaniel Hawthorne, Henry James, Edith Wharton, Pauline Hopkins, Zora Neale Hurston, Herman Melville, E.D.E.N. Southworth, and Stephen Crane.

ENGL 367(3670) Studies in U.S. Fiction After 1900: The Literature of the Stranger (also AM ST 367[3670]) (LA) Spring. 4 credits. S. Wong.
What is a stranger? How do we define the category of the "stranger" to be marked off from, for example, that of the foreigner, outsider, refugee, exile, wanderer, pariah, or barbarian? Who is a stranger? What is the social function of the stranger? How has the idea of the "stranger" shaped, or been shaped by, 20th-century U.S. fiction? What can we learn about the stranger as a sociological type and as literary type? These are some of the questions that will serve as points of departure for our discussions of the literature. We'll be reading widely across the landscape of 20th-century U.S. fiction. We'll also be reading a number of articles that take up the idea of the stranger from a variety of disciplinary viewpoints.

ENGL 369(3690) Fast-Talking Dames and Sad Ladies: 1940s and Now (also FILM 369[3690], FGSS 369[3690]) (LA) Spring. 4 credits. Limited to 15 students. Students must be able to attend Mon. and/or Tues. late-afternoon screenings. Film fee: $20. J. Belasco.
Focusing on sassy or subdued heroines of Hollywood's 1940s films and current films, this seminar works to define romantic comedy and melodrama as genres; as vehicles for female stardom; as ways of viewing the world. Psychoanalytic and feminist analyses of these films will help us pose questions about gender and culture, about gendered spectatorship, about Hollywood's changing constructions of "woman," the "male gaze," and about representations of desire, pleasure, fantasy, and ideology. Required twice-weekly screenings of such films as Gilda, The Lady Eve, Notorious, The Women, The Philadelphia Story, His Girl Friday, Mrs. Dalloway, The Hikers, First Wives' Club, All About My Mother, Silence of the Lambs, and Far From Heaven.

A survey of representative works by major British novelists from Austen to Hardy. These works exemplify the great variety of "realism" in the novel, developing a range of distinctive styles and narrative structures in efforts to represent the interplay of personal identity and society at large. They are particularly engaged by our sense of history, examining the ways slavery continues to emerge within the most dynamic economy the world had yet seen. We'll be especially interested in the novel's preoccupation with domestic life, and reshaping of the familiar "marriage plot" in a world of great social and sexual anxiety. In short: love and money. The readings will include works by Austen, Thackeray, Dickens, C. Bronté, Trollope, George Eliot, and Hardy.

ENGL 372(3720) Medieval and Renaissance Drama (also THETR 372[3720]) (LA) Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2007–2008. M. Baskody.

ENGL 373(3730) English Drama from 1700 to the Present (LA) Spring. 4 credits.

ENGL 374(3740) Slavery in 20th-Century Film and Fiction (also AM ST 374[3740]) (LA) Spring. 4 credits. N. Waligora-Davis.
This course explores 20th-century representations and reconstructions of slavery, examining the ways slavery continues to define and impact sexuality, racial identities and their popular representations, our sense of public and private spaces, legal discourse, and our national identity. What does it mean
to be a black or white man or woman in America? Who does law, history, and society concede as legitimate witness? How should we craft our histories? Who is a subject of, and who is subjected to law? How are privacy interests diffused against social interests? Our readings will place in close proximity not only historical writings on slavery (slave history and slave narratives) and these 20th-century revisionist slave stories, but slave law and contemporary immigration, property, reproduction, criminal, and privacy legislation.

ENGL 375[3750] Studies in Drama and Theatre: “Enemies, A ‘Love’ Story?” (also THETR 375[3780]) (LA)
Fall. 4 credits. P. Lorenz.

The birth of modern drama has been linked to the staging of interpersonal relationships, and in particular to relations of conflict, struggle, and hostility. Very often the hero of drama is at odds with an enemy. But what is an enemy? Is he personal or political, racial or religious? Is he a he, and if so, is there any escaping him? The course focuses on the figure of the enemy in plays by Shakespeare, Marlowe, Kyd, Brecht, Ibsen, Bruckner, Miller, and Wilson, while considering various conceptual models of enmity, from the Bible through Marx and Freud. How are these models responded to or resisted in drama from the Renaissance through the 20th century?

[ENGL 376[3780] American Poetry Since 1950 (also AM ST 372[3780]) (LA)]

[ENGL 379[3790] Reading Nabokov (also RUSSL 385[3850]) (LA)]
Fall. 4 credits. G. Shapiro.

For description, see RUSSL 385.

ENGL 381[3810] Reading as Writing (LA)
See complete course description in section headed “Expository Writing.”

[ENGL 382-383(3820-3830) Narrative Writing (LA)]
See complete course description in section headed “Creative Writing.”

ENGL 384-385(3840-3850) Verse Writing (LA)
See complete course description in section headed “Creative Writing.”

ENGL 386[3860] Philosophic Fictions (LA)
See complete course description in section headed “Expository Writing.”

ENGL 387(3870) Autobiography: Theory and Practice (LA)
See complete course description in section headed “Expository Writing.”

ENGL 388[3880] The Art of the Essay (LA)
See complete course description in section headed “Expository Writing.”

ENGL 391[3910] Studies in African American Literature (also AM ST 387[3890]) (LA)
Fall. 4 credits. H. Spillers.

This course offers an introduction to the study of African American literature and culture, open to English majors, as well as any student interested in the subject, the course adopts its readings from a range of genres and writers from the early eras of the literature to the contemporary period.

[ENGL 395[3950] Video: Art, Theory, and Politics (also FILM 395[3950])]

[ENGL 396[3960] Introduction to Global Women’s Literature @ (LA)]

ENGL 397[3970] Policing and Prisons in American Culture (also AM ST 395[3970]) (CA)
Spring. 4 credits. B. Maxwell.

Having attained the highest number of incarcerated persons of any nation on earth, while subjecting the populace to ordeals marked by the names Rodney Loiuma, and Amadou Diallo, United States regimes of policing and imprisonment compel historical and critical attention. This course considers policing and imprisonment in United States culture, stressing prisoners’ writing, song, raps, slang, and graphic art. In addition to work by imprisoned people, readings will draw on carceral theory, activist documentation, and the history of criminal justice. Finally, we will consider questions raised by non-criminal confinement in U.S. history: slavery, indentured servitude, the reservation system for indigenous peoples, prisoners of war in the Civil War, the wartime internment of Japanese Americans, and carceral and punitive operations of the former Immigration and Naturalization Service, now part of the Department of Homeland Security.

ENGL 398(3980) Latino/a Popular Culture (also AM ST 398[3981], LSP 398[3980]) (CA)
Spring. 4 credits. U.S. Latino/a history is strongly recommended as a prerequisite, but not required. M. P. Brady.

This course will explore Latino/a cultural work ranging from ‘zines to comic books, architecture to film, music to sculpture, musicals to spoken word, theatre to internet sites. We will consider how this work emerges in the context of U.S. engagements with Latin America and in the context of struggles for social and economic equality among ethnoracial groups in the United States. We will consider therefore the production of stereotypes (particularly in the 19th century) and the ongoing efforts of contemporary artists to dispel such stereotypes, to work alongside them and to rework them. We will also consider the relationship between cultural production, representation, and public policy. U.S. Latino/a history is strongly recommended as a prerequisite, but not required.

Courses for Advanced Undergraduates

Courses at the 400 level are open to juniors and seniors and to others by permission of instructor unless other prerequisites are noted.

[ENGL 402[4020] Literature as Moral Inquiry (KCM)]

Fall. 4 credits. R. Gilbert.

The period between 1955 and 1980 was an especially exciting one in American poetry, as a younger generation of poets struggled to break away from the high Modernists and establish their own voices. This course will explore the wide range of styles and projects that emerged during this period. We’ll focus on important individual books of poetry, beginning with two seminal volumes: Allen Ginsberg’s Howl (1956) and Robert Lowell’s Life Studies (1959). Other poets to be studied may include John Berryman, Gwendolyn Brooks, Elizabeth Bishop, Robert Duncan, Robert Creeley, Frank O’Hara, James Wright, A. R. Ammons, John Ashbery, James Merrill, W. S. Merwin, Adrienne Rich, Gary Snyder, Sylvia Plath, and Andre Lorde. In-class presentations will focus on the critical reception of individual volumes. Three essays.

[ENGL 404[4040] Paleography, Bibliography, and Reception History (also ENGL 404[4040]) (LA)]

[ENGL 405[4050] The Politics of Contemporary Criticism (LA)]

ENGL 408(4080) Society for the Humanities
Spring. 4 credits.

Sec 1 Modernization and Fiction. A. Hoberek. For description, see S HUM 421.

Sec 2 Caribbean Popular Literature. B. Edmondson. For description, see S HUM 423.

[ENGL 413[4130] Middle English (also ENGL 612[6130]) (LA)]
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2008-2009. T. Hill.

ENGL 414(4140) Bodies of the Middle Ages: Embodiment, Incarnation, Performance (also FGSS 414[4140]) (LA)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. M. Raskolnikov.

How can the sort of bodies (female, heroic, monstrous, martyred and/or divine) found in medieval works represent, or fail to represent, the “real” of lived experience? To study the Middle Ages is to study the writings of peoples centuries dead. Reaching back in time, we find disembodied words. Yet these words speak to us about the very stuff of embodied life: love, sex, hunger, dirt, death, decay. This course is designed to expose students to a wide range of medieval genres and authors (like a “Middle English Literature survey”), and to an array of contemporary critical methodologies for considering the meaning of life in a body then and now.

ENGL 419(4190) The Old English Laws and Their Politico-Cultural Context (also ENGL 609[6090], HIST 469[469], 469A[469A], 469B[469B])
Fall. 4 credits. P. Hyams and T. Hill. For description, see HIST 469.
ENGL 421(4210) Advanced Seminar in the Renaissance: Literature, Science, and Renaissance Curiosities
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. J. Mann.
Francis Bacon, the first philosopher of English science, vowed "to trust nothing but on the faith of my eyes." Bacon's declaration became a central tenet of philosophical inquiry during the 17th century, as gentlemen began to collect specimens, dissect bodies, and survey the physical universe. This course will explore how the methods of the new experimental "science" were challenged by—literary productions in the age of Shakespeare and Milton. We will also consider the representation of figures subject to the developing scientific gaze: curiosities such as the hermaphrodite, the Amazon, and the African. Our syllabus will include works of imaginative literature (Golding, Shakespeare, Beaumont, Donne, Wroth, Milton) as well as medical texts and works of natural philosophy (Paré, Duval, Bacon, Harvey, Cavendish).

ENGL 422(4220) Renaissance "Traffic" (LA)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. R. Kalas.
This course looks at the various forms of traffic and exchange—in words, books, goods, and persons—that shaped the literary culture of the Renaissance in Britain. How did writers respond to new modes of mercantile exchange; new forms of commercial theater and print culture; and new ideas about the transmission of property? And what is the role of literary innovation in these kinds of social and historical transformations? We'll be asking, ultimately, how a notion of literary traffic might refine our understanding of the foundations of transatlantic Anglo-American culture. Readings will include plays by Shakespeare, Massinger, and Jonson; Marlowe's Hero and Leander, Milton's Samson Agonistes, and other poems by Donne. Marvell, and Isabella Whitney; and prose works such as Echard's True and Briefe Account of the Foure and Twelve Years' Warre, 1642-1646, and Coryat's Crudities.

ENGL 423(4230) Renaissance Lyric (LA)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. B. Correll.
This course is about Renaissance poetry and the issues involved in studying it, including forms like sonnets and psalms, techniques, influences, cultural contexts. Reading covers major authors such as Surrey, Wyatt, Sidney, Spenser, Shakespeare, and Donne, and others, including women writers, who also participated in developing early modern poetry. We look at rhetoric handbooks, debates on poetry, and important scholarship. While the topic of 16th-century lyric is historically specific, this seminar is aimed at anyone with an interest in lyric poetry, regardless of background or preparation, willing to work collectively to talk about lyric, interested in what might be at stake in reading early modern lyric.

ENGL 428(4280) Problem Poems: Close Reading and Reasional Debate (LA)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. F. Bogel.
A number of English and American poems have generated long-standing—sometimes dramatic—controversy, much of it still unresolved. We'll study closely a variety of these poems and their "problems," paying attention to the texts, to the disagreements, and to what criticism can tell us about how these disagreements have been produced and addressed. What can such critical controversy tell us about poetic meaning, or critical authority? Some supplementary readings in criticism and theory will be made available. Poems will be drawn from a wide range of authors and periods. Authors may include Shakespeare, Marvell, Rochester, Swift, Gray, Wordsworth, Keats, Robert Browning, Dickinson, George Eliot, Millay, and Roethke. This is an appropriate course for anyone interested in poetry and different ways of reading it.

ENGL 439(4290) Adam's Rib and Other Divine Signs: Reading Biblical Narrative (also RELST 429[4290]) (LA)

ENGL 430(4300) Topics in American Studies (also AM ST 430[4303], AAS 430[4301], HIST 448[4480])
Spring. 4 credits. S. Wong.
The Rabinor Seminar. For description, see AM ST 430.

ENGL 431(4310) Of Machines and Men: Gender, Technology, and Literature 1880-1940
Spring. 4 credits. K. Biers.
This course examines the close relationship between humans and machines in British and American literature from the end of the 19th century to World War II. Reading various genres—including novels, short stories and essays—we will explore how the machine became a highly gendered object of fear, fascination, and fantasy in the context of industrialization and urbanization; mass culture; war; changing gender roles; and new theories of perception, consciousness, sexuality, and the body. Our main focus will be how machines influenced representational practices, giving rise to different styles and movements—including realism and modernism—and opening up the possibility for representing distinctly "modern" conceptions of gender and sexuality. Authors may include Stephen Crane, Henry Adams, Bram Stoker, Henry James, Virginia Woolf, Gertrude Stein, Mina Loy, and Wyndham Lewis.

ENGL 434(4340) Electronic Art and Culture (LA)

ENGL 437(4370) Fiction(s) of Race, Fact(s) of Racism: Perspectives from South African and Afro-American Literatures (LA)

ENGL 440(4440) Romantic Drama (also ENGL 644[6440], THETR 440[6440], 645[6450]) (LA)

ENGL 444(4441) Text Analysis for Production: How to Get from the Text onto the Stage (also THETR 445[4450], VISST 445[4455])
Fall. 4 credits. B. Levitt.
For description, see THETR 445.

ENGL 446(4460) Comedy and Satire: The 19th Century
Spring. 4 credits. P. Sawyer.
From the sophisticated and witty to the obscene and grotesque, 19th-century English writers confronted their society, aroused their readers, and changed the shape of literature through the forms of mockery and laughter. In sharing the laughter, we'll also explore how comic forms articulate serious concerns—about class and sexual identity, injustice, utopias, love, and death. Topics will include parody, the grotesque, the emergence of urban satire, and the Dickensian comedy of manners. Texts will include Northanger Abbey, Don Juan, Vanity Fair, Pickwick Papers, and The Importance of Being Earnest, poems by Robert Browning and Christina Rossetti; a comic opera by Gilbert and Sullivan; caricatures and epigrams; and theoretical works by Bakhtin and Frye.

ENGL 450(4500) History of the Book (LA)

ENGL 452(4520) Wilde and Woolff (LA)
Spring. 4 credits. S. Siegel.
This seminar considers the question of style: what does the word mean, why has it claimed attention, how has it behaved in the work of two authors whose writings among their contemporaries marked distinctive departures? We explore Oscar Wilde and Virginia Woolf as readers of literary and social texts. Along the way, we direct our attention to the implicit expectations brought to the understanding of "Victorians" and "Modernists." Selections are drawn from the full range of Wilde's and Woolff's work. Our principal texts, however, is limited to a few essays by each author.

ENGL 453(4530) Postmodern Novel (also AAS/FGSS 453[4530]) (LA)
Fall. 4 credits. Course requirements include presentations, short responses to readings, and a longer research paper. Next offered 2007-2008. S. Wong.

ENGL 455(4550) Metafiction (also COM L 446[4460])
Fall. 4 credits. W. Cohen.
For description, see COM L 446.

ENGL 456(4560) Postmodern Novel (LA)

ENGL 458(4580) Imagining the Holocaust (also COM L 483[4830], GERST 457[4570]) (LA)
Spring. 4 credits. D. Schwartz.
What is the role of the literary imagination in keeping the memory of the Holocaust alive for us? Shall we examine major works and widely read Holocaust narratives that have shaped the way we understand and respond to the Holocaust? Or shall we begin with first person reminiscences—Wiesel's Night, Levis's Survival at Auschwitz, and The Diary of Anne Frank—before turning to realistic fictions such as Keneally's Schindler's List (and Spielberg's film), Kerro's Rabbit, Run, and Ozick's The Shawl. We shall also read the mythopoetic vision of Schwarz-Bart's
of modernity that most obsessively engaged Melville’s representational and critical capacities: slavery; capitalism; illegitimate authority; exterminationist policy directed against American Indians; orphanhood and homelessness; imperialism; the attempted occultation of women; the shifting terrain of male comradeship; and the ambivalent resort to religion. We will be interested in testing the premise that Melville charted the faultlines of his world with an unorthodox critical acuity unparalleled in United States literature.

ENGL 479(4790) Advanced Seminar in American Literature: Visual Culture and Women’s Literature (also FGSS 479[4790], VISST 480[4800]) (LA) Fall. 4 credits. S. Samuels.

ENGL 480–481, 480[4800]–481[4810] Seminar in Writing (LA) Fall, fall; 481, spring. 4 credits. For description, see section “Creative Writing.”

ENGL 483(4601) Seminar in Comparative 20th-Century Anglophone Drama (also THETR 483(4830)) (LA) Fall. 4 credits. Some knowledge of classical and avant-garde theories of drama and theatre would be useful, but is not a prerequisite for this course. Next offered 2007–2008.

ENGL 491(4910) Honors Seminar I Fall. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor. Sec. 1: Women and the Novel Form—L. Brown. This course raises questions about the role of gender in the study of literature by exploring the development of the female-authored novel from the 17th to the 20th century. Readings include Burney’s Evelina, Austen’s Emma, Bronn’s The Wolf of One’s Own and Mrs. Dalloway, Morrison’s Sula, and Silko’s Gardens in the Dunes. These novels engage ideas about race and slavery, love and marriage, culture and difference, sexuality, and history. We will work together to develop close readings of the texts, and in each case we will experiment with a particular theoretical or critical perspective, including cultural studies, gender studies, poststructuralism, and postcolonialism. Requirements: participation in discussion, three in-class exercises, a take-home final, and a research paper preceded by a prospectus.

Sec. 2: Arguments of Style in Poetry and Fiction—D. Fried. How does the most compelling commentary about literature achieve its force? How can critical style shed light on literary eloquence? How can the clarities of critical prose serve the stylistic indirections of poetry and fiction? How can writers of English Honors Theses find an individualizing voice while attending to the voices of the works and writers they care about? Through a close study of several exemplary kinds of scholarly and critical writing about poetry and fiction notable for stylistic extravagance, we will consider how the claims of criticism are imminent in its language, syntax, and structure. Writers such as Hopkins, Hardy, Dickinson, Thoreau,
Ashbery, Austin, Henry James, critics such as: William Empson, Geoffrey Hartman, Christopher Ricks, Helen Vendler, Stanley Cavell, and others.

ENGL 492(4930) Honors Essay Tutorial I
Fall or spring, 4 credits. Prerequisites: senior standing and permission of director of the Honors Program.

ENGL 494(4940) Honors Essay Tutorial II
Fall or spring, 4 credits. Prerequisites: ENGL 493 and permission of director of the Honors Program.

ENGL 495(4950) Independent Study
Fall or spring, 2-4 credits. Prerequisites: permission of departmental advisor and director of undergraduate studies.

ENGL 497(4970) Terrorism and Its Representations (also COM L 421(4210))
Fall. 4 credits. E. Hyman. For description, see COM L 421.

ENGL 499(4990) Studies in Irish Culture: Caricature # (LA)
Fall. 4 credits. S. Siegel.

Courses Primarily for Graduate Students

Permission of the instructor is a prerequisite for admission to courses numbered in the 600s. These are intended primarily for graduate students, although qualified undergraduates are sometimes admitted. Undergraduates seeking admission to a 600-level course should consult the instructor. The list of courses given below is illustrative only; a definitive list, together with course descriptions and class meeting times, is published in a separate department brochure before course enrollment each semester.

Graduate Courses in English 2006-2007

ENGL 600(6000) Colloquium for Entering Students
R. Kalas.

ENGL 602(6020) Literature and Theory (also ENGL 302(3020), COM L 302/622[3020/6220])
J. Culler.

ENGL 607(6070) Medieval Psychology: Dream Visions
M. Raskolnikov.

ENGL 609(6090) The Old English Laws (also ENGL 419[4190], HIST 469[669][4691/6691])
P. Hyams and T. Hill.

ENGL 611(6110) Old English (also ENGL 311[3110])
T. Hill.

ENGL 627(6270) Studies in Shakespeare: Shakespeare and Marlowe (also THETR 627[6270])
B. Correll.

ENGL 632(6320) Studies in the 18th Century: Key Texts of Modernity
L. Brown.

ENGL 633(6330) Satire, Sentiment, Imitation, and Mechanism in 18th-Century Literature
F. Bogel.

ENGL 635(6350) Seminar In Dramatic Theory; Theatre and Social Change (also THETR 637, FGSS 638[6380])
S. Warner.

ENGL 639(6390) Studies in Romantic Literature: Byron, Hazlitt, Percy and Mary Shelley, Keats, and the Issues of Romanticism
R. Parker.

ENGL 667(6670) 19th-Century American Poetry: Dickinson and Her Others
D. Fried.

ENGL 670(6700) Joyce's Ulysses
D. Schwarz.

ENGL 691(6910) Postcolonial America
L. Donaldson.

ENGL 696(6960) Digital Bodies, Virtual Identities (also COM L 692[6920], THETR 638[6380])
T. Murray.

ENGL 710(7100) Advanced Old English: Wisdom and Law
T. Hill.

ENGL 780.01 MFA Seminar: Poetry
A. Fulton.

ENGL 780.02 MFA Seminar: Fiction
A. Lurie.

ENGL 785(7850) Reading for Writers
S. Vaughn.

ENGL 791(7910) Postcolonial America: Writing on Race
N. Saccamano.

ENGL 699(6990) Studies in African American Literature
H. Spillers.

ENGL 741(7410) Wordsworth and Rousseau
C. Chase.

ENGL 781.01(7810.01) MFA Seminar: Poetry
P. Janowitz.

ENGL 781.02(7810.02) MFA Seminar: Fiction
M. McCoy.

ENGL 792(7920) Prospects Seminar
J. Culler.

ENGLISH AS A SECOND LANGUAGE
See "English for Academic Purposes."

ENGLISH FOR ACADEMIC PURPOSES
D. Campbell, director; S. Schaffzin, I. Arnesen, K. (Priscilla) Kershaw

Note: Courses and credits do not count toward the A.B. degree.

ENGLF 205(1005) English as a Second Language
Fall. 4 credits. Prerequisite: placement by exam. S. Schaffzin.

All-skills course emphasizing listening and speaking, with some writing practice. Students also meet individually with the instructor.

ENGLF 206(1006) English as a Second Language
Spring. 3 credits. Prerequisite: ENGLF 205 or placement by exam. S. Schaffzin.

Writing course for those who have completed ENGLF 205 and need further practice, or for those who place into the course. Individual conferences are also included.

ENGLF 209(1009) English as a Second Language
Fall or spring. 1 credit. Prerequisite: permission of instructor, S. Schaffzin.

Practice in classroom speaking and in informal conversational English techniques for gaining information. Students also practice giving informal presentations. Individual conferences with the instructor supplement class work.

ENGLF 210(1010) English as a Second Language
Spring. 1 credit. Prerequisite: permission of instructor, S. Schaffzin.

Practice in academic speaking. Formal classroom discussion techniques and presentation of information to a group. Presentations are videotaped and reviewed with the instructor. Individual conferences supplement class work.

ENGLF 211(1011) English as a Second Language
Fall, spring, or summer. 3 credits. Prerequisite: placement by exam. D. Campbell.

Academic writing with emphasis on improving organization, grammar, vocabulary, and style through the writing and revision of short papers relevant to students' fields. Frequent individual conferences supplement class work.
ENGLF 212(1012) English as a Second Language
Spring. 3 credits. Limited to 12 students on first-come, first-served basis. Prerequisite: permission of instructor. D. Campbell. Research paper writing. For the major writing assignment of this course, students must have a real project that is required for their graduate work. This can be a thesis proposal, a pre-thesis; part of a thesis, such as the literature review or discussion section; a paper for another course or a series of shorter papers (by permission of the other instructor); or a paper for publication. Time limitations make it difficult to deal with work over 20 pages in length. Course work involves practice in paraphrasing, summary, the production of cohesive, coherent prose: vocabulary use, and grammatical structure. Frequent individual conferences are a necessary part of the course. Separate sections for social sciences/humanities and for science/technology.

ENGLF 213(1013) Written English for Non-Native Speakers
Spring. 3 credits. Prerequisite: permission of instructor. S. Schaffzin. Designed for those whose writing fluency is sufficient for them to carry on regular academic work but who want to refine and develop their ability to express themselves clearly and effectively. Individual conferences supplement class work.

First-Year Writing Seminar
ENGLB 115-116(1050-1060) English for Later Bilinguals
For description, see First-Year Writing Program brochure.

FALCON PROGRAM (INDONESIAN)
See “Department of Asian Studies.”

FEMINIST, GENDER, AND SEXUALITY STUDIES

Introduction to the Program
The Feminist, Gender, & Sexuality Studies Program is an interdisciplinary program in the College of Arts and Sciences that seeks to deepen our understanding of gender and sexuality. Since its founding in 1972 (see below), the Program has integrated the study of gender with complex structures of power and inequality including race, sexuality, class, and nation. Over the past several decades, the curriculum has also increasingly broadened its scope theoretically and methodologically to encompass cultural, historical, literary, scientific, and quantitative analysis. Students find that these innovative methods and theories enhance their lifelong personal and intellectual growth, as well as their professional development. As such, the Program is an integral part of the curriculum for students who wish to combine the study of gender, sexuality, and gender identity with other fields of study.

The Feminist, Gender, & Sexuality Studies Program is a pre-thesis; part of a thesis, such as the literature review or discussion section; a paper for another course or a series of shorter papers (by permission of the other instructor); or a paper for publication. Time limitations make it difficult to deal with work over 20 pages in length. Course work involves practice in paraphrasing, summary, the production of cohesive, coherent prose: vocabulary use, and grammatical structure. Frequent individual conferences are a necessary part of the course. Separate sections for social sciences/humanities and for science/technology.

The Program is built around several assumptions about the study of gender and sexuality. First, understandings of sex, sexuality, and gender are neither universal nor immutable; to study them is to gain a fuller understanding of human behavior, culture and society across times and places as well as to gain a sense of how these constructions shape us as individuals. Second, gender and sexuality are best understood when examined in relation to one another by learning about women and men of different economic classes, sexual orientations, and cultural and racial backgrounds. Third, the most current knowledge derived from the humanities, social sciences and natural sciences is neither as impartial, objective, nor neutral but instead emerges out of particular historical and political contexts. Students, as a consequence, transfer the critical and analytical skills they acquire in FGSS courses to other courses and activities beyond Cornell.

A historical footnote: Established in 1972 as one of the by-products of the Women’s Liberation Movement, the Cornell Feminist, Gender, & Sexuality Studies Program was initially called Women’s Studies so as to explicitly name the group rendered invisible by (what was then almost always referred to as) the “patriarchy”—and also so as to highlight that it would be speaking from the perspective of the traditionally marginalized Other rather than from the perspective of the group presumed by the dominant paradigm to neutrally represent humankind (i.e., men). But the name quickly became controversial, not only because it failled to the objects of study, as well as those undertaking the studies, were exclusively women, but also because it did nothing to discourage the common assumption that the women in question were white, middle-class, and heterosexual. To expand and institutionalize the sexual diversity of the Program, a minor in Lesbian, Bisexual, & Gay Studies was established at both the graduate and undergraduate levels in 1990. To shift the emphasis of the Program even further toward the intertwining of gender and sexuality with structures of power and inequality, in 2002 the program changed its name from Women’s Studies to Feminist, Gender, & Sexuality Studies.

Program Offerings
Feminist, Gender, and Sexuality Studies offers an undergraduate major, an undergraduate concentration, and a graduate minor. Undergraduate students in other colleges at Cornell will need to work out special arrangements and should speak to FGSS’s director of undergraduate studies (DUS).

The Undergraduate Major: FGSS
1. Prerequisites:
   a. A minimum of 36 credits in FGSS courses with a grade of C- or higher is required for the major. For FGSS courses that are cross-listed, students may register through FGSS or the cross-listing department.
   b. These 36 credits must include the following three courses:
      - FGSS 201 Introduction to FGSS Studies
      - FGSS 202 Introduction to FGSS Theories
      - FGSS 400 Senior Seminar in FGSS Studies
   c. The 36 credits must also include at least one FGSS course with a significant focus on each of the following three categories: (Note: Although a given course may satisfy one, two, or even three of these categories, a given student must take at least two courses to fulfill this requirement):
      - LBG studies
      - Intersecting structures of oppression: race, ethnicity, and/or class
      - Global perspectives: Africa, Asia, Latin America, or Middle East, by itself or in a comparative or transnational framework. Students may choose from the list in the course catalog or at FGSS office.

A student with a double major may count up to three FGSS courses toward the FGSS major that she be is simultaneously counting toward a second major.

The Honors Program: To graduate with honors, a student majoring in FGSS must complete a senior thesis under the supervision of a FGSS faculty member and defend that thesis orally before an honors committee. To be eligible, a student must have at least a 3.3 GPA in all courses applying to their FGSS major. Students interested in the honors program should consult the DUS late in the spring semester of their junior year, or early in the fall semester of their senior year.

The FGSS Concentration
Undergraduate students in any college at Cornell may concentrate in Feminist, Gender, & Sexuality Studies in conjunction with a major defined elsewhere in their university. The concentration consists of five FGSS courses with a grade of C- or higher, through FGSS or the cross-listing department that are completed with a grade of C- or above, none
of which may be counted toward the student's non-FGSS major. An exception to this rule may be made for students in the contract colleges, who may petition the FGSS DUS to count one course from their major toward the FGSS concentration. First-year writing seminars may not be included within the five required courses. Students wishing to concentrate in FGSS should see the DUS. The five courses required for the FGSS Undergraduate Concentration must include:

FGSS 201 Introduction to FGSS Studies
FGSS 202 Introduction to FGSS Theories
Any FGSS course that satisfies at least one of the three categories required for a major as defined above.

Any two additional FGSS courses of the student's choice.

The LBG Concentration

FGSS serves as home to the Lesbian, Bisexual, and Gay Studies Program, which offers an undergraduate concentration as well as a graduate minor. The LBG undergraduate concentration consists of four courses. For a complete listing of all courses that will fulfill this concentration please see the LBG Studies portion of this catalog.

1. First-Year Writing Seminars

FGSS 106(1060) FWS: Women and Writing (also ENGL 105[1060])
Fall and spring. 3 credits. Staff.

2. Courses

FGSS 201(2010) Introduction to Feminist, Gender, and Sexuality Studies (CA)
Fall and spring. 4 credits. S. Martin and K. McCullough.
Feminist, Gender, & Sexuality Studies is an interdisciplinary program focused on understanding the impact of gender and sexuality on the world around us and on the power hierarchies that structure it. This course focuses mainly on the experiences, historical conditions, and conditions of women as they are shaped by gender and sexuality both in the present and the past. Students read a variety of texts, personal narratives, historical documents, and cultural criticism across a range of disciplines. In doing so, students consider how larger structural systems of both privilege and oppression affect individuals' identities, experiences, and options, and simultaneously examine forms of agency and action taken by women in the face of these larger systems.

FGSS 203(2020) Introduction to Feminist, Gender, and Sexuality Theories (also VISST 203[2020]) (CA)
Spring. 4 credits. D. Reese.
Introduces students to critical approaches in feminist scholarship to the cultural, socioeconomic, and political situation(s) of women. Particular attention is paid to the conceptual challenges and dangers posed by attempts to study women without taking account of relations between race, class, and gender in ideological and social formations. Readings draw on work in various disciplines and include literary texts and visual images.

[FGSS 205(2050) Introduction to World Literatures in English (also ENGL 205[2050])]

FGSS 209(2090) Seminar in Early American History (also HIST 209[2090], AM ST 209[2090])
Fall. 4 credits. M. B. Norton.
For description, see HIST 209.

FGSS 212(2120) African American Women: 20th Century (also HIST/AM ST 212[2120])

FGSS 214(2140) Biological Basis of Sex Differences (also BIOAP 214[2140], &SOC 214[2141])
Fall. 3 credits. Offered alternate years. J. Fortune.
For description, see BIOAP 214.

FGSS 216(2160) Gender and Colonialization in Latin America (also HIST 216[2160], LAT A 216[2161])

FGSS 217(2170) Gender, Sex, Empire: Modern Middle East

FGSS 219(2190) Women in South Asia (also HIST 219[2190], ASIAN 219[2191])

FGSS 244(2440) Language and Gender Relations (also LING 244[2244])
Spring. 4 credits. S. McConnell-Ginet.
For description, see LING 244.

FGSS 246(2460) Contemporary Narratives by Latina Writers (also SPANL 246[2460])
Fall. 3 credits. L. Carrillo.
For description, see SPANL 246.

FGSS 249(2490) Feminism and Philosophy (also PHIL 249[2490])
Fall. 4 credits. N. Sethi.
For description, see PHIL 249.

FGSS 251(2510) 20th-Century Women Writers (also ENGL 251[2510])

FGSS 261(2610) SSP: Feminist Theory/State Theory (also GOVT 261[2615])
Spring. 4 credits. A. M. Smith.
For description, see GOVT 261.

FGSS 263(2630) Studies in Film Analysis: Monsters and Misfits: Hollywood's Misogynist Myths of Women (also ENGL 263[2630], FILM 265[2650])

FGSS 270(2700) Gender Meanings and Practice (also SOC 270[2700])
Spring. 3 credits. S. Correll.
For description, see SOC 270.

FGSS 273(2730) Women in American Society, Past and Present (also HIST 273[2730])

FGSS 276(2760) Desire (also ENGL 276[2760], THETR 276[2780])
Spring. 4 credits. E. Hanson.
For description, see ENGL 276.

FGSS 301(3010) Religion, Race, and Politics (also GOVT 301[3015])
Fall. 4 credits. S. Martin.
For description, see GOVT 301.

FGSS 302(3020) Asian American Women's History (also HIST 302[3021], AM ST 302[3020])
Spring. 4 credits. S. Sangren.
For description, see HIST 302.

FGSS 304(3040) Women and Politics (also GOVT 304[3043])
Spring. 4 credits. K. McCullough.
For description, see GOVT 304.

FGSS 305(3050) Questioning Kin, Queering Family (also ANTHR 305[3054] [SBA])
Fall. 3 credits. K. Martin.
As a symbolic system and field of practice, kinship produces configurations of sexuality, gender, race and power embodied by persons. This recognition is indebted to critical race, feminist, postcolonial and queer interventions in the field of kinship studies. In this course we will review key texts in this field beginning with classic anthropological theories of kinship. We will consider the variability of sanctioned arrangements of sexuality, procreation, household labor and economy across the historical and ethnographic record. Focusing on this variation, we will pose relatedness as a question. Which lives, forms of desire, modes of embodiment are enabled, and which are abandoned through the grammar of kinship at work in a particular place and time? What possibilities of life lie outside dominant kinmaking practices?

FGSS 307(3070) African American Women in Slavery and Freedom (also HIST/AM ST 307[3070])

FGSS 321(3210)[5310] Sex and Gender in Cross-Cultural Perspective (also ANTHR 321[3212][3421][6421])
Fall. 4 credits. K. March.
For description, see ANTHR 321/621.

FGSS 325(3250) Queer Performance (also THETR 326[3260])
Spring. 4 credits. S. Warner.
For description, see THETR 326.

FGSS 341(3410) Objects on Objects: Women Writers and the Aesthetics of the Modern (also COM L 319[3190]) (LA)
Fall. 4 credits. D. Reese.
As we have so often heard, "women are objects," or are they? We will examine the ways that women have been portrayed in texts across the centuries. We will explore how women's writing has been used to both empower and subjugate both authors and readers. We will consider the ways texts objectify women in the present and the past. We will also examine the ways in which feminist, postcolonial and queer interventions in the field of kinship studies. In this course we will review key texts in this field beginning with classic anthropological theories of kinship. We will consider the variability of sanctioned arrangements of sexuality, procreation, household labor and economy across the historical and ethnographic record. Focusing on this variation, we will pose relatedness as a question. Which lives, forms of desire, modes of embodiment are enabled, and which are abandoned through the grammar of kinship at work in a particular place and time? What possibilities of life lie outside dominant kinmaking practices?

FGSS 344(3440) Male and Female in Chinese Culture and Society (also ANTHR 344[3554])
Fall. 4 credits. S. Sangren.
For description, see ANTHR 344.

FGSS 347(3470) Asian American Women's History (also HIST 347[3470], AM ST 351[3470])
Spring. 4 credits. D. Chang.
For description, see HIST 347.

FGSS 348(3480) Studies in Women's Literature (also ENGL 348[3480])
Spring. 4 credits. K. McCullough.
For description, see ENGL 348.
For description, see PAM 350.

For description, see FRLIT 355.

with the dynamics of gender differentiation; ways in which these processes interact

[FGSS 358(3580) Theorizing Gender
Spring. 4 credits. K. Long and M. Miguel. For description, see FRUIT 355.]

[FGSS 360(3600) Gender and Globalization (also CRP 395(3950)
(SBA)

This course invites students to think globally about gender issues and to trace the connections between global, national and local perspectives. Emphasis will be given:
understanding processes of globalization (economic, political, cultural); discussing ways in which these processes interact with the dynamics of gender differentiation; understanding how globalization affects women's and men's paid and unpaid work; discussing the significance of women's location in global markets; looking at the importance of culture and social construction of gender in shaping the ways in which globalization affects people's lives and gender relations; introducing regional differences and similarities; discussing the gender dimensions in the debates on "the clash of civilizations"; introducing questions of global governance and examining cases that illustrate women's role in the shaping of international debates.]

FGSS 368(3680) Marriage and Sexuality in Medieval Europe (also HIST/RELST 368[3680])
Fall. 4 credits. P. Hyams. For description, see HIST 368.

FGSS 369(3690) Fast-Talking Dames and Sad Ladies (also ENGL 369[3690], FILM 369[3690])
Spring. 4 credits. L. Bogel. For description, see ENGL 369.

[FGSS 370(3700) Gender and Age in Archeology (also ANTH/ARKEO 369[3690])

[FGSS 478(4780) Senior Seminar in the 20th Century: Narratives of Loss (AIDS) (also ENGL 478(4780), VISST 480(4800), ART H 479(479)] Fall. 4 credits. D. Wootshet.  

For description, see ENGL 475.  

[FGSS 479(4790) Advanced Seminar in American Literature: Gender and Visual Culture in Women's Literature (also ENGL 479(4790), VISST 480(4800), ART H 479(479)] Fall. 4 credits. S. Samuels.  

For description, see ENGL 479.  

[FGSS 488(4880) Beliefs, Attitudes, and Ideologies (also PSYCH 489(4890), 4890/4899) Fall. 4 credits. D. Bein.  

For description, see PSYCH 489.  

[FGSS 497(4970) Sexual Citizenship (also COM L 497(4970)] Spring. 4 credits. E. Hyman.  

For description, see COM L 497.  

[FGSS 498(4980) Senior Honors Thesis Fall and spring 1–8 credits. Prerequisite: FGSS seniors only. Staff.  

To graduate with honors, FGSS majors must complete a senior thesis under the supervision of a FGSS faculty member and defend that thesis orally before an honors committee.  

To be eligible for honors, students must have at least a cumulative GPA of 3.0 in all course work and a 3.3 average in all courses applying to their FGSS major. Students interested in the honors program should consult the DEUS late in the spring semester of their junior year or very early in the fall semester of their senior year.  

Seminar exploring contexts for critical work on sexuality and film/video. Course examines the uses and abuses of psychoanalytic theory and the regulation of sexuality.]  

[FGSS 612(6120) Population and Development in Asia (also D SOC 612(6120)] 3 credits. Next offered 2007–2008. L. Williams]  

[FGSS 614(6140) Gender and International Development (also CRP 614(6140)] Spring. 3 credits. L. Benceria.  

For description, see CRP 614.  

[FGSS 617(6170) Feminist Methodology (also GOVT 642(6423)] Spring. 4 credits. S. Martin.  

A feminist lens of analysis disrupts traditional categories that frame the questions we ask with implications for the answers that we find and how we find them. A sample of readings across the disciplines will allow us to explore how feminist scholarship has led to the reframing of big questions while stretching the boundaries of traditional methodological frontiers. This course seeks to familiarize students with primarily qualitative methodological tools to be applied to individual research questions.  

[FGSS 620(6200) Government Policy Workshop (also CRP 618(6180), AEM 634(6340)] Spring. 4 credits. M. Warner.  

For description, see CRP 618.  

[FGSS 621(6210) Black Communities and the Politics of Health (also AS&RC 620(6200), HD 622(6220)] Fall. 4 credits. L. Walton.  

For description, see AS&RC 620.  

[FGSS 622(6220) Gender and Slavery in the Americas (also AS&RC 612[6203)] Spring. 4 credits. W. Battle-Baptiste.  

For description, see AS&RC 612.  

[FGSS 624(6240) Epistemological Development and Reflective Thought (also EDUC 641(6410)] Fall. 4 credits. D. Schrader.  

For description, see EDUC 641.  

For description, see FGSS 429.  

[FGSS 631(6310) Sex and Gender in Cross-Cultural Perspective (also AS&RC 321(3210), ANTHR 321/621[3421/6421)] Fall. 4 credits. K. March.  

For description, see ANTHR 321.  

[FGSS 636(6360) Comparative History of Women and Work (also ILLRIC 6360(6360)] 4 credits. I. DeVault.  

[FGSS 638(6380) Seminar in Dramatic Theory: Theater and Social Change (also THETR 637(6370)] Fall. 4 credits. S. Warner.  

For description, see THETR 637.  

[FGSS 640(6400) Historical Issues of Gender and Science (also HIST 644(6440), S&T 640(6401)] 4 credits. Next offered 2007–2008. S. Seth]  

[FGSS 649(6490) Mystics and Mystique (also FRLIT 449/649[4490/6490)] Fall. 4 credits. C. Howe.  

For description, see FRLIT 449/649.  

[FGSS 673(6730) Exoticism & Eroticism: Figures of the Other in 18th Century Literature (also FRLIT 673[6730)] Fall. 4 credits. A. Berger.  

For description, see FRLIT 674.

GERMAN STUDIES  

L. Adelson; D. Baithrick, acting chair; M. Briggs (Dutch); B. Buettner, associate language program director; P. Gilgen, director of undergraduate studies (fall); A. Groos, acting director of graduate studies (fall); P. U. Hohendahl, G. Lischke, language program director and director of undergraduate studies (spring); B. Martin; U. Maschke, associate language program director, D. Reese, A. Schwarz, director of graduate studies (spring); L. Tancik (Swedish); G. Waite. Emeritus: H. Deinert.  

The Department of German Studies offers students a wide range of opportunities to explore the literature and culture of German-speaking countries, whether as part of their general education, a major in German Studies, or a double major involving another
sequence of courses

Courses in German: Introductory level: GERST 121-122, after completion, placement into GERST 123 or 200. Intermediate level: GERST 200, 202, 204, and 206. Advanced level: GERST 301, 302, 306, 307, 310, and 410. Courses taught in German that are numbered 300 through 320 focus on intensive language study; courses taught in German that are numbered 321 through 350 focus on studying literature and other forms of cultural expression. Courses in German or English: further 300- and 400-level literature and culture courses (see course descriptions).

Advanced Standing

Students with an AP score of 4 or 5 are automatically granted 3 credits in German. Students with an AP score of 4 or better, an LPG score of 65 or higher, or an SAT II score of 690 or higher must take the CASE exam for placement in courses above GERST 200. Students coming to Cornell with advanced standing in German and/or another subject are encouraged to consider a double major and to discuss the options with the director of undergraduate studies as early as possible.

Certificate in German Language Study

The Certificate in German Language Study is issued to recognize substantial language study beyond the GERST 200 level in the Department of German Studies. Students are awarded the certificate after passing three German Studies courses held in German with a grade of B or above. Two of these courses must be at the 300 level or above. Applications for the language certificate may be picked up in the Department of German Studies (185 Goldwin Smith Hall) in February.

Internships

The department works with the USA-Interns program to provide summer internships to qualified students with German companies and agencies. Interested students should contact the language program director, Gunhild Lischke (gL15@cornell.edu), G75 Goldwin Smith Hall, 255-0725, early in the fall semester.

The Majors

The department offers two options for the major: German literature and culture, and German area studies. The latter is a more broadly defined sequence that includes work in related disciplines. The course of study in either major is designed to give students proficiency in reading, speaking, and writing in German, to acquaint them with German culture, and to help them develop skills in reading, analyzing, and discussing German texts in relevant disciplines with those goals in mind. The department also encourages study abroad. For both majors, there is a wide variety of courses co-sponsored with other departments (Comparative Literature; Government; History; Music; Theatre; Film; and Dance; Feminist, Gender, and Sexuality Studies). The department encourages double majors and makes every effort to accommodate prospective majors with a late start in German. Students interested in a major should consult the director of undergraduate studies, Professor Peter Gilgen, 192 Goldwin Smith Hall (fall) or Gunhild Lischke, G75 Goldwin Smith Hall (spring).

German (Literature and Culture)

Students in this major select courses from the Department of German Studies and may use them to pursue individual interests in literature, film and visual culture, theater and performing arts, music, intellectual and political history, and gender studies, for example. Please consult with the director of undergraduate studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, 204, or 206.

To complete the major, a student must:

1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302, 306, 310) or the equivalent.
2. Complete six courses in the Department of German Studies at the 300 level or above. One of these must be GERST 410 Senior Seminar.
3. Select a faculty advisor from the department.

German Area Studies

Students select courses from the Department of German Studies as well as courses with a substantial German component from other departments, such as Comparative Literature; Government; History; Music; Theatre; Film; and Dance; and Feminist, Gender, and Sexuality Studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, 204, or 206.

To complete the major, a student must:

1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302, 306, 310) or the equivalent.
2. Complete six courses with a substantial German component at the 300 level or above. Three of these must be in the Department of German Studies, including GERST 410 Senior Seminar.
3. Select a committee of one or more faculty advisors to help formulate a coherent program of study. One of the advisors must be from the Department of German Studies.

Honors

Honors in German Studies are awarded for excellence in the major, which includes overall grade point average and completion of the honors thesis. Students are awarded either honors (cum laude), high honors (magna cum laude), or the highest honors (summa cum laude) in the program based on the honors advisors’ evaluation of the level and the quality of the work completed toward the honors degree. The honors distinction will be noted on the student’s official transcript and will also be indicated on the student’s diploma.

Prerequisites for admission. Students must have upperclass standing, an overall GPA of a B or higher, and a GPA of 3.5 or higher in the major. Students must first consult with the director of undergraduate studies in German Studies regarding eligibility for the honors program.

Procedure. Students who wish to be considered for honors ideally should apply to the director of undergraduate studies no later than the second term of the junior year. Students who are off campus in their junior year must apply by the third week of classes in the first semester of their senior year. Students should secure the consent of a faculty member to serve as the director of both the reading course (GERST 453) and the writing of a thesis (GERST 454). With the director of their thesis advisor, students choose an area of special interest and identify at least one other faculty member who is willing to serve on the honors committee. An oral thesis defense concludes the process.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, 204, or 206.

To complete the major, a student must:

1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302, 306, 310) or the equivalent.
2. Complete six courses in the Department of German Studies at the 300 level or above. One of these must be GERST 410 Senior Seminar.
3. Select a faculty advisor from the department.

German Area Studies

Students select courses from the Department of German Studies as well as courses with a substantial German component from other departments, such as Comparative Literature; Government; History; Music; Theatre; Film; and Dance; and Feminist, Gender, and Sexuality Studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, 204, or 206.

To complete the major, a student must:

1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302, 306, 310) or the equivalent.
2. Complete six courses with a substantial German component at the 300 level or above. Three of these must be in the Department of German Studies, including GERST 410 Senior Seminar.
3. Select a committee of one or more faculty advisors to help formulate a coherent program of study. One of the advisors must be from the Department of German Studies.

Honors

Honors in German Studies are awarded for excellence in the major, which includes overall grade point average and completion of the honors thesis. Students are awarded either honors (cum laude), high honors (magna cum laude), or the highest honors (summa cum laude) in the program based on the honors advisors’ evaluation of the level and the quality of the work completed toward the honors degree. The honors distinction will be noted on the student’s official transcript and will also be indicated on the student’s diploma.

Prerequisites for admission. Students must have upperclass standing, an overall GPA of a B or higher, and a GPA of 3.5 or higher in the major. Students must first consult with the director of undergraduate studies in German Studies regarding eligibility for the honors program.

Procedure. Students who wish to be considered for honors ideally should apply to the director of undergraduate studies no later than the second term of the junior year. Students who are off campus in their junior year must apply by the third week of classes in the first semester of their senior year. Students should secure the consent of a faculty member to serve as the director of both the reading course (GERST 453) and the writing of a thesis (GERST 454). With the director of their thesis advisor, students choose an area of special interest and identify at least one other faculty member who is willing to serve on the honors committee. An oral thesis defense concludes the process.
Study Abroad in a German-Speaking Country
The Department of German Studies strongly supports study abroad as an opportunity for students to live and study in the German cultural context. The experience of living abroad promotes enduring personal growth, provides new intellectual perspectives through cultural immersion, and opens up academic and professional opportunities.

Students interested in studying abroad are encouraged to consider the Berlin Consortium, of which Cornell is a member. The program is run in conjunction with the Free University of Berlin and is of very high caliber. Six weeks of an intensive language practicum held at the Berlin Consortium center are followed by one or two semesters of study at the university. Participants enroll in regular courses at the university. Assistance in finding internships between semesters may be available to students staying for an entire academic year.

Four semesters of German language study are prerequisite for participating in the program; ideally the last of these courses should be at the 300 level.

Students interested in this or other study abroad options in Germany, Austria, or Switzerland should consult the language program director, Gunhild Lischke (G75 Goldwin Smith Hall, 255-0725, g15@cornell.edu).

First-Year Writing Seminars
Consult the John S. Knight Institute brochure for course times, instructors, and descriptions.

Courses Offered in German

**GERST 121(1210) Exploring German Contexts I**
Fall or spring, 4 credits. Intended for students with no prior experience in German language and staff placement test (LPG) below 37, or SAT II below 570. G. Lischke, U. Maschke, and staff. Students develop basic abilities in listening, reading, writing, and speaking German in meaningful contexts through interaction in small group activities. Course materials including videos, short articles, poems, and songs provide students with varied perspectives on German language, culture, and society.

**GERST 122(1220) Exploring German Contexts II**
Fall or spring, 4 credits. Prerequisite: GERST 121, LPG 37–44, or SAT II 370–450. U. Maschke, G. Lischke, and staff. Students build on their basic knowledge of German by engaging in intense and more meaningful contexts through interaction in small group activities. Course materials including videos, short articles, poems, and songs provide students with more advanced perspectives on German language, culture, and society.

**GERST 123(1230) Expanding the German Dossier**
Fall or spring, 4 credits. Successful completion of GERST 121, 122, and 123 satisfies Option 2. Prerequisite: study of German and LPG 45–55 or SAT II 460–580. U. Maschke and staff. Students continue to develop their language skills by discussing a variety of cultural topics and themes in the German-speaking world. The focus of the course is on expanding vocabulary, reviewing major grammar topics, developing effective reading strategies, improving listening comprehension, and working on writing skills. Work in small groups increases each student’s opportunity to speak in German and provides for greater feedback and individual help.

Fall or spring, 3 credits. Satisfies Option 1. Prerequisite: GERST 123 or LPG 56–64 or SAT II 590–680, or placement by exam. B. Buettner and staff. Content-based language course on the intermediate level. Students examine important aspects of present-day German culture while expanding and strengthening their reading, writing, and speaking skills in German. Materials for each topic are selected from a variety of sources (fiction, newspapers, magazines, and the Internet). Units address a variety of topics including studying at a German university, modern literature, German online, and Germany at the turn of the century. Oral and written work and individual and group presentations emphasize accurate and idiomatic expression in German. Successful completion of the course enables students to continue with more advanced courses in language, literature, and culture.

**GERST 202(2020) Literary Texts and Contexts (LA)**
Fall or spring, 3 credits. Satisfies Option 1. Prerequisite: GERST 200 or equivalent or placement exam. Conducted in German. D. Reese. Students in this intermediate course read and discuss a number of works belonging to different literary genres by major German-speaking authors such as Kafka, Walser, Brecht, Mann, Frisch, Dürenmatt, Bachmann, and others. They explore questions of subjectivity and identity in modern society, the existence as existence in language, and of the representation of history in literary texts. Activities and assignments focus on the development of reading competency in different literary genres, the improvement of writing skills including the writing of idiomatic expressions, the expansion of students' German vocabulary, and the systematic review of select topics in German grammar.

**GERST 204(2040) Working with Texts (CA)**
Fall or spring, 3 credits. Satisfies Option 1. Prerequisite: GERST 200 or placement exam. Conducted in German. P. Gilgen. Emphasis is on improving oral and written expression of idiomatic German. Enrichment of vocabulary and appropriate use of language in different conversational contexts. Materials consist of authentic documents from Germany online, and Germany at the turn of the century. Oral and written work and group projects. Topics include awareness of culture, dependence of meaning on context, and the expression of idiomatic German. Recommended to students interested in a combined introduction to literature and high-level language training. This sister course is a business German textbook. At the end of the course, the external Goethe Institut exam "Deutsch für den Beruf" is offered.

**GERST 301(3010) Scenes of the Crime: German Mystery and Detective Fiction (LA)**
Fall. 4 credits. Satisfies Option 1. May be counted toward requirement for 300-level language work in the major. Prerequisite: GERST 202, 204, or equivalent or placement by exam, or permission of instructor. Taught in German. P. Gilgen. Exploration of German mystery and detective fiction in texts ranging from the early 19th century to contemporary fiction. Authors studied may include: Kleist, E. T. A. Hoffmann, Dürenmatt, Schatten, Sisskind, Handke, Oren, Arjouni, and others. In addition to exploring hermeneutic skills and, by extension, that gray matter of which Sherlock Holmes and Hercule Poirot were so fond, this course aims at improving proficiency in aural and reading comprehension, as well as speaking and writing skills, with emphasis on vocabulary expansion, advanced grammar review, and stylistic development. Recommended to students interested in a combined introduction to literature and high-level language training. The sister course is taught in German.

**GERST 302(3020) Youth Culture: Adolescence in German Fiction (LA)**
Spring. 4 credits. Satisfies Option 1. Prerequisite: GERST 202, 204 or 206 or equivalent or placement exam, permission of instructor. Taught in German. B. Buettner. Examination of literary and cultural approaches to childhood, youth, and adolescence in texts ranging from the late 18th century to the present. Authors discussed may include: Bernhard, Musil, Zweig, von Horvath, Mann, Goethe, Kaschnitz, and Schlink. Aimed at improving students' proficiency in aural and reading comprehension, as well as in speaking and composition skills. Focus on high-level grammar review, stylistic and expository refinement and vocabulary expansion. Recommended for students wishing to combine intensive language training with reading and discussion of short fiction.

**GERST 306(3060) German Media (CA)**
Fall. 4 credits. Taught in German. Satisfies Option 1. Prerequisites: GERST 202, 204 or 206 or equivalent or permission of instructor. U. Maschke. This course explores the German media landscape through analysis of print, film, and digital media. We will investigate different styles of writing and presentation to unravel culturally specific discourses of communication. Interactive language study will enable the students to develop their own projects in the media of choice.
course at 300 level taught in German or equivalent or permission of instructor. Readings and discussions in German. A. Schwarz.

Examination of love as a literary motif in texts ranging from the 18th to the 20th century. Special attention to the following questions: love as indicator for changing social attitudes toward family and kinship; love as a literary expression of emotion; love as aesthetic theory. Authors: Goethe, Schiller, Schlegel, Kleins, Stifter, Fontane, Storm, Mann, Strauss, and Boll.

Courses conducted in English

It may be possible to arrange a German section for courses conducted in English, either informally or formally (for credit). Students are encouraged to discuss this possibility with instructors.

**[GERST 360(3600)] Words and Music (also MUSIC 272[2245]) [# (LA)]**

**[GERST 374(3740)] Opera and Culture (also MUSIC 374[3222]) [# (LA)]**

Advanced Undergraduate and Graduate Courses

**[GERST 405(4050)] Introduction to Medieval German Literature I [# (LA)]**
Fall. 4 credits. Prerequisite: reading knowledge of German. A. Groos.

After a brief introduction to basic aspects of the medieval universe, ranging from cosmology to psychology, readings will focus on introductory texts of late 12th-century courtly culture. Using the predominant genres of aristocratic self-representation, the heroic epic (Nibelungenlied), Arthurian romance (Hartmann's Erec or Iwein), and Minnesang, discussions will investigate the court as the locus of conflicting forces in the rise of the secular culture in Germany, examining such issues as the first vernacular construction of social and sexual identity, generational conflicts within the communal-hydraulic order, the rise of individualism (the knightly quest), and subjectivity (the love lyric).

**[GERST 406(4060)] Introduction to Medieval German Literature II [# (LA)]**
Spring. 4 credits. Prerequisite: GERST 405 or equivalent or permission of instructor. Anchor course for the medieval period. A. Groos.

Political lyrics by Woltair von der Vogelweide will introduce agendas of conflict in 13th-century German culture, ranging from crusades to civil war. Against this background, we will examine the utopian quest to win the Holy Grail and heal the Fisher King in Wolfram's Parzival, using Bukhtin's approach to pre-novelistic discourse. Readings from the love lyric to representation of gender against emerging class differences; the increasing complexity of self, and instabilities of the performance text. Concluding topics may include women mystics and late medieval narratives of socio-sexual violence, anti-Semitism, and urban Angst.

**[GERST 407(4070)] Teaching German as a Foreign Language**
Fall. 4 credits. G. Lischke.

Designed to familiarize students with current ways of thinking in the field of applied linguistics and language pedagogy. Introduces different concepts of foreign language methodology as well as presents and discusses various techniques as they can be implemented in the foreign language classroom. Special consideration is given to topics such as planning syllabi, writing classroom tests, and evaluating students' performance. Participants conduct an action research project.

**[GERST 420(4200)] Faust: Close Reading (LA)**
Fall. 4 credits. Conducted in English. Limited to 15 students. G. Waite.

This is a close reading of Goethe's Faust (Parts I and II). Although our reading of Goethe's masterpiece inevitably is informed by contemporary theoretical concerns (including poststructuralism, deconstruction, psychoanalysis, feminism, gender and sexuality studies, and Marxism) our approach will be primarily that of close reading. Each week the amount of reading will be very small (sometimes only 10 or 15 lines at most) but these lines we will read carefully. Problems of translation will be crucially annotated editions of the text will be available in German and in English.

**[GERST 424(4240)] The Totalitarian Order: Vision and Critique (also GOVT 425[4255]) (CA)**

**[GERST 430(4300)] Brecht, Artaud, Muller, Wilson (also FILM 420[4200])**

**[GERST 433] History of Modern Jewry (also HIST 433)**
Fall. 4 credits. Limited to 15 students. V. Caron.

For description, see HIST 433.

**[GERST 441(4410)] Introduction to Germanic Linguistics (also LING 441[4441]) (HA)**

For description, see LING 441.

**[GERST 449(4490)] Rescreening the Holocaust (also COM L 453[4530], FILM/RESLT 450[4550]) (LA)**

**[GERST 451–452(4510–4520)] Independent Study**
Fall. 45, fall, spring. 1–4 credits each semester. Prerequisite: permission of instructor.

**[GERST 453(4530)] Honors Research**
Fall. Staff.

**[GERST 454(4540)] Honors Thesis**
Spring. 8 credits. Prerequisite: GERST 453. Staff.

**[GERST 457(4570)] Imagining the Holocaust (also COM L 483[4830], ENGL 458[4580]) (LA)**
Spring. 4 credits. D. Schwartz.

For description, see ENGL 458.

**[GERST 471(4710)] Critical Reason, The Basics: Kant, Hegel, Marx, Adorno (also GOVT 471[4715]) (KCM)**
Fall. 4 credits. Limited to 15 students. S. Buck-Morss.

For description, see GOVT 471.

**[GERST 496(4960)] Theorizing the Public German Masterpiece**
how it bears on issues of law: In keeping with this, we will consider the density of the bodies which cross the thresholds of judgment, swallow prophesies, move through border patrols and succumb to or exceed the narrative logic which brings them forth. Selected prose works by Kleist and Kafka will be read alongside writings by Barthes, Benjamin, Bloch, Freud, and Nietzsche.

[GERST 637(6370) 19th-Century Fiction: The Realist Project]

[GERST 638(6380) Readings of Recollection (also COM L 601(6010)]
Fall. 4 credits. P. Gilgen.

This course examines the emergence of a veritable philosophy of recollection around 1800. The decline of the ars memoriae and the temporalization of knowledge in the course of the 18th century made possible a new semantics of "recollection" (Erinnerung). A new mode of reading was re-written. A new mode of reading was of central importance for this development. Primary readings may also include Cicero, Herder, Leibniz, Lessing, Kant, Goethe, Schiller, Hegel, Holderlin.

[GERST 639(6390) Walter Benjamin: Constellations of Thought (also COM L 623(6230)]
Spring 4 credits. Texts in English and German. Discussion in English. A. Schwarz.

Considering the entire work of Walter Benjamin this seminar will explore this author's unique contributions to the fields of literature, philosophy, and politics. Beginning with an analysis of Benjamin's notion of language as a fundamental premise of his analytic approach we shall expand the focus to include his studies of specific literary genres, authors and issues (Tragic drama, novel, translation, Schlegel, Baudelaire, Kraus, Kafka, Modernism) as well as his many contributions to political and cultural discussions (state of emergency, shock, youth movements). Benjamin's manifold status as literary critic, philosopher, political theorist and historian of culture reflects methodological constellations of thought and ideas that have set this author apart from any other critical school within the 20th century.

[GERST 641(6410) Baroque (also COM L 657(6570)]
Fall. 4 credits. Anchor course. Conducted in English. G. Waite.

This graduate seminar focuses on the "baroque" (or "early radical enlightenment") in two basic ways: (1) as a period of cultural production in 17th-century Europe (including Germany, the Netherlands, and Spain); (2) and as a problem in current aesthetic, philosophical, and political theory. Topics may include: allegory and drama of mourning (Benjamin); action from a distance and absent author's unique contributions to the fields of literature, philosophy, and politics.

Note:
For complete description, see GERST 420.

[GERST 689(6890) The Aesthetic Theory of Adorno (also COM L 689(6890)]
Fall. 4 credits. P. U. Hohendahl.

The seminar will focus on the aesthetic writings of Adorno, beginning with relevant chapters from Dialectic of Enlightenment as well as selected essays on European literature and music. The emphasis then will be placed on Adorno's major posthumous work: Aesthetic Theory (1970). The aim is a close reading of Adorno's theory in the context of the Kantian and Hegelian tradition.

[GERST 696(6960) Conceptualizing Cultural Contact]

[GERST 753-754(7530-7540) Tutorial in German Literature]
Fall and spring. 1–4 credits each semester. Prerequisite: permission of instructor.
reading, and film, drawing on all Dutch-speaking cultures.

**DUTCH 300(3000) Directed Studies**
Spring. 1-4 credits, variable. Prerequisite: permission of instructor. Conducted in Dutch. M. Briggs. Individualized advanced Dutch studies. Provides students with individualized programs which can be anything from advanced mastery in any or all skills to the mastery of Dutch for research, literature, and history in support of all disciplines.

**Swedish**

**SWED 121-122(1210-1220) Elementary Swedish**
121, fall; 122, spring. 4 credits each semester. Prerequisite: for SWED 122, SWED 121 or equivalent. L. Tranck. Students develop abilities in listening, speaking, reading, and writing within Sweden's cultural context. Work on the Internet, interactive computer programs, and a virtual textbook are used in these courses.

**SWED 203(2030) Intermediate Swedish**
Fall. 3 credits. Satisfies Option 1. Prerequisite: SWED 122 or permission of instructor. L. Tranck. Intermediate to advanced-level instruction using audiovisual material and text to enhance language comprehension.

**SWED 300(3000) Directed Studies**
Fall. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. L. Tranck. Taught on a specialized basis to address particular student needs.

**GOVERNMENT**

Web site: falcon.arts.cornell.edu/Govt

“Government” is what Cornell calls a department that elsewhere might be termed political science. The focus of this discipline is power applied to public purposes. Some faculty concentrate on purposes, some on applications. Some engage in the close reading of great texts of political philosophy, while others analyze the behavior of power wielders and publics in this and other societies. Government is divided into four subfields: U.S. politics, comparative politics (other nations), political theory (philosophy), and international relations (transactions between nations).

**The Major**

To be admitted to the major, a student must pass two government courses.

To complete the major, a student must:

1. pass two of the introductory government courses (GOVT 111, 131, 161, 181);
2. pass an additional course in one of the remaining subfields (American government, comparative government, political theory, or international relations). This course may be any course offered in the government department, including introductory courses, upper-level courses, or seminars but must be a minimum of 3 credits. Students are strongly advised to take at least one course in each of the four subfields;
3. accumulate an additional 28 credits of government course work at the 300 level or above;
4. complete at least one seminar-style course in government that may be applied toward the 28 credits. These courses include those numbered 400 XX to which students are admitted by application only, or other 400-level GOVT courses in which no more than 15 students are enrolled;
5. accumulate 11 credits in upper-level courses in related fields (e.g., anthropology, economics, history, science and technology studies, psychology, and sociology). Upper-level courses are usually courses numbered at the 300 level or above (200-level courses are not considered upper-level). Students should consult with their major advisor to choose appropriate courses. All choices of related courses must be approved by the major advisor or the director of undergraduate studies;
6. all courses used to fulfill a government major must be passed with a letter grade. No S-U grades accepted.

To summarize, a total of 10 government courses and three additional courses (11 credits) of upper-level related courses are required to complete the major. For more information about the government major, please visit our web site: http://falcon.arts.cornell.edu/Govt.

**Cornell in Washington Program.** Government majors may apply to the Cornell in Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

**European Studies Concentration.** Government majors may elect to group some of their required and optional courses in the area of European studies, drawing from a wide variety of courses in relevant departments. Students are invited to consult Professors P. Katzenstein and S. G. Tarrow for advice on course selection and foreign study programs.

**Model European Community Simulation.** Undergraduates with an interest in the European Union, public affairs, or debating may participate in an annual European Union simulation held, on an alternating basis, in April at SUNY Brockport or in January in Brussels. The simulation provides an opportunity for participants, representing politicians from the members states, to discuss issues and resolutions of current concern to the European Union.

To prepare for the simulation, a 2-credit course is offered by the Department of Government (GOVT 431 or 432). Participation in the simulation is open only to those who register for this course. Anyone interested in participating or finding out more information should contact the Institute for European Studies at 120 Uris Hall, 255-7592.

**International Relations Concentration.** See the description under “Special Programs and Interdisciplinary Studies.”

**Honors.** Application to the honors program is made in the early spring of the junior year. For more information about the honors program and an application form, please visit falcon.arts.cornell.edu/Govt.

**First-Year Writing Seminars.** Consult with your major advisor to choose an appropriate course.

**Major Seminars.** Fall or spring. 4 credits. These seminars, emphasizing important controversies in the discipline, cap the majors' experience. Thus preference in admission is given to majors over nonmajors and seniors over juniors. Topics and instructors change each semester. To apply, students should pick up an application in 210 White Hall during the pre-enrollment period.

**Course Subfields.** Courses in the Department of Government are divided into four subfields: American government, political theory, international relations, and comparative government. To determine in which category (or subfield) the following courses fall, please note the two-letter reference at the end of the descriptions.

The key is as follows: AM = American, PT = political theory, IR = international relations, and CO = comparative.

**GOVT 111(1111) Introduction to American Government and Politics (SBA)**
Fall and summer. 3 credits. T. Lowi. Introduction to government through the American experience. Concentrates on analysis of the institutions of government and politics as mechanisms of social control. (AM)

**GOVT 131(1313) Introduction to Comparative Government and Politics (also LAT A 131[1310]) (SBA)**
Spring and summer. 3 credits. K. Roberts. Provides a survey of the institutions, political processes, and policies of contemporary states. Focuses on the conditions for and workings of democracy. Looking at Western Europe, students analyze institutional variations among liberal democracies and their political implications. They then probe the origins of democracy in Western societies and the reasons why communism and other forms of authoritarian rule have prevailed elsewhere. Finally, they explore the imperatives behind and the obstacles to democratization in the Third World and the erstwhile Communist Bloc. Throughout this survey, problems of democracy are related to problems of economic development, efficiency, and equality. (CO)

**GOVT 161(1615) Introduction to Political Philosophy # (HA)**
Spring. 3 credits. B. Hendrix. Survey of the development of Western political thought from Plato to the present. Readings from the works of the major theorists. Examination of the relevance of their ideas to contemporary politics. (PT)

**GOVT 181(1817) Introduction to International Relations (SBA)**
Fall and summer. 3 credits. P. Katzenstein. Introduction to the basic concepts and practice of international politics. (IR)
GOVT 182(1827) WIM Section: Introduction to International Relations
Fall. 1 credit. Prerequisite: permission of instructor; GOVT 181. Staff. Special, writing-intensive section of GOVT 181, designed to provide a small number of students the opportunity to practice and improve their writing skills as they learn about world politics. Students complete a series of papers and are expected to take an active part in class discussion. (IR)

GOVT 202(2021) Honor and Obligation in Contact (HA)
Spring. 4 credits. J. Rahkin. Explores a key question in political life—why obey the law? Examines the question where answers are most difficult: in the extreme setting of international conflict in war and commerce, where normal policing is not available. Looks at ancient and medieval answers, as portrayed in literature of those eras. Then it highlights changes in successive modern—and now, perhaps, post-modern—efforts to sustain legal restraints beyond the reach of ordinary state controls, as illustrated in formal treaties and accounts of actual conflicts. (AM)

GOVT 227(2273) SSP: The Atomic Age (SBA)
Fall. 4 credits. Limited to 15 students. C. Way. How has the advent of nuclear weapons changed world politics? In exploring this general question, this course addresses a wide range of issues: How do nuclear weapons work, and how difficult are they to obtain? Do nuclear weapons keep the peace by rendering war obsolete, or do they make the world a more dangerous place? What are the psychological effects of living with the specter of nuclear conflict? Are strategies of nuclear deterrence, which entail targeting civilizations, ethically justified? Does the Nuclear Non-Proliferation Treaty (NPT) work, and what are the prospects for future proliferation? How likely is nuclear terrorism, and what can be done to prevent it? Students reflect on these issues theoretically and historically, but also in the context of particular current events, such as the nuclearization of South Asia, the 2005 Review Conference of the NPT, and the unraveling of the A.Q. Khan network. Texts include film and literature as well as international relations literature, and writing assignments offer students the opportunity to explore a number of genres: policy memo, political research, film interpretation, fiction, and editorial. (CO)

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines' outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing ability to provide challenging instruction with top university professors.

GOVT 248(2485) Ethics and International Relations (also PHIL 248(2480)) (KCM)
Spring. 4 credits. R. Miller. For description, see PHIL 248. (PT)

GOVT 261(2615) SSP: Feminist Theory/State Theory (also FGSS 261(2610), AM ST 263/2615) (CA)
Spring. 4 credits. A. M. Smith. Feminist theory presents unique challenges to the student of politics interested in state structures, legal systems and public policy. While liberal democratic state theory takes for granted the separation between the "private" and "public" spheres, feminist theory submits that distinction to a thorough interrogation. Through the feminist theory lens, we can appreciate the way in which public policy not only impacts the domestic household, but actually shapes and defines the family itself through mechanisms such as family law, welfare policy, labor market regulation, and even residential zoning by-laws. Feminists also insist that "sex" is political. Is an individual woman might decide to use contraception or to practice safer sex in a highly intimate context, but feminist theory brings to light the fact that social movements, governmental agencies, and legal doctrine have set the stage for that personal decision. Feminist theory is therefore situated in a privileged position to shed new light on some of the most interesting issues in contemporary politics, such as same-sex marriage, abortion, the HIV and AIDS epidemic, stem cell research, access to health care, discrimination in the workplace, and poverty policy. This seminar explores feminist theory's interrogation of state theory. Pays particularly close attention to a feminist theory that explores the intersection between racism and sexism in America today. (PT)

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines' outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing ability to provide challenging instruction with top university professors.

GOVT 282(2827) China and the World (also CAPS 282/2827) (CA)
Spring. 3 credits. A. Carlton. Study of the dramatic rise of China through reviewing major developments in contemporary Chinese foreign policy since the establishment of the People's Republic of China (PRC), and concentrating more specifically on major developments in Chinese foreign policy during the 1980s and 1990s. Such a wide-ranging survey of Chinese foreign policy involves not only a consideration of the evolution of China's relations with its major bilateral partners but also an investigation of how China has defined its broader relationship with the international system. In addition, students are asked to consider which causal factors have been of primary importance in motivating Chinese behavior. (IR)

GOVT 294(2947) Global Thinking @ (KCM)
Fall. 4 credits. H. Shue. Existing nation-states face many challenges that cross their borders, including environmental degradation, international terrorism, and global market forces. This course considers the possibility and desirability of a world government. Students evaluate the practical achievability of different world-level political structures, paying particular attention to the theories of international relations, and to related questions of social-scientific evidence. Students also evaluate the ethical status of potential world-level political structures, evaluating the normative value of existing states compared to the likely dangers and benefits of several visions of world government. (IR)

GOVT 302(3021) Social Movements in American Politics (also AM ST 302/3021) (HA)
Fall. 4 credits. Next offered 2007-2008.

E. Sanders

Social Movements in American Politics offers the student of politics interested in the history of the rise of social movements and their impact on public policy. We focus on the history of important social movements, such as the 1960s; environmentalism; the 1980s anti-nuclear (weapons) movement; gay rights; and the new religious right. Some theoretical questions we will consider include: How do social movements affect political processes and institutions (and vice versa)? What is their legacy in politics and in society today? This course focuses on the major social movements analyzed as populism, progressivism; labor; socialism; women's suffrage, the gender equality movement; protest movements of the 1960s; civil rights; SDS and anti-war movements of the 1960s; environmentalism, the 1980s anti-nuclear (weapons) movement; gay rights; and the new religious right. Some theoretical works are used, but most of the theoretical explorations are derived inductively, from studies of actual movements and the difficulties they faced. (AM)

GOVT 303(3031) Imaging America (also AM ST 326/3031), COM L 341(3410), FR/LT 324/3240) (CA)
Fall. 4 credits. D. Rubenstein. For description, see AM ST 326.

GOVT 304(3043) Women and Politics (also FGSS 304/3040) (SBA)
Spring. 4 credits. S. Martin. Relies on case studies to examine gender and politics from a comparative perspective. Explores how political and economic transformations impact gender norms and family structures, thereby posing new challenges for governments in the ongoing tasks of nation-building and construction of a national identity. Topics include, but are not limited to (1) the changing social constructions of family; (2) families as agents of socialization; (3) efforts to control women's reproductive capacities; (4) women's political mobilization; and (5) policy instruments used to reproduce ideal families. (CO, AM)

GOVT 306(3063) Society and Party Politics (also SOC 307/3070) (SBA)
Spring. 4 credits. S. Van Morgan. For description, see SOC 307.

GOVT 307/3071 Introduction to Public Policy
Summer. 4 credits. S. Jackson. Public policy is shaped by many forces. This course will enhance your ability to understand those forces and the policies that they produce. It will provide you with tools for thinking about, assessing, and evaluating
those policies. And it will introduce you to the substantive core of several major issues in America today. The course will have three segments. In the first, we will examine the different realms of life. (AM)

The major political actors, institutions, and policy styles in the American party system, voter turnout, individual voting decisions, negative campaigning, and the noncompetitiveness of congressional elections. Examines several theories that explain these phenomena, including in particular the theory of rational choice. Course requirements include one or two papers based on original analysis of election survey data. (AM)

The role of Congress in the American political system. Topics include: the political setting within which Congress operates, the structure of Congress, the salient features of the legislative process, and recent congressional behavior in a number of policy areas. (AM)

A new generation of leaders has emerged in America's political, economic, educational and cultural institutions. Those leaders employ and explore in their work modern communications technologies such as the Internet. Thereby, they are changing both what is done, and how things are done in the respective life spheres. This course explores the resulting changes in American life and asks questions about the interactions among the different realms of life. (AM)

A fundamental paradox in democracy is that a government, not by the people is better (it is usually worse). This is not to say that government as a whole. (AM)

A new generation of leaders has emerged in America's political, economic, educational and cultural institutions. Those leaders employ and explore in their work modern communications technologies such as the Internet. Thereby, they are changing both what is done, and how things are done in the respective life spheres. This course explores the resulting changes in American life and asks questions about the interactions among the different realms of life. (AM)

A fundamental paradox in democracy is that a government, not by the people is better (it is usually worse). This is not to say that government as a whole. (AM)

A new generation of leaders has emerged in America's political, economic, educational and cultural institutions. Those leaders employ and explore in their work modern communications technologies such as the Internet. A fundamental paradox in democracy is that a government, not by the people is better (it is usually worse). This is not to say that government as a whole. (AM)
of theoretical perspectives to investigate these and other questions, paying particular attention to evaluating the theoretical arguments with both systematic and historical evidence. (CO)

GOVT 341(3413) Modern European Society and Politics (also SOC 341[3410]) (SBA) Fall. 4 credits. S. Van Morgan. A trip to the past and the future that examines the main economic and political transformations in Europe over the course of more than 600 years. Integrates theoretical and analytical insights from history, sociology, and political science to describe and interpret the rise and relative decline of Europe as a world actor. In particular, emphasizes the role of state competition and the drive toward capital accumulation, first within Europe and then on a global scale, in providing the impetus for Europe's political and economic dynamics. During this period, Europe invented and eventually transcended the nation-state. Simultaneously, its economy moved from agrarian to industrial, and then to postindustrial, from self-sufficiency to integration into global exchange networks encompassing populations, goods, services, and capital. At the formal level, the course combines lectures with multimedia materials.

[GOVT 342(3427) Germany and Europe] (SBA) Fall. 4 credits. P. Katzenstein. German unification in 1990 and the accelerating movement toward European integration have created new political conditions for our understanding of German and European politics. The end of the Cold War has brought forth old fears about the domination of Europe by an unpredictable German giant. Alternatively, these changes have also fueled new hopes for Germany and Europe as models of political pluralism in a more peaceful and prosperous world. This course will thus reflect on two kinds of politics: the specter of the "Germanization" of Europe and the vision of the "Europeanization" of Germany. Liebert description for Fall 95: German unification, the collapse of the Soviet bloc and the accelerating movement towards European unification have focussed attention on the shape and significance of the "New Europe." These changes have fueled both new hope for European democracy and new problems for European integration, as new states join the Union and new strains emerge within it. The course will also engage intergovernmental comparisons of EU member states, on the emerging weight of Germany as the strongest state in the Union, as well as on supranational institutional and political developments in the 1990s.

GOVT 343(3437) The Politics of the European Union (SBA) Spring. 4 credits. H. Zimmermann. Despite recent bad feelings, the countries constituting the European Union (EU) still remain the most important partners for the United States in the world. And despite the rise of China and other Asian countries, the EU, together with the United States, still calls the tune in the international economy. However, even citizens of the European Union generally know very little about how this complex structure works. This course explores the policies and policy-making of the European Union against the backdrop of the postwar history of European integration and the institutional framework of the EU. Also considers the external dimension of the EU and explores questions about the emerging European polity, in particular the European constitution. Throughout the course, students reflect on parallels with the American political system and on the state of current transatlantic relations. (IR)

GOVT 351(3513) Politics of South Asia (also GOVT 735[7353]) Spring. 4 credits. R. Herring. How well do India's political institutions function in the face of social and economic challenges of the 1990s? We will take up a range of issues that have been hotly debated in India over the last 10 years—economic restructuring, Hindu nationalism, child labor, gender inequality, among others—considering what these controversies reveal about the character of the Indian state. Each week will be organized around a controversial question as presented in articles, books, and films. (CO)

[GOVT 354(3549) Capitalism, Competition, and Conflict in the Global Economy (SBA)] Fall. 4 credits. Next offered 2007-2008. P. Katzenstein. Unemployed autoworkers in Detroit and the wood stoves in New England signal an important change in America's relation to the world economy. This course characterizes these changes in a number of fields (trade, money, energy, technology), explains them as the result of the political choices of a declining imperial power that differs substantially from other states (Japan, Germany, Britain, France, the small European states, and Korea), and examines their consequences for America and international politics. (AM, CO, IR)

GOVT 360(3605) Ideology (CA) @ Spring. 4 credits. D. Rubenstein. Focuses on critical approaches to the study of ideology in order to understand the role of ideology in political subject formation. After an initial presentation of the classical Marxist texts on ideology, examines 20th-century revolts of hegemony theorist Antonio Gramsci and the critical structuralist approaches of Roland Barthes, Jean Baudrillard and Dick Hebdige. Concentrates on the "lived relation" to ruling ideas in the form of ideologies of everyday life. The second part of the course is devoted to psychoanalytically oriented theories (Freud, Lacan) which address the internalization of belief, both in relation to the intrapsychic and in the interaction between psychic and state apparatuses. Concludes with Louis Althusser's notion of interpellation, which resumes the notion of interpellation, which resumes the Marxist, structuralist and psychoanalytic objectives of the course material. The course will consider the possible futures of these "nations within" by considering normative arguments about assimilation, cultural rights, treaty federalism, and full sovereign statehood.

[GOVT 365(3655) Politics and Literature (also AM ST 362[3655]) (LA)] Fall. 4 credits. Next offered 2007-2008. J. Frank. What is political authority and how is it constituted? How do we judge and act when torn by conflicting obligations? How do political actors in the present negotiate the legacies of past injustice (e.g., slavery, colonialism, state violence)? To what extent does the past shape and determine our political present? How do our relations with others? And where might we find the cultural resources for resistance and/or political transformation? These are some of the ethical and political questions pursued in this course through the study of prominent (and diverse) works of literature. This course examines the important contributions of literature to the study of politics, and to the formation of a more thoughtful, critical citizenship.
GOVT 366(3665) American Political Thought from Madison to Malcolm X (also AM ST 316(3160), AM ST 376(3665)) (HA)
Fall. 4 credits. I. Kramnick.
Survey of American political thought from the 18th century to the present. Particular attention is devoted to the persistence of liberal individualism in the American tradition. Politicians, pamphleteers, and poets provide insights into historical and social context.

[GOVT 375(3755) Visual Culture and Social Theory (CA)]

GOVT 385(3857) American Foreign Policy (also CAPS 385(3857)) (SBA)
Spring. 4 credits. J. J. Suh.
Introduction to several aspects of U.S. foreign policy, emphasizing current concerns and organized in terms of several principal functions and regions of interest to U.S. foreign policy. Examinations of the study of foreign policy as well as specific historical cases. This course has three basic goals: (1) to familiarize students with the importance of theory for describing, understanding, and explaining foreign policy decision making behavior; (2) to sensitize students to the complex constraints under which foreign policy is made, the margins of choice that statesmen have in shaping policy, the intended and unintended consequences that a chosen policy has on the international as well as domestic life; and (3) to help students develop a critical, in-depth understanding of some of the foreign policy issues that face the United States today. In an attempt to encourage students to think creatively about alternatives.

GOVT 386(3867) The Causes of War (SBA)
Spring. 4 credits. C. Way.
Surveys leading theories of the causes of interstate wars—that is, large-scale organized violence between or among states. Examines theories of why a war is a recurring feature of international politics. Are democracies more peaceful than authoritarian regimes? Does inexperience in war account for or predict the behavior of states? Why is war a recurring feature of international politics? Do we need a new type of war? Do we need to use force by "rallying around the flag" in support of their governments? The inexcusable pattern of the rise and fall of nations led to cycles of great power wars throughout history.

GOVT 389(3898) International Law (HA)
Fall. 4 credits. Taught in Washington, D.C. Is international law a tool by which individual citizens can (or should) protect their rights against the actions of states? Is international law a set of rules that constrains and limits the actions of states? How do states view the operation of international law? Students will present analyses of specific conflicts or instances of peacemaking for class presentation.

GOVT 393(3937) Introduction to Peace Studies (SBA)
Fall. 4 credits. M. Evangelista.
This course serves as an introduction to the study of war, peace, and peacemaking. We will study different theories of peace and war from a variety of disciplinary perspectives. The course will cover definitions of peace and war, the causes of conflict, and modes of conflict prevention and resolution. The concepts will be applied to a range of historical and current conflicts. Students will prepare analyses of specific conflicts or instances of peacemaking for class presentation.

[GOVT 404(4041) American Political Development in the 20th Century (also AM ST 404(4041), GOVT 612(6121)) (HA)]

GOVT 405(4051) The Postmodern Presidency: 2004 (CA)
Spring. 4 credits. D. Rubenstein.
Examines the presidencies of Reagan, G. H. W. Bush, Clinton, and G. W. Bush in relation to the postmodern presidency. This course examines the role of the modern presidency as an institution of power. The course examines the role of the modern presidency in shaping public opinion and the development of modern presidential power. The course examines the role of the modern presidency as a site of conflict and transformation.

GOVT 406(4061) Politics of Slow-Moving Crisis (also GOVT 616[6161], AM ST 406/616[4061/6161])
Fall. 4 credits. M. Jones-Correa.
An interdisciplinary seminar focusing on three intersecting "slow-moving policy crises": population growth/change (aging, immigration), water availability and global warming—to introduce the concepts sketched out above. Each of these areas involved a policy arena where the need for policy coordination is clear but the pressures for coordination are often somewhat removed, so that the consequences of policy action or inaction may be felt only years down the road. There may also be a segment of the course on planning for and understanding the response to Hurricane Katrina (and/or terrorism). (AM)

[GOVT 413(4131) Coordination in American Politics (also GOVT 613(6131)) (SBA)]
Spring. 4 credits. E. Sanders.
This course serves as an introduction to the study of war, peace, and peacemaking. We will study different theories of peace and war from a variety of disciplinary perspectives. The course will cover definitions of peace and war, the causes of conflict, and modes of conflict prevention and resolution. The concepts will be applied to a range of historical and current conflicts. Students will prepare analyses of specific conflicts or instances of peacemaking for class presentation.

GOVT 420(4201) War at Home (also AM ST 422(4201)) (HA)

GOVT 422(4221) Immigrants, Migrants and Metro. Governance (CA)
Spring. 4 credits. L. Frasure.
This course will examine how socioeconomic and political factors related to immigration and racial/ethnic migration impact metropolitan governance in both U.S. central cities and suburban jurisdictions. We will consider some major issues in metropolitan governance through readings on pluralism, political power, regime theory, racial/ethnic segmentation, and the pro/con debate on immigration and racial/ethnic groups. We will examine how metropolitan governments have traditionally balanced allocative versus distributive concerns of newcomers and existing groups. We will also consider the contemporary prospects for public-private-non-profit partnerships at the local government level. Students will participate in both theoretical and practical discussions and will be evaluated based on: short papers and a research design (final paper) covering a related topical area.

GOVT 423(4231) The 1960s: Conceptualizing the Future from the Past (also AM ST 425)
Fall. 4 credits. J. Kirshner and T. Lowi.
The decade of the 1960s was a genuine sea change in American history. It was also the end of American economic sovereignty. And it was the end of the arts as pure entertainment. Was it the end of everything? What was the response to "1968"? Cultural as well as political-economic phenomena must be explored. The seminar divides neatly and naturally between ends and beginnings.

GOVT 424(4241) Contemporary American Politics (also AM ST 424(4241), GOVT 629[6291]) (HA)
Fall. 4 credits. M. Sheller.
Seminars and writing assignments in U.S. government and public policy. Topics include: partisan realignment, the new conservatism, racial cleavages, "identity politics," and democratic decline.

GOVT 425(4255) The Totalitarian Order: Vision and Critique (also GERST 424[4240]) (CA)
Fall. 4 credits. Next offered 2007–2008. P. Hohendahl. (PT)

GOVT 428(4281) Government and Public Policy: An Introduction to Analysis and Criticism (also AM ST 428[4281]) (SBA)
Fall. 4 credits. T. J. Lowi.
Concentrates on history and criticism of U.S. policies and the policies associated with them. Particular attention is given to the origins and character of the regulatory state and the welfare state. (AM)

GOVT 431(4313) Model European Union I
Spring. 2 credits. Staff.
For description, see GOVT web site.
GOVT 432(4323) Model European Union II
Fall. 2 credits. Staff.
For description, see GOVT web site.

GOVT 438(4392) Japanese Politics (also ASIAN 439(4393) @ (SBA))

GOVT 458(4585) American Political Thought (also GOVT 658(6585), AM ST 458(4585))

GOVT 462(4625) Sexuality and the Law (also GOVT 762(7625), FGSS 461/762(4610/7620) @ (KCM))
Spring. 4 credits. A. M. Smith.
For description, see GOVT 762. (PT).

GOVT 466(4665) Topics Pol Phil: Islamism @
Spring. 4 credits. Prerequisite: graduate students or juniors and seniors who have taken GOVT 161 or 300-level course in political theory. Next offered 2008–2009. S. Buck-Moors.
Topics vary; but all analyze texts written by non-European and non-US theorists who have inspired modern political and social movements. Attention is given to the political and theoretical presuppositions embedded in the very conception of the "West," the hegemony of its political discourses, and how these figure into the meanings of "modernity," "progress," "universal rights," and "liberation." In fall 2002 the topic was Islamism. Philosophical texts include those by Ayatollah Ruhollah Khomeini, Al-Qabandi, Muhammad Iqbal, Ustad Mahmud, Sayyid Qutb, and Ali Shariati. Commentaries include those by academic scholars: Mohammed Arkoun, Talal Asad, Saba Mahmood, Bobby Sady, Azzam Tamimi, Bassam Tibi, as well as historical and social-scientific analyses of political events influenced by Islamism. (In alternate years. Latin American and Caribbean writers and social movements are the focus.) (PT)

GOVT 470(4705) Contemporary Reading of the Ancients (also FRIT 470[4700], COM L 475[4750]) (CA)
Fall. 4 credits. Graduate students welcome to enroll. D. Rubenstein.
Focuses on Derrida's reading of Plato and St. Augustine. Begins with Derrida's close reading of Plato's Phaedrus and traces his conceptual adumbration of the pharmakon to other critical and philosophical scenes: addiction and terrorism. The next textual encounter is between St. Augustine's Confessions and Derrida's Circonfession. Consider the questions of national and religious identity in relation to other Derridean texts such as Monolingue of the Other. Returns to conclude with Plato's Apology, Crito and Phaedo, read in tension with Derrida's last extended interview, his writings on death and the death penalty. Throughout the seminar students explore Derrida's conceptual interrogation of globalization, citizenship, hospitality, friendship, pedagogy, eros and death. (PT)

GOVT 471(4715) Critical Reason, The Basics: Kant, Hegel, Marx, Adorno (also GERST 471[4710]) (KCM)
Fall. 4 credits. S. Buck-Moors.
This course deals with basic concepts and methods of Critical Theory from Kant to Adorno. Lectures will consider philosophy from the perspective of the political, demonstrating how autonomy, freedom, democracy, law are approached by the following: critical reason, dialectic, materialist epistemology, and the socio-logics of non-identity. Students will tackle difficult primary texts in this tradition, with the goal of enhancing their own critical capacities to analyze political, social and economic life. (PT)

GOVT 480(4809) Politics of '70s Films (SBA)
Spring. 4 credits. J. Kirshner.
The ten years from 1967 to 1976 were an extraordinary time both in the history of American politics and the history of American film. In the same period that the country was rocked by the Vietnam War, the feminist and civil rights movements, Watergate and economic crisis, the end of Hollywood censorship along with demographic and economic change in the industry ushered in what many call "the last golden age" of American film. In this class we study both film theory and political history to examine these remarkable films and the political context in which they were made. The goal of the course is to take seriously both the films and their politics. (AM or PT)

GOVT 482(4827) Unifying While Integrating: China and the World (also GOVT 682[6827]) @ (HA)
Fall. 4 credits. A. Carlson.
Seminar intended to examine the increasingly complex relationship that has evolved between China and the rest of the international system during the 1980s and 1990s. Emphasizes the interrelated, yet often contradictory, challenges facing Beijing in regard to the task of furthering the cause of national unity while promoting policies of integration with international society and interdependence with the global economy. Concentrates especially on ongoing controversies over the rise of Chinese nationalism and the persistence of "minority nationalism" in many regions within China. (IR)

GOVT 483(4837) The Military and New Technology (also S&TS 483[4837]) (SBA)
Spring. 4 credits. K. Vogel.
Military organizations are seen paradoxically as both inflexible, bound-bound institutions and avid proponents of new technology. This seminar examines changes over time in the attitude of the military toward new technology and analyze competing explanations, including concepts from science studies, for these changes. Concludes with an analysis of the so-called "Revolution in Military Affairs." Readings include John Ellis, The Social History of the Machine Gun, and Steven Rosen, Winning the Next War. (IR)

GOVT 490(4907) International Institutions (SBA)
Spring. 4 credits. J. J. Suh.
Study of the ways in which units in the international system are constituted and how their interactions are institutionalized. Examines not only formal international organizations that have formal decision-making rules and palpable entities, but also "settled practices" that legitimize certain actions and de-legitimize others. Students develop our theoretical understanding of international institutions by analyzing such issue areas as decolonization, human rights, the environment, and communications. (IR)

GOVT 491(4917) Normative Issues in International Relations
Spring. 4 credits. M. Evangelista.
This course examines current and historical issues in international relations from the perspective of international law, norms, and ethics. We develop general principles and concepts, such as "just war," "national interest," and "human rights," and apply them to real-world situations. Most of the focus of the course is on particular cases that involve legal and ethical issues, violations of human rights and genocide; war crimes; military intervention: economic sanctions; environmental degradation; economic injustice. The first part of the course examines these issues using examples from 20th century international affairs, including recent events. The second part focuses on current issues that pose ethical problems for the foreign policy of the United States: internal violence and human rights abuses in the former Yugoslavia and former Soviet Union; U.S. involvement in Mexico and their relation to U.S. foreign economic policy; the appropriate U.S. response to situations in countries such as Haiti, Nigeria, and China.

GOVT 494(4949) Honors Seminar: Thesis Clarification and Research
Fall. 4 credits. Prerequisite: acceptance into honors program. R. Bensel.
Designed to support thesis writers in the honors program during the early stages of their research projects.

GOVT 495(4959) Honors Thesis: Research and Writing
Spring. 4 credits. Prerequisite: successful completion of GOVT 494.

GOVT 499(4999) Undergraduate Independent Study
Fall or spring. 1–4 credits.
One-on-one tutorial arranged by the student with a faculty member of his or her choosing. Open to open to government majors doing superior work, and it is the responsibility of the student to establish the research proposal and to find a faculty sponsor. Applicants for independent study must present a well-defined program of study that cannot be satisfied by pursuing courses in the regularly scheduled curriculum. No more than four credits of independent study may count toward fulfillment of the major. Students who elect to continue taking this course for more than one semester must select a new theme or subject each semester. Credit can be given only for work that results in a satisfactory amount of writing. Emphasis is on the capacity to subject a body of related readings to analysis and critical examination. In no case, independent study cannot be used to fulfill the seminar requirement. The application form for independent study is available in

456 ARTS AND SCIENCES-2006-2007

457
GOVT 500(4998) Politics and Policy: Theory, Research, and Practice (also AM ST 501[4998], PAM 406[4060], ALS 500[4998])
Fall, spring. Offered in Cornell in Washington Program. This required course forms the core of the Cornell in Washington program for students in the public policy option. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issues in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate so as to provide students with a strategy and framework for integrating classroom based learning, field experience and individual research.

GOVT 601(6019) Methods of Political Analysis I
Fall. 4 credits. W. Mebane.
The first half of this course examines how to frame, evaluate, and compare empirical explanations in political science. Introduces several theoretical approaches that have been widely applied in political science research, including rational choice, social mechanisms, and functionalism. Students discuss the differences between explanation and description and the idea of experimental manipulation. Building on this general discussion, the second half explores the distinctive methodological issues involved in comparing macro-social units and surveys a range of different approaches to comparative analysis.

GOVT 602(6029) Methods of Political Analysis II
Spring. 4 credits. Staff.
Introduction to some of the quantitative methods used in political science. The central theme of the course consists in applying quantitative methods to explore and evaluate political science theories. Specific topics include probability theory; concepts of inference, including point estimation, confidence intervals, and hypothesis testing; strategies of data analysis and presentation; and regression. The goal is to provide students with basic familiarity with statistics and econometrics for studying politics, and to lay a solid foundation for further course work for those who choose to pursue quantitative analysis in more depth.

GOVT 603(6031) Field Seminar in American Politics
Spring. 4 credits. E. Sanders.
Introduces the major issues, approaches, and institutions of American government and the various subfields of American politics. Focuses on both substantive information and theoretical analysis. (AM)

GOVT 605(6053) The Comparative Method in International and Comparative Politics
Spring. 4 credits. K. Roberts.
An in-depth, graduate-level introduction to qualitative and comparative methods of political analysis, with special emphasis on the application of these methods in comparative and international politics. Through readings, discussions, and written assignments, students will explore strategies for concept formation, theory construction, and theory testing, using the craft and tools of comparative political analysis.

GOVT 606(6067) Field Seminar in International Relations
Fall. 4 credits. A. Carlson.
General survey of the literature and propositions of the international relations field. Criteria are developed for judging theoretical propositions and are applied to the major findings. Participants are expected to do extensive reading in the literature as well as research. (IR)

GOVT 607(6075) Field Seminar in Political Thought
Fall. 4 credits. J. Krausnick.
A survey of the early modern political theory canon, emphasizing texts and writers from the 17th and 18th centuries. (PT)

GOVT 610(6101) Political Identity: Race, Ethnicity, and Nationalism
The social sciences generally treat ethnicity, nationalism, and race as descriptive categories or variables, while avoiding actually defining these categories or thinking about how they should be used. How should we go about describing ethnicities, nationalism, and race? Should we treat them as primordial or as social constructions? Much of the recent literature suggests the latter. If constructed, by whom are they constructed (or by what)? What constrains structures these constructions? What purposes do these constructions serve? Whom do they serve? Are some constructions better representations of identity than others, and what does this mean? How should we go about applying these categories in political analysis? (AM)

GOVT 611(6111) The Political Economy of American Development, 1860 to 1900

GOVT 612(6121) American Political Development in the 20th Century (also AM ST/GOVT 404[4041])

GOVT 613(6131) Coordination in American Politics (also GOVT 413[4131])
Spring. 4 credits. Prerequisites for undergraduates: GOVT 111 and one 300-level course in American government, or permission of the instructor. W. Mebane. Seminar examining the idea that American voters act in a strategically coordinated way. Are voters as wary of one another as they are of politicians? Students examine how coordination depends on American institutions, especially the separation of powers and the political parties. They also look at how large-scale coordination, which implies collective equilibrium, need not depend on individuals being highly informed and rational. Students consider how coordination and strategic voting affect the parties' campaign strategies, and what coordination implies about popular control of the government.

GOVT 615(6151) State and Economy in Comparative Perspective
Spring. 4 credits. R. Bensel.
Reviews the extension of literature on the political economy of comparative state formation, economic development, and institutional change. Topics include war-making and state expansion, regime evolution and modernization, and market processes and class transformation. The focus ranges from the micro-economic foundations of political choice through the grand historical forces that have shaped the contemporary world economy. Although much of the reading and discussion focuses on European cases, the limits of this experience as a theoretical model for the remainder of the world also are considered. (AM)

GOVT 621(6213) Democratic Institutions
Institutions and constitutions establish the "rules of the game" of democracies. This seminar examines how they emerge and evolve, and how—or whether—they shape democratic stability, policy profiles, party systems, political participation, and quality of governance, among other phenomena. Examines both established and new democracies (with the United States among its major cases). (COI)

GOVT 627(6274) People, Markets, and Democracy
Spring. 4 credits. C. Anderson.
Examines the relationship between the economy and democracy. Focuses on behavioral political economy in democratic or democratizing countries. Major topics include inequality and democratic performance.

GOVT 629(6291) Contemporary American Politics (also GOVT 424[4241])
Fall. 4 credits. M. Shaffer. For description, see GOVT 424. (AM)

GOVT 634(6349) New Life Sciences: Emerging Technologies, Emerging Politics (also S&TS 645[6451])
Spring. 4 credits. C. Anderson. For description, see S&TS 645.

GOVT 636(6369) Comparative Political Participation
Fall. 4 credits. S. Martin.

GOVT 641(6413) Revitalizing Labor: A Comparative Perspective (also ILRIC 632[6320])
Spring. 4 credits. L. Turner. For description, see ILRIC 652.

GOVT 642(6423) Feminist Methodology (also FGSS 617[6170])
Spring. 4 credits. S. Martin.
For description, see FGSS 617.

GOVT 651(6511) Natural Law and the Law of Nations
Graduates have assumed the existence of international law—or the law of nations—for centuries. Before today's network of multilateral treaties and international organizations, thinking about the law of nations was guided by notions about the
most fundamental obligations in the law of nature. The natural law of nature was thought to provide the moral foundations of domestic law. In today’s world, when such categories as “domestic” seem questionable, there is renewed interest in philosophic foundations for international policy. This course will survey the range of arguments advanced about natural law and international justice, from late medieval times to the 20th century, with particular emphasis on doctrines and assumptions invoked by American statesmen. (AM)

[GOVT 675(6573)] Comparative Democratization

[GOVT 658(6585)] American Political Thought (also GOVT/AM ST 458(4585))
For description, see GOVT 458.

[GOVT 659(6595)] Ethics and Cultural Difference
Spring. 4 credits. B. Hendrix.
One of the persistent questions in moral thinking is its appropriate degree of generality. Can we make moral claims that have universal applicability? What would it mean for such claims to be valid? If there are some universal moral principles, which ones might they be? These abstract theoretical concerns are tied to obvious political worries: Are claims about universal moral principles often colonialist justifications for oppression? Do theoretical arguments about moral universals have meaning for real people entrenched in actual political structures? What is the role of political theorists themselves in arguments about culture and morality? Authors to be read include Michele Moody-Adams, Michael Walzer, James Tully, Iris Young, Will Kymlicka, and others. (PT)

[GOVT 660(6600)] States and Social Movements (also SOC 660(6600))
Spring. 4 credits. S. Tarrow.
Two trends run parallel in political sociology and comparative politics: the study of statebuilding and state transformation and the study of social movements and contentious politics. In the 1960s and 1970s, they converged in the work of scholars like Charles Tilly, who advanced both fields of study, which then ran along parallel but largely independent tracks. This course seeks to synthesize the two traditions, drawing on both historical and contemporary materials from Europe and the Third World, and searching for the key mechanisms and processes that link forms of contention to processes of statebuilding and state transformation. (CO)

[GOVT 661(6615)] Secession, Intervention, and Just-World War
Spring. 4 credits. B. Hendrix.
This course examines philosophical viewpoints on secession, military intervention. legitimate reasons to go to war, and justice in prosecuting wars. Roughly the first half of the course will focus on the discussion of secession, while the second half will investigate intervention and war. Central texts include Allen Buchanan, Secession; David Miller, On Nationality, and Michael Walzer, Just and Unjust Wars.

[GOVT 662(6625)] Field Seminar in Political Theory
Fall. 4 credits. J. Frank.
Introduces students to several contemporary approaches to political theorizing, with an emphasis placed on different modes of interpretation. Authors read may include Althusser, Arendt, Butler, Foucault, Habermas, Kristeva, MacIntyre, Skinner, Strauss, Taylor, Wolin, and Zizek. (PT)

[GOVT 664(6645)] Democratic Theory (also AM ST 664(6645))
Fall. 4 credits. J. Frank.
In contemporary political contexts “democracy” is often invoked as the very ground of political legitimacy. There is very little agreement, however, on what democracy means or how it is best embodied in state institutions and law. This seminar will place students to select debates in contemporary democratic theory over the normative meaning of democracy and the limitations of contemporary democratic practice. Beginning with the work of Rousseau and ending with debates over “radical democracy,” we will explore the following themes: How do democratic theorists and democratic actors negotiate the paradoxes of collective self-rule? What is the relationship between liberalism and democracy? Do rights suspend democracy or establish its preconditions? What are the best procedures for democratic decision-making? How does democracy deal with difference? Is democracy best understood as a form of government or a practice of resistance to domination? (PT)

[GOVT 665(6655)] Media Theory: Film and Photograph (also VISST 686(6466))
Spring. 4 credits. D. Rubenstein.
Seminar addressing two concerns: the specifically French contribution to visual theory in relation to the media of television, film, and photography, and the political stances of that theory in relation to larger issues of globalization, in which both image and event are subjected to eve-increasing pressures. To what extent is French media theory a response to technological imperatives? Begins with a consideration of television and the televisual, framed by Jacques Lacan’s radio address, “Television,” and Pierre Bourdieu’s “On Television.” Questions of hegemony, institutional, and ideology induce further interrogation of the status of the virtual and the “operational fetishism” of television in Baudrillard, Derrida, and Virilio. Next the course considers differences between the televisual and cinematic image in relation to three canonical texts: Deleuze’s Cinema 1 & 2; Michel Chion’s The Voice in Cinema, and Christian Metz’s Imaginary Signifier (as well as selections by Debord). Concludes with an examination of canonical writing on photography (Barthes, Bourdieu) and recent writings of Baudrillard that returns to the question of the digital and numerics’s “muder” of the image as well as its political consequences post 9/11. (PT)

[GOVT 669(6695)] Modern Social Theory II (also GERST 670(6700), VI SST 670(6470))
Topics vary. (PT)

[GOVT 677(6775)] Language and Politics
Spring. 4 credits. J. Frank.
This course explores the “linguistic turn” of recent political theory alongside canonical debates over the political and epistemological consequences of different philosophies of language. Writers examined will include Locke, Rousseau, Nietzsche, Wittgenstein, Austin, Derrida, Butler, and Cavell.

[GOVT 681(6817)] Politics of Transnationalism (also SOC 680(6600))
Spring. 4 credits. M. Evangelista and S. Tarrow.
Globalization and internationalization are giving rise to a new area of international studies that examines the interactions of civil society actors with one another, with states, and with international institutions. This course traces the development of this area of research from its origins in the “old” transnational politics; examines the contributions of constructivism, liberal internationalism, and state-centered realism, and focuses on four areas of transnational politics: norm formation, the construction of transnational coalitions, the effects of transnational advocacy networks, and whether there is a growing fusion between international and domestic contention. (IR)

[GOVT 682(6827)] Unifying While Integrating: China and the World (also GOVT 482(4827))
Spring. 4 credits. J. Kirshner.
For description, see GOVT 482.

[GOVT 685(6857)] International Political Economy
Exploration into a range of contemporary political economy and research topics in the field of international political economy. The seminar covers different theoretical perspectives and a number of substantive problems. (IR)

[GOVT 688(6887)] Political Economy and National Security
Spring. 4 credits. J. Kirshner.
This seminar considers the relationship between economics and national security. Specific topics will change from year to year, but will typically include the following: the economic foundations of power, economic coercion, the economic roots of conflict, and the ways in which structural changes in the international economy shape and limit state authority. (IR)

[GOVT 689(6897)] International Security Politics
Spring. 4 credits. C. Way.
Examines a variety of international relations theories in studying a broad range of security issues, including the causes of war, alliance formation, balance-of-power politics, security regimes, nuclear and conventional deterrence, the democratic peace, military strategy, international terrorism, and domestic constraints on the use of force. Uses a variety of theoretical perspective to investigate these and other issues, paying particular attention to evaluating the theoretical arguments with both historical and systematic evidence. (IR)
GOVT 691(6917) Normative Issues in IR
Fall. Next offered 2007-2008. H. Shue. Examines selected normative elements of international affairs, divided into three interlocking clusters. First are issues about conflict, including both low-intensity military intervention and nuclear weapons. Second are questions about cooperation, especially between rich nations and poor nations. Third are debates about the authority and status of the major players in the international system: individual persons, nation-states, and international regimes. Questions considered include: is the retention by some nations of nuclear weapons morally justified? Is the world economy unjust? Should national governments be pressured to respect individual human rights? (IR)

GOVT 692(6927) Administration of Agriculture and Rural Development (also IARD 603/6060)
Spring. 4 credits. N. Uphoff and T. W. Tucker. For description, see IARD 603.

GOVT 699(6999) CPAs Weekly Colloquium
Fall, spring 1 credit. S-U grades only. Staff. Colloquium is the weekly seminar series hosted by the Cornell Institute for Public Affairs (CIPA). It is also a required, 1-credit course for all CIPA Fellows and is graded S-U based on attendance. The colloquium series is a collaborative effort between the CIPA Colloquium Committee and the faculty and staff of CIPA.

GOVT 703(7035) Political Economy
Fall. 4 credits. J. Kirshner. This course will undertake a general survey of the classical and modern theories of political economy. The works of Smith, Keynes, Hayek, among others, will be studied and placed within the context of the history and evolution of the thought, practice, and method of the field. Issues pertaining to the politics of macroeconomics and money will be of prominent (but not exclusive) interest to the course. (PT)

GOVT 706(7063) Labor in Global Cities
Fall. 4 credits. L. Turner. For description, see ILRCB 706. (CO)

GOVT 707(7073) Game Theory for Political Science
Fall. 4 credits. Requires no prior training in game theory or formal methods. R. Weaver. Game theory is a tool for studying strategic interaction. This course offers a critical introduction, with applications to comparative politics, American politics, and international relations. Studies the core concepts of game theory; how to formulate, solve, and empirically test games in ways that help advance research; and how to assess game-theoretic arguments in the political science literature.

GOVT 728(7281) Government and Public Policy
Fall. 4 credits. T. J. Lowi. For description, see GOVT 428. (AM)

GOVT 735(7353) Politics of South Asia
(also GOVT 351/3513)
Spring. 4 credits. R. Herring. For description, see GOVT 351. (CO)

GOVT 760(7605) Theoretical Approaches to Ideology
Fall. 4 credits. A. M. Smith. Investigation of what is casually referred to as the "polities of meaning" is of course central to political theory and political science as a whole. However, profound controversies revolve around the definition of "ideology," its relationship to the interests of dominant groups, the means by which it is circulated throughout diverse social sites, the ability of political agents to interrupt institutionlized ideologies, and the processes by which ideology penetrates and reconstructs the worldviews of the dominated. The groundwork for the seminar is laid by examining key texts on ideology by Marx. Students trace the multiple meanings of the term in his work and their various implications. Next they explore the ways in which the study of gendered and racial discourse has transformed our understanding of ideology. Students address the Freudian and Lacanian interventions in ideology studies with respect to the concepts of the unconscious and misidentification. They discuss the ways in which Adorno, Horkheimer, and Habermas have re-articulated Marx's formulations. The structuralist and post-structuralist schools are studied with reference to Saussure, Levi-Strauss, Barthes, and Althusser. Finally, students explore the problem of institutional analysis with reference to texts from the science and technology studies and state theory traditions. (PT)

GOVT 762(7625) Sexuality and the Law (also GOVT 462/4625, FGSS 461/4610/7620)
Spring. 4 credits. A. M. Smith. Advanced feminist theoretical/queer theory/legal theory seminar for graduate students and law students. Deals first with theoretical approaches to sexuality that build on and interrogate the post-structuralist approach that defines sexuality as a social construction, rather than an expression of a-historical instincts. Explores a series of major legal and political issues: the right to privacy with respect to contraception and abortion; the restriction of the exclusion of homosexual sodomy from the practices protected by the right to privacy; the racial regulation of marriage; same-sex marriage; Fineman's "sexual family" critique of family law; the moral regulation of poor women in early welfare law; the sexual regulation of poor single mothers in contemporary welfare law; the question of suspect class status for lesbians and gay men, and homosexuality and military service. Throughout the course, students examine the extent to which sexuality is constructed in articulation with gender, class and race differences. The reading list includes theoretical works (Foucault, Butler, Cohen and Martin), Supreme Court decisions; and critical commentaries by feminist legal theorists. (PT)

GOVT 779(7999) Independent Study
Fall or spring. 4 credits. Not open to undergraduates. Undergraduates wishing to conduct supervised study should register for GOVT 499. Individualized readings and research for graduate students. Topics, readings, and writing requirements are designed through consultation between the student and the instructor. Graduate students in government who are looking to use this as an option to fulfill their course requirements should check with their chairs to be certain that the program of study is acceptable for this purpose. Applications must be completed and signed by the instructor and by the chairs of their special committees. They are available from, and must be returned to, the graduate assistant in 212 White Hall.

HISTORY

The popularity of history among Cornell students is due to its usefulness as preparation for graduate, professional, or law school and for any career that requires critical thinking and good writing, the reputation of the faculty for scholarship, teaching, and advising; and most of all, the intrinsic interest of the discipline. A wide variety of introductory and advanced courses is offered. The department is particularly strong in ancient, medieval, and modern European history; in American, Latin American, and Asian history; and in the history of science.

Advanced Placement
Students who pass the AP American and/or European History exam with a score of 4 or 5 have two options: (1) use the AP credits to fulfill the Arts and Sciences course credit requirements for graduation, or (2) take introductory American and/or European history courses.
The Major

To complete the history major, a student must fulfill the requirements listed below:-

Entry requirement: completion of any two history courses excluding first-year writing seminars.

1. Take nine history department courses (for either 3 or 4 credits each), completing all of them with a grade of C or better. (Courses taken for entry may count toward fulfilling the major.)

2. Of the total nine courses:
   a. four must be in courses designated as outside U.S. history and
   b. three must be in courses designated as history before 1800.

Courses used to fulfill requirement (1) above may also be used to fulfill requirement (2), in respect both to (a) and (b) if applicable. A course in American history before 1800 may be used to fulfill requirement (2b). A course before 1800 in a field other than American history can be used toward fulfillment of both requirements (2a) and (2b).

A list of those courses that fulfill the "outside U.S." and "pre-1800" requirements is maintained by the History Department. Only courses from that list fulfill these requirements.

3. Two of the nine courses must be seminars, of which one must be a 400-level seminar. HIST 400 may be used to fulfill this requirement.

Honors

The history department offers an honors program for students who wish to research and write a thesis during their senior year. In addition to writing the thesis, honors students must maintain a 3.5 average in their history courses and complete at least 10 courses in history (for 3 or 4 credits each) during their junior year plus an additional 400-level seminar, preferably during their junior year, and complete 10 courses in history (for 3 or 4 credits each). During the second semester of the sophomore year or early in the junior year, interested students should speak to a faculty member or faculty advisor about the honors program.

Before the beginning of the senior year, the candidate presents, in conversation or in writing, a thesis proposal to an appropriate faculty member. The faculty member who approves the proposal ordinarily becomes the thesis supervisor. If for any reason it is necessary to change supervisors, this arrangement should be confirmed no later than the fourth week after the beginning of the candidate's senior year.

Honors candidates should register in HIST 401, a seminar course in honors research. Any exceptions to this must be approved by the Honors Committee. HIST 401 is a 4-credit course that permits honors candidates to conduct research and to begin writing the honors essay in a seminar environment. At the end of the first semester of the senior year, as part of the requirements for HIST 401, the student submits to the supervisor a 10- to 15-page overview, or, alternatively, a preliminary draft of some part of the thesis along with an outline of the whole to the instructor of 401 and to the student's supervisor. HIST 402 is a 4-credit seminar course that permits honors candidates to complete the honors essay and to demonstrate skill in writing of the ways in which the themes explored in the thesis fit into a larger historical context.

The completed thesis is evaluated by three readers, including the supervisor and a first reader selected by the student, in consultation with his or her supervisor.

The text of the honors essay may not exceed 60 pages except by permission of the chair of the Honors Committee and the student's supervisor. Two copies are due during the third or fourth week of April. In May each honors candidate is given an oral exam administered by the supervisor; exam focuses on the essay as well as the specific subfield of history in which the student has conducted research (e.g., Periclean Athens, 17th-century science, 19th-century American politics).

To qualify for a bachelor of arts degree with honors in history, a student must (1) sustain at least a 3.5 cumulative average in all history courses and (2) earn at least a cum laude grade on the honors essay and on the oral exam.

Cornell in Washington Program. History majors may apply to the Cornell in Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

Category Key: Courses in History are broken into different categories. To determine which category(s) a course falls in, please note the reference at the end of each course description. The key is as follows: AF = African History, AM = American History, AS = Asian History, CO = Comparative History, EA = Ancient European History, ER = Renaissance & Medieval History, EM = Modern European History, HS = History of Science, LA = Latin American History, NE = Near Eastern History, and HR = Honors, Reading, and Research.

First-Year Writing Seminars

HIST 103(1103) First-Year Writing Seminar: Immigrant Experiences (also AAS 103[1063])

Spring. 3 credits. Students should register through First-Year Writing Seminar Program. D. Chang.

An examination of US history through the experiences of immigrants. It surveys the migration of people from Europe, Africa, Asia, and Latin America to the US. Major topics include the relationship between immigration and American national identity, debates over assimilation and pluralism, ethnic resilience, collective struggles for equality, and movements toward immigration exclusion.

HIST 119(1190) First-Year Writing Seminar: Gandhi and the Politics of Non-Violence (also ASIAN 118[1118])

Fall. 3 credits. Students should register through First-Year Writing Seminar Program. D. Ghosh.

This course will examine the writings of Mohandas K. Gandhi, a leader of the non-violent movement against British colonialism in India. In particular, students will consider whether Gandhi's philosophies of self-reliance, moral discipline, civil disobedience, non-violent protest, and vegetarianism are applicable to living in the modern world. We will read some of Gandhi's well-known criticisms of modernity, including Hind Swaraj and My Experiments with Truth, and address the sources, impact and legacy of Gandhi's ideas, including the relationship between Gandhian non-violence and the American civil rights movement. Written assignments will involve close readings of Gandhi's work with an eye toward engaging whether his ideas translate to being a modern and morally responsible individual in the early 21st century. (AS)

HIST 126(1250) First-Year Writing Seminar: Local History: Cornell University

Fall and spring. Students should register through First-Year Writing Seminar Program. C. Kamen.

This seminar will explore the history of Cornell University, its origins, founders, and the reasons why it was considered a radical and "godless" place. We will look at how the curriculum expanded, the origins of the education of women, the relationship of the university to the education of African-Americans and foreign students and how the earliest stated principles were adhered to, for the most part, but sometimes ignored. Readings for the course are taken from Carl Becker, Morris Bishop, F. B. White and the diaries, letters, and other comments written by more than 50 previous Cornell students. Members of the class will conduct research in the archives and create annotated scrapbooks of the semester. (AM)

HIST 130(1300) First-Year Writing Seminar: History of the Writing of History

Fall. 3 credits. Next offered 2008-2009. A. Sachs.

Introductory Courses

HIST 151(1510) Introduction to Western Civilization (HA)

Summer and fall. 4 credits. D. Corps.

The West and its relations with the rest of the world are central topics today, but just what is the West and what is its history? In this course, we survey the history of the West from its antecedents in the ancient Near East through classical, the Middle Ages, Renaissance, and Reformation. Key themes include the origins of democracy and the civic republican tradition, the western way of war, the formation of Christendom, the development of and conflict between secular and church government, humanism, religious reform movements, and western encounters with other civilizations. Readings include a combination of primary and secondary sources. (EA) (ER)

HIST 152(1520) Intro to Western Civilization (HA)

Summer and spring. 4 credits. T. R. Travers.

This course introduces students to the major social, intellectual, political, cultural, artistic, and literary events and movements that emerged in Europe and the Americas during the modern period. Readings will offer a variety of perspectives on topics such as: modernity and its meaning, revolution (industrial, social, political, cultural, artistic), imperialism, war, and the emergence of modern ideologies (capitalism, communism, liberalism, fascism). (ER) (EM)
HIST 152(1530) Introduction to American History [also AM ST 103(1530)] # (HA)
Summer and fall. 4 credits. HIST 153 is not a prerequisite for HIST 154.
M. Washington.
A survey of American history from the beginnings through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, antebellum reform movements, and the coming of the Civil War. (AM)

HIST 154(1531) Introduction to American History [also AM ST 104(1531)] (HA)
Summer and spring. 4 credits. HIST 153 is not a prerequisite for HIST 154. A. Sachs.
An introductory survey of the development of the United States since the Civil War. (AM)

[HIST 190(1900) Introduction to Asian Civilizations @ # (HA)
Spring. 4 credits. Next offered 2007-2008. Staff]

HIST 191(1910) Introduction to Modern Asian History [also ASIAN 191(1191)] @ (HA)
Fall. 4 credits. E. Tagliacozzo and D. Ghosh.
The history of Asia–Pacific from the 19th century to the present, focusing on relations of India and Southeast Asia with each other and with the west. (AS)

HIST 195(1950) Colonial Latin America [also LAT A 195(1950)] @ (HA)
Fall. 4 credits. K. Graubart.
This course examines the colonial “encounter” of Iberia, Africa and the New World, which began in 1492. Topics include economic and social organization of the colonies; the cultural hybridity that preceded as well as developed within colonialism; the production of ethnicity and race; slavery, forced labor and economic stratification; intellectual currents and daily life; indigenous and slave resistance and rebellion; and independence. (LA)

HIST 196(1960) Modern Latin America [also LAT A 196(1961)] @ (HA)
Spring. 4 credits. M. Roldan.
An introductory survey of Latin American history from the early 19th century to the present with particular emphasis on processes of nation-state formation and the development of capitalist economies. Prominent themes include U.S.-Latin American Relations; neocolonialism; and radicalism and revolutionary movements, explored through a variety of primary and secondary sources. (LA)

HIST 201(2001) Supervised Reading
Fall or spring. 2 credits. Prerequisite: junior or senior standing. Permission of instructor required. Staff (HR)

Sophomore Seminars

[HIST 202(2020) The Court, Crime, and the Constitution [also AM ST 204(2022)] (HA)
Spring. 4 credits. Limited to 15 students. Designed for sophomores but open to others as space permits. Permission of instructor required. Next offered 2007-2008. R. Polenberg.]

[HIST 203(2030) Wilderness In North American History and Culture [also AM ST 203(2033)] # (HA)
Fall. 4 credits. Limited to 15 students. Priority given to sophomores. Students must commit to a weekend-long field trip in Sept. Next offered 2008-2009. A. Sachs.]

HIST 204(2041) The Dutch and English in Colonial New York [also AM ST 216(2104)] # (HA)
Fall. 4 credits. Limited to 15 students.
J. Jacobs.
In this seminar course we will examine how identity and ethnicity shaped the culture of the Dutch in colonial New York, first during the years under Dutch rule in New Netherland (1624–1664, 1673–1674), and subsequently under English rule in New York State and City. Readings will center on a published primary sources (all in English translation). This course aims to provide students with insights into the construction of identity and the experience of ethnic diversity in early America. (AM)

[HIST 205(2050) The French Enlightenment: Methods, Ambitions, Contradictions # (HA)
Fall. 4 credits. Limited to 15 students. Next offered 2008-2009. S. Kaplan.]

[HIST 207(2070) SSP: The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia [also HIST 507(5070), ASIAN 206(2660)] @ (CA)

HIST 208(2081) Microhistory and the Margins of Early Modern European Society # (CA)
Spring. 4 credits. Limited to 15 students.
D. Copis.
This course will examine the practice of “microhistory” as a method for understanding early-modern European culture and society. Microhistory as a genre of history writing has been most strongly developed by early-modern European historians and has largely dealt with the everyday lives of marginal but otherwise unheralded—criminals, heretics, witches, lovers, peasants, and artisans. Students in this seminar will read exemplary contributions to the genre in an attempt to analyze the successes and short comings of this approach to history writing. Written assignments will ask students to theorize the relationship between everyday life and macrohistorical phenomena, to analyze of specific microhistories, and to write their own microhistories based on primary sources such as memoirs and court cases. (EM)

HIST 209(2090) Seminar in Early American History [also AM ST/FGSS 209(2090)] # (HA)
Fall. 4 credits. Limited to 20 students.
M. B. Norton.
Topic for Fall 2006: The Salem Witchcraft Crisis of 1692. Even though a myriad of books have been written about this endlessly fascinating episode in American history, many aspects of it remain unexplored. After reading some of the latest scholarship on the subject and viewing contemporary depictions of it, students will focus on interpreting and analyzing original documents covering some of the lesser-known aspects of the crisis (for example, the involvement of large numbers of people from Andover, Mass.). Students will have opportunity to contribute their final work to the Salem Digital Archive on the web. (AM)

HIST 210(2100) The Government of God # (HA)
Spring. 4 credits. Limited to 15 students.
D. Fall.
The most efficient and powerful system of government in the West during the Middle Ages was centered at Rome and headed by the papacy. Yet, paradoxically, the Pope commanded no divisions and identified himself as the ‘servant of the servants of God.’ This course introduces students to key aspects of medieval institutional and religious history through an examination of this mighty papal apparatus, relying chiefly on reading of primary sources. (in translation). We will trace the history and methods by which the papal hierarchy established its sovereignty, comparing and contrasting them to those used by other medieval rulers, and ponder the ideologies which played a role in animating this enterprise. (ER)

[HIST 211(2110) SSP: Back Religious Traditions in the 20th Century [also AM ST 251(2110), RELST 211(2110)] (HA)
Fall. 4 credits. Limited to 15 students.

[HIST 212(2120) African-American Women in the 20th Century [also AM ST/FGSS 212(2120)] (HA)
Spring. 4 credits. Limited to 15 students.

HIST 214(2141) SSP: Crusade, Heresy, and Inquisition in the Medieval Mediterranean [also RELST 215(2150)] # (HA)
Spring. 4 credits. Limited to 15 students.
P. Hyams.
The Crusade and Inquisition are words that retain the capacity to move us today. The decades around 1200 saw the notion of crusade expand greatly from its earlier use as holy war against Islam to license, among other things, ideological war within Christendom and against Christian heretics. The Albigensian Crusade targeted the Cathars of south-western France, followers of a faith imported from the eastern Mediterranean that the pope and western Church swiftly classified as heresy. Once efforts to extirpate dissent by preaching had failed orthodoxy turned to war and torture. The persecuting society transformed inquisition from a technical means for the investigation of truth in Roman law into a device to prosecute unbelievers and then destroy them by torture and fire. This will be a reading and writing seminar, aimed principally at sophomores and freshmen. We shall read mostly original sources, in English translation, and understand them through regular text commentary and investigative papers. Discussion will inevitably raise disturbing questions of contemporary political thought and wartime ethics and should help students clarify their historical roots and their own responses to some of the challenges facing the West today. (ER)

This is a special seminar sponsored by the John M. & Mabel Ringling M. B. Norton.

HIST 215(2150) Introduction to Jewish History [also AM ST/FGSS 215(2150)] # (HA)
Spring. 4 credits. Limited to 15 students.
M. B. Norton.
Sophomore Seminars sponsored by the John M. & Mabel Ringling M. B. Norton.

HISTORY 551
discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Enrollment is limited to 15. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

[HIST 215(2150)] Middle Ages on Film # [HA]
Spring. 4 credits. Limited to 15 students.

[HIST 216(2160)] Gender and Colonization in Latin America (also LAT A 216[2161], FGSS 216[2160]) # [HA]

[HIST 218(2180)] Seminar on Genocide (HA)

[HIST 219(2190)] Women and Gender in South Asia: State and Society from Pre-colonial to Post-colonial (also ASIAN 219[2191], FGSS 219[2190]) # [HA]

[HIST 220(2200)] The Road Trip in American History and Culture (also AM ST 220[2200]) # [HA]

[HIST 221(2211)] Seminar: The Blues and American Culture (also AM ST 205[2211]) (HA)
Fall. 4 credits. Limited to 15 students. Permission of instructor required. R. Polenberg.
Topics include: social origins of the blues; Delta, Piedmont, and east Texas variants; religion and racial protest; gender and sexuality; law, crime, and justice; white-country blues; collectors and musicians; migration and the urban blues; the 1960s revival; the contemporary scene. (AM)

[HIST 222(2220)] SSP: Law, Society, and Culture in the Middle East (also NES/RELST 265[2565]) # [CA]
For description, see NES 265. (NE)

[HIST 223(2230)] International Law (HA)
Spring. 4 credits. Limited to 15 students.

[HIST 224(2240)] Art and Politics in 20th-Century Latin History (HA)
Spring. 4 credits. Limited to 15 students.

[HIST 226(2261)] Society and Religion in China (also ASIAN 226[2262]) # [HA]
Fall. 4 credits. Limited to 15 students. T. J. Hinrichs.
Categories that we take for granted, such as church/state, sacred/secular, supernatural/natural, and divine-human, do not always fit religious practices or ways of talking about them in Chinese society. This course will examine the religious description of society and the social organization of the supernatural. It will investigate the politics of religion and the numeric power of emperors and officials. It will explore the ways in which social groups (such as families, communities, and sects), texts (such as Buddhist sutras and popular fiction), specialists (such as priests and Confucian teachers), performances (such as state rituals and popular plays), and places (such as temples and homes) participate in the creation, transmission, and transformation of religion and society in late imperial and modern China. (AS)

[HIST 227(2271)] Family Life in Renaissance Italy (also ITALL 227[2270]) # [HA]
Spring. 4 credits. Limited to 15 students. J. Najemy.
The seminar explores the structures and sentiments of family life in Renaissance Italy, from the 14th to the 16th century, through a combination of translated primary sources and some secondary readings. Chief among the primary sources are the 15th-century dialogues On the Family written by the humanist Leon Battista Alberti, supplemented by diaries and memoirs, letters, sermons, and prescriptive writings by fathers, humanists, and churchmen. Among the topics to be investigated will be the variety of family structures, marriage, sexual relations, wives and husbands, parents and children, and family memory and commemoration in art and religious life. (ER)

[HIST 228(2280)] Indian Ocean World (also ASIAN 228[2228]) # [HA]
Spring. 4 credits. Limited to 15 students.

[HIST 229(2290)] Jefferson and Lincoln: American Ideas about Freedom (also AM ST 229[2290]) (HA)
Spring. 4 credits. Limited to 15 students. Priority given to underclassmen.

[HIST 230(2300)] Seminar in History and Memory # (HA)
Fall. 4 credits. Limited to 15 students.

[HIST 234(2340)] Seminar: Gender in Early Modern Europe (also FGSS 234[2340]) # [CA]
Fall. 4 credits. Limited to 15 students. Designed for underclassmen but open to all students. Permission of instructor required. Next offered 2008-2009. R. Weil.

[HIST 235(2350)] Antisemitism and the Crisis of Modernity (HA)
Fall. 4 credits. Limited to 15 students.
Next offered 2007-2008. V. Caron.

[HIST 236(2360)] Native Peoples of the Northeast (also AM ST 236[2360]) # [HA]
Spring. 4 credits. Limited to 15 students. J. Parmenter.
This course examines the history and culture of the indigenous peoples of northeastern North America, from ancient times through the era of contact with Europeans to the present day. The course emphasizes the fascinating and dramatic series of transformations and adaptations under taken by the Native peoples of the Northeast which have contributed to their survival in the twenty-first century. Readings and discussions will be drawn from a variety of sources, including historical documents, traditional narratives, archaeological reports, ethnography, literature, the Internet, and museum exhibits of material culture. (AM)

[HIST 238(2431)] Families in China since the 17th Century # (HA)
Spring. 4 credits. Limited to 15 students.
In ancient Greece and Rome, government did little besides wage war and raise taxes, culture focused on war, warriors gloried in battle, and civilians tried to get out of the way. This course surveys the impact of war and the rarity of peace in the ancient world. Topics include: "why war?"; the face of battle; leadership; strategy, operations, and tactics; women and war; intelligence and information-gathering; diplomacy and peacemaking; military campaigns and the archaeology of warfare. Readings in translation include selections from Homer, Herodotus, Thucydides, Xenophon, Caesius, Livy, Tacitus, Josephus, and Ammianus Marcellinus. (EA)

HIST 257(2571) China Encounters the World (also ASIAN 257(2577), CAPS 257(2570)) # (HA)

Fall. 4 credits. J. Chen.

This is a lecture and discussion course focusing on how China has encountered the world since the 17th century, with an emphasis on the late 19th and 20th centuries. In particular, it will analyze the age-old Chinese "Central Kingdom" concept and how the conception was challenged during modern times as the result of Western and Japanese incursion and China's inability to deal with the consequences of the incursion. It will further analyze the impact of the Chinese "victim mentality" in order to pursue a deeper understanding of why radical revolutions have dominated China's modern history. While the emphasis of this course is China's external relations, foreign policy issues will be examined in the context of China's political, economic and social developments in broader terms. The course's purpose is not only to impart information but also to cultivate a basic understanding of the significance of the Chinese experience in the age of worldwide modernization. Grade in this class will be calculated on the basis of class participation, quizzes, midterm and final exams, and one essay assignment. (AS)

[HIST 259(2590) The Crusades # (HA)]

HIST 260(2600) Latinos in the United States: Colonial to 1898 (also LSP 260(2600), AM ST 259(2599)) # (HA)

Fall. 4 credits. M. C. Garcia.

This course examines the history of various Latino populations in the United States up to 1898. Some of the topics we will discuss include the Spanish exploration and settlement of North America; the impact US territorial expansion on Mexicans, Puerto Ricans, and Cubans; the historical-structural factors that influenced 19th century migration; the role of race and class in shaping a national and ethnic identity; and the transnational influence of immigrant communities on their homelands. (AM)

[HIST 261(2610) Latinos in the United States: 1898 to the Present (also AM ST/LSP 261(2610)) # (HA)]

Spring. 4 credits. M. C. Garcia.

This course examines the history of various Latino populations in the United States since 1898. Some of the topics we will discuss include: immigration as a product of US hemispheric policies; the civil rights struggles of the 20th century and the evolution of a distinct "Latino" identity; the "new" migration from Latin America; the transnational influence of immigrant communities on their homelands. (AM)

[HIST 262(2620) The Middle Ages: Introduction and Sampler # (CA)]

[HIST 264(2640) Introduction to Asian American History (also AAS 213(2130), AM ST 213(2610)) (HA)]

HIST 265(2650) Ancient Greece from Homer to Alexander the Great (also CLASS 265(2650)) # (HA)

Fall. 4 credits. Open to freshmen.

B. Strauss.

A survey of Greece from the earliest times to the end of the Classical period in the late fourth century B.C. The course focuses on the Greek genius: its causes, its greatness, its defects, and its legacy. The Heroic Age, the city-state, and ancient democracy, and the intellectual ferment of the Greek Enlightenment are the main topics of study. Readings in translation from Homer, Aristophanes, Sophocles, Herodotus, Thucydides, Plato, Aristotle, and from the evidence of ancient inscriptions, coins, art, and architecture. (EA)
HIST 271(2711) Politics of Violence in 20th-Century Europe (HA)
Spring. 4 credits. H. Case.
A survey of Europe's 20th-century history with specific emphasis on uses of violence, including warfare, terrorism, genocide, uprisings, state-initiated domestic violence, rape, and other forms of violence. Discussions of First and Second World Wars and the political and ethnic clashes of the post-WWII period will be supplemented by less familiar instances of violence in the European context, including domestic violence. Lectures, readings and written assignments will explore the factors determining who organizes, overcomes, and resists violence, how it is interpreted, what reactions it provokes, and how states have sought to curtail or facilitate it. (EM)

HIST 272(2720) The Atlantic World from Conquest to Revolution (also AM ST 272(2720)) @ (HA)

HIST 273(2730) Women in American Society, Past and Present (also AM ST/FGSS 273(2730)) @ (HA)

HIST 274(2740) Foodways: A Social History of Food and Eating @ (HA)

HIST 277(2771) Getting Medieval I: The Early Middle Ages # (HA)
Fall. 4 credits. This course fulfills the prerequisite for HIST 278. O. Falk.
Spanning the period ca. 300 to 1100 AD, this course surveys European history between the twilight of Classical antiquity and the dawn of the second millennium. Although we focus primarily on what would later become Western Europe, we also pay close attention to the neighbors of Latin Christendom, Byzantium and the Muslim world. Social, cultural, and institutional developments are emphasized, as is the variety of historical methodologies used to study the early Middle Ages. Were the "Dark Ages" a tailspin of hopeless decline? Or did medieval Europe embody new alternatives to a monolithic ancient world? Who or what drove the changes, and why? (ER)

HIST 278(2772) Getting Medieval II: The Later Middle Ages # (HA)
Spring. 4 credits. Prerequisite: HIST 262/HIST 277 or permission of instructor. O. Falk.
This course surveys European history in the period ca. 1000 to 1500 AD, when Western Europe was transformed. From inauspicious beginnings as Eastern Christendom and Islam's neglected cousin, it was able to bootstrap itself into the position of a dominant world civilization. We will look at developments in government, economy, technology, religious institutions and faith, cultural media and social ideals. What enabled the "European revolution" of the Middle Ages? How was it implemented and manifested? What were the costs of progress, and who bore them? Who reaped the benefits? (ER)

HIST 279(2790) International Humanitarianism @ (HA)
Spring. 4 credits. J. Weiss.
This course surveys international humanitarian and human rights activities from their origins to the present. The ideological and social roots of humanitarian thought and action receive attention, as does the often-overlapping, sometimes conflictual relationship between humanitarianism and human rights advocacy. Case studies will include the anti-slavery movement, the activities of faith-based groups, biographical studies of pioneering individuals, and the international response to various genocides. (EM)

HIST 280(2800) Introduction to Korea [also ASIAN 218(2218)] @ CA
Fall. 3 credits. J. Khalil.
An introduction to the Korean language and civilization. Emphasis will be on developing listening, speaking, reading, and writing skills in a contextual approach. (AM)

HIST 281(2810) Science in Western Civilization [also S&T S 281(2811)] @ (HA)
Fall. 4 credits. HIST 281 is not a prerequisite for HIST 282. P. Dear.
This course aims to make comprehensible both to science majors and to students of the humanities the historical structure and development of modern science and to show sciences as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the 20th century form the framework for current Western views of the world, while the roots of the present-day dominance of "science" as a symbol of progress of modernity lie in an alliance between knowledge of nature and power over nature that took shape in the 19th century after a long period of emergence. HIST 281 runs chronologically up to the death of Isaac Newton and focuses on the cultural traditions of Christendom and its selective appropriation of a Greek heritage. (HS)

HIST 282(2820) Science in Western Civilization [also S&T S 282(2821)] @ (HA)
Spring. 4 credits. HIST 281 is not a prerequisite for HIST 282. P. Dear.
This course aims to make comprehensible both to science majors and to students of the humanities the historical structure and development of modern science and to show sciences as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the 20th century form the framework for current Western views of the world, while the roots of the present-day dominance of "science" as a symbol of progress of modernity lie in an alliance between knowledge of nature and power over nature that took shape in the 19th century after a long period of emergence. This course covers the 18th, 19th, and early 20th centuries. (HS)

HIST 283(2831) The Dutch and the Atlantic World [also AM ST 283(2831)] @ (HA)
Fall. 4 credits. J. Jacobs.
This course analyzes the unique nature of Dutch involvement in the Atlantic World from the end of the 16th century to the close of the 17th century. Unlike other early modern European colonial efforts, nations, the Dutch did not found flourishing settlement colonies, but instead concentrated on trade and shipping, organizing the problems and advantages associated with non-territorial colonial expansion. Considered in comparative perspective, the Dutch experience raises the question of whether expansion without empire was a viable option during the early modern period. Readings will consist of primary documentary and secondary scholarship in the form of both articles and monographs. Students will take two exams and write a research essay. (AM)

HIST 285(2850) From Medievalism to Modernity: The History of Jews in Early Modern Europe, 1492 to 1789 [also JWST 285(2850)] @ (HA)
Fall. 4 credits. V. Caron.
This course examines the history of European Jewry during the centuries of transition from the Middle Ages to the Modern Era. We examine the extent to which traditional Jewish life began to break down during this period and thus paved the way for the emergence of modern Jewry. Topics include the Spanish Expulsion of 1492, religious, intellectual, and socio-economic developments of the Marrano dispersion, including Lurianic Kabbalah and the messianic movement of Shabbatai Zevi; the establishment of Jewish communities in the West; the end of the "Golden Age" of Polish Jewry and the rise of Hasidism; the changing economic and social role of Jews in the 17th and 18th centuries; and the impact of the Enlightenment. (EM)

HIST 286(2861) History of Zionism and the Birth of Israel (also JWST 290[2670]) @ (HA)
Spring. 4 credits. V. Caron.
This course will examine the history of Zionism as an ideology and political movement from its origins in the 19th century to the present. Attention will be paid to situating Zionism within the context of Jewish history, European history, and European Jewish History. Topics will include: the ideological foundations of Zionism; the role of Theodor Herzl and the rise of political Zionism; the Balfour Declaration; the development of the Yishuv; Zionism and the British Mandate; the Arab-Zionist encounter; Zionist responses to the Holocaust; and Zionism and contemporary Israeli society. (EM)

HIST 287(2870) Evolution (also BIOEE 207[2070], S&T S 287(2871)) @ (PBS)
Fall. 3 credits. A. MacNeil.
For description, see BIOEE 207. (HS)

HIST 289(2890) The U.S.-Vietnam War [also ASIAN 298(2298)] @ (HA)

HIST 291(2910) Modern European Jewish History, 1789 to 1948 (HA)
Fall. 4 credits. Next offered 2007–2008. V. Caron.

HIST 292(2920) Inventing an Information Society [also ENGRG/ECE 298[2980], S&T S 292[2921]] @ (HA)
Spring. 3 credits. R. Kline.
For description, see ENGRG 298.

HIST 294(2940) History of China in Modern Times [also ASIAN 294[2294]] @ (HA)
Spring. 4 credits. Staff.
A survey that concentrates on the rise of the last imperial dynasty and the first 20th century, the upheavals resulting from domestic rebellions and foreign imperialism in the 19th century, and the 20th-century efforts
to achieve social mobilization, political unity, and commercial expansion. (AS)

[HIST 205(2950) Introduction to the History, Language, and Culture of the Balkans (HA)]

HIST 300(3000) Spanish in the Disciplines (also SPANL/LAT A 302[3020])
Fall 1 credit. Staff.
For description, see SPANL 302. (LA)

HIST 302(3002) Supervised Research
Fall and Spring 3 or 4 credits. Prerequisite: junior or senior standing. Permission of instructor required. Staff. (HR)

[HIST 303(3030) African-American Women in Slavery and Freedom (also FGSS 307[3070], AM ST 303[3030])]

HIST 304(3040) American Culture in Historical Perspective, 1880–1980 (also AM ST 304[3040]) (CA)
Fall. 4 credits. M. Kammen.
An introduction to the study of modern American culture. Emphasis upon the role of culture in the quest for national identity; the function of cultural myths and myth-making; the advent of modernism; relationships between mass culture, popular culture, and high culture; and on the question of American exceptionalism (distinctiveness). Special attention also to the situation of subcultures and regions, to the changing role of entertainment in relation to leisure, the media, ethnicity (pluralism), the decorative and popular arts. (AM)

[HIST 305(3050) Britain, 1660 to 1815 (HA)
Fall. 4 credits. Next offered 2007–2008. R. Weil.]

HIST 306(3060) Modern Mexico: From Independence to the Zapatistas (also LAT A 306[3060]) (HA)
Spring. 4 credits. R. Craib.
A survey of Mexico's history from the early 19th century to the present. The course covers social, cultural and economic trends and their relationship to political movements. Special emphasis will be given to the ways in which "common people" participated in and influenced politics; to the important regional, class, ethnic, and gender differences that have figured prominently in Mexico's history; and to the politics of history-making. (LA)

[HIST 307 British History, 1760–1870 (HA)

[HIST 308(3080) History of Post-War Germany (1945 to Present) (HA)
Fall. 4 credits. Next offered 2008–2009. I. Hull.]

[HIST 309(3090) History and Geographical Imagination @ (HA)
Fall. 4 credits. Next offered 2008–2009. R. Craib.]

[HIST 311(3110) Andean History and Ethnohistory @ (HA)

[HIST 312(3120) Forging Nations: Experiments in Latin American Nation-Building and Reform (also LAT A 312[3211]) (CA)
Fall. 4 credits. M. Roddam.
The course examines efforts undertaken to beautify, rationalize, integrate, reform and engineer into existence 'modern' Latin American citizens and nations, and the ways in which these efforts were contested and re-shaped by Latin Americans from the 19th through the 20th century. Topics will include (but are not limited to): race, science and rights; immigration, sexuality and urban regulation; radio, mass politics and space; the Cold War, Liberation Theology, revolution and counter-revolutions. (LA)

[HIST 314(3140) History of American Foreign Policy, 1912 to the Present (also AM ST 314[3140]) (HA)

[HIST 315(3150) Environmental History: The United States and Beyond (also AM ST 349[3510]) (HA)

[HIST 316(3160) American Political Thought: From Madison to Malcolm X (also AM ST 376[3665], GOVT 366[3665]) (HA)
Fall. 4 credits. I. Kramnick.
For description, see GOVT 366. (AM)

[HIST 318(3180) American Constitutional Development (also AM ST 317[3180]) (HA)
Fall. 4 credits. Not open to freshman. R. Polenberg.
Major issues in constitutional history. Topics include: the drafting of the Constitution, the Bill of Rights; the Marshall era; the crises caused by slavery and emancipation; the rise of substantive due process; Holmes, Brandeis, and freedom of speech; the Roosevelt "revolution"; civil liberties and civil rights in modern America; the right of privacy; the contemporary Supreme Court. (AM)

[HIST 319(3191) Martial Arts and Society and Religion (also ASIAN 391[3391]) (HA)
Fall. 4 credits. T. J. Hinrichs.
Exploration of the social, political, and cultural contexts of martial arts practice, and historical dynamics behind their transmission, transformation, and spread. Examination of the emergence of martial artists as popular figures, and martial arts as distinct sets of practices in China and Japan. Study of the modern re-invention of these practices, and of their transmission to other parts of the world. Investigation of a local martial arts school, and of the question, "What is East Asian about East Asian martial arts in Ithaca?" (AS)

[HIST 320(3200) The Viking Age # (HA)

[HIST 321(3210) Colonial North America to 1763 (AM ST 321[3210]) (HA)
Fall. 4 credits. M. B. Norton.
A survey of European settlement in North America and the Caribbean, emphasizing the interactions of Europeans, Indians, and Africans; economic development; gender; relations; religious and political change; and the impact on the colonies of internal and external conflicts. (AM)

[HIST 322(3240) Varieties of American Dissent, 1880–1900 (also AM ST 324[3240]) (HA)
Fall. 4 credits. N. Salvatore.
For description, see AM ST 324. (AM)

[HIST 325(3250) Age of the American Revolution, 1754 to 1815 (also AM ST 322[3250]) (HA)
Spring. 4 credits. M. B. Norton.
An examination of the process by which the 13 English colonies became an independent and united nation, with emphasis on political thought and practice, social and economic change, and cultural development. Attention will be paid to the impact of the American Revolution on women, Blacks, and Indians as well as on white males. (AM)

[HIST 326(3260) History of the Modern British Empire (HA)

[HIST 347(3470) Asian American Women's History (also AA/FGSS 347[3470], AM ST 351[3470]) @ (CA)
Spring. 4 credits. D. Chang.
This course examines the experiences and representations of Asian American women from the mid-19th century to the present. It explores the lives & contexts of immigrant women and of women both in the U.S. quartz into identity and power are at the heart of this course as we explore the intertwined nature of race, gender, and nation. (AM)

[HIST 348(3481) Modern France: 1870 to the Present (also FRLIT 348[3480]) @ (HA)
Spring. 4 credits. C. Robcis.
This course will explore some of the major developments in French history, from the advent of the Third Republic to the present day. We will focus in particular on the political, social, economic, and cultural constructions of a "French Republican model" which has engendered a specific set of inclusions and exclusions. Among other themes, we will explore the consolidation of bourgeois power and social challenges; imperial expansion and decolonization; the impact of the two World Wars and the contested memory of Vichy; anti-Semitism, nationalism, and the rise of the new Right; immigration policies, May 68, and contemporary challenges to the "French social model." (EM)

[HIST 349(3490) Renaissance England, 1485 to 1660 @ (HA)
R. Weil.)

[HIST 350(3500) The Italian Renaissance (also ITALL 221[2210]) @ (HA)
Spring. 4 credits. J. Najemy.
An exploration of intellectual, cultural, religious, and political developments in Italy from the political thought of Dante and Marsilius in the age of the communes, through the several stages of Humanism from Petrarch to Alberti to the crisis of Italian liberty in the generation of Machiavelli, Guicciardini and Castiglione. The course seeks to problematize the notion of a "Renaissance" in the period's ambivalent attitudes toward history, politics, learning, culture, gender, language, and the role of intellectuals in politics and society. Emphasis is placed on the close reading of primary sources and on issues of interpretation. (ER)

[HIST 351(3510) Machiavelli (also ITALL 351[3510]) @ (HA)
Fall. 4 credits. J. Najemy.
This course presents Machiavelli in a variety of historical and interpretive contexts, European and Italian politics in the early 16th century, the Florentine republic and the rise of the Medicean principate; Machiavelli's career in government and his, and the republic's, crisis in 1512–13; the intellectual traditions of Renaissance humanism, political thought, and the revival of antiquity; vernacular literary currents and popular culture; and the political writers and theorists with whom Machiavelli associated and corresponded. Emphasis is placed on a close reading of the major works (including the essays, The Prince, the Discourses, Mandragola, and selections from The Art of War and the Florentine Histories, all in translation) and a critical examination, in the light of that reading, of some major modern interpretations of Machiavelli. (ER)

[HIST 352(3520) 20th-Century East Asian-American Relations (also CAPS 352[3520]) @ (HA)
Spring. 4 credits. J. Chen.)

[HIST 355(3550) The Era of the French Revolution and Napoleon @ (HA)
S. Kaplan.)

Fall. 4 credits. For freshman, permission of instructor required. Next offered 2007–2008.
K. P. Long and W. Kennedy.)

[HIST 359(3590) Marriage and Sexuality in Medieval Europe (also RELST/FGSS 368[3680]) @ (HA)
Fall. 4 credits. Recommended: some prior knowledge of medieval European history. P. Hyams.
Few topics generate heat so readily as gender relations and sexuality. Behind the current controversies lies decisions made in the first Christian centuries, and the course continues in the course of the Middle Ages. These will affect all of us, believers and unbelievers alike. This course studies Western attempts to deal with the problem of sexuality up to about 1500. The class will specifically clarify the church's normative rules of law and theology. Armed with this framework, it will then turn to more specific topics, including homosexuality, prostitution, rape, abduction and sexuality in medieval literature. The goal is to be able to compare the ideal model with the reality, as one of the great transformations in which people from different segments of society participated for various reasons and motives. In this class, we will examine this event as a revolution, thus paying close attention to a wide range of ideas, activities, and practices such as marriage, monogamy, millenarian uprisings, popular culture, millenarianism, the exploration of western forms of knowledge and power, nation-state building and new ideologies of time (progress) and space (national identity). In other words, we seek to understand Japan's transformation as a fairly long, multifaceted and widely participated process of intense intellectual and cultural activism as well as social and political activism. In addition to primary and secondary texts, we will read a few important theoretical works on revolution/social transformation for the purpose of critically examining the history of the fall of the Tokugawa samurai regime and the creation of a modern social order, called bakumatsu-ishin in Japan. (AS)

[HIST 361(3611) Bukomatsu-Ishin: Conflicts and Transformations in Early Modern Japan, 1700–1890 @ (HA)
Fall. 4 credits. K. Hirano.
This course explores Japan's tumultuous transformation from a samurai martial government to a modern nation-state and its political and cultural implications for the present. It has been debated among both Japanese and American historians whether or not Japan's modern transformation is best understood as a "restoration (of imperial rule)" or as a "revolution." The choice of word or as a descriptive category matters to the extent that it reveals something about this event. "Restoration" expresses the view that Japan's metamorphosis into a modern society was a relatively uneventful and smooth "transition" carried out by a handful leaders whereas "revolution" recognizes Japan's experience
and thus to assess the product the medieval church passed on to Western culture and ourselves. No formal prerequisite, though some prior knowledge of medieval European history is desirable. (EM)

[HIST 369(3690) The History of Florence in the Time of the Republic, 1250 to 1530 (also ITALL 369[3690]) (HA)]

[HIST 370(3700) History of the Holocaust (HA)]
Spring. 4 credits. Next offered 2007–2008. V. Caron.]

[HIST 371(3710) World War II in Europe (HA)]
Summer and fall. 4 credits. J. Weiss. The Second World War remains the single most important event shaping the contemporary world. The course deals with both the events of World War II as they shaped European and world history and the way those events were remembered and commemorated in postwar years. Lectures, screenings, and readings will examine: the role of wartime political leaders and military commanders; the experience of war and occupation for soldiers and civilians, including Resistance movements and collaborators; Nazi genocide; intellectual and cultural changes during the war, including the impact on literature and philosophy; strategic questions about the origins and conduct of the war; the concluding phases involving the Nuremberg Trials, the Yalta and Potsdam conferences, and the launching of the Cold War; and the representation of the war in subsequent films, literature, and political culture. (EM)

[HIST 373(3730) Law, Crime, and Society in Early Modern Europe (HA)]
Spring. 4 credits. D. Corpos. This course will introduce students to the development of law, legal institutions, definitions of crime, and practices of criminality from the 16th through 18th centuries. We often associate this period with extreme measures of law enforcement and repression, whether the persecutions of Jews by the Inquisition or the witch burnings that raged through various parts of Europe in the 16th and 17th centuries. Yet much of our common knowledge of law and crime in early modern Europe consists of exaggerations, myths, and misunderstandings. This course offers a corrective by exploring the historical contexts and meanings of law and crime in European society. Some of the themes covered in this course include the relationship between common law and Roman law, jurisdiction building and jurisdictional competition, the imposition of gender and sexual norms, heresy and witchcraft prosecutions, the sociology and anthropology of "criminal" subcultures, and the political process of "criminalization." (EM)

[HIST 375(3750) The African American Workers, 1865 to 1910: The Rural and Urban Experience (also IRLCB 386[3860]) (HR)]
Fall. 5 credits. Junior or senior standing or permission of instructor. Next offered 2007–2008. N. Salvatore.]

[HIST 376(3760) The African-American Workers, 1910 to the Present: Race, Work, and the City (also IRLCB 386[3860]) (AM)]
Fall. 5 credits. N. Salvatore. For description, see IRLCB 386. (AM)

[HIST 378(3780) Topics in U.S. Women's History (also AM ST 378[3780])]
Fall. 4 credits. Prerequisite: HIST/FGSS 273, 303, or 238 or permission of instructor. Next offered 2007–2008. M. B. Norton.]

[HIST 379(3790) The First World War: Causes, Consequences (HA)]
Spring. 4 credits. For freshman, permission of instructor required. I. Hull.]

[HIST 386(3880) History of Vietnam (also HIST 688[6880], ASIAN 385/685[3385/6685]) (HA)]
Fall. 3 credits. K. Taylor. For description, see ASIAN 385. (AS)

[HIST 395(3950) Premodern Southeast Asia (also HIST 695[6950], ASIAN 397[3397]) (HA)]
Fall. 4 credits. Open to undergraduates, and to graduate students, although with separate requirements. Next offered 2007–2008. E. Tagliacozzo.

[HIST 396(3960) Southeast Asian History from the 18th Century (also HIST 696[6960], ASIAN 396/696/3396/6696)] (HA)
Spring. 4 credits. Graduate students must enroll in HIST 696. E. Tagliacozzo. Surveys the modern history of Southeast Asia with special attention to colonialism, the Chinese diaspora, and socio-cultural institutions. Considers global transformations that brought "the West" into people's lives in Southeast Asia. Focuses on the development of the modern nation-state, but also questions the narrative by incorporating groups that are typically excluded. Assigns primary texts in translation. (AS)

Honors Courses

[HIST 400(4000) Honors Proseminar]
Fall and spring. 4 credits. Limited to 15 students. For prospective honors candidates in history. Permission of member of Honors Committee required. Fall. H. Case; spring, R. Crab. An exploration of major contemporary approaches to historical inquiry, analysis, and presentation. Ways of thinking about history along with research methods and organization of the results will be considered by reading and discussing a variety of historical works. (HR)

[HIST 401(4001) Honors Guidance]
Fall. 4 credits. Prerequisite: HIST 400. Permission of instructor required. E. Tagliacozzo. (HR)

[HIST 402(4002) Honors Research]
Spring. 4 credits. Prerequisite: HIST 400. Permission of instructor required. E. Tagliacozzo. (HR)

Undergraduate Seminars

[HIST 403(4030) History of the U.S. Senate in the 20th Century (also GOVT 400)(HA)]
Fall and spring. 4 credits. Offered in Cornell in Washington Program. B. Koed. This course will offer students an opportunity to view the process of shaping national debates from the perspective of the United States Senate. The modern Senate will serve as the point of reference for an inquiry into the development of the institution's powers under the Constitution during the past 200 years. Class readings, lectures and discussions will focus on the themes of continuity and change, the role of individual senators, and the institutional evolution of the Senate. In addition to general class reading and written examinations, each student will write a short paper and participate in an oral presentation. (AM)

[HIST 404(4041) Ethnicity, Race, and Indigeneity in Latin America (HA)]

[HIST 405(4050) U.S.–Cuba Relations (also HIST 605[6050], LAT A/LSP/AM ST 405[6050], 405/605/6050)] (HA)
Fall. 4 credits. M. C. García. The course examines the political, cultural, and economic relations between the United States and Cuba since the 18th century. Special attention is given to the transnational role of exiles and immigrants in shaping policy in both countries and across the region. (AM) (LA)

[HIST 406(4061) The New Cold War History (also HIST 606[6061]) (HA)]
Spring. 4 credits. Limited to 15 students. C. Chen. This is a reading and research seminar with an emphasis on the "new" Cold War history—a scholarly phenomenon emerging since the early 1990s, along with the end of the global Cold War and the new opportunities to conduct multi-archival and multi-source research. Students will be exposed to various new interpretations, new methods of research, and new ways of thinking associated with the "new Cold War history" studies. Readings in this class will be focused on the scholarship that has appeared since the early 1990s. Students are required to write several feature reviews and a comprehensive review essay, as well as to present them, in the course. Grade in the course will be calculated on the basis of evaluation of both written work and oral presentations, as well as of class participation. (AS)

[HIST 408(4080) Feudalism and Chivalry: Secular Culture in Medieval France, 1000 to 1300 (HA)]

[HIST 410(4100) Archipelago: Worlds of Indonesia (also HIST 617[6100], ASIAN 409/617[4409/6617]) (HA)]
Spring. 4 credits. Open to undergraduates and graduate students, though with separate requirements. Limited to 15 students. Next offered 2007–2008. E. Tagliacozzo.]
In addition, we will read Tocqueville’s *Democracy in America* (2 vols., 1835-40). In addition, we will read a close reading of the most astute and influential inquiry ever made concerning politics and society in the U.S., Alexis de Tocqueville’s Democracy in America (2 vols., 1835-40). In addition, we will read Tocqueville’s correspondence concerning the U.S.; some major secondary sources about Tocqueville and his companion Beaumont; two works by “moderns” who have done the “Tocqueville thing” (1982 and 2005); and assess the uses and abuses of Tocqueville’s insights in recent American political discourse. How prophetic was this French political philosopher? (AM)

**HIST 422(4221) British in India, 1750-1830** @ [HA]
Spring. 4 credits. T. R. Travers. Examines the growth of British power in India before 1830. Topics include: the sequence and causes of historical conquests, the British-Indian army, colonial legal regimes and knowledge systems, and the social life of colonial towns. Students will undertake their own research paper and a topic of their choice. (EM)

**[HIST 423(4230)] Chronicles of the Conquest of Latin America** @ [HA]

**HIST 424(4240) Art and Politics in 20th-Century Latin America** also [LAT A 424(4241)] @ [CA]
Fall. 4 credits. Limited to 15 students. Permission of instructor required. HIST 206 or other Latin American course suggested. M. Roldan.

This seminar will examine how the intersection of art and politics shaped culture, ideology, and identity in Latin America from the Mexican Revolution to the dictatorships of the late 20th century. Topics may include muralism and the Mexican Revolution; the artist as muse and activist (Frida Kahlo); working class and immigrant culture in Argentina and the tango; sanba as social and political protest in Brazil; gender and politics in exiled women’s literature; the appropriation of public spaces as artistic forum and mean of communication under authoritarian regimes. (LA)

**HIST 426(4260) The West and Beyond: Frontiers and Borders in American History and Culture** also [AM ST 426(4260)] @ [HA]
Spring. 4 credits. Limited to 15 students. Priority given to junior and senior majors in History and American Studies. A. Sachs.

“Fearless I go only by force,” said Henry David Thoreau, “but westward I go free.” This seminar will undertake a close reading of the most astute and influential inquiry ever made concerning politics and society in the U.S., Alexis de Tocqueville’s Democracy in America (2 vols., 1835-40). In addition, we will read Tocqueville’s correspondence concerning the U.S.; some major secondary sources about Tocqueville and his companion Beaumont; two works by “moderns” who have done the “Tocqueville thing” (1982 and 2005); and assess the uses and abuses of Tocqueville’s insights in recent American political discourse. How prophetic was this French political philosopher? (AM)

**HIST 428(4261) Commodification in Historical Perspective: Sex, Rugs, Salt, and Coal** also [AM ST 427(4261)] @ [HA]

**HIST 430(4300) America in the Camera’s Eye** Fall. 4 credits. Limited to 15 students. Permission of instructor required. Next offered 2006-2007. R. L. Moore.

**HIST 431(4310) Farmworkers** also [HIST 631(6310), LSP 431(431), 432(432), 6310], CRP 395.72/679.72[3850/5850], ILRCB 402(4202) @ [HA]
Spring. 4 credits. R. Graff.

For description, see LSP 451. (LA)

**HIST 432(4320) Topics in Ancient Greek History** also [HIST 633(6330)] @ [HA]

Although the fate of the Jews in Germany ended in tragedy during the Holocaust, the German-Jewish interaction during the modern period was also characterized by immense creativity. Modern German Jewry stood at the forefront of innovative religious and ideological movements, and their history therefore offers a lens through which we can focus on the opportunities and challenges that faced modern European Jews more generally. Topics include: debates about Jewish emancipation, the processes of anti-Semitism; the encounter with East European Jewish immigrants; Jews in Weimar culture; Jewish responses to the rise of Nazism; and post-1945 German reflections on the Holocaust. (EM)

**HIST 436(4360) Conflict Resolution in Medieval Europe** also [KCM]

**HIST 439(4390) Reconstruction and the New South** also [AM ST 439(4390)] @ [HA]

**HIST 441(4411) Fourth Century and Early History of Greece** also [CLASS 441(4410)] @ [HA]
Fall. 4 credits. B. Strauss.

Topics include the evolution of the Greek city-state; society, economy, and gender; democracy, oligarchy, and tyranny; the careers of Philip, Alexander, and the Successors. Greco-Persian relations. Sicily and southern Italy, and the establishment of the Hellenistic Kingdoms. (EA)

**HIST 442(4421) To Be Enslaved Then and Now** @ [HA]
Spring. 4 credits. S. Greene.

In this course, we will read and analyze select texts (both oral and written) that were composed between the late 18th century and 2005 by individuals who were enslaved or who boasted of enslaving others. Emphasis is placed on African-American texts but in comparison with narratives by
Europeans, Asians and Latin Americans. For whom were these texts produced and for what purpose? How much in these texts is history, how much is fiction, and how do we determine the difference? What can these texts tell us about the individual authors and the political, economic and cultural contexts in which they were written? These and other related questions will structure this seminar. (AF)

[HIST 444(4440) American Men (also AM ST/GFS 444[4440]) (HA)

[HIST 445(4451) New York Women (also S&TS 422[4221], FGSS 422[4220]) (HA)
Fall. 4 credits. Limited to 15 students. M. Rossler.
For description, see S&TS 422. (AM)]

[HIST 446(4460) Strategy in World War II (HA)
Spring. 4 credits. Permission of instructor required. J. Weiss.
Strategic decision-making in World War II. The course will be organized into a "task force" addressing crucial problems faced by the European-American Allies in World War II: the invasion of northwest Europe, strategic bombing tactics, the rescue of European Jews, and coordination with the Soviet Union. Individual presentations/papers followed by meetings to draft group reports. (EM)]

[HIST 447(4470) Crusaders and Chroniclers @ (HA)
Fall. 4 credits. Limited to 15 students. Next offered 2007–2008. P. Hyams.]

[HIST 448(4480) The Rabino Seminar (also AM ST 430.5[4301], AAS 430[4301], ENGL 430[4300])
Spring. 4 credits. Permission of instructor required. S. Wong.
For description, see AM ST 430.5.]

[HIST 452(4520) History of the New Europe (HA)

[HIST 453(4530) Formation of Islamic Law (also NES/RELST 457[4570]) @ (HA)
Fall. 4 credits. D. Powers.
For description, see NES 457. (NE)]

[HIST 454(4541) The Rise and Fall of 20th-Century Liberalism (HA)
Spring. 4 credits. R. Vanderlan.
This seminar will consider the origins, achievements, limits and legacy of 20th century attempts to create a more just and equal society. We will examine the evolving nature of liberal thought from the New Deal through the Great Society and on to Bill Clinton, and trace opposition from Barry Goldwater through Ronald Reagan and on to Welfare Reform. We will focus on the interplay between ideas, policies, and politics. (AM)]

[HIST 456(4560) Topics in Medieval Historiography (also HIST 656[6560)] @ (HA)
Spring. 4 credits. Permission of instructor required. O. Falk.
This seminar explores issues of historical theory and methodology, emphasizing their specific iterations in medieval European history. Historians of the Middle Ages must wrestle with all of the challenges familiar to our modern counterparts and then some: documents are more scarce, languages more dead, categories more elusive than in recent historical context. We will examine medieval historians' contributions to broad debates in the discipline, sample historiographical chestnuts that have occupied medievalists, and enquire into ways of expanding our conceptual tool kits further in the future. (ER)]

[HIST 457(4570) Seminar in European Fascism (HA)
Fall. 4 credits. Permission of instructor required. D. Powers.
An attempt to define and understand the social, political, and intellectual origins, mechanisms, and goals of European fascists movements of the 1920s and 1930s by detailed study of German national socialism, Italian fascism, and the Action Francaise. (EM)]

[HIST 458(4581) Intelligibility in Science (also S&TS 458[4581]) (HA)
Spring. 4 credits. P. Dear.
In what ways has the European tradition known as "science" attempted to understand the natural world, and how has it attempted to lend credibility to its accounts? This seminar research seminar will focus on the study of primary sources in the history of science, especially the European science of the past four centuries, to investigate what issues were involved in the establishment and acceptance of dominant approaches in various areas of scientific work, in both physical and life sciences. Work will be centered on the text of Peter Dear's The Intelligibility of Nature: How Science Makes Sense of the World (U. Chicago Press, currently in press), with the intention of investigating further some of its ideas in relation to source material not considered in the text. Final papers for the course will pursue the nobility of the search for intelligibility in the history of science by investigating a case study from any period and in any scientific discipline that the student (in consultation with the professor) deems worthwhile. (HS)]

[HIST 462(4620) Popular Culture in European History (CA)

[HIST 463(4630) War and Society in Eastern Europe (HA)

[HIST 464(4640) Historical Issues of Science, Technology, Race, and Colonialism (also S&TS 475[4751]) (HA)
]

[HIST 465(4651) Special Topics: Chinese Historical Documents (also CHIN 425[4245])
Fall. 4 credits. Prerequisite: equivalent of three years Mandarin instruction. Permission of instructor required. Z. Chao.
Topic for Fall 2006: Historical Documents on Modern China. For description, see ASIAN 425. (AS)]

[HIST 466(4660) Iroquois History (also AM ST/AS 466[4660]) @ (HA)

[HIST 468(4680) Love and Sex in the Italian Renaissance (also ITAL 468[4680]) @ (HA)
Spring. 4 credits. J. Najemy.
An exploration of the representation of love, sex, and eros in Italian Renaissance literature, and the attempts by secular governments and the Church to manage, discipline, and punish sexual transgressions. Primary texts include Boccaccio's Decameron, 15th-century novella, plays by Machiavelli (Mandragra, Clizia) and Bibbiena (Calandria), and Arentino's Dialogues. Secondary readings include studies of sexual crime, love across social boundaries, prostitution, homosexuality, and leshmannism. (ER)]

[HIST 469(4691) The Old English Laws and Their Politico-Cultural Context (also HIST 669[6691], ENGL 419[4190]) @ (CA)
Fall. 4 credits. P. Hyams and T. Hill.
The Old English law codes contain basic information on almost every historical topic for the period from kingship down to peasants and their boundary fences. This makes them central to the study of Anglo-Saxon England. Yet their very nature remains controversial. How far, for example do they represent achievement such as the establishment of central authority capable of enforcing laws throughout the realm, and how far merely aspiration, possibly clerical and unworthy at that, toward that end? The special character of the laws comes from their being in the vernacular. In this interdisciplinary class, there will be an opportunity to read them in the original Old English, with assistance to beginners. But the excellent translations we possess and a plethora of lively comment offer anyone an attractive introduction to the study of pre-modern texts in general and to the reasons why Old English scholars are now extending their canon so far beyond its traditional "literary" borders. (ER)]

[HIST 474(4740) Topics in Modern European Intellectual and Cultural History (also COM L/JWST 474[4740])
Fall. 4 credits. Limited to 15 students.
D. LaCapra.
Topic for 2006: History and Trauma. The course will focus on the relation between trauma and history, including the experience, memory, and representation of traumatic events. It will treat a series of works (historical, theoretical, and fictional) in which this problem arises in an acute form, especially (but not exclusively) with respect to the Holocaust. (EM)]

[HIST 476(4760) History and Story in the North Sagas (also HIST 676[6760]) (HA)

[HIST 477(4770) Seminar on the Politics of the Enlightenment @ (HA)

[HIST 484(4840) Subversion as Foreign Policy: The United States in Southeast Asia (HA)

This seminar explores issues of historical theory and methodology, emphasizing their specific iterations in medieval European history. Historians of the Middle Ages must wrestle with all of the challenges familiar to our modern counterparts, and then some: our texts are more scarce, languages more dead, categories more elusive than in recent historical context. We will examine medieval historians' contributions to broad debates in the discipline, sample historiographical chestnuts that have occupied medievalists, and enquire into ways of expanding our conceptual tool kits further in the future. (ER)

[HIST 496(4961) History of Medicine and Healing in China (also ASIAN 469[4469], S&T&S&BSCC 496[4961]) # (HA)]
Spring. 4 credits. T. J. Hirnich.
An exploration of processes of change in medicine in China. Focuses on key transitions, such as the emergence of canonical medicine, of Daoist approaches to healing and longevity, of “Socratic Physicians,” and of Traditional Chinese Medicine in modern China. Inquires into the emergence of new healing practices in relation to both popular and specialist views of the body and disease, “cultivating vitality” practices, modes of transmission of medical knowledge, and healer–patient relations. Course readings include primary texts in translation as well as secondary materials. (AS)

[HIST 497(4970) Jim Crow and Exclusion-Era America (also HIST 697[6970], AM ST 497[4970]/6970), AAS 497[4970]) (HA)]

[HIST 610(6101) Afro-American Historiography (also AM ST 610[6101])]
Fall. 4 credits. Letter grades only.
M. Washington
Reading and discussion course focusing on the way historians write and interpret the Black experience in America. Students will be concerned with individual historians, various schools of thought, and historical approaches. (AM)

[HIST 612(6120) Colonial Latin America (also LAT A 612[6120])]
Fall. 4 credits. K. Graubart.
This course provides a foundation in colonial Latin American history and historiography for graduate students. We will examine some of the most exemplary recent monographs in the field as well as analyze the debates of the past four decades. (LA)

[HIST 615(6150) The Past in the Present/ The Present in the Past: Histories of Tokugawa Japan]
Fall. 4 credits. K. Hirano.
This course investigates the interactive play between historians' interpretations of the past and their concerns with the present. It places an emphasis on the ways in which modern/contemporary historians of Japan interpret early modern thinkers, texts, and events, and the ways such interpretations are shaped by their understandings of Japanese modernity and their aspirations for a better future. The questions we shall address throughout this course are as follows: Why do historians of Japan pay special attention to the early modern period as an epoch indispensable for a better and deeper understanding of Japanese modernity? How do historians' concerns with the present shape the ways in which they interpret the past? How do historians' dialogues with Late Modernist (interpretations) alter our perspectives not only on the past but also on the present? (AS)

[HIST 616(6160) Gender and Sexuality in Southeast Asia (also HIST 416[4160], ASIAN 416[4160]/4416[6161], FGSS 416[4160])]

HIST 636 Ancient Warfare (also CLASS 632[6320])
Spring. 4 credits. Prerequisites: at least one course in ancient history and a reading knowledge of Greek and Latin. Permission of instructor required. B. Strauss.

A survey of recent theories, methods and publications as well as readings in Greek and Latin. (EA)

HIST 637(6370) Popular Culture in Europe from the Middle Ages through the 19th Century: Problems in Thinking about Cultural and Social History/Historiography
Fall. 4 credits. S. Kaplan.

An examination of the origins, practices and meanings of popular culture throughout Europe from the Middle Ages to the Communist. After considering the various ways in which "culture" and "popular" can be construed, the seminar will focus on two sets of questions: (1) the specific manifestations of popular culture, its various languages and gestures, and its complex relations with the dominant elite cultures; (2) the epistemological, methodological and historiographical issues that arise from this effort to confront cultural and social approaches to "doing" history. HIST 709(7090) Introduction to the Graduate Study of History
Fall. 4 credits. Requirement for first-year graduate students. R. Craib and H. Case.

This course is designed to introduce entering graduate students to crucial issues and problems in historical methodology that cut across various areas of specialization. (HR)

HIST 711(7110) Introduction to Science and Technology Studies (also S&TS 711[7111])
Fall. 4 credits. P. Dear.

For description, see S&TS 711. (HS)

HIST 804-807(8004-8007) Supervised Reading
Spring. 4 credits each semester. Prerequisite: graduate standing. Permission of instructor required. Staff. (HR)

HISTORY OF ART

The Department of the History of Art provides a broad range of introductory and advanced courses in Western art (European and North American) and non-Western art (East and Southeast Asian, African), from antiquity to the present.

The Major

Department majors acquire a broad understanding of the history of art in several chronological and geographical areas: ancient, medieval, Renaissance, modern (Europe and North America), Southeast Asia, China, Japan, and Africa. Additionally, majors practice a range of art historical methods and interpretive strategies, including connoisseurship, iconography, architectural history, historiography, semiotics, and social history. Majors are encouraged to locate the history of art within allied humanities fields and the applied arts by taking courses in history, literature, history of architecture, and fine arts. The study of foreign languages is strongly encouraged.

Requirements for the Major

Prospective majors should consult the director of undergraduate studies. Students wishing to declare a major in the history of art should have completed any two courses at the 100 level at Cornell in the department by the end of their sophomore year and have received a grade of B- or above in both.

Courses must be taken for a letter grade. These courses count toward the total 4 credits. The major in the history of art requires 44 credits, 30 at the 300 level or above. The core requirements are: pre-seminar; another seminar at the 400 level or above; two courses on art from the following time periods: Ancient Europe, Medieval/Islamic, or Renaissance/Baroque (one course per time period); two courses on art from the three following geographical areas: Africa, Asia, or Latin America (one course per region); and two courses on modern/contemporary art in Europe and North America, including art from outside the Anglo-American tradition. In addition to the 44 credits, majors are required to take two courses, approved by their advisors, in areas related to the history of art.

Honors

To become a candidate for the degree of bachelor of arts with honors in the history of art, a student must have a cumulative average of A- for all courses taken in the department and B- in all arts and sciences courses. Application to write an honors thesis should be made to the director of undergraduate studies during the second semester of the junior year. Students are advised to enroll in ART H 499 as Honors Research at this time. The application must include a summary of the proposed project, an endorsement by a faculty sponsor, and a copy of the student's transcript. In the senior year the honors candidate will include a 40-50 page thesis. This thesis addresses the research and writing of the senior thesis under the direction of the student's project advisor.
Course Numbering System
100-level courses are first-year writing seminars.
200-level courses are introductions to the major subdivisions of Western art and art outside the West.
300-level courses are intermediary courses addressing more specialized topics or epochs.
400-level courses are seminars primarily for advanced undergraduates and graduate students.
500-level courses are seminars primarily for professional level.
600-level courses are seminars primarily for graduate students.

First-Year Writing Seminars
For first-year writing seminar offerings in the history of art, consult the John S. Knight Institute brochure for times, instructors, and descriptions. These courses may not be used to satisfy the distribution requirement or the major.

Courses
ART H 202(2100)
Survey of European Art: Renaissance to Modern # (CA)
Summer only. 3 credits. D. Royce-Roll.
The major traditions and movements in western European art from the Renaissance to the modern period. Painting, sculpture, and architecture with an emphasis on painting. Each Friday class meets at the Johnson Museum of Art with gallery talks and viewing of relevant works that supplement the previous four days of classroom lectures.

ART H 209(2190) SSP: The Immigrant Imagination (also AAS 209[2090], AM ST 227[2091]) (NA)
Fall. 4 credits. Limited to 15 students. T. Tu.
Explores how contemporary immigrant experiences are expressed through visual culture. Examines a variety of expressive forms—including visual and material arts, video/performance art, and film—produced by recent immigrants, and considers the ways that they function as a type of "migration narrative." By doing so, connections are made between visual representations and other modes of narration, including literary and musical. Asks: how do the visual arts operate within immigrant communities as a mode of story-telling or history-making? How have immigrants employed visual culture to narrate their cross-cultural movements, community-building efforts, political struggles, and cultural memories? Is there such a thing as "immigrant art"? If so, what are its characteristics and how does it help to reshape our understanding of contemporary artistic productions?
This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students.

ART H 219(2190)
Thinking Surrealisms (also COM L 220[2200], VISST 219[2190])
Spring. 4 credits. B. Maxwell.

ART H 227
Art and Arkeo/Ancient Med World (also CLASS 227[2277], ARKEO 227[2277])
Fall. 3 credits. S. Manning.
For description, see CLASS 227.

ART H 245(2400)
Introduction to Art History: Renaissance and Baroque Art (also VISST 245[2645]) # (HA)
Fall. 4 credits. Each student must enroll in a sec. C. Lazzaro.
Surveys major works of European painting, sculpture, prints, and architecture from 1400 to 1750. Emphasizes the social, religious, and political contexts in which artists worked and the role of patrons in the creative process. Also introduces the art historical approaches through which we interpret these works. Weekly section meetings are required.

ART H 250(2350)
Introduction to Art History: Islamic Art and Culture @ # (HA)
Fall. 4 credits. Next offered 2007-2008.
C. Robinson.

ART H 255(2355)
Introduction to Art History: Medieval Art and Culture # (CA)
C. Robinson.

ART H 260(2600)
Introduction to Art History: The Modern Era (CA)
Spring. 4 credits. Not open to students who have taken ART H 261. Each student must enrol in a sec. C. Lazzaro.
Considers modern art in a historical and cultural context, from painting associated with the French Revolution through American pop art. The emphasis is on major movements and artists: Neo-Classicism (David), Romanticism (Delacroix), Realism (Courbet), Impressionism (Monet), Post-Impressionism (Van Gogh), Cubism (Picasso), Fauvism (Matisse), Surrealism (Miro), Abstract Expressionism (Pollock), and Pop Art (Warhol). Different critical approaches are examined.

ART H 251(2501)
Introduction to Art History: Modern Art (CA)
Summer. 3 credits. D. Royce-Roll.
Introduction to early modern art as it developed between the French Revolution and the post-War II era. Both European and American movements are examined, particularly as represented in the Herbert F. Johnson Museum of Art collection where some class meetings are held. The course combines a chronological survey with a brief examination of the social condition, the artist's vision, and cultural iconology.

ART H 262(2602)
20th Century Art: Modernism and After (New; Summer) (HA)
Summer. 4 credits. J. Stojanovic.
Since the end of the 19th century, Modernism has been the dominant force in the production of western avant-garde art. However, since the early 1950s many of the values assumed by the modernist avant-garde have come under fundamental scrutiny. The goal of this course is to enable the student to understand these debates while providing an accessible historical progression through 20th-century art. Modernist myths which have appeared to make art elitist or inaccessible, or simply irrelevant, are examined. We also consider Postmodernism and explore whether the diversity of contemporary art mirrors this 'new' situation. Issues of gender and ethnicity, criticism of the accepted canon of modern art, and important social and political influences upon the institutions of art are incorporated into the discussion of particular works and case studies.

ART H 306(3600)
Introduction to Art History: Contemporary Art: 1960 to Present (C)
Spring. 4 credits. Prerequisite: ART H 260 or equivalent. I. Dadi.
Discusses new art practices since the 1960s. Although numerous artistic experiments took place during the first half of the 20th century, it was with the declining importance of modernist painting and sculpture by the 1960s that newer modes of artistic practice became established. This course explores the rise of Fluxus, Minimalism, Conceptualism, Land Art, Video and Performance, Postmodernism, and Postcolonialism. These practices are located in relation to intellectual and social movements, such as the 1960s counterculture, feminism, race, ecology, institutional critique, and globalization. This course focuses primarily on European and American art but also incorporates selected global developments.

ART H 307(3607)
Orientalism and Representation
Fall. 4 credits. I. Dadi.
This course will explore how the Orient has been represented in Western art, architecture, literature, and media since the 19th century. Popular and scholarly ideas about the Orient and Orientalism have come under increasing scrutiny since the publication of Edward Said's influential critique of Orientalism that explored the persistence of these tropes in historical and literary writings. The course will explore the debates surrounding Said's critique, and also discuss its salience in the analysis of modern and contemporary art and visual culture. The course will include discussions of French Orientalist paintings, Hollywood depictions of the Orient, national independence movements that redepolyed colonial textual and visual archives to formulate national past, and the strategies of artists who have appropriated the trope of Orientalism to create new understandings of hybridity and intercultural encounters.

ART H 322(3202)
Arts of the Roman Empire (also CLASS 350[3740]) # (NA)
Fall. 4 credits. Prerequisite: permission of instructor. Staff.
The visual arts in the service of the first world state. Starts with the architecture, painting, and sculpture of the Etruscan and Republican period but concentrates on monuments of the Imperial era in Italy and the provinces until the time of Constantine. Art made for private patrons is considered, along with the official presentations of the emperors.

ART H 343(3443)
Art and Society in Early Renaissance Italy (NA)
Spring. 4 credits. C. Lazzaro.
The new style of Donatello, Masaccio, Brunelleschi, and later Botticelli and Alberti, spread from Florence to the courts of northern Italy. A predominantly class, increasingly concerned with material goods, commissioned images celebrating individuals,
family, and the rituals of birth, marriage, and death, as well as contemporary devotional practices.

[ART H 349(3149)] Artistic Identity through Time: From Anonymous to Magnificent # (LA) Fall. 4 credits. P. Morin. Surveys the variety of roles artists/architects have assumed, constructed, or negotiated over time. The social economic status of the artists that ranged from priestly demigod to slave, manual laborer to intellectual, bohemian to member of the bourgeoisie, craftsman to visionary, activist to actor, spectator to hero. Constructions of genius and personal negotiation of identity are explored through a variety of sources, including philosophical texts, biography, treatises, popular press, and film. We consider artistic identity through gender, ethnicity, nationality, and social economic status. Artistic productions including architecture, painting, sculpture, installation, and performance are examined from the time of the Pharaohs to the present day, from Inhotep to Warhol.

[ART H 350(3100)] History of Photography (LA) Summer and winter. 4 credits. J. Dadi. Provides a survey of the history of photography over a course of two centuries. Starting with its invention in the 1830s, this course covers the subject both topically and chronologically. During the 19th century, it focuses on its technical development and on the complex relations that situate photography in relation to painting, portraiture, urban life, war, anthropology, exploration and travel, and science and industry. While these topics continue to be important during the 20th century, photography has been enriched by new developments that include its use as a modernist and experimental art form, in social documentary and photojournalism, in propaganda, in advertising and fashion, and in its centrality in the practice of conceptual art, postmodernism, and in the digital age.

[ART H 360(3740)] Painting 19th-Century America (also AM ST 360[3740]) # (CA) Spring. 4 credits. Recommended: ART H 245. C. L. Meixner. Interdisciplinary view of art and life in 19th-century America from the colonial era through the Gilded Age. Considers definitions of democratic culture through topical units, including Native American and commodity culture; the art museum in the new republic, genre painting in the Jacksonian era; Hudson River landscape and railroad expansion; photography and the rising middle class; images of African Americans and Reconstruction; images of Native Americans, Manifest Destiny, and the frontier myth; cosmopolitan taste and robber barons in the Gilded Age. Alongside key paintings, students look at print culture including daguerreotypes, postcards, political prints, photographs, and advertisements.

[ART H 362(3760)] Impressionism in Society # (CA) Fall. 4 credits. Not open to freshmen. Recommended: ART H 245. L. L. Meixner. Discusses French Impressionist art as products of 19th-century public life. By relating Impressionism to state culture, including Universal Expositions, the course traces subversive themes such as criminality, café and brothel societies, clandestine prostitution, and class-regulated leisure. Students consider images of Parisian spectacle and commodity culture (Manet, Cassatt, Degas, Toulouse-Lautrec) as well as French landscapes (Monet, Van Gogh, Pissarro). Special topics include artists' relationships to novelists (Zola), poets, and the avant-garde theater as well as the construction of the artist and courtsean in Puccini's La Bohème and Verdi's La Traviata. Images include paintings, prints, postcards, political posters, and photographs. Organizing our historical units is the theme of power and vision with attention to the female gaze, voyeurism, surveillance, and scopophilia.

[ART H 365(3605)] U.S. Art from FDR to Reagan (also AM ST 355[3605]) # (LA) Fall. 4 credits. Each student must enroll in a sec. J. E. Bernstock. Considers the contextual features of American art from the 1930s through the late 1980s. Examines art in relation to contemporary politics, society and literature. A few of the thematic units that will be covered are: Abstract Expressionism, Pop Art, Earth Art, and Feminist Art. Examines various critical approaches.

[ART H 366(3650)] History and Theory of Digital Art (CA) Fall. 4 credits. M. Fernandez. In this course students will examine the role of mechanical, electronic, and digital technologies in the arts of the late 20th and 21st centuries with emphasis on Europe and North America. Beginning with kinetic art and the cybernetically inspired work of the late sixties, we will explore early uses of computer technology, including early work in synthetic video in the 1970s. An overview of pre-Internet telematic experiments will lead to an investigation of net art. The ongoing development of behavioral art forms including interactive art and interactive installation will be a central theme. Critical evaluation of various attitudes concerning technology will be encouraged.

[ART H 368(3550)] Modern and Contemporary Latin American Art (also LSP 368[3551], LAT A 368[3680]) (HA) Spring. 4 credits. M. Fernandez. This course is designed as a thematic survey of Latin American art from the early 20th century to the present. Attention is given to issues such as the effect of colonialism on Latin America's visual arts, the creation of national artistic styles, the relation of Latin American art and artists to European and American culture centers, the interaction of high art and popular culture, the role of art criticism on popular perceptions of Latin American Art, and the contributions of Latin American women to various aspects of artistic practice. Special classes will examine border arts and Latin America artists' exploration of electronic technologies.

[ART H 371(3711)] Architectural History of Washington, D.C. # (HA) Fall or spring. 4 credits. Prerequisite: students in Cornell in Washington program; nonarchitects. P. Scott. Historical and critical survey of the architecture of Washington. Attention is given to the periods, styles, architects, and clients—public and private—of the notable buildings and to the urban scene of the nation's capital. The vocabulary of architectural analysis and criticism is taught. Field trips required.

[ART H 378(3510)] Introduction to African Art (also AS&RC 310[3501]) @ (LA) Fall. 4 credits. C. Robinson. Survey of the visual art and material cultural traditions of sub-Saharan Africa. It aims at investigating the different forms of visual artistic traditions in relation to their historical and sociocultural context. The symbolism and complexity of traditional African art are explored through the analysis of myth, ritual, and cosmology. In-depth analysis of particular African societies is used to examine the relationship of the arts to indigenous concepts of time, space, color, form, and sociopolitical order. New and contemporary art forms associated with major socioeconomic changes and processes of assimilation and accumulation are also explored. These include tourist art, popular art, and elite art.

[ART H 380(3800)] Introduction to the Arts of China (also ARKEO 380[3880], ASIAN 383[3883]) @ # (LA) Fall. 4 credits. A. Pan. This course offers a survey of the art and culture of China, from the Neolithic period to the 20th century. We begin with an inquiry into the meaning of national boundaries and the controversy of the Han Chinese people, which helps us identify the scope of Chinese culture. Pre-dynastic (or prehistoric) Chinese culture is presented through legends about the origins of the Chinese, and scientifically excavated artifacts. Art of the dynastic and modern periods is presented in light of contemporaneous social, political, geographical, philosophical and religious contexts. Students work directly with objects in the Herbert F. Johnson Museum of Art.

[ART H 384(3820)] Introduction to the Arts of Japan @ # (LA) Spring. 4 credits. A. Pan. As an island nation east of the Asian continent, Japan developed a unique culture that reflects both continental and indigenous characteristics. This course examines pre- and post-contact with continental culture and the process of artistic acculturation and assimilation in successive periods of Japanese art history.
ART H 390(3520) African American Cinema (LA)
Fall. 4 credits. Next offered 2007-2008.
C. Finley.

ART H 395(3855) The House and the World: Architecture of Asia (also VISST 394[3655]) # (HA)
K. McGowan.

ART H 396(3850) The Arts of Southeast Asia # (HA)
Fall. 4 credits. Next offered 2007-2008.
K. McGowan.

Seminars
Courses at the 400 to 600 level are open to juniors and seniors, majors, and graduate students unless otherwise stated. All seminars involve the writing and presentation of research papers. Enrollment is limited to 15 students, and permission of the instructor is required. Course names repeat courses that cover a different topic each semester.

ART H 400(4100) Proseminar (also VISST 400[4200], ART H 600[6100]) (HA)
Fall. 4 credits. Limited enrollment.
Prerequisite: history of art majors. Grads should enroll in 600. 1. Dach.
Works of art cover a different topic each semester. This seminar introduces the methods that art historians have engaged in, studying the objects and ideas that constitute the historiography of their discipline. Challenged and enlarged by cultural debates over issues of class, ethnicity, nationality, sexual orientation, and gender, the field of art history is expanding to incorporate problems of assessing quality of intention and reception along with authorship, of artistic production in place of artistic creation, and of Western-oriented attitudes to race in reference to Orientalism and colonialism. Readings focus on historically situating methods and the implications of their cross-cultural application. Papers encourage students to put methods into practice, realizing in the process that subject matter is not an isolated choice to which methods are applied, but something that profoundly affects the approach researchers bring to the writing of art history. In addition to the seminar meeting from 2:30 to 4:30, students are required to attend the Visual Culture Colloquium held on most Mondays from 5:00 to 6:30 p.m.

ART H 401(4991) Independent Study
Fall or spring. 2-4 credits; may be repeated for credit. Prerequisite: permission of department faculty member.
Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

ART H 402(4992) Independent Study
Fall or spring. 2-4 credits; may be repeated for credit. Prerequisite: permission of department faculty member.
Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

ART H 407(4107) The Museum and the Object (also VISST 407[4607]) (CA)
Fall 4 credits. Prerequisite: History of art majors; freshmen and sophomores by permission of instructor. All classes meet in Johnson Art Museum study gallery.
K. McGowan.

Given advanced students the opportunity to work directly with original objects from the collection in the Herbert F. Johnson Museum. Focuses on art and connoisseurship by questioning the ways quality is determined in works of art. Topics include methods of attribution, fakes and forgeries, technique and media, restoration and conservation, art education and theories of perception. Session leaders include the curatorial staff of the art museum.

ART H 408(4508) Exhibiting Cultures: Museums, Monuments, Representations and Display (also ART H 608[6508], AS&RC 408/608[4504/6504], AM ST 408/608[4506/6506])
Fall. 4 credits. Grads should enroll in 608.
C. Finley.

This seminar explores the ways in which our contemporary understanding of art, history, and culture is constructed and informed by public display in museums, galleries, and the broader cultural landscape. Using a series of case studies, we consider issues of representation and display and the wider social context in which art and culture are presented. Topics include the blockbuster and the cultural heritage museum, the effect of globalization on the museum industry, recent developments in the monument making and the UNESCO Slave Routes Project. Our specific focus will be on African, African American and African diaspora art and visual culture.

ART H 410(4310) Methods in Medieval Art (CA)
4 credits. Next offered 2009-2010.
C. Robinson.

ART H 411(4311) The Multicultural Alhambra (also SPANL 411[4110])
C. Robinson.

ART H 412(4312) The Late Medieval Art of Devotion (HA)
C. Robinson.

ART H 413(4113) Race, Technology and Visual Culture (also AAS 413[4130], AM ST 413[4131]) (CA)
T. Tu.

ART H 414(4114) Popular Culture and Visual Practice in Asian America (also AAS 414[4140], AM ST 414[4114]) (CA)
Spring. 4 credits. T. Tu.

Through a variety of case studies, this course examines the forms and practices of Asian American popular culture (including music, film, video, print and visual, decorative, and performance arts) within the historical, social, and economic contexts that have shaped their production. The course will: ask the following questions: What is the relationship of these popular forms to the histories of Asian American communities? How have Asian Americans engaged with "the popular" altered traditional approaches to visual representation, artistic production, and cultural exchange? In this course we also consider how the influence of Asian American popular culture in the United States (from anime to Bollywood and beyond) has informed the styles, fashions, and visual vocabularies of contemporary Asian American culture.

ART H 417(4917) Modern Art and Popular Culture (also S HUM 416, VISST 417[4170])
Fall. 4 credits. Limited to 15 students.
S. Evans.

This course will examine a range of art-historical approaches to the relationship between modern art and popular culture from the 19th century to now. While we will read pertinent critiques by Benjamin, Greenberg, and others of mass culture, we will also investigate the ellipses of mass culture and popular culture. Moreover, we will also advocate for the idea that mass culture is not the sameness, but something new. Thus, the course will explore the relationship between modern and popular culture in the context of modernism and its critics. The course will examine the relationship between modern art and its audience, as well as the relationship between modernism and mass culture. Finally, the course will examine the relationship between modern art and popular culture in the context of modernism and its critics. The course will examine the relationship between modern art and its audience, as well as the relationship between modernism and mass culture.
ART H 444(4144) Responsive Environments (also ART H 444[4144])
Fall. 4 credits. M. Fernandez.
This seminar will examine notions of interactivity, immersion, and responsiveness in works of art and architecture from the 1950's to the present. Students will work with historically significant works in traditional media, telematics, machine sculpture, interactive and digital installation will be explored as well as more recent genres of artistic practice including interactive cinema, locative media and video games. Theorizations of interactivity, addressing narrativity, performativity, embodiment, "liveliness" and the sensual and affective engagement of the user with the work will be discussed, as will the relation of art and surveillance, and the relation of "high art" interactivity with popular techno-cultural forms. The relevance of these topics to architecture will be a recurrent theme.

HUMAN BIOLOGY PROGRAM
J. Haas, nutritional sciences, director (220 Savage Hall, 255-2665); A. Clark (molecular biology and genetics); P. Cassano (nutritional sciences); B. Finlay (psychology); J. Fortune (neurobiology, psychology); C. Frongillo (neurobiology, psychology), R. Johnston (psychology), K. A. R. Kennedy (ecology and systematics/anthropology), D. Levitsky (nutritional sciences), D. L. Pelletier (neurobiology, psychology), S. Robertson (human ecology and evolutionary biology, psychology), S. Robertson (human ecology and evolutionary biology, psychology), E. Frongillo (neurobiology, psychology) R. Savin-Williams (human development), M. Small (anthropology)

Human biology integrates the methods and theories of many disciplines, such as biological anthropology, nutrition, neurobiology, psychology, demography, ecology, genetics, and paleontology into a comprehensive study of biological diversity in Homo sapiens. A central focus of this interdisciplinary approach to the study of the human organism is an understanding of evolutionary processes that explain our biological variation through space and time. The curriculum of study seeks to educate future biological scientists to understand the role of behavior in the survival of species that is becoming more demanding of the scientific community to place its specialized biological knowledge in a broad context. The human biology curriculum is of particular relevance to undergraduate programs in premedical and pre-dentistry programs, biological anthropology, nutrition, human development, ecology and evolutionary biology, psychology, physiology, genetics, and the health-related sciences. It serves to bring together students who have a common interest in humankind as defined from these diverse fields and to provide a forum for student-faculty interaction on various topics relating to human evolution and biological diversity. Human biology is not a major but a curriculum of study that provides majors in various departments and colleges with a program for selecting elective courses that deal with the human species. Students after their freshman year may develop a program of study in human biology while majoring in any one of a number of different departmental fields.

Basic Requirements
The requirements for a program of study in human biology are designed to ensure sufficient background in physical sciences and mathematics to enable the student to pursue a wide range of interests in the fields of modern biological sciences, anthropology, and fields related to the biological diversity of the human species. Adjustments may be made in these requirements, depending on the student's academic background and affiliation with colleges and schools within the university.

The basic requirements are one year of introductory biology (BIO G 101-103 plus 102-104 or 105-106 or BIO G 107-108 offered during the eight-week Cornell Summer Session); one year of general chemistry (CHEM 207-208 or 215-216); one year of college mathematics (MATH 111-112 or 105-106 or 111-110); one course in genetics (BIO G 280, 281, or 282); one course in biochemistry (BIO G 330, 331, 332, or 333 or NS 320). It is recommended that students planning graduate study in biological anthropology, psychology, and related fields in the medical and nutritional sciences take a course in statistics. Students should consult their faculty advisor in human biology for help in selecting appropriate courses.

Elective courses should be taken that enable the student to acquire breadth in the subject major. Students may major or minor in public health or one of their departmental major. Therefore only 6 of the 15 human biology elective credits may also fulfill requirements for the major. Courses should be selected that also provide sufficient exposure to the integration of basic anatomical and physiological sciences with the behavior of individuals and groups within the context of evolutionary theory and ecology. The courses listed below are representative of the offerings in human biology and are included to assist the student in organizing a curriculum of study. They are organized into three groups that reflect the three levels of integration noted above: (1) human anatomy and physiology, (2) human behavior, evolution, and ecology. Students should choose at least one course from each of these areas of integration. It is anticipated that the student will include in a program of study at least one of the laboratory courses offered. It is expected that a student will take a minimum of 15 credits from among these courses.

There is no foreign language requirement for human biology beyond what is dictated by specific departments and colleges.

The requirements for the human biology curriculum are set alongside requirements of the undergraduate majors as these are defined by different departments. Students with independent majors may design their
own programs of study under the guidelines provided by their college. Although a student may indicate an interest in human biology in the freshman year and be able to obtain early guidance from a faculty advisor representing the curriculum of study, it is more usual for students to establish their course programs in the first semester of the junior year. The student may request one of the faculty advisors in his or her department who is listed as faculty in human biology to be their principal advisor, or he or she may have an advisor in the department of the major and seek the advice of a human biology faculty advisor in matters pertaining to satisfaction of the requirements. In certain cases a faculty advisor may represent both the major and the curriculum of study in human biology.

Courses

Human Anatomy and Physiology

AN SC 410(4100) Nutritional Physiology and Metabolism  
Fall. 3 credits.

BIOAP 214(2140) Biological Basis of Sex Differences (also B&SOC 214[2141], FGSS 214[2140])  
Spring. 3 credits.

BIOAP 311(3110) Introductory Animal Physiology, Lectures (also VETPH 346[3460])  
Fall. 3 credits.

BIOAP 319(3190) Animal Physiology Experimentation  
Fall. 4 credits.

BIOAP 427(4270) Fundamentals of Endocrinology  
Fall. 3 credits.

BIOAP 458(4580) Mammalian Physiology  
Spring. 3 credits.

BIOBM 434(4340) Applications of Molecular Biology to Medicine, Agriculture, and Industry  
Fall. 3 credits.

BIOBM 439(4390) Molecular Basis of Human Disease (also BIOGD 439[4390])  
Fall. 3 credits.

BIOEE 274(2740) The Vertebrates: Structure, Function, and Evolution  
Spring. 4 credits.

BIOGD 487(4870) Human Genomics  
Fall. 3 credits.

BIOM 417(4170) Medical Parasitology (also VETMI 417[4170])  
Fall. 2 credits.

NS 115(1150) Nutrition, Health, and Society  
Fall. 3 credits.

NS 222(2220) Maternal and Child Nutrition  
Fall. 3 credits.

NS 315(3150) Obesity and the Regulation of Body Weight (also PSYCH 613[3150])  
Spring. 3 credits.

NS 331(3310) Physiological and Biochemical Bases of Human Nutrition  
Spring. 4 credits.

NS 341(3410) Human Anatomy and Physiology  
Spring. 4 credits.

NS 361(3610) Biology of Normal and Abnormal Behavior (also PSYCH 361[3610])  
Fall. 3 credits.

NS 421(4210) Nutrition and Exercise  
Spring. 3 credits.

NS 431(4310) Mineral Nutrition and Chronic Disease  
Fall. 3 credits.

NS 441(4410) Nutrition and Disease  
Fall. 4 credits.

NS 475(4750) Mechanisms Underlying Mammalian Developmental Defects (also BIOAP 475[4750])  
Spring. 3 credits.

NS 614(6140) Topics in Maternal and Child Nutrition  
Fall. 3 credits.

PSYCH 322(3220) Hormones and Behavior (also BIONB 322[3220])  
Fall. 3 or 4 credits.

PSYCH 425(4250) Cognitive Neuroscience  
Fall. 4 credits.

PSYCH 460(4600) Human Neuroanatomy  
Spring. 3 credits.

Human Behavior

ANTHR 208(3200) Anthropology of Human Mating (also BIONB 208[2080])  
Spring. 3 credits.

ANTHR 390(3900) Primate Behavior and Ecology  
Spring. 4 credits.

ANTHR 490(4900) Topics in Biological Anthropology  
Spring. 4 credits.

BIONB 327(3270) Evolutionary Perspectives on Human Behavior  
Fall. 3 credits.

BIONB 331(3310) Human Sociobiology  
Spring. 3 credits.

BIONB 392(3920) Drugs and the Brain  
Fall. 4 credits.

BIONB 421(4210) Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431[6310])  
Fall. 3 or 4 credits.

BIONB 422(4220) Modeling Behavioral Evolution  
Spring. 4 credits.

BIONB 424(4240) Neuroethology (also PSYCH 424[4240])  
Spring. 3 credits.

BIONB 427(4270) Animal Social Behavior  
Fall. 4 credits.

BIONB 428(4280) Clinical Neurobiology  
Fall. 3 credits.

BIONB 431(4310) Genes and Behavior  
Spring. 3 credits.

BIONB 496(4960) Biocoustic Signals in Animals and Man  
Fall. 3 credits.
Human Evolution and Ecology

ANTHR 101 (1300) Introduction to Anthropology: Biological Perspectives on the Evolution of Humankind
Fall. 3 credits.

ANTHR 203 (2200) Early People: The Archaeological and Fossil Record (also ARKEO 203 [2200])
Spring. 3 credits.

ANTHR 375 (3375) Evolutionary Theory and Human Behavior
Spring. 4 credits.

ANTHR 390 (3390) Primate Behavior and Ecology
Spring. 4 credits.

ANTHR 490 (4390) Topics in Biological Anthropology
Spring. 4 credits.

BIOEE 261 (2610) Ecology and the Environment
Fall or summer. 4 credits.

BIOEE 275 (2750) Human Biology and Evolution (also NS 275 [2750])
Fall. 3 credits.

BIOEE 278 (2780) Evolutionary Biology
Fall or spring. 3 or 4 credits.

BIOEE 371 (3710) Human Paleontology
Fall. 4 credits.

BIOEE 464 (4640) Macroevolution
Spring. 4 credits.

BIOEE 469 (4690) Food, Agriculture, and Society
Spring. 5 credits.

BIOEE 671 (6710) Paleanthropology of South Asia (also ANTHR 671 [6671], ASIAN 671 [6731])

BIOEE 673 (6730) Human Evolution: Concepts, History, and Theory (also ANTHR 673 [6733])
Spring. 3 credits.

BIOGD 481 (4810) Population Genetics
Fall. 4 credits.

BIOGD 482 (4820) Human Genetics and Society
Fall. 4 credits.

BIOGD 484 (4840) Molecular Evolution
Spring. 3 credits.

BIOGD 487 (4870) Human Genomics
Fall. 3 credits.

B&SOC 447 (4471) Seminar in the History of Biology (also HIST 415 [4150], S&T&S 447 [4471])
Summer. 4 credits.

D SOC 201 (2010) Population Dynamics (also SOC 202 [2202])
Spring. 3 credits.

D SOC 410 (4100) Health and Survival Inequalities (also SOC 410 [4100])
Fall. 4 credits.

NS 306 (3060) Nutritional Problems of Developing Nations
Spring. 3 credits.

NS 450 (4500) Public Health Nutrition
Spring. 3 credits.

NS 451 (4510) Epidemiology and Health of Human Communities
Fall. 3 credits.

NS 452 (4520) Molecular Epidemiology and Dietary Markers of Chronic Disease
Spring. 3 credits.

NS 457 (4570) Economics of Hunger and Malnutrition (also ECON 474 [4740])
Spring. 3 credits.

PAM 303 (3030) Ecology and Epidemiology of Health
Fall. 3 credits.

PSYCH 326 (3260) Evolution of Human Behavior
Spring. 4 credits.

PSYCH 427 (4270) Evolution of Language (also COGST 427 [4270])
Fall. 3 credits.

VETMI 431 (4310) Medical Parasitology (also BIOMI 417 [4170])
Fall. 2 credits.

VTPMD 664 (6640) Introduction to Epidemiology
Fall. 3 credits.

HUNGARIAN

See "Department of Linguistics" and "Russian."

INDEPENDENT MAJOR PROGRAM

J. Finlay, director, 55 Goldwin Smith Hall, 255-2222.
The Independent Major Program is described in the introductory section of "College of Arts and Sciences."

IM 351 (3510) Independent Study
Fall or spring. 1–4 credits. Prerequisite: permission of program director.

IM 499 (4990) Honors Research
Fall or spring. 1–8 credits; max. of 8 credits may be earned for honors research. Prerequisite: permission of program director.

INEQUALITY CONCENTRATION

363 Uris Hall
www.inequality.cornell.edu
254-8674.
The study of inequality lies at the heart of current debates about welfare reform, affirmative action, the "glass ceiling," globalized, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways.
The inequality concentration allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. Although Cornell University is a leading center of scholarship on poverty and inequality, this strength is necessarily distributed across many departments and colleges; an interdisciplinary concentration thus allows students to combine these resources into an integrated program of study. The institutional home for the inequality concentration is the Center for the Study of Inequality (located at 363 Uris Hall and at www.inequality.cornell.edu).
The inequality concentration is appropriate for students interested in government service, policy work, and related jobs in non-governmental organizations (NGOs) as well as students who wish to pursue post-graduate education in such fields as public policy, economics, government, law, history, psychology, sociology, anthropology, literature, and philosophy. In many of these fields, the study of inequality is becoming increasingly central and fundamental, and the inequality concentration can therefore provide students with a valuable and unique foundation for further study.
The inequality concentration is not a major but rather is an interdisciplinary program that should be completed in conjunction with a major. The concentration is open to students enrolled in any of the seven Cornell undergraduate colleges. If the requirements of the concentration are met, a special notation to this effect will be recorded on the transcript.

Concentration Requirements

The inequality concentration exposes students to the breadth of approaches, methods, and topical areas on offer while also allowing them to tailor a program to their particular interests. The requirements are as follows:

1. Overview Course

The required overview course may be selected from any of the eight courses listed below. When possible, the overview course should be completed early in the program, as it serves to define the field and to expose students to areas and topics that might be explored in future course work.

- Income Distribution (IRLE 441)
- Inequality, Diversity, and Justice (PHIL 193, CRP/GOVT/SOC 293)
- Power and Poverty in America (GOVT 310)
- Social Inequality (SOC 208 and D SOC 209)
- Comparative Social Stratification (D SOC 370 and SOC 371)
- Social Inequality: Contemporary Theories, Debates, and Models (SOC 516)
- Introduction to Social Inequality (SOC 108)
- Inequality and Social Science (SOC 221)

2. Controversies About Inequality

(PHL 195, SOC/PAM/TLAB/D SOC/GOVT 222)
This 3-credit course introduces students to current controversies in the study of inequality while facilitating interdisciplinary dialogue between concentrators and faculty members at Cornell University. Students are exposed to research on inequality under way at Cornell presented by guest lecturers and also participate in debates on pressing inequality-relevant issues (e.g., welfare reform, school vouchers, immigration policy, affirmative action).

3. Electives
In addition to the overview course and core course, students must select four electives from the list of qualified courses. This list can be viewed on the web site for the Center for the Study of Inequality, www.inequality.cornell.edu. Although students may tailor their programs to match their interests, the electives and overview course must be distributed across at least three departments (thereby ensuring breadth in the analytic approaches that are represented).

4. Lectures and Seminars
The Center for the Study of Inequality (CSI) hosts occasional lectures and symposia, and concentrators are expected to attend them when possible. These events will be announced via e-mail and are also listed on the center web site, www.inequality.cornell.edu.

Enrolling in the Concentration
The web site for the Center for the Study of Inequality (CSI) provides current information on the Inequality Concentration. For students considering the concentration, it may be useful to schedule a meeting with the assistant to the director (inequality@cornell.edu).

Sample Programs
The inequality concentration allows students considerable flexibility in devising programs that reflect their interests. As examples of possible programs, we have listed below sample tracks, each comprising a different set of possible electives. The first program listed below is a general track that provides an overview of the field, while the remaining nine programs are more specialized and focus on particular issues within the field. This sampling of programs is obviously illustrative and does not cover the entire wide range of interests that may be addressed within the concentration.

General Track
The objective of the general track is to provide a broad foundation that addresses both the many forms of inequality (e.g., class, gender, ethnic) as well as the various approaches and perspectives (e.g., economic, sociological, historical) that have been brought to bear on these forms. The sample schedule outlined below is just one of many possible programs that meets this generalist objective.

1. Overview Course (choose any one)
2. Controversies About Inequality (PHIL 195, SOC/PAM/ILR/GOVT 222)
3. Possible Electives:
   Economics of Hunger and Malnutrition (ECON 474, NS 457)

Globalization and Inequality
As a global economy takes hold, there has been increasing concern that economic inequalities will grow apace, especially North-South inequalities between rich and poor countries. The countervailing "optimistic view" is that between-country disparities will in the long run wither away and render inequality an entirely internal, within-country affair. These and related lines of argumentation can be explored in courses that address such topics as trends in income inequality, theories of economic development, emerging patterns of international migration, and globalization and gender.

1. Overview Course (choose any one)
2. Controversies About Inequality (PHIL 195, SOC/PAM/ILR/GOVT 222)
3. Possible Electives (choose any four):
   - International Development (D SOC 205, SOC 206)
   - Economic Development (ECON 371)
   - Labor Markets and Income Distribution in Developing Countries (ILR/GOVT 635)
   - Globalization and Inequality (SOC 320)
   - Indigenous Peoples and Globalization (D SOC 325)
   - Comparative Ethnic Stratification: Demographic Perspectives (D SOC 431/631)
   - Global Perspectives on Gender (AS&RC 362)
   - Sex and Gender in Cross-Cultural Perspective (ANTHR 321/621, FGSS 321/631)
   - Human Migration: Internal and International (D SOC 430)
   - Gender and International Development (FGSS/CRP 614)
   - Politics of Transnationalism (GOVT 681)

Social Policy and Inequality
In the modern period, inequalities generated in the market and through other social institutions are typically regarded as excessive, and the state is seen as the main tool for redistribution, discrimination abatement, equalization of life chances, and related forms of amelioration. The social policy and inequality track explores the role of the state in generating and reducing inequalities of various kinds.

1. Overview Course (choose any one)
2. Controversies About Inequality (PHIL 195, SOC/PAM/ILR/GOVT 222)
3. Possible Electives (choose any four):
   - Organizations and Social Inequality (SOC 322, ILR/GOVT 626)
   - The Sociology of Markets (SOC 217)
   - Sociology of Markets (ILR/GOVT 622)
   - Economic Security (ILR/GOVT 340, ECON 451)

Employment Discrimination and the Law
- Human Resource Economics and Public Policy (ILRH 360)
- Employee Relations and Diversity (ILRH 463)
- Social Welfare as a Social Institution (PAM 383)
- Applied Public Finance (PAM 204)
- Introduction to Policy Analysis (PAM 230)
- Critical Perspectives (PAM 240)
- Introduction to Policy Management (PAM 320)
- Intermediate Policy Analysis (PAM 330)
- Demography and Family Policy (PAM 371)
- Social Policy (SOC 326/526)
- Social Policy (PAM 473)
- Social Policy and Social Welfare (CRP 448/548)
- Policy Analysis: Welfare Theory, Agriculture, and Trade (ECON 430, AEM 630)
- Economic Analysis of the Welfare State (ILR/GOVT 642, ECON 460)
- Families and Social Policy (HD 456)
- Health and Social Behavior (HD/SOC 457)
- Public Policy and the African-American Urban Community (AS&RC 420)
- Seminar: Beliefs, Attitudes, and Ideologies (PSYCH 489, FGSS 488)
- Feminist Jurisprudence (LAW 466)
- Political Economy of Education (EDUC 378)
- Research on Education Reform and Human Resource Policy (ILR 653)

The Ethics of Inequality
Charges of social injustice are often charges of excessive inequality. What are the political, philosophical, and legal debates that are relevant to such judgments? Under what conditions should rich countries assist poor countries? At what point should governments step in and redistribute income? When should parents pass on their wealth to their children? The ethics of inequality track examines the conditions under which inequalities might be deemed legitimate or illegitimate, evaluates prevailing inequalities and social policy as against this yardstick, and explores the larger role of values in popular and scholarly judgments about inequality.

1. Overview Course: Inequality, Diversity, and Justice (PHIL 193, SOC/CRP/GOVT 293)
2. Controversies About Inequality (PHIL 195, SOC/PAM/ILR/GOVT 222)
3. Possible Electives:
   - Values in Law, Economics, and Industrial Relations (ILR/GOVT 607)
   - Appropriation and Alienation (PHIL 142)
   - Global Thinking (PHIL 194, GOVT 294)
Modern Political Philosophy (PHIL 346, GOVT 462)
Contemporary Political Philosophy (PHIL 447, GOVT 465)
International Justice (PHIL 448, GOVT 492)
Feminism and Philosophy (PHIL/FGSS 249)
Marx (PHIL 219)
Marx: An Overview of His Thought (ANTHR 368)

B. Social Science Classes (choose two)
Select courses in consultation with advisor (see list of electives below).

Poverty and Economic Development
Over the past century, rich countries have of course become yet richer, while less developed countries remain burdened with massive poverty. The courses listed below examine the sources and causes of world poverty, the rise of global anti-inequality social movements, and the types of policy interventions that might stimulate economic development and reduce poverty.
1. **Overview Course (choose any one)**
2. **Controversies About Inequality (PHIL 195, SOC/PAM/ILROB/GOVT 222)**
3. **Possible Electives (choose any four):**
   - Economic Development (ECON 371)
   - Population and Development (D SOC 438, SOC 437)
   - International Justice (PHIL 448, GOVT 492)
   - Economics of Development (ECON 466, AEM 666)
   - Land Reform Old and New (D SOC 643)
   - Issues in African Development (CRP 477/477)
   - Labor Markets and Income Distribution in Developing Countries (ILRCB 655)
   - Global Perspectives on Gender (AS&RC 362)
   - Population, Environment, and Development in Sub-Saharan Africa (D SOC 495)
   - Gender and International Development (FGSS/CRP 614)
   - Politics of Transnationalism (GOVT 681)
   - Economics of Malnutrition and Hunger (NS 457, ECON 474)

Social Movements and Inequality
The history of modern society may be seen in large part as a history of anti-inequality social movements (e.g., the Enlightenment, socialism, the union movement, the civil rights movement, feminism) interspersed with occasional inequality-inducing reactions (e.g., the post-socialist transition). The social movements track examines the causes, effects, and likely future of such social movements and the reactions they spawn.
1. **Overview Course (choose any one)**
2. **Controversies About Inequality (PHIL 195, SOC/PAM/ILROB/GOVT 222)**
3. **Possible Electives (choose any four):**
   - Utopia in Theory and Practice (SOC 115)

Social Movements (D SOC 311)
Social Movements in American Politics (GOVT/AM ST 302)
Poor People’s Movements (GOVT 456)
Group Conflict and the Nation-State (SOC 531)
Social Movements (SOC/GOV 660)
Politics of Transnationalism (GOVT 681)
Feminism Movements and the State (GOVT/FGSS 353)
Comparative Labor Movements in Latin America (ILRC 631)
Union Organizing (ILRCB 400)
Theories of Industrial Relations Systems (ILRCB 606)
Revitalizing the Labor Movement: A Comparative Perspective (ILRC 632)
Women and Unions (ILRCB/FGSS 394)
History of Resistance Movements in Africa and the Diaspora (AS&RC 283)
Latina Activism Feminist Theory (LSP 300)
Prisons (GOVT 314)

Education and the Reproduction of Inequality
In the contemporary period, the study of inequality has increasingly turned on the study of formal education, as schools have become the main institutional locus for training and credentialing workers and for signaling potential employers about (putative) worker quality. The inequality and education track examines educational institutions and how they are organized, how they generate equality and inequality, and how possible institutional changes (e.g., vouchers, required testing) might affect the reproduction of inequalities.
1. **Overview Course (choose any one)**
2. **Controversies About Inequality (PHIL 195, SOC/PAM/ILROB/GOVT 222)**
3. **Possible Electives (choose any four):**
   - Introduction to Education (EDUC 101)
   - Sociology of Education (EDUC 271)
   - Education, Inequality, and Development (D SOC 305)
   - Schooling and Society (SOC 357)
   - Issues in Educational Policy (EDUC 370)
   - Political Economy of Education (EDUC 578)
   - The Politics of Education (GOVT 406)
   - Research on Education Reform and Human Resource Policy (ILRHR 653)
   - Education, Technology, and Productivity (ILRHR 695)
   - Educational Finance (EDUC 664)
   - Education in Africa and the Diaspora (AS&RC/EDUC 459)
   - Education and Development in Africa (AS&RC 502)

Race and Ethnicity in Comparative Perspective
This program of study examines the many forms of racial and ethnic inequality as revealed across different times and places. When race and ethnicity are examined from an explicitly comparative perspective, it becomes possible to identify regularities and better understand the forces of competition, conflict, and subordination among ethnic and racial groups. The courses listed below address such issues as the causes of discrimination, the implications of residential segregation for inequality, the sources of ethnic and racial differences in income, the effects of anti-inequality reform efforts (e.g., affirmative action), and the possible futures of ethnic and racial stratification.
1. **Overview Course (choose any one)**
2. **Controversies About Inequality (PHIL 195, SOC/PAM/ILROB/GOVT 222)**
3. **Possible Electives (choose any four):**

A. General Courses
Introduction to American Studies: New Approaches to Understanding American Diversity, the 20th Century (AM ST/LSP 110)
Race and Ethnic Relations (SOC 204)
Race, Power, and Privilege in the United States (AS&RC 280)
History and Politics of Racialization: A Comparative Study (AS&RC 204)
Sociology of Health and Ethnic Minorities (LSP/D SOC 220)
Prisons (GOVT 314)
Minority Politics in the United States (GOVT/ LSP 319)
Concepts of Race and Racism (GOVT 377)
Comparative Ethnic Stratification: Demographic Perspectives (D SOC 431/631)
Race, Gender, and Organization (GOVT/FGSS 415)
Employee Relations and Diversity (ILRHR 463)
Ethnicity and Identity Politics: An Anthropological Perspective (ANTHR 479)
Political Identity: Race, Ethnicity, and Nationalism (GOVT/LSP 610)

B. Immigration and Ethnicity
Comparative Migration to the Americas (LSP 203, HIST 202, AM ST 204)
Strangers and Citizens: Immigration and Labor in U.S. History (ILRCB 302)
Immigration and Ethnic Identity (SOC/AAS 438)
Human Migration: Internal and International (D SOC 450)
The Immigrant City: 1900 to 2000 (LSP/HUM/AM ST 406, HIST 412)
Immigration and the American Labor Force (ILRHR 469)
Immigration and Ethnicity in 20th-Century United States (HIST 201)
Immigration and Refugee Law (LAW 731)

C. Case Studies
African-American Social and Political Thought (AS&RC 231)
African-American Women in the 20th Century (HIST/AM ST/FGSS 212)
African-American History from Slavery to Freedom (HIST 335)
The African-American Workers, 1865 to 1910, The Rural and Urban Experience (HIST 375, ILRSCB 385)
The African-American Workers, 1910 to The Present: Race, Work, and the City (HIST 376, ILRSCB 380)
African-American Women in Slavery and Freedom (HIST/AM ST 303, FGSS 307)
Public Policy and the African-American Urban Community (AS&RC 420)
Politics and Social Change in Southern Africa (AS&RC 484)
Global Africa: Comparative Black Experience (AS&RC 501)
Afro-American Historiography (HIST 610)
African-American Women in Slavery and Freedom (HIST 608)
Latinos in the United States (SOC/D SOC 265, LSP 203)
Introduction to U.S. Latino History, Part I (LSP/HIST 260, AM ST 259)
Introduction to U.S. Latino History, Part II (LSP/HIST/AM ST 261)
Latina Activism Feminist Theory (LSP 300)
Latino Politics in the United States (LSP/GOVT 306)
Introduction to American Studies (AAS 110)
Asian American History (AAS/HIST 213)
Asians in the Americas: A Comparative Perspective (AAS/ANTHR 305)
Introduction to American Indian Studies (AIS/D SOC 100)
Indian America in the 20th Century (AIS/D SOC 175)
Indians, Settlers, and Slaves in the Early South (AIS/HIST 329)
Antisemitism and the Crisis of Modernity: From the Enlightenment to the Holocaust (HIST/JWST 459)
The Family and Inequality
Although workers in modern labor markets are often analytically treated as independent individuals, they of course typically belong to families that pool the labor supply of their members, consume goods jointly, and serve in some circumstances as units of collective production. It might therefore be asked how the modern labor market has adapted to and evolved in the context of the family (and, otherwise, how the family has responded to the market). The courses within this track explore such issues as the causes and consequences of the intrafamilial division of labor, the effects of marriage and family structure on careers, and the transmission of socioeconomic advantage from one generation to the next.
1. Overview Course (choose any one)
2. Controversies About Inequality (PHIL 195, SOC/PAM/ILRSCB GOVT 222)
3. Possible Electives (choose any four):
   - Work and Family (SOC/FGSS 203)
   - Demography and Family Policy (PAM 371)
   - Families and Social Policy (HD 456)
   - Families and the Life Course (SOC 251, HD 250)
   - Parent-Child Development in African-American Families (HD 458)
   - The Sociology of Marriage (SOC/FGSS 309)
   - Seminar in Family Studies and the Life Course (HD 655)
   - Contemporary Family Theory and Research (HD 650)
   - Economics of Household Behavior (PAM 605)
   - Politics and Culture SOC 248/GOVT 363
   - Inequality, Diversity, and Justice SOC 293/GOVT 273/CRP 293/PHIL 193

The Major

Information Science (IS) is an interdisciplinary field that explores the design and use of information systems in a social context: the field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their use rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

Courses in the Information Science (IS) major are assigned to three area-based tracks:

Human-Centered Systems
This area examines the relationship between humans and information, drawing from human-computer interaction and cognitive science.

Information Systems
This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.

Social Systems
This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of 11 core courses: one introductory course, four courses in mathematics and statistics, and two courses from each of the three IS area-based tracks. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

Requirements
Core (11 courses)
1. Introductory (one course):
   - INFO 130 Introductory Design and Programming for the Web
2. Math and Statistics (four courses):
   - MATH 111 Calculus I
   - either MATH 231 Linear Algebra with Applications or MATH 221 Linear Algebra and Differential Equations
   - INFO 295 Mathematical Methods for Information Science

One of the following:
- MATH 171 Statistical Theory and Application in the Real World
- H ADM 201 Hospitality Quantitative Analysis
- AEM 210 Introductory Statistics
- PAM 210 Introduction to Statistics
- ENGRD 270 Basic Engineering Probability and Statistics (or equivalent)
- BTRY 301 Statistical Methods I
- SOC 301 Evaluating Statistical Evidence
- CEE 304 Uncertainty Analysis in Engineering
- ILRST 312 Applied Regression Methods
- ECON 310 Introduction to Statistics and Probability

Psych 350 Statistics and Research Design

3. Human-Centered Systems (two courses):
   - INFO 214 Cognitive Psychology
   - INFO 245 Psychology of Social Computing

4. Information Systems (two courses):
   - COM S 211 Computers and Programming
   - INFO 230 Intermediate Design and Programming for the Web

5. Social Systems (two courses):
   - either ECON 301 Microeconomics or ECON 313 Intermediate Microeconomic Theory
   - one of the following: INFO 292 Inventing an Information Society, INFO 355 Computers From the 17th Century to the Dot.com Boom, or INFO 356 Computing Cultures

Where options in the core courses exist, the choice will depend on the student's interests and planned advanced courses for the selected primary and secondary tracks.

Tracks
Students must complete four advanced courses in their primary track and three advanced courses in their secondary track, selected from those listed below. Human-Centered Systems and Information Systems can be used as primary or secondary tracks. Social Systems can be used only as a secondary track.

Courses taken to satisfy the core course requirements may not be used to fulfill the track requirements.

Additional information on Information Science courses can be found below and
in the “Computing and Information Science (CIS)” section of Courses of Study. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, COM S, S&TS).

Human-Centered Systems
PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display*
INFO 345 Human–Computer Interaction Design
PSYCH 347 Psychology of Visual Communications
PSYCH 380 Social Cognition*
PSYCH 413 Information Processing: Conscious and Unconscious
PSYCH 416 Modeling Perception and Cognition
INFO 440 Advanced Human–Computer Interaction Design
INFO 445 Seminar in Computer-Mediated Communication
INFO 450 Language and Technology
DEA 470 Applied Ergonomic Methods
* Students who take PSYCH 342 may also count its prerequisite, PSYCH 205, toward the Human-Centered Systems primary or secondary track requirements. Similarly, students who take PSYCH 380 may also count PSYCH 280 toward the Human-Centered Systems primary or secondary track requirements. At most, one of PSYCH 205 or PSYCH 280 can be counted toward the primary or secondary track requirements.

Information Systems
INFO 330 Data-Driven Web Applications
COM S 419 Computer Networks
LING 424 Computational Linguistics
INFO 430 Information Retrieval
INFO 431 Web Information Systems
COM S 432 Introduction to Database Systems
COM S 465 Computer Graphics I
COM S 472 Foundations of Artificial Intelligence
LING 474 Introduction to Natural Language Processing
OR&IE 474 Statistical Data Mining
COM S 478 Machine Learning
OR&IE 480 Information Technology
COM S 501 Software Engineering
COM S 513 System Security

OR&IE 574 Statistical Data Mining
COM S 578 Empirical Methods in Machine Learning and Data Mining

Social Systems
SOG 304 Social Networks and Social Processes
AEM 322 Technology, Information, and Business Strategy*
INFO 349 Media Technologies
INFO 355 Computers: From the 17th Century to the Dot.com Boom
INFO 356 Computing Cultures
ECON 368 Game Theory (formerly ECON 467)*
INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors
S&TS 411 Knowledge, Technology, and Property
ECON 419 Economic Decisions under Uncertainty
INFO 429 Copyright in a Digital Age
INFO 435 Seminar on Applications of Information Science
OR&IE 435 Introduction to Game Theory*
S&TS 438 Minds, Machines, and Intelligence
INFO 447 Social and Economic Data
H ADM 474 Strategic Information Systems*
ECON 476/477 Decision Theory I and II
INFO 515 Culture, Law, and Politics of the Internet
* Only one of OR&IE 435 and ECON 368 may be taken for IS credit. Only one of AEM 322 and H ADM 474 may be taken for IS credit.

Admission
All potential affiliates are reviewed on a case-by-case basis relative to the following criteria:
- Completion of four core courses, one in each of the core course areas listed above (i.e., Math and Statistics, Human-Centered systems, Information Systems, and Social Systems). Courses must be taken for a letter grade.
- A grade of C or better in each of the completed core courses with an overall GPA for these courses of 2.5 or more.

Courses
For complete course descriptions, see the Information Science listings under Computing and Information Science (CIS).

INFO 130 Introductory Design and Programming for the Web (also COM S 130)
Fall. 3 credits.
For description, see COM S 130 in CIS section.

INFO 172 Computation, Information, and Intelligence (also COGST 172)
Fall. 3 credits.
For description, see COGST 172 in CIS section.

INFO 204 Networks (also ECON 204, SOC 2120)
Spring. 4 credits.
For description, see ECON 204.

INFO 214 Cognitive Psychology (also COGST 214, PSYCH 214)
Fall. 3 credits.
For description, see PSYCH 214.

INFO 230 Intermediate Design and Programming for the Web (also COM S 230)
Spring. 3 credits.
For description, see COM S 230 in CIS section.

INFO 245 Psychology of Social Computing (also COMM 245)
Fall. 3 credits.
For description, see COMM 245.

INFO 282/292 Inventing an Information Society (also AM ST 292, ECE/ENGRG 292/2980, HIST 292/2920, S&TS 292/2921) [I/II]
Fall. 3 credits. Prerequisite: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100.
For description, see ENGRG 298.

INFO 285 Mathematical Methods for Information Science
Fall. 4 credits. Corequisites: MATH 231 or equivalent.
For description, see INFO 285 in CIS section.

INFO 330/3300 Data-Driven Web Applications (also COM S 330/3300)
Fall. 3 credits. Prerequisite: COM S/ENGRR 211.
For description, see COM S 330 in CIS section.

The Concentration
A concentration in Information Science is also available to students in the College of Arts and Sciences, CALS, AAP (Architecture and Planning students only), Engineering, Human Ecology, Hotel, and ILR. The concentration has been designed to ensure that students have substantial grounding in all three tracks: Human-Centered Systems, Information Systems, and Social Systems. Detailed information about the concentration can be found in the CIS section of Courses of Study. Students are referred to www.infosci.cornell.edu/ugrad/concentrations.html for the most up-to-date description of the concentration and its requirements.
INFO 345(3450) Human-Computer Interaction Design (also COMM 345[3450])
Spring. 3 credits.
For description, see COMM 345.

INFO 349(3491) Media Technologies (also COMM 349[3490], S&TS 349)
Spring. 3 credits.
For description, see COMM 349.

INFO 355(3551) Computers: From the 17th Century to the Dot.com Boom (also S&TS 355[3551]) (HA)
Fall. 4 credits.
For description, see S&TS 355.

INFO 356(3561) Computing Cultures (also S&TS 356[3561]) (CA)
For description, see S&TS 356.

INFO 372(3720) Explorations in Artificial Intelligence
Spring. 3 credits. Prerequisites: MATH 111 or equivalent, an information science approved statistics course, and COM S 211 or permission of instructor.
For description, see INFO 372 in CIS section.

INFO 387(3871) The Automatic Lifestyle: Consumer Culture and Technology (also S&TS 387[3871])
For description, see S&TS 387.

INFO 429(4290) Copyright in the Digital Age (also COMM 429[4290])
Fall. 3 credits. Next offered 2007-2008.
For description, see COMM 429.

INFO 430(4300) Information Retrieval (also COMM S 430[4300])
Fall. 3 credits. Prerequisites: COM S/ENGRI 211 or equivalent.
For description, see COMM 430 in CIS section.

INFO 431(4302) Web Information Systems (also COMM S 431[4302])
Spring. 5 credits. Prerequisites: COMM S 211 and some familiarity with web site technology.
For description, see COMM S 431 in CIS section.

INFO 435(4390) Seminar on Applications of Information Science (also INFO 435[4390])
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COMM S 211 or equivalent, and experience in using information systems.
For description, see INFO 435 in CIS section.

INFO 440(4400) Advanced Human-Computer Interaction Design (also COMM 440[4400])
Fall. 3 credits. Prerequisite: COMM/INFO 245.
For description, see COMM 440.

INFO 445(4450) Seminar in Computer-Mediated Communication
Fall. 3 credits. Prerequisites: COMM/INFO 245.
For description, see COMM 445.

INFO 447(4470) Social and Economic Data (also IR/PLE 447[4470])
Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor.
For description, see INFO 447 in CIS section.

INFO 450(4500) Language and Technology (also COMM 450[4500])
Spring. 3 credits. Prerequisite: COMM 240 or COMM/INFO 245 or permission of instructor.
For description, see COMM 450.

INFO 490(4999) Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

INFO 491(4910) Teaching in Information Science, Systems, and Technology
Fall, spring. Variable credit.
Involves working as a TA in a course in the information science, systems, and technology major.

INFO 515(5150) Culture, Law, and Politics of the Internet
Fall. 4 credits.
For description, see INFO 515 in CIS section.

INFO 530(5300) The Architecture of Large-Scale Information Systems (also COMM S 530[5300])
Spring. 4 credits. Prerequisites: COMM S/ INFO 330 or COMM S 432.
For description, see COMM S 530 in CIS section.

INFO 614(6140) Cognitive Psychology (also PSYCH 614[6140])
Fall. 3 credits. Prerequisite: permission of instructor.
For description, see PSYCH 614.

INFO 630(6300) Human Language Technology (also COMM S 630[6300])
Spring. 4 credits. Prerequisite: basic knowledge of linear algebra and probability theory and basic programming skills.
For description, see COMM S 630 in CIS section.

INFO 634(6341) Information Technology in Sociocultural Context (also S&TS 634[6341])
Spring. 4 credits. Prerequisites: permission of instructor.
For description, see S&TS 634.

INFO 635(6390) Seminar on Applications of Information Science (also INFO 635[6390])
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COMM S 211 or equivalent, and experience using information systems. Undergraduates and master's students should register for INFO 635; Ph.D. students should register for INFO 635.
For description, see INFO 635 in CIS section.

INFO 640(6400) Human-Computer Interaction Design (also COMM 640[6400])
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 640.

INFO 645(6450) Seminar in Computer-Mediated Communication (also COMM 645[6450])
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 645.

INFO 685(6850) The Structure of Information Networks (also COMM S 685[6850])
Fall or spring. 4 credits. Prerequisite: COMM S 482.
For description, see COMM S 685 in CIS section.

INFO 709(7090) IS Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 747(7400) Social and Economic Data (also IR/PLE 747[7400])
Spring. 4 credits. Prerequisites: open to Ph.D. and research master's students only.
For description, see INFO 747 in CIS section.

INFO 790(7900) Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 990(9900) Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Thesis research for post-A exam Ph.D. students.

INTERNATIONAL RELATIONS CONCENTRATION
Office: 152 Uris Hall, 254-5004, www.einaudi.cornell.edu/irc/ D. R. Lee (AEM), director

Objective
The International Relations (IR) Concentration is an interdisciplinary program for undergraduate students enrolled in any of the seven Cornell undergraduate colleges. The IR Concentration provides a structured yet flexible program for undergraduates to take advantage of the vast resources available at the university for studying the politics, economics, history, languages, and cultures of the countries and regions of the world.

Graduates of the program have gone on to pursue further education in fields such as political science and anthropology and to successful careers in international law, economics, agriculture, trade, finance, international development, and government service, among others. They have gone on to work in international and nongovernmental organizations, in cross-cultural affairs, in journalism, and in education.
The International Relations Concentration is not a major or a department, but rather a program offering a selection of courses reaching across colleges and departments. Students pursue the IR Concentration in addition to their regular degree. Students concentrating in international relations have majored in fields ranging from anthropology, city and regional planning, communications, economics, government, and history to natural resources, industrial and labor relations, and computer science. International course work and language study add a global and cross-cultural dimension to those majors. Some students even design an independent major in some aspect of international relations or comparative social or cultural studies. Spending a semester or year of study abroad can contribute to meeting the course requirements of the IR Concentration, including the language requirement.

Course Requirements
These requirements are designed to expose students to a broad range of perspectives in international relations while allowing them to tailor their course selections to specific interests. Courses throughout the university are grouped into four subject areas, including:
1. International Economics and Development
2. World Politics and Foreign Policy
3. Transnational Processes and Policies
4. Cultural Studies

Within these four subject areas, courses are also identified as "core" or "elective." Students must complete altogether eight courses from the four groups according to one of two options. Option A emphasizes the politics and economics of international relations. Option B puts greater stress on culture. In choosing either option, students should ensure that they acquire familiarity with more than one geographic region or country. All courses used to fulfill the concentration requirements must be taken for a letter grade. Courses can count toward a major and the International Relations Concentration.

Study Abroad
Students in the IR Concentration are encouraged to study abroad to bring a practical dimension to their expertise in international issues. Those who choose this option will find the requirements for the concentration highly compatible with courses taken abroad. Students are encouraged to contact the administrative coordinator before departure.

Completion
Transcripts will reflect successful completion of the requirements for the Concentration. In addition, students will receive a special certificate and a letter of confirmation signed by the director of the IR Concentration and the director of the Mario Einaudi Center for International Studies.

Enrollment
To obtain course lists, to enroll and for all further information, please contact the IR administrative coordinator, Mario Einaudi Center for International Studies, 152 Uris Hall, 254-5004.

Course List for 2005-2006
Core course options and selected electives are listed below; other electives are possible. Most courses are offered one semester only. Offerings may change, so see the administrative coordinator, course roster, and IR web site for updates and further details.

Group 1: International Economics and Development
Core:
- ECON/AEM 230 International Trade and Finance
- AEM 429 International Finance
- AEM 430 International Trade Policy
- ECON 361 International Trade Theory
- ECON 362 International Monetary Theory and Policy

Electives:
- AEM 432 Business and Governments in Global Marketplace
- ECON/AEM 464 Economics of Agricultural Development
- CRP 384 Green Cities
- CRP 453 Environmental Aspect of International Planning
- HD 483 Early Care and Education in Global Perspective
- D SOC 275 Immigration and a Changing America
- ILRCB 304 Seminar in American Labor and Social History
- ILRHR 469 Immigration and the American Labor Force
- IARD 300 Perspectives in International Agricultural and Rural Development
- IARD/UD 402 Agriculture in the Developing Nations
- IARD 494 Special Topics in International Agriculture
- NTRES 332 Ethics and the Environment
- NTRES 494 History of the Environment

Group 2: World Politics and Foreign Policy
Core:
- GOVT 181 Introduction to International Relations

Electives:
- GOVT 302 Social Movements in American Politics
- GOVT 332 Modern European Politics
- GOVT 400 Democracy in Latin America
- GOVT 424 Contemporary American Politics
- GOVT 482 Unifying While Integrating: China and the World

AS&G 311 Government and Politics in Africa
AS&G 451 Political and Social Change in Caribbean

Group 3: Transnational Processes and Policies
Core:
- GOVT/PHIL 294 Global Thinking
- GOVT 393 Introduction to Peace Studies

Electives:
- AEM 432 Business and Governments in Global Marketplace
- ECON/AEM 464 Economics of Agricultural Development
- CRP 384 Green Cities
- CRP 453 Environmental Aspect of International Planning
- HD 483 Early Care and Education in Global Perspective
- D SOC 275 Immigration and a Changing America
- ILRCB 304 Seminar in American Labor and Social History
- ILRHR 469 Immigration and the American Labor Force
- IARD 300 Perspectives in International Agricultural and Rural Development
- IARD/UD 402 Agriculture in the Developing Nations
- IARD 494 Special Topics in International Agriculture
- NTRES 332 Ethics and the Environment
- NTRES 494 History of the Environment

Group 4: Cultural Studies
Core:
- ANTHR 102 Introduction to Anthropology: The Comparison of Cultures
- ANTHR 200 Cultural Diversity and Contemporary Issues

Electives:
- ANTHR/AIS 230 Cultures of Native North America
- ANTHR/AAS 303 Asians in the Americas

Language Requirement
Students in the IR Concentration are expected to complete additional language study beyond the College of Arts and Sciences' degree requirement (for those in Arts and Sciences). This study can be accomplished in one of two ways: (1) two years of one foreign language (proficiency plus one course); (2) two languages at proficiency.

PROGRAM OF JEWISH STUDIES
D. I. Owen, director (Ancient Near Eastern History and Archaeology; Assyriology; Biblical History and Archaeology), L. Adelson (German-Jewish Literature and Culture), D. Batshick (Holocaust Film Studies), R. Brann (Judeo-Islamic Studies), V. Carron (Modern French and European-Jewish History), M. Diesing (Jewish Language and Linguistics), K. Haines-Eitzen (Early Judaism and Early Christianity), P. Holendrul (German Literature), R. Hoffman (Holocaust Studies), P. Hymas (Medieval Jewish History), D. LaCapra (Holocaust Studies), M. Migiel (Italian Literature), C. Monroe (Near Eastern Mediterranean Studies; Nautical Archaeology), L. Monroe (Hebrew Bible Studies), R. Polenberg (American-Jewish History), P. Powers (Islamic History and Law), E. Rebillard (Jews in the Roman Empire), N. Scharf (Hebrew Language), D. Schwarz (Anglo-Jewish Literature), G. Shapiro (Russian-Jewish Literature), S. Shoer (Hebrew Language), T. Sorek (Sociology and Anthropology), D. Starr (Modern Hebrew and Arabic Literature; Critical Theory; Middle Eastern Film), P. Stevens (curator), S. M. Tovar (Arabic Literature and Islamic Studies), J. Zorn (Biblical Archaeology).
The Program of Jewish Studies was founded as an extension of the Department of Semitic Languages and Literatures, now the Department of Near Eastern Studies, in 1973 and attained status as an intercollegiate program in 1976.
The program has grown out of the conviction that Judaic civilization merits its own comprehensive and thorough treatment and that proper understanding of any culture is inconceivable without adequate knowledge of the language, literature, and history of the people that created it. Accordingly, the offerings in the areas of Jewish languages and literatures have been considerably expanded, and courses in ancient, medieval, and especially modern Jewish history and culture have been added to the program.
It is a broadly based, interdisciplinary program, bringing together faculty from various Cornell departments and colleges.
The Program of Jewish Studies supports teaching and research in the many areas of Jewish Studies. It is a secular, academic program, whose interests are diverse and cross-cultural. The program recognizes its special relationship to teaching and research in classical Judica and Hebraica pursued by the members of the Department of Near Eastern Studies, with particular emphasis on the interrelationship between Judaism, Christianity, and Islam.
It presently enables students to obtain basic instruction and specialization in the fields of Semitic languages; the Hebrew Bible; medieval and modern Hebrew literature; ancient, medieval, and modern European and Middle Eastern Jewish history; and Holocaust studies. In some of these fields students may take courses on both graduate and undergraduate levels. Faculty throughout the university provide breadth to the program by offering courses in related areas of study.
For more information, please visit www.cornell.edu/jwst/index.html.
Courses Offered

JWST 101-102(1101-1102) Elementary Modern Hebrew I and II (also NES 101-102[1101-1102])
Fall. 4 credits. N. Scharf.
For description, see NES 101-102.

JWST 103(1103) Elementary Modern Hebrew III (also NES 103[1103])
Fall. 4 credits. N. Scharf.
For description, see NES 103.

JWST 200(2100) Intermediate Modern Hebrew (also NES 200[2100])
Spring. 4 credits. N. Scharf.
For description, see NES 200.

JWST 223(2623) Introduction to the Hebrew Bible (also NES/RELST 223[2623])
Fall. 3 credits. L. Monroe.
For description, see NES 223.

JWST 244(2644) Introduction to Judaism (also NES 244[2644], RELST 244[2644])
Spring. 3 credits. L. Monroe.
For description, see NES 244.

JWST 251(2651) Holy War, Crusade, and Jihad: Judaism, Christianity, and Islam (also HIST 251[2651], NES/RELST 251[2651])
Fall. 3 credits. R. Brann.
For description, see NES 251.

JWST 253(2650) From Medievalism to Modernity: The History of Jews in Eastern Modern Europe, 1492-1789 (also HIST 253[2650])
Fall. 4 credits. V. Caron.
For description, see HIST 253.

JWST 261(2661) Ships and Seafaring: Introduction to Nautical Archaeology (also NES 261[2661])
Spring. 3 credits. C. Monroe.
For description, see NES 261.

JWST 262(2662) Daily Life and the Cultural Landscape of the Biblical World (also ARKEO 262[2662], NES 262[2662], RELST 261[2662])
Fall. 3 credits. J. Zorn.
For description, see NES 262.

JWST 266(2666) Jerusalem Through the Ages (also RELST/ARKEO 266[2666])
Spring. 3 credits. J. Zorn.
For description, see NES 266.

JWST 268(2668) Ancient Egyptian Civilization (also ARKEO/NESS 268[2668])
Fall. 3 credits. C. Monroe.
For description, see NES 268.

JWST 290(2670) History of Zionism (also HIST 290[2670])
Spring. 4 credits. V. Caron.
For description, see HIST 267.

JWST 291(2793) SSP: Middle Eastern Cinema (also NES 293[2793], FILM/COM L 293[2930], VISST 293[2193])
Fall. 4 credits. D. Starr.
For description, see NES 293.

JWST 301(3101) Advanced Intermediate Modern Hebrew (also NES 301[3101])
Fall. 4 credits. N. Scharf.
For description, see NES 301.

JWST 305(3105) Conversational Hebrew (also NES 305[3105])
Spring. Variable. 4 credits. Limited to 15 students. Prerequisite: NES 301, 400, or permission of instructor: non-native speakers only. N. Scharf.
For description, see NES 305.

JWST 384(3784) Israeli Literature: Between Self and Nation (also NES 384[3784])
Spring. 4 credits. D. Starr.
For description, see NES 384.

JWST 332(3832) Martyrdom in Contemporary Societies (also NES 332[3832])
Spring. 4 credits. Staff.
For description, see NES 332.

JWST 364(3664) Ancient Iraq I: Origins of Mesopotamian Civilization (also NES/ARKEO 364[3664], NES/JWST 664[6664])
Fall. 4 credits. D. I. Owen.
For description, see NES 364.

JWST 395(3895) Israeli Society (also NES 395[3895], SOC 390[3900])
Fall. 4 credits. T. Sorek.
For description, see NES 395.

JWST 400(4100) Seminar in Advanced Modern Hebrew (also NES 400[4100])
Fall. 4 credits. Limited to 15 students. N. Scharf.
For description, see NES 400.

JWST 401(4101) Modern Hebrew Literature (also NES 401[4101])
Spring. 4 credits. D. Starr.
For description, see NES 401.

JWST 420(4102) Biblical Hebrew Prose—Joshua (also NES/RELST 420[4102])
Fall. 4 credits. L. Monroe.
For description, see NES 420.

JWST 438(4738) Imagining the Mediterranean (also NES 438[4738], COM L 496[4960])
Fall. 4 credits. G. Holst-Warhaft.
For description, see NES 438.

JWST 453(4330) History of Modern German Jewry: From the Enlightenment to the Post-1945 Era (also HIST 453[4330], GERST 433[4330])
Fall. 4 credits. V. Caron.
For description, see HIST 433.

JWST 466(4666) History of Israelite Religion (NES 466[4666])
Spring. 4 credits. L. Monroe.
For description, see NES 466.

JWST 470 Power and Wealth in Ancient Civilizations (also NES 470)
Spring. 4 credits. C. Monroe.
For description, see NES 470.

JWST 474(4740) Topics in Modern Europe: Intellectual and Cultural History (also JWST 674[6740], HIST 474[4740], COM L 474[4740], VISST 674[6740])
Fall. 4 credits. D. LaCapra.
For description, see HIST 474.

JWST 630(6230) Judeo-Arabic Literature (also NES 630[6230])
Fall. 4 credits. R. Brann.
For description, see NES 630.

JWST 491-492(4991-4992) Independent Study—Undergraduate
Fall and spring. Variable credit. Staff.

Courses not offered 2006-2007

JWST 236 Israel: Literature and Society (also NES 236)
JWST 248 Introduction to Classical Jewish History (also RELST/NES 248)
JWST 255 Women and the Holocaust (also ENGL/FGSS 255)
JWST 271 Yiddish Linguistics (also LING 271)
JWST 299 The Hebrew Bible and the Arabic Qur'an in Comparative Perspective (also NES/RELST/COM L 299)
JWST 323 Reinventing Biblical Narrative Apocrypha and Pseudepigrapha (also NES/RELST 323)
JWST 328 Gnosticism and Early Christianity (also NES 328, RELST 330)
JWST 344 The History of Early Christianity (also NES 344, CLASS 344, RELST 325)
JWST 371 A Mediterranean Society and its Culture: The Jews under Classical Islam (also NES/RELST/COM L 371)
JWST 435 Aramaic (also NES 435)
JWST 449 Rescanning the Holocaust (also GERST 449, COM L 453, THEIR 450)
JWST 494 Studies in the Novel: Reading Joyce's Ulysses (also ENGL 470)
JWST 639 Islamic Spain: Culture and Society (also NES 339/639, JWST 339, RELST/COM L 334, SPANL 339/699)
JWST 694 Joyce's Ulysses and the Modern Tradition (also ENGL 670)

JOHN S. KNIGHT INSTITUTE FOR WRITING IN THE DISCIPLINES

The director of the John S. Knight Institute is Paul Lincoln Sawyer, professor in the Department of English. Katherine Gottschalk, senior lecturer in the Department of English, is the Walter C. Teagle Director of First-Year Writing Seminars. The institute's offices are in 101 McGraw Hall, 255-4061.

M. Gilliland (Writing Workshop), K. Hjortshoj (Writing in the Majors), B. LeGendre (Writing Workshop), J. Martin (Writing Workshop), J. Pierpoint (Writing Workshop), E. Shapiro (Writing Workshop).

The John S. Knight Institute helps to coordinate the teaching of writing in all undergraduate schools and colleges (the School of Industrial and Labor Relations; the School of Hotel Administration; and the colleges of Agriculture and Life Sciences, Architecture, Art and Planning, Arts and Sciences, Engineering, and Human Ecology). The program administers writing seminars for first-year and upperclass students, discipline-based seminars in its Sophomore Seminars Program, tutorial writing classes, and seminars in the teaching of writing. More than 30 academic departments and programs participate in the program.
First-Year Writing Seminars

For first-year students the Institute offers the First-Year Writing Seminars—more than 125 different courses in the humanities, social sciences, expressive arts, and sciences. Through introductory work in a particular field of study, seminars help students write good English expository prose—prose that, at its best, is characterized by clarity, coherence, intellectual force, and stylistic control. All seminars pursue this common aim through small classes, with a maximum of 17 students, and adherence to a program-wide set of guidelines:

- **Seminars** require at least six—and at most nine—formal essays on new topics. (While these assignments should total about 30 pages, some of the 30-page total may include major drafts that receive commentary from the instructor and are later significantly revised.) Assignments form a logical sequence.
- At least three of the six to nine required essays and a final paper are developed through several stages of revised drafts under the instructor's guidance. Guidance may include, in addition to written commentary on drafts, individual conferences, in-class group work, peer conferences, reading responses, journals, and so on.
- **Seminars** are limited to no more than 17 students.
- **Ample classroom time** is spent on work directly related to writing.
- Reading assignments in the course subject are kept under 75 pages per week to permit regular, concentrated work on writing.
- All students meet in at least two individual conferences with the instructor.

Offerings change from semester to semester. Each semester's First-Year Writing Seminars are described on the web at [http://arts.cornell.edu](http://arts.cornell.edu). To ensure that students will enjoy the benefits of small writing classes, First-Year Writing Seminars are limited to no more than 17 students. Instead of pre-enrolling in their writing courses, students request placement in one of five writing seminars by filling out an electronic ballot in August. Students may change their writing seminars variously as "first-year writing," "oral and performance," "writing," and so on.

For work done at other institutions to be accepted as equivalent to First-Year Writing Seminars, students should demonstrate that they have done a reasonably equivalent amount of writing in a formal course (e.g., it is not sufficient to write one 30-page term paper.) Students in the College of Engineering and the College of Arts and Sciences must file an "application for transfer evaluation" to request writing credit for such courses; students in other colleges should consult their college registrars.

In unusual circumstances, upper-level students may petition to use a Cornell writing course other than a First-Year Writing Seminar to satisfy part of their writing requirement. The John S. Knight Institute must approve all such petitions in advance.

For information about the requirements for First-Year Writing Seminars and descriptions of seminar offerings, see the John S. Knight Institute web site at [http://arts.cornell.edu/knight_institute](http://arts.cornell.edu/knight_institute).

**English 288–289: Expository Writing**

Helps students write with more confidence and skill in all disciplines. Open to Cornell sophomores, juniors, and seniors, ENGL 288–289 courses explore themes shaped by a genre or use of expository writing, by the common concerns of several disciplines, or by an interdisciplinary topic intimately related to the written medium. Although English department instructors make up roughly half the staff, the Knight Institute's involvement enables the course to extend and diversify its offerings in separately defined, 16-member sections that appeal to the varied interests and needs of students in many areas of study. Students may choose among a variety of sections focusing on such themes as "War, Peace, Terror, and the Law," "Making the News," "The Reflective Essay," "Hollywood Babylon," and "Rights, Democracy, and the Courts." All staff are selected because their special interests and distinctive training and experience in First-Year Writing Seminars promise original course design and superior performance.

**Sophomore Seminars**

Since 2001, the John S. Knight Institute has been sponsoring a distinctive tier of electives through its Sophomore Seminars Program. The program involves a range of disciplines across the College of Arts and Sciences and the university. Building on an introductory exposure to discipline-specific approaches to writing gained in the First-Year Writing Seminars, the Sophomore Seminars provide interested students with an early mentoring experience in a small forum with leading university professors. Limited to 15 students per seminar. Purpose: to prepare sophomores for advanced work they will undertake in their chosen fields as juniors and seniors. Each Sophomore Seminar is presented in an interdisciplinary context and may serve as a gateway to a particular major. Seminars may also be used, with permission, to satisfy remaining First-Year Writing Seminar requirements for transfer students, sophomores, juniors, and seniors. By the end of the present academic year, the Knight Institute will have sponsored the following 62 seminars from 32 disciplines:

**Knight Institute Sophomore Seminars 2001–2007**

- **AAS 210** South Asian Diasporic Locations
- **AAS 211** Race and the American City: Reading New York and San Francisco
- **AEM 200** Contemporary Controversies in the Global Economy
- **AN SC 204** Domestic Animal Issues
- **ANTHR 205** The Anthropology of Sport
- **ANTHR 211** Nature and Culture
- **ART 372** Contemporary Art: Making and Looking
- **ART H 209** The Immigrant Imagination
- **ASIAN 201** Buddhist Felicities
- **ASTRO 233** From Planets to Galaxies: The Origin of Cosmic Structures
- **BIOEE 467** Why Is Evolutionary Biology So Controversial?
- **CLASS 244** Psycho, Ego, and Self
- **COM L 215** Comparative American Literatures
- **COM L 225** Poetry and Poetics of Difference
- **COM L 227** Multilingualism
- **CRP 395** Separate Societies: Poverty and Inequality in U.S. Cities
- **CSS 200** Soils and Civilizations
- **DANCE 204** Movement in Time and Space
- **ENGL 204** Introduction to American Literatures: Narrating the Nation
- **ENGL 209** Introduction to Cultural Studies
- **ENGL 220** The Idea of the Pet in Literature
- **ENGL 221** Imagining the Holocaust
- **ENGL 244** Studies in Irish Culture
Writing in the Majors

Spanning the humanities, social sciences, and sciences, the Knight Institute's upper-level writing courses do not satisfy formal writing requirements, and faculty participation is entirely voluntary. While all writing in the Majors courses include extensive writing, usually guided revision, they also emphasize other forms of active, interactive learning essential to scholarship and careers in the disciplines. Writing in the Majors initiatives have included individual and collaborative research projects, collaborative writing, oral presentations, group oral exams, field studies, public engagement, designed laboratory experiments, debates, analytical and critical reading exercises, topical symposia, conversation groups, student-led discussions, poster sessions, and many kinds of informal writing, including online exchanges. Varying radically in design and size, from enrollments of fewer than 10 students to more than 300, Writing in the Majors courses over the past 18 years have involved collaboration with 150 faculty members and more than 250 graduate teaching assistants to enrich learning in 75 upper-level courses offered in 24 departments.

WRIT 701(7101) Writing in the Majors Seminar
Fall and spring. 1 credit. S-U grades only. Teaching assistants assigned to Writing in the Majors projects enroll in a six-week course on teaching strategies in advanced instruction.

Teaching Writing
Each summer and fall, the institute offers instruction in the teaching of writing to new staff members in the First-Year Writing Seminars and other interested instructors. Teaching Writing, offered in the summer or fall, is primarily a course for graduate students. The program also sponsors a summer apprenticeship program for a limited number of graduate students, and a summer seminar for faculty members interested in the teaching of writing.

WRIT 700(7100) Teaching Writing
Summer and fall. 1 credit. S-U grades only. Introduces new instructors of Cornell's First-Year Writing Seminars to the challenges of teaching writing in courses that both introduce students to particular fields of study and develop the sophisticated writing skills students will need throughout their undergraduate careers and beyond. An overview of methodologies involved in the teaching of writing within a disciplinary context is provided by readings representing a range of pedagogical theories and practices, seminar discussions, and presentations of faculty, visiting scholars in the field, and experienced TAs. Participants in the course prepare written assignments designed to prepare them for the actual work of their First-Year Writing Seminars. In addition, written critiques and explanatory rationales of those assignments provide an opportunity for reflection on the methods chosen and on the principles underlying them.

WRIT 137-138, 134(1137-1138, 1134) An Introduction to Writing in the University
Fall and spring. 3 credits. Cannot fulfill writing or distribution requirements. Prerequisite: undergraduate standing, permission of instructor. S-U grades only. Writing seminar designed for students who need more focused attention to mastering the expectations of academic writing. Emphasizes the analytic and argumentative writing and critical reading essential for university-level work. With small classes and weekly student/teacher conferences, each section is shaped to respond to the needs of students in that particular class.

WRIT 139(1139) Special Topics in Writing
Fall and spring. 3 credits. Cannot fulfill writing or distribution requirements. Prerequisite: undergraduate standing, permission of instructor. S-U grades only. These courses allow students the opportunity to resolve significant writing challenges that have interfered with their academic progress. Students must have ongoing writing projects on which to work. Instruction is in weekly tutorials. Interested students should go to 174 Rockefeller for more information.

WRIT 702(7102) Graduate Writing Workshop
Fall and spring. 3 credits. Limited to 10 students per sec. Prerequisite: graduate standing and permission of instructor. S-U grades only. Provides graduate students the opportunity to resolve significant writing challenges that have interfered with their academic progress. Students must have ongoing writing projects to work on. Instruction is in weekly tutorials. Interested students should go to 174 Rockefeller Hall for further information.

WRIT 703(7103) Work in Progress
Fall and spring. 3 credits. Limited to 10 students per sec. Prerequisite: graduate standing and permission of instructor. S-U grades only.
Writing seminar for graduate students who have substantial work in progress, such as professional articles, theses, or dissertations. In the first two weeks students discuss rhetorical and stylistic features of scholarly writing and methods of composing and revising, with relevant readings. Remaining weeks emphasize exchange and discussion of drafts, supplemented by individual conferences. The course goal is the improvement and completion of student writing projects.

LATIN AMERICAN STUDIES PROGRAM
190 Uris Hall
John S. Henderson, Anthropology, Director, Latin American Studies Program; John S. Henderson, Anthropology, Director, Latin American Studies Program. S. Ayora-Diaz
Vienna Santiago-Frazier, Anthropology, LASP director of graduate studies; Lourdes Beneria, City and Regional Planning; Robert Blake, Animal Science; David Block, Ibero-American Bibliographer, Bruno Bosteds, Romance Studies; Debra Ann Castillo, Romance Studies, director of undergraduate studies; María Lorena Cook, School of Industrial and Labor Relations; Raymond Craib, History; David Cruz de Jesús, Romance Studies; Elena Dozier, Romance Studies; María Fernández, History of Art; Gary Fields, International Labor Relations and Economics; María Antonia García, Romance Studies; María Cristina García, History; William W. Goldsmith, City and Regional Planning; Karen Granbart, History; Jere D. Haas, Anthropology, Nutritional Science; Jean-Pierre Habicht, Nutritional Science; Zulma Iguina, Romance Studies; Steven Jackson, Government; Teresa Jordan, Geological Science; Steven Kyle, Agricultural Economics; David R. Lee, Applied Economics and Management; Barbara Lynch, City and Regional Planning; Luis Morató, Romance Studies; Ben Olguin, English; Jura Oliveira, Romance Studies; Kathleen O'Neill, Government; Edmundo Paz Soldán, Romance Studies; Eloy Sanchez-Blake. Emeritus: History; S. Pond.

To complete an undergraduate concentration in Latin American Studies, students must earn a minimum of 15 credits in Latin American Studies. Latin American content courses not on the list may be approved by petition only. To satisfy the requirements of the concentration, undergraduates must select courses from at least three fields and must include at least one course at the advanced level. Language instruction below the 300 level may not be counted toward the credit requirement. However, language facility in Spanish, Portuguese, or Quechua must be demonstrated by successful completion of SPANR 219, PORT 219, QUECH 219, or the equivalent.

Undergraduate Concentration

Courses

LAT A 103[1030] Introduction to World Music I: The African Diaspora (also MUSIC 103[1030], LSP 100[1301])
Spring. 3 credits. K. Graubart.
For description, see MUSIC 103.

LAT A 195(1950) Colonial Latin America (also HIST 195[1950])
Fall and spring. 4 credits. R. Craib.
For description, see HIST 195.

LAT A 131(1310) Introduction to Comparative Government and Politics (also GOVT 131[1310])
Spring. 3 credits. K. Roberts.
For description, see GOVT 131.

LAT A 196(1961) Modern Latin America (also HIST 196[1960])
Fall. 4 credits. J. Rodríguez-García.
For description, see HIST 196.

LAT A 215(2150) The Tradition of Rupture (also SPANL 215[2150])
Fall and spring. 4 credits. K. Graubart.
For description, see SPANL 215.

LAT A 216(2161) Gender and Colonialization in Latin America (also HIST 216[2160])
Spring. 4 credits. K. Graubart.

LATINO STUDIES PROGRAM
434 Rockefeller Hall

Undergraduate Concentration

The Latino Studies Program offers an interdisciplinary undergraduate concentration in Latino Studies, with courses mostly drawn from history, sociology, anthropology, literature, and language, but the program also cross-lists courses from other colleges.

- To complete the concentration, students must take at least five courses (a minimum of 15 credits) in Latino Studies, including Latinos in the United States (D SOC 265, LSP 201, and SOC 265), which is offered each spring semester.
- Students are required to include at least three courses from Groups I and II (one from each group, and another from either group). Of the three courses, two must be at the 300 or 400 level.

One elective course (see list below) can count toward the concentration. Courses must be completed with a letter grade of C or above. Independent studies and first-year writing seminars do not count toward concentration requirements. The list varies each semester in accordance with faculty schedules and visiting appointments.

Group I: Humanities

LSP 225 The United States-Mexico Border: History, Culture, Representation (also AM ST/HIST 225)

LSP 240 Survey in U.S. Latina/o Literature (also AM ST/ENG 240)

LSP 246 Contemporary Narratives by Latina Writers (also FGSS/SPANL 246)

LSP 248 Poetry of the Latina/o Experience (also SPANL 248)

LSP 260 Latinos in the United States: Colonial Period to 1890 (also AM ST 259, HIST 260)

LSP 261 Latinos in the United States: 1898 to the Present (also AM ST/HIST 261)

LSP 264 Exploring Latina/o Identity (also ENGL 264)

LSP 303 American Dreams (also SPANL 303)

LSP 398 Latina/o Popular Culture (also AM ST 396, ENGL 398)

LSP 413 Classics of Latina/o Literature (also SPANL 413)

LSP 462 Senior Seminar in Latina/o Studies: Chicana Feminism in a Globalizing World (also ENGL 462, AM ST 452)

LSP 693 Gender, Globalization, and Latina/o Literature (also ENGL 693)

Group II: Social Sciences

LSP 201 Latinos in the United States (also D SOC/SOC 265)

LSP 220 Sociology of Health and Ethnic Minorities (also D SOC 220)

LSP 221 Anthropological Representation: Ethnographies of Latino Culture (also AM ST/ANTH 221)

LSP 230 Latino Communities (also D SOC 230, AM ST 231)

LSP 355 Latinos, Law, and Identity (also AM ST 357, D SOC 355)

LSP 375 Comparative U.S. Racial and Ethnic Relations (also AM ST/D SOC 375)

LSP 431/631 Farmworkers (also HIST 431/631)

LSP 451 Multicultural Issues in Education (also EDUC 451)

LSP 610 Political Identity: Race, Ethnicity, and Nationalism (also GOVT 610)

LSP 624 Ethnoracial Identity in Anthropology, Language, and Law (also ANTHR 624, LAW 723)

LSP 660 Language, Ideologies and Practices (also ANTHR 660)

Electives:

LSP 100 Introduction to World Music I: Africa and the Americas (also MUSIC 102)

LSP 101 Research Strategies in Latino Studies

LSP 111 Introduction to American Studies: New Approaches to Understanding American Diversity, the 20th Century (also AM ST 110, HIST 161)

LSP 202 Spanish for English Spanish Bilinguals (also SPANR 200)

LSP 241 Immigration and Ethnicity in 20th-Century United States (also HIST 240, AM ST 239)

LSP 311 Social Movements (also AIS/D SOC 311)

LSP 313 Spanish Writing Workshop for Advanced English/Spanish Bilinguals (also SPANR 313)

LSP 319 Racial and Ethnic Politics in the United States (also GOVT 319, AM ST 313)

LSP 368 Modern and Contemporary Latin American Art (also ART H 368)

LSP 377 The United States (also ANTHR/AM ST 377)

LSP 380 Cinema and Social Change (also FILM 380)

LSP 405 U.S.-Cuba Relations (also HIST 405, 405/405, LAT A 405/405)

ART 214 Art and the Multicultural Experience

Other elective courses will be determined each semester.

Graduate Minor

Students wishing to complete a graduate minor in Latino studies need to formally register with the Latino Studies Program office, take an upper-level seminar (400/500) in Latino Studies and work intensively with a faculty member outside of their major field. Over the course of their study they will be expected to take two other Latino studies graduate or advanced undergraduate courses outside of their major field. In lieu of available courses, the student and his or her minor field advisor may design a special project that culminates in a paper given at a conference.
or presented for publication. Each special project requires the approval of the director of graduate studies for the minor field. Upon completion of the minor, students receive a certificate from the program. Students wishing to pursue the graduate minor field in Latino studies must file an application at the Latino Studies Program, 434 Rockefeller Hall.

Library

The Latino Studies Program library in 432 Rockefeller Hall serves Cornell students, faculty, staff, and the wider local community. The library maintains print and media material pertinent to U.S. Latino issues including an extensive collection of books, research material, archives, and films. The library and conference room also provide meeting space for more than 25 Latino student organizations.

Courses

LSP 100(1301) Introduction to World Music: Africa and the Americas [also MUSIC 103(1301), LAT A 100(1301)]
Spring, 3 credits. 1-hour disc. S. Pond. For description, see MUSIC 105.

LSP 101(1101) Research Strategies
Spring, 1 credit. I. Martinez.
Fall, 1 credit. V. Santiago-Irizarry.
The digital revolution has made an enormous amount of information available to research scholars, but discovering resources and using them effectively can be challenging. This course introduces students with research interests in Latin America to search strategies and methods for finding materials in various formats (e.g., digital, film, and print) using information databases such as the library catalog, print and electronic indexes, and the World Wide Web. Instructors provide equal time for lecture and hands-on learning. Topics include government documents, statistics, subject-specific online databases, social sciences, the humanities, and electronic citation management.

LSP 201(2010) Latinos in the United States [also SOC/D SOC 265(2650), AM ST 265(2650)]
Spring, 3 credits. L. Carrillo. For description, see SOC 265.

LSP 202(2020) Spanish for English-Speaking Bilinguals [also SPANR 200(2000)]
Fall, 3 credits. Staff. For description, see SPANR 200.

LSP 220(2200) Sociology of Health and Ethnic Minorities [also D SOC 220(2200)]
Fall, 3 credits. P. Parra.
Discuss the health status of minorities in the United States. Specifically explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

LSP 246(2460) Contemporary Narratives by Latina Writers [also SPANL/FGSS 246(2460)]
Fall, 3 credits. L. Carrillo.
For description, see SPANL 246.

LSP 248(2480) Poetry of the Latina/o Experience [also SPANL 248(2480)]
Spring, 3 credits. L. Carrillo. For description, see SPANL 248.

LSP 260(2600) Latinos in the United States: Colonial to 1898 [also HIST 260(2600), AM ST 259(2590)]
Fall, 4 credits. M. C. Garcia.
For description, see HIST 260.

LSP 261(2610) Latinos in the United States: 1898 to the Present [also HIST/AM ST 261(2610)]
Spring, 4 credits. M. C. Garcia.
For description, see HIST 261.

LSP 264(2640) The Private I and the Public Eye: Exploring Latina/o Identity in Poetry, Fiction, and Nonfiction [also ENGL 264(2640)]
Fall, 4 credits. H. Viramontes.
For description, see ENGL 264.

LSP 313(3130) Social Movements [also D SOC/AM ST 313(3130)]
A. Gonzales.
For description, see D SOC 311.

LSP 319(3191) Racial and Ethnic Politics in the United States [also GOVT 319(3191), AM ST 313(3191)]
Spring, 4 credits. M. Jones-Corra.
For description, see GOVT 319.

LSP 355(3550) Latinos, Law, and Identity [also AM ST 357(3550), D SOC 355(3550)]
R. Mize.
For description, see D SOC 355.

LSP 368(3680) Modern and Contemporary Latino/Latin American Art [also ART H 368(3680), LAT A 368(3680)]
Spring, 4 credits. M. Fernandez.
For description, see ART H 368.

LSP 375(3750) Comparative U.S. Racial and Ethnic Relations [also AM ST 375(3750), D SOC 375(3750)]
Spring, 3 credits. R. Mize.
For description, see D SOC 375.

LSP 377(3777) The United States [also ANTHR/AM ST 377(3777)]
V. Santiago-Irizarry.
For description, see ANTHR 377.

LSP 398(3980) Latina/o Popular Culture [also ENGL 398(3980), AM ST 396(3961)]
Spring, 4 credits. M. P. Brady.
For description, see ENGL 398.

LSP 405(4050) U.S.-Cuba Relations [also AM ST/HIST/LAT A/L/ LSP 405(4050), 4050(4050)]
Fall, 4 credits. M. C. Garcia.
For description, see HIST 405/505.

LSP 413(4130) Classics of Latina/o Literature [also SPANL 413(4130)]
V. Santiago-Irizarry.

LAW AND SOCIETY

Co-directors: M. Lynch (science and technology studies), 302 Rockefeller Hall, 255-7294, mel27@cornell.edu, and R. Lieberwitz (ILR), 287A Ives Hall, 255-3289, rll3@cornell.edu.
Advisers: G. Alexander (law), D. Dunning (psychology), G. Hay (law), B. Hendrix (government), P. Hyams (history), M. Katzenstein (government), R. Miller (philosophy), M. Moody-Adams (philosophy), M. B. Norton (history), R. Polenberg (history), D. Powers (Near East studies), J. Rabkin (government), A. Riles (law), V. Santiago-Irizarry (anthropology), P. Sawyer (English), S. Shiffrin (law).
The law and society concentration provides an opportunity for focused study of the interaction between law and society from an interdisciplinary perspective predominantly rooted in the social sciences and humanities: anthropology, comparative literature, economics, government, history, philosophy, psychology, science and technology studies, and sociology.
The concentration is open to all undergraduates, but interested students with majors outside the College of Arts and Sciences are advised to check their college's
policy and procedures regarding external concentrations, including whether the concentration is included on their college transcript. All students completing the concentration will receive a certificate and may include their participation in the law and society concentration on a résumé or law school application.

To allow sufficient time for a coherent program of study to be developed and completed, students who have an interest in this concentration are required to register before the start of the second semester of their junior year. Under extenuating circumstances, late registrations may be accepted at the discretion of the directors, but only if the registrant has a plan already formulated for completing the concentration's requirements. Special late registration forms that include the student's plan outline are available in the Ethics and Public Life (EPL) office, 240 Goldwin Smith Hall.

The standard law and society registration form is available online at www.arts.cornell.edu/epl and in the EPL office. As part of the registration process, each student is assigned a law and society adviser who is available to provide guidance with course selection and help with other questions or concerns related to the student's participation in the concentration. The name and contact information of the assigned adviser are included in a welcome e-mail that is sent shortly after a student's registration form is received.

Four-Event Requirement

Many students find access to and participation in law and society events a particularly beneficial component of the concentration. Officially registered law and society students are notified of qualifying events (usually at least 10 per semester) and other information related to the concentration through an e-mail listserv and postings outside the Ethics and Public Life office. Attendance at a minimum of four events (tracked with sign-in sheets) is required between registration and graduation, but students seeking a broader perspective are encouraged to attend as many events as they can.

Four-Course Requirement

Law and society is an interdisciplinary concentration requiring students to successfully complete four courses (at least 12 credits) from the approved course list, earning a letter grade no lower than C- in each. Of the four qualifying courses, at least two must be outside the student's major, and no more than two can be in the same subject area. Cross-listed courses may be counted in any of the departments listed. Students who have a double major are permitted to select one major as the dominant and use applicable courses from the second major toward the four-course requirement. Appropriate courses taken before registering for the law and society concentration can be counted toward the four-course requirement. There are no required courses, but past students have found GOVT 313 and PSYCH 265 particularly relevant.

At the discretion of the law and society directors, permission may be granted to substitute an appropriate course that has been:

1. accepted from another educational institution toward the student's degree program (one course maximum)
2. taken as part of a semester abroad program
3. recently added to the Cornell curriculum

The best evidence of a course's appropriateness is the syllabus, which is often available online and can be submitted electronically to one of the directors for their determination. Petitions for course substitutions should be submitted before the student's final semester.

To facilitate tracking of courses taken and/or attended, a printable student progress record can be accessed electronically or obtained as a preprinted form from the EPL office.

The law and society concentration is administered by the Ethics and Public Life (EPL) office. For more information, contact the EPL administrative assistant at 240 Goldwin Smith Hall, epl@cornell.edu, or 255-8515.

LESBIAN, BISEXUAL, AND GAY STUDIES

The field of Lesbian, Bisexual, & Gay Studies is devoted to the interdisciplinary study of the social construction of sexuality. The field is founded on the premise that the social organization of sexuality is best studied from the perspectives offered by those positions that have been excluded from established cultural norms.

In addition to offering a graduate minor, the field of LGIS Studies offers an undergraduate concentration, which is administered under the auspices of Feminist, Gender, & Sexuality Studies (FGSS) and which consists of four courses from the list below. Students selecting four courses from the LGIS studies subset must identify their concentration as either LBG studies or FGSS; the LBG studies subset must identify their concentration as either LBG studies or FGSS.

For description, see ANTHR 200.

Courses

ANTHR 200(420) Cultural Diversity and Contemporary Issues

Fall. 3 credits. M. Fiskejøs.
ANTHR 321/621, 3421/6421 Sex and Gender in Cross-Cultural Perspective (also FGSS 321/631 [3210/6210])
Fall. 4 credits. K. March.

Spring. 4 credits. L. Ramberg.
For description, see FGSS 429.

[FRLIT 442/642/4420/6420] Sex in French (also FGSS 432/632 [4320/6320])
4 credits. C. Howie.

FRLIT 449/649/4490/6490 Mystics and Mystique (also FGSS 449[4490])
Fall. 4 credits. C. Howie.
For description, see FRLIT 449/649.

FGSS 474(4740) Exoticism and Eroticism: Figures of the Other in 18th-Century Literature (also FRLIT 476)
Fall. 4 credits. A. Berger.
For description, see FRLIT 475.

FGSS 673(6730) Exoticism and Eroticism: Figures of the Other in 18th-Century Literature (also FRLIT 673[6730])
Fall. 4 credits. A. Berger.
For description, see FRLIT 475.

GOVT 462(4625) Sexuality and the Law (also FGSS 461[4610])
Spring. 4 credits. A. M. Smith.
For description, see GOVT 462.

GOVT 762(7625) Sexuality and the Law (also FGSS 762[7620])
Spring. 4 credits. A. M. Smith.
For description, see GOVT 762.

HD 384(3840) Gender and Sexual Minorities (also FGSS 385[3850])
Fall. 4 credits. K. Cohen.
For description, see HD 384.

HIST 209(2090) Seminar in Early America (also AM ST/FGSS 209[2090])
Fall. 4 credits. M. B. Norton.
For description, see HIST 209.

[HIST 273(2730) Women in American Society, Past and Present (also FGSS 273[2730])
M. B. Norton.

[HIST 368(3860) Marriage and Sexuality in Medieval Europe (also FGSS/RELS 368[3860])
Fall. 4 credits. P. Hyams.
For description, see HIST 368.

[HIST 416(4160) Gender and Sex in Southeast Asia (also ASIAN 416[4416], FGSS 416[4160])
T. Loos.

LING 244(2244) Language and Gender (also FGSS 244[2440])
Spring. 4 credits. S. McConnell-Ginet.
For description, see LING 244.

MUSIC 695(7311) Topics in Music: Gender, Sexuality, and Glam Rock (also FGSS 695[7311])
Fall. 4 credits. J. Peroine.
For description, see MUSIC 695.

LINGUISTICS
http://ling.cornell.edu
J. Whitman, chair (209 Morrill Hall); M. Diesing, director of graduate studies (211 Morrill Hall); W. Harbert, director of undergraduate studies (210 Morrill Hall); A. Berger, chair, (210 Morrill Hall); A. Miller, A. Nussbaum, M. Rooth, C. Rosen, M. Wagner, M. Weiss, D. Zec.

Linguistics, the systematic study of human language, lies at the crossroads of the humanities and the social sciences, and much of its appeal derives from the special combination of intuition and rigor that the analysis of language demands. The interests of the members of the Department of Linguistics and linguistic communities in other departments span most of the major subfields of linguistics: phonetics and phonology, the study of speech sounds; syntax, the study of how words are combined; semantics, the study of meaning; historical linguistics, the study of language change over time; and sociolinguistics, the study of language's role in social and cultural interactions.

Studying linguistics is not a matter of studying many languages. Linguistics is a theoretical discipline with ties to such areas as cognitive psychology, philosophy, logic, computer science, and anthropology. Nonetheless, knowing particular languages (e.g., Spanish or Japanese) in some depth can enhance understanding of the general properties of human language. Not surprisingly, then, many students of linguistics owe their initial interest to a period of exposure to a foreign language, and those who come to linguistics by some other route find their knowledge about languages enriched and are often stimulated to embark on further foreign language study.

Students interested in learning more about linguistics and its relationship to other disciplines in the humanities and social sciences are encouraged to take LING 101, a general overview, which is a prerequisite for most other courses in the field, or one of the first-year writing seminars offered in linguistics (on topics such as metaphor and the science of language). LING 101 and other introductory courses fulfill the social science distribution requirement. Most 100- and 200-level courses have no prerequisites and cover various topics in linguistics (e.g., LING 170 Introduction to Cognitive Science; LING 285 Linguistic Theory and Poetic Structure) or focus on the linguistics of a particular geographic region or historical development of particular languages (e.g., LING 177 History of the English Language to 1300; LING 241 Yiddish Linguistics). Some of these courses also fulfill the breadth requirements.

Talks and discussions about linguistics are offered through the Undergraduate Linguistics Forum and the Linguistics Colloquium (sponsored by the department and the Cornell Linguistic Circle). These meetings are open to the university public and anyone wishing to learn more about linguistics is most welcome to attend.

The Major
For questions regarding the linguistics major, contact Professor Wayne Harbert (210 Morrill Hall, 255-8441, weh2@cornell.edu).

The prerequisite for a major in linguistics is the completion of LING 101 and either LING 301, 302, 303, or 304. The major has its own language requirement, different from that of the College of Arts and Sciences, which should be completed as early as possible. The majors must complete the equivalent of two semesters of college-level study of a language that is either non-European or non-Indo-European (language study undertaken to satisfy the college requirement can also count toward the major requirement if the language meets these conditions). With approval of the department's director of undergraduate studies, this requirement may be waived for students taking the cognitive studies concentration or a double major.

The other standard requirements for the linguistics major are as follows:

1. LING 301 Introduction to Phonetics, LING 302 Introduction to Phonology, LING 303 Introduction to Syntax, and LING 304 Introduction to Semantics and Pragmatics (one of which will already have been taken as a prerequisite to the major).
2. LING 314 Historical Linguistics.
3. Three additional courses in linguistics at the 300 or 400 level, of which two must be general linguistics.
4. A course at or beyond the 300 level in the structure of a language, or LING 400 Language Typology or LING 600 Field Methods.

Some substitutions to these standard requirements are possible after consultation with your advisor and approval by the DUS.

Honors
Applications for honors should be made during the junior year or by the start of fall semester of the senior year. For further information, please contact the DUS. Candidates for admission must have a 3.0
Courses

LING 101(1101) Introduction to Linguistics (also FGSS 101(1101)
Fall or spring. 4 credits each semester. Fall, M. Wagner; spring, M. Diesing.
Overview of the science of language, especially its theoretical underpinnings, methods, and major findings. Areas covered include: the relation between sound and meaning in human languages, social variation in language, language change over time, universals of language, and the mental representation of linguistic knowledge. Students are introduced to a wide variety of language phenomena, drawn not only from languages resembling English, but also from many that appear to be quite unlike English, such as those native to the Americas, Africa, Asia, Australia, and the South Pacific.

LING 109(1109) English Words: Histories and Mysteries (also CLASS 171(1609)) (HA)
Spring. 3 credits. W. Harbert.
Where do the words we use come from? This course examines the history and structure of the English vocabulary from its distant Indo-European roots to the latest in technical jargon and slang. Topics include formal and semantic change, taboo and euphemism, borrowing, new words from old, "learned" English loans from Greek and Latin, slang, and society.

LING 111(1111) American Sign Language
Summer only. 4 credits. T. Galloway.
Students with no previous background in American Sign Language (ASL) are introduced to the nature of a signed language and develop expressive and receptive skills in ASL. Basic grammar and vocabulary are covered, including explanations of the fundamental parts of a sign, proper use of fingerspelling, and the significance of nonmanual features. Instruction is supplemented with videotexts allowing students to begin to explore the visual literature of the Deaf community in the United States—stories, poems, and jokes that are unique to Deaf culture. Readings and class discussions acquaint students with the causes of deafness, the historical development of ASL and its linguistic status, and characteristics of deaf education both throughout history and in the present day.

LING 112(1112) American Sign Language II
Summer only. 4 credits. Prerequisite: LING 111 or permission of instructor. T. Galloway.
In this intermediate course, students continue to develop expressive and receptive fluency in ASL. Focus is on greater descriptive skill, developing intermediate-level narratives, and enhancing conversational ability. Advanced grammar and vocabulary is supplemented with further instruction in the linguistic structure of ASL. Readings, class discussions, and videotexts containing samples of the visual literature of the U.S. Deaf community continues students investigation into American Deaf history and the shaping of modern Deaf culture.

LING 131-132(1131-1132) Elementary Sanskrit (also CLASS 191-192(1331-1332), SANSK 131-132(1131-1132))

LING 170(1170) Introduction to Cognitive Science (also COGST 101(1101), COM S 101(1171), PHIL 191(1910), PSYCH 102(2000)) (KCM)
For description, see COGST 101.

LING 215(215)/715(2215)/7150) Psychology of Language (also COGST 216(2150), PSYCH 215(2150)/7150) (KCM)
For description. see PSYCH 215.

LING 217(2217) History of the English Language to 1300 (also ENGL 217/2170) (HA)
Fall. 4 credits. W. Harbert.
Explores the development of the English language from its Indo-European beginnings through the period of Early Middle English. Topics include linguistic reconstruction, changes in sound, vocabulary and grammatical structure, external influences, and Old and Early Middle English language and literature. This course forms a sequence with LING 218, but the two may be taken independently.

LING 218(2218) History of the English Language since 1300 (HA)

LING 224(2244) Language and Gender (also FGSS 224(2244)) (SBA)
Spring. 4 credits. For nonmajors or majors. S. McConnell-Ginet.
Explores connections between language (use) and gender/sex systems, addressing such questions as the following: How do sex and gender affect the ways we speak, the ways we interpret and evaluate speech? How do sociocultural differences in women's and men's roles affect their language use; their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, psychology, sociology, literature, and general women's studies and feminist theory.

LING 246(246)/546(2246)/5546) Minority Languages and Linguistics (SBA)
Fall. 4 credits. Graduate students register under LING 546. Next offered 2008-2009.

LING 247(2247) Language and Gender (also FGSS 247(2247)) (SBA)

LING 285(2285)/585(2258) Linguistic Theory and Poetic Structure (LA)
Spring. 4 credits. Prerequisite: LING 101 or permission of instructor. A. Cohn.
Introduction to the study of the physical properties of human speech sounds, including production, acoustic, and perception of speech. Provides in-depth exposure to the breadth of sounds found across human languages. Students achieve a high level of skill in phonetic transcription and some practice in reading spectrograms. An introduction to speech synthesis and automatic speech recognition is also provided. A small course project to discover the phonemes of an unknown language is undertaken.

LING 301(3301) Introduction to Phonetics (KCM)
Fall. 4 credits. Prerequisite: LING 101 or permission of instructor. A. Cohn.
Introduction to the study of the physical properties of human speech sounds, including production, acoustic, and perception of speech. Provides in-depth exposure to the breadth of sounds found across human languages. Students achieve a high level of skill in phonetic transcription and some practice in reading spectrograms. An introduction to speech synthesis and automatic speech recognition is also provided. A small course project to discover the phonemes of an unknown language is undertaken.

LING 302(3302) Introduction to Phonology (KCM)
Spring. 4 credits. Prerequisite: LING 101 or permission of instructor. A. Cohn.
Introduction to phonology, which studies the patterning of speech sounds in human language. Emphasis is on formal devices, such as rules and representations, that capture the internal organization of speech sounds as well as their grouping into larger units, syllables, and feet.

LING 303(3303) Introduction to Syntax (KCM)
Fall. 4 credits. Prerequisite: LING 101 or permission of instructor. J. Legate.
Introduction to syntax, which studies how words are combined to form phrases and sentences. The course aims to give students
LING 302(3308) Readings in Celtic Languages
Fall or spring, depending on demand. 2 credits. Prerequisite: permission of instructor. S-U grades only. W. Harbert. Reading/discussion groups in Welsh or Scottish Gaelic.

LING 314(3314) Introduction to Historical Linguistics # (HA)
Fall. 4 credits. Prerequisite: LING 301 or permission of instructor. M. Weiss. Survey of the basic mechanisms of linguistic change, with examples from a variety of languages.

LING 315-316(3315-3316) Old Norse
315, fall; 316, spring. 4 credits each semester. A. Angantysson. Old Norse is a collection of the earliest North Germanic literary languages: Old Icelandic, Old Norwegian, Old Danish, and Old Swedish. The richly documented Old Icelandic is the center of attention, and the purpose is twofold: (1) to familiarize students with the basic patterns of Old Norse language and literature, and (2) to familiarize students with the Old Norse sagas, which are a fundamental part of Viking Age literature. The sagas are a key source for understanding the history and culture of the Viking Age.

LING 321(3321) History of the Romance Languages # (HA)
Fall. 4 credits. Prerequisite: LING 301 and qualification in any Romance language. Next offered 2007-2008. Staff. Covers the Romance languages from their origins in Latin to the present day, focusing on their development as a result of historical events, cultural influences, and social changes. The course also explores the linguistic and non-linguistic factors that have shaped the Romance languages over time.

LING 322(3332) Philosophy of Language (also PHIL 332[3320])
For description, see PHIL 332.

LING 323(3333) Problems in Semantics (also PHIL/COGST 333[3330]) (KCM)
Spring. 4 credits. Prerequisite: logic or semantics course or permission of instructor S. McConnell-Ginet. Examines the role of logical analysis in natural language, focusing on the syntactic and semantic aspects of natural language, with particular emphasis on the relationship between syntax and semantics. Topics include the representation of lexical meaning, the meaning of quantifier phrases and variables, the use of logical analysis to determine the meaning of sentences, and the role of logic in the study of natural language.

LING 324(3334) Topics in the History of English (HA)
Fall. 4 credits. Prerequisite: LING 217, 314, course in Old or Middle English, or permission of instructor. W. Harbert. Treats specific topics in the linguistic history of the English language, selected on the basis of the particular interests of the students and the instructor.

LING 330(3390) Independent Study in Linguistics
Fall or spring. 1–4 credits, variable. Prerequisite: LING 101 and permission of instructor. Staff. Independent study of linguistics topics not covered in regular curriculum for undergraduate students.

LING 340(4400) Language Typology (KCM)
Spring. 4 credits. Prerequisite: LING 101. C. Rosen. Studies a basic question of contemporary linguistics: in what ways do languages differ, and in what ways are they all alike? Efforts are made to formalize universals of syntax and to characterize the total repertory of constructions available to natural languages. Common morphological devices and their syntactic correlates are covered. Emphasis is on systems of case, agreement, and voice.

LING 401-402(4401-4402) Phonology I, II (KCM)
401, fall; 402, spring. 4 credits each semester. Prerequisites: for LING 401, LING 302 or equivalent; for LING 402, LING 401 or permission of instructor. Fall, D. Zeic; spring, M. Wagner. 401 provides a basic introduction to phonological theory. The first half of the course focuses on basic principles of phonology, phonological representations, and the nature of syllable structure and feature representations. 402 provides further refinement of the issues investigated in 401, focusing in particular on metrical theory, lexical phonology, autosegmental phonology, and prosodic morphology.

LING 403-404(4403-4404) Syntax I, II (KCM)
403, fall; 404, spring. 4 credits each semester. Prerequisites: for LING 403, LING 303; for LING 404, LING 403 or permission of instructor. Fall, J. Legate; spring, M. Diesing. 403 is an advanced introduction to syntactic theory within the principles and parameters/Minimalist frameworks. Topics include phrase structure, argument structure (unaccusative verbs, unergative verbs, double object constructions), principles of word order, and the binding theory. 404 is a continuation of 403, focusing on syntactic dependencies, including the theory of control, an examination of locality constraints on movement, covert versus overt movement, and the syntax of quantification. The purpose of the course is to develop the background needed for independent syntactic research.

LING 405(4405) Sociolinguistics (CA)
Fall. 4 credits. Prerequisite: LING 101 or permission of instructor. Next offered 2007-2008. Staff.

LING 409(4409) Structure of Italian (KCM)
Spring. 4 credits. Prerequisites: LING 101 and qualification in any Romance language. C. Rosen.

LING 411(4411) History of the Japanese Language (also ASIAN 411[4411], JAPAN 410[4410]) # @ (HA)
Fall. 4 credits. Prerequisite: reading knowledge of Japanese. J. Whitman. Overview of the history of the Japanese language followed by intensive examination of issues of interest to the participants. Students should have a reading knowledge of Japanese.

LING 412(4412) Linguistic Structure of Japanese (also ASIAN 412[4412]) (KCM)
Spring. 4 credits. Prerequisites: JAPAN 102 or permission of instructor and LING 101. Next offered 2008-2009. J. Whitman. An introduction to the linguistic study of Japanese, with an emphasis on morphology and syntax.

LING 413(4413) Applied Linguistics and Second Language Learning (KCM)
Spring. 4 credits. Prerequisite: at least one course in applied linguistics, linguistics, psychology, anthropology, communication, cognitive sciences, education, or literary analysis; or permission of instructor. Next offered 2007-2008. Staff. An introduction to the field of applied linguistics with focus on different domains of language research as they bear on second language learning.

LING 416(4416) Structure of the Arabic Language (also NES 416[4206]) (KCM)
Spring. 4 credits. M. Younes. For description, see NES 416.

LING 417(4417) History of the Russian Language (also RUSSA 401[4401]) (KCM)
Spring. 4 credits. Prerequisite: permission of instructor. W. Browne. Phonological, morphological, and syntactic developments from Old Russian to modern Russian.

LING 419(4419) Phonetics I (KCM)
Fall. 4 credits. Prerequisite: LING 301 or permission of instructor. A. Miller. Provides a basic introduction to the study of phonetics. Topics include anatomy and physiology of the speech production apparatus, transcription and production of some of the world's sounds, basic acoustics, computerized methods of speech analysis, acoustic characteristics of sounds, speech perception, speech synthesis, and stress and intonation.

LING 420(4420) Phonetics II (KCM)
Spring. 4 credits. Prerequisite: LING 419. A. Miller. Continuation of Phonetics I, providing a more detailed survey of some areas in acoustic
and articulatory phonetics. Topics include feature theory, vocal tract acoustics, quantal theory, speaker normalization, theories of speech perception, coarticulation, theories of speech production, and prosody. In addition, a number of "hands-on" projects are part of the course.

**LING 421(4421) Semantics I (KCM)**
Spring. 4 credits. Prerequisite: LING 304. D. Abusch.
Introduces methods for theorizing about meaning within generative grammar. These techniques allow the creation of grammars that pair syntactic structures with meanings. Students look at several empirical areas in detail, among them complementation (combining heads with their arguments), modification, conjunction, definite descriptions, relative clauses, traces, bound pronouns, and quantification. An introduction to logical and mathematical concepts used in linguistic semantics (e.g., set theory, functions and their types, and the lambda notation for naming linguistic meanings) is included in the course.

**LING 422(4422) Semantics II (KCM)**
Fall. 4 credits. Prerequisite: LING 421 or permission of instructor. M. Rooth.
Uses the techniques introduced in Semantics I to analyze linguistic phenomena, including quantifier scope, ellipsis, and referential pronouns. Temporal and possible worlds semantics are introduced and used in the analysis of modality, tense, and belief sentences. The phenomena of presupposition, indefinite descriptions, and anaphora are analyzed in a dynamic compositional framework that formalizes the idea that meaning sentence meaning effects a change in an information state.

**LING 423(4423) Morphology (KCM)**
Spring. 4 credits. Prerequisite: LING 101 or permission of instructor. J. Legate.
Addresses the basic issues in the study of words and their structures. Provides an introduction to different types of morphological structures with examples from a wide range of languages. Special emphasis is given to current theoretical approaches to morphological theory.

**LING 424(4424) Computational Linguistics (also COGST 424(4470), COM S 324(3420)) (MQR)**
Fall. 4 credits. Recommended: COM S 114. M. Rooth.
Introduces methods for doing a language computationally, including parsing and representation of syntactic analyses; computational morphology; probabilistic grammars; feature constraint formalisms for syntax; treebank methodology.

**LING 425(4425) Pragmatics (also PHIL 435/4350)) (KCM)**
Fall. 4 credits. Prerequisite: LING 304 or PHIL 231, or permission of instructor. D. Abusch.
Introduction to aspects of linguistic meaning that have to do with context and with the use of language. Topics include context change semantics and pragmatics, presupposition and accommodation, conversational implicature, speech acts, and the pragmatics of definite descriptions and quantifiers.

**LING 427(4427) Structure of Hungarian (also HUNGR 427(4427)) (KCM)**

**LING 428(628)/428(6628) Connectionist Psycholinguistics (also COGST 428, PSYCH 428/628(4280/6280))**
Next offered 2007-2008. For description, see PSYCH 428.

**LING 430(4430) Structure of Korean (also ASIAN/KOREA 430(4430)) (KCM)**
Spring. 4 credits. Prerequisite: KOREA 102 or linguistics course. No previous knowledge of Korean required. Next offered 2008-2009. J. Whitman.
Intensive examination of the syntax and phonology of a non-Indo-European language with the objective of testing principles of current linguistic theory.

**LING 431(4431) Structure of an African Language (KCM)**
Spring. 5 credits. Prerequisite: LING 101 or permission of instructor. Next offered 2007-2008. A. Miller.
Survey of the grammar of an African language in light of current linguistic theory.

**LING 432(4432) Middle Korean (also KRLIT 432(4432)) @ # (LA)**
Spring. 4 credits. Offered alternate years. Prerequisite: KOREA 202 or equivalent. J. Whitman.
Introduction to the premodern Korean language. Focuses on the earliest bongeul texts of the 15th century, but also introduces materials written in Korean using Chinese characters before the 15th century, including byangga. No previous background in linguistics is required, but students should have a command of written Korean of at least the third-year level.

**LING 433(4433) The Lesser-Known Romance Languages (also ROM S 433(4433)) (KCM)**
Survey of the grammar of an African language in light of current linguistic theory.

**LING 436(4436) Language Development (also COGST/PSYCH 436(4360), HD 337[3370]) (KCM)**
For description, see COGST 436.

**LING 437(4437) Celtic Linguistic Structures (KCM)**
Treats selected topics in the syntax and morphosyntax of the modern Celtic languages.

**LING 441(4441) Introduction to Germanic Linguistics (also GERST 441(4441)) (HA)**
Spring. 4 credits. Prerequisite: LING 101 or permission of instructor. Next offered 2008-2009. W. Harbert.
Survey of major issues in historical Germanic linguistics.
LING 601(6601) Topics in Phonological Theory
- Spring. 4 credits. Prerequisites: LING 401 and one higher-level phonology course. Next offered 2007–2008. Staff. Selected topics in current phonological theory.

LING 602(6602) Topics in Morphology
- Fall. 4 credits. Prerequisites: LING 401 or 403 or permission of instructor. Next offered 2007–2008. Staff. Selected topics in current morphological theory.

LING 604(6604) Research Workshop
- Fall. 2 credits. Requirement for third-year linguistics graduate students. S-U grades only. M. Wagner. Provides a forum for presentation and discussion of ongoing research, and development of professional skills. Participants must enroll in a concurrent independent study with a special committee member, or a relevant workshop.

LING 606(6606) Historical Syntax

LING 609(6609) SLA and the Asian Languages (also ASIAN 610[6610])

LING 615(6615) Topics in Semantics
- Fall. 4 credits. Prerequisite: LING 421 or permission of instructor. Next offered 2007–2008. D. Abusch. Selected topics in semantic theory, focusing on recent literature.

LING 616(6616) Topics in Syntactic Theory
- Fall. 4 credits. Prerequisite: LING 404 or permission of instructor. M. Diesing. Examination of recent developments in syntactic theory, including "minimalist" approaches to phrase structure, derivations/representations and the nature of economy conditions, and parametric differences.

LING 617–618(6617–6618) Hittite
- Fall. 4 credits. Prerequisite: LING 617, permission of instructor; for LING 618, LING 617 or permission of instructor. Next offered 2007–2008. M. Weiss. Introduction to the cuneiform writing system and the grammar of Hittite, followed by the reading of selected texts.

LING 619(6619) Rigveda
- Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2008–2009. Staff.

LING 621(6621) Avestan and Old Persian

LING 623–624(6623–6624) Old Irish I, II
- Fall, 4 credits. Prerequisite: LING 624, LING 623 or permission of instructor. M. Weiss.

LING 625(6625) Middle Welsh

Students develop a reading knowledge of Middle Welsh through translating selections from prose and poetry. No familiarity with Welsh is assumed.

LING 631(6631) Comparative Indo-European Linguistics

LING 633(6633) Language Acquisition Seminar (also COGST/HD 633[6330])
- Fall. 1–4 credits. Prerequisite: LING 436 or equivalent or permission of instructor. B. Lust. This seminar reviews and critiques current theoretical and experimental studies of first language acquisition, with a concentration on insights gained by cross-linguistic study of this area. Attention is also given to the development of research proposals.

LING 635–636(6635–6636) Indo-European Workshop

LING 637(6637) Introduction to Tocharian

LING 645(6645) Gothic
- Fall. 4 credits. Prerequisite: LING 101. Offered every three years. W. Harbert. Linguistic structure of Gothic, with extensive readings of Gothic texts.

LING 646(6646) Old High German, Old Saxon (also GERST 658[6580])
- Spring. 4 credits. Prerequisite: LING 101. Highly recommended: reading knowledge of Modern German. Offered every three years. W. Harbert. Combines a survey of the linguistic history and structure of Old High German and Old Saxon with extensive readings from the major documents in which they are recorded.

LING 648(6648) Speech Synthesis (also INFO 648[6648])
- Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor. Offered alternate years. S. Hertz. Investigates the nature of the acoustic structure of speech synthesis, using speech as a tool for exploring this structure. A particular acoustic model is proposed, developed, and motivated by considering the relationship between phonological and acoustic structure, speech timing, phonetic universals, coarticulation, and speech perception. The primary tool for investigation is the Delta System, a powerful software system for investigating phonology and phonetics through speech synthesis. The course is meant for graduate students and advanced undergraduate students in linguistics, but may also be of interest to students in psychology/psycholinguistics, computer science, and cognitive studies.

LING 649(6649) Structure of Old English
- Fall. 4 credits. Prerequisite: LING 441. Offered every three years; next offered 2007–2008. W. Harbert. Linguistic overview of Old English, with emphasis on phonology, morphology, and syntax.

LING 651(6651) Old Church Slavonic (also RUSSA 651[6651])

LING 662(6662) Old Russian Texts (also RUSSA 602[6602])

LING 671(6671) Comparative Slavic Linguistics (also RUSSA 651[6651])
- Fall. 4 credits. Prerequisites: LING 661 taken previously or simultaneously, or permission of instructor. Offered alternate years; next offered 2007–2008. W. Browne.

LING 700(7700) Seminar
- Fall or spring. Credit TBA. Seminars are offered according to faculty interest and student demand. Topics for 2006–2007 include: semantics; computational linguistics; language acquisition; and the nature of the interfaces between phonetics, phonology, and syntax.

LING 701–702(7701–7702) Directed Research
- 701, fall, 702, spring. 1–4 credits. Times TBA. Staff.

analysis, Lie groups, topology and geometry, logic, probability and statistics, mathematical physics, and applied mathematics. Related departments at Cornell have specialists in computer science, operations research, linear programming, and game theory, and courses in these topics can be integrated readily into the mathematics major.

The department offers a rich variety of undergraduate courses, and many of its beginning graduate courses are suitable for advanced undergraduates as well. Under some conditions, a student may carry out an independent reading and research project for college credit under the supervision of a faculty member.

Members of the department are available to discuss with students the appropriate course for their levels of ability and interest, and students are urged to avail themselves of this help.

Students who want to take any of the courses numbered 300 or above are invited to confer, before registering, with the instructor concerned. The level of a course is indicated by the first digit of the course number; roughly, 1, 2, indicate underclass courses; 3, 4, upperclass courses; 5, professional level; and mathematics education courses; 6, 7, graduate courses. The subject matter of courses is often indicated by the second digit: 0, general; 1, 2, analysis; 3, 4, algebra and combinatorics; 5, 6, topology and geometry; 7, probability and statistics; 8, logic, computer, other.

Midterm grades, when required, will be S or U only, except in special circumstances. In courses with numbers below 700, students will receive letter grades, with the exception of nonmathematics majors who have requested an S-U grade.

Advanced Placement
Secondary school students are strongly urged to take one of the two advanced placement exams of the College Entrance Examination Board in their senior year. Freshmen who have had some calculus but who have not taken an advanced placement exam should take the placement exam in mathematics offered at Cornell just before the beginning of classes in the fall. Anyone with any knowledge of calculus should carefully read "Advanced Placement," p. 7.

The Major
The mathematics major adapts to a number of purposes. It can emphasize the theoretical or the applied. It can be appropriate for professionals and nonprofessionals alike, and can be broad or narrow. It can also be combined easily with serious study in another subject in the physical, biological, or social sciences by means of a double major and/or concentration. For example, a double major in mathematics and computer science is facilitated by the concentration in computer science (requirement 4, option b) described below. This concentration permits a student to use certain computer science courses to satisfy the requirements of both majors. Questions concerning the major should be brought to a departmental representative.

Prerequisites
The traditional prerequisites are MATH 221–222, 223–224, or 293–294. Normally students will be admitted to the major only when they have grades of B- or better in all 200-

level mathematics courses taken. Alternative prerequisites are MATH 213 and 231, normally with grades of B+ or better.

Requirements
There are five requirements for the major.
1. COM S 100. Students are urged to take this course before the end of their sophomore year.
2. Two courses in algebra. Eligible courses are MATH 431 or 433, MATH 432 or 434, MATH 437, MATH 332 or 336. (Credit for both MATH 332 and 336 will be granted only if both were taken during or before spring 2002.)
3. Two courses in analysis. Eligible courses are MATH 311, 321, 323, 413, 414, 418, 420, 422, 424, 425, 428.
4. Five further high-level mathematical courses. Two-credit courses count as half courses. For students graduating in May 2007 or later, 500-level MATH courses will not normally count toward the major. In rare cases, exceptions are made. Students should consult their advisors. The seven alternatives (a–g) below do not exhaust the possibilities. A mathematics major interested in a concentration in a subject different from those below may develop a suitable individual program in consultation with his or her major advisor.

Concentration in Mathematics:

a. Four additional MATH courses numbered 300 or above.

i. One course dealing with mathematical models. Any course from outside mathematics with serious mathematical content and dealing with scientific matters. Serious mathematical content includes, but is not limited to, extensive use of calculus or linear algebra. Any course from another department that would satisfy one of the other concentrations may be used. In addition, COM S 211, MATH 335/COM S 480, MATH 382, MATH 384/PHIL 330, MATH 481/PHIL 431, MATH 482/PHIL 432, MATH 483/PHIL 436, MATH/COM S 486, PHYS 116, 208, 213, or 217 may be used, but no other 100-level physics course, nor PHYS 207 or 209, may be used. Some courses in biology, chemistry, and other fields may be used.

b. Concentration in Computer Science:

Five additional courses from (iii) and (iv) below, of which at least one is from (iii) and three are from (iv).

i. Mathematics courses numbered 300 or above.

iv. Computer science courses with substantial mathematical content. Eligible courses are: COM S 321, 322, 381, 400, 411, 421, 425, 427, 428, at most one of 405 and 467, 468, 474, 478, 480, 481, 482, 483, and 486. Students graduating in January 2007 or earlier may use any COM S course numbered 300 or above to fulfill this requirement.

c. Concentration in Economics:

Five additional courses from (v), (vi), and (vii) below, as follows: one course from (v), three courses from (vi), and a fifth course from any of (v), (vi), or (vii). However, MATH 472 and ECON 519 cannot both be used to satisfy these requirements.

v. Mathematics courses numbered 300 or above.

vi. Economics courses with significant mathematical content. Eligible courses are ECON 319, 320, 325, 327, 368 (formerly 467), 416, 419, 450 (also ECON 450), 476, 477, 609, 610, 613, 614, 619, 620, 676, 677, 717, 748, 749, 756. For students graduating in May 2007 or later, only two of the economics courses (520, 325, 327, 748, 749) are allowed.

Concentration in Mathematical Biology:

Five additional courses from (viii) and (ix) below, with three courses from (viii) and two courses from (ix).

Biology courses that have mathematical content or provide background necessary for work at the interface between biology and mathematics. Examples include BIOBM-COM S 321, BIOEE-MATH 302, BIOEE 480, BIOG 481, 484, 487, BIOND 330, 422, BTRY 382, 408, 409, 482. (BTRY 408 and 409 cannot be taken for credit with MATH 471 and 472.)

ix. Mathematics courses numbered above 300. Particularly appropriate are MATH 420 and 471.

Concentration in Mathematical Physics:

Five additional courses from (x) and (xi) below, of which at least one is from (x) and three are from (xi).

Concentration in Mathematical Statistics:

Concentration in Mathematical Logic:

Concentration in Mathematical Economics:

Concentration in Operations Research:

Five additional courses from (x) and (xi) below, of which at least one is from (x) and three are from (xi).

x. Mathematics courses in analysis, geometry, algebra and combinatorics, probability and statistics, and mathematical logic. Eligible courses are MATH 511, 321, 323, 401, 413, 414, 420, 418 or 422, 424, 425, 426, 431 or 433, 432 or 434, 437, 441, 442, 450, 451, 452, 453, 454, 455, 457, 471, 472, 481, 482, 485, 486, 487.

Concentration in Operations Research:

Five additional courses from (xii) and (xiii) below, of which at least one is from (xii) and three are from (xiii).
Courses 106-171

A senior thesis can form a valuable part of an optional oral presentation, can have a lasting value as the finished written product and can contribute to honors. Both the process of doing independent research and mathematics exposition, as well as having high honors, should be pursued. Honors students interested in high honors should consult their major advisors and the chair of the department's Mathematics Major Committee during the second semester of their junior year.

Teacher Education in Mathematics

For information on the various possibilities for students considering teaching mathematics in schools, go to www.math.cornell.edu/Undergraduate/Teaching.

Studying Mathematics Outside the Major

The College of Arts and Sciences and the Department of Mathematics offer no minor or concentration in mathematics for students who are not math majors. However, some other scientific departments in the college offer, within their own majors, concentrations in mathematics and mathematics-related fields. A student interested in such a concentration should consult the director of undergraduate studies of his or her major department.

The College of Engineering offers a minor in applied mathematics that is open to any undergraduate in that college. The minor is sponsored jointly by the Department of Mathematics and the Department of Theoretical and Applied Mechanics, and is administered by the latter department. Engineering students interested in this minor should contact Professor Richard Rand of the Department of Theoretical and Applied Mechanics (255-7145; rand@cornell.edu).

The Department of Mathematics welcomes into its upper-level courses students from all colleges, schools, and departments at Cornell. In particular, undergraduates who wish to pursue serious study of mathematics, whether within or to complement their own major fields, are encouraged to consult with the department. The department's director of undergraduate studies and other faculty can provide assistance in selecting appropriate areas of study and individual courses.

Distribution Requirement

The mathematics courses that can be used to satisfy the Mathematics and Quantitative Reasoning part of the Arts College distribution requirements are indicated by the symbol "MQR".

Basic Sequences

Precalculus

Description

Courses

1. Algebra and trigonometry to prepare students for calculus

MATH 109* or
EDUC 005*

2. Algebra, analytic geometry, elements of calculus

EDUC 115*,
MATH 100*

* MATH 100, MATH 109, EDUC 005, and EDUC 115 do not carry credit for graduation in the Arts College.

Students who want a semester of calculus after EDUC 115 or MATH 100 may take MATH 106 or 111. Noncalculus alternatives are MATH 105 or 171.

Calculus

Description

Mathematics Courses

1. Standard three-semester sequence for students who do not expect to take advanced courses in mathematics

111–112–213

2. Calculus for engineers

(also taken by some physical science majors)

191–192–293–294

3. Several sequences are possible for prospective mathematics majors and others who expect to take advanced courses in mathematics. 111–112–221–222, 111–122–223–224 or some mix of these courses. Students may also take the engineering sequence 191–192–293–294. Students are encouraged to consult with their advisors.

MATH 191 may be substituted for 112. The two-year sequences include some linear algebra. Students who take the three-semester sequence 111–112–213 may learn some linear algebra by taking MATH 231.

Special-Purpose Sequences

Description

Mathematics Courses

1. Finite mathematics and calculus for life and social science majors

105–106

2. Other possible finite mathematics and calculus sequence

105–111

3. Calculus and statistics sequences

106–171

Students who want to take two semesters of calculus are advised to take the first two semesters of one of the three calculus sequences. Students with excellent performance in MATH 106 may follow that course with MATH 112 or 122. The courses in each of the calculus and statistics sequences may be taken in either order, since no calculus background is required for MATH 171. Each of the sequences listed here satisfies the mathematics requirement for most medical schools.

Switching between calculus sequences is often difficult, especially at the 200 level. Students should not attempt such a switch without consulting the director of undergraduate studies.

Double Majors

The Department of Computer Science, Economics, and Physics all permit double majors with the mathematics major, allowing the courses listed under the corresponding concentrations above to be counted for both majors. Students should consult the appropriate departments for any further conditions.

Honors Program

The Department of Mathematics awards honors (cum laude) and high honors (magna cum laude and summa cum laude) to graduating mathematics majors who have demonstrated outstanding ability in the major program. The awards are determined by the Mathematics Major Committee in the latter part of the semester before graduation. The committee will primarily be looking for excellent performance in mathematics courses, particularly in challenging ones at the 400 level or beyond. Participation in the honors seminar (MATH 401) for one semester, or independent study at a high performance level can also contribute to honors. Students interested in honors should consult their major advisors concerning suitable courses.

Outstanding performance in graduate classes or an excellent senior thesis can also contribute to high honors. Students interested in high honors should consult their major advisors and the chair of the department's Mathematics Major Committee during the second semester of their junior year.
Courses with Overlapping Content
Because the department offers many courses with overlapping content, students must choose their courses carefully to ensure that they will receive credit for each course they take. Listed below are groups of courses that have similar content. Students will receive credit for only one of the courses in each group.

105, 111
112, 122, 191
192, 213, 222, 224
221, 223, 231, 294
332, 335, 336
431 and 433
432 and 434

*Credit for both MATH 332 and MATH 336 will be granted only if both were taken during or before spring 2002.

Note: Courses with overlapping content are not necessarily equivalent courses. Students are encouraged to consult a mathematics faculty member when choosing between them.

Fees
In some courses there may be a small fee for photocopying materials to be handed out to students.

Summer Courses
A list of mathematics courses usually offered every summer can be found in the School of Continuing Education and Summer Sessions section of this catalog. Students interested in taking summer courses in mathematics should consult the Department of Mathematics website (www.math.cornell.edu). A tentative summer listing may be available as early as October.

Undergraduate Course Offerings
Please visit www.math.cornell.edu for further information and up-to-the-minute corrections.

Mathematics Education: 408, 451
History of Mathematics: 403
General and Liberal Arts Courses: 103, 134, 135, 171, 201, 304, 401, 408
Analysis: 311, 321, 413, 414, 418
Algebra and Number Theory: 332, 335, 336, 431, 432, 433, 434, 437
Combinatorics: 441, 442, 445
Geometry and Topology: 356, 450, 451, 452, 453, 454
Probability and Statistics: 171, 201, 304, 401, 408
Mathematical Logic: 281, 384, 481, 482, 483, 486

MATH 005(0005) Academic Support for MATH 105
Fall. 1 transcript credit only; cannot be used toward graduation.
Reviews material presented in MATH 105 lectures, provides problem-solving techniques and tips as well as prelim review. Provides further instruction for students who need reinforcement. Not a substitute for MATH 105 lectures or recitations.

MATH 006(0006) Academic Support for MATH 106
Spring. 1 transcript credit only; cannot be used toward graduation.
Reviews material presented in MATH 106 lectures, provides problem-solving techniques and tips as well as prelim review. Provides further instruction for students who need reinforcement. Not a substitute for MATH 106 lectures or recitations.

MATH 011(0001) Academic Support for MATH 111
Fall, spring. 1 transcript credit only; cannot be used toward graduation.
Reviews material presented in MATH 111 lectures, provides problem-solving techniques and tips as well as prelim review. Provides further instruction for students who need reinforcement. Not a substitute for MATH 111 lectures or recitations.

MATH 012(0012) Academic Support for MATH 112
Fall, spring. 1 transcript credit only; cannot be used toward graduation.
Reviews material presented in MATH 112 lectures, provides problem-solving techniques and tips as well as prelim review. Provides further instruction for students who need reinforcement. Not a substitute for MATH 112 lectures or recitations.

MATH 100(1000) Calculus Preparation
Fall, spring. 2 transcript credits only; cannot be used toward graduation.
Introduces a wide variety of topics of algebra and trigonometry that have applications in various disciplines. Emphasis is on the development of linear, polynomial, rational, trigonometric, exponential, and logarithmic functions. Students will have a better understanding of the behavior of these functions in their application to calculus because of the strong emphasis on graphing. Application of these mathematical ideas is addressed in problem-solving activities.

MATH 103(1103) Mathematical Explorations (MQR)
Fall, spring, summer. 3 credits.
For students who wish to experience how mathematical ideas naturally evolve. The homework consists of the students actively addressing in problem-solving activities.

MATH 105(1105) Finite Mathematics for the Life and Social Sciences (MQR)
Fall. 3 credits. Prerequisite: three years of high school mathematics, including trigonometry and logarithms.
Introduction to linear algebra, probability, and Markov chains that develops the parts of the theory most relevant for applications. Specific topics include equations of lines, the method of least squares, solutions of linear systems, matrices, basic concepts of probability, permutations, combinations, binomial distribution, mean and variance, and the normal approximation to the binomial distribution. Examples from biology and the social sciences are used.

MATH 106(1106) Calculus for the Life and Social Sciences (MQR)
Spring. 3 credits. Prerequisite: readiness for calculus, such as can be obtained from three years of high school mathematics (including trigonometry and logarithms) or from MATH 100, MATH 109, or EDUC 115. For students planning to take MATH 112, MATH 111 is recommended rather than 106.
Introduction to differential and integral calculus, partial derivatives, elementary differential equations. Examples from biology and the social sciences are used.

MATH 109(1109) Precalculus Mathematics
Summer. 3 transcript credits only; cannot be used toward graduation.
Designed to prepare students for MATH 111. Reviews algebra, trigonometry, logarithms, and exponentials.

MATH 111(1110) Calculus I (MQR)
Fall, spring, summer. 4 credits.
Prerequisite: MATH 109 or three years of high school mathematics, including trigonometry and logarithms.
Topics include functions and graphs, limits and continuity, differentiation and integration of algebraic, trigonometric, inverse trig, logarithmic, and exponential functions; applications of differentiation, including graphing, max-min problems, tangent approximation, implicit differentiation, and applications to the sciences; the mean value theorem; and antiderivatives, definite and indefinite integrals, the fundamental theorem of calculus, substitution in integration, the area under a curve. Graphing calculators are used, and their pitfalls are discussed, as applicable to the above topics. MATH 111 can serve as a one-semester introduction to calculus or as part of a two-semester sequence in which it is followed by MATH 112 or 122.

MATH 112(1120) Calculus II (MQR)
Fall, spring, summer. 4 credits.
Prerequisite: MATH 111 with grade of C or better or excellent performance in MATH 106. Those who do well in MATH 111 and expect to major in mathematics or strongly mathematics-related field should take 112 instead of 111.
Focuses on integration: applications, including volumes and arc length; techniques of integration, approximate integration with error estimates, improper integrals, differential equations (separation of variables, initial conditions, systems, some applications). Also covers infinite sequences and series: definition and tests for convergence, power series, Taylor series with remainder, and parametric equations.

MATH 122(1220) Honors Calculus II (MQR)
Fall. 4 credits.
Prerequisite: one semester of calculus with high performance or permission of department. Students planning to continue with MATH 213 are advised to take 112 instead of this course. Takes a more theoretical approach to calculus than MATH 112. Topics include differentiation and integration of elementary transcendental functions, techniques of integration, applications, polar coordinates, infinite series, and complex numbers, as well as an introduction to proving theorems.

*See the list of courses with overlapping content at the end of the introduction.
MATHEMATICS 593

MATH 134(1340) Mathematics and Politics
Fall, spring, 4 credits.
We apply mathematical reasoning to some problems arising in the social sciences. We discuss game theory and its applications to political and historical conflicts. Power indices are introduced and used to analyze some political institutions. The problem of finding a fair election procedure to choose among three or more alternatives is analyzed.

MATH 135(1350) The Art of Secret Writing (MQR)
Fall, spring, summer. 3 credits.
Prerequisite: three years high school mathematics.
Experiences modern methods of message encryption, decryption, and cryptanalysis. Mathematical ideas are developed to describe these methods (modular arithmetic, probability, matrix arithmetic, number theory), and some of the fascinating history of the methods and people involved are presented.

MATH 171(1710) Statistical Theory and Application in the Real World (MQR)
Fall, spring, summer. 4 credits.
No previous familiarity with computers presumed. No credit if taken after ECON 319, 320, or 321.
Introductory statistics course discussing techniques for analyzing data occurring in the real world and the mathematical and philosophical justifications for these techniques.
Topics include randomization and sample distributions, central limit theorem, statistical theories of point estimation, confidence intervals, testing hypotheses, the linear model, and the least squares estimator. The course concludes with a discussion of tests and estimation for regression and analysis of variance (if time permits). The computer is used to demonstrate some aspects of the theory, such as sampling distributions and the Central Limit Theorem. In the lab portion of the course, students learn and use computer-based methods for implementing the statistical methodology presented in the lectures.

MATH 191(1910) Calculus for Engineers (MQR)
Fall, spring, summer. 4 credits.
Prerequisite: three years high school mathematics including trigonometry and logarithms and at least one course in differential and integral calculus.
Essentially a second course in calculus. Topics include techniques of integration, finding areas and volumes by integration, exponential growth, partial fractions, infinite sequences and series, and power series.

MATH 192(1920) Multivariable Calculus for Engineers (MQR)*
Fall, spring, summer. 4 credits.
Prerequisite: MATH 191.
Introduction to multivariable calculus. Topics include partial derivatives, double and triple integrals, line integrals, vector fields, Green’s theorem, Stokes’ theorem, and the divergence theorem.

MATH 201(2010) Invitation to Higher Math: Algebra and Geometry (MQR)
Spring. 3 credits.
*See the list of courses with overlapping content at the end of the introduction.

MATH 213(2130) Calculus III (MQR)*
Fall, spring. 4 credits. Prerequisite: MATH 112, 122, or 191.
Designed for students who wish to master the basic techniques of multivariable calculus, but whose major will not require a substantial amount of mathematics. Topics include vectors and vector-valued functions; multivariable and vector calculus including multiple and line integrals; first- and second-order differential equations with applications; systems of differential equations; and elementary partial differential equations. The course may emphasize different topics in the syllabus in different semesters.

MATH 221(2210) Linear Algebra (MQR)*
Fall, spring. 4 credits. Prerequisite: two semesters of calculus with high performance or permission of department. Recommended for students who plan to major in mathematics or a related field. For a more applied version of this course, see MATH 251.
Topics include vector algebra, linear transformations, matrices, determinants, orthogonality, eigenvalues, and eigenvectors. Applications are made to linear differential equations.

MATH 222(2220) Multivariable Calculus (MQR)*
Fall, spring. 4 credits. Prerequisite: MATH 221. Recommended for students who plan to major in mathematics or a related field.
Topics include vector algebra, linear transformations, matrices, determinants, orthogonality, eigenvalues, and eigenvectors. Applications are made to linear differential equations.

MATH 223(2230) Theoretical Linear Algebra and Calculus (MQR)*
Fall. 4 credits. Prerequisite: two semesters of calculus with grade of A- or better, or permission of instructor.
MATH 223-224 provides an integrated treatment of linear algebra and multivariable calculus designed for students who have been highly successful in their previous calculus courses. The material is presented at a higher theoretical level than in 221-222. Topics in 223 include vectors, matrices, and linear transformations; differential calculus of functions of several variables; inverse and implicit functions; quadratic forms; extrema, and manifolds; multiple and iterated integrals.

MATH 224(2240) Theoretical Linear Algebra and Calculus (MQR)*
Spring. 4 credits. Prerequisite: MATH 223.
Topics include vector fields; line integrals; differential forms and exterior derivative; work, flux, and density forms; integration of forms over parametrized domains; and Green’s, Stokes’, and divergence theorems.

MATH 231(2310) Linear Algebra with Applications (MQR)*
Fall, spring. 3 credits. Prerequisite: MATH 111 or equivalent. Students who plan to major in mathematics should take MATH 221 or 294.
Introduction to linear algebra for students who wish to focus on the practical applications of the subject. A wide range of applications are discussed and computer software may be used. The main topics are systems of linear equations, matrices, determinants, vector spaces, orthogonality, and eigenvalues.
Typical applications are population models, input/output models, least squares, and difference equations.

MATH 275(2750) Living in a Random World (MQR)
Spring. 3 credits. Prerequisite: one semester of calculus. Some familiarity with integration and differentiation is useful, but the equivalent of a one-semester course in calculus is more than enough. Concentrates on applications of probability in the physical, biological, and social sciences, and to understanding the world around us (e.g., games, lotteries, option pricing, and opinion polls).

MATH 281(2810) Deductive Logic (also PHIL 331)(3310) (MQR)
Fall. 4 credits. H. Hodges.
For description, see PHIL 331.

MATH 293(2930) Differential Equations for Engineers (MQR)
Fall, spring, summer. 4 credits.
Prerequisite: MATH 192. Taking MATH 293 and 294 simultaneously is not recommended.
Introduction to ordinary and partial differential equations. Topics include: first-order equations (separable, linear, homogeneous, exact); mathematical modeling (e.g., population growth, terminal velocity); qualitative methods (slope fields, phase plots, equilibria, and stability); numerical methods; second-order equations (method of undetermined coefficients, application to oscillations and resonance, boundary-value problems and eigenvalues); Fourier series; linear partial differential equations (heat flow, waves, the Laplace equation); and linear systems of ordinary differential equations.

MATH 294(2940) Linear Algebra for Engineers (MQR)
Fall, spring, summer. 4 credits.
Prerequisite: MATH 192. Taking MATH 293 and 294 simultaneously is not recommended.
Linear algebra and its applications. Topics include matrices, determinants, vector spaces, eigenvalues and eigenvectors, orthogonality and inner product spaces; applications include brief introductions to difference equations, Markov chains, and systems of linear ordinary differential equations. May include computer use in solving problems.

*See the list of courses with overlapping content at the end of the introduction.
MATH 304(3040) Prove It! (MQR)
Spring. 4 credits. Prerequisite: MATH 221, 223, 294, or permission of instructor.
In mathematics, the methodology of proof provides a central tool for confirming the validity of mathematical assertions, functioning much as the experimental method does in the physical sciences. In this course, students learn various methods of mathematical proof, starting with basic techniques in propositional and predicate calculus and in set theory and combinatorics, and then moving to applications and illustrations of these via topics in one or more of the three main pillars of mathematics: algebra, analysis, and geometry. Since cogent communication of mathematical ideas is important in the presentation of proofs, the course emphasizes clear, concise exposition. This course is useful for all students who wish to improve their skills in mathematical proof and exposition, or who intend to study more advanced topics in mathematics.

MATH 311(3110) Introduction to Analysis (MQR)
Fall, spring. 4 credits. Prerequisites: MATH 221-222, 223-224, or 192 and 294.
Provides a transition from calculus to real analysis. Topical coverage includes rigorous treatment of fundamental concepts in calculus including limits and convergence of sequences and series, compact sets, continuity, uniform continuity and differentiability of functions. Emphasis is placed upon understanding and constructing mathematical proofs.

MATH 321(3210) Manifolds and Differential Forms (MQR)
Fall. 4 credits. Prerequisites: multivariable calculus and linear algebra (e.g., MATH 221-222, 223-224, or 192 and 294).
A manifold is a type of subset of Euclidean space that has a well-defined tangent space at every point. Such a set is amenable to the methods of multivariable calculus. After a review of some relevant calculus, this course investigates manifolds and the structures that they are endowed with, such as tangent vectors, vector fields, and differential forms. The notion of a differential form encompasses such ideas as surface and volume forms, the work exerted by a force, the flow of a fluid, and the curvature of a surface, space, or hyperspace. The course re-examines the integral theorems of vector calculus (Green, Gauss, and Stokes) in the light of differential forms and apply them to problems in partial differential equations, topology, fluid mechanics, and electromagnetism.

MATH 323(3230) Introduction to Differential Equations (MQR)
Fall. 4 credits. Prerequisites: multivariable calculus and linear algebra (e.g., MATH 221-222, 223-224, or 192 and 294), or permission of instructor.
Intended for students who want a brief one-semester introduction to the theory and techniques of both ordinary and partial differential equations. Topics for ordinary differential equations may include initial-value and two-point boundary value problems, the existence and uniqueness theorems, continuous dependence on data, stability of fixed points, numerical methods, special functions and their applications. Topics for partial differential equations may include the Poisson, heat and wave equations, boundary and initial-boundary value problems, maximum principles, continuous dependence on data, separation of variables, Fourier series, Green’s functions, numerical methods, transform methods.

MATH 332(3320) Algebra and Number Theory (MQR)*
Fall. 4 credits. Prerequisite: MATH 221, 223, 231 or 294.
Covers various topics from number theory and modern algebra. Usually includes most of the following: primes and factorization, Diophantine equations, congruences, quadratic reciprocity, continued fractions, rings and fields, finite groups, and an introduction to the arithmetic of the Gaussian integers and quadratic fields. Motivation and examples for the concepts of abstract algebra are derived primarily from number theory and geometry.

MATH 335(3350) Introduction to Cryptology (also COM S 480(4870)) (MQR)
Fall, spring. 3 credits. Prerequisites: MATH 221-222, 223-224, or 192 and 294, and COM S 100 or equivalent.
Introduction to the algorithmic and mathematical concepts of cryptanalysis. Topics include security vs. feasibility and different types of cryptographic attack, elementary probability, number theory, cryptographic hash functions, and secret and public key cryptography.

MATH 336(3360) Applicable Algebra (MQR)
Spring, summer. 4 credits. Prerequisites: MATH 221, 223, 231, or 294.
Introduction to the concepts and methods of abstract algebra and number theory that are of interest in applications. Covers the basic theory of groups, rings and fields and their applications to such areas as public-key cryptography, error-correcting codes, parallel computing, and experimental designs. Applications include the RSA cryptosystem and use of finite fields to construct error-correcting codes and Latin squares. Topics include elementary number theory, Euclidean algorithm, prime factorization, congruences, theorems of Fermat and Euler, elementary group theory, Chinese remainder theorem, factorization in the ring of polynomials, and classification of finite fields.

MATH 356(3560) Groups and Geometry (MQR)
Fall, spring. 4 credits. Prerequisite: MATH 221, 223, 291 or 294.
A geometric introduction to the algebraic theory of groups, through the study of symmetries of planar patterns and 3-dimensional regular polyhedra. Besides studying these algebraic and geometric objects themselves, the course also provides an introduction to abstract mathematical thinking and mathematical proofs, serving as a bridge to the more advanced 400-level courses. Abstract concepts covered include: axioms for groups, groups and quotients, groups; isomorphisms and homomorphisms; conjugacy; group actions, orbits, and stabilizers. These are all illustrated concretely through the visual medium of geometry.

*MATH 362(3620) Dynamic Models in Biology (also BIOEE 362(3620)) (MQR)
Spring. 4 credits. Prerequisites: two semesters of introductory biology (BIO G 101-102, 105-106, 107-108, 109-110, or equivalent) and completion of math requirements for biological sciences major or equivalent. Next offered 2007-2008.
For description, see BIOEE 362.

MATH 401(4010) Honors Seminar: Topics in Modern Mathematics (MQR)
Spring. 4 credits. Prerequisite: two mathematics courses numbered 300 or higher or permission of instructor.
Participatory seminar aimed primarily at introducing senior and junior mathematics majors to some of the challenging problems and areas of modern mathematics. Helps students develop research and expository skills in mathematics, which is important for careers in any field that makes significant use of the mathematical sciences (i.e. pure or applied mathematics, physical or biological sciences, business and industry, medicine). Content varies from year to year.

MATH 403(4030) History of Mathematics # (MQR)
Spring. 4 credits. Prerequisite: two mathematics courses numbered above 300, or permission of instructor.
Survey of the development of mathematics from antiquity to the present, with an emphasis on the achievements, problems, and mathematical viewpoints of each historical period and the evolution of such basic concepts as number, geometry, construction, and proof. Readings from original sources in translation. Students are required to give oral and written reports.

MATH 408(4080) Mathematics in Perspective (MQR)
Spring, 4 credits. Prerequisite: permission of instructor. Next offered 2007-2008.
Re-examines very basic mathematics from an advanced perspective, emphasizing the connections between branches and ties of current mathematical interest. Emphasis on communication and mathematics.

MATH 413(4130) Honors Introduction to Analysis I (MQR)
Fall, spring. 4 credits. Prerequisite: high level of performance in MATH 221-222, 223-224, or 192 and 294 and familiarity with proofs. Students who do not intend to take MATH 414 are encouraged to take MATH 413 in spring.
Introduction to the rigorous theory underlying calculus, covering the real number system and functions of one variable. Based entirely on proofs. The student is expected to know how to read and to some extent, construct proofs before taking this course. Topics typically include construction of the real number system, properties of the real number system, continuous functions, differential and integral calculus of functions of one variable, sequences and series of functions.

MATH 414(4140) Honors Introduction to Analysis II (MQR)
Spring. 4 credits. Prerequisite: MATH 413.
Proof-based introduction to further topics in analysis. Topics may include the Lebesgue measure and integration, functions of several variables, differential calculus, implicit function theorem, infinite dimensional normed
and metric spaces, Fourier series, ordinary differential equations.

**MATH 418(4180) Introduction to the Theory of Functions of One Complex Variable (MQR)**
Spring. 4 credits. Prerequisite: MATH 223–224, 311, or 413 or permission of instructor.

Theoretical and rigorous introduction to complex variable theory. Topics include complex numbers, differential and integral calculus for functions of a complex variable including Cauchy’s theorem and the calculus of residues, elements of conformal mapping. Students interested in the applications of complex analysis should consider MATH 422.

**MATH 420(4200) Differential Equations and Dynamical Systems (MQR)**
Fall, spring. 4 credits. Prerequisite: high level of performance in MATH 221–222, 223–224, 192 and 294, or permission of instructor.

Covers ordinary differential equations in one and higher dimensions: qualitative, analytic, and numerical methods. Emphasis is on differential equations as models and the implications of the theory for the behavior of the system under study and includes an introduction to bifurcations.

**MATH 422(4220) Applied Complex Analysis (MQR)**
Spring. 4 credits. Prerequisite: MATH 221–222, 223–224, 192 and 294, or permission of instructor.

Covers complex variables, Fourier transforms, Laplace transforms and applications to partial differential equations. Additional topics may include an introduction to generalized functions.

**MATH 424(4240) Wavelets and Fourier Series (MQR)**
Spring. 4 credits. Prerequisite: MATH 221–222, 223–224, 192 and 294, or permission of instructor.

Both Fourier series and wavelets provide methods to represent or approximate general functions directly or modeled by simple building blocks. Such representations have important consequences, both for pure mathematics and for applications. Fourier series use *natural* sinusoidal building blocks and may be used to help solve differential equations. Wavelets use *artificial* building blocks that have the advantage of localization in space. A full understanding of both topics requires a background involving Lebesgue integration theory and functional analysis. This course presents as much as possible on both topics without such formidable prerequisites. The emphasis is on clear statements of results and key ideas of proofs, working out examples, and applications. Related topics that may be included are Fourier transforms, Heisenberg uncertainty principle, Shannon sampling theorem, and Poisson summation formula.

**MATH 425(4250) Numerical Analysis and Differential Equations (MQR)**
Fall. 4 credits. Prerequisite: MATH 221–222, 223–224, or 192 and 294, one course numbered 300 or higher in mathematics and COM S 100, or permission of instructor. Next offered 2007–2008.

Introduction to the fundamentals of numerical analysis: error analysis, interpolation, direct and iterative methods for systems of equations, numerical integration. Applications to solving differential equations.

### **MATH 428(4280) Introduction to Partial Differential Equations (MQR)**

Spring. 4 credits. Prerequisite: MATH 221–222, 223–224, or 192 and 294, or permission of instructor.

Topics are selected from first-order quasilinear equations, classification of second-order equations, with emphasis on maximum principles, existence, uniqueness, stability, Fourier series methods, approximation methods.

**MATH 431(4310) Linear Algebra (MQR)**
Fall. 4 credits. Prerequisite: MATH 221, 223, 231, or 294. Undergraduates who plan to attend graduate school in mathematics should take MATH 435–434.

Introduction to linear algebra, including the study of vector spaces, linear transformations, matrices, and systems of linear equations. Additional topics are quadratic forms and inner product spaces, canonical forms for various classes of matrices and linear transformations.

**MATH 432(4320) Introduction to Algebra (MQR)**
Spring. 4 credits. Prerequisite: MATH 332, 336, 431 or 433, or permission of instructor. Undergraduates who plan to attend graduate school in mathematics should take MATH 435–434.

Introduction to various topics in abstract algebra, including groups, rings, fields, factorization of polynomials and integers, congruences, and the structure of finitely generated abelian groups. Optional topics are modules over Euclidean domains and Sylow theorems.

**MATH 433(4330) Honors Linear Algebra (MQR)**
Fall. 4 credits. Prerequisite: high level of performance in MATH 221, 223, 231, or 294.

Honors version of a course in advanced linear algebra, which treats the subject from an abstract and axiomatic viewpoint. Topics include vector spaces, linear transformations, polynomials, determinants, tensor and wedge products, canonical forms, inner product spaces, and bilinear forms. Emphasis is on understanding the theory of linear algebra; homework and exams include at least as many proofs as computational problems. For a less theoretical course that covers approximately the same subject matter, see MATH 431.

**MATH 434(4340) Honors Introduction to Algebra (MQR)**
Spring. 4 credits. Prerequisite: MATH 332, 336, 431, or 433, or permission of instructor.

Honors version of a course in abstract algebra, which treats the subject from an abstract and axiomatic viewpoint, including universal mapping properties. Topics include groups, rings, groups acting on sets, Sylow theorems, rings, factorization: Euclidean rings, principal ideal domains and unique factorization domains, the structure of finitely generated modules over a principal ideal domain, fields, and Galois theory. The course emphasizes understanding the theory with proofs in both homework and exams. An optional computational component using the computer

*See the list of courses with overlapping content at the end of the introduction.*

**MATH 437(4370) Computational Algebra**
Fall. 4 credits. Prerequisite: linear algebra (MATH 294, or MATH 221, or MATH 431).

Introduction to Gröbner bases theory, which is the foundation of many algorithms in computational algebra. In this course, students learn how to compute a Gröbner basis for polynomials in many variables. Covers the following applications: solving systems of polynomial equations in many variables, solving diophantine equations in many variables, 3-colorable graph theory. Such applications arise, for example, in computer science, engineering, economics, and physics.

**MATH 441(4410) Introduction to Combinatorics I (MQR)**
Fall. 4 credits. Prerequisite: MATH 221, 223, 231, or 294.

Combinatorics is the study of discrete structures that arise in a variety of areas, particularly in other areas of mathematics, computer science, and many areas of application. Central concerns are often to count objects having a particular property (e.g., trees) or to prove that certain structures exist (e.g., matchings of all vertices in a graph). The first semester of this sequence covers basic questions in graph theory, including extremal graph theory (how large must a graph be before one is guaranteed to have a certain subgraph) and Ramsey theory (which shows that large objects are forced to have structure). Variations on matching theory are discussed, including theorems of Dilworth, Hall, König, and Birkhoff, and an introduction to network flow theory. Methods of enumeration (inclusion/exclusion, Möbius inversion, and generating functions) are introduced and applied to the problems of counting permutations, partitions, and triangulations.

**MATH 442(4420) Introduction to Combinatorics II (MQR)**

Continues 441, although formally independent. Latin squares, combinatorial designs, classical finite geometries and combinatorial geometries (matroids). Partially ordered sets, Möbius inversion, Polya counting theory.

**MATH 450(4500) Matrix Groups**
Fall. 4 credits. Prerequisite: MATH 221–222, 223–224, or 192 and 294.

An introduction to a topic that is central to mathematics and important in physics too, although usually taught only at the graduate level as in MATH 650, Lie Groups. The objects of study are certain classes of matrices, such as orthogonal, unitary, or symplectic matrices. These classes have both algebraic structure (groups) and geometric/topological structure (manifolds). Thus the course will be a mixture of algebra and geometry/topology, with a little analysis as well. Concrete examples will be emphasized, as is appropriate for an undergraduate introduction. Background not included in the official prerequisites will be developed as needed.

**MATH 451(4510) Euclidean and Spherical Geometry (MQR)**
Fall. 4 credits. Prerequisite: MATH 221, 223, 231, or 294, or permission of instructor.

Language GAP is available. For a less theoretical course that covers similar subject matter, see MATH 432.
Covers topics from Euclidean and spherical (non-Euclidean) geometry. Nonlecture seminar-style course organized around student participation.

[MATH 452(4520) Classical Geometries (MQR)]
Spring. 4 credits. Prerequisite: MATH 221, 223, 231, or 294, or permission of instructor. Topology may be described briefly as the qualitative geometry—the classical geometries that developed as Euclidean geometry was better understood.

[MATH 453(4530) Introduction to Topology (MQR)]
Fall. 4 credits. Prerequisite: MATH 221, 223, 231, or 294, plus at least one mathematics course numbered 300 or above, or permission of instructor. Topology may be described briefly as the qualitative geometry. This course begins with basic point-set topology, including connectedness, compactness, and metric spaces. Later topics may include the classification of surfaces (such as the Klein bottle and Möbius band), elementary knot theory, or the fundamental group and covering spaces.

[MATH 454(4540) Introduction to Differential Geometry (MQR)]
Spring. 4 credits. Prerequisite: MATH 221–222, 223–224, or 293–294, plus at least one mathematics course numbered 300 or above. MATH 453 is not a prerequisite. Differential geometry involves using calculus to study geometric concepts such as curvature and geodesics. This introductory course focuses on the differential geometry of curves and surfaces. It may also touch upon the higher-dimensional generalizations, Riemannian manifolds, which underlie the study of general relativity.

[MATH 455(4550) Applicable Geometry (MQR)]
Spring. 4 credits. Prerequisite: good introduction to linear algebra (e.g., MATH 221, 223, 231, or 294) or permission of instructor. Does not assume students know geometry. The meaning, of all words in the following description. Introduction to the theory of n-dimensional convex polytopes and polyhedra and some of its applications, with an in-depth treatment of the case of 3-dimensions. Discusses both combinatorial properties (e.g., face counts) as well as metric properties (e.g., rigidity). Covers theorems of Euler, Cauchy, and Steinitz, Voronoi diagrams and triangulations, convex hulls, cyclic polytopes, shellability and the upper-bound theorem. Relates these ideas to applications in tiling, linear inequalities and linear programming, structural rigidity, computational geometry, hyperplane arrangements and zonotopes.

[MATH 471(4710) Basic Probability (MQR)]
Fall, spring. 4 credits. Prerequisite: one year of calculus. Recommended: some knowledge of multivariate calculus. Introduction to probability theory, which prepares the student to take MATH 472. The course begins with basic combinatorial probability, mean and variance, independence, conditional probability, and Bayes formula. Density and distribution functions and their properties are introduced. The law of large numbers and the central limit theorem are stated and their implications for statistics are discussed.

[MATH 472(4720) Statistics (MQR)]
Spring. 4 credits. Prerequisite: MATH 471 and knowledge of linear algebra (e.g., MATH 221). Recommended: some knowledge of multivariable calculus. Statistics have proved to be an important research tool in nearly all of the physical, biological, and social sciences. This course serves as an introduction to statistics for students who already have some background in calculus, linear algebra, and probability theory. Topics include parameter estimation, hypothesis testing, linear regression. The course emphasizes both the mathematical theory of statistics and techniques for data analysis that are useful in solving scientific problems.

[MATH 481(4810) Mathematical Logic (also PHIL 431[4310]) (MQR)]
Spring. 4 credits. Prerequisites: MATH 222 or 225 and preferably some additional course involving proofs in mathematics, computer science, or philosophy. First course in mathematical logic providing precise definitions of the language of mathematics and the notion of proof (propositional and predicate logic). The completeness theorem says that we have all the rules of proof we could ever have. The Godel incompleteness theorem says that they are not enough to decide all statements even about arithmetic. The compactness theorem exploits the finiteness of proofs to show that theories have unintended (nonstandard) models. Possible additional topics: the mathematical definition of an algorithm and the existence of noncomputable functions; the basics of set theory to cardinality and the uncountability of the real numbers.

[MATH 486(4860) Applied Logic (also COM S 486[4860]) (MQR)]
Spring. 4 credits. Prerequisites: MATH 221–222, 223–224, or 192 and 294; COM S 280 or equivalent (e.g., MATH 332, 336, 432, 434, or 481); and additional course in mathematics or theoretical computer science. Covers propositional and predicate logic; compactness completeness by tableaux, natural deduction, and resolution. Other possible topics include equational logic; Herbrand Universes and unification; rewrite rules and equational logic. Knuth-Bendix method and the congruence-closure algorithm and lambda-calculus reduction strategies; topics in Prolog, Lisp, ML, or Nuprl; and applications to expert systems and program verification.

[MATH 490(4900) Supervised Reading and Research]
Fall, spring. 1-6 credits. Supervised reading and research by arrangement with individual professors. Not open to individual students. Offered alternate years. Next scheduled courses are listed at www.math.cornell.edu/Courses/courses.html. This web site includes course descriptions that are often more detailed than those included here; as well as a means for interested students to participate in the process of selecting meeting times.

[MATH 611(6110) Real Analysis]
Fall. 4 credits. MATH 611–612 are the core analysis courses in the mathematics graduate program. 611 covers measure and integration and functional analysis.

[MATH 612(6120) Complex Analysis]
Spring. 4 credits. MATH 611–612 are the core analysis courses in the mathematics graduate program. 612 covers complex analysis. Fourier analysis, and distribution theory.

[MATH 613-614(6130-6140) Topics in Analysis]
Spring. 4 credits. MATH 611–612 are the core analysis courses in the mathematics graduate program. 614 covers complex analysis. Fourier analysis, and distribution theory.

[MATH 615(6150) Mathematical Methods in Physics]
Fall. 4 credits. Prerequisite: for undergraduates, permission of instructor. Intended for graduate students in physics or related fields. Recommended: a strong advanced calculus course and at least two years of general physics. Assumes knowledge of elements of finite dimensional vector spaces, theory, complex variables, separation of variables in partial differential equations, and Fourier series. Designed to give a working knowledge of the principal mathematical methods used in advanced physics. Covers Hilbert space, generalized functions, Fourier transform, Sturm-Liouville problem in ODE, Green's functions, and asymptotic expansions.
MATH 617(6170) Dynamical Systems  
Fall. 4 credits. Generally offered every two years.
Topics include existence and uniqueness theorems for ODEs; Poincaré-Bendixon theorem and global properties of two-dimensional flows; limit sets, nonwandering sets, chain recurrence; pseudo-orbits and structural stability; linearization at equilibrium points; stable manifold theorem and the Hartman-Grobman theorem; and generic properties: transversality theorem and the Kupka-Smale theorem. Examples include expanding maps and Anosov diffeomorphisms; hyperbolicity; the horseshoe and the Birkhoff-Smale theorem on transversal homoclinic orbits; rotation numbers; Hermann’s theorem; and characterization of structurally stable systems.

MATH 618(6180) Smooth Ergodic Theory  
Spring. 4 credits.
Topics include invariant measures; entropy; Hausdorff dimension and related concepts; hyperbolic invariant sets; stable manifolds, Markus partitions and symbolic dynamics; equilibrium measures of hyperbolic attractors; ergodic theorems; Pesin theory: stable manifolds of nonhyperbolic systems; Lie flows, exponents; and relations between entropy, exponents, and dimensions.

[MATH 619-620(6190-6200) Partial Differential Equations]  
Fall. 620, Spring. 4 credits each semester. Next offered 2007–2008.
Covers basic theory of partial differential equations.

MATH 621(6210) Measure Theory and Lebesgue Integration  
Fall. 4 credits.
Covers measure theory, integration, and Lp spaces.

MATH 622(6220) Applied Functional Analysis  
Spring. 4 credits. Not offered every year.
Covers basic theory of Hilbert and Banach spaces and operations on them. Applications.

MATH 628(6280) Complex Dynamical Systems  
Fall. 4 credits. Prerequisite: MATH 418.
This course covers various topics in the dynamics of analytic mappings in one complex variable, such as Julia and Fatou sets, the Mandelbrot set and selected additional topics.

MATH 631(6310) Algebra  
Fall. 4 credits. Assesses familiarity with material of standard undergraduate course in abstract algebra.
MATH 631-632 are the core algebra courses in the mathematics graduate program. 631 covers group theory, especially finite groups; rings and modules; ideal theory in commutative rings; arithmetic and factorization in principal ideal domains; and unique factorization domains; introduction to field theory, tensor products and multilinear algebra. (Optional topic: introduction to affine algebraic geometry.)

MATH 632(6320) Algebra  
Spring. 4 credits. Prerequisite: MATH 631.
MATH 631-632 are the core algebra courses in the mathematics graduate program. 632 covers Galois theory, representation theory of finite groups, introduction to homological algebra. Familiarity with the material of a standard undergraduate course in abstract algebra will be assumed.

MATH 633(6330) Noncommutative Algebra  
Fall. 4 credits.
Covers Wedderburn structure theorem, Brauer group, and group cohomology.

[MATH 634(6340) Commutative Algebra]  
Covers Dedekind domains, primary decomposition, Hilbert basis theorem, and local rings.

MATH 649(6490) Lie Algebras  
Fall. 4 credits.
Topics include nilpotent, solvable and reductive Lie algebras, enveloping algebras; root systems; Coxeter groups; and classification of simple algebras.

[MATH 650(6500) Lie Groups]  
Topics include topological groups, Lie groups, relation between Lie groups and Lie algebras; exponential maps, homogeneous manifolds; and invariant differential operators.

MATH 651(6510) Algebraic Topology  
Spring. 4 credits.
One of the core topology courses in the mathematics graduate program. An introductory study of certain geometric processes for associating algebraic objects such as groups to topological spaces. The most important of these are homology groups and homotopy groups, especially the first homotopy group or fundamental group, with the related notions of covering spaces and group actions. The development of homology theory focuses on verification of the Eilenberg-Steenrod axioms and on effective methods of calculation such as simplicial and cellular homology and Mayer-Vietoris sequences. If time permits, the cohomology ring of a space may be introduced.

MATH 652(6520) Differentiable Manifolds I  
Fall. 4 credits. Prerequisites: advanced calculus, linear algebra (MATH 431), point-set topology (MATH 453).
One of the core topology courses in the mathematics graduate program. Introduction to geometry and topology from a differentiable viewpoint, suitable for beginning graduate students. The objects of study are manifolds and differentiable maps. The collection of all tangent vectors to a manifold forms the tangent bundle, and a section of the tangent bundle is a vector field. Alternatively, vector fields can be viewed as first-order differential operators. Students study flows of vector fields and prove the Frobenius integrability theorem. In the presence of a Riemannian metric, the notions of parallel transport, curvature, and geodesics are development. Students examine the tensor calculus and the exterior differential calculus and prove Stokes’ theorem. If time permits, de Rham cohomology, Morse theory, or other optional topics are introduced.

[MATH 653(6530) Differentiable Manifolds II]  
Advanced topics from differential geometry and differential topology selected by instructor. Examples of eligible topics include transversality, cobordism, Morse theory, classification of vector bundles and principal bundles, characteristic classes, microlocal analysis, conformal geometry, geometric analysis and partial differential equations, and Atiyah-Singer index theorem.

MATH 661(6610) Geometric Topology  
Fall. 4 credits.
Introduction to some of the more geometric aspects of topology and its connections with group theory. Possible topics include surface theory, 3-manifolds, knot theory, geometric and combinatorial group theory, hyperbolic groups, and hyperbolic manifolds.

[MATH 662(6620) Riemannian Geometry]  
Topics include linear connections, Riemannian metrics and parallel translation; covariant differentiation and curvature tensors; the exponential map, the Gauss Lemma and completeness of the metric, isometries and space forms; Jacobi fields and the theorem of Cartan-Hadamard; the first and second variation formulas; the index form of Morse and the theorem of Bonnet-Myers; the Rauch, Hessian, and Laplacian comparison theorems; the Morse index theorem; the conjugate and cut loci; and submanifolds and the Second Fundamental form.

MATH 671(6710) Probability Theory I  
Fall. 4 credits. Prerequisite: knowledge of Lebesgue integration theory, at least on real line. (Students can learn this material by taking parts of MATH 413–414 or 621.)
Conditioned expectation, martingales, Brownian motion. Other topics such as random walks and ergodic theory, depending on time and interest of the students and the instructor.

MATH 672(6720) Probability Theory II  
Spring. 4 credits. Prerequisite: MATH 671.
Content will vary from year to year. Course may be taken more than once for credit. Previously, topics have been chosen from stochastic calculus, diffusion processes, martingale problems, weak convergence, and Markov processes in continuous time.

MATH 674(6740) Introduction to Mathematical Statistics  
Spring. 4 credits. Prerequisites: MATH 671 (measure theoretic probability) and OR&E 670, or permission of instructor.
Topics include an introduction to the theory of point estimation, hypothesis testing and confidence intervals, consistency, efficiency, and the method of maximum likelihood. Basic concepts of decision theory are discussed; the key role of the sufficiency principle is highlighted and applications are given for finding Bayesian, minimax, and unbiased optimal decisions. Modern computer-intensive methods like the bootstrap receive some attention, as do simulation methods involving Markov chains. The parallel development of some concepts of machine learning is exemplified by classification algorithms. An optional section may include nonparametric curve estimation and elements of large sample asymptotics.

MATH 675(6750) Statistical Theories Applicable to Genomics  
Fall. 4 credits.
Focuses on statistical concepts useful in genomics (e.g., microarray data analysis) that involve a large number of populations. Topics include multiple testing and closed testing (the corollary of multiple testing), family-wise error rate, false discovery rate (FDR)
of Benjamini and Hochberg, and Storey’s papers relating to pFDR. Also discussed are
the shrinkage technique or the Empirical
Bayes approach, equivalent to the BLUP in
a random effect model, which is a powerful
technique, taking advantage of a large number
of populations. A related technique, which
allows use of the same data to select and
make inferences for the selected populations
(or genes), is discussed. If time permits, there
may be some lectures about permutation tests,
bootstrapping, and QTL identification.

MATH 681(6810) Logic
Spring. 4 credits.
Covers basic topics in mathematical logic
including propositional and predicate calculus;
formal number theory and recursive functions;
completeness and incompleteness theorems;
compactness and Skolem-Loewenheim
theorems. Other topics as time permits.

MATH 703(7030) Topics in the History of
Mathematics
Spring. 4 credits. Prerequisites:
undergraduate algebra and analysis. Next
Topics in the history of modern mathematics
at the level of Evolution of Mathematics in the
19th Century by Klein, ABBE D’Histoire Des
Mathématiques 1700–1900 by Dieudonné,
and Source Book of Classical Analysis
by Birkhoff!

MATH 711-(712)(7110)-(7120) Seminar in
Analysis
711, fall; 712, spring. 4 credits. 712 next

MATH 713(7130) Functional Analysis
Fall. 4 credits.
Covers topological vector spaces, Banach and
Hilbert spaces, and Banach algebras. Additional
topics selected by instructor.

MATH 715(7150) Fourier Analysis
Spring. 4 credits.

MATH 717(7170) Applied Dynamical
Systems (also T & A M 776(7760))
Spring. 4 credits. Recommended: T & A M
675, MATH 617 or equivalent. Next
Topics include review of planar (single-
degree-of-freedom) systems; local and global
analysis; structural stability and bifurcations
in planar systems; center manifolds and normal
forms; the averaging theorem and perturbation
methods; Melnikov’s method; discrete
dynamical systems, maps and difference
equations, homoclinic and heteroclinic
motions, the Smale Horseshoe and other
complex invariant sets; global bifurcations,
strange attractors, and chaos in free and
forced, n-dimensional, oscillatory equations; and applications to problems in solid and fluid mechanics.

MATH 722(7220) Topics in Complex
Analysis
Selections of advanced topics from complex
analysis, such as Riemann surfaces, complex
dynamics, and conformal and quasiconformal
mapping. Course content varies.

MATH 726(7260) Seminar in Partial
Differential Equations

MATH 723(7230) Seminar in
Algebra
731, fall; 732, spring. 4 credits each

MATH 735(7350) Topics in Algebra
Fall, spring. 4 credits.
Selection of advanced topics from algebra,
algebraic number theory, and algebraic
gometry. Course content varies.

MATH 737(7370) Algebraic Number
Theory
Fall. 4 credits.

MATH 739(7390) Topics in Algebra
Spring. 4 credits.
Selection of advanced topics from algebra,
algebraic number theory, and algebraic
gometry. Content varies.

MATH 740(7400) Homological Algebra
Fall. 4 credits.

MATH 751-752(7510-7520) Berstein
Seminar in Topology
751, fall; 752, spring 4 credits each
semester.

MATH 753(7530) Algebraic Topology II
Fall. 4 credits.
Continuation of 751. The standard topics most
years are cohomology, cup products, Poincaré
duality, and homotopy groups. Other possible
topics include fiber bundles, fibrations, vector
bundles, and characteristic classes. May
sometimes be taught from a differential forms
viewpoint.

MATH 755-756(7550-7560) Topology and
Geometric Group Theory Seminar
755, fall; 756, spring. 4 credits each
semester.

MATH 757-758(7570-7580) Topics in
Topology
757, fall; 758, spring. 4 credits each
Selection of advanced topics from modern
algebraic, differential, and geometric topology.
Content varies.

MATH 761-762(7610-7620) Seminar in
Geometry
761, fall; 762, spring. 4 credits each
semester. Either 761 or 762 generally
offered every year.

MATH 767(7670) Algebraic Geometry
Spring. 4 credits.

MATH 771-772(7710-7720) Seminar in
Probability and Statistics
771, fall; 772, spring. 4 credits each
semester.

MATH 774(7740) Statistical Learning
Theory
Fall. 4 credits. Prerequisites: basic
mathematical statistics (MATH 674 or
equivalent) and measure theoretical
probability (MATH 671). Next offered
The course aims to present the developing
interface between machine learning theory and
statistics. Topics are classification and pattern
discovery, support vector machines, neural
networks, tree methods, and boosting.

MATH 777-778(7770-7780) Stochastic
Processes
777, fall; 778, spring. 4 credits each
semester.

MATH 781-782(7810-7820) Seminar in
Logic
781, fall; 782, spring. 4 credits each
semester.

MATH 783(7830) Model Theory

Introduction model theory at the level of the
books by Hodges or Chang and Keisler!

MATH 784(7840) Recursion Theory
Spring. 4 credits.
Covers theory of effectively computable
functions; classification of recursively
enumerable sets; degrees of recursive
unsolvability; applications to logic; hierarchies;
recursive functions of ordinals and higher type
objects; generalized recursion theory.

MATH 787(7870) Set Theory
Fall. 4 credits.
First course in axiomatic set theory at the level of
the book by Kunen.

MATH 788(7880) Topics in Applied Logic
Fall. 4 credits.
Covers applications of the results and
methods of mathematical logic to other
areas of mathematics and science. Topics
vary each year; some recent examples are:
automatic theorem proving, formal semantics
of programming and specification languages,
linear logic, constructivism (intuitionism),
nonstandard analysis, and automata theory.
This year the course will cover Kolmogorov
complexity and algorithmic information
theory. We use the theory of algorithms to
define the complexity of an individual finite
bit string. This is then applied to infinite bit
strings via their initial segments, and we get a
deduction of algorithmically random real number.
Further topics include prefix complexity, a priori
probability and Shannon entropy.

MATH 790(7900) Supervised Reading and
Research
Fall, spring. 1–6 credits.

MEDIEVAL STUDIES
P. E. Hyams, director; F. M. Abl, R. Brann,
C. Britain, E. W. Browne, O. Fink,
A. S. Galloway, A. B. Groos, K. Haines-Eitzen,

A. M. Colby-Hall, J. J. John, C. V. Kaske,
P. I. Kuniholm, W. Wetherbee.

Undergraduate Study in Medieval
Studies
Course work in medieval studies enhances the
student’s enjoyment and understanding of the
artistic and material relics of the Middle Ages:
Gregorian chant, illuminated manuscripts and
stained glass windows, Gothic cathedrals,
Crusader castles, and picturesque towns
crammed within ancient walls. Students
discover the serious realities involved in, and
shaped by, Arthurian tales of brave knights
and fair ladies, dungeons, dragons, and other
marvels. Students can analyze and appreciate
the horrors of the Black Death, triumphs in
courtly love and pitched battle, swords and
scimitars, caliphs and popes, fear of demons
and djins, and the reassuring presence of
angels. Students can study all this and more
very well in English, but see below for how

to acquire the medieval languages that so
enhance the experience.

The period saw many of the foundational
choices that have, for good and ill, made the
world what it is today. Many of our current

...
challenges in the fields of law, human rights, attitudes toward power, authority, gender relations, and sexual mores derive from the ways in which these and other questions were formulated a millennium ago. It actually makes good sense to think out your positions on today's world through study of the less complicated but intriguing medieval West, with whose successes and failures we must still contend. Serious investigation of exotic materials marks this concentration out as a unique addition to Cornell's training. The Medieval Studies Program houses a lively undergraduate association, Quodlibet, that arranges frequent lectures on medieval topics and an annual celebratory Reading of prose and poetry in many medieval languages.

The "middle" in "Middle Ages" comes from its position between antiquity and the "modern" period, in a schema created for European and Western conditions. Our concentration, however, is more properly inclusive and treats a time span from roughly the fifth century into the 16th and ranges from Western Europe and the Mediterranean to China and Japan. To discover the vibrant state of medieval studies today, students should look at the extraordinary range of scholarship, but accessible, web sites that have sprung up all over the Internet. (They can start from Cornucopia noted below.) Cornell possesses a wealth of resources to introduce students to every corner of the field. Many students feel bound to choose their majors with an eye to future careers and earning potential. While this concentration provides strong interdisciplinary breadth to many majors (e.g., classics, all modern languages, history, music, philosophy), and is excellent preparation for graduate study in a medieval field, science majors do well too. The program provides encouragement, guidance, and an avenue for intelligent appreciation of an important part of all our pasts.

Undergraduates who wish to undertake an independent major or concentration in medieval studies should consult the director of the program, 259 Goldwin Smith Hall, 255-8545, medievalst@cornell.edu. The undergraduate concentration in medieval studies shall consist of five medieval courses (at the 200 level or above) in at least two different disciplines, of which up to two may also count toward the major.

MEDIEVAL LANGUAGES

Medieval texts (like all others) become most lively and informative when read in the original, and Cornell fortunately offers many courses for students interested in acquiring the relevant skills: Medieval Latin, Old English, Middle English, Gothic, Old Saxon, Old High German, Middle High German, Old Norse-Icelandic, Old Irish, Middle Welsh, Old Occitan (Provençal), Old French, Medieval Spanish, Medieval Italian, Old Russian, Old Church Slavonic, Classical Arabic, Medieval Hebrew, Classical Chinese, and Classical Japanese.

Some medieval languages require study of a modern language (e.g., French for Old Occitan and Old French) or a classical language (Classical Latin for Medieval Latin) as background. Students interested in a concentration in Medieval Studies should begin the study of a medieval language as early as possible, so that they may be able to study texts in the original before they graduate. Students are advised to consult the sponsoring departments for information about the prerequisites for various medieval languages.

GRADUATE STUDY

The Medieval Studies Program offers both an interdisciplinary and a literary comparative Ph.D. in medieval studies. Disciplinary fields of concentration offered within the Field of medieval studies are medieval archaeology, medieval history, medieval history of art, medieval literature, medieval music, medieval philology and linguistics, and medieval philosophy. Information about the graduate program in medieval studies is available from the field coordinator (medievalst@cornell.edu), and at Cornucopia, the program's web site (www.arst.cornell.edu/medieval).

MEDIEVAL STUDIES COURSES: GRADUATE AND UNDERGRADUATE

Courses in various aspects of medieval studies are offered every year in several cooperating departments, including Art History, Asian Studies, Classics, Comparative Literature, English, German Studies, History, Linguistics, Music, Near Eastern Studies, Philosophy, Romance Studies, Russian Literature, and the Society for the Humanities. For descriptions, please see the home department. The current year's offerings are:

ART H 309(3200) Introduction to Dendrochronology (also ARKEO 309[3090], CLASS 330(3750)) Spring, 4 credits. S. Manning.

ASIAN 241(2241) China's Literary Heritage: An Introduction to Cornucopia Fall, 2 credits. D. X. Warner.

CHLIT 213(2213) Classical Chinese Literature Fall, 3 credits. R. McNeil.

CHLIT 214(2214) Introduction to Classical Chinese Fall, 3 credits. D. X. Warner.

CHLIT 307(3307) Readings in Classical Chinese Literature Fall, 4 credits. B. Rusk.

CHLIT 420(4420) Tang Poetry: Themes and Contexts Fall, 4 credits. D. X. Warner.

CLASS 412(4202) Seneca's Letters Spring, 4 credits. C. Brittain.

CLASS 632(7582) Topics in Ancient History: Religion and Authority in Late Antique North Africa (also HIST 630[6300]) Fall, 4 credits. E. Rebillard.

CLASS 680(7272) The Intellectual World of Rome in the Fourth and Fifth Centuries C.E. (also MEDIEVAL) Spring, 4 credits. E. Rebillard.

COM L 356(3560) Renaissance Literature (also ENGL 320[3200]) Spring, 4 credits. W. J. Kennedy.

COM L 450/650(4500/6500) Renaissance Poetry (also ITALL 450/6500) Spring, 4 credits. W. J. Kennedy.

ENGL 311/611(3110/6110) Old English Fall, 4 credits. T. Hill.

ENGL 312/612(3120/6120) Beowulf Spring, 4 credits. S. Zacher.

ENGL 319(3190) Chaucer Spring, 4 credits. M. Raskolnikov.

ENGL 321(3210) Spenser and Malory Spring, 4 credits. C. Kaske.

ENGL 414(4140) Bodies in the Middle Ages: Incarnation and Performance Spring, 4 credits. M. Raskolnikov.

ENGL 606(6060) The Alliterative Tradition Spring, 4 credits. A. Galloway.

ENGL 607(6070) Medieval Psychology: Dream Visions and the Question of the Medieval Unconscious Fall, 4 credits. M. Raskolnikov.

ENGL 608(6080) Wisdom and Law Fall, 4 credits. T. Hill.

ENGL 710(7100) Advanced Topics in Old English Fall, 4 credits. T. Hill.

FRLIT 354(3540) Sad Songs: Medieval Melancholia Spring, 4 credits. C. Howie.

FRLIT 449/649(4490/6490) Mystics and Mystique (also FGSS 449/649[4490/6490]) Fall, 4 credits. C. Howie.

GERST 405-406(4050-4061) Introduction to Middle High German Literature 405, fall; 406, spring, 4 credits each semester. A. Groos.

GERST 410/610(4100/6100) Senior Seminar: Early Modern City Culture Fall, 4 credits. A. Groos.

HIST 227(2271) Sophomore Seminar: Family Life in Renaissance Italy Spring, 4 credits. J. Najemy.

HIST 277(2771) Getting Medieval I: The Early Middle Ages Fall, 4 credits. O. Falk.

HIST 278(2772) Getting Medieval II: The Later Middle Ages Spring, 4 credits. O. Falk.

HIST 285(2850) From Medievalism to Modernity (also JWST 253(2850)) Fall, 4 credits. V. Caron.

HIST 350(3500) The Italian Renaissance (also ITALL 221[2210]) Spring, 4 credits. J. Najemy.

HIST 351(3510) Machiavellii (also ITALL 351[3510]) Fall, 4 credits. J. Najemy.

HIST 368(3680) Marriage and Sexuality in Medieval Europe (also FGSS 368[3680], RELST 368[3680]) Fall, 4 credits. P. Hyams.
Carolingian Augustine, Cassiodorus, and the Rule of St. Western monasticism from the foundations will focus on the intellectual culture of much more. We will begin with Donatus, documents, letter exchange, preaching, and foundational aspects that encompass grammar, exegesis, monastic tradition, students should come to the course with a firm grasp of Latin grammar, advanced topics in syntax will be reviewed as necessary, and we will treat linguistic developments in post-classical Latin and matters of style and versification as they arise.

MEDVL 521/621 [4202/6202] Topics in Medieval Latin Literature (also LATIN 423/623[4223/7223])
Spring. 4 credits. C. Ruff

In Spring 2007, Topics in Medieval Latin Literature will explore the Latin Troy Tradition. Texts and authors will include Ovid's Heroides; Statius's Thebaid, the Ilias Latina: Baudri of Bourgueil; Joseph of Exeter; Guido delle Colonne; and others. We will consider the medieval commentary traditions on ancient and medieval authors as well as the literary and political uses to which the Troy legend was put in the later Middle Ages. The spring course will begin with somewhat simpler texts and give students a chance to build their skills as the course progresses, but will move fairly rapidly towards extended reading from more difficult authors. Substantial attention will be devoted to increasing students' fluency in reading Latin quantitative verse. While the primary focus of the course will be on the Latin tradition, students will have the opportunity to compare vernacular Troy traditions will be welcome and encouraged to present seminar papers and pursue research projects related to those traditions.

MEDVL 612(6102) Latin Paleography (also LATIN 622[7222])
Fall. 4 credits. C. Ruff
Latin paleography will be devoted in approximately equal measure to the dating, localization, and reading of scripts, and to codicological methods in the study of medieval manuscripts. The primary emphasis will be on Latin bookhands from late antiquity to the invention of printing, but students with interests in earlier or later periods or the vernacular Troy traditions will be welcome and encouraged to present seminar papers and pursue research projects related to those traditions.

EDVL 802 Directed Study—Group
Fall and spring. Up to 4 credits. Staff.

NES 214[2212] Qur'an and Commentary (also RELST 214[2212])
Spring. 3 credits. D. Powers.

NES 251[2651] Holy War, Crusade, and Jihad in Judaism, Christianity, and Islam (also HIST 269[2691], COM L 231[2310], JSTW 251[2651], RELST 251[2651])
Fall. 3 credits. R. Brann.

NES 255[2655] Introduction to Islamic Civilization (also HIST 253[2530], RELST 255[2655])
Spring. 3 credits. D. Powers.

NES 445[4545] Gender, Sexuality & the Body in Late Antiquity (also FGSS 445[4550], RELST 445[4550])
Fall. 4 credits. R. Haines-Eitzen.

NES 457[4567] Seminar in Islamic History: The Formation of Islamic Law (also HIST 453[4530], RELST 457[4567])
Fall. 4 credits. D. Powers.

NES 630[6230] Judeo-Arabic Literature (also JSTW 630[6230])
Fall. 4 credits. R. Brann.

PHIL 415[4150] Medieval Philosophy
Spring. 4 credits. S. MacDonald.

SANSK 251-252[2251-2252] Intermediate Sanskrit (also CLASS 221-222[2351-2352], LING 221-222[2351-2352])
Fall and spring. 2 credits each term. Staff.

SPANL 217[2170] Readings in Medieval/Early Modern Spanish
Fall. 4 credits. M. A. Garcés.

SPANL 234[2340] Faith, Love and Adventure in Medieval Spain
Spring. 4 credits. S. Pineda.

MODERN EUROPEAN STUDIES CONCENTRATION
Sydney Van Morgan, coordinator
Students from any college may choose an undergraduate concentration in modern European studies to complement any major. The purpose of the concentration is to provide a coherent structure for students with an interest in interdisciplinary study in the field of European studies. The concentration has three tracks: European politics, economics, and society; modern European history; and European culture. The requirements for the concentration are:

1. Competence in at least one modern European language, Romance, Germanic, or Slavic (i.e., completion of a 300-level course or equivalent with a grade of at least B-, or demonstration of an advanced level of competence in an oral proficiency interview test where available).

2. Completion of two out of three interdisciplinary core courses.
MUSIC

Office: 255–4097
Web site: www.arts.cornell.edu/music/

Musical Performance and Concerts

Musical performance is an integral part of Cornell’s cultural life and an essential part of its undergraduate academic programs in music. The department encourages music making through its offerings in individual instruction and through musical organizations and ensembles that are directed and trained by members of the faculty. Students from all colleges and departments of the university join with music majors in all of these ensembles:

Vocal ensembles
- Chamber Singers
- Chorale
- Chorus
- Glee Club
- Sage Chapel Choir

World Music Choir

World Music Choir

Instrumental ensembles
- Chamber Music Ensembles
- Chamber Orchestra
- Symphony Orchestra
- Jazz Ensembles
- Jazz Combos
- Chamber Winds
- Wind Ensemble
- Wind Symphony
- Gameian
- Middle Eastern Music Ensemble
- World Drum and Dance Ensemble
- Steel Band

Information about requirements, rehearsal hours, and conditions for academic credit can be found in the following listings for the Department of Music. Announcements of auditions are posted during registration each fall semester and, where appropriate, each spring semester as well.

The university is also home to many student-run musical organizations not affiliated with the Department of Music, including the Big Red Marching Band and Big Red Pep Band, the Cornell Savoyards, and several a cappella groups. Information is available directly from the Department of Music. Announcements of concerts and ensembles are expected to have chosen an advisor from among the department faculty before acceptance into the major; admission to the major is decided by the faculty as a whole. Students majoring in music then design their course of study with their advisor.

Music majors must complete the Core Curriculum plus at least two electives. The Core Curriculum serves as the basis for focus in specific areas, such as composition, performance, jazz studies, vernacular music, Western art music, or Asian music. Students may, however, choose electives that reflect a more broadly based study. Those intending to pursue graduate study or professional work in music are advised to take further courses in addition to the two required electives.

For a complete list of relevant courses and seminars, and any further information, contact Sydney Van Morgan, coordinator of the Modern European Studies Concentration, at the Institute for European Studies, 120 Usis Hall, 255-7592, sydney.morgan@cornell.edu, www.einaudi.cornell.edu/Europe.
are encouraged to formulate programs that allow them to demonstrate their musical and scholarly abilities, culminating in an honors thesis, composition, or recital, to be presented not later than April 1 of the senior year. A comprehensive examination administered by the candidate's committee is held not later than April 20. The level of honors conferred is based primarily on the candidate's performance in the honors program, and secondarily on the candidate's overall record in departmental courses and activities.

Computing in the Arts Undergraduate Concentration

A concentration in Computing in the Arts with an emphasis on music is available both to music majors and to students majoring in other subjects. For more information, contact the department office, 101 Lincoln Hall (255-4097).

Distribution Requirement

College of Arts and Sciences students may apply either one or two music department courses toward the distribution requirement in Literature and the Arts (LA) or Cultural Analysis (CA), as noted. Neither first-year seminars nor advanced placement credit count toward this requirement.

If one music course is counted for distribution, it must carry at least 3 credits, and it may not be in musical performance (MUSIC 321, 322, or 323) or in organizations and ensembles (MUSIC 331 through 348 and 421 through 448). Any two of the 2-credit courses MUSIC 361, 362, 363 count as one course for this purpose.

If two music courses are counted for distribution in LA, they must total at least 6 credits, and at least one of the courses must be academic (as described in the preceding paragraph), not performance-oriented. The second "course," however, may comprise either up to 4 credits earned in musical performance (MUSIC 321, 322, or 323) or up to 4 credits earned in organizations and ensembles (MUSIC 331 through 348 and 421 through 448), but not both.

Facilities

Music Library. The Sidney Cox Library of Music and Dance in Lincoln Hall has an excellent collection containing approximately 140,000 periodicals, books, scores, and parts; 60,000 sound and video recordings; and a microfilm collection of early printed and manuscript sources. Its depth and breadth serve the needs of a wide variety of users on the campus and its computer lab (designed specifically for music use), listening, and video viewing facilities are open to all members of the Cornell community. Highlights of the reference books include early opera libretti and scores, 18th-century keyboard and chamber music, 17th- and 18th-century books on music, and an archive of American popular song from 1890 to 1950. In addition, the Carl A. Kroch Library, in the Division of Rare and Manuscript Collections, a collection of musical manuscripts and early printed books on music.

Concert Halls. The Department of Music sponsors more than 100 concerts annually. Cornell's principal concert halls are Bailey Hall Auditorium (about 1,400, currently under renovation), Sage Chapel (about 800), and Barnes Hall Auditorium (about 280).

Rehearsal Spaces and Practice Rooms.

Departmental ensembles rehearse primarily in Lincoln Hall, Barnes Hall, and Sage Chapel. Twenty-six studios in Lincoln Hall are available for individual practice by pianists, vocalists, and instrumentalists who are members of the Cornell community. Of these, eight have grand pianos, six have upright pianos, and two have percussion instruments. To guarantee practice times, a practice room must be reserved. Practice-room fees for a room with a grand piano are $80 per semester for up to 12 hours weekly. A $20 cash deposit must be made for a key to the grand piano practice rooms, which is refunded upon return of the key. Fees for a room with either an upright piano or percussion instruments are $60 per semester for up to 12 hours weekly, and fees for a room without a piano are $25 per semester for up to 12 hours weekly. The fee for use of the pipe organs is $60 per semester for up to 12 hours weekly. All fees are nonrefundable and are not prorated.

Instruments. Six concert grand pianos are available for performances in the various concert halls, plus the following historical keyboard instruments: a modern copy of an 18th-century fortepiano by Johann Andreas Stein; a fortepiano by Robert McNulty, a Broadwood grand piano from 1827, an 18th-century fortepiano replica, an 18th-century fortepiano replica, and a two-manual mechanical-action instrument (1792), both in Anabel Taylor Chapel; a three-manual symphonic organ (1943) in Sage Chapel; and an 18th-century German-style chamber organ (2003) in Barnes Hall. In addition, the Music Department owns a limited number of string, wind, and percussion instruments that may be rented by members of the department's ensembles.

Electroacoustic Music Center. The Center comprises five studios each outfitted with state-of-the-art hardware and software for music recording, creation, and experimentation. Macintosh, Windows, and Linux operating systems are represented. A variety of MIDI and OSC (Open Sound Control) devices are available for live and interactive performance interests. Available software includes commercial, open source, and custom-designed in-house applications. Max/MSP, PD(PureData), Steinberg Cubase, Ardour, Reason, Csound, Peak, Audacity, and Ableton Live are represented alongside dozens of modular utilities. Video editing and DVD creation are available using Final Cut Pro and Cinelerra. The primary studio hosts a multichannel hardware/software environment (up to 12 channels) for ambisonic mixing, 5.1 surround mixing and mastering, and "vbap" localization techniques. In addition, the Center operates its own server with space for data backup, website hosting, and remote login.

Digital Music Program Workstations. There are four Power Macintosh workstations available for qualified students majoring in a project-credit study of digital performance. SoundDiver, Peak, Reason, and other software packages. The MIDI hardware includes a Protesis 2000, Korg OSK-W, Access Virus b, and an Alesis QS81 keyboard controller. The other two workstations are more advanced. In addition to the software above, they use Final Cut Pro and Pro Tools. The MIDI hardware includes an E-Mu Platinum Sampler, a Novation SuperNova II, and a Kurzweil K2600 (with sampling) keyboard controller. Also included are several plug-in packages.

Introductory Courses

MUSIC 100(1100) Elements of Musical Notation
Fall or spring, weeks 2-5-1 credit
Corequisite: any 3-credit music course and permission of instructor. Staff. This four-week course, given at the beginning of each semester, fulfills the requirement of basic pitch, rhythm, and score-reading skills needed for some introductory courses and 200-level courses with prerequisites.

MUSIC 101(1311) Popular Music in America: A Historical Survey [also AM ST 105(1311)] # (LA)

MUSIC 102(1101) Fundamentals of Music (LA)
Fall. 3 credits. No previous training in music required. M. Hatch.

An introduction to the theory of music from around the world: the structures of melody and rhythm (pulse, meter, scales, modes, texture, timbre, harmony, form) and the influences of audiences, music technologies (including instruments), reasons, and contexts for music making on instrumental and vocal music from classical, folk, traditional, and popular music of Asia, Africa, Europe, and the Americas. Extensive listening and video examples.

MUSIC 103(1301) Introduction to World Music I: Africa and the Americas (also LSP 100(1301), LAT A 103(1030) # (CA)
Fall. 3 credits. No previous training in music required. S. Pond.

An exploration of folk, popular, and traditional musical genres of the Western Hemisphere, particularly the African diaspora. Examines both the elements of music and the features of society that influence music. Listening assignments are major components of the course.

MUSIC 104(1302) Introduction to World Music II: Asia # (CA)

An exploration of folk, popular, and traditional musical genres from South, Southeast, and East Asia.

MUSIC 105(1105) Introduction to Music Theory (LA)
Fall. 3 credits. Recommended: experience with music required. MUSIC 100 concurrently. J. Webster.

An elementary, self-contained introduction to the theory of Western art music, emphasizing fundamental musical techniques, theoretical concepts, and their application. Intervals, scales, triads; basic concepts of tonality and form; extensive listening to music in various styles; analysis of representative works of Bach, Mozart, Beethoven, and Debussy.
Music Theory

Students contemplating the music major are strongly advised to take MUSIC 151, 152, 153, and 154 in freshman year and MUSIC 152 and 154 must be completed no later than the end of the sophomore year.

MUSIC 151(2101) Tonal Theory I (LA)
Fall. 3 credits. Prerequisites: admission by departmental placement exam and concurrent enrollment in or previous credit for MUSIC 153, or equivalent. Intended for students expecting to major in music and other qualified students. D. Yearsley. Detailed study of the fundamental elements of modal and tonal music: rhythm, scales, intervals, triads, major and minor scales, and two-part counterpoint; diatonic harmony and four-part voice leading; basic formal structures. Study engages different repertoires, including Western art music as well as non-Western and popular traditions.

MUSIC 152(2102) Tonal Theory II (LA)
Spring. 3 credits. Prerequisites: MUSIC 151 and 153 or equivalent; concurrent enrollment in or previous credit for MUSIC 154. Intended for students expecting to major in music and other qualified students. A grade of B- or better in MUSIC 152 is required for admission to music major. K. Taavola. Continued study of voice leading and harmonic progression, including diatonic modulations; analysis of binary and ternary forms as well as jazz, blues, and pop phrase models.

MUSIC 153(2103) Musicianship I

MUSIC 154(2104) Musicianship II
Spring, 2 credits. Prereq.: MUSIC 152. Intended for students expecting to major in music and other qualified students. A grade of B- or better in MUSIC 154, and failure in no individual musicianship component of the course, are required for admission to the music major. K. Taavola.

MUSIC 204(2111) Physics of Musical Sound (also PHYS 204[1204]) (PBS)
Spring. 3 credits. K. Selby. For description, see PHYS 204.

MUSIC 251(3101) Tonal Theory III (LA)
Fall. 3 credits. Prerequisites: MUSIC 152 and 154 or equivalent. Corequisites: MUSIC 253. K. Taavola. Continued study of diatonic and introduction to chromatic harmony; species counterpoint; composition in small forms.

MUSIC 252(3102) Tonal Theory IV (LA)
Spring. 3 credits. Prerequisites: MUSIC 251 and 253 or equivalent. Corequisites: MUSIC 254. K. Taavola. Study of and composition in larger forms, including sonata form; systematic study of chromatic harmony, voice-leading, and modulation; composition in chromatic style.

MUSIC 253(3103) Musicianship III

MUSIC 254(3104) Musicianship IV

MUSIC 361(3111) Jazz Improvisation I
Spring. 2 credits. Prerequisite: MUSIC 151 or permission of instructor. P. Merrill. An introduction to fundamental jazz theory, technique, and applied skills. Class work and assignments emphasize basic nomenclature, diatonic seventh chords, upper-structures, modes of the major scale, linear style and melodic motive development, feel, cycles, and phrase construction. Performance, composition, analysis, and ear training.

MUSIC 362(3112) Jazz Improvisation II
Fall. 2 credits. Prerequisite: MUSIC 361. P. Merrill. Continuation of jazz theory, technique, and applied skills. Class work and assignments emphasize altered upper-structures and dominants, chords and modes of melodic minor, harmonic minor, substitutions, and advanced rhythmic development. Performance, composition, analysis, transcribing, listening, and ear training.

MUSIC 365[3115] Jazz Piano
Spring. 2 credits. Prerequisite: MUSIC 151 or permission of instructor. P. Merrill. An introduction to jazz keyboard technique, including reading chord symbols, comping, bass line construction, and soloing. This course is intended primarily for jazz instrumentalists with little or no keyboard experience and pianists with little or no jazz experience.

MUSIC 451(4101) Counterpoint # (LA)
Spring. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. Next offered 2008-2009. S. Stucky.

MUSIC 452(4102) Topics in Music Analytical (also MUSIC 602[6101]) (LA)
Spring. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. Next offered 2007-2008. K. Taavola.

MUSIC 453(4111) Composition (LA)
Fall. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. R. Sierra. Study of music composition through the use of traditional forms such as variation and sonata. The student is required to write original pieces for solo and chamber ensembles.

MUSIC 454(4112) Composition in Recent Styles (LA)
Spring. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. R. Sierra. Through analysis, repertoire from the 20th and 21st centuries furnishes models for composing new works. Styles and techniques are drawn from composers such as Debussy, Bartók, Schoenberg, Copland, and Adams. Recommended (though not required) before taking MUSIC 454; when both 453 and 454 are offered, they form a full-year sequence.

MUSIC 455(4121) Conducting (LA)
Fall. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. Next offered 2007-2008. C. Kim. Covers fundamentals of score reading, score analysis, rehearsal procedures, and conducting technique; instrumental and choral contexts.

MUSIC 456(4122) Orchestration (LA)
Spring. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. Next offered 2008-2009. R. Sierra. Orchestration based on 19th- and 20th-century models.

MUSIC 457(4103) 20th-Century Musical Languages (LA)

MUSIC 458(4123) Jazz Arranging (LA)
Fall. 4 credits. Prerequisite: MUSIC 358 or permission of instructor. Next offered 2007-2008. P. Merrill. A survey of jazz arranging techniques for the big band.

Music in History and Culture

MUSIC 221(3132) History of Rock Music (also AM ST 223[3132]) (LA)
Spring. 3 credits. No previous training in music required. J. Peraino. This course examines the development and cultural significance of rock music from its origins in blues, gospel, and Tin Pan Alley up to present-day genres of alternative rock and hip hop.
An introduction to opera through the performance. Available on video and DVD recordings and, critique some of the different productions which it is based. We will compare and libretto from the play or short story upon elements. With two of the operas studied, interaction of the words, music, and visual performances.

A survey of the lives, works, and historical developments in musical style 1750-1800, including historiography, criticism, approaches to vernacular and non-western musics, and interactions with other musics of the time. Reading (historical, biographical, and critical) and listening assignments are major components of the course. There are no midterm or final exams; however, quizzes and research papers are required.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: MUSIC 151/153 or permission of instructor. A. Richards.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

MUSIC 245(1341) Gamelan in Indonesian History and Cultures (also ASIAN 245/2245, VISST 244/2744) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. Fall, staff; spring, M. Hatch.

An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian gamelan; a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2007–2008. Staff.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 245(1341) Gamelan in Indonesian History and Cultures (also ASIAN 245/2245, VISST 244/2744) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. Fall, staff; spring, M. Hatch.

An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian gamelan; a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2007–2008. Staff.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 245(1341) Gamelan in Indonesian History and Cultures (also ASIAN 245/2245, VISST 244/2744) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. Fall, staff; spring, M. Hatch.

An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian gamelan; a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2007–2008. Staff.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 245(1341) Gamelan in Indonesian History and Cultures (also ASIAN 245/2245, VISST 244/2744) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. Fall, staff; spring, M. Hatch.

An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian gamelan; a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2007–2008. Staff.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 245(1341) Gamelan in Indonesian History and Cultures (also ASIAN 245/2245, VISST 244/2744) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. Fall, staff; spring, M. Hatch.

An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian gamelan; a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2007–2008. Staff.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 245(1341) Gamelan in Indonesian History and Cultures (also ASIAN 245/2245, VISST 244/2744) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. Fall, staff; spring, M. Hatch.

An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian gamelan; a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2007–2008. Staff.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 245(1341) Gamelan in Indonesian History and Cultures (also ASIAN 245/2245, VISST 244/2744) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. Fall, staff; spring, M. Hatch.

An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian gamelan; a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2007–2008. Staff.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

MUSIC 207(3201) Survey of Western Music I (LA)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2007–2008. Staff.

MUSIC 208(3202) Survey of Western Music II (LA)
Spring. 3 credits. Pre- or corequisite: MUSIC 151/153 or permission of instructor. A. Richards.

Music History Courses for Majors and Qualified Nonmajors

MUSIC 245(1341) Gamelan in Indonesian History and Cultures (also ASIAN 245/2245, VISST 244/2744) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. Fall, staff; spring, M. Hatch.

An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian gamelan; a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.
A composition-based introduction to creates several short compositions. MIDI sequencing and other techniques for sound and digital media. Fundamentals of computer hardware and software for digital music (LA) by permission.

MUSIC 120(1421) Introduction to Digital Music (LA)
Fall. 3 credits. Limited enrollment. Prerequisite: permission of instructor. Recommended: ability to read music. K. Ernste.

A composition-based introduction to computer hardware and software for digital sound and digital media. Fundamentals of MIDI sequencing and other techniques for producing electroacoustic music. Each student creates several short compositions.

MUSIC 165(1465) Computing in the Arts (also COM S/CIS/ENGRI 165(1610))
Spring. 3 credits. G. Bailey. For description, see COM S 165.

MUSIC 220(2421) Computers in Music Performance (LA)
Spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor. K. Ernste.

A course in live performance and real-time, interactive sound manipulation techniques both in concert and over networks. Students will work individually or in small groups toward realizing short pieces that utilize tools and ideas from the course. MUSIC 220 is appropriate as a continuation for those who have taken MUSIC 120 but is open to others by permission.

MUSIC 230(3421) Scoring the Moving Image Using Digital Technology (LA)
Spring. 4 credits. Prerequisite: MUSIC 120 with grade of B or higher and MUSIC 251. Next offered 2007-2008. K. Ernste.

MUSIC 355(3431) Sound Design and Digital Audio (also THETR/DANCE 356/3680) (LA)
Fall. 4 credits. W. Cross. For description, see THETR 356.

MUSIC 356(3441) Digital Performance (also THETR 369/3690) (LA)
Spring. 4 credits. W. Cross. For description, see THETR 369.

Independent Study and Honors

MUSIC 301-302(4901) Independent Study in Music
301, fall; 302, spring. Credit TBA. Prerequisite: departmental approval; experience in proposed area of study. Staff. See also MUSIC 398-399 under "Music in History and Culture."

MUSIC 401-402(4911) Honors in Music
401, fall; 402, spring. 8 credits per year. Prerequisite: senior honors candidates. Staff. See "Honors" under "The Major" at the beginning of the MUSIC listings.

MUSIC 492(4231) Music and Queer Identity (CA)

MUSIC 493(4232) Women and Music (also FGSS 496/4960) (CA)

Digital Music and New Media

MUSIC 120(1421) Introduction to Digital Music (LA)
Fall. 3 credits. Limited enrollment. Prerequisite: permission of instructor. Recommended: ability to read music. K. Ernste.

A composition-based introduction to computer hardware and software for digital sound and digital media. Fundamentals of MIDI sequencing and other techniques for producing electroacoustic music. Each student creates several short compositions.

MUSIC 165(1465) Computing in the Arts (also COM S/CIS/ENGRI 165(1610))
Spring. 3 credits. G. Bailey. For description, see COM S 165.

MUSIC 220(2421) Computers in Music Performance (LA)
Spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor. K. Ernste.

A course in live performance and real-time, interactive sound manipulation techniques both in concert and over networks. Students will work individually or in small groups toward realizing short pieces that utilize tools and ideas from the course. MUSIC 220 is appropriate as a continuation for those who have taken MUSIC 120 but is open to others by permission.

MUSIC 230(3421) Scoring the Moving Image Using Digital Technology (LA)
Spring. 4 credits. Prerequisite: MUSIC 120 with grade of B or higher and MUSIC 251. Next offered 2007-2008. K. Ernste.

Fall. 4 credits. W. Cross. For description, see THETR 356.

MUSIC 356(3441) Digital Performance (also THETR 369/3690) (LA)
Spring. 4 credits. W. Cross. For description, see THETR 369.

Independent Study and Honors

MUSIC 301-302(4901) Independent Study in Music
301, fall; 302, spring. Credit TBA. Prerequisite: departmental approval; experience in proposed area of study. Staff. See also MUSIC 398-399 under "Music in History and Culture."

MUSIC 401-402(4911) Honors in Music
401, fall; 402, spring. 8 credits per year. Prerequisite: senior honors candidates. Staff. See "Honors" under "The Major" at the beginning of the MUSIC listings.

MUSICAL INSTRUCTION

Cornell faculty members offer individual instruction in voice, organ, harpsichord, piano and fortepiano, violin, viola, cello, and some brass and woodwind instruments to those students advanced enough to do college-level work in these instruments. Lessons are available by audition only. They may be taken either without credit (MUSIC 321) or with credit (MUSIC 322 or 323). All students studying with Cornell faculty members must enroll in MUSIC 321, 322, or 323. Other instruments may sometimes be studied for credit outside Cornell, but also by audition only (see MUSIC 321-323, Secs 9 and 10).

Lessons for beginners. The Department of Music can recommend outside teachers for those who wish to begin studying voice or an instrument. No credit is available for beginning instruction.

Auditions. Auditions are held at the beginning of each semester for lessons for advanced students. Contact the music department office in 101 Lincoln Hall for information.

Earning academic credit for lessons. For every 4 credits earned at MUSIC 322, the student must have earned, or currently be earning, at least 3 credits in another music course (excluding MUSIC 322, 323, 331-348, or 421-448). These 3 credits must be earned before, or simultaneously with, the first 2 credits in 322, they cannot be applied retroactively. Only music courses taught at Cornell (or approved transfer courses from other colleges or universities) may be used to satisfy this requirement.

Fees. The fee for a one-hour lesson (or two half-hour lessons) weekly, with or without credit, is $480 per semester. For a one-half hour lesson weekly (without credit only), the fee is $240. All fees are nonrefundable once lessons begin, even if the course is subsequently dropped.

Lessons taken outside Cornell. Under certain conditions, advanced students may earn credit for lessons taken outside Cornell. An audition is required, and no credit can be granted for beginning instruction. For further information, read the description of MUSIC 322-323, Secs 9 and 10, and contact the Music Department office.

Scholarships. Music majors receive a scholarship of up to $480 per semester. Any member of department-sponsored ensembles may, with the permission of the director of the ensemble, receive a partial scholarship to help defray the cost of the lessons. All scholarships are intended only for lessons in the student's primary performing medium. Scholarship forms, available in the music department office, are to be returned to the office within the first three weeks of classes.

MUSIC 321-322-323(3501-3502-3501) Individual Instruction
Prerequisite: advanced students only; may register after successful audition with instructor, or, if student needs to study outside Cornell, with appropriate faculty sponsor. Students should contact instructor or music department office for audition information. Students may register for these courses in successive semesters or years.

MUSIC 321(3501)
Fall or spring. 0 credits each semester. See section listing below for instructors. Students who pass a successful audition to study with Cornell faculty, but either wish to take only a half-hour lesson per week or cannot receive credit for lessons, must enroll in MUSIC 321. S-U grades only.

MUSIC 322(3502)
Fall or spring. 2 credits each semester. See section listing below for instructors. Students earn 2 credits each semester for one-hour lesson (or two half-hour lessons) per week, accompanied by appropriate practice schedule. Credit may be earned only in conjunction with academic music courses; see "Earning Academic Credit for Lessons," above. Letter grades only.

MUSIC 323(3401)
Fall or spring. 4 credits each semester. See section listing below for instructors. Open only to juniors and seniors majoring in music and graduate students in music. The section numbers listed below apply to MUSIC 321, 322, or 323, depending on the instrument studied.

Sec 01 Voice. J. Kellock.
Sec 02 Organ. A. Richards.
Sec 03 Piano. X. Bjerken and Staff.
Sec 04 Harpsichord. A. Richards and D. Yeandle.
Sec 05 Violin or Viola. V. Gelley.
Sec 06 Cello. J. Haines-Eitzen.
Sec 07 Brass. Staff.
Sec 08 Woodwinds. Staff.
Sec 09/Sec 10 Individual Instruction Outside Cornell.

All the standard orchestral and band instruments, keyboard instruments, guitar, and voice may, under certain conditions, be studied for credit with outside teachers. This course is available primarily for the study of instruments not taught at Cornell and when there is limited enrollment in MUSIC 321 and 322. Prior approval and audition by a member of the faculty in the department are required, and credit may be earned only as described under "Earning academic credit for lessons," above. Additionally, a departmental petition must be completed by the end of the third week of classes. For information and a list of approved teachers, consult the department office, 101 Lincoln Hall.

MUSICAL ORGANIZATIONS AND ENSEMBLES

Students may participate in musical organizations and ensembles throughout the year. Permission of the instructor is required, and admission is by audition only (usually at the beginning of each semester), except that the Sage Chapel Choir and the Cornell Gamelan Ensemble are open to all students without prior audition. Registration is permitted in two of these courses simultaneously and students may register in successive years, but no student may earn more than 8 credits in these courses. Membership in these musical organizations and ensembles is also open to qualified students who wish to participate without earning credit.

MUSIC 331-332(3601) Sage Chapel Choir
331, fall; 332, spring. Either 0 credits, S-U, or 1 credit, letter grade, each semester. No audition required. R. Riley.

Open to all students and members of the university. Varied and demanding repertoire. The Sage Chapel Choir sings regularly in the
MUSIC 431-432(3614) Middle Eastern Music Ensemble (also NES 447-448(4947-4948))
451, fall; 452, spring. Either 0 credits, S-U, or 1 credit, letter grade, each semester.
Prerequisite: permission of instructor. M. Hatch.
Performance of diverse musical traditions from the Middle East. Instruction in individual instruments (oud, ney, kanoun, and percussion) and group rehearsals, culminating in one or two performances per semester. Songs are taught in several languages, with the assistance of local language and dictation teachers.

MUSIC 445-446(4641) Gamelan Ensemble
445, fall; 446, spring. Either 0 credits, S-U, or 1 credit, letter grade, each semester.
Prerequisite: permission of instructor. Fall, staff; spring, M. Hatch.
Advanced performance on the Indonesian gamelan. Tape recordings of gamelan and elementary number notation are provided. Some instruction by visiting Balinese artist.

MUSIC 447-448(4601) Chamber Singers
447, fall; 448, spring. Either 0 credits, S-U, or 1 credit, letter grade, each semester.
Prerequisite: successful audition. Staff.
A mixed-voice chamber choir specializing in Renaissance and 20th-century music.

Graduate Courses
Open to qualified undergraduates by permission of instructor.

MUSIC 601(6201) Introduction to Bibliography and Research
Fall. 4 credits. B. Boettcher.
This course explores the nature of the discipline and introduces the many types of bibliographic tools, both printed and electronic, needed to pursue research in music.

MUSIC 602(6101) Analytical Technique
(also MUSIC 452(4102)]

MUSIC 603(6202) Editorial Practice

MUSIC 604(6301) Introduction to Ethnomusicology
Spring. 4 credits. Also open to graduate students in anthropology, linguistics, psychology, sociology, Africana, Asian Studies, and other cognate fields by permission of instructor. M. Hatch.
This course surveys a spectrum of issues central to the field, including but not limited to issues of identity and representation, and intersections with other fields in the humanities and social sciences.

MUSIC 620(6420) Techniques for Computer Music
Fall. 4 credits. Prerequisite: permission of instructor. K. Ernste.
Intended principally for doctoral students in music composition but open to others by permission. The course presents a practical overview of both classical and state-of-the-art techniques for computer music, including digital synthesis, signal processing and sound manipulation, analysis and resynthesis, spatialization, and real-time and/or interactive applications. Students will produce several short studio projects as well as one larger piece to be presented in a final concert.

MUSIC 653(7101) Topics in Tonal Theory and Analysis
Spring. 4 credits. Next offered 2008-2009. J. Webster.)

MUSIC 654(7102) Topics in Post-Tonal Theory and Analysis
NEAR EASTERN STUDIES

MUSIC 656(7121) Advanced Orchestral Technique
Fall 4 credits. S. Stucky.
Intensive analysis of orchestral scores by such composers as Debussy, Ravel, Stravinsky, Dutilleux, Boulez, Lutoslawski, Berio, Takemitsu, Druckman, Krusen, Benjamin, Adams, Saariaho, and Lindberg, with an emphasis on modern instrumental techniques, gestures, and textures. Composition exercises aimed at harnessing these discoveries for the students' own work. Designed for doctoral candidates in composition; others admitted by permission only.

MUSIC 657-658(7111) Composition
657, fall; 658, spring. 4 credits each semester. R. Sierra and S. Stucky.

MUSIC 659(6421) Electroacoustic Composition
Spring. 4 credits. Prerequisite: permission of instructor. K. Ernest.
Intended principally for doctoral students in music composition but open to others by permission. Depending on students' backgrounds and interests, the course may include an introduction to electroacoustic composing, an emphasis on aesthetic issues associated with the field, interactivity and real-time performance, software instrument design, performance controllers, or other topics.

[MUSIC 677(7221) Mozart: His Life, Works, and Times
Fall. 4 credits. Next offered 2007–2008. N. Zaslaw.]

[MUSIC 680(7301) Topics in Ethnomusicology
Spring. 4 credits. Also open to graduate students in anthropology, linguistics, psychology, sociology, Africana Studies, Asian Studies, and other cognate fields by permission of instructor. Next offered 2007–2008. S. Pond.]

[MUSIC 681(7201) Seminar in Medieval Music

[MUSIC 683(7231) Music and Postmodern Critical Theory

[MUSIC 684(7202) Seminar in Renaissance Music
Fall. 4 credits. Next offered 2008–2009. R. Harris-Warrick.]

[MUSIC 686(7203) Seminar in Baroque Music

[MUSIC 688(7204) Seminar in Classical Music
Spring. 4 credits. J. Webster. Topic: Haydn.

[MUSIC 689(7205) Seminar in Music of the Romantic Era
Spring. 4 credits. A. Gross and D. Rosen. Topic: The operas of Puccini.

[MUSIC 690(7206) Seminar in Music of the 20th Century
Fall and spring. 4 credits. Next offered 2007–2008. Staff.]

MUSIC 691–692(7501) Historical Performance
691, fall; 692, spring. 4 credits each semester. Prerequisite: permission of instructor. M. Bilson.
Lessons on the major instrument with supplementary study and research on related subjects.

[MUSIC 693(7211) Seminar in Performance Practice
Fall. 4 credits. Next offered 2008–2009. N. Zaslaw.]

MUSIC 695(7311) Gender, Sexuality, and Glam Rock (also FGSS 695[6950])
Fall. 4 credits. J. Peraino. This course will examine the history and legacy of glam rock, with a focus on the use of music, fashion, and performance as a means of exploring non-normative gender and sexual identities. Key artists and groups include the Velvet Underground, Marc Bolan, David Bowie, Roxy Music, Queen, Iggy pop, and the New York Plastic treatments of glam rock, such as Velvet Goldenmine and Hedwig and the Angry Inch, will also be considered. Readings will be drawn from cultural, gender and sexuality studies as well as musicology.

MUSIC 697–698(7901) Independent Study and Research
697, fall; 698, spring. Credit TBA. Staff.

MUSIC 785(7103) History of Music Theory
Fall. 4 credits. K. Taavola.
Issues and problems in the history of music theory, topics vary from year to year. Topic for 2006: Exoteric French and German theory in the 19th and 20th centuries.

[MUSIC 787(7232) History and Criticism of Popular Music Theory

MUSIC 901–902(9901) Thesis Research
901, fall; 902, spring. Up to 6 credits each semester, TBA. S–U grades only. Limited to doctoral students in music who have passed the Admission to Candidacy exam.

NEAR EASTERN STUDIES

K. Haines-Eitzen, chair, R. Brann (director of graduate studies), H. Elaqad, I. Gocheleishvili, C. Monroe, L. Monroe, D. Starr (director of undergraduate studies), S. Younes, J. Zorn. Joint faculty: M. Bernal (emeritus), G. Holst-Warhaft, C. Robinson

The Department
The Department of Near Eastern Studies (409 White Hall, 255-6275) offers courses in Near Eastern civilization including archaeology, history, religions, languages, and literatures. These course offerings treat the Near East from the dawn of history to the present and emphasize methods of historical, cultural, and literary analysis. Students are encouraged to take an interdisciplinary approach to the religions and cultures of the region and their articulation during antique, late antique, medieval, and modern times. For more information, please visit www.arts.cornell.edu/nesc/.

Distribution Requirements
Any two Near Eastern Studies history or archaeology courses at the 200, 300, or 400 level that form a reasonable sequence or combination satisfy the distribution requirement in the social sciences/history. Any two Near Eastern Studies civilization or literature courses at the 200, 300, or 400 level that form a reasonable sequence or combination satisfy the distribution requirement in the humanities. NES 197 or 251 plus any other Near Eastern Studies course will constitute a sequence to fulfill the distribution requirement in either social sciences/history or humanities, depending on the second course used in combination with 197 or 251. All 200- or 300-level language courses may fulfill the humanities requirement.

The Major
A major in Near Eastern Studies offers students the opportunity to explore the languages, literatures, cultures, religions, and history of the Near East/Middle East from antiquity to the modern day. The major is designed both to acquaint students broadly with the region and its cultures as well as to study a particular subfield in depth.

Prerequisites
• The applicant for admission to the major in Near Eastern Studies must have completed at least two Near Eastern Studies content courses, one of which can be a language course. Students are strongly encouraged to enroll in language courses and/or NES 251 or 254 either before signing into the major or early on in their major.
• Prospective majors must meet with the director of undergraduate studies before submitting a major application.
• To qualify as a major, a cumulative grade average of C or better is required.

Major Requirements
For students graduating in the Classes of 2006 or earlier, consult the department. The precise sequence and combination of courses chosen to fulfill the major is selected in consultation with the student's advisor. All majors must satisfy the following requirements (no course may be used to satisfy two requirements; S–U option not permitted):

1. Two years of one Near Eastern language or, in exceptional cases, one year of two Near Eastern languages.
2. Nine 3- or 4-credit NES courses, which must include the following:
   a. NES 251 Judaism, Christianity, and Islam or NES 254 Introduction to Near Eastern Civilizations
   b. NES 460 Junior/Senior Proseminar: Theory and Method in Near Eastern Studies
   c. Seven additional courses, of which:
      i. three must fulfill temporal breadth, defined as: one course whose chronological parameters fall within the period 500 ce to 600 ce, one course whose chronological parameters fall within the period 600 ce to 1800 ce, and one course whose chronological parameters fall between 1800 ce and the
present. The following are examples (a complete list may be obtained in the department office):

3000 BCE to 600 CE

NES 223 Introduction to the Hebrew Bible
NES 229 Introduction to the New Testament
NES 244 Introduction to Ancient Judaism
NES 261 Ancient Seafaring
NES 265 Jerusalem through the Ages
NES 320 Women in the Hebrew Bible
NES 360 Ancient Iraq
NES 322 Reinventing Biblical Narrative
NES 394 Gender, Sexuality, and the Body in Early Christianity

600 CE to 1800 CE

NES 214 Qur'an and Commentary
NES 234 Muslims and Jews in Confluence and Conflict
NES 256 Introduction to the Qur'an
NES 275 History of the Middle East: 13th to 18th Centuries
NES 339 Islamic Spain
NES 351 Law, Society, and Culture in the Middle East
NES 418 Seminar in Islamic History

1800 CE to the present

NES 235 Jews and Arabs in Contact and Conflict: The Modern Period
NES 274 History of the Modern Middle East: 19th to 20th Centuries
NES 319 Crime and Conflict in the Modern Arabic Novel
NES 385 Middle Eastern Cities
NES 393 History of Jews and Christians in the Modern Middle East
NES 397 History of the Israeli-Palestinian Conflict
NES 493 Cosmopolitan Alexandria

A maximum of three of these seven courses can be at the 200 level; a minimum of four must be at the 300 level or above.

One of the 300-level or above courses must be a research seminar (courses are designated with ®). The following are examples (a complete list can be found in the department office):

- NES 359 Islamic Spain: Culture and Society
- NES 385 Middle Eastern Cities: History, Society, and Culture
- NES 394 Gender, Sexuality, and the Body in Early Christianity
- NES 427 New York, Paris, Baghdad: Poetry of the City
- NES 457 Formation of Islamic Law

Note: a maximum of two independent studies can be applied to the major; a maximum of two non-cross-listed courses may be applied to the major; a maximum of two courses may receive credit for more than one major; a maximum of 15 credits of relevant, departmentally approved course work taken overseas or at another university may be applied to the major.

For students graduating in the classes of 2006 or earlier, consult the department.

Honors. Candidates for the degree of Bachelor of Arts with honors in Near Eastern Studies must fulfill the requirements of the appropriate major study and enroll in the honors course, NES 499, in the fall and spring semesters of their senior year. For admission to the honors program, candidates must have a cumulative average of B+ or better and have demonstrated superior performance overall in Near Eastern Studies courses. After consulting their major advisor, candidates should submit an outline of their proposed honors work to the department during the second semester of their junior year. The Near Eastern Studies main office has more specific guidelines for the honors thesis.

Study abroad. Near Eastern Studies majors may choose to study in the Near East during their junior year. There are various academic programs in the countries of the Near East that are recognized by the Department of Near Eastern Studies and that allow for the transfer of credit. Archaeological fieldwork on Cornell-sponsored projects in the Near East may also qualify for course credit.

First-Year Writing Seminars
For descriptions, consult the John S. Knight Institute brochure for times, instructors, and descriptions.

Language Courses

Arabic

NES 111-112(1201-1202) Elementary Arabic I and II (also AS&RC 111/112[1104/1105])
111, fall; 112, spring. 4 credits each semester. Limited to 18 students per section. Prerequisite: for NES 112, NES 111 or permission of instructor. M. Younes and staff.
Provides a thorough grounding in all language skills: listening, speaking, reading, and writing. It starts with spoken Arabic and gradually integrates Modern Standard Arabic in the form of listening and reading texts. Emphasis is on learning the language through using it in meaningful contexts. Students who successfully complete the two-semester sequence are able to (1) understand and actively participate in simple conversations involving basic practical and social situations (e.g., introductions, greetings, school, home and family, work, simple instructions), (2) read Arabic material of limited complexity and variety (e.g., simple narrative and descriptive texts, directions), (3) write notes and short letters describing an event or a personal experience. An important objective of the course is to familiarize students with basic facts about the geography, history, and culture of the Arab world.

NES 113-210(1203-2200) Intermediate Arabic I and II (also AS&RC 113/213[1106/2101])
113, fall; 210, spring. 4 credits each semester. Prerequisite: for NES 210, NES 113 or permission of instructor. M. Younes and staff.
Sequel to NES 111-112. Continued development of the four language skills through extensive use of graded materials on a wide variety of topics. Increased attention is given to developing native-like pronunciation and grammatical accuracy, but the main focus is on developing communication skills. The student who successfully completes 210 is able to: (1) understand and express himself or herself in Arabic in situations beyond the basic needs; (2) read and comprehend written Arabic of average difficulty; (3) write a letter, a summary of a report, or a reading selection. An appreciation of Arabic literature and culture is sought through the use of authentic materials.

NES 133-134(1211-1212) Introduction to Qur'anic and Classical Arabic (also RELST 133-134[1211-1212])
133, fall; 134, spring; D. Powers. 4 credits each semester. This course is designed for students who are interested in reading the Qur'an and other texts in Classical Arabic. By the end of the semester, students will have mastered many of the common grammatical structures and will have a good working vocabulary. This course, and its follow-up in the Spring, provide a firm foundation on which to build an advanced study of Classical Arabic. No prior knowledge of Arabic is required.

NES 214(2212) Qur'an and Commentary (also RELST 214[2212])
Spring. 3 credits. Prerequisite: for NES 214, NES 113-210; D. Powers.
Advanced study of classical Arabic through a close reading of selected chapters of the Qur'an, together with the Qur'anic commentary (tafsir) and other relevant literature. Special attention is given to grammar, syntax, and lexicography.

NES 311-312(3201-3202) Advanced Intermediate Arabic I and II (also AS&RC 308-312)
311 fall; 312 spring; 4 credits each semester. Prerequisite: for NES 311, NES 210 or permission of instructor; for NES 312, NES 311 or permission of instructor. Letter grades recommended. M. Younes and staff.
Introduces students to authentic, unedited Arabic language materials ranging from poems, short stories, and plays to newspaper articles dealing with social, political, and cultural issues. Emphasis is on developing fluency in oral expression through discussion of issues presented in the reading selections. There is more focus on the development of native-like pronunciation and accurate use of grammatical structures than on elementary and intermediate Arabic. A primary objective of the course is the development of writing skill through free composition exercises in topics of interest to individual students.
NES 416(4206) **Structure of the Arabic Language** (also LING 416(4416)) (KCM)

Spring. 4 credits. Limited to 15 students. Preerequisite: one year of Arabic or a linguistic background. M. Younes. Consists of a brief history of Arabic and its place in the Semitic language family, the sociolinguistic situation in the Arab world (diglossia), Arabic phonology (sounds, emphasis, syllable structure, and related processes), morphology (verb forms and derivational patterns), and syntax (basic sentence structures, cases, and moods).

**Hebrew**

NES 101-102(1101-1102) **Elementary Modern Hebrew I and II** (also JWST 101-102(1101-1102))

101. Fall; 102, spring. 4 credits each semester. Limited to 18 students per section. Prerequisite: for NES 102, NES 101 with grade of C- or better or permission of instructor. Letter grades only. S. Shoer. Intended for beginners. Provides a thorough grounding in reading, writing, grammar, oral comprehension, and speaking skills.

NES 103(1103) **Elementary Modern Hebrew III** (also JWST 103(1103))

Fall. 4 credits each semester. Limited to 15 students per section. Prerequisite: NES 102 with grade of C- or better or permission of instructor. Letter grades recommended. N. Scharf. Sequel to NES 101-102. Continued development of reading, writing, grammar, oral comprehension, and speaking skills.

NES 200(2100) **Intermediate Modern Hebrew** (also JWST 200(2100)) @

Spring. 4 credits. Satisfies Option I. Prerequisite: NES 103 with grade of C- or better or permission of instructor. Letter grades recommended. N. Scharf. Introduces Hebrew literature and Israeli culture through the use of texts and audiovisual materials.

NES 301(3101) **Advanced Intermediate Modern Hebrew** (also JWST 301(3101)) @

Fall. 4 credits. Satisfies Option I. Limited to 15 students. Prerequisite: NES 200 with grade of C- or above or permission of instructor. This sequence may be used to fulfill humanities distribution requirement in literature. Letter grades recommended. N. Scharf. Advanced study of the Hebrew language both orally and through the analysis of mostly unedited texts of social, political, and cultural relevance, with less emphasis on the study of grammar. Students are introduced to articles published in Israeli newspapers and magazines, works by authors, and movies. Students develop composition and advanced writing skills by studying language structure, idioms, and various registers of style.

NES 305(3105) **Conversational Hebrew** (also JWST 305(3105)) @

Spring. Variable to 3 credits. Limited to 15 students. Prerequisite: NES 301, 400, or permission of instructor; non-native speakers only. Letter grades recommended. N. Scharf.

Intended to continue the development of all aspects of the language. Emphasis, however, is placed on speaking skills and understanding by using text material relevant to Israeli contemporary society. The instructor is sensitive to individual student needs.

NES 420(4102) **Biblical Hebrew Prose—Joshua** (also JWST/RELS 420(4102)) @ # (LA)

Fall: 4 credits. Satisfies Option I. Prerequisite: one year of biblical or modern Hebrew. L. Monroe. The biblical book of Joshua recounts miraculous stories of the Israelite conquest and settlement of the land of Canaan under the leadership of Joshua ben Nun. The details of these accounts have drawn the attention of biblical scholars and archaeologists alike, who are interested in questions of who the Israelites were, how they came to occupy the land of Canaan, and how they understood themselves in relation to their Canaanite neighbors. In this class we will read the book of Joshua in the original Hebrew, with a particular focus on how the language of the text illuminates the Israelites' own evolving understanding of their origins and collective identity. Close attention will be paid to matters of grammar, syntax, and vocabulary in order to develop students' skills in reading biblical Hebrew prose and to enhance their understanding of the Hebrew language itself as a window on ancient Israelite thought. Students will be expected to utilize commentaries, biblical Hebrew grammars and lexicons in their preparation of assigned texts. Prior training in Hebrew is required.

NES 422(4105) **Biblical Hebrew Script—The Biblical World and the Text** (also JWST/RELS 422(4105)) @ # (LA)

Spring. 4 credits. Satisfies Option I. Prerequisite: one year of biblical or modern Hebrew. L. Monroe. The biblical book of Joshua recounts miraculous stories of the Israelite conquest and settlement of the land of Canaan under the leadership of Joshua ben Nun. The details of these accounts have drawn the attention of biblical scholars and archaeologists alike, who are interested in questions of who the Israelites were, how they came to occupy the land of Canaan, and how they understood themselves in relation to their Canaanite neighbors. In this class we will read the book of Joshua in the original Hebrew, with a particular focus on how the language of the text illuminates the Israelites' own evolving understanding of their origins and collective identity. Close attention will be paid to matters of grammar, syntax, and vocabulary in order to develop students' skills in reading biblical Hebrew prose and to enhance their understanding of the Hebrew language itself as a window on ancient Israelite thought. Students will be expected to utilize commentaries, biblical Hebrew grammars and lexicons in their preparation of assigned texts. Prior training in Hebrew is required.

**Topics Courses**

NES 223(2623) **Introduction to the Hebrew Bible** (also JWST/RELS 223(2623)) @ # (LA)

Fall. 3 credits. L. Monroe. The Hebrew Bible (Old Testament) is a repository of ancient Israelite religious, political, social, historical, and literary traditions. For the modern reader these ancient traditions are often obscured by a focus on the text as revelation. The purpose of this course is to introduce students to the biblical world by reading the Hebrew Bible in translation, on its own terms, as a body of literature that evolved in an ancient Near Eastern context. The Bible itself will be the primary text for the course, but students will also be exposed to the rich and diverse textual traditions of the ancient Near East, including Mesopotamia, Egypt, Moab, and Edom. In addition, this course will explore the impact of early biblical interpretation on shaping the monotheistic traditions inherited in the West. As participants in a secular course on the Bible, students will be challenged to question certain cultural assumptions about the composition and authorship of the Bible, and will be expected to differentiate between a text's content and its presumed meaning.

NES 244(2644) **Introduction to Judaism** (also JWST 244(2644), RELST 244(2644)) @ # (HA)

Spring. 3 credits. L. Monroe. This course is designed to acquaint students with the varieties of Judaism from ancient times to the early modern period. A strong emphasis will be placed on ancient Jewish
to the first transatlantic voyages in the 15th century, including Arab, Viking, and European explorers, and the birth of modern capitalism in the Italian Maritime Republics. Along the way, economics, war, exploration, culture, life at sea, and colonization are discussed.

NES 262(2662) Daily Life and the Cultural Landscape of the Biblical World (also ARKEO 260[2662], JWST 262[2662], RELST 261[2662]) @ (CA)
Fall. 3 credits. J. Zorn.
Surveys the common and not-so-common daily activities of the world of ancient Israel and its neighbors in Mesopotamia, Egypt, and Canaan. Many courses cover aspects of ancient political history or ancient literature, but these often focus on the activities of members of social elites, at the expense of the activities of more average citizens. The focus of this course on ancient technologies provides a broader spectrum, spanning all social classes. Material to be covered includes topics such as food production and processing, pottery production, metallurgy, glass making, cloth production and personal adornment, implements of war, medicine, leisure time (games and music), and others.

NES 265(2655) SSP: Law, Society, and Culture in the Middle East (also RELST 265[2655], HIST 222[2220]) @ (CA)
Spring. 3 credits. Limited to 15 students. Prerequisite: none. Sophomore seminar. D. Powers.
Explores the nature of the Islamic judicial system and notions of justice. Class discussions are based upon the close reading of historical materials, including legal documents, judicial opinions, and court cases (all in English translation), which form the basis of writing assignments. Themes treated include the marital regime, relations between parents and children, gender, slavery, the intergenerational transmission of property, the status of non-Muslims, crime and its punishment, law and the public sphere.
This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Sophomore Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminar is aimed at initiating students into the discipline's outlook, its discourse community, its modes of knowledge, and its ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

NES 266(2666) Jerusalem Through the Ages (also JWST/ARKEO/RELST 266[2666]) @ (HA)
Spring. 3 credits. J. Zorn.
Jerusalem is a holy city to the adherents of the three great monotheistic faiths: Judaism, Christianity, and Islam. For most of its existence it has also been a national capital or major provincial center for the many states and empires that vied for control of the vital land bridge connecting Africa, Europe, and Asia. Thus many of the pivotal events that shaped western civilization were played out in the streets and structures of Jerusalem. This course explores the history, archaeology, and cultural landscape of Jerusalem throughout its long life, from its earliest remains in the Chalcolithic period (c. 4000 BCE) to the 19th century, including Jerusalem as the capital of the Davidic dynasty, the Roman era city of Herod and Jesus, the Crusaders and medieval Jerusalem, and Ottoman Jerusalem as the city entered the modern era. Students examine the original historical sources (Josephus, the Maimonides, the Mezuda map) that pertain to Jerusalem. Slides and videos are used to illustrate the natural features, man-made monuments, and artifacts that flesh out the textual material providing a fuller image of this world's most prominent spiritual and secular capital.

NES 268(2668) Ancient Egyptian Civilization (also ARKEO/JWST 268[2668]) @ (HA)
Fall. 3 credits. C. Monroe.
The course surveys the history and culture of pharaonic Egypt from its prehistoric origins down to the early first millennium BCE. Within a chronological framework, the following themes or topics will be considered: the development of the Egyptian state (monarchy, administration, ideology); social organization (gender and family, slavery); economic factors; empire and international relations.

NES 293(2793) SSP: Middle Eastern Cinema (also JWST 291[2793], FILM 293[2930], COM L 293[2930], VISST 293[2183]) @ (LA)
Fall. 4 credits. Staff.
We frequently see representations of “Middle Easterners” in the American media, whether in the news, or in TV dramas and film. But there are far fewer opportunities to see how the media from the Middle East represent their own cultures. Students in this course view films from the Arab world, including North Africa and the Eastern Mediterranean, as well as from Iran and Israel. The films range from musical comedies, to dramas, to experimental genres. Readings provide background on the particular cultural and historical contexts in which the films are produced and familiarize students with techniques for critically interpreting visual media. Films are screened on Mondays at 7:30 p.m. and also are available on reserve.

NES 332(3832) Martyrdom in Contemporary Societies (JWST 332[3832]; SBA)
Spring. 4 credits. Staff.
Nothing demonstrates better the power of society than the readiness of some individuals to sacrifice their lives for their community, their nation, or their religious group. There is no better way to unify a group than to celebrate the image of individuals who sacrificed themselves, ostensibly, for their community. This course sheds a sociological light on these intimate relations between violent death and solidarity of modern societies. Offers a comparative discussion on the social significance of heroic death and victimhood in various contexts around the globe. Examines various national “cultures of death,” analyzing which sociological theories have to say about these phenomena, and discussing the relevance of existing theories in light of case studies presented in class.

NES 343(3430) Tales of Love and Lust (also SPANL 331[3310])
Fall. 4 credits. M. A. Garcés.
For description, see SPANL 133.

N. C. 10,000 BCE
Continuation of work done in NES/JWST 301, with less emphasis on the study of grammar. Students read and discuss texts of cultural relevance, using articles published in Israeli newspapers and works by authors in each of the three principal genres: poetry, theater, and novels.

NES 401(4101) Modern Hebrew Literature (also JWST 401[4101]) @ (LA)
Spring. 4 credits. Satisfies Option I. Limited to 15 students. Prerequisite: NES/JWST 302, or permission of instructor. D. Starr.

Literature has held a privileged place in the revival of modern Hebrew and the formation of Israeli culture. This course affords students the opportunity to read a sampling of this exciting literature. Each semester feature a different theme, topic, or period in the development of Hebrew literature. Readings may include short stories, novels, poetry, and drama. All readings, writing assignments, and discussions are in Hebrew.

NES 415(4202) Arabic Short Story @ (LA)
Fall. 4 credits. Prerequisite: NES 312 or permission of instructor. D. Starr.

Introduces students to modern Arabic literature through the genre of the short story. Class discussions and writing assignments center on interpretation and textual analysis.

NES 438(4738) Imagining the Mediterranean (also JWST 438[4738], COM L 496[4960])
Fall. 4 credits. G. Holst-Warhaft.

Through a series of readings in poetry and prose from Spain, Greece, Morocco, Turkey, Israel, and Egypt, the course examines how Mediterranean writers interact with the sensual aesthetics of landscape, music, and ritual in the Mediterranean. We will be concerned with how poetry, music, dance, and image interact in the region, and how this relationship is reflected in 20th-century literature from and about the Mediterranean.

The readings will focus on particular cases, such as the relationship of Lorca's poetry to understandings of the other of Andalusia, lowbrow musical form in Greece, and the nostalgia for the mythical city of Alexandria in Cavafy and other Alexandrian authors. We will also consider how the myth of the Mediterranean as a place of the literary imagination within and beyond the region.

NES 445(4545) Gender, Sexuality, and the Body in Late Antiquity (also RELST 445[4545], FGSS 447[4470])
Fall. 4 credits. K. Haines-Eitzen.

Beliefs about gender, sexuality, and the human body were remarkably interwoven with political, religious, and cultural disputes of late antiquity. In this course we will explore the construction and representation of gender, sexuality, and the body in various forms of Christianity in hellenistic and early rabbinic Judaism, and the philosophical writings from the first century through the fourth. Asceticism and celibacy, veiling and unveiling, transgression and Gnostic anodyony, marriage and childbirth, and homosexuality will be among the topics considered. The sources (all in translation) will range from the New Testament, early Christian apocryphal and apologetic literature, and patristic writings to Greek and Latin medical and philosophical texts, Jewish midrash, Dead Sea Scrolls, Roman inscriptions, and Egyptian erotic and magical spells. Current interdisciplinary and theoretical studies on gender, ideology, sexuality, and power will aid us in developing our analytical approaches to the ancient materials.

NES 447-449(4947-4949) Middle Eastern Music Ensemble (also MUSIC 431-432[3614])
447, fall; 448, spring. 1 credit each semester. Limited to 40 students. Prerequisite: permission of instructor. M. Hatch.

Performance of diverse musical traditions from the Middle East. Instruction in percussion, oud, nay, and kanoun, among others.

NES 457(4657) Seminar in Islamic History: Formation of Islamic Law (RELST 457[4657], HIST 453[4530]) @ (HA)
Fall. 4 credits. Prerequisite: NES 255 or equivalent; or permission of instructor. D. Powers.

Examines what has been called "the mystery of the formation of Islamic law" by attempting to establish a middle ground between the traditional Islamic approach to the subject and that of revisionist western scholars. Themes discussed include: the Near Eastern and Arabian background of the Qur'an, interpretation of the law, religious and political factors in the formation of Islamic law, the relationship between Qur'anic legal pronouncements and legal practice during the first century of its development, the debate over the authenticity of hadith reports, i.e., statements about what Muhammad said, did or condoned by his silence; the role of caliphal law and Umayyad administrative practice; and the formation of the law schools or madhhabs. Fullfills research seminar requirement for major.

NES 460(4560) Theory and Method in Near Eastern Studies (CA)
Spring. 4 credits. Requirement for NES majors. R. Brann.

Seminar offering advanced Near Eastern Studies students the opportunity to read and discuss the range of theories and methods that have been employed by scholars in the interdisciplinary area of Near Eastern Studies. After giving attention to the historical development of area studies programs—and their current status and relevance—students read a wide range of highly influential works in Near Eastern Studies. Literary theory, historiography, post-colonialism, archaeology, gender theory, and comparative religions are a few of the approaches, methods, and theories explored. Authors include Talal Asad, Homi Bhabha, Mircea Eliade, Timothy Mitchell, Mary Douglas, Zachary Lockman, Edward Said, J. Z. Smith.

NES 466(4666) History of Israelite Religion (also JWST 466[4666], RELST 466)
Spring. 4 credits. L. Monroe.

This course will focus on the diversity of ancient Israelite practice and belief throughout the biblical period, and its rootedness in the polytheistic religious traditions of ancient Syria-Palestine. It will focus on the worship of Yahweh and other deities in ancient Israel, and will trace the long and complicated process by which Yahweh became the sole deity accepted within the biblical tradition. Using biblical evidence, as well as inscriptive and archaeological discoveries from Syria-Palestine and elsewhere in the ancient Near East, we will address the question of why the Israelites eventually rejected deities such as Baal, Ashterel, El, and others, who were originally part of the
Israëlle pantheon, and who contributed much of the divine imagery that came to be associated with Yahweh. We will explore the ways in which a small group of Jerusalem elites helped shape the monotheistic tradition that has been inherited in the West, and we will explore the political, social and theological implications of this transformation.

NES 470 Power and Wealth in Ancient Civilizations (also JWST 470)
Spring. 4 credits. C. Monroe.
How were wealth and power created and distributed in ancient Mesopotamia, Egypt, and the Aegean? Using archaeological, anthropological, sociological and historical approaches, several case studies will be considered: the emergence of urbanism in the Urk and Minoan worlds; the construction of bureaucracy in the Ur III state; the organization of empire under Hittite, Egyptian and Assyrian rulers; and the economic strategies of resistance used in smaller kingdoms and city-states like Israel and Phoenicia. The role of the trader in these societies will be examined, as well as the role of certain political within larger economic systems. The case studies are approached after students are introduced to the intellectual foundations of historical materialism in early authors (like Smith, Marx, and Weber) and are versed in current approaches to political economy in early states.

NES 481-492(4991-4992) Independent Study, Undergraduate Level
Fall and spring. Variable credit. Prerequisite: permission of instructor. Staff.

NES 498-499(4998-4999) Independent Study, Honors
Fall and spring. 8 credits. Prerequisite: permission of instructor. Staff.

NES 619 The Arabic Novel
Spring. 4 credits. Prerequisites: 400-level Arabic course or equivalent, or permission of instructor. D. Starr.
Advanced topical seminar pertaining to the Arabic novel. As topics vary from semester to semester, course may be repeated with permission of the instructor.

NES 630(6230) Judeo-Arabic Literature (also JWST 630)
Fall. 4 credits. R. Brann. Prerequisites: NES 212 (Arabic), NES 202 (Hebrew) or equivalents. Designed for graduate students but open to undergraduates with permission of instructor. May be repeated for credit; readings will vary from year to year.
This course will study some of the most important texts of classical Judeo-Arabic literature produced in Iraq, Egypt, North Africa and Muslim Spain from 900 until 1200. Depending on the textual genre the focus will vary from literary, philosophical, linguistic, and historical analysis.

NES 691-692(6991-6992) Independent Study: Graduate Level
Fall and spring. Variable credit. Prerequisite: permission of instructor. Staff.

Philosophy

The study of philosophy provides students with an opportunity to become familiar with some of the ideas and texts in the history of thought while developing analytical skills that are valuable in practical as well as academic affairs. It affords the excitement and satisfaction that come from understanding and working toward solutions of intellectual problems. The curriculum includes offerings in the history of philosophy, logic, philosophy of science, ethics, social and political philosophy, metaphysics, and theory of knowledge. Any philosophy course numbered in the 100s or 200s is suitable for beginning study in the field. Sections of PHIL 100 are part of the first-year writing seminar program; they are taught by various members of the staff on a variety of philosophical topics, and because of their small size (17 students at most) they provide ample opportunity for discussion. Students who want a broad introduction to philosophy may take PHIL 101, but many students with special interests may find that the best introduction to philosophy is a 200-level course in some particular area of philosophy; such courses have no prerequisites and are usually open to first-year students.

The Major
Students expecting to major in philosophy should begin their study of it in their freshman or sophomore year. Admission to the major is granted by the director of undergraduate studies of the department on the basis of a student's work during the first two years. Normally the student must have completed two philosophy courses with grades of B or better. Eight philosophy courses, taken for a letter grade, are required for the major. They must include at least one course on ancient philosophy (PHIL 211, or a course with a large component on Plato or Aristotle), at least one course on classical metaphysics and epistemology from Descartes through Kant (e.g., PHIL 212 or a course on the empiricists, the rationalists, or Kant), and a minimum of three courses numbered above 300. Students admitted to the major (after fall 1996) are required to take a minimum of six philosophy courses numbered above 200, and may not count more than one section of PHIL 100 toward the major. Courses numbered 191-199 do not count toward the major. A course in formal logic (e.g., PHIL 251), while not required, is especially recommended for majors or prospective majors.

Philosophy majors must also complete at least 8 credits of course work in related subjects approved by their major advisors. Occasionally majors may serve as teaching or research aides, working with faculty members familiar with their work.

Honors. A candidate for honors in philosophy must be a philosophy major with an average of B- or better for all work in the College of Arts and Sciences and an average of B+ or better for all work in philosophy. In either or both semesters of the senior year a candidate for honors enrolls in PHIL 490 and undertakes research leading to the writing of an honors essay by the end of the final semester. Honors students normally need to take PHIL 490 both semesters of their senior year to write a satisfactory honors essay. PHIL 490 does not count toward the eight philosophy courses required for the major. Prospective candidates should apply at the Department of Philosophy office, 218 Goldwin Smith Hall.

Fees
In some courses a small fee may be charged for photocopying materials to be handed out to students.

Introductory Courses
First-Year Writing Seminars in Philosophy
Fall and spring. 3 credits. Consult John S. Knight Institute brochure for times, instructors, and descriptions.

PHIL 101(1101) Introduction to Philosophy # (KCM)
Fall and spring. 3 credits. Prerequisite: none. Open to freshmen. B. Weatherson. An introduction to basic issues and methods in philosophy, focusing on questions about
philosophy of religion and philosophy of mind. The first part of the course will look at whether God's existence is consistent with the amount of suffering we see, and whether the existence of a divine designer is the best explanation of the world we find. The second part will look at questions about minds, especially whether minds are identical to bodies, and whether machines can do what minds do.

PHIL 131(1310) Logic, Evidence, and Argument
Spring. 3 credits. Staff. For description, see department website.

PHIL 145(1450) Contemporary Moral Issues (KCM)
Fall. Y. Cohen; spring. Staff. Fall 2006: In this course we will examine several contemporary moral problems, including abortion, capital punishment, euthanasia, affirmative action, and world hunger. We will critique ideas from a philosophical perspective by learning how to create and evaluate publicly accessible arguments and apply general moral principles to particular cases.

PHIL 181(1810) Introduction to the Philosophy of Science (KCM)
Fall and spring. 3 credits. Staff. For description, see department website.

PHIL 191(1910) Introduction to Cognitive Science (also COGST 101[1101], PSYCH 102[1200], COM S 101[1710], LING 170[1770]) (KCM)
Fall. 3 or 4 credits. B. Bienvenue. For description, see PSYCH 102.

PHIL 211(2110) Ancient Philosophy (also CLASS 231[2366]1) (KCM)
Fall. 4 credits. Prerequisite: none. Open to freshmen. T. Irwin. This course examines the origin and development of Western philosophy in Ancient Greece and Rome. We will study some of the key figures, such as Socrates, Plato, Aristotle, and the Hellenistic philosophers (Epicureans, Stoics, and Skeptics). Questions to be considered include: What are the nature and limits of knowledge? Is knowledge even possible? How reliable is perception? What are the basic entities in the universe: atoms, Platonic Forms, or Aristotelian substances? Is moral knowledge possible? What is the nature of happiness and what sort of life will make people happy? Do human beings have free will? Ought we to fear death?

PHIL 212(2120) Modern Philosophy (KCM)
Spring. 4 credits. Prerequisite: none. Open to freshmen. T. Blosner. For description, see department website.

PHIL 213(2130) Existentialism
Fall. 4 credits. Prerequisite: none. Open to freshmen. M. Kosch. Examination of main philosophical texts of phenomenology and existentialism (by Husserl, Heidegger, Sartre, Merleau-Ponty), with some 19th century background.

PHIL 231(2310) Introduction to Deductive Logic (MQR)
Fall and spring. 4 credits. Prerequisite: none. Open to freshmen. Fall: H. Hodes; spring: Staff. Fall 2006 topic: The logic of truth-functional connectives, identity, and the universal and existential quantifiers; a formal language; translation between it and English; constructing worlds and models; and constructing proofs. We'll use a textbook accompanied by a software package, Language, Proof, and Logic by J. Barwise and J. Etchemendy.

PHIL 241(2410) Ethics (KCM)
Fall. 4 credits. Prerequisite: none. Open to freshmen. N. Sturgeon. An introduction to the philosophical evaluation of moral theories and moral arguments. Ethical relativism, ethical egoism, ethical skepticism, utilitarianism, and duty-based theories. Application to controversial contemporary issues.

PHIL 242(2420) Social and Political Philosophy (KCM)
Spring. 4 credits. Prerequisite: none. Open to freshmen. Staff. For description, see department website.

PHIL 245(2450) Ethics and Health Care (KCM)
Spring. 4 credits. Prerequisites: none. Open to freshmen. S. MacDonald. An introduction to the philosophical study of ethical problems that arise from the practice of medicine as such or that arise in response to developments within medicine and the larger world. Does it require that all have access to approximately the same level of health care? In addition to learning how to arrive at and defend ethical positions, we reflect on the techniques and methods we use.

PHIL 246(2460) Ethics and the Environment (also S&T/S&B/SOC 208[2061]) (KCM)
Spring. 4 credits. Staff. For description, see S&T/S&B/SOC 206.

PHIL 248(2480) Ethics and International Relations (also GOVT 248(2485)) (KCM)
Spring. 4 credits. Prerequisite: none. Open to freshmen. R. Miller. An introduction to moral problems posed by international relations. The justification of wars and the assessment of tactics in wars, the right response to global poverty and inequality, the just governance of multinational institutions, the moral importance of sovereignty, self-determination and cultural autonomy, the benefits and burdens of globalization, the moral significance of America's global power, and the tension between patriotic and cosmopolitan duties are some of the issues that may be addressed.

PHIL 249(2490) Feminism and Philosophy (also FGSS 249[2490]) (KCM)
Fall. 4 credits. Prerequisite: none. Open to freshmen. N. Sethi. This class will examine a variety of feminist attempts to understand and explain the various ways in which traditional philosophy reflects bias against women. We will also consider a variety of feminist viewpoints and examine how these are used to address "real life" issues regarding sexuality, violence, family structure, identity, peace, and war.

PHIL 261(2610) Knowledge and Reality (KCM)
Fall and spring. 4 credits. Prerequisite: none. Open to freshmen. T. Blosner; spring: Staff. For description, see department website.

PHIL 262(2620) Philosophy of Mind (KCM)
Fall. 4 credits. Prerequisite: none. Open to freshmen. N. Silins. We will evaluate views about the nature of mental states and about their relation to the brain, behavior, and the world. Questions we will consider include: are mental states the same as states of our brains? If not, what is the relation between them and states of our brains? How is it possible for mental states to cause our behavior? We will pay special attention to questions about the nature of consciousness and about whether consciousness can be understood in physical terms.

PHIL 263(2630) Religion and Reason (also RELST 262[2630]) (KCM)
Spring. 4 credits. Prerequisite: none. S. MacDonald. What must (or could) God be like, and what reasons do we have for thinking that a being of that sort actually exists? What difference would (or could) the existence of God make to our lives? This course examines the idea, shared by several major world religions, that God must be an absolutely perfect being. What attributes must a perfect being have? Must it have a mind, a body, or care for human beings? Is the concept of a perfect being coherent? Is the existence of a perfect being compatible with the presence of evil in the world and the existence of human freedom? Does human morality depend in any important way on the nature or will of a perfect being? Is a perfect being among the things that actually inhabit our universe? The course approaches these questions with the tools and methods of philosophical reasoning and through readings drawn from both classic texts and contemporary philosophical discussion.

PHIL 286(2860) Science and Human Nature (also S&T/S&B/SOC 286[2861]) (KCM)
Spring. 4 credits. Prerequisite: university level course in biology or equivalent, or permission of instructor. R. Boud. Examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential and to apply such theories to explain important social and psychological phenomena.

Intermediate or Advanced Courses
Some of these courses have prerequisites.

PHIL 309(3090) Plato (also CLASS 339[3669]1) (KCM)
Fall. 4 credits. Prerequisites: at least one previous course in philosophy at the 200 level or above; or permission of instructor. G. Fine. We will consider many of Plato's major dialogues, focusing on questions in metaphysics and epistemology, though some attention will also be paid to his ethical and political theories, especially in the Republic. Among the topics we will consider are the following: the theory of Forms; Socrates' disavowal of knowledge; dialectic and recollection; the nature of knowledge and how to acquire it; the nature of the soul and moral motivation; justice and happiness.

PHIL 310(3100) Aristotle (also CLASS 340[3664]) (KCM)
Spring. 4 credits. Prerequisite: one philosophy course. T. Irwin. An examination of the philosophical significance of Aristotle's major works,
PHIL 311(3110) Modern Rationalism #
Spring. 4 credits. Prerequisite: one philosophy course. Staff.
For description, see department web site.

PHIL 312(3120) Modern Empiricism # (KCM)
Fall. 4 credits. Prerequisite: one philosophy course. Staff.
For description, see department web site.

PHIL 316(3160) Kant # (KCM)
Spring. 4 credits. Prerequisite: one philosophy course. Staff.
For description, see department web site.

PHIL 320(3200) 19th and 20th Century Continental Philosophy
Fall. 4 credits. Prerequisite: one philosophy course. M. Kosch.

PHIL 331(3310) Deductive Logic (also MATH 28[2810]) (MQR)
Fall. 4 credits. N. H. Hodes.
The syntax and model-theory of classical propositional logic and classical predicate logic, including proofs of the soundness and completeness of Natural Deduction formalizations of these logics, with some attention to related material.

PHIL 332(3320) Philosophy of Language (also LING 332[3332])
Fall. 4 credits. Prerequisite: one philosophy course or permission of instructor. Staff.
The course is an introduction to, and an overview of, philosophy of language. We will cover a variety of issues, including singular reference, meaning, truth, analyticity, indeterminacy, and nativism. We will pay special attention to the development of philosophy of language from Frege's late nineteenth century writings through today, and to the interplay between philosophy of language and other areas of philosophy.

PHIL 333(3330) Problems in Semantics (also LING 333[3333], COGST 333[3330]) (KCM)
Spring. 4 credits. S. McConnell-Ginet.
For description, see LING 333.

PHIL 341(3410) Ethical Theory (KCM)
Spring. 4 credits. Prerequisite: one philosophy course or permission of instructor. N. Sturgeon.
Topic: Consequentialism and its critics. This course will examine one of the deepest divides in modern philosophical debates about ethics, between those who think the moral evaluation of acts, character traits, and social institutions ultimately depends solely on their good or bad consequences, and critics who find this approach fundamentally misguided.

PHIL 346(3460) Modern Political Philosophy (also GOVT 362[3625]) (KCM)
Fall. 4 credits. R. Miller.
A study of the leading contemporary theories of justice, including the work of Rawls, Nozick, Gauthier, and Scanlon. In discussing these theories and their critics, we will encounter radically different accounts of the moral significance of economic inequality, the kinds of freedom that governments ought to protect, the kinds of values and convictions that are a proper basis for laws (as opposed to being private matters); the tension between unequal political influence and democratic rights; and the roles of community, virtue, and group-loyalty in political justification. While mainly exploring these rival conceptions of freedom, equality, community, and obligation, we will also examine the implications of these theories for specific political controversies (e.g., abortion, welfare programs, and pornography).

PHIL 364(3640) Metaphysics (KCM)
Spring. 4 credits. B. Weatherson.
We will look at a number of contemporary debates in metaphysics, including debates between reductionists and anti-reductionists about nomological concepts, competing theories of persistence and issues about material constitution. We will pay some attention to higher level debates about whether we should expect there to be objective answers to the questions we are investigating.

PHIL 381(3810) Philosophy of Science: Knowledge and Objectivity (also S & TS 381[3811]) (KCM)
Fall. 4 credits. R. Boyd.
Topics in the philosophy of science.

PHIL 390(3900) Independent Study
Fall or spring. Credit TBA.
To be taken only in exceptional circumstances. Must be arranged by the student with his or her advisor and the faculty member who has agreed to direct the study.

Advanced Courses and Seminars
These courses are offered primarily for majors and graduate students.

PHIL 409(4090) German Philosophical Texts (KCM)
Fall and spring. Variable credit.
Prerequisites: knowledge of German and permission of instructor. Staff.
Reading and translation of philosophical texts in German.

PHIL 410(4100) Latin Philosophical Texts (also RELST 410[4100]) # (KCM)
Spring. Variable credit.
Prerequisites: knowledge of Latin and permission of instructor. Staff.
Reading and translation of philosophical texts in Latin.

PHIL 411(4110) Greek Philosophical Texts (also CLASS 611[7111]) # (KCM)
Fall and spring. Variable credit.
Prerequisites: knowledge of Greek and permission of instructor. Staff.
Reading and translation of philosophical texts in Greek.

PHIL 415(4150) Medieval Philosophy # (KCM)
Spring. 4 credits. Prerequisite: at least two courses in philosophy numbered 200 or above, or permission of instructor. S. MacDonald.

PHIL 416(4160) Modern Philosophy # (KCM)
Fall. 4 credits. Staff.
For description, see department web site.
PHIL 655(6650) Metaphysics

Fall. 4 credits. M. Eklund.

Our main topic will be different ways to conceive of realism/antirealism disputes both the global dispute and how to understand this type of dispute as it arises with respect to particular discourses such as mathematics, ethics, modality, the past, etc. We will discuss error theories (about ethics and mathematics), non-factualism, anti-realism as it is found in the writings of Dummett and Putnam, response-dependence, and, lastly, fictionalism. We will relate these different conceptions of truth correspondence, coherence, deflationism, epistemic conceptions of truth and semantic conceptions of truth. As should be clear from this rather varied list of issues, the course will be an overview of the problems in the area rather than something focused on a narrowly conceived problem.

PHIL 700(7000) Informal Study

Fall or spring. Credit TBA.

To be taken by graduate students only in exceptional circumstances and by arrangement made by the student with his or her Special Committee and the faculty member who has agreed to direct the study.

PHYSICS

S. A. Teukolsky, chair (109 Clark Hall, 255–6016); C. P. Franck, director of undergraduate studies (101 Clark Hall, 255–8158); physics@cornell.edu

The Department of Physics offers a full range of university-level work in physics, from general education courses for nonscientists to doctoral-level independent research. Major research facilities are operated by two component organizations, the Laboratory of Atomic and Solid State Physics (LASSP) and the Laboratory for Elementary Particle Physics (LEPP). The department also has extensive research efforts in condensed-matter physics and biophysics. LEPP operates a major high-energy particle physics research facility at Wilson Laboratory, the Cornell electron–positron storage ring (CESR). Theoretical work is carried out in many fields of physics, including astrophysics. There is a full schedule of weekly research-oriented seminars and colloquia. Students find many opportunities for research participation and summer employment.

Introductory physics sequences are: 101–102, 207–208, and 112–213–214, or its more analytic version 116–217–218. In addition, there is a group of general-education courses, PHYS 200–206, 209, 210, PHYS 101–102, a self-paced autotutorial course, is designed for students who do not intend to take further physics courses and who do not have preparation in calculus. PHYS 112 and 207 both require calculus (MATH 190 or 191 or 111), and admissibility is required for subsequent courses in the sequence. PHYS 101–102 or 207–208 may be taken as terminal physics sequences. The three-semester sequences 112–213–214 or 116–217–218, are recommended for engineers and physics majors.

Courses beyond the introductory level that might be of interest to nonmajors include PHYS 316 Modern Physics I; PHYS 330 Modern Experimental Optics; and PHYS 360 Electronic Circuits.

Advanced placement and credit are offered as outlined in "Advanced Placement of Freshmen." or students may consult the director of undergraduate studies, as should students requesting transfer credit for physics courses taken at another college.

The Major

The major program is constructed to accommodate those who wish to prepare for professional or graduate work in physics as well as those who wish to complete their major program in the field of physics but have other post-graduation goals. The physics major provides flexibility to pursue diverse interests through concentrations either within physics or outside physics.

Students who wish to major in physics are advised to start the physics sequence in the first semester of their freshman year. The major program still can be completed with a second-semester start, but flexibility in future course scheduling is reduced.

Prospective majors are urged to make an early appointment at the physics office for advice in program planning. Acceptance into the major program is normally granted upon completion of a year of physics and mathematics courses at Cornell with all course grades at the B-level or higher. Students wishing to declare the major should meet with the director of undergraduate studies, who will match the student with a major advisor following discussion of the student's interests. Details of the major program are consulted as the core is completed.

Such a concentration will reflect the student's interest in some area related to physics. The array of courses that comprise the concentration must have internal coherence. The array will normally be worked out in conference with the major faculty advisor and may be approved. Of the required 15 hours credit beyond the core, at least 8 credits must be in courses numbered above 300. Students in the past have chosen to concentrate in a wide variety of fields, including (but not limited to) astronomy, biochemistry, chemical physics, computer science, economics, education, geophysics, history, and philosophy of science, law, meteorology, or public policy. A combined biology-chemistry concentration is common for pre-medical students or those who wish to prepare for work in biophysics.

Physics Core

Common to all major programs is a requirement to complete a core of physics courses. In addition to the three-semester introductory sequence (PHYS 112–213–214 and 216 before 316 or 110–217–218), the core includes five upper-level courses—(1) the two-course sequence in modern physics (PHYS 316–317), (2) at least three semester hours of laboratory work selected from PHYS 310, 330, 360, 410, ASTRO 410, (3) an intermediate course in classical mechanics, and (4) an intermediate course in electromagnetism.

Accompanying these physics courses should be work in mathematics through at least MATH 222 or 294. Students following the professional/graduate school channel are expected to complete at least one additional year of applicable mathematics (A&EP 321–322 or appropriate selections from mathematics).

In addition to the core, each physics major must complete 15 semester hours of credit in an area of concentration that has been agreed on by the student and major faculty advisor.

Concentration within Physics

A student who wishes to pursue professional or graduate work in physics or a closely related field should follow a concentration within the field of physics. For those students with a strong secondary school preparation, the sequence PHYS 116–217–218 is encouraged. Students are strongly encouraged to start the sequence with PHYS 116, even if they qualify for advanced placement credit for PHYS 112 and/or 215. Core courses in mechanics and electromagnetism will normally be PHYS 316 and 317. The major requirements must be completed. The minimum 15 hours beyond the core must be composed of physics courses with numbers greater than 300 and must include the senior laboratory course PHYS 410. This means a physics program of at least 42 credits. Students with an interest in science and technology are encouraged of all majors. If this work is done as an independent project, PHYS 490, up to 8 credits can be applied to the concentration.

Concentration outside Physics

Such a concentration will reflect the student's interest in some area related to physics. The array of courses that comprise the concentration must have internal coherence. The array will normally be worked out in conference with the major faculty advisor and may be approved. Of the required 15 hours credit beyond the core, at least 8 credits must be in courses numbered above 300. Students in the past have chosen to concentrate in a wide variety of fields, including (but not limited to) astronomy, business, chemical physics, computer science, economics, education, geophysics, history, and philosophy of science, law, meteorology, or public policy. A combined biology-chemistry concentration is common for pre-medical students or those who wish to prepare for work in biophysics.

The department particularly wishes to encourage students with an interest in science education. Physics majors can obtain teaching certification by concentrating in education and then completing a one-year master of arts in teaching (MAT) degree. Information about the education concentration and MAT can be obtained from the Department of Education's Cornell Teacher Education Program or from the director of undergraduate studies in physics. For students with concentrations outside physics, the core requirements in mechanics and electromagnetism can be appropriately met with PHYS 314 and 323, respectively.

Students with an astronomy concentration who might continue in that field in graduate school should use ASTRO 410, 451, 452 as...
part of the concentration, they are encouraged to use PHYS 318 and 327 to satisfy the core requirements in mechanics and electromagnetism.

Honors
A student may be granted honors in physics upon the recommendation of the Physics Advisors Committee of the physics faculty. There is no particular course structure or thesis requirement for honors.

Double Majors
Double majors including physics are possible and not at all uncommon. It should be noted, however, that any course used to satisfy a requirement of another major may be used only in satisfaction of physics major requirements only if the student's concentration is within physics.

Courses with Overlapping Content
Because the department offers several courses with overlapping content, students should select courses carefully to meet the needs of their academic programs and to ensure credit for each course they take. Listed below are groups of courses with largely similar content. In general, students may receive credit for only one of the courses in each group.

PHYS 101, 112, 116, 207
PHYS 102, 208, 213, 217
PHYS 214, 218
PHYS 314, 318
PHYS 323, 327
PHYS 116, 216

In addition, students with credit for PHYS 101, 112, 116, or 207, or an advanced placement equivalent who wish to enroll in PHYS 200-206, 209, or 210 should obtain written permission from the instructor and the director of undergraduate studies in physics.

Course Prerequisites
Prerequisites are specified in physics course descriptions to illustrate the materials that students should have mastered. Students who wish to plan programs different from those suggested by the prerequisite ordering are urged to discuss their preparation and background with a physics advisor or with the instructor in the course. In many cases an appropriate individual program can be worked out without exact adherence to the stated prerequisites.

Courses

PHYS 012(1012) PHYS 112(1112)

Supplement
Spring. 1 credit. S-U grades only.

R. Lieberman.

Provides backup instruction for PHYS 112. Recommended for students who either feel insecure about taking PHYS 112 or simply want to develop their problem-solving skills. Emphasis is on getting the student to develop a deep understanding of basic concepts in mechanics. Much class time is spent solving problems and applications.

PHYS 013(1013) PHYS 213(2213)

Supplement
Fall. 1 credit. S-U grades only.

R. Lieberman.

Provides backup instruction for PHYS 213. Description is the same as for PHYS 012, except the material covered is electricity and magnetism.

Typical Physics Course Sequences (other sequences are also possible)

Semester | No AP math or physics | 1 year AP calculus and good HS physics | Outside concentrators | Outside concentrators (alternate)
--- | --- | --- | --- | ---
1st - Fall | 112 | 116 | 112 | 112
2nd - Spring | 213 | 217 | 213 | 213
3rd - Fall | 214, 216 | 218 | 214, 216 | 213
4th - Spring | 316, 3x0 | 316, 3x0 | 3x0 | 214, 216
5th - Fall | 317, 327, 3x0 | 317, 327, 3x0 | 316 | 310, 316
6th - Spring | 314/318, 443 | 318, 443 | 314 | 314, 3x0
7th - Fall | 341, 410 | 341, 410 | 317, 523 | 317, 523
8th - Spring | Elective(s) | Elective(s) | Elective(s) | Elective(s)

- For majors with concentrations outside physics, there is wide variation in individual programs, arranged to best match the field of concentration.
- Crossovers between the two sequences 112-113-214 and 116-217-218 are possible, although the combination 112-213-218 is difficult. PHYS 207 may be substituted for PHYS 112.
- Students taking 217 after 112 must co-register for 216.
- Students taking the honors sequence 116-217-218 are strongly encouraged to start with PHYS 116. Exceptionally well-prepared students may be able to begin work at Cornell with PHYS 217. Such students should visit the department office for advice in planning a course program.
- Physics electives for the major include 360, 444, 454, 455, 480, 490, 525, 553, 561, 572, the senior seminars 481-489, ASTRO 352 or 451-452, and A&E 434.
- One semester of intermediate laboratory, listed here as 3x0, is required.
- Well-prepared sophomores wishing to take PHYS 318 should consult the instructor before registering.

PHYS 101(1101) General Physics I (PBS)
Fall, summer (eight-, six-, or a four-week session within the first weeks of the eight-week session). 4 credits. Enrollment may be limited and freshmen are excluded. General introductory physics for physics majors. Prerequisites: three years high school mathematics, including some trigonometry. Students without high school physics should allow extra time for PHYS 101. Includes less mathematical analysis than PHYS 207 but more than PHYS 200-206, 209, 210. B. Richardson. Emphasizes quantitative and conceptual understanding of the topics of introductory physics developed without use of calculus. The course is mostly self-paced in a mastery-oriented format including eight subject units and a final retention (review) unit. Most instruction occurs in the learning center with personal tutoring by staff, assigned readings, problems, laboratory exercises, videotaped lectures, and solutions of sample test questions at our web site. Unit testing is designed to measure mastery with a limit of three test tries. Major topics for 101: kinematics, forces and dynamics, momentum, energy, fluid mechanics, waves, sound, light, thermal physics, kinetic theory, and thermodynamics. At the level of College Physics, second edition, by Giambattista, Richardson, and Richardson.

PHYS 102(1102) General Physics II (PBS)
Spring, summer (eight-week, six-week, or second four weeks only for those doing PHYS 101 in first four weeks). 4 credits. Enrollment may be limited. Prerequisite: for PHYS 102, PHYS 101 or 112 or 207. Includes less mathematical analysis than PHYS 208 but more than PHYS 200-206, 209, 210. B. Richardson. Emphasizes quantitative and conceptual understanding of the topics of introductory physics developed without use of calculus. The course is mostly self-paced in a mastery-oriented format including eight subject units and a final retention (review) unit each semester. Most instruction occurs in the learning center with personal tutoring by staff, assigned readings, problems, laboratory exercises, videotaped lectures, and solutions of sample test questions at the course web site. Unit testing is designed to measure mastery with a limit of three test tries taken at the time of the student's choice. Major topics for 102: electricity and magnetism, optics, relativity, quantum, nuclear, and particle physics. At the level of College Physics, second ed., by Giambattista, Richardson, and Richardson.

PHYS 103(1103) General Physics (PBS)
Summer. 4 credits. Prerequisite: three years high school mathematics, including trigonometry. Students without high school physics should allow extra time for PHYS 103. Introductory physics taught through interactive lectures, not recommended for students majoring in physics or engineering; fulfills some requirements as PHYS 101. Basic principles treated quantitatively but without calculus. Topics include kinematics, forces and Newton's laws, momentum, angular momentum, and energy, thermal physics and fluid mechanics, sound and waves, thermodynamics. Text is College Physics, by Giambattista, Richardson, and Richardson.
PHYS 112(1112) Physics I: Mechanics (PBS)
Fall, spring, summer (six-week session). 4 credits. Primarily for engineering students and prospective physics majors. Prerequisite: MATH 191. Recommended co-registration in MATH 192. Students co-registered in MATH 191, 112, or equivalent may enroll, but PHYS 112 employs some math concepts before their completion in these calculus courses. Fall, J. Thom, Staff.
Covers the mechanics of particles with focus on kinematics, dynamics, conservation laws, central force fields, periodic motion. Mechanics of many-particle systems: center of mass, rotational mechanics of a rigid body, and static equilibrium. At the level of University Physics, Vol. 1, by Young and Freedman.

PHYS 116(1116) Physics I: Mechanics and Special Relativity (PBS)
Fall, spring, 4 credits. More analytic than PHYS 112, intended for students who are comfortable with deeper, somewhat more abstract approach; intended mainly but not exclusively for prospective majors in physics, astronomy majors, or applied and engineering physics majors. Prerequisites: good secondary school physics course, familiarity with basic calculus, and enjoyment of puzzle-solving. Corrective transfers between PHYS 116 and PHYS 112 (in either direction) are encouraged during first three weeks of instruction. Fall, H. Tye; spring, staff.
At the level of An Introduction to Mechanics by Kleppner and Kolenkow.

PHYS 117(1117) Concepts of Modern Physics
Fall. 1 credit. Enrollment may be limited. Corequisite: PHYS 112 or 116 or 213 or 217. For freshmen who plan to major in physics, applied and engineering physics, or astronomy. S-U grades only. A. Sadoff.
Intended for freshmen who plan to major in physics or a closely related field (i.e., applied and engineering physics or astronomy) and would like to learn about the concepts of modern physics early in their physics education. Possible topics of discussion are methodology, symmetry and conservation laws, fundamentals of modern physics, the unification of forces and matter, and big-bang cosmology.

PHYS 190(1110) Supplemental Introductory Laboratory
Fall, spring. 1 credit. Times TBA with instructor. Limited enrollment. S-U grades only. Prerequisites: 3 transfer credits for introductory physics lecture material. A degree requirement for laboratory component of that introductory course; approval of director of undergraduate studies; and permission of lecturer of that course at Cornell. Students must file PHYS 190 form 121 Clark Hall with physics department course coordinator. Students perform the laboratory component of one of the introductory courses (PHYS 112, 207, 208, 213, 214) to complement the lecture-related course credit acquired elsewhere. Those wishing to take equivalent of one of these introductory courses at another institution should receive prior approval from the physics director of undergraduate studies.

PHYS 201(1201) Why the Sky Is Blue: Aspects of the Physical World (PBS)
Fall. 3 credits. A. Sadoff.
Descriptive physics course aimed specifically at the nonscience student. There is an emphasis on the ideas of modern physics where the approach is both historical and thematic. The methodology of science and the nature of evidence is emphasized. An overriding theme is the unification and character of physical laws as shown, for example, through the great principles of symmetry and conservation. While a few computational problems are assigned, the purpose is to help students to understand the concepts rather than to master problem-solving techniques.

PHYS 202(1202) How Physics Works (PBS)
Spring. 3 credits. Intended for nonphysics majors. No background in either science or mathematics beyond high school algebra assumed. P. Stein.
Introduces students who are not majoring in scientific or quantitative disciplines to the techniques and ways of reasoning employed in physics. By gaining an understanding of two milestones in the history of physics (the discoveries of Newton and the application of the laws of laws of probability to physical problems), students learn about the interaction of experiment, mathematics, and conjecture that has fueled the advance of physics.

PHYS 203(1203) Physics of the Heavens and the Earth—A Synthesis (PBS)
Spring. 3 credits. Prerequisite: none; upper high school algebra and geometry. For nonscience majors. H. Padamsee.
Shows how the unification of apparently distinct areas of physics leads to an explosion in the growth of our knowledge and understanding. The material is divided into three parts: the physics of motion on earth; motion in the heavens; and synthesis. Trace how ideas about celestial and terrestrial motion evolved separately at first, from the ancient ideas of Greek philosophers to the dynamics and telescopic discoveries of Galileo during the Renaissance. The two arenas finally melded under Newton's Universal Gravitation. Einstein's special and general theories of physics (the concept of space-time) and the unification of apparently disparate fields is provided as a basis for understanding. There is a major emphasis on "how do we know the laws?" These are stories of breakthrough discoveries and brilliant insights made by fascinating people, offering a humanistic perspective.

PHYS 204(2104) Physics of Musical Sound (also MUSIC 204[2111]) (PBS)
Spring. 3 credits. Intended for nonscientists. Does not serve as prerequisite for further science courses. Assumes no scientific background but uses high school algebra. K. Selby.
Explores musical sound from a physics point of view. Topics include: how various musical instruments work, pitch, scales, intervals and tunings; hearing; room acoustics; reproduction of sound, scattering; and the use of sound in science (physics and medicine). Weekly lab assignments are integral to the course.

PHYS 205(1205) Reasoning about Luck (PBS)
Fall. 3 credits. Intended for nonscientists. Does not serve as prerequisite for further science courses. Assumes no scientific background but uses high school algebra. K. V. Ambegaokar.
When and how natural scientists can cope rationally with chance is the theme of this course. Starting from simple questions—such as how one decides if an event is likely or unlikely, or just incomprehensible—an understanding is reached of more subtle points: why it is, for example, that in large systems likely events can become overwhelmingly likely. From last considerations, the interested student is introduced to the second law of thermodynamics, that putative bridge between C. P. Snow's two cultures. The way in which chance occurs, albeit somewhat mysteriously, in quantum mechanics is also explained. There are several problem sets, but the main assignment is a 15- to 20-page paper on one or more of the topics covered.

PHYS 207(2207) Fundamentals of Physics I (PBS)
Fall. 4 credits. Prerequisites: high school physics plus MATH 111, 190, or 191, or solid grasp of basic analytic and introductory calculus. Corequisite: math course approved by instructor. R. Thorne.
A two-semester introduction to physics, intended for students majoring in an analytically oriented biological science, a physical science, or mathematics. The combination of lectures illustrated with applications from the sciences, medicine, and everyday life, weekly labs tightly coupled to lectures that introduce the introductory calculus. Assumes no scientific background but uses high school algebra, introductory calculus (e.g., MATH 111, 190, or 191). 207-208 is a two-semester introduction to physics with emphasis on tools generally applicable in sciences, intended for students majoring in physical science, mathematics, or analytically oriented biological science. Covers electricity and magnetism, and topics from geometrical and physical optics, quantum and nuclear physics. At the level of Fundamentals of Physics, Vol. II, seventh ed., by Halliday, Resnick, and Walker.

PHYS 208(2208) Fundamentals of Physics II (PBS)
Spring. 4 credits. Prerequisites: PHYS 207 or 112 or 101: substantial contact with introductory calculus (e.g., MATH 111, 190, or 191). 207-208 is a two-semester introduction to physics with emphasis on tools generally applicable in sciences, intended for students majoring in physical science, mathematics, or analytically oriented biological science. Covers electricity and magnetism, and topics from geometrical and physical optics, quantum and nuclear physics. At the level of Fundamentals of Physics, Vol. II, seventh ed., by Halliday, Resnick, and Walker.

PHYS 213(2213) Physics II: Heat/ Electromagnetism (PBS)
Fall, spring, summer (six-week session). 4 credits. Primarily for engineering and prospective physics majors. Prerequisite: PHYS 112 and MATH 192. Students co-registered in MATH 192, 221, or equivalent may enroll, but PHYS 213 employs some math concepts before their completion in these calculus courses. Fall, L. Gibbons; spring, Staff.
Topics include temperature, heat, the laws of thermodynamics, electrostatics, behavior of matter in electric fields, DC circuits, magnetic fields, Faraday’s law, AC circuits, and electromagnetic waves. At the level of University Physics, Vols. 1 and 2, by Young and Freedman, 11th ed.

**PHYS 214(2214) Physics III: Optics, Waves, and Particles (PBS)**
Fall, spring. 4 credits. Primarily for engineering students and prospective physics majors. Prerequisites: PHYS 213 and MATH 293. Students co-registered in MATH 293, 222, or equivalent. Students who have done very well in PHYS 214 and in mathematics and who desire more analytic treatment than that of PHYS 214. Prospective physics majors are encouraged to register. Prerequisites: PHYS 217 (with grade of B or higher) and course in differential equations or permission of instructor. Fall, D. Carafano, M. Wang.

The first part of the course gives a thorough discussion of wave equations, including traveling waves, standing waves, energy, momentum, power, reflection and transmission, interference and diffraction. Derives wave equations on strings, sound, elastic media, and light. Covers solutions of these wave equations and Fourier series and transforms. The second part introduces thermodynamics and statistical mechanics, including heat engines, the Carnot cycle, and the concepts of temperature and entropy. Evening exams may be scheduled. At the level of Physics of Waves by Elmore and Heald.

**PHYS 310(3310) Intermediate Experimental Physics (PBS)**
Spring. 3 credits. Enrollment may be limited. Prerequisites: PHYS 214 or 218; PHYS 116 or 212; and PHYS 217 or 207 or permission of instructor. Students select from a variety of experiments. An individual, independent approach is encouraged. Facilities of the PHYS 410 lab are available for some experiments.

**PHYS 317(217) Physics II: Electricity and Magnetism (also A&EP 217(2170)) (PBS)**
Fall, spring. 4 credits. Enrollment may be limited. Intended for students who have done very well in PHYS 112 or 116 and in mathematics and who desire more analytic treatment than that of PHYS 213. Prospective physics majors encouraged to register. Prerequisites: approval of student’s advisor and permission of instructor. Co-requisite: MATH 293 or equivalent. Placement quiz may be given early in the semester. Prerequisite: PHYS 217 or equivalent, or consent of instructor. Vector calculus is taught in this course but previous contact, especially with the operations grad, div, and curl, is helpful. It is assumed the student has seen special relativity at level of PHYS 116 or is currently enrolled in PHYS 216 and that student has covered material of MATH 192. Fall, A. LeClair; spring, staff.

At the level of Electricity and Magnetism, Vol. 2, by Purcell (Berkeley Physics Series).

**PHYS 218(2218) Physics III: Waves and Thermal Physics (PBS)**
Fall, spring. 4 credits. Enrollment may be limited. Intended for students who have done very well in PHYS 116 and 217 and in mathematics and who desire more analytic treatment than that of PHYS 214. Prospective physics majors are encouraged to register. Prerequisites: PHYS 217 (with grade of B or higher) and course in differential equations or permission of instructor. Fall, D. Carafano, M. Wang.

The first part of the course gives a thorough discussion of wave equations, including traveling waves, standing waves, energy, momentum, power, reflection and transmission, interference and diffraction. Derives wave equations on strings, sound, elastic media, and light. Covers solutions of these wave equations and Fourier series and transforms. The second part introduces thermodynamics and statistical mechanics, including heat engines, the Carnot cycle, and the concepts of temperature and entropy. Evening exams may be scheduled. At the level of Physics of Waves by Elmore and Heald.

**PHYS 317(3317) Applications of Quantum Mechanics (PBS)**
Fall. 3 credits. Prerequisite: PHYS 316. K. Schwab.

Covers a number of applications of quantum mechanics to topics in modern physics. Topics include the physics of single and multi-electron atoms, quantum statistical mechanics, molecular structure, quantum theory of metals, band theory of solids, superconductivity, nuclear structure, radioactive decay, and elementary particle physics.

**PHYS 316(3316) Basics of Quantum Mechanics (PBS)**
Fall, spring. 3 credits. Prerequisites: PHYS 214 or 218; PHYS 116 or 216; and co-registration in at least MATH 294 or equivalent. Covers essence of techniques for solving problems in quantum mechanics. Fall, J. C. Davis; spring, G. Hofstaetter.

Topics include breakdown of classical concepts in microphysics; light quanta and matter waves; Schrödinger equation and solutions for square well, harmonic oscillator, and the hydrogen atom; angular momentum, spin, and magnetic moments. At the level of An Introduction to Quantum Physics by French and Taylor.

**PHYS 327(3327) Advanced Electricity and Magnetism (PBS)**
Fall. 4 credits. Prerequisites: PHYS 217/218 or permission of instructor. Corequisite: A&EP 321 or appropriate mathematics course(s). Intended for physics majors concentrating in physics or astronomy. PHYS 327 covers similar material at a demanding level. Assumes knowledge of material at level of PHYS 217 and makes extensive use of vector calculus, and some use of Fourier transforms and complex variables. F. L. Hand.

Covers electromagnetostatics, boundary value problems, dielectric and magnetic media, Maxwell’s Equations, electromagnetic waves, including guided waves, and sources of electromagnetic radiation. At the level of Introduction to Electrodynamics by Griffths.

**PHYS 322(3322) Intermediate Electricity and Magnetism (PBS)**
Fall. 4 credits. Prerequisites: PHYS 208 or 213/214 (or equivalent) and MATH 293-294 (or equivalent). Recommended: co-registration in A&EP 321 or appropriate mathematics course. Intended for physics majors with concentration outside of physics or Astronomy. PHYS 322 covers similar material at a more analytical level. C. Franck.

Topics include electro/magnetostatics, boundary value problems, dielectric and magnetic media, Maxwell’s Equations, electromagnetic waves, including guided waves, and sources of electromagnetic radiation. At the level of Introduction to Electrodynamics by Griffths.
PHYS 330(3330) Modern Experimental Optics (also A&EP 330[3300]) (PBS)
Fall. 4 credits. Limited enrollment. Prerequisite: PHYS 214 or equivalent. G. Hoffstaetter.
Practical laboratory course in basic and modern optics. The six projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-self optical and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques. At the level of Optics by Hecht.

PHYS 341(3341) Thermodynamics and Statistical Physics (PBS)
Fall. 4 credits. Prerequisites: PHYS 214, 316, and MATH 294. I. Cohen.
Covers statistical physics, developing both thermodynamics and statistical mechanics simultaneously. Also covers concepts of temperature, laws of thermodynamics, entropy, thermodynamic relations, and free energy. Applications to phase equilibrium, multicomponent systems, chemical reactions, and thermodynamic cycles. Application of statistical mechanics to physical systems, and an introduction to treatment of Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac statistics with applications. Elementary transport theory. At the level of Fundamentals of Statistical and Thermal Physics by Reif.

PHYS 360(3360) Electronic Circuits (also A&EP 363[3630]) (PBS)
Fall, spring. 4 credits. Prerequisites: undergraduate course in electricity and magnetism (e.g., PHYS 208, 213, or 217) or permission of instructor. No previous electronics experience assumed, although course moves quickly through introductory topics such as basic dc circuits. Fall semester usually has smaller enrollment. S-U, grade available by permission of instructor for students who do not require course for major. Fall, E. Kirkland; spring, R. Thorne.
Practical electronics as encountered in a scientific or engineering research/development environment. Analyze, design, build, and test circuits using discrete components and integrated circuits. Analog circuits: resistors, capacitors, filters, operational amplifiers, feedback amplifiers, oscillators, comparators, passive and active filters, diodes and transistor switches and amplifiers. Digital circuits: combinational and sequential logic (gates, flip-flops, registers, counters, timers), analog to digital (ADC) and digital to analog (D/A) conversion, signal averaging, computer architecture and interfacing. Additional topics may include analog and digital signal processing, light wave communications, transducers, and noise reduction techniques. At the level of Art of Electronics by Horowitz and Hill.

PHYS 400(4400) Informal Advanced Laboratory
Fall, spring. 1-3 credits, variable. Prerequisites: two years physics or permission of instructor. Fall, P. McEuen; spring, staff.
Experiments of widely varying difficulty in one or more areas, as listed under PHYS 410, may be done to fill the student's special requirements.

PHYS 410(4410) Advanced Experimental Physics (PBS)
Fall, spring. 4 credits. Prerequisite: senior standing or permission of instructor; PHYS 214 (or 310 or 360) plus 318 and 327, or permission of instructor. Fall, P. McEuen; spring, staff.
Selected topics in experimental concepts and techniques. About 60 different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic-ray, and nuclear physics. The student performs three to four different experiments, depending on difficulty, selected to meet individual needs and interests. Independent work is stressed. Lectures are on experimental techniques used in experiments in the laboratory and on current research topics.

PHYS 443(4443) Intermediate Quantum Mechanics (PBS)
Spring. 4 credits. Prerequisites: PHYS 327 or 323; and PHYS 316 and A&EP 321 or appropriate mathematics course(s); co-registration in PHYS 314 or 318, or permission of instructor. Assumes prior experience in linear algebra, differential equations, and Fourier transforms. M. Neubert.
Provides an introduction to concepts and techniques of quantum mechanics, at the level of An Introduction to Quantum Mechanics by Griffiths.

PHYS 444(4444) Introduction to Particle Physics (PBS)
Spring. 4 credits. Prerequisite: PHYS 443 or permission of instructor. A. Ryd.
The standard model of particle physics; behavior of high-energy particles and radiation; elementary particles; basic properties of accelerators and detectors; general symmetries and conservation laws. At the level of Introduction to Elementary Particles by Griffiths or Modern Elementary Particle Physics by Kane.

PHYS 445(4445) Introduction to General Relativity (also ASTRO 445[4445]) (PBS)
Fall. 4 credits. Offered as alternative to more comprehensive, two-semester graduate sequence PHYS 553 and 554. E. Flanagan.
One-semester introduction to general relativity, which teaches physics concepts and phenomenology while keeping mathematical formalism to a minimum. General relativity is a fundamental cornerstone of physics that underlies several of the most exciting areas of current research. These areas include theoretical high-energy physics and the search for a quantum theory of gravity, relativistic astrophysics, and in particular, cosmology, where there have been several groundbreaking observations over the last few years. It uses the new textbook Gravity: An Introduction to Einstein’s General Relativity by Hartle.

PHYS 454(4545) Introductory Solid-State Physics (also A&EP 450[4500]) (PBS)
Fall. 4 credits. Prerequisite: PHYS 443, A&EP 361, or CHEM 793 highly desirable but not required. F. Wise.
Introduction to modern solid-state physics, including crystal structure, lattice vibrations, electron theory of metals and semiconductors, and selected topics from magnetic properties, optical properties, superconductivity, and defects. At the level of Introduction to Solid State Physics by Kittel and Solid State Physics by Ashcroft and Mermin.

PHYS 455(4455) Geometrical Concepts in Physics (PBS)
Spring. 4 credits. Prerequisite: PHYS 323 or equivalent and at least co-registration in PHYS 318 or permission of instructor.
Usually offered every other spring. Most non-quantum physical theories are based on one or another form of geometry. Newtonian mechanics on Euclid, electromagnetism on Minkowski, general relativity on Riemann, string theory on higher dimensionality. This course surveys the unification of classical physics that accompanies the application of Hamilton’s principle of least action to these various geometries. At the level of A First Course in String Theory, Part I by Zwiebach or Geometric Mechanics by Talman.

PHYS 480(4480) Computational Physics (also PHYS 680[7680], ASTRO 690[7690]) (PBS)
Fall. 3 credits. Assumes familiarity with standard mathematical methods for physical sciences and engineering, differential equations and linear algebra in particular and with computer programming in general (e.g., Fortran or C). S-U grades only. T. Arias.
Covers numerical methods for ordinary and partial differential equations, linear algebra and eigenvalue problems, nonlinear equations, and fast Fourier transforms and nonlinear optimization from the hands-on perspective of how they are used in modern computational research in the era of open software and the web. Depending on the instructor, the course emphasizes different areas of computational science: Emphasis ranges from general methods for tackling PDEs, including finite-difference and spectral methods, to developing students’ own working ab initio computer program for calculating the properties of molecules and materials with the methods that won Walter Kohn and John Pople the Nobel Prize in Chemistry in 1998.

PHYS 481(4481) Quantum Information Processing (also PHYS 681[7681], COM S 483[4812]) (PBS)
Spring. 2 credits. S-U grades only. Prerequisite: familiarity with theory of finite-dimensional vector spaces over complex numbers. Next offered 2007-2008. A technology that successfully exploits fundamental principles of quantum physics can spectacularly alter both the nature of computation and the means available for the transmission of information.)
PHYS 488(4488) Advanced Topics in Accelerator Physics (also PHYS 688(7688))
Spring. 3 credits. S-U grades only. G. Hofstatter.

PHYS 490(4490) Independent Study in Physics
Fall or spring. Variable to 4 credits; max. of 8 credits may be applied to physics major. Prerequisite: permission of instructor who will direct proposed work.Copy of Request for Independent Study form must be filed with physics department course coordinator, 121 Clark Hall. Individual project work (reading or laboratory) in any branch of physics.

PHYS 500(6500) Informal Graduate Laboratory
Fall, spring. Variable to 2 credits. Prerequisite: permission of instructor, Fall, P. McEuen; spring, staff.

PHYS 510(6510) Advanced Experimental Physics
Fall, spring. 3 credits. Optionallec associated with PHYS 410 available M. Fall, P. McEuen; spring, staff.

PHYS 553-554(6553-6554) General Relativity (also ASTRO 509-510(6509-6510))
553, fall; 554, spring. 4 credits. Prerequisite: knowledge of special relativity and methods of Classical Mechanics by Goldstein. J. York.

PHYS 557(6574) Applications of Quantum Mechanics II
Spring. 4 credits. Knowledge of concepts and techniques covered in PHYS 561 and 572 and of statistical mechanics at undergraduate level assumed.

PHYS 574(6574) Applications of Quantum Mechanics II
Spring. 4 credits. Knowledge of concepts and techniques covered in PHYS 561 and 572 and of statistical mechanics at undergraduate level assumed.

PHYS 635(7635) Solid-State Physics I
Fall. 3 credits. Prerequisite: good undergraduate solid-state physics course (e.g., PHYS 454), as well as familiarity with graduate-level quantum mechanics.

PHYS 636(7636) Solid-State Physics II
Spring. 3 credits. Prerequisite: PHYS 635. P. Brouwer.

PHYS 651(7651) Relativistic Quantum Field Theory I
Fall. 3 credits. S-U grades only. M. Perelstein.

PHYS 652(7652) Relativistic Quantum Field Theory II
Spring. 3 credits. S-U grades only. H. Tye.

PHYS 572(6572) Quantum Mechanics I
Fall. 4 credits. V. Elser.

PHYS 574(6574) Applications of Quantum Mechanics II
Spring. 4 credits. Knowledge of concepts and techniques covered in PHYS 561 and 572 and of statistical mechanics at undergraduate level assumed.

PHYS 639(6599) Cosmology (also ASTRO 599(6599))

PHYS 645(7645) Topics in High-Energy Particle Physics
Fall. 3 credits. Next offered 2007-2008.

PHYS 646(7646) Topics in High-Energy Particle Physics
Spring. 3 credits. M. Neubert.

PHYS 651(7651) Relativistic Quantum Field Theory I
Fall. 3 credits. S-U grades only. M. Perelstein.

PHYS 652(7652) Relativistic Quantum Field Theory II
Spring. 3 credits. S-U grades only. H. Tye.
breaking, and anomalies. At the level of An Introduction to Quantum Field Theory by Peskin and Schroeder.

**PHYS 653(7653) Statistical Physics**
Fall. 3 credits. Prerequisites: quantum mechanics at level of PHYS 572, statistical physics at level of PHYS 562. S-U grades only. E. Mueller.

Survey of topics in modern statistical physics selected from phase transitions and the renormalization groups, linear response and fluctuations-dissipation theories, quantum statistical mechanics; and nonequilibrium statistical mechanics.

**PHYS 654(7654) Theory of Many-Particle Systems**
Spring. 3 credits. Prerequisites: PHYS 562, 574, 635, 636, and 653 or permission of instructor. S-U grades only. Staff.

Advanced topics in condensed-matter physics are taught by several members of the faculty. Past modules include random matrix theory, the quantum Hall effect, disordered systems and computational complexity, and asymptotic analysis. Future topics may include dilute cold gases and exotic quantum phenomena, thermodynamic Green's functions, 1/N expansions, density functional theory, instantons, dynamical mean-field theory, conformal field theory, Fermi liquid theory and superconductivity, localization and disordered metals, renormalization groups, duality transformations, Luttinger liquids, frustrated and quantum magnetism, and Chern-Simons gauge theory. Detailed course content will be announced at the end of the fall semester.

[**PHYS 656(7656) Introduction to Accelerator Physics and Technology** (also PHYS 456(4456))]

For description, see PHYS 456.]

[**PHYS 661(7661) Advanced Topics in High-Energy Particle Theory**]

Presents advanced topics of current research interest. Subject matter varies from year to year. Some likely topics are two-dimensional conformal field theory with applications to string theory.]

[**PHYS 665(7665) Seminar: Astrophy Gas Dynamics** (also ASTRO 659(7699))]
Fall. 2 credits. D. Lai.

For description, see ASTRO 699.

[**PHYS 667(7667) Theory of Stellar Structure and Evolution** (also ASTRO 560(5650))]
For description, see ASTRO 560.

[**PHYS 680(7680) Computational Physics** (also PHYS 480(4480), ASTRO 690(7690))]
For description, see PHYS 480.

[**PHYS 681-689(7681–7689) Special Topics**]
Offerings are announced each semester. Typical topics are group theory, analyticity in particle physics, weak interactions, superfluids, stellar evolution, surface physics, Monte Carlo methods, low-temperature physics, magnetic resonance, phase transitions, and the renormalization group.

[**PHYS 681(7681) Quantum Information Processing** (also PHYS 481(4481), COM S 483(4481))]

For description, see PHYS 481.]

[**PHYS 682(7682) Computational Methods for Nonlinear Systems** (also CIS 628(6228))]
Fall. 4 credits. Enrollment may be limited. J. Sethna and C. Myers.

Graduate computer laboratory, focusing on the next generation of tools for computation, simulation, and research in a broad range of fields of interest to the IGERT program and the Life Sciences Initiative. The course is pitched at a high level of computational sophistication, but is designed to fit into the busy schedules of first-year graduate students.

[**PHYS 687(7687) Selected Topics in Accelerator Technology** (also PHYS 487(4487))]

For description, see PHYS 487.]

[**PHYS 688(7688) Advanced Topics in Accelerator Physics** (also PHYS 488(4488))]
For description, see PHYS 488.

[**PHYS 690(7690) Independent Study in Physics**]
Fall or spring. Variable to 4 credits. Students must advise department course coordinator, 121 Clark Hall, of faculty member responsible for grading their project. S-U grades only.

Special graduate study in some branch of physics, either theoretical or experimental, under the direction of any professorial member of the staff.

**POLISH**
See "Department of Russian."

**PORTUGUESE**
See "Department of Romance Studies."

**PSYCHOLOGY**

The major areas of psychology represented in the department are perceptual and cognitive psychology, biopsychology, and personality and social psychology. These areas are very broadly defined, and the courses are quite diverse. Biopsychology includes animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Perceptual and cognitive psychology includes such courses as cognition, perception, memory, and psycholinguistics. Personality and social psychology is represented by courses in social psychology and personality (e.g., Psychology and Law, Judgment and Decision Making), as well as courses in fieldwork and psychopathology. In addition to the three major areas mentioned above, the department emphasizes the statistical and logical analysis of psychological data and problems.

**The Major**
Admission to the major is usually granted to any student in good standing in the college who has passed three or more psychology courses with grades of C+ or better. Provisional admission requires two such courses. To apply to the major and receive an advisor, a major application form may be obtained from the department office (211 Urbs Hall) and should be completed and taken to one of the faculty members whose name is listed on the form.

Requirements for the major are:

1. a total of 40 credits in psychology (including prerequisites), from which students majoring in psychology are expected to choose, in consultation with their advisors, a range of courses that covers the basic processes in psychology (laboratory and/or field experience is recommended); and
2. demonstration of proficiency in statistics before the beginning of the senior year.

Normally it is expected that all undergraduate psychology majors will take at least one course in each of the following three areas of psychology:

1. Perceptual cognition and development
2. Behavioral and evolutionary neuro science (BEN)
3. Social, personality, and abnormal psychology

The following classification of Department of Psychology offerings is intended to help students and their advisors choose courses that will ensure that such breadth is achieved.

4. Other courses: PSYCH 101, 199, 347, 350, 410, 440, 441, 470, 471, 472, 473, 475, 478, 479. The major advisor determines to which group, if any, these courses may be applied.

With the permission of the advisor, courses in other departments may be accepted toward the major requirements.

**Fieldwork, independent study, and teaching.**

The department requires students to observe the following limits on fieldwork, independent study, and teaching:

1. Undergraduates may not serve as teaching assistants for psychology courses if they are serving as teaching assistants for any other course during the same semester.
2. An undergraduate psychology major cannot apply more than 12 of the credits
and factual material and the ability to devise and execute a creative empirical research project. The honors program offers students the closest contact and consultation with faculty they will likely experience while at Cornell, and all qualified majors who are planning graduate work in any academic field should consider applying for the program. However, it should also be noted that conducting honors research and completing a thesis is an extremely demanding undertaking, both in time and effort. Due to the demands of both research and writing, it is expected that after the Christmas break, honors students will return to campus as early as possible to continue their work, as well as remain on campus through all of spring break.

The focus of the honors program is conducting an experiment, analyzing the data that result, and describing the project in a thesis that closely approximates a professional-level research report both in form and quality. The research project is to be conducted under the close sponsorship of a faculty member. Subject to approval, the student in the psychology department per se. Students that successfully complete the honors program graduate with one of levels of honors, which is noted on their diplomas. The customary level is cum laude, awarded to approximately two-thirds of psychology honors graduates. Approximately one-third receive the next higher level of honors, which is magna cum laude. A student who has both an unusually strong academic record in psychology and completes a thesis of exceptionally high quality will be considered for summa cum laude, the highest level of honors. However, those are unusual cases. The T. A. Ryan Award, accompanied by a cash prize, is awarded to the student who conducts the best honors project in a given year. Students in the program register for 3 or 4 credits of PSYCH 471 Independent Study in both fall and spring semesters. Format and binding of the thesis follows guidelines for the doctoral dissertation master's thesis, outlined by the Cornell University Graduate School. Stylistic format is APA style. Alternative style formats are possible, if approved in advance.

Computing in the Arts Undergraduate Concentration

A concentration in Computing in the Arts with an emphasis on psychology is available both to psychology majors and to students majoring in other subjects. For more information, see page 4.

Courses

PSYCH 101/1101 Introduction to Psychology: The Frontiers of Psychological Inquiry (SBA)
Fall, summer (six-week). 3 credits. Attendance at all mandatory. Students who wish to withdraw may do so until the fifth day. Students who enroll in PSYCH 101, M. W. F. J. B. Muns. The study of human behavior. Topics include brain functioning and mind control, psychophysiology of sleep and dreaming, psychological testing, perception, learning, cognition, memory, language, motivation, personality, abnormal behavior, psychotherapy, social psychology, and other aspects of applied psychology. Emphasis is on developing skills to critically evaluate claims made about human behavior.

PSYCH 102/1200 Introduction to Cognitive Science (also COGST 101[1101], COM S 101[1170], LING 170[1170], PHIL 191[1910]) (KCM)
Fall, summer (six-week). 3 or 4 credits (4-credit option instead of exams). T. R. M. Spivey. For description, see COGST 101.

PSYCH 103/1103 Introductory Psychology Seminars
Fall. 1 credit. Limited to 300 students. Corequisite: PSYCH 101. 12 different time options. J. B. Maas and staff. Weekly seminar that may be taken in addition to PSYCH 101 to provide an in-depth exploration of selected areas in the field of psychology. Involves extensive discussion and a seminar paper related to the seminar topic. Choice of seminar topics and meeting times are available at the second lecture of PSYCH 101.

PSYCH 111/1110 Brain, Mind, and Behavior (also BIOL/COGST 111[1110]) (PBS)
Spring, 3 credits. Letter grades only. Prerequisite: freshmen and sophomores in humanities and social sciences; juniors allowed. M. W. F. E. Adkins Regan and R. Hoy. For description, see COG 111.

PSYCH 165/1650 Computing in the Arts (also COM S/CIS/ENGRI 165[1650], MUSIC 165[1465])
Fall. 3 credits. G. Bailey. For description, see COM S 165.

PSYCH 201/2010 Cognitive Science in Context Laboratory (also COGST 201[2010], COM S 201[2710]) (KCM)
Spring, 4 credits. Limited to 24 students. Prerequisite: PSYCH 102, COGST/COM S 101, LING 170, or PHIL 191. Knowledge of programming languages not assumed. Disc and demos, M. W. F. plus additional hours TBA. 259 Uris Hall. O. Field and staff. For description, see COGST 201.

PSYCH 205/2050 Perception (also PSYCH 605/6050)
Spring, 3 credits. Open to all students. Graduate students, see PSYCH 605. T. R. J. E. Cutting. One of four introductory courses in cognitive psychology. Basic perceptual concepts and phenomena are discussed with emphasis on stimulus variables and sensation mechanisms. All sensory modalities are considered. Visual and auditory perception are discussed in detail.

PSYCH 209/2090 Developmental Psychology (also PSYCH 709/7090) (KCM)
Spring, 4 credits. Graduate students, see PSYCH 709. M. W. F. Goldstein. One of four introductory courses in cognition and perception. A comprehensive introduction to current thinking and research in developmental psychology that approaches problems from both psychobiological and cognitive perspectives. We will use a cognitive approach to assess principles of development change. The course focuses on the development of perception, action, cognition, language and social understanding in infancy and early childhood.
Introduces the idea of cognition as information processing or computation, using examples from perception, attention and consciousness, memory, language, and thinking. Participants acquire conceptual tools that are essential for following the current thought on the nature of mind and its relationship to the brain.

PSYCH 215(2150) Psychology of Language (also COGST 215(2150), LING 215(2215) (KCM)

Spring. 3 credits. Prerequisites: sophomore, junior, or senior standing; any one course in psychology or human development. Next offered 2007–2008. T. R. M. Christiansen.

Provides an introduction to the psychology of language. The purpose of the course is to introduce students to the scientific study of psycholinguistic phenomena. Covers a broad range of topics from psycholinguistics, including the origin of language, the different components of language (phonology, morphology, syntax, and semantics), processes involved in reading, computational modeling of language processes, the acquisition of language (both under normal and special circumstances), and the brain bases of language.

PSYCH 223(2230) Introduction to Biopsychology (PBS: supplementary list)

Fall. 3 credits. Prerequisites: none. May be used to satisfy psychology major breadth requirement and as alternative prerequisite for upper-level biopsychology courses.

Introduction to psychology from a biological perspective, including both evolutionary and physiological approaches to behavior. Topics include the structure and function of the nervous system, the cellular and biochemical models of behavior, hormones and behavior, biological bases of learning, cognition, communication, and language, and the evolution of social organization.

Introductory courses in social and personality psychology. Each of the following three courses (260, 275, 280) provides an introduction to a major area of study within social and personality psychology. These courses are independent of one another, and none have any prerequisites. Students may take any one of the courses or any combination of them (including all three). Courses may be taken in any order or simultaneously.

PSYCH 231(2310) SSP: Borges and I: a Quest for Self-Knowledge (KCM)

Spring. 4 credits. Limited to 15 students. S. Edelman.

This seminar will survey the state of the art in theoretical neuroscience, a discipline whose ultimate goal is finding the mind in the brain. Our journey through the scientific literature on minds and brains, covering topics such as memory and identity, love, solitude and society, language, creativity, religion, and morality, will be accompanied by a choice of short stories by Jorge Luis Borges.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-specific study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

PSYCH 265(2650) Psychology and Law (SBA)

Examines the implications of psychological theory and methods for law and the criminal justice system. Concentrates on psychological research on legal topics (e.g., confession, eyewitness testimony, jury decision making, homicide, aggression, the prison system), social issues (e.g., death penalty, affirmative action), and on psychologists as participants in the legal system (e.g., assessing insanity and dangerousness and for expert testimony).

PSYCH 275(2750) Introduction to Personality Psychology (also HD 260(2600)) (SBA)

Spring. 3 credits. Recommended: introductory psychology or human development. T. R. Staff.

Designed as an introduction to theory and research in the area of personality psychology, including personality development. Covers the major influences on personality, including genetic, environmental, and gene–environment interactions. The assumptions and models of human behavior that form the basis of each theoretical orientation are examined and compared, and the relevant empirical evidence reviewed and evaluated. In addition, basic psychometric concepts and the methods for measuring and assessing personality are covered, as are the major related debates and controversies.

PSYCH 280(2800) Introduction to Social Psychology (SBA)

Introduction to research and theory in social psychology. Topics include social influence, persuasion, and attitude change; social interaction and group phenomena; altruism and aggression; stereotyping and prejudice; and everyday reasoning and judgment.

PSYCH 282(2820) Community Outreach (also HD 282(2820))

Fall. 2 credits. Prerequisites: PSYCH 101 or HD 115; T. H. Segal.

Provides students with information and perspectives essential to volunteer fieldwork with human and social service programs in the community. Readings are drawn from the field of community psychology and include analyses of successful programs, such as Head Start, as well as a review of the methods by which those programs are developed and assessed. Although students are not required to volunteer, the instructor provides students with a list of local agencies open to student placements.

PSYCH 305(3050) Visual Perception (also VISST 305(3030))

Fall. 4 credits. Limited to 25 students. Prerequisite: PSYCH 205 or permission of instructor. M. W. F. J. E. Cutting.

Detailed examination of pictures and their comparison to the real world. Linear perspective in Renaissance art, photography, cinema, and video is discussed in light of contemporary research in perception and cognition.

PSYCH 313(3130) Problematic Behavior in Adolescence (also HD 313(3130))

Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101. Recommended: HD 216. M. W. J. Hauagard.

For description, see HD 313.

PSYCH 316(3160) Auditory Perception (also PSYCH 716(7160)) (KCM)

Fall. 3 or 4 credits. 4-credit option involves lab project or paper. Limited to 30 students. Prerequisites: PSYCH 102, 205, 209, or 214 (or other psychology, linguistics, or biology courses by permission of instructor). Graduate students, see PSYCH 716. M. W. Next offered 2007–2008. C. L. Krumhansl.

Covers the major topics in auditory perception including: physics of sound; structure and function of the auditory system; perception of loudness, pitch, and spatial location, with applications to speech production and perception; and music and environmental sounds.

PSYCH 322(3220) Hormones and Behavior (also BIOLB 322(3220), PSYCH 722(7220) (PBS)

Fall. 3 credits. Two lec plus sec in which students read and discuss original papers in the field, give an oral presentation, and write a term paper. Prerequisites: junior or senior standing; any one of the following: PSYCH 223, BIOLB 221 or 222, or one year introductory biology plus psychology course. Graduate students, see PSYCH 722. M. W. F. E. Adkins Regan.

Comparative and evolutionary approaches to the study of the relationship between reproductive hormones and sexual behavior in vertebrates, including humans. Also hormonal contributions to parental behavior, aggression, stress, learning and memory, and biological rhythms.

PSYCH 324(3240) Biopsychology Laboratory (also BIOLB 324(3240)) (PBS)

Fall. 4 credits. Limited to 20 students. Prerequisites: junior or senior standing. PSYCH 223 or BIOLB 221 or 222, and permission of instructor. T. R. T. J. DeVoogd.

Experiments designed to provide experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, animal species, and behavior patterns are included.

PSYCH 325(3250) Adult Psychopathology (also HD 370(3700)) (SBA)

Spring. 3 credits. Prerequisite: sophomore, junior, or senior standing; any one course in psychology or human development. T. R. No S-U opt; M. W. H. Segal.

A theoretical and empirical approach to the biological, psychological, and social (including cultural and historical) aspects of adult psychopathology. Readings range from Freudian topics in psychopathology. The major mental illnesses are covered, including schizophrenia as well as mood, anxiety, and personality disorders. Childhood disorders are not covered.
PSYCH 326(3260) Evolution of Human Behavior (also PSYCH 626[6260])

Spring. 4 credits. Prerequisite: PSYCH 223, or introductory biology, or introductory anthropology. Graduate students, see PSYCH 626. T. K. R. E. Johnstone.

Broad comparative approach to the behavior of animals and humans with special emphasis on the evolution of human behavior. Topics vary but include the following: human evolution, evolutionary and sociobiology theory, animal communication, nonverbal communication, language, cognitive capacities, social behavior and organization, cooperation and altruism, sexual behavior, mating and marriage systems, aggression, and warfare.

PSYCH 327(3270) Field Practicum I (also HD 327[3270]) (SBA)

Fall only. 3 credits. Limited enrollment. Prerequisites: PSYCH 325 or HD 370 (or taken concurrently), and permission of instructor. Students must commit to taking PSYCH 328 in spring semester. Letter grades only. M. W. H. Segal.

Composed of three components that form an intensive undergraduate field practicum. First, students spend three to six hours a week at local mental health agencies, schools, or facilities working directly with children, adolescents, or adults; supervision is provided by host agency staff. Second, the instructor provides additional weekly individual, clinical supervision for each student. Third, group meetings cover issues of adult and developmental psychopathology, clinical technique, case studies, and current research issues. Students write one short paper, two final take-home exams, and present an account of their field experience in class.

PSYCH 328(3280) Field Practicum II (also HD 328[3280]) (SBA)

Spring. 3 credits. Limited enrollment. Prerequisites: PSYCH 327 taken previous semester, PSYCH 325 or HD 370 (or taken concurrently), and permission of instructor. Letter grades only. M. W. H. Segal.

Continues the field practicum experience from PSYCH 327.

PSYCH 330(3300) Introduction to Computational Neuroscience (also BIONB/COSTG 330[3300]) (PBS)

Fall. 3 credits. Limited to 25 students. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional. Offered alternate years. C. Linster.

For description, see BIONB 330.

PSYCH 332(3320) Biopsychology of Learning and Memory (also BIONB 332[3320], PSYCH 632[6320]) (PBS)

Spring. 3 credits. Limited to 60 students. Prerequisite: one course in biology and either a biopsychology course or BIONB 222. Graduate students, see PSYCH 632. M. W. F. T. DeVoogd.

Surveys the approaches that have been or are currently being used to understand the biological bases for learning and memory. Topics include invertebrate, “simple system” approaches, imprinting, avian song learning, hippocampal and cerebellar function, or research using fMRI or other imaging for humans. Many of these readings are from primary literature.

PSYCH 340(3400) Autobiographical Memory

Spring. 3 credits. Limited to 20 students. Prerequisite: any one course in psychology or human development. Staff.

Much recent research has focused on people’s ability to remember—and often to misremember—their own life experiences. This course reviews research, including such topics as “false memories,” “childhood amnesia,” the development of memory in children, cultural differences in the “false memory syndrome,” eyewitness testimony, prospective memory, sex differences, recall of school learning, the amnesic syndrome, and the relation between memory and self.

PSYCH 342(3420) Human Perception: Applications to Computer Graphics, Art, and Visual Display (also PSYCH 642[6420], COGST 342[3420], VISSST 342[3432])

Fall. 5 or 4 credits; 4-credit option involves term paper. Highly recommended: PSYCH 205. Graduate students, see PSYCH 642. T. R. D. J. Field.

Our present technology allows us to transmit and display information through a variety of media. To make the most of these media channels, it is important to consider the limitations and abilities of the human observer. The course considers a number of applied aspects of human perception with an emphasis on the display of visual information. Topics include “traditional” display systems, color theory, spatial and temporal limitations of the visual systems, attempts at subliminal communication, and “visual” effects in film and television.

PSYCH 347(3470) Psychology of Visual Communications (SBA)

Spring. 3 to 15 students. Prerequisites: PSYCH 101 and permission of instructor. R. J. B. Maas.

Exploration of theories of education, communication, perception, attitude, and behavior change as they relate to the effectiveness of visually based communication systems. Emphasis is on the use of photography and computer graphics to deliver educational messages. A digital camera with manual control of f-stops and shutter speed is mandatory.

PSYCH 350(3500) Statistics and Research Design (MQR)

Fall, summer (even). 4 credits. Limited to 120 students. M. W. F. Staff.

Acquaints the student with the elements of statistical description (e.g., measures of average, variation, correlation) and, more important, develops an understanding of statistical inference. Emphasis is placed on those statistical methods of principal relevance to psychology and related behavioral sciences.

PSYCH 361(3610) Biopsychology of Normal and Abnormal Behavior (also NS 361[3610]) (PBS: Supplementary List)

Spring. 3 credits. Limited to 50 students in psychology and 50 students in nutritional sciences. Prerequisites: junior or senior standing, introductory biology and introductory psychology, or permission of instructor. S-U grades optional. M. W. F.

Critical evaluation of factors thought to underlie normal and abnormal behavior in cognitive functioning. Psychological, biological, and behavioral influences are integrated. Topics include the psychobiology of learning and memory, nutritional influences on behavior/cognition (e.g., sugar, food additives, cholesterol, cognitive dysfunction (e.g., amnesia, Alzheimer’s disease); developmental exposure to environmental toxins and drugs of abuse; and psychiatric disorders (depression, eating disorders).]

PSYCH 380(3800) Social Cognition (SBA)

Fall. 3 credits. Prerequisites: junior or senior standing; PSYCH 280. T. R. M. Ferguson.

What are the causes and consequences of our own and other’s judgments, feelings, attitudes, and behaviors? This course introduces students to social cognition, which is a research perspective that uses both cognitive and social psychological theories and methodologies to explain such social phenomena.

PSYCH 385(3850) The Psychology of Emotion (SBA)

Fall. 3 credits. D. Pizarro.

We've all been mad, sad, happy, and disgusted. Some of us get nostalgic at times, and some of us are easily embarrassed. We've been feeling these emotions nearly our whole lives, and this makes us all emotion experts of a sort. Nonetheless, these feelings can be mysterious. When do they come from? Do people across all cultures experience similar emotions? How can we regulate our emotions? Do emotions make us less rational? Do they make us smarter? What triggers certain emotions? Are there gender differences in emotions? The science of emotion is fairly young, but there has been an enormous amount of progress in understanding emotional phenomena in the last few decades. In this course we will tackle the aforementioned questions and more. By the end of the course you should be familiar with the most influential theories of emotion—from the evolutionary explanations of emotion to the developmental and social factors involved in making us emotional creatures. So while we are all intuitive experts on emotion, by the end of the course you will have a different kind of expertise—one grounded in the most recent scientific discoveries in this exciting field.

PSYCH 396(3960) Introduction to Sensory Systems (also BIONB 396[3960]) (PBS)

Spring. 4 credits. Limited to 35 students. Next offered 2009-2010. B. P. Halpern.

Somesthetic, auditory, and visual system neuroscience principles and methods of study are taught using the Socratic method. Original literature read and discussed.

PSYCH 405(4505) Intuitive Judgment (SBA)

Fall. 4 credits. Limited to 18 students by application. Priority given to senior psychology majors. Prerequisites: at least one course in each of social and cognitive psychology. T. Gilovich.

Judgment pervades everyday experience: Can this person be trusted? Does this relationship have promise? Is the economy likely to fibrish? This course explores the evidence behind the answers to these questions and more. By the end of the course you will have developed a general approach to intuitive judgment: one grounded in the most recent scientific discoveries in this exciting field.

PSYCH 410(4101) Undergraduate Seminar in Psychology

Fall or spring. 2 credits. Priority given to psychology majors. Staff.

Information on specific sections for each semester, including instructor, prerequisites, and time and place, may be obtained from the Department of Psychology office, 211 Urs Hall.
VARIOUS SPECIES and experiments in which
studies of naturally occurring signaling in
from communication studies in which animal
the evolution of intelligence; and whether
memory, and abstract thinking similar to that
they show concept and category learning,
thinking. Specific topics may include whether
recent surge of interest in animals'
perceptual/cognitive phenomena.
that applies a computational model to some
other topics. Students complete a final project
perception, arid visual development, among
processing, language acquisition, visual
analysis, connectionist models, dynamical
 approaches to understanding perception
Offers a survey of several computational
areas of visual perception, pattern recognition,
primates is a specific focus throughout. The
animals are conscious or self-aware. Evidence

PSYCH 414(4140) Comparative
Cognition (also PSYCH 714(7140),
COGST 414(4140)) (KCM)
Spring. 3 or 4 credits; 4-credit option
involves annotated bibliography or creation
of relevant web site. Prerequisites: PSYCH
Math 205, 209, 214, 223, 292 or permission
of instructor. Graduate students, see PSYCH
Examines some of the conceptual and
empirical work resulting from and fueling the
recent surge in animals’ thinking. Specific topics may include whether
nonhumans behave intentionally; whether
they show concept and category learning,
memory, and abstract thinking similar to that
of humans; and (3) computational approaches
to understanding the evolution of intelligence; and whether
animals are conscious or self-aware. Evidence
from communication studies in which animal
signals provide a “window on the mind” plays
a strong role in the deliberations, including
studies of naturally occurring signaling in
various species and experiments in which
nonhumans are trained in human-like
language behavior. Cognition in nonhuman
primates is a specific focus throughout.
The course is a mix of lecture and discussion,
emphasizing the latter as much as possible.

PSYCH 416(4160) Modeling Perception
and Cognition (also PSYCH
616[6160], COGST 416(4160))
Spring. 4 credits. Prerequisites: PSYCH 205,
209, 214, or 215, or permission of instructor.
Graduate students, see PSYCH 616. M W F.
Spivey.
Offers a survey of several computational
approaches to understanding perception
and cognition. Explores linear systems
analysis, connectionist models, dynamical
systems, and production systems, to name
a few. Emphasis is placed on how complex
sensory information gets represented in these
models, as well as how it gets processed.
Covered are topics of language processing, language acquisition, visual
perception, and visual development, among
other topics. Students complete a final project
that applies a computational model to some
perceptual/cognitive phenomena.

PSYCH 418(4180) Psychology of Music
(also MUSC 418(4181), PSYCH
618[6180]) (KCM)
Spring. 3 or 4 credits, depending on
whether student elects to do independent
project. Intended for upper-level students in
music, psychology, engineering, computer
science, linguistics, physics, anthropology, biology, and related
disciplines. Some music background
desirable but no specific musical skills
required. Graduate students, see PSYCH
618. M W. D. J. Field.
Laboratory course designed to introduce
students to experimental methods in
perception and cognitive psychology. Students take part in a number of classic experiments and develop at least one independent project.
Computers are available and used in many
of the experiments although computer literacy
is not required. Projects are selected from the
areas of visual perception, pattern recognition,
memory, and concept learning.

PSYCH 424(4240) Neuroethology (also
BIONB 424(4240)) (PSYCH)
Spring. 4 credits. Prerequisites: BION 221 or
222 or BIO G 101–102 and permission
of instructor. S-U grades optional. M W F,
disc. one hour each week. Next offered
For description, see BION 241.

PSYCH 425(4250) Cognitive Neuroscience
(also BIOL 425, PSYCH 625[6250]) (KCM)
Fall. 4 credits. Prerequisites: introductory
biology, biopsychology or neurobiology (e.g.,
PSYCH 223 or BION 221), and
introductory course in perception,
cognition, or language (e.g., PSYCH 102,
209, 214, or 215). Graduate students, see
PSYCH 625. S-U grades optional. M W. F.
Offered alternate years. B. L. Finlay.
Studies the relationship between structure
and function in the central nervous system.
Stresses the importance of evolutionary
and mechanistic approaches for understanding the
human behavior and cognition. Focuses on
issues in cognition, including mechanisms of perception, particularly vision,
and the neuropsychology of everyday acts
involving complex cognitive skills such as
recognition of individuals, navigation in
the world, language, memory, social interaction,
and consciousness.

PSYCH 426(4260) Learning Language
(also PSYCH 726, COGST 426)
Spring. 4 credits. Prerequisite: PSYCH 214 or
permission of instructor. Letter grades
only. S. Edelman.
A survey of a promising new synthesis
in the understanding of the cognitive function
that is at the core of the human
nature: language. The material focuses on
two aspects of the study of language: (1)
psycholinguistic data and their interpretation,
and (2) algorithmic studies and computational
modeling. In psycholinguistics, students
will read key papers that shed light on the
nature of linguistic knowledge (“grammar”)
possessed by normal adult speakers, and on
the learning of this knowledge by children.
In computation, the focus is on learning
grammar from raw data. The common thread
to this course is realism: in psycholinguistics,
we shall consider only those results obtained
empirically by established psychological
procedures (as opposed to intuition, either of
experts or of lay speakers); in computation,
the only approaches of interest to us are those
that are algorithmically tractable, and that are
effective when applied to realistic data.

PSYCH 427(4270) Evolution of Language
(also COGST 427[4270], PSYCH
627[6270]) (KCM)
Fall. 3 credits. Prerequisites: junior or senior
standing; any one course in psychology or
human development. Graduate students,
see PSYCH 627. S-U grades optional.
Offered alternate years, next offered 2007–2008.
M. Christiansen.
Seminar surveying a cross-section of modern
theories, methods, and research pertaining
to the origin and evolution of language.
Considers evidence from psychology,
Literature-based examination of post-
maturation changes in sensory, perceptual, struc-
tural, and physiological characteristics of
somesthetic, visual, auditory, and
chemosensory systems. Emphasis is on
human data, with nonhuman information
included when especially relevant. Qualities
of life issues are assessed. Current develop-
ments in human sensory prosthetic devices,
and in regeneration or replacement of receptor
structures or organs are examined. Brief
written statements by e-mail of questions
related to the material are expected from
each student. The instructor will attempt to
answer these questions before the next class.
All students are expected to contribute to
discussion, and to take an active part in every class.
All assignments are taken home.

**PSYCH 435(4350) Olfaction, Pheromones, and Behavior**
Fall. 4 credits. Prerequisites: Introductory
biology and course in neurobiology and
behavior or psychobiology or 300-level
course in psychobiology or permission of
instructor. R. Johnston.
Covers chemical signals, olfaction, and
behavior in vertebrates (including humans),
as well as the neurobiology of olfaction
and odor-mediated behaviors. Behavioral
topics may vary from year to year but
include evaluation of and advertisement for
mates, aggression and territorial behavior,
parental-young interactions, social recognition
(sex, species, individual, kin reproductive
state, status), memory for odors, odor
and endocrine interactions, imprinting, and
pheromones. Basic aspects of the
structure and function of the olfactory
system are also covered, including the
molecular biology of chemo-reception, olfactory
coding, and higher-order processing in the
central nervous system. This course includes
lectures, discussions, and student presentations.

**PSYCH 436(4360) Language Development (also COGST 436[4360], HD 337[3370], LING 436[4363]) (KCM)**
Spring. 4 credits. Open to undergraduate
and graduate students. Graduate students
should also enroll under HD 633/LING 700/PSYCH 600, supplemental graduate
seminar. Prerequisite: at least one course
in developmental psychology, cognitive psychology, cognitive development, or
For description, see COGST 436.

**PSYCH 437(4370) Lab Course: Language Development (also COGST 450[4500], LING 450[4505], HD 437[4370], Language Development in conjunction with COGST 436[4360], HD 339[4390], LING 436[4363], Language Development)**
Spring. 2 credits. Optional supplement to the survey course Language Development (HD 337/COGST/ PSYCH/LING 436). Provides students with a
hands-on introduction to scientific research,
including design and methods, in the area of
first-language acquisition.

**PSYCH 440(4400) The Brain and Sleep (also PSYCH 642[6420])**
Fall. 4 credits. Prerequisites: at least
PSYCH 223 or BION 221. Recommended:
additional course in biology, biopsychology, or neurobiology. S-U grades optional. Includes students, see
Taking a comparative evolutionary perspec-
tive, this course examines the neural events
that instigate, maintain, and disturb the states
and rhythms of sleep in various species.
Emphasizing human data where possible,
special topics include sleep deprivation and
the biological functions of sleep; biologically
interesting deviations from normal sleep;
and the cognitive neuroscience of sleep, including
sleep's possible role in learning and memory.

**PSYCH 441(4410) Laboratory in Sleep Research (also PSYCH 642[6420])**
Spring. 4 credits. Lab fee: $55. Graduate
students, see PSYCH 641. W. H. S. Porte.
Emphasizing the neurobiology of sleep
state, this course introduces students to the
laboratory study of human sleep and its
psychological correlates. Serving as both
experimenter and subject, each student
learns the physical rationale and techniques
of electroencephalography and other
bioelectric measures of behavioral state. Using
computerized data analysis, students complete
weekly laboratory reports and a collaborative
term project. Sleep recordings are done during
the day or evening when possible. In addition,
overnight recording sessions are required.

**PSYCH 452(4520) Trauma and Treatment (also PSYCH 652[6520]) (SBA)**
Fall. 4 credits. Required to 12 students;
priority given to senior psychology and
human development majors. Prerequisite:
course work in both psychopathology and
social development; permission of
instructor by e-mail application during
deadline. Instructor: S. Ben.
An in-depth examination of psychological
trauma and its treatment in psychotherapy.
Special attention is given to the neuroscience
of danger, defense, and emotional
dialectics. Topics include traumatic
attunement on development, the key role
of dissociation, and an array of treatments
including dialectical behavior therapy, play
therapy, sensorimotor therapy, gestalt therapy,
and psychosocial therapy.

**PSYCH 465(4650) Topics in High-Level Vision (also COGST 465[4650], PSYCH 665[6650]) (KCM)**
Spring. 4 credits. Graduate students, see
PSYCH 665. Offered alternate years; next
High-level vision. A study concerned with functions such as visual
object recognition and categorization,
scene understanding, and reasoning about
visual structure. It is an essentially
cross-disciplinary course that integrates
concepts and methods from neuroanatomy and
neurophysiology, cognitive psychology,
applied mathematics, computer science,
and philosophy. This course concentrates on a
critical examination of a collection of research
publications, linked by a common thread,
from the diverse perspectives offered by
the different disciplines. Students write biweekly
commentaries on the assigned papers and a
term paper integrating the material covered
in class.

**PSYCH 470(4700) Undergraduate Research in Psychology**
Fall or spring. 1-4 credits. Prerequisite:
written permission from staff member who
will supervise the work and assign grade
must be included with course enrollment
material. Students should enroll in sec-
listed for that staff member; sec list
available from Department of Psychology.
Practice in planning, conducting, and
reporting independent laboratory, field, and
library research. One, and preferably
two, semesters of PSYCH 470 is required. The
research should be more independent and
involve more developmental and technical skills
than that carried out in PSYCH 470.

**PSYCH 472(4720) Multiple Regression**
Spring, weeks 1-7. 2 credits. Prerequisite:
one solid semester of introductory
statistics. Recommended: analysis of
variance. M. W. F. Staff.
Covers use and pitfalls of multiple regression
in causal analysis, path analysis, and
prediction. Emphasis is on analyzing data
collected under uncontrolled conditions.
Includes collinearity, indicator variables,
sets, adjusted and shrunken R², suppressors,
hierarchical analysis, overcontrol, and
experimental design. Students may use the
Minitab, SPSS, StatX, SAS, or Systat
packages.

**PSYCH 473(4730) General Linear Model**
Spring, weeks 8-14. 2 credits. Prerequisite:
PSYCH 472 or equivalent. M. W. F. Staff.
Topics include multivariate categories, correlations for matrix
methods, nonlinear relationships,
interaction, main and simple effects, and
basic power analysis. Student may use Minitab, SPSS, StatX,
SAS, or Systat.

**PSYCH 478(4780) Parenting and Child Development (also PSYCH 678[6780], HD 444[4440]) (KCM)**
Fall. 4 credits. Limited to 25 students.
Intended for seniors and graduate
students. Graduate students, see PSYCH
578. M. W. M. Goldstein.
Explores the influences of parenting skills
and styles on the development of infants
and children. By studying parents and their infants
together, the family can be viewed as a system
in which the members engage in reciprocal
stimulation and regulation of learning and
behavior. Patterns of interaction within
a family serve as a source of developmental
change in infants. Such a system is influenced
by internal and external forces. This course
evaluates the impact of parenting on
child development, and the interactions of
parenting and the environment on child
development. The course will cover the
psychological, biological, and sociological
factors that influence parenting.

Finally, it examines and evaluates the role of
An intensive examination of the basic research methods used in social, personality, cognitive, and developmental psychology. The course focuses on designing and conducting experiments, i.e., how to turn vague theories into concrete and testable notions, evaluate studies, avoid common pitfalls and, finally, remain ethical. Beyond learning methods of "correct" and rigorous experimentation, students also discuss what makes a research study interesting. The course in addition, covers construction, survey methods, and quasi-experiments. Students concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

PSYCH 492(4920) Sensory Function (also BIONB 492[4920], PSYCH 692[6920])
Spring, 4 credits. Limited to 25 students.
Prerequisite: 300-level neuroscience course, or BIONB 222 or BIOAP 311, or equivalent, knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Graduate students must see PSYCH 692. M W F. Offered alternate years.
B. P. Halpern and H. C. Howland. In general, this course has covered classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory processing, location of stimulus sources in space, the development of sensory system, and nonclassical topics such as electrophysiology and internal chemoreceptors.

Advanced Courses and Seminars
Advanced seminars are primarily for graduate students, but with the permission of the instructor they may be taken by qualified undergraduates. The selection of seminars to be offered each semester is determined by the needs of the students. A supplement describing these advanced seminars is available at the beginning of each semester and can be obtained from the department office (211 Uris Hall). The following courses may be offered either semester and carry 4 credits unless otherwise indicated.

PSYCH 510-511(6100-6110) Perception
Fall and spring. 4 credits each semester.
Prerequisites: one course each in psychology and biology/chemistry.
T R. J. E. Cutting.

PSYCH 512-514(6120) Visual Perception
Spring. 4 credits.
Prerequisite: 300-level neuroscience course, or BIONB 222 or BIOAP 311, or equivalent, knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Graduate students must see PSYCH 692. M W F. Offered alternate years.
B. P. Halpern and H. C. Howland.

PSYCH 518(6181) Topics in Psycholinguistics
Spring. 4 credits.
Prerequisite: 300-level neuroscience course, or BIONB 222 or BIOAP 311, or equivalent, knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Graduate students must see PSYCH 692. M W F. Offered alternate years.
B. P. Halpern and H. C. Howland.

PSYCH 519-520(6830) Affects and Cognition (also NRE 507)
Fall. 4 credits.
A. M. ISEN.

PSYCH 521(6210) Behavioral and Brain Sciences
Fall and spring. 4 credits each semester.

PSYCH 522(6220) Topics in Perception and Cognition
Fall and spring. 4 credits each semester.

PSYCH 523(6230) Hormones and Behavior
Fall and spring. 4 credits each semester.

PSYCH 527(6270) Topics in Biopsychology
Spring. 4 credits.
Prerequisites: graduate standing, course in cognitive psychology, linguistics, computer science, or permission of instructor. Offered alternate years, next offered 2007-2008. S. Edelman.

One of the central puzzles of cognition is the manner in which brains deal with structured information such as scenes composed of a variety of objects, or sentences composed of words and phrases. The processing of structure by the brain is constrained by the neuronal architecture, as well as by general principles of information processing that are studied in computer science. This course focuses on insights from these different disciplines, striving for understanding couched in abstract computational terms, yet compatible with the basic neurobiological constraints, with behavioral data, and with philosophical intuition.

PSYCH 535(6350) Evolutionary Perspectives on Behavior
Fall. 4 credits.

PSYCH 541(6410) Statistics in Current Psychological Research
Fall. 4 credits. Next offered 2007-2008. M. Spivey.

PSYCH 550(6500) Special Topics in Cognitive Science (also COGST 550)
Spring. 4 credits.

PSYCH 580(6800) Experimental Social Psychology
Fall or spring. 4 credits.

PSYCH 600(6000) General Research Seminar
Fall. 4 credits.

PSYCH 612(6120) Laboratory in Cognition and Perception (also PSYCH 412[4120])
Spring. 4 credits.
M W. D. J. Field.

PSYCH 613(3150) Obesity and the Regulation of Body Weight (also NS 315[3150])
Fall. 4 credits.
Prerequisites: one course each in psychology and nutrition; undergraduates by permission of instructor. S-U grades optional. Offered alternate years. T R. D. A. Levitsky. Multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, psychosexual determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

PSYCH 614(6140) Cognitive Psychology (also PSYCH 214[2140], COGST 214[2140], COGST 614[6140])
Fall. 3 credits.
M W. F. S. Edelman.

PSYCH 616(6160) Modeling Perception and Cognition (also PSYCH 416[4160], COGST 416[4160])
Spring. 4 credits.
M. Spivey.

PSYCH 618(6180) Psychology of Music (also PSYCH 418[4180], MUSIC 418[4181])
Spring. 4 credits.
M. W. C. Krumhansl.

PSYCH 625(6250) Cognitive Neuroscience (also PSYCH 425[4250])
Fall. 4 credits.
M W. F. R. L. Finlay.
The Major in Religious Studies

Signing into the major: To sign into the major in Religious Studies, a student must have completed at least one course in Religious Studies before scheduling an appointment with the program director. Here is the process:

1. Schedule an appointment with the director of the Religious Studies Program, whose name and e-mail address can be found on the Religious Studies web site.

2. In addition to a copy of the current Cornell transcript (the informal one students regularly receive is acceptable), students should bring to their meeting with the director all of these forms, available in the Religious Studies office, 409 White Hall:
   a. a completed Religious Studies major application form
   b. a proposed “course of study,” which will be used as a guide in the student’s conversation with the director and revised for formal submission to the program upon your entrance as a major
   c. a College of Arts and Sciences advisor/major form, which will be signed by the director and advisor. The advisor will be assigned in the student’s meeting with the director based on interest.

Advising in the Religious Studies Program:

Upon entering the major in Religious Studies, a student is assigned a faculty advisor whose area of expertise most closely matches the proposed interest of the student. An up-to-date advisor approval list is available in the Religious Studies office. Note that not all faculty members who cross-list courses with RELST can serve as RELST advisors. Working closely with one’s RELST advisor when selecting courses is an important component of this program, enabling students to fulfill the requirements for the major while creating an integrated and coherent course of study out of our large number of multidisciplinary course offerings.

To graduate as a major in Religious Studies, a student must (1) complete with letter grades the program’s three core courses, RELST 250 Introduction to Asian Religions, RELST 251 Introduction to Judaism, Christianity, and Islam, and RELST 449 History and Methods of the Academic Study of Religion; and (2) complete with letter grades seven additional courses approved for the major.

Students must complete 10 courses cross-listed with Religious Studies:

Three Core Courses:

RELST 250 Introduction to Asian Religions
RELST 251 Introduction to Judaism, Christianity, and Islam
RELST 449 History, Theory, and Methods in the Academic Study of Religion

The requirement for either or both RELST 250/251 may be satisfied by taking two or more courses in the relevant traditions with some attention to breadth.

The requirement for RELST 250 may be satisfied by taking at least one course on South Asian traditions AND one course on East Asian traditions.

The requirement for RELST 251 may be satisfied by taking at least one course in each of two or more of the traditions of Near Eastern origin (Judaism, Christianity, and Islam).

Absolutely no student will be exempted from completing at least one course in each of our large number of multidisciplinary traditions.

In selecting their additional courses for the major, students are expected to consult closely with their advisors to ensure that their programs have adequate breadth in Religious Studies generally and in a particular tradition, cultural area, or approach to the field.

Most courses approved for the major are offered by cooperating departments within the College of Arts and Sciences.

A comprehensive up-to-date list of these courses is maintained at the office of the Religious Studies Program, 409 White Hall.

Graduating with Honors in Religious Studies:

GENERAL INFORMATION

1. Eligibility. 3.0 cumulative average and 3.5 average inside the major below B-. Program director notifies eligible candidates during the spring semester of the junior year or before commencement of final year.

2. Honors Courses. Candidates must sign into RELST 495 Senior Honors Essay for 8 credits (two courses) for two semesters. After the first semester, an R in the transcript indicates that this course (usually for 8 credits) is a yearlong course. When the project is completed at the end of the second semester, the grade recorded counts for all 8 credits. (The 8-credit limit is the result of the conviction/belief that earning more than 8 credits for a single “piece” of one’s undergraduate education is unwise.)

   The student submits the honors proposal (with and according to the program’s instructions/cover sheet) to the Religious Studies administrative office. The advisor submits the proposal to the Religious Studies administrative office after the end of the spring semester of the junior year, or not later than Sept. 15 of the final year. The advisor then approves the student’s signing into the honors courses.

3. Honors Committee—three faculty members. While students are required to have three faculty members on their committee at the time of the submission of the final draft, only two of them must be identified when the proposal is submitted. In the event the advisor is on leave, the program will assign a committee member from the list of approved RELST advisors. The three members should be:
   a. The professor who has agreed to work closely with the student over the year and to be the supervisor or chair of the project is chair of the committee.
   b. The student’s Religious Studies major advisor (required)
   c. Another knowledgeable faculty member

   Sometimes the advisor is the supervisor/chair. If that is the case, the student needs two additional knowledgeable professors for the committee of three.

Courses Approved for the Major Sponsored by Religious Studies

RELST 133-134(1211-1212) Introduction to Qur’anic and Classical Arabic (also NES 133-134(1211-1212))
   133, fall; 134, spring. 4 credits. M. Younes. For description, see NES 133-134.

RELST 202(2105) The Greek New Testament (also CLASS 202(2105))
   Spring. 3 credits. R. Knauf. Prerequisites: at least one year of Greek (CLASS 101-103 or 104, or permission of instructor). Next offered 2008-2009. E. Rebillard. For description, see CLASS 202.

RELST 211(2110) SSP: Black Religious Traditions: Sacred and Secular (also AM ST 251(2110), HIST 211(2110))

   For description, see HIST 211.

RELST 214(2212) Quran and Commentary (also NES 214(2212))
   Spring. 3 credits. D. Powers.

   For description, see NES 214.

RELST 215(2150) SSP: Crusade, Heresy, and Inquisition in the Medieval Mediterranean (also HIST 214(2141))
   CA
   Spring. 4 credits. Limited to 15 students. P. Hyams.

   For description, see HIST 214.

RELST 223(2623) Introduction to the Hebrew Bible (also NES/JWST 223(2623))
   Fall. 3 credits. L. Monroe.

   For description, see NES 223.

RELST 226(2646) Atheism Then and Now (also CLASS 226(2646))
   Spring. 3 credits. J. Coleman.

   For description, see CLASS 226.

RELST 237(2607) Greek Religion and Mystery Cults (also CLASS 237(2607))

   For description, see CLASS 237.

RELST 242(2420) Religion and Politics in American History (also HIST/AM ST 242(2420))
   Spring. 4 credits. Sophomore seminar. Limited to 15 students. Prerequisite: permission of instructor. J. Coleman.

   For description, see HIST 242.

RELST 244(2644) Introduction to Ancient Judaism (also NES/JWST 244(2644))
   Spring. 3 credits. J. Monroe.

   For description, see NES 244.

RELST 250(2250) Introduction to Asian Religions (also ASIAN 250(2250))
   Spring. 3 credits. L. Monroe.

   For description, see ASIAN 250.

RELST 251(2651) Holy War, Crusade, and Jihad (also HIST 269(2691), NES 251(2651), JWST 251(2651))
   Fall. 3 credits. R. El-Sharif.

   For description, see NES 251.

RELST 255(2655) Introduction to Islamic Civilization (also NES 255(2655), HIST 253(2530))
   Fall. 3 credits. D. Powers.

   For description, see NES 255.
offerings and opportunities for independent study, the department seeks to encourage study of the interactions of the Romance literatures among themselves, with other literatures, and with other fields of inquiry.

**Catalan**

**CATA 121-122(1210-1220) Elementary Catalan**

121, fall; 122, spring. 4 credits each semester. 121 must be taken before 122. Recommended: knowledge of another Romance language. Fall: A. Puig-Herz; spring: W. Wietsenz.

Catalan is a Romance language spoken by some 10 million people in four European states (Andorra, France, Italy, and Spain). This course provides a thorough grounding in all language skills: speaking, listening, reading, and writing, and is designed to provide students with the basis for establishing linguistic contact with Catalan culture.

**French**

**The Major**

The major in French is divided into two options: French cultural studies and French literature. While prospective majors should try to plan their programs as far ahead as possible, especially if they intend to study abroad, no student will be refused admission to the major merely because of a late start. See the director of undergraduate studies, Professor Kathleen Long (kp12@cornell.edu), 320 Morrill Hall. This consultation is especially important for finding out what sequence of courses will follow the current choice of courses.

We are currently not admitting new students to the French linguistic major. Students having such interests should apply for admission through the field of linguistics. Courses in general Romance linguistics are offered.

**French Literature**

This option is designed to give students mastery of the oral and written language, as well as a broader knowledge of French and Francophone culture in an interdisciplinary context.

To be admitted to the major, a student should have completed FRLLIT 221 and FRROM 219 or equivalent.

To complete the major, a student must:

1. Acquire advanced knowledge of and competence in French language. This competence is demonstrated by the successful completion of FRROM 301 Advanced French I or FRROM 305 French through Film ("only one may be taken for credit), or a properly accredited study abroad or the passing of a special language test (the CASE examination) or the permission of the major advisor or of the director of undergraduate studies.

2. Take the two core courses for the major: FRLLIT 321 Readings in Modern French Literature and Culture; FRLLIT 322 Readings in Early Modern French Literature and Culture.

3. Take five or more additional courses at the 300-level or above, including:
   - One course on Francophone Literature or culture
   - One course on French Literature or culture pre-1789
   - One course at the 400-level
   - Three courses conducted in French (i.e., no more than two courses conducted in English may be counted toward the major), and
   - Up to two courses offered by a department other than Romance Studies (for example Comparative Literature, History, Linguistics, Philosophy, Art History, or Visual Studies), provided the course includes a significant (at least 50%) French component.

**French Cultural Studies**

This option is designed to give students mastery of the oral and written language, as well as a broader knowledge of French and Francophone culture in an interdisciplinary context.

To be admitted to the major, a student should have completed FRLLIT 221 and FRROM 219 or equivalent.

To complete the major, a student must:

1. Acquire advanced knowledge of and competence in French language. This competence is demonstrated by the successful completion of FRROM 301 Advanced French I or FRROM 305 French through Film ("only one may be taken for credit), or a properly accredited study abroad or the passing of a special language test (the CASE examination) or the permission of the major advisor or of the director of undergraduate studies.

2. Take one of the core courses for the major: FRLLIT 320 Introduction to the 21st Century; FRLLIT 321 Readings in Modern French Literature and Culture, or FRLLIT 325 Being French. (all may be taken for credit, but only one is required)

3. Take six or more additional courses at the 300-level or above, including:
   - One course on French literature or culture pre-1789
   - One course at the 400-level
   - Three courses offered by the Department of Romance Studies
   - Three courses conducted in French (i.e., no more than three courses conducted in English may be counted toward the major), and
   - Up to three courses offered by a department other than Romance Studies (for example Comparative Literature, History, Linguistics, or Visual Studies), provided the course includes a significant (at least 50%) French component.

**Administration of the French Major**

Students are admitted to the major by the director of undergraduate studies. The French section of the Department of Romance Studies is designed to be compatible with all kinds of majors and is open to students in all the undergraduate colleges. The course has a strong academic record. The minimum French preparation is the completion of FRROM 219 or its equivalent in advanced French through Film or placement by the Cornell CASE exam or completing a 200-level course in French)

**Concentration in French Studies**

At Cornell, a concentration is the functional equivalent of a minor. Its purpose is to supplement a student's major with a complementary focus or concentration that is indicated on the graduate's transcript. The concentration in French Studies, organized by the interdisciplinary Program in French Studies, is designed to be compatible with all kinds of majors and is open to students in all the undergraduate colleges. The concentration promotes broad understanding of French culture, as well as Francophone literatures, societies, and their political/economic systems; it also encourages students to refine and practice their language skills. Students pursuing the concentration must attain proficiency (by taking a placement exam or completing a 200-level course in French) and must take the core course The French Experience (FRLLIT 224 or HIST 270) or an approved equivalent of the core course (approved alternatives will be listed on the program web site). Students may also petition the program director to use an advanced course conducted in French as their core course. Completion of the concentration requires, in addition to the core, three non-language courses on French and Francophone topics. Only one of the four courses required for the concentration can be taken S-U.

Applications for the concentration are accessible at the French Studies web site, www.einaudi.cornell.edu/french_studies/about/index.asp and should be submitted to the Institute for European Studies (210 Uris Hall) or to Bonnie Bailey at bab3@cornell.edu.

**Study Abroad in France**

French majors or other interested students may study in France for one or two semesters during their junior year. Opting for one of several study-abroad plans recognized by the Departments of Romance Studies and Linguistics facilitates the transfer of credit. Information about these plans is available from the director of undergraduate studies.

Students must be Cornell undergraduates with a strong academic record. The minimum French preparation is the completion of FRROM 219 or its equivalent in advanced credit or placement by the Cornell CASE examination. Taking FRROM 301 and/or 312 is, however, strongly recommended.

Students interested in studying in France are encouraged to consider the special benefits offered by EDUCO, the program in Paris cosponsored by Cornell, by Emory, and by Duke University. EDUCO offers advanced students a challenging course of study and the experience of total immersion in French life and culture in Paris. Participants in this program spend the year or semester as fully matriculated students at the University of Paris VII and other institutions of higher learning in Paris, including the Institut d'Etudes Politiques (Sciences Po), selecting courses in many fields from the regular university course offerings.
Students begin the academic year with an intensive three-week orientation in French history, society and daily life. While it is possible to enroll in the EDUCO Program for one semester, admission will be given first to students planning to study abroad for the full academic year.

EDUCO maintains a center in Paris with appropriate support staff. The resident director, chosen annually from the Cornell, Emory, and Duke faculties, teaches a special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a small library and word-processing facilities, is regularly used by students for special tutorials, seminars, and lectures, as well as informal gatherings.

**Honors.** The honors program encourages well-qualified students majoring in French literature and culture to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two semesters, provides a unique learning opportunity, since it allows for wide reading and extensive rewriting to a degree not possible in the case of course papers.

To be eligible for honors, students must have a general grade point average of at least 3.00 and a grade point average of at least 3.5 in the French major. No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisors who have agreed to supervise their work. They may receive course credit for independent study in FRROM 129-450, but these independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year, each honors student is examined orally on the honors essay by a jury consisting of his or her faculty advisor and two other faculty members. The senior essay is to be made available for reading by the jury on or before April 15. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

**Language.** Enrollment in a language course is conditional upon the student's eligibility for the particular level and on attendance at the first scheduled class session. Because of the high demand for language courses, a student who fails to attend the first class meeting will be dropped so others may register.

*Note:* Students placed in the 200-level courses have the option of taking language analyis classes; see listings under "Literature" for descriptions of the literature courses, some of which may be taken concurrently with FRROM 206, 220, or 219.

**FRROM 121-122 (1210-1220) Elementary French**
- Fall, 122, spring. 4 credits each semester. Prerequisites: for 121, no previous experience in French or LPF lower than 37 or SAT II lower than 410; for 122, LPF 37-44 or SAT II 410-480. FRROM 121: Fall: J. Luks (course coordinator) and staff; spring: J. Luks (course coordinator), K. Tun, and staff.
- Provides a thorough grounding in the language and insights into French language and francophone cultures so that students can function in basic situations in a French-speaking culture. Small classes provide intensive, context-specific practice in speaking, reading, writing, and listening comprehension.

**FRROM 123 (1230) Continuing French**
- Fall or spring. 4 credits. Prerequisite: FRROM 122 or LPF 45-55 or SAT II 490-550. Recommended courses after FRROM 123: FRROM 206 or 209. Fall: K. Proux-Garcia (course coordinator) and staff; spring: K. Proux-Garcia.

All-skills course designed to improve pronunciation, oral communication, and reading ability; to establish a groundwork for correct writing; and to provide a substantial grammar review. The approach encourages the student to see the language within the context of its culture.

**FRROM 206 (2060) French Intermediate Reading and Writing**
- Fall. 4 credits. Satisfies Option 1. Prerequisite: FRROM 123, LPF 56-64, or SAT II 600-680. Conducted in French. Recommended courses after FRROM 206: FRROM 219 or FRLIT 221. Students who have taken FRROM 209 are not eligible to take FRROM 206 for credit. S. Tun.

Designed for students who want to focus on their reading and writing skills. Emphasizes grammar review and expansion, vocabulary development, and appreciation of different styles of language. Diverse text types are used, including a contemporary novel and student-selected material.

**FRROM 209 (2090) French Intermediate Composition and Conversation I**
- Fall, spring, or summer. 4 credits. Satisfies Option 1. Prerequisite: FRROM 123, LPF 56-64, or SAT II 600-680. Recommended courses after FRROM 209: FRROM 219 or FRLIT 221. Students who have taken FRROM 206 are not eligible to take FRROM 209 for credit. Fall: C. Sparfel (course coordinator), C. Dye, C. Waldron, and staff; spring: C. Sparfel (course coordinator), C. Dye, and staff; summer: C. Waldron.

Designed to strengthen grammar skills; improve reading, speaking, and writing ability; and help students become independent learners.

**FRROM 210 (2100) Pronunciation of Standard French**
- Spring. 3 credits. Prerequisites: FRROM 206 or 209 or higher, CASE Q+, or permission of instructor. This course cannot be used to fulfill the language requirement.

Intermediate-level course focusing on accent reduction. Students learn how to transcribe French sounds while simultaneously engaging in systematic listening and pronunciation exercises. The exercises target vowels, consonants, and basic intonational patterns. Expressive intonation may be addressed near the end of the semester if time permits. Class work includes memorization of short dialogues and scenes from films. Students achieve better pronunciation, greater fluency, and increased self-assurance in spoken French by the end of the course.

**FRROM 219 (2190) French Intermediate Composition and Conversation II**
- Fall or spring. 4 credits. Satisfies Option 1. Prerequisite: FRROM 206 or 209, or permission of instructor, or Q+ on Cornell Advanced Standing Examination (CASE). Conducted in French. Recommended courses after FRROM 219: FRLIT 221. FRROM 301 or 305. FRROM 219 may be taken concurrently with FRLIT 221. Fall: S. LoBello and staff; spring: S. LoBello (course coordinator), K. Proux-Garcia, and staff.

Emphasizes improving grammatical accuracy and enriching vocabulary in oral and written expression of French. Varied types of reading including newspaper articles. Short videos, films, and presentations by students, provide the basis for writing assignments and class discussions. Themes and emphases may vary from section to section.

**FRROM 300 (3000) Directed Studies**
- Fall or spring. 1-4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. Staff. Taught on a specialized basis to address particular student needs.

**FRROM 301 (3010) Advanced French (I)**
- Fall or spring. 4 credits. Satisfies Option 1. Requirement for French majors. Prerequisite: FRROM 219 or Q++ on Cornell Advanced Standing Examination (CASE). Recommended courses after FRROM 300: FRROM 301 or 312. FRROM 301 may be taken concurrently with 301. S. LoBello. Class discussions based on reading contemporary texts: half short stories, half articles on current events taken from French magazines or newspapers. All texts are chosen for thematic or cultural interest and linguistic quality. Special attention is given to accuracy in French through grammar review and weekly papers (essays or translations). Each student gives one or more oral presentations in class.

**FRROM 305 (3505) French through Film**
- Fall or spring. 4 credits. Satisfies Option 1. Prerequisite: FRROM 219 or Q++ on Cornell Advanced Standing Examination (CASE) or permission of instructor. Recommended courses after FRROM 305: FRROM 301 or 312 or FRLIT 221. FRROM 305 may be taken concurrently with FRLIT 221. S. C. Waldron.

Analysis of French contemporary films and related readings, used as a means of studying the language. Particular emphasis is on the culture and historical context as it relates to French contemporary society. Additionally, guest speakers provide enrichment on selected topics.

**FRROM 312 (3120) Advanced French (II)**
- Fall or spring. 4 credits. Satisfies Option 1. Prerequisite: FRROM 301 or 305, or Q++ on Cornell Advanced Standing Examination (CASE). T. Althoff.

Course on stylistics and translation aiming to help students develop a richer, more nuanced and idiomatic command of both the spoken and written language. Emphasis of the study of grammar is discontinued as more attention is devoted to topics such as descriptive and prescriptive stylistics, authorial style, varieties of spoken and written French and their literary representations, rhetorical figures, poetry, as well as translation theory and textual analysis. Writing exercises include pastiche, precis, explication de texte, exercice de style, and theme. Additional exercises target vocabulary development. Seminar-style participation in class discussions is expected, as are oral presentations.
FRROM 313(3130) French in the News
Spring. 4 credits. Satisfies Option 1.
Prerequisite: FRROM 301 or 305, or placement by Cornell Advanced Standing Examination (CASE). C. Waldron. Students will analyze television and news broadcasts and other media to understand today's France. The course is designed for students who know a little or no French. It will focus on developing language skills and understanding cultural contexts.

FRROM 630(6300) French for Reading—Graduate Students
Spring only. 3 credits. Prerequisite: graduate standing. T. Alkire and staff. Designed to maximize the assimilation of the French language. This course will be taught through a variety of media, including television and newspapers, with an emphasis on developing reading and analytical skills.

Literature

FRLIT 221(2210) Introduction to Textual Analysis # (LA)
Fall or spring. 3 credits. Satisfies Option 1. Prerequisite: FRLIT 220 or 220 or CASE Q. Conde. Fall: L. Ferri, T. McNulty, and staff; spring: A. Berger, C. Howie, and staff. Designed to introduce students to methods of textual analysis, through the reading and discussion of works in various genres (narrative prose, drama, poetry) from the French and Francophone world. Emphasizes the development of analytical skills, particularly close readings of works by a variety of authors from different periods. Offerings change from semester to semester; for detailed descriptions of individual sections, consult the course roster or department web site.

FRLIT 222(2240) The French Experience (also HIST 270/2700) (CA)
Fall. 3 credits. Readings available both in French and in English translation. Conducted in English. P. Lewis and S. Kaplan. Examination of French society, culture, and institutions through key moments in French history. The course will be divided into three themes: the Renaissance, the Classical period, and the Enlightenment, with an emphasis on the cultural context. Students will read extensively in the Old French trouveres, verse and prose, by authors such as Boccaccio, Caxton, Colette, Duran, Genet, Mallarmé, Michaux, Proust, Rimbaud, Sartre, etc.

FRLIT 232(2320) Imagining America (also AM ST 326, COM L 341, GOVT 303)
Fall. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221 or 224, and FRROM 301 or 305 or CASE placement. Conducted in French. P. Lewis. Designed to teach ways of reading and understanding works created in the Romantic period to the present day, in their cultural context. A range of texts from various genres is presented, and students refine their analytical skills and their understanding of various methodologies of reading. Texts by authors such as Balzac, Baudelaire, Cixous, Colette, Duran, Genet, Mallarmé, Michaux, Proust, Rimbaud, Sartre, etc.

FRLIT 320(3200) Introduction to Twenty-First Century France (LA)
Spring. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221, FROM 301, or CASE placement. Conducted in French. P. Lewis. The broad focus of this course will be the art, literature, culture, and society of contemporary France. These interlocking dimensions of what the French take to be their national identity will be examined through a wide variety of representations: descriptions published in newspapers, magazines, and scholarly journals of the social, political, and religious controversies that have been prominent since the spring 2003 elections; a sampling of narratives, theatre, poetry, and opera produced since 2000: documentary films and standard movies produced for mass consumption; publicity for museums, exhibitions, and urban organizations; essays by politicians, journalists, and scholars about so-called "decline of France"; and conflicting accounts of France's place in the European Union and its tense relations with the United States.

FRLIT 321(3210) Readings in Modern French Literature and Culture (LA)
Fall. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221 or 224, and FRROM 301 or 305 or CASE placement. Conducted in French. L. Dubreuil. Designed to teach ways of reading and understanding works created in the Romantic period to the present day, in their cultural context. A range of texts from various genres is presented, and students refine their analytical skills and their understanding of various methodologies of reading. Texts by authors such as Balzac, Baudelaire, Cixous, Colette, Duran, Genet, Mallarmé, Michaux, Proust, Rimbaud, Sartre, etc.

FRLIT 322(3220) Readings in Early Modern Literature and Culture # (LA)
Spring. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221 or 224, and FRROM 301 or 305 or CASE placement. Conducted in French. P. Lewis. Designed to familiarize students with works from the Renaissance, the Classical period, and the Enlightenment, as well as the cultural and historical context in which these texts were created, reflected a dynamic period of significant change for France. Texts by such authors as Ronsard, du Bellay, Montaigne, Molére, Marguerite de Navarre, Cornelle, Diderot, de Lafayette, Racine, Perrault, Rousseau. Students may read texts in the original languages or in translation.

FRLIT 324(3240) The Haitian Experience (CA)
Fall. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221, FRROM 301 or 305, or CASE placement. Conducted in French. L. Dubreuil. This course will study some of the major features of Haitian society, culture, religion, politics, and literature, from the end of the 18th century to the present. Topics will include: Toussaint L'Ouverture and the Black Revolution of the 1790s, voodoo, theories of race, and Creole as a language. Works studied will include books from-and about Haiti, and perhaps some films that are intended to be a part of the course will be devoted to the rich (but less well-known) body of 19th century Haitian literature (such as Delorme, Durand, Firmin).

FRLIT 353(3530) Monsters A-X (Aristotle-X-files) (also FGSS/COL L 353(3530) # (CA)
Fall. 4 credits. Conducted in English. K. Long and M. Miegel. The course will explore the classical, medieval, and early modern sources for our notions of monsters, including strange beasts, wild men, demons, witches, and cyborgs. What do these figures tell us about our ideas of what constitutes life? Considered will include Aristotle's On the Generation of Animals, Pliny's Natural History, Chrétien de Troyes' Yvain, Ambroise Paré's On Monsters and Marvels, Beautif, Bram Stoker's Dracula, and various episodes of the X-Files (The X-Files, X-Files, Bad Blood, Il Mondo Gira, etc.), as well as critical material from Donna Haraway (Simians, Cyborgs, and Women and Primate Visions), Judith Butler (Gender Trouble), and Julia Kristeva (Poucois de l'horreur).

FRLIT 354(3540) Sad Songs: Medieval Melancholia (LA)
Spring. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221, FRROM 301, or CASE placement. Conducted in French. C. Howie. There is something about medieval lyric that always seems a little past its prime. Love songs are necessarily sad songs, whether the love in question is for a distant past (usually full of better singers) or a distant present (usually full of inaccessible ladies). This course provides an introduction to medieval popular song, so to speak. It means not to let go, and how certain poetic forms lend themselves to this tenacity. We'll read extensively in the Old French trouvères, their Occitan counterparts (who, as the lyric goes, always acted on their part) and the variously besieged and be-sotted poets-for-hire of medieval France, particularly Rutebeuf and François Villon. At the same time, we'll read about melancholia, how it holds on and what it holds on to, as articulated by thinkers such as Agamben, Butler, and even in French, no previous knowledge of Old French is necessary.

FRLIT 355(3550) He Said, She Said: The Battle of the Sexes in Medieval and Renaissance Writing (also ITALL 358/3580, FGSS 356/3560) # (LA) Spring. 4 credits. Conducted in English. K. Long and M. Miegel. The Middle Ages and the Renaissance have been described by some modern scholars as the crucible of modern subjectivity, the period in which we see the emergence of the individual and the elaboration of new and dissenting perspectives on the relation between the self and the divine, as well as between the self and the social order. Our seminar will focus upon these emerging perspectives by exploring how human experience has been articulated differently by men and women. Literary works of the period
reveal a spirited debate about gender roles and notions of romantic love and sexuality. Gender, language, and power are enmeshed in these writings. Men and women wield words both to reinforce the status quo and to challenge social reality, posing questions that continue to be asked today. Are men and women fundamentally different? Do they experience the same event in different ways? Do men acknowledge and respond to women's authority? How do women present themselves when they respond to male authority and assume authority themselves? We will look for answers to these questions in such works as the Lettres de Heloise et Abélard, the Lettres de Marie de France, Boccacio's Decameron, Marguerite de Navarre's Heptameron, and the poetry of Veronica Franco.

FRLIT 356(3560) Renaissance France # (CA) Fall. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221, FRROM 301, or CASE placement. Conducted in French. K. Long.

This course traces the importance of a number of movements/crises/events for the evolution of France as a nation and a culture, as well as the impact these movements will have on the development of religious and national interests, and the rise of modernization and scientific disciplines. Three areas of inquiry are studied by means of various texts: the works of Marguerite de Navarre, Louise Labé, François Rabelais, Jean-Jacques du Bellay, Pierre de Ronsard, Ambroise Paré, and Michel de Montaigne, among others.

FRLIT 381(3810) 19th-Century French Women Writers (also FGSS 381(3810)) # (LA) Fall. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221, FRROM 301 or 305, or CASE placement. Conducted in French. A. Berger.

While situating the works read within their specific historical and cultural context, this course will attempt to address a number of questions: can the literary works produced by women at that time be said to exhibit gender-related features? Given the operational hierarchy of literary genres in the 19th century, what accounts for women writers' preference for a given literary genre or exercise? How do women exploit or subvert literary canons? How do women present themselves when they respond to male authority and assume authority themselves? We will look for answers to these questions in such works as the works of Marguerite de Navarre, Louise Labé, François Rabelais, Jean-Jacques du Bellay, Pierre de Ronsard, Ambroise Paré, and Michel de Montaigne, among others.

FRLIT 444(4440) Thinking the Event: Alain Badiou's Philosophy (also FRLIT 644(6440), COM L 626(6260)) (LA) Spring. 4 credits. Conducted in English. B. Bostel. Based on the philosophy of Alain Badiou, especially in Being and Event, this course will study how we can think the radical change produced by an event, whether in politics, in art, in science, or in love. In a broad contextualization that will also serve as a generational portrait, we will discuss the relations of Badiou's thinking to psychoanalysis, mathematical set theory, poststructuralism, literary modernism, and Marxist explorations. We will be inspired by works translated into English, but a good reading knowledge of French and Spanish is recommended.

FRLIT 449(4490) Mystics and Mystique (also FRLIT 649(6490), FGSS 449/649(4490/6490)) Fall. 4 credits. Conducted in English. C. Howie.

Mystics have a certain mystique. This is more redundant (and more true) than it might at first seem: mysticism is mystique, at least for a certain category of the visionary, and the difference that might take place between being and having is at the very heart of the mystical, or what at any rate has come down to us under that name. It is by now a commonplace that some of the most compelling vernacular writing of the high Middle Ages comes from the mouths (and, less frequently, the pens) of medieval visionaries. These women (and, less frequently, men) have challenged and continue to challenge us to disentangle understandings of language and gender, God and history, sex and sanctity. Furthermore, their hot and heavy (or occasionally austere and abstract) engagements with what surpasses human telling has inspired an entire generation (or two) of French thinkers (e.g. Bataille, Lacan) as well as entire theological traditions. In this seminar, we will engage closely with an array of authors primarily from the medieval Mediterranean, including but not limited to Bonaventure, Marguerite Porete, Margaret of Oingt, Angela of Foligno, Jacopone of Todli, Catherine of Siena, John of the Cross, and Teresa of Avila. We will also look at modern artificiations of this tradition, from pious Victoriana to Bataille's Eroticism to Lacan's Encore, and theological reappraisals by Denys Turner, Mark McIntosh, and others. Readings and discussion in English.

FRLIT 471(4710) The End of Narrative (also FRLIT 671[6710]) (LA) Fall. 4 credits. T. McNulty.

The irreducibility of literature to narrative is one of the dominant preoccupations of 20th century French literature and criticism, informing projects as diverse as André Gide's aspiration to strip narrative of its signifying function in Literature (previously, Marguerite Duras' claim in De la vie dite que elle ne can no longer tolerate novels "because of the sentences," Émmanuel Lévinas' critique of narrative "thematisation" as a privileging of the "said" (le dit) over "saying" (le dire), and Roland Barthes' quest for what he calls "writing degree zero." We will divide our attention between literary and critical works, with special attention to those authors (Proust, Gide, Bataille, Blanchot, Klossowski, Sarratore, Duras) who approached the problem of the "end of narrative" through literary works as well as critical essays and interviews. Reading knowledge of French required.

FRLIT 475(4750) Exoticism and Orientalism: Figures of the Others in 18th-Century Literature (also FRLIT 673[6730], FGSS 474[4740]) # (LA) Fall. 4 credits. Satisfies Option 1. Prerequisite: FRLIT 221 and FRROM 301 or 305, or permission of instructor. Conducted in French. A. Berger.

Through travel, commerce and colonial expeditions, Europe "discovered" itself as it "encountered" others (good savages and cannibals, oriental women or despots, Persians, Indians, Zoroastrians, Tahitians. Americans, giants, etc.) Imagined or theorized, the exotic experience helped shape modern discourses on diversity and identity, on universalism and particularism, on the human species and community. In this context, a new literary genre emerged: the oriental (or orientalist) novel. Since literature itself traditionally occupies the place of the "other of reason", since it is the great language weapon in thought, it sided with the orient, or rather with the oriental woman. For exoticism is always eroticized (thus feminized) as the erotic is orientalized. How does the oriental novel stage or articulate the contradictions of fiction, feminism, sexuality and otherness? How does the oriental novel fit in or stray away from the Enlightenment intellectual and political program? (Readings include Montesquieu, Prévert, Diderot, Duras, and Rousseau).

FRLIT 478(4780) Cinema and Writing in France and the Francophone World Spring. 4 credits. Satisfies Option 1. Prerequisites: FRLIT 221 and FRROM 301 or 305, or permission of instructor. Conducted in French. L. Dubreuil.

This course will investigate the relations between literature and cinema, and will include a theoretical reflection on language and image. Various cases of cooperation or interfacing will be studied. We will examine works belonging to the French and Francophone traditions, such as: Une partie de campagne (Maupassant's short story and Jean Renoir's movie), Mouchette (Bernanos' book adapted by Robert Bresson), Xala (Sembene Ousmane's adaptation of his own novel), India Song (Marguerite Duras' movie and book), Le Polygraphe (Robert Lepage's movie and play), and Pour Louis de Funès (Valérie Novarina's text on acting).

FRLIT 488(4880) Baudelaire and the Lyric (also FRLIT 680[6800], COM L 480[6800]) Spring. 4 credits. J. Culler.

For description see COM L 480.

FRLIT 607(6070) Proseminar (also ITAL/ SPANL 607[6070]) Fall. 2 credits. D. Castillo and staff.

The proseminar is the place for sustained exchanges between graduate students, faculty, and visiting lecturers. Activities include reading and discussion of seminal texts, chapters from dissertations and works in progress, and articles and essays from visiting lecturers.
Thinking the Event: Alain Badiou’s Philosophy (also FRLIT 444(4440), COM L 526(5260))
Spring, 4 credits. Conducted in English.
B. Bosteels.
For description, see FRUIT 444.

Mystics and Mystique (also FRLIT 449(4490), FGSS 449/649(4490/6490))
Fall, 4 credits. C. T. McNulty.
For description, see FRUIT 449.

The Extraordinary: Literature and Concept
(Spring and Summer)
Spring, 4 credits. Conducted in French.
L. Dubreuil.

Literary thought is extraordinary since it passes the boundaries of philosophical concepts. Far from being attached to naive affects or to sacred purity, literature articulates an impossible response to philosophy. Thus, an oeuvre constitutes an effective event, whose experience is sometimes related to the very representation of the extraordinary (plurality of worlds, ecstasy, possession, haunting, etc.). While the seminar will give a general introduction to the main positions on “literature and philosophy” in contemporary France (Deleuze, Derrida, Rancière, Badiou), the bulk of our time will be devoted to the outlines of Italian literary and cultural history, and to develop some skill in textual and cultural analysis. In conjunction with the major advisor, the student will craft an individualized plan of studies that will meet the minimum requirements for Track 1 as listed here:

- At least 10 ITALL courses at the 200 level and higher. (The prerequisite may be counted toward this requirement. The 1-credit Italian practicum and the 1- or 2-credit independent study options do not count as full courses). One of these courses must be at the 400 level and one must focus on Italian texts before the 18th century. With the permission of the advisor, the student may substitute for two of these courses other courses that are deemed relevant to the student’s study of Italian, e.g., a course in another national literature or course in critical theory, or a course in European history.
- At least 20 credits in courses conducted entirely in Italian. The Italian practice may be used to fulfill 3 of these credits. Twelve of these credits must be in courses in Italian at the 300 level or above.
- Competency in the Italian language (as demonstrated by examination or by course work approved by the DUS).

ITALIAN

Track 2: Italian Studies

Track 2 in Italian Studies is designed primarily for students who wish to pursue individual interests that do not fall within Track 1 of the major. Students select courses from the Italian section, and courses from other departments that have a substantial Italian component, such as History of Art, Architecture, Government, Music, and Comparative Literature. For the list of approved Italian studies courses, please see the director of undergraduate studies.

Admission: By the end of their sophomore year, prospective majors in Track 2 should have taken ITALL 219, Intermediate Conversation and Composition, or demonstrated the equivalent level of fluency.

To complete the program, students must:

1. Demonstrate competence in the Italian language by completing ITALL 313, Advanced Conversation and Composition, or its equivalent;
2. Complete the core series of Italian studies courses: ITALL 290, Perspectives in Italian Culture (fall), ITALL 295, Italian Cinema (fall), and ITALL 297, Introduction to Italian Literature (spring);
3. Complete at least five courses (20 credits) from the approved list of Italian studies courses at the 300 level or above from no more than three departments. Students planning on studying abroad for a year or a semester in Italy should plan their course work to emphasize their individual interests. Note: Students must maintain a B- in each of the five Italian studies courses;
4. Select a committee of one or more faculty advisors to help formulate a coherent program of study. One of the advisors must come from the Italian studies section.

Students are encouraged to enrich the program by combining this option with other majors in related fields such as history of art, music, comparative literature, or architecture.

Concentration in Italian Studies

In order to complete an undergraduate concentration in Italian Studies, students must take at least five courses (a minimum of 15 credits) by selecting courses from the Italian Studies Concentration Course List, one of which must be ITALL 290, Perspectives in Italian Culture. These courses must be allocated among at least three Cornell departments and must include one introductory course and one course at the advanced level. Courses not on the list may be approved by petition. Language competence must be demonstrated by successfully completing ITALL 219. Please note that courses taken as part of a study abroad program approved by the Study Abroad Dean may count towards meeting the above requirements.

Students wishing to enroll in the concentration must register their intent by contacting Professor Timothy Campbell, director of undergraduate studies, 323C Morrill Hall, 607-255-8452, who will assign a faculty advisor to students.

Study Abroad in Italy: Italian studies faculty members strongly encourage students to consider studying abroad in Italy. Students will have the opportunity to immerse themselves in Italian and gain a singular perspective on the Italian cultural context. Students are urged to consider the Bologna Cooperative Studies Program (BCSP), of which Cornell is an associate member. BCSP offers qualified undergraduate students an opportunity to study for a full academic year or a second semester at the University of Bologna for credit. During each semester of the academic year, the program extends through June. BCSP students enroll in one or two regular University of Bologna courses with Italian students.
ITALA 121-122(1210-1220) Elementary Italian
121, fall; 122, spring. 4 credits each semester. Prerequisite: ITALA 122, 121 or LPI 37-44 or SAT II 370-450. Intended for beginners or students placed by examination. At the end of ITALA 122, students who score lower than 56 on LPI may take ITALA 123, those with 56 or higher on LPI attain qualification and may enter 200-level sequence; otherwise ITALA 123 required for qualification. Evening prelins. Fall: F. Cervesti (course coordinator), T. Allikre, M. Baraldi, K. Bitting von Wittelsbach, and staff. Spring: F. Cervesti (course coordinator), M. Baraldi, K. Bitting von Wittelsbach, C. Dye, and staff. Provides a thorough grounding in all the language skills: listening, speaking, reading, and writing, with practice in small groups. Lectures cover grammar and cultural information.

ITALA 123(1230) Continuing Italian
Fall or spring. 4 credits. Prerequisite: ITALA 122, 121 or LPI 37-44 or SAT II 460-580. K. Bitting von Wittelsbach. All-skills course designed to improve speaking and reading ability, establish a groundwork for correct writing, and provide a substantial grammar review.

ITALA 209(2090) Italian Intermediate Composition and Conversation I
Fall or spring. 4 credits. Satisfies Option 1. Prerequisite: ITALA 125 or LPI 56-64, or SAT II 590-680, or CASE Q. Fall: P. Swenson (course coordinator), C. Dye, and staff. Spring: P. Swenson and staff. Provides a guided conversation, composition, reading, pronunciation, and grammar review, emphasizing the development of accurate and idiomatic expression in the language.

ITALA 219(2190) Italian Intermediate Composition and Conversation II
Fall or spring. 4 credits. Satisfies Option 1. Prerequisite: ITALA 209 or equivalent. P. Swenson and staff. Guided conversation, composition, reading, pronunciation, and grammar review emphasizing the development of accurate and idiomatic expression in the language.

Note: Students placed in 200-level courses also have the option of taking courses in introductory literature, cultural studies, and cinema; see separate listings under ITALL for descriptions of these courses.

ITALA 313(3130) Advanced Italian: Language in Italian Culture (LA)
Fall. 3 credits. Satisfies Option 1. Prerequisite: ITALA 219 or equivalent or permission of instructor. Conducted in Italian. Focuses on developing oral and written language skills through the study of cultural and social issues of contemporary Italy. Students improve their fluency in the language through oral exercises, compositions, as well as group and individual presentations. The course also entails a grammar review of selected points and analysis of present-day Italian.

ITALA 227(2270) Family Life in Renaissance Italy (also HIST 227[2271]) (MA)
Spring. 4 credits. Conducted in English. J. Najemy. For description, see HIST 227.

ITALA 255(2550) Sophomore Seminar: A Forkful of Spaghetti Westerns: The Italian Western and Its American Lineage (LA)
Spring. 3 credits. Limited to 15 students. Conducted in English. T. Campbell. In this course we will attempt to construct a cinematic genealogy of the spaghetti western. Beginning with the classic American westerns, we'll examine the captivity, narratives, and sado-masochistic theater of the Hollywood Western associated with Native Americans, and discuss the figure of the gunman and the role of landscape as a space of both harmony and ruin. Turning to the films of Sergio Leone and a number of Italian directors who are most representative of the Italian western, we will examine the cultural and social contexts surrounding the emergence of the Western in Italy (of all places), wonder about the Italian-ness of the genre, linking it to the pastoral, discuss the spaghetti's assumptions about race and family, and ask after its long-term impact on American cinema, in particular in the film of Sam Peckinpah. American westerns to be screened: Stagecoach, My Darling Clementine, Fort Apache, The Bravados, The Searchers, Rio Bravo, The Man Who Shot Liberty Valance, The Wild Bunch. Italian westerns to be screened: A Fistful of Dollars, For a Few Dollars More, Once Upon A Time in the West, A Fistful of Dynamite. A Bullet for the General, Django, My Name is Nobody. This is a special seminar sponsored by the John S. Knight Institute sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

ITALA 290(2900) Perspectives in Italian Culture (CA)
Fall. 3 credits. "Core course" in Italian studies major. Satisfies Option 1. Conducted in Italian. Staff. Students enrolled in an introductory Italian literature or culture course that is conducted in English (e.g., ITALA 290) may opt to take this practicum, provided they have already attained proficiency in the language. Students in the practicum spend one class hour per week discussing selected issues or texts in Italian; they also complete an appropriate amount of written work in Italian.

ITALA 301(3010) Screening "Cosa Nostra": The Mafia and the Movies from Scarface to The Sopranos
4 credits. Limited to 30 students. Conducted in English. T. Campbell. From Al Capone to Tony Soprano, the Mafia has been subject of numerous films over...
the course of 70 years, so many in fact that one might speak of a “Mafia obsession” in American popular culture. Drawing upon a large number of American and Italian films, this course examines the cultural history of the Mafia through film. We will explore issues related to the figure of the gangster, the gender and class assumptions that underpin it, and the portrayal—almost always stereotypical—of Italian-American immigrant experience that emerges from our viewing. The aim will be to enhance our understanding of the role the Mafia plays in American and Italian culture in the 20th and 21st centuries. Film screening will include “Little Caesar,” “Scarface: Shame of the Nation,” “The Godfather I and II,” “Goodfellas,” “The Funeral,” “Donnie Brasco,” and several episodes from the “Sopranos.” We will also watch a number of Italian treatments of the Mafia, including: “Salvatore Giuliano,” “Johnny Stocco,” “The 100 Steps,” and “Angela.” Critical readings from Bondanella, Dickie, Gardapié, Kolker, and Warshow.

ITAL 303(3030) Italian in Pre-Modern Times
Spring. 4 credits. Prerequisites: ITAL 209 or permission of instructor. Conducted in Italian. M. Migiel.

The major objective of this seminar will be to have students develop competence in reading pre-modern Italian texts. Manageable readings will be drawn from a variety of sources (literary, religious, philosophical, historical). Students will have an opportunity to work with well-known Italian works that have been widely disseminated in multiple English translations and with lesser known Italian works that have never been translated into English.

ITAL 340(3400) History of the Grotesque (LA)
Fall. 5 credits. Prerequisites: ITAL 209 or permission of instructor. Conducted in Italian. C. Howie.

Italian literary history, seen from a certain angle, is a series of moments of rhetorical exaggeration, bodily deformity, sexual overkill, religious satire, and extreme violence; hallmarks of an aesthetic category that came, at some point in the modern period, to be called the grotesque. We’ll examine the particular shapes to which this category can be applied across literature and how may in turn alter the very shape of the category. After all, the grotesque is nothing if not a question of shapes: of anticipated literary, embodied forms and their eventual disappointment or monstrous transformation, of how aesthetic devices not only represent but produce the ‘normal’ body as an effect of its many variations. We’ll look at the fecal fantasies of Lacopone da Todi and Dante: Boccaccio’s *femmes fatales*; the beautifully mangled bodies of Renaissance epic (Tasso) and pornography (Arentino); modern decadentism (Gozzano, Campana); and the return of blasphemy in Pasolini and Landolfi. We’ll also see how Stephen Sondheim reinframes Tarchetti’s *Risca* (via Scòla’s *Passione d’amore*) and how critics as various as Bakhtin, Harpham, and Linda Hart have articulated the grotesque’s offensive allure.

ITAL 350(3500) Italian Renaissance (also HIST 350(3500)) # (HA)
Spring. 5 credits. J. Najemy.

For description, see HIST 351.

ITAL 355(3550) He Said, She Said: The Battle of the Sexes in Medieval and Renaissance Writing (also FRLIT 355[3550], FGSS 356[3560]) # (LA)
Spring. 4 credits. Conducted in English. M. Migiel and K. Long.

For description, see FRLIT 355.

ITAL 385(3850) Modern Italian Travel Writing
Fall. 4 credits. Prerequisite: permission of instructor. Conducted in Italian. T. Campbell.

In this introduction to modern Italian travel narratives, students will read a range of texts dating from the late 19th to mid-20th centuries that urge travel as their theme (with a particular emphasis placed on Northeast Africa and the Mediterranean). We will ask after the ways in which travel writing produces a space of displacement, consider the relation between technology, travel and aesthetics, and discuss the forms by which the distinction between Italian and non-Italian is observed.

ITAL 389(3890) Modern Italian Novel (LA)
Spring. 4 credits. Satisfies Option I. Prerequisite: permission of instructor. Students who have taken ITAL 389 previously may retake course for credit, provided that readings are different. Conducted in Italian. P. Swenson.

Through the novels of N. Ginzburg, G. Bassani, P. Levi, R. Loy, this course examines the Italian social and political situation during the Fascist period; the Second World War, and the post-war years. Time, memory, family, the responsibility of the individual, the fate of the Jew, are common themes that pervade the narratives of the authors in both comparable and dissonant ways. Conducted in Italian.

ITAL 400(4000) Morante (LA)
Fall. 4 credits. M. Migiel.

This seminar will be dedicated to a reading of Elsa Morante’s 1974 novel, *La Storia*. Considered by many readers to be the most outstanding novel of the Italian 20th century, *La Storia* treats a grand event of History (World War II, the battle between the superpowers, the Shoah), from the perspective of a humble school teacher in Rome, Idizza, and her family (most notably her illegitimate son, Uspese, and his canine companions). The novel offers students insights into how language, story, and literature can help us confront difference, conflict, loss, destruction, and grief.

ITAL 419-420(4190-4200) Special Topics in Italian Literature
Fall, 420, spring. 2-4 credits each semester. Satisfies Option I. Prerequisite: permission of instructor. Fall: T. Campbell; spring: T. Campbell and M. Migiel.

Guided independent study of specific topics.

ITAL 429-430(4290-4300) Honors in Italian Literature
Fall, 429; spring, 430, spring (yearlong). 8 credits. R; Fall: letter grade, spring. Prerequisite: senior standing, permission of instructor. T. Campbell and staff.

ITAL 450(4500) Renaissance Poetry (also ITALL 450(4500), COM L 450(4500), ENGL 452(4520)) # (LA)
Spring. 4 credits. W. Kennedy.

For description, see COM L 450.

ITAL 468(4680) Love and Sex in the Italian Renaissance (also HIST 468(4680)) # (HA)
Fall. 4 credits. J. Najemy.

For description, see HIST 468.

ITAL 607(6070) Proseminar (also FRLIT/SPANL 607(6070))
Fall. 2 credits. D. Castello and staff.

For description, see FRLIT 607.

ITAL 639-640(6390-6400) Special Topics in Italian Literature
Fall, 639; spring, 640, spring. 4 credits each semester. Fall: T. Campbell; spring: T. Campbell and M. Migiel.

ITAL 650(6500) Renaissance Poetry (also ITALL 450(4500), COM L 450(4500))
Spring. 4 credits. W. Kennedy.

For description, see COM L 450.

Portuguese
Faculty: L. Horne, J. Oliveira.

PORT 121-122(1210-1220) Elementary Brazilian Portuguese I-II
121, fall; 122, spring. 4 credits each semester. PORT 121 is the prerequisite for PORT 122. J. Oliveira.

This is a full-year introductory course, intended for students with no knowledge of Portuguese, and with limited or no knowledge of Spanish*. Stress is placed upon the development of the fundamental communication skills: listening, speaking, reading, and writing.

PORT 209-219(2090-2190) Intermediate Brazilian Portuguese for Spanish Speakers* I-II @
209, fall, 219, spring. 4 credits each semester. Satisfies Option I. Prerequisite for 209: PORT 122 or permission of instructor. Prerequisite for 219: PORT 209 or permission of instructor. J. Oliveira.

Portuguese 209-219 is a full year course intended for students who have already taken the first level of Portuguese, or as an intensive introductory course for those who are native near native speakers of Spanish*. An all-skills course with particular emphasis on Brazilian Portuguese spoken within the context of its culture, it presents a fast-paced review focused on improving grammatical accuracy, pronunciation and enriching vocabulary.

*Although most of the materials are geared to speakers of Spanish, speakers of other Romance languages, such as French, Italian, or Catalan, etc., will also find this course effective as an introduction to Portuguese.

On the difference between PORT 209–219 and 221–222. PORT 209 is the first semester of the full-year 209–219 intermediate sequence. Although students may enroll in 209 and not continue with 219, students who have not previously taken 209 are not eligible to enroll in 219. Likewise, PORT 221–222 is a full-year intermediate sequence designed specifically for...
for distance learning, and following a different syllabus, using different materials, and as such is distinct from 209–219. The differences in materials and course design are such that students from one sequence are not eligible to enroll in the second half of the other sequence.

PORT 221-222(2210-2220) Intermediate Brazilian Portuguese via Distance Learning
221, fall; 222, spring. 4 credits each semester. Satisfies Option 1. Prerequisite for 221: PORT 122 or permission of instructor; Prerequisite for 222: PORT 221 or permission of instructor. Staff. PORT 221–222 is a full year course intended for students who have already taken the first level of Portuguese, or as an introductory course for those who are native/near-native students, of Spanish or of another Romance Language.

On the Distance Learning format. PORT 221–222 is designed in a distance learning format for access by two other institutions. The course is conducted in a specially equipped classroom at the Language Resource Center at Cornell, with a Cornell instructor and Cornell students working together on location, communicating with students from two other campuses via monitors, with native speakers of Portuguese as facilitators at each other site. The format that there are members of the class at two other sites renders communication at times less natural; however at the same time this communication is in fact more motivated, and allows for greater richness of exchange and development of auroral/oral skills. There being more than one native speaker of the language (the instructor and the facilitators) provides another level of enrichment as well. Because of the size of the classroom this course is limited to a maximum of 10 Cornell students, and to a maximum of 15 students at all three sites combined.

On the difference between PORT 209–219 and 221–222. PORT 221–222 is a full year course intended for students who have the same background as those entering the 209–219. Although students may enroll in 221 and not continue with 222, students who have not previously taken 221 are not eligible to enroll in 222. Likewise, PORT 209–219 is a full-year intermediate sequence following a different syllabus, using different materials, and as such is distinct from 221–222. The differences in materials and course design are such that students from one sequence are not eligible to enroll in the second half of the other sequence.

PORT 280(2800) Perspectives on Brazil
Fall. 3 credits. Conducted in English. L. Horne.

This course provides an introduction and overview of Brazilian culture. It will study different periods of Brazilian history through the analysis of films, literature, essays, visual arts, and music. Students will explore different definitions of Brazilian identity and “Brazilianess” focusing on key topics including the formation of the Colonial Brazil and the emergence of the nation of Brazil as a tropical paradise; slavery and abolition, the particularities century, and the contradictions of the modernization process throughout the 20th century. We will consider elements of Brazilian popular culture such as Carnival, Samba, and telenovelas, and some of the most important cultural movements of the 20th century such as “Modernismo,” “Cinema Novo,” and “Tropicalia.” The primary objective of the course is to provide students with the relevant background to understand Brazilian cultural history.

PORT 311(3110) Portuguese Advanced Conversation
Fall. 4 credits. Prerequisite: PORT 219 or 222, or permission of instructor. J. Oliveira.

The focus of the course is expanding conversation through an advanced systematic study of grammar review emphasizing accuracy, and enriching vocabulary in oral practice of Brazilian Portuguese. Designed for students who want to improve their comprehension and communication skills. The exercises target vocabulary and grammar development.

PORT 312(3120) Portuguese Advanced Conversation and Composition
Spring. 4 credits. Prerequisite: PORT 311, or permission of instructor. J. Oliveira.

Content-based language course focused on selected readings, producing longer written articles, magazines and the Internet in addition to the textbook. A systematic study of grammar is discontinued, however, the readings in the textbook continue to provide a review of more advanced grammatical and idiomatic structures. By engaging in more sustained interactions in the language, the course aims to help the students to express more complex ideas in Portuguese.

PORT 319(3190) Readings in 19th and 20th Century Brazilian and Portuguese Literatures
Spring. 4 credits. Prerequisites: PORT 219 or permission of instructor. Conducted in Portuguese. L. Horne.

This course aims to provide an overview of Modern Brazilian and Portuguese Literatures. It will cover the major literary movements and the essential canonical writers of 19th and 20th century in Portuguese language. Following a chronological order, we will read texts from both Portugal and Brazil, establishing a comparative approach and underlining the similarities and the differences of each context. Some of the topics to be discussed are: the formation of a national literature; literature and slavery; foreign models and rewriting; diverse definitions of national spaces and landscapes; relationships between aesthetic innovations and political issues; and different literary definitions of frontiers, margins and exclusions. The course also intends to introduce students to the practice of literary analysis, and to provide an opportunity to improve language skills in Portuguese through extensive oral and written practice. Some of the authors to be read include Oswald de Andrade, Machado de Assis, Clarice Lispector, Fernando Pessoa, Eça de Queirós, Graciliano Ramos, João Guimarães Rosa, and José Saramago.

PORT 390(3900) Brazilian Cinema: 1960s to the Present
Spring. 4 credits. L. Horne.

PORT 390(3900) Brazilian Cinema: 1960s to the Present
Spring. 4 credits. L. Horne.

This course will explore the major trends in Brazilian Cinema from the 1960s to the present. We will begin by examining the different phases of the famous “Cinema Novo”; followed by the most important films of the seventies and eighties and ending with a unit centered around the “New Brazilian Cinema” (1990–present). We will address diverse issues including the following: How has Brazilian Cinema used allegory in order to represent national identity? How formal
Students are encouraged to enrich the major program by including a variety of courses from related fields or by combining Spanish with related fields such as history, philosophy, sociology, anthropology, art, music, classics, English, comparative literature, and other foreign languages and literatures. The interdisciplinary program of Latin American studies and Latino studies sponsor relevant courses in a variety of areas.

The J. G. White Prize and Scholarships are available annually to undergraduate students who achieve excellence in Spanish.

Study Abroad in Spain: Cornell, the University of Michigan, and the University of Pennsylvania co-sponsor an academic year in Spain program. Students enrolled in the program spend the first month before the fall semester begins in an orientation session at the University of Seville, where they take courses in Spanish language and culture and take advantage of special lectures and field trips in Andalusia. The College of Arts and Sciences awards 3 credits for orientation.

Once the semester begins, students enroll in regular classes at the University of Seville and at the program’s center facility. Center courses are designed for the program and include a seminar offered by the resident director, from the faculty of either Cornell, Michigan, or Pennsylvania. Other center courses typically include history of art, history of the Mediterranean region, a literature course, and Spanish composition and syntax. In Seville, students live in private homes and a rich array of cultural activities and excursions are organized every semester.

Applicants are expected to have completed SPANR 219 before departure. Completion of SPANR 219 is highly recommended. Students are strongly encouraged to study abroad for the entire year rather than one semester. Students interested in the study abroad program should visit Cornell Abroad in 474 Uris Hall and see the Cornell Abroad website: www.enaudi.cornell.edu/cuabroad.

Study Abroad in Bolivia: The summer program in Cochabamba, Bolivia, is sponsored by the Latin American Studies Program and accepts both undergraduate and graduate students. Students live with Bolivian families and usually take two courses with Cornell faculty who participate in this program. In addition to coursework, students spend the first month in Bolivia, participating in research and internships with grass-roots communities, government offices, and businesses.

Honors: Honors in Spanish may be achieved by superior students who wish to undertake guided independent reading and research in an area of their choice. Students in the senior year select a member of the Spanish faculty to supervise their work and direct the writing of their honors essay (see SPANL 429-430).

Language

Enrollment in a language course is conditional upon the student’s eligibility for the particular level and on attendance of the first scheduled class session. Because of the high demand for language courses, a student who fails to attend the first class meeting will be dropped no others may register.
SPANR 112(1120) Elementary Spanish: Review and Continuation
Fall only. 4 credits. Prerequisite: LPS 37–44 or SAT II 370–450. Students who have taken SPANR 121 may enroll. S. Amigo-Silvestre (course coordinator), and staff. Provides a basic review and then moves on to cover new material for the remainder of the semester. As part of the final exam, students take the LPS and, according to their score, may place into SPANR 123 (score below 56) or into the 200-level courses (score 56 or above).

SPANR 121-122(1210-1220) Elementary Spanish
121. Fall and summer; 122. spring. 4 credits each semester. Intended for students with no experience in Spanish; students who have previously studied two or more years of Spanish may not attend unless they have LPS lower than 37 or SAT II lower than 370. Prerequisite: for 121, SPANR 121 or LPS 37–44 or SAT II 370–450. B. Teulli (course coordinator), M. Arellano, and staff. Provides a thorough grounding in all language skills.

SPANR 123(1230) Continuing Spanish
Fall, spring, or summer: 4 credits. Prerequisite: SPANR 112 or 122, or LPS 45–55, or SAT II 460–580. Fall: M. K. Redmond (course coordinator), N. Maldonado-Méndez, L. Morató-Péta, and staff; spring: M. K. Redmond (course coordinator), D. M. Rios, L. Morató-Péta, and staff; summer: A. Stratakos-Tiö. Lower intermediate-level course providing an intensive grammar review in communicative contexts, and practice in all skills. After this course, the student may take SPANR 200, 207, or 209.

SPANR 200(2000) Spanish for English/Spanish Bilinguals (also LSP 202(2020))
Fall. 4 credits. Satisfies Option I. Prerequisite: LPS 56 or higher; SAT II 590 or higher, CASE placement, or permission of instructor. Not open to students who have taken SPANR 207 or 209. N. Maldonado-Méndez and staff. Designed to expand bilingual students’ knowledge of Spanish by providing them with ample opportunities to develop and improve each of the basic language skills.

SPANR 207(2070) Intermediate Spanish for the Medical and Health Professions
Fall or spring. 4 credits. Satisfies Option I. Prerequisite: SPANR 123, LPS 56–64, or SAT II 590–680, Q on CASE exam, or permission of instructor. Students who have taken SPANR 200 or 209 should speak to instructor A. Stratakos-Tiö. Provides a conversational grammar review, with dialogues, debates, compositions, and readings on health-related themes. Special attention is given to relevant cultural differences.

SPANR 209(2090) Spanish Intermediate Composition and Conversation I
Fall or spring. 4 credits. Satisfies Option I. Prerequisite: SPANR 123, LPS 56–64, or SAT II 590–680. Not open to students who have taken SPANR 200 or SPANR 207. J. Routier-Pucci (course coordinator), I. Auffer, C. Lawless-Blake, and staff; spring: J. Routier-Pucci (course coordinator), I. Auffer, C. Lawless, N. Maldonado-Méndez, L. Meza-Ricewald, E. Sanchez-Blake. Provides a conversational grammar review with special attention to the development of accurate and idiomatic oral and written expression. Assignments include composition-writing, reading and discussing Spanish and Spanish America, and to gain an awareness of and related cultures, as well as improve their comprehension and communication skills.

SPANR 219(2190) Spanish Intermediate Composition and Conversation II
Fall or spring. 4 credits. Satisfies Option I. Prerequisite: SPANR 207 or 209, or CASE Q+. Fall: Z. Iguina (course coordinator), and E. Dozier (course coordinator). Z. Iguina and N. Maldonado-Méndez. Advanced-intermediate course designed for students who want to further broaden their knowledge of the language and related cultures, as well as improve their comprehension and communication skills.

SPANR 300(3000) Directed Studies
Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. Conducted in Spanish.

SPANR 310(3100) Advanced Spanish Conversation and Pronunciation
Fall or spring. 3 credits. Satisfies Option I. Prerequisite: SPANR 219 or CASE Q++ or permission of instructor. Z. Iguina. Conversation course with intensive oral practice obtained through the production of video programs. Students practice the fundamental aspects of communication in the standard spoken and written Spanish, with some focus on dialectal variations. There are weekly pronunciation labs.

SPANR 311(3110) Advanced Spanish Composition and Conversation I
Fall or spring. 4 credits. Satisfies Option I. Prerequisite: SPANR 310 or CASE Q++ or equivalent. Fall: C. Lawless (course coordinator) and staff. Advanced language skills developed through reading, grammar review and intensive practice in speaking. The reader and DVD developed for the course provide a multimedia approach that enables students to hear the actual voices—and accents—of the authors from various regions of Spain and Spanish America, and to gain an awareness of their cultural milieu.

SPANR 312(3120) Advanced Spanish Composition and Conversation II
Fall or spring. 4 credits. Satisfies Option I. Prerequisite: SPANR 311 or permission of instructor. E. Sánchez-Blake. Readings and class discussion focus on the stylistic analysis of modern texts. Increased emphasis, through weekly essays, on students' development of an effective Spanish prose style.

SPANR 313(3130) Spanish Writing Workshop for Advanced English/Spanish Bilinguals
Fall. 1 credit. Prerequisite: permission of instructor. N. Maldonado-Méndez and staff. Designed for the advanced bilingual seeking support in the development of written accuracy, this workshop can serve as a companion or culture course conducted in Spanish. Meets one hour per week, concurrently with one of the weekly sessions of SPANR 200. Students enrolled in this course are expected to work autonomously, to keep up with the syllabus of SPANR 200, and to come to class with focused questions drawn from writing tasks either assigned from other courses, or prepared as self-assigned exercises. The workshop will be conducted in a peer-editing format. The final exam will consist of a term paper in Spanish that demonstrates progress achieved in written accuracy. Students who have taken other Spanish language courses in the department including SPANR 200, and who have difficulty with writing identified as specific to the English/Spanish bilingual, are eligible to enroll in the 1 credit SPANR 313, with the instructor's permission. Course may be repeated for credit.

Literature

SPANL 214(2140) The Spanish Difference: Readings in Modern Iberian Literatures
Fall or spring. 4 credits. Prerequisites: SPANR 207 or 209, CASE Q+, or permission of instructor. Conducted in Spanish. Fall: M. Vergez; spring: Z. Iguina. Introductory survey of modern Spanish literatures. Students develop their analytical skills and learn basic literary concepts such as genre (drama, novel, short story and novel) and style (romanticism, realism, the fantastic, etc.) as well as male/female perspectives and the translation of literature to film language. The survey introduces students to Spain's cultural complexity through readings of works by authors representative of its diverse linguistic and literary traditions.

SPANL 215(2150) The Tradition of Rupture: Latin American Writing from Modernism to the Present (also LAT A 215(2150))
Fall or spring. 4 credits. Prerequisites: SPANR 207 or 209, CASE Q+, or permission of instructor. Conducted in Spanish. Fall: J. M. Rodríguez-García and Z. Iguina; spring: E. Sanchez-Blake. Readings and discussions of key texts of the 19th and 20th centuries from various regions of Spanish America. Among the authors considered are Sarmiento, Hernandez, Marti, Dario, Agustini, Borges, Cortázar, Garcia Marquez, Poniatowski, and Valenzuela.

SPANL 217(2170) Early Hispanic Modernities: Readings in Medieval and Early Modern Iberian and Spanish-American Literatures (also LAT A 217[2170])
Fall or spring. 4 credits. Prerequisites: SPANR 207 or 209, or placement by CASE Q+, or permission of instructor. Conducted in Spanish. Fall: M. A. Garces; spring: S. Finen. This course explores major texts and themes of the Hispanic tradition from the 11th to the 17th centuries. We will examine general questions on literary analysis and the relationship between literature and history around certain cultural, national, and temporal events. Students will study works centering on the medieval and early modern Spanish world, the origins of modernity, and the formation of a multicultural Iberia, the creation of the Spanish Inquisition in the 15th century and the expulsion of the Jews in 1492, the encounter between the Old and the New Worlds, the opposition of court culture or the secular and the sacred in poetry and prose. Issues of representation regarding gender, identities, and subjectivity may also be studied. Readings may be drawn from...
medieval short stories and miracle collections; chivalric romances, Columbus and the literary discovery, Lazarillo de Tormes, Cervantes, Lope de Vega, Calderón, and Sor Juana Inés de la Cruz, among others. Course will be conducted in Spanish.

SPANL 220(2200) Perspectives on Latin America (also HIS 251[2511], LAT A 220[2200]) (CA)
Spring. 3 credits. Highly recommended for Latin American studies concentrators. Conducted in English. E. Paz-Soldán. Interdisciplinary, co-taught course offered every spring through the Latin American Program. Topics vary by semester, but readings always focus on current research in various disciplines and regions of Latin America. The range of issues addressed include the economic, social, cultural, and political trends and transitions in the area. In the weekly meetings, instructors and guest lecturers facilitate student discussions. Students taking the course are required to participate in all class discussions and write one research paper in their chosen focus area.

SPANL 223(2230) Perspectives on Spain (LA)
Fall. 4 credits. Prerequisite: SPAN 219 or permission of instructor. Conducted in Spanish. An introduction to the history of Spain and its present day society. How did Spain come into existence, what cultures contributed to shape its national sense, what political alternatives were left behind or discarded, what are its strengths and weaknesses, its present and its possible futures? These and other questions will be discussed, combining the long view with emphasis on the contemporary period. Political, social, and cultural materials will be selected with the aim of providing a bare bones introduction to a complex society. This course is crucial to students who anticipate taking courses in Spanish literature and culture or plan to visit Spain.

SPANL 234(2340) Faith, Love and Adventure in Medieval Spain # (LA) Spring. 3 credits. Conducted in Spanish. E. Sanchez-Blake. Examination of some of the prominent themes of the medieval period. Focus on poetry— to address questions of identity, faith, institutions, historicity, and nation-building in multicultural Iberia. Students are expected to participate actively in class discussion and to prepare written critical analyses. Primary sources constitute the main corpus, but modern perspectives on the Middle Ages are also included.

SPANL 246(2460) Contemporary Narratives by Latina Writers (also LSP/FGSS 246[2460]) (LA)
Fall. 3 credits. Conducted in English. L. Carrillo. Survey of narratives, including novels, short fiction, essays, political/feminist manifestoes, and memoirs by representative Latina writers of various cultural and national groups in the United States and the Americas, including Chicana, Chilena, Cuban, Dominican, and Puerto Rican, among others. Investigates the parallel development of a Latina perspective on personal, social issues and alongside that of the U.S. ethnic liberation/revitalization movements of the 1960s to contemporary feminist activism and women of color movements. The course investigates these works as artistic attempts to deal with issues of culture, language and bilingualism, family, gender, sexual identity and domesticity among others. Regional distinctions and contributions are accounted for. Readings include works by Julia Alvarez, Elena Castro, Sandra Cisneros, Judith Ortiz Cofer, Cristina Garcia, Ana Lydia Vega, and others.

SPANL 247(2470) Spanish through Media and Culture
Fall. 3 credits. Satisfies Option 1. Prerequisite: SPAN 219, CASE Q++, or permission of instructor. Conducted in Spanish. E. Sánchez-Blake. Offers hands-on media analysis and production. Oriented to students with interest in Spain and Latin America and uses media to support research on topics in their areas of interest. Emphasizes intensive use of Spanish in a cultural context. Conducted in a computer classroom with access to electronic media and sources of information in the Spanish world. Students conduct a research project that is produced and presented as a news media program.

SPANL 248(2480) Poetry of the Latino Experience (also LSP 248[2480]) (LA)
Spring. 3 credits. L. Carrillo. Survey of the rich tradition of poetry in the modern and contemporary Latin American experience. Readings chart and critique the developments beginning in the 1960s among Chicanos/as in the West and Southwest United States and among Nuyorican writers in the East Coast through to the 1980s development of feminist, lesbian, and gay poetry, the Cuban poets emerging as the "American" generation, and concluding with recent poetry produced in the atmosphere of immigration, labor issues, globalization, and the institutional academy.

SPANL 261(2610) The General and His Labyrinths: Representing Bolivar in Contemporary Latin American Culture (LA)
Fall. 3 credits. Prerequisites: SPAN 219, CASE Q++, or permission of instructor. Conducted in Spanish. J. A. Hernández. The current sociopolitical situation in Latin America, particularly in the Andean countries, has once again directed attention to the thin line separating the line between the political and the poetic dimension. Bolivar inhabited this fluid space. The Liberator was perceived by his own contemporaries as a self-deluded hero (Don Quijote). Our class discussions will focus on how the prominence of our class discussions will examine the representation of Bolivar's main writings as well as the poems, pamphlets, and popular histories in which he was either denigrated or extolled. Special attention will be given to folk rituals, contemporary novels, theater plays, public art, and films that use the larger-than-life hero of the Spanish American Revolution of Independence as their main pre-text.

SPANL 301(3010) Hispanic Theater Production (also LAT A 301[3010]) Fall or spring. 1–3 credits. Fall: D. Castillo, spring: E. Sánchez-Blake. Students develop a specific dramatic text for full-scale production. The course involves selection of an appropriate text, close analysis of the literary aspects of the play, and group evaluation of its representational value and effectiveness. All students in the course are involved in some aspect of production of the play, and write a final paper as a course requirement. Credit is variable depending upon the student's role in play production: a minimum of 50 hours of work is required for 1 credit; a maximum of 2 credits are awarded for 100 hours or more of work.

SPANL 331(3310) Tales of Love and Lust (also NEX 343[3430]) Fall. 4 credits. Prerequisites: two of the following courses: SPAN 214 (formerly 316), SPAN 215 (formerly 318), and SPAN 217 (formerly 319), or permission of instructor. Conducted in Spanish. E. Paz-Soldán. The novella, a short fiction whose name alludes to both "novelty" and "news" (nouvelles), attained such perfection in the hands of Cervantes that he was called by one of his contemporaries "the Spanish Boccaccio." Despite the title of his collection, Novelas ejemplares, these narratives are not exemplary: their scenes of rape, seduction, adultery, and witchcraft not only challenged social structures and reigning ideologies, but also constituted daring literary experiments which question the status of fiction. This course will trace the development of the novella in the 17th-century Spain, studying a range of short fictions by Cervantes, Maria de Zayas, and other authors.

SPANL 333(3330) Latin American Short Story Fall. 4 credits. Prerequisites: two of the following courses: SPAN 214 (formerly 316), SPAN 215 (formerly 318), and SPAN 217 (formerly 319), or permission of instructor. Conducted in Spanish. E. Paz-Soldán. The short story is one of the most prestigious genres of the Latin American tradition. In this course, we will trace the development of the genre in its various "nations," from the modernists in late 19-century until present times. We will focus on the major canonical writers of the genre: Quiroga, Borges, Cortázar, Rulfo, García Márquez, Lispero.

SPANL 375(3750) Literature and Cinema of the Cuban Revolution Spring. 1-3 credits. Fall, spring. Prerequisite: SPAN 214 (formerly 316), SPAN 215 (formerly 318), and SPAN 217 (formerly 319) or permission of instructor. J. A. Hernandez. An introduction to some of the most relevant cultural expressions created in Cuba after the triumph of the Revolution (1959). How did the movies, novels, short stories and poetry represent the conflicts generated by the Revolution? How were issues of class, race and gender expressed by filmmakers, poets and novelists? We will approach the above mentioned and other relevant topics (like the representation of Cuban nationhood and its relation to Latin America and the U.S.) reading works like Alejo Carpentier, Jesús Díaz, Nicolás Guillén, Tomás Gutiérrez Alea, Sergio Giral, Nancy Morejón, Heriberto Padilla, José Lezama Lima and Reynolds Arenas, among others.

SPANL 419-420(4190-4200) Special Topics in Hispanic Literature 419, fall; 420, spring. 2-4 credits each semester. Prerequisite: permission of instructor. Staff. Guided independent study of specific topics. For undergraduates interested in special problems not covered in courses.
SPANL 429-430(4290-4300) Honors Work in Hispanic Literature
4 credits. Spring 429; Fall 430. Writing (yearlong). 8 credits. Grade fall semester, letter grade spring semester. Prerequisite: seniors with superior academic record; permission of instructor. M. A. Garcia and staff.

SPANL 431(4310) 20th-Century Poetry [LA]
Spring. 4 credits. Prerequisites: senior standing only; SPANL 217 (formerly 319), 214 (formerly 316) and 215 (formerly 318) or permission of instructor. Required of Spanish majors. Conducted in Spanish.
J. M. Rodriguez-Garcia
How has 20th-century poetry shaped our modern consciousness and how has it in turn been shaped by the modernizing forces of positivism, liberalism, and secularization? The poetry of Spain and Spanish America written between 1900 and 1960 registers such perennial dichotomies as the celebration of the ephemeral and the nostalgia for transcendent truths; the need for solitude and the search for human fellowship; and the paradoxical attractions of primitivism and scientific progress. Through readings of canonical poems by the four most influential poets of 20th-century Spain (Antonio Machado, Juan Ramon Jimenez, Federico Garcia Lorca, and Miguel Hernandez) and the three Spanish American poets who have been awarded the Nobel Prize for Literature (Gabriela Mistral, Pablo Neruda, and Octavio Paz), we will examine a broad range of poetic modes and traditions. Special attention will be given to the political contexts informing the work of these poets as well as their ability to fuse the political, the elegiac, and the emotional impulses in lyrics of unsurpassed beauty and power.

SPANL 433(4330) Literature of the 19th Century Hispanic Caribbean (also SPANL 633[6330]) [LA]
Fall. 4 credits. Conducted in Spanish.
J. A. Hernandez
An introduction to the major topics of the 19th century Hispanic Caribbean. Nationalism, colonialism, race, slavery and abolitionism will be discussed. Authors like Marti, Sacco, Hostos, Betances, Gomez de Avellaneda will be among our readings.

SPANL 442(4420) The City as Text (also COM L 446[4460])
Spring. 4 credits. Conducted in English.
J. R. Resina
For description, see COM L 446.

SPANL 444(4440) Spanish Novel of the Franco Era (also SPANL 644[6440]) [LA]
Spring. 4 credits. Prerequisites: SPANL 217 (formerly SPANL 319), 214 (formerly SPANL 316) and 215 (formerly SPANL 318) or permission of instructor. Conducted in Spanish.
J. R. Resina
Despite the exile of the majority of prestigious writers in 1936 and the dismal quality of the works published in the 40s, the novel begins to reassert itself in Spain in the 1950s and 60s. In this course we will trace the recuperation of this genre and the formation of a new, deeply personal, early work of Cela to the more experimental novels by Goytisolo and Benet. We will read selected works by authors such as Camilo Jose Cela, Jose Maria Gironella, Ana Maria Matute, J. Amat-Piñella, Rafael Sanchez Perelosio, Llorenç Villalonga, Luis Martin Santos, Juan Benet, Maria Aurelia Capmany, and Juan Goitsosolo.

SPANL 450(4500) Literature of the Conquest (also SPANL 650[6500]) [LA]
Spring. 4 credits. Prerequisites: SPANL 217 (formerly SPANL 319), 214 (formerly SPANL 316) and 215 (formerly SPANL 318) or permission of instructor. Conducted in Spanish.

This course examines the cultural and psychological impact of the "Discovery" on the literatures of the Old and the New World. In a voyage that takes us from the Caribbean to the mesetas of Ancient Mexico and the Andean regions of South America, we will explore the formation of the literature of various discourses on the New World through a close reading of 16th- and 17th-century European and Amerindian texts. Particular attention will be paid to the formation of an "American discourse" in the literary subjects who launched a counter-offensive against the political views of the colonizers. Reading selections from Columbus, Cabeza de Vaca, Bartolome de las Casas, Hernan Cortes, Bernal Diaz, Aztec and Maya Testimonies on the Conquest, Michel de Montaigne, Pedro Cieza de Leon, Inca Garcilaso de la Vega, Sor Juana Ines de la Cruz, Stephane Mallarme, Wallace Stevens, Juan Ramon Jimenez, Jorge Guillen, and especially Octavio Paz. The Mexican author's ideas about language, poetry, translation, and history will be discussed in the context of his engagement with baroque, symbolist, and surrealist traditions of writing. A substantial part of the course will focus on the work of translator-poets, from Francisco de Quevedo to Andres Sanchez Robayna.

SPANL 469(6900) Hispanic Feminisms
4 credits. Conducted in Spanish.
D. Castillo
This seminar is designed to explore the interrelationship of feminist literary theory and the narrative production of the Hispanic world. We will be looking at key literary and theoretical texts that ground the 1980s boom in attention to women's literature (Castellanos, Valenzena, Franco, Sommer, Martin-Marez) through more recent interest in lesbian/gay/queer theory (Molloy, Blanco, Munoz) and transgender theory (Sifuentes-Jauregui, Carrer, Priester). As case studies we will look at examples from a range of sub-genres: best-sellers, testimonios, popular culture and high art texts and films.
by registering for RUSSA 491. Such courses involve a one-hour section each week with work in the Russian language. Students may count two 1-hour credits toward the 12 hours of Russian literature in the original language required for the major.

Satisfying the Foreign Language Requirement

1. Under Options 1a and 1b:
   1a. Any Russian-language (RUSSA) course totaling 3 or 4 credits at the 200 level or above (with the exception of RUSSA 300 Directed Study) satisfies the Arts and Sciences language requirement under Option 1a.
   1b. Under Options 1a and 1b. After completing the prerequisites RUSSA 121 and RUSSA 122, students may satisfy the language requirement by taking RUSS 209. Students who qualify may satisfy the language requirement by taking RUSS 212. Other RUSS courses that are taught in Russian may also be used when appropriate.

2. Under Option 2:
   • In two semesters: RUSSA 103 and 121 in the fall, RUSSA 104 and 122 in the spring.
   • In three semesters: RUSSA 121 in the fall, 122 in the spring, 203 the following fall.
   • In four semesters: RUSSA 121 in the fall, 122 in the spring, 125 the following fall, 126 the following spring.

Study Abroad

Students from Cornell frequently participate in the Council on International Educational Exchange and the American Council of Teachers of Russian programs for language study, as well as other Russian language programs. Opportunities are available for study during the summer, a single semester, or the full year. Further information is available from Professor Wayles Browne in the Department of Linguistics (220 Morrill Hall) and from the Cornell Abroad Office.

Honors. Students taking honors in Russian undertake individual reading and research and write an honors essay. Students planning to take honors should consult the director of undergraduate studies in their junior year.

Russian Language

Detailed information and schedules of the Russian language courses, as well as office hours of the instructors, are available at: http://russian.cornell.edu.

Suggested tracks for first- and second-year Russian language study:
• First-year intensive: 105 + 121 in the fall, 104 + 122 in the spring
• First-year non-intensive: 121 in the fall, 122 in the spring
• Second-year intensive: 125 + 203 in the fall, 120 + 204 in the spring
• Second-year non-intensive: 203 in the fall, 204 in the spring
• Second-year "mostly reading, lighter load": 125 in the fall, 126 in the spring

RUSSA 103-104(1103-1104) Conversation Practice
103, fall. 104, spring. 2 credits each semester. Students must enroll in one sec of 103 and one sec of 121 in fall and one sec of 104 and one sec of 122 in spring.

R. Krivitsky. Reinforces the speaking skills learned in RUSSA 121 and 122. Homework includes assignments that must be done in the language lab or on the students' own computers.

RUSSA 121-122(1121-1122) Elementary Russian through Film
121, fall or summer; 122, spring or summer. 4 credits each semester.

Prerequisite for RUSSA 122, RUSSA 121
R. Krivitsky, S. Paperno, and V. Tsimberov.

Gives a thorough grounding in all the language skills: listening, speaking, reading and writing. Course materials include clips from original Russian films and TV programs. Homework includes assignments that must be done in the language lab or on the students own computers.

RUSSA 125-126(1125-1126) Reading Russian Press
125, fall; 126, spring. 2 credits each semester.

Prerequisite: RUSSA 122, RUSSA 121
R. Krivitsky, S. Paperno, and V. Tsimberov.

Gives a thorough grounding in all the language skills: listening, speaking, reading and writing. Course materials include clips from original Russian films and TV programs. Homework includes assignments that must be done in the language lab or on the students own computers.

RUSSA 203-204(2203-2204) Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each semester.

Prerequisite: for RUSSA 203, RUSSA 122 and 104, or RUSSA 122 with grade higher than B, or placement by department; for RUSSA 204, RUSSA 203 or equivalent. R. Krivitsky, S. Paperno, and V. Tsimberov.

Guided conversation, translation, reading, pronunciation, and grammar review, emphasizing the development of accurate and idiomatic expression in the language. Course materials include video clips from an original Russian feature film and work with Russian web sites.

RUSSA 300(3300) Directed Studies
Fall or spring. 1–4 credits, variable.

Prerequisite: permission of instructor. Times TBA with instructor.* See starred (*) note at end of RUSSA section.

S. Paperno and V. Tsimberov.

Directed study for students with special projects (e.g., to supplement a non-language course or thesis work).

RUSSA 303-304(3303-3304) Advanced Composition and Conversation
303, fall; 304, spring. 4 credits each semester.

Prerequisite: for RUSSA 303, RUSSA 204; for RUSSA 304, RUSSA 303 or equivalent. R. Krivitsky, S. Paperno, and V. Tsimberov.

Reading, writing, and conversation: current Russian films (feature and documentary), newspapers, TV programs, Russian web sites, and other materials are used. In some years, completing interviews with native speakers of Russian is a component of RUSSA 304.

RUSSA 305-306(3305-3306) Reading and Writing for Heritage Speakers of Russian
305, fall; 306, spring. 2–3 credits, variable.

Prerequisite: placement by department.

Times TBA with instructor.* Please see starred (*) note at end of RUSSA section.

May be canceled if enrollment is insufficient. S. Paperno and R. Krivitsky.

Intended for students who speak grammatically correct Russian but do not know Russian grammar and have not learned to read or write Russian well (or have not learned written Russian at all). The two courses are very similar and do not constitute a sequence. Each may be taught slightly faster or slower in a given year, depending on the needs and interests of the students. Classes a week teach writing and grammar and include related reading. These classes are required, and the students who take them receive 2 credit hours. The third (optional) class teaches reading and discussion, and grants an additional credit hour.

RUSSA 308(3308) Russian Through Popular Culture
Spring. 2–3 credits, variable.

Prerequisite: RUSSA 304 for non-native speakers of Russian; RUSSA 305 or 306 for heritage speakers of Russian; for all others with advanced knowledge of Russian, placement by department. Not open to fluent native speakers of Russian (recommended: RUSSA 309/310 and RUSS courses). Conducted in Russian. Times TBA with instructor.* See starred (*) note at end of RUSSA section. R. Krivitsky.

Aims to expand the students' vocabulary and their comprehension, speaking, reading, and writing skills, as well as cultural competence, through a mosaic study and discussion of a variety of styles in contemporary Russian popular culture (1970's through the present).

Course materials include traditional and urban folklore, film, animation, published texts (prose and poetry), and a variety of songs. Includes two or three essays or similar writing assignments. Work is distributed so that a student may attend all three weekly meetings for 3 credit hours or only two of the meetings for 2 credit hours.

RUSSA 309-310(3309-3310) Advanced Reading
309, fall; 310, spring. 4 credits each semester.

Sec. 1 for non-native speakers of Russian; sec. 2 for native speakers of Russian. Prerequisites: for sec. 1 of RUSSA 309, RUSSA 204, for RUSSA 310, RUSSA 305 or equivalent; for sec. 2 of 309 and 310, placement by department. Times TBA with instructors.* See starred (*) note at end of RUSSA section.

May be canceled if enrollment is insufficient. S. Paperno and V. Tsimberov.

Designed to teach advanced reading and discussion skills. In section 1, weekly reading assignments include 20–40 pages of unabridged Russian, fiction or nonfiction. In section 2, the weekly reading is 100–130 pages. Discussion of the reading is conducted entirely in Russian and centered on the content of the assigned selection.

RUSSA 401(4401) History of the Russian Language (also LING 417(4417)) (HA)
Spring. 4 credits. W. Browne.

For description, see LING +17–118.
RUSSA 403(4403) Linguistic Structure of Russian (also LING 443[4443]) (KCM)  
For description, see LING 443[4443].

RUSSA 413-414(4413-4414) Advanced Conversation and Stylistics  
413, fall; 414, spring. 2 credits each semester.  
Prerequisites: for RUSSA 413, RUSSA 304 or equivalent, for RUSSA 414, RUSSA 413 or equivalent. Times TBA with instructor.  
Please see starred (*) note at end of RUSSA section.  
Staff.  
Involves discussion of authentic Russian texts and films (feature or documentary) in a variety of nonliterary styles and genres.

RUSSA 491(4491) Reading Course: Russian Literature in the Original Language  
Fall or spring. 1 credit each semester.  
Prerequisite: permission of instructor. Times TBA with instructor.  
Please see starred (*) note at end of RUSSA section. Staff.  
To be taken in conjunction with any Russian literature course at the advanced level.  
Students receive 1 credit for reading and discussing works in Russian in addition to their normal course work.

RUSSA 601(6601) Old Church Slavonic (also LING 661[6661])  
For description, see LING 661.[

RUSSA 602(6602) Old Russian Texts (also LING 662[6662])  
For description, see LING 662.[

RUSSA 633-634(6633-6634) Russian for Russian Specialists  
633, fall; 634, spring. 1–4 credits, variable.  
Prerequisite: four years of college Russian or equivalent. Times TBA with instructor.  
Please see starred (*) note at end of RUSSA section. Staff.  
Designed for students whose areas of study require advanced active control of the language. Fine points of syntax, usage, and style are discussed and practiced. Syllabus varies from year to year.

RUSSA 651(6651) Comparative Slavic Linguistics (also LING 671[6671])  
For description, see LING 671.[

**For courses marked “Times TBA with instructor” (“*”) taught byWayles Browne, contact Professor Browne (ewb2@cornell.edu or 255-0712) for the time and place of his organizational meeting.

**Russian Literature**

A variety of courses is offered in Russian literature. Readings may be in English translation or in the original Russian or both (see course descriptions). Instruction often encompasses culture and intellectual history as well as literature. Some courses are cross-listed with appropriate departments.

[RUSSL 207-208(2207-2208) Themes from Russian Culture (LA)  

These courses are based on lectures, discussions, and audio-visual presentations and cover various aspects of Russian culture, such as literature, art, architecture, music, religion, philosophy, and social thought. RUSSL 207 extends through the 18th century, and RUSSL 208 covers the 19th and 20th centuries.

RUSSL 209(2209) Readings in Russian Prose and Poetry (LA)  
Fall 3 credits. Satisfies Option 1.

Prerequisite: For students with 2+ semesters of Russian language (RUSSA 121[122] or equivalent). Readings in Russian/discussion in English. G. Shapiro.

Goals are to introduce students to 20th-century Russian literature in the original and to improve their Russian reading and writing skills. Readings are from 20th-century masters such as Bunin, Bulgakov, and Nabokov. All reading, writing, and discussion in Russian. Course designed for students with native background needing another course to satisfy the language requirement. May be used as a prerequisite for RUSSL 300–400 courses with reading in Russian.

RUSSL 212(2212) Readings in 20th-Century Russian Literature (LA)  
Spring. 3 credits. Satisfies Option 1. G. Shapiro.

Reads a variety of nonliterary styles and genres. Readings may be in English translation. Next offered 2008–2009.

RUSSL 279[2279] The Russian Connection, 1830 to 1867 (also COM L 279[2790]) (LA)  

Examines Russian prose of mid-19th century (Lermontov, Tolstoy) against background of European prose (Rousseau, Musset, Stendhal, Thackeray, et al.).

RUSSL 280(2280) The Russian Connection, 1870 to 1960 (also COM L 280[2800]) (LA)  

Examine the Dostoevskian novel against background of European prose (Diderot, Camus, Sarrate, et al.).

RUSSL 331(3331) Introduction to Russian Poetry (LA)  
Spring. 4 credits. Prerequisite: proficiency in Russian or permission of instructor. May be counted toward 12 credits of Russian literature in original language for Russian major. S. Senderovich.

A survey of Russian poetry, with primary emphasis on the analysis of individual poems by major poets.

RUSSL 332(3332) Russian Drama and Theater (also THTR 332[3320]) (LA)  

RUSSL 333(3333) 20th-Century Russian Poetry (LA)  

Close readings of lyrics by major 20th-century poets. All readings are in Russian.

RUSSL 334(3334) The Russian Short Story (LA)  
Spring. 4 credits. Prerequisite: proficiency in Russian or permission of instructor. May be counted toward 12 credits of Russian literature in original language for Russian major. Next offered 2008–2009. P. Carden.

Survey two centuries of Russian storytelling. Analysis of individual stories by major writers. Emphasis on narrative structure and on related landmarks of Russian literary criticism.

RUSSL 335(3335) Gogol (LA)  
Spring. 4 credits. G. Shapiro.

Selected works of Gogol are read closely and viewed in relation to his life and to the literature of his time. Readings are in English translation.

RUSSL 337(3337) Films of Russian Literary Masterpieces (also COM L 338[3380]) (LA)  

Comparative analysis of American films based on Russian novels: War and Peace and Dr. Zhivago. Problems of translation between media and cultures.

RUSSL 338(3338) Lermontov's Hero of Our Time (LA)  

Mikhail Lermontov's Hero of Our Time has been called the first major Russian novel. Readings in Russian, with attention to linguistic and literary problems.

RUSSL 350(3500) Education and the Philosophical Fantasies (also COM L 350[3500]) (LA)  
Fall. 4 credits. P. Carden.

A major philosophical tradition has conceived of education as encompassing the whole of our lives. What we should do or be is seen as the result of every choice we make. The whole of our human context is understood as a school in which we form ourselves. This all-encompassing vision of education has been embodied in the works of the great philosopher-fantasists who use the forms of fiction to explore fundamental issues of education. Students examine several key philosophical fantasies, among them Plato’s Republic, Rousseau’s Émile, and Tolstoy’s War and Peace. The aim is to understand how the discourse on education became a central part of our modern tradition.

RUSSL 367(3367) The Russian Novel (LA)  

RUSSL 368(3368) 20th-Century Russian Literature (LA)  

A survey of 20th-century Russian prose, including such writers as Bunin, Bulgakov, and Nabokov, as well as Solzhenitsyn, Shalamov, and Voinovich.
DOSTOEVSKY # (LA)

4 credits. Limited to 40 students.

A survey of Dostoevsky's major novels: Notes from Underground, Crime and Punishment, The Idiot, and The Brothers Karamazov.

Readings in English translation.

CHEKHOV # (LA)

Anton Chekhov's stories in the context of contemporary paintings. Readings in English translation.

Pushkin # (LA)

Spring. 4 credits. Prerequisite: proficiency in Russian or permission of instructor. May be counted toward 12 credits of Russian literature in original language for Russian major. Next offered 2007-2008.

Reading in the original language and discussion of selected works by Pushkin: lyrics, narrative poems, and Eugene Onegin.

Short Works of Tolstoy

Fall. 4 credits. Prerequisite: RUSS 209 or 212 or equivalent mastery of Russian language skills. P. Carden.

A selection of short stories and short novels will be read in the original Russian text.

Class discussion will focus on the themes and style of Tolstoy's writings, with particular attention to his use of the Russian idiom. The assignments will be adjusted to take into account the language capabilities of those enrolled. Discussion and papers will be in English.

A Moralist and a Pornographer (LA)

Spring. 4 credits. Limited to 15 students.

Prerequisite: proficiency in Russian or permission of instructor. Next offered 2008-2009. S. Senderovich.

Bestsellers Doctor Zhitago and Lolita (both October 1958) concerned the sexual exploitation of a teenage girl. Pasternak's novel, hailed as highbrow and highly moral, received the Nobel Prize. Nabokov's novel, perceived as a pornographic text, could not be published in the U.S.

Supervised Reading in Russian Literature

Fall or spring. 1–4 credits each semester.

Independent study. Prerequisite: students must find an advisor and submit a plan before signing up. Times TBA with instructor. Staff.

Directed Studies

Spring. 4 credits. Limited to 15 students.

Prerequisite: permission of instructor. Times TBA with instructor.** See double-starred (**) note at end of UKRAN section. W. Browne.

Taught on a specialized basis to address particular student needs.

Elementary Hungarian

5 credits. Prerequisites: For 132: HUNGR 131 or permission of instructor. This language series (131–132) is not sufficient to satisfy the language requirement. Next offered 2007–2008. G. Nehler.

Teaches the basic grammar of Hungarian. Designed to aid the student in all facets of language acquisition: speaking, listening, comprehension, reading, and writing. Second-semester Hungarian (132) teaches more advanced grammar of the language at an intermediate level.

Continuing Hungarian

131, fall; 134, spring. 3 credits. Prerequisite: for 133, HUNGR 132 or permission of instructor; for 134, HUNGR 133 or permission of instructor. This language series (133–134) is not sufficient to satisfy the language requirement. G. Nehler.

A conversation and reading course designed to aid the student in all facets of language acquisition: speaking, listening, comprehension, reading, and writing. Fourth-semester Hungarian (134) teaches more advanced instruction of the language at an intermediate level.

Directed Studies

Taught on a specialized basis to address particular student needs.

Structure of Hungarian (also LING 427(4427)]

(KCM)

For description, see LING 427.

2 credits. Prerequisite: proficiency in Russian or permission of instructor. Next offered 2008–2009. S. Senderovich.

Major works of Chekhov in Russian; focus on style and language. Readings include stories ("Anna on the Neck," "Darling," "Steppe") and plays (Uncle Vanya and Seagulls).

The Avant-Garde in Russian Literature and the Arts (LA)

Fall. 4 credits. Prerequisite: proficiency in Russian or permission of instructor. Next offered 2007–2008. P. Carden.

Literature, theater, and the visual arts in the richly innovative period 1890–1920.

Directed Studies

131, fall; 132, spring. 3 credits each semester.

Prerequisite: for POLSH 131, POLISH 131 or equivalent. Offered alternate years; next offered 2007–2008. K. Golkowska.

Taught on a specialized basis to address particular student needs.

Structure of Polish (also LING 427(4427)]

(KCM)

For description, see LING 427.

1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor.** See double-starred (**) note at end of UKRAN section. Staff.

131, fall; 132, spring. 3 credits each semester.

Prerequisites: for POLSH 131, POLISH 131 or equivalent. Offered alternate years.

Covered: language skills: speaking, listening, comprehension, reading, and writing.

Directed Studies

133, fall, 134, spring. 3 credits each semester.

Prerequisites: for POLSH 133, POLISH 133 or permission of instructor; for POLSH 134, POLISH 134 or equivalent. Times TBA with instructor.** See double-starred (**) note at end of UKRAN section. Staff.

131, fall; 132, spring. 3 credits each semester.

Prerequisites: for POLSH 131, POLISH 131 or equivalent. Offered alternate years.

Taught on a specialized basis to address particular student needs.
An intermediate conversation and reading course.

**POLISH 300(3300) Directed Studies**

Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Times TBA with instructor.** See double-starred (**) note at end of UKRAN section. K. Golokowska.

Taught on a specialized basis to address particular student needs.

**POLISH 301(3301)** Polish through Film and Literature

Spring. 3 credits. Satisfies Option 1. Prerequisite: POLISH 134 or permission of instructor. Times TBA with instructor.** See double-starred (**) note at end of UKRAN section. K. Golokowska.

All-skill course designed to build communicative proficiency in the language and provide insight into Polish culture. Short videos, films, and contemporary texts chosen for their thematic interest and linguistic accessibility provide the basis for practice in listening and reading comprehension, guided conversation, and a grammar review.

**Serbo-Croatian**

([SEBCR 131-132](1131-1132) Elementary Serbo-Croatian)

131, fall; 132, spring. 3 credits each semester. Prerequisite for SEBCR 132: SEBCR 131 or equivalent. This language series (131-132) is not sufficient to satisfy language requirement. Times TBA with instructor.** Offered alternate years; next offered 2007-2008. See double-starred (**) note at end of UKRAN section. Staff.

Covers all language skills: speaking, listening comprehension, reading, and writing. Includes Bosnian.

([SEBCR 133-134](1133-1134) Continuing Serbo-Croatian)

133, fall; 134, spring. 3 credits each semester. Prerequisite for SEBCR 133: SEBCR 132 or equivalent; for SEBCR 134: SEBCR 133 or equivalent. Times TBA with instructor.** See double-starred (**) note at end of UKRAN section. Offered alternate years; next offered 2008-2009. Staff.

An intermediate conversation and reading course.

**SEBCR 300(3300) Directed Studies**

Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Times TBA with instructor.** See double-starred (**) note at end of UKRAN section. Staff.

Taught on a specialized basis to address particular student needs.

**SEBCR 302(3302) Advanced Serbo-Croatian**

Fall. 3 credits. Prerequisite: SEBCR 134 or permission of instructor. K. Bättig von Wittelsbach.

Includes Bosnian as well as Croatian and Serbian. This is a third-year course with intensive speaking and writing practice. Selections from a variety of fictional and argumentative texts, as well as video materials illustrative of contemporary South Slavic societies (Croatia, Bosnia and Herzegovina, Serbia, Montenegro), will provide basis for discussions and essays. Review of select grammar topics is included. Students' grade will be based on participation, compositions, oral presentations, grammar exercises and a final exam.

**Ukrainian**

**UKRAN 300(3300) Directed Studies**

Spring. 1-4 credits variable. Prerequisite: permission of instructor. Times TBA with instructor.** See double-starred (**) note at end of section. W. Browne.

Taught on a specialized basis to address particular student needs.

**For these courses, contact Professor Browne (ewrb2@cornell.edu or 255-0712) for time and place of organizational meeting(s).**

**SANSKRIT**

See "Asian Studies."

**SCIENCE AND TECHNOLOGY STUDIES**

In today's world, issues at the intersection of the technical and the social arise continually in all aspects of life, from the role of computers in society, the history of evolutionary theory, and the challenges of environmental controversies, to the ethical dilemmas of genomics and biomedicine. The field of science and technology studies (STS) addresses such issues through the study of the social aspects of knowledge, especially scientific and technological knowledge. STS explores the practices that shape science and technology, examines their social and cultural context, and analyzes their political and ethical implications. STS provides a strong liberal arts background from which students can go on to careers in law, medicine, environmental policy, business, and a variety of other professions where the social aspects of science and technology loom large.

**The Science and Technology Studies Major**

ST&S courses are organized into a set of core courses plus three themes. Students select the theme that best represents their interests. In consultation with a faculty member, students may devise their own theme as long as it meets the general criteria of coherence and rigor.

**Admission to the Major**

Students intending to major in Science and Technology Studies should submit an application during their sophomore year. Juniors are considered on a case-by-case basis. The application includes (1) a one-page statement explaining the student's intellectual interests and why the major is consistent with the student's academic interests and goals; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of courses fulfilling ST&S requirements; and (4) an up-to-date transcript of work completed at Cornell University (and elsewhere, if applicable). Acceptance into the major requires completion of the following prerequisites:

1. ST&S 101 and 102, or ST&S 101 or 102 and an additional Social Science or Humanities course. (Students who have not taken ST&S 101 or 102, but have taken a different ST&S course and an additional Social Science or Humanities course should contact the ST&S Department for guidance about whether those courses can substitute for the prerequisites.)

2. the science and quantitative requirement of the College of Arts and Sciences. These courses cannot be used to fulfill the core or other course requirements for the major and must be taken for a letter grade. Sophomores in the process of completing these prerequisites may be admitted to the major on a provisional basis. Further information and application materials are available in 306 Rockefeller Hall (255-6047).

**Requirements**

ST&S majors must complete the following requirements:

Note: All courses used to fulfill major requirements must be taken for a letter grade, which must be C- or above.

1. Core: one course in each of the following groups (a-c).
   a. Foundation (ST&S 201)
   b. Ethics (choose from ST&S 205, 206, 360, or 490)
   c. History (choose from ST&S 233, 250, 281, 282, 330, 355, 357, 447, 458, or 475)

2. Theme: Students must elect a theme and take four courses in the theme. Courses taken to satisfy the core course requirements may not be used as part of the required four courses in the theme. At least two of the courses should be at the 300 level or higher, and at least one should be at the 400 level.

Available themes are:

In consultation with an ST&S faculty advisor, students may also devise their own theme as long as it meets the general criteria of coherence and rigor.

3. Additional Science and Technology Studies Courses: additional courses to total 34 credit hours in the major, chosen from the general list of ST&S courses.

4. Science Requirement: in addition to the science requirement of the College of Arts and Sciences, Science and Technology Studies majors are required to take an additional two semesters of a natural science or engineering (including computer science). Mathematics sufficient to provide background for the additional
The honors program is designed to provide independent research opportunities for academically talented S&TS majors. Students who enroll in the honors program are expected to do independent study and research, with faculty guidance, on issues in science and technology studies. Students who participate in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career. S&TS majors are considered for entry into the honors program at the end of the second semester of their junior year. To qualify for the S&TS honors program, students must have an overall Cornell cumulative grade point average (GPA) of at least 3.00 and a 3.30 cumulative GPA in courses taken for the major. Additionally, the student must have formulated a research topic, and have found a project supervisor, and a second faculty member willing to serve as the advisor; at least one of these must be a member of the S&TS department. More information on the honors program is available from the S&TS undergraduate office at 306 Rockefeller Hall (255-6047).

The Biology and Society Major
The Department of Science and Technology Studies also offers the Biology and Society Major, which includes faculty from throughout the university. The Biology and Society major is designed for students who wish to combine the study of biology with exposure to perspectives from the social sciences and humanities. In addition to providing a foundation in biology, Biology and Society students obtain background in the social dimensions of modern biology and in the biological dimensions of contemporary social issues.

The Biology and Society major is offered to students enrolled in the College of Arts and Sciences, the College of Human Ecology, and the College of Agriculture and Life Sciences. The major is coordinated for students in all colleges through the Biology and Society office. Students can get information, specific course requirements, and application procedures for the major from the office in 306 Rockefeller Hall, 255-6047.

A full description of the Biology and Society major can be found on p. 477 of this catalog.

The Concentration in Science and Technology Studies

\[ \text{goals. Majors in the natural sciences and} \]
\[ \text{engineering have an opportunity to explore} \]
\[ \text{the social, political, and ethical implications} \]
\[ \text{of their selected fields of specialization, while} \]
\[ \text{students majoring in the humanities and} \]
\[ \text{social sciences have a chance to study} \]
\[ \text{the processes, products, and impacts of science} \]
\[ \text{and technology from an S&TS perspective.} \]

To satisfy the requirements for the S&TS concentration, students must complete with letter grades of C- or above a minimum of four courses selected from the course offerings listed for the major. At least one course must be chosen from each of the following themes:

1. Minds and Machines
2. Science, Technology, and Public Policy
3. Life in its Environment

The concentration is completed with one other course in S&TS. Interested students may obtain further information about courses and a list of course descriptions by contacting the S&TS undergraduate office, 306 Rockefeller Hall (255-6047).

Course Offerings

- Introductory Course
- Core Courses
- Foundation Course
- Ethics
- History
- Theme Courses
- Minds and Machines
- Science, Technology, and Public Policy
- Life in its Environment
- Independent Study
- Graduate Seminars

First-Year Writing Seminars

Consult the John S. Knight Institute web site for times, instructors, and descriptions. Web site: www.arts.cornell.edu/Knight_institute/index.html.

Introductory Courses

**S&TS 101(1101)** Science and Technology in the Public Arena (SBA)
- Fall. 3 credits. S&TS 101 and 102 may be taken separately or in any order.
- Recommended as introduction to field; not required and may not be used to fulfill a major requirement. J. Reppy.

**S&TS 102(1102)** Histories of the Future (CA)
- Spring. 3 credits. Recommended as introduction to field; not required and may not be used to fulfill a major requirement. S&TS 101 and 102 may be taken separately or in any order. R. Prentice.

From *Frankenstein* to *The Matrix*, science fiction and film have depicted contemporary science, technology, and medicine for almost two centuries. This course introduces students to historical and social studies of science and technology using science fiction films and novels, as well as key readings in science and technology studies. What social questions can fictional accounts raise that factual ones can only anticipate? How have "intelligent machines" from Rabbages' Analytical Engine to Hal raised questions about what it means to be human? What can Marvel Comics teach us about changes in science and technology? When can robots be women and, in general, what roles did gender play in scientific, technological, and medical stories? How was the discovery that one could look inside the human body received? How do dreams and nightmares of the future emerge from the everyday work of scientific and technological research?

Core Courses

**Foundation Course**

**S&TS 201(2101)** What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210(2100)) (CA)
- Spring. 3 credits. K. Lambert.

Introduces some of the central ideas in the field of Science and Technology Studies (S&TS). As well as serving as an introduction to those students who plan to major in Biology or Society or in Science and Technology Studies, the course is aimed at students with backgrounds in either the sciences or the humanities who are challenged to think more critically about what we mean by science, what counts as scientific knowledge and why, and how science and technology intervene in the wider world. The course is a mixture of lecture, discussion, and other activities. The discussion sections are an integral part of the course and attendance is required. In addition, a series of written assignments throughout the semester and a take-home final during exam week compose the majority of the grade.

**Ethics**

**S&TS 205(2051)** Ethical Issues in Health and Medicine (also B&SOC 205(2051)) (KCM)
- Fall. 4 credits. Limited to 150 students.

For description, see B&SOC 205.

**S&TS 206(2061)** Ethics and the Environment (also B&SOC 206(2061), PHIL 246(2460)) (KCM)
- Spring. 4 credits. Limited to 50 students.

For description, see B&SOC 206.

**S&TS 360(3601)** Ethical Issues in Engineering (also ENGRG 360(3600))
- Spring. 3 credits. Limited to juniors and seniors only. P. Doing.

For description, see ENGRG 360.

**History**

**S&TS 233(2331)** Agriculture, History, and Society: From Squanto to Biotechnology (HA)
- Fall. 3 credits. M. Rossiter.

For description, see "Life in Its Environment" theme.
ARTS AND SCIENCES - 2006-2007

[S&T S 250(2501) Technology in Society (also ENGRG/ECE/HIST 250(2500)) (HA)]
Fall. 3 credits. Offered alternate years. R. Kline.
For description, see ENGRG 250.

[S&T S 281(2811) Science in Western Civilization (also HIST 281(2810)) (HA)]
Fall. 4 credits. P. Dear.
For description, see HIST 281.

[S&T S 282(2821) Science in Western Civilization (also HIST 282(2820)) (HA)]
Spring. 4 credits. S&T S 291 is not a prerequisite to 282. P. Dear.
For description, see HIST 282.

[S&T S 330(3301) Physical Sciences in the Modern Age (also HIST 329(3290)) (HA)]
Spring. 4 credits. K. Lambert.
Examines the history of the physical sciences in Europe and the United States from 1800 to the present. Students study such topics as the development of thermodynamics and electrodynamics, the quantum and relativity theories, science during the world wars, and post-war "big science." As well as a history of ideas, the course emphasizes the broader historical contexts in which physical science has been produced, focusing on issues raised in relation to Romanticism, the first and second industrial revolutions, social statistics, train travel, and the military-industrial-scientific complex, among others. Reading for the course ranges from primary source material (original papers by Thomson, Helmholtz, Planck, and Einstein) to extracts from Mary Shelley's Frankenstein and Michael Frayn's Copenhagen.

[S&T S 355(3551) Philosophy of Science: Knowledge and Objectivity (also PHIL 355(3550)) (CA)]
Fall. 4 credits. P. Sengers and R. Prentice.
For description, see PHIL 381.

[S&T S 356(3561) Computing Cultures (also INFO 356(3560), COMM 356(3560)) (CA)]
Spring. 4 credits. No technical knowledge of computer use presumed or required. S&T S 355 and 356 may be taken separately or in any order. Next offered 2007-2008. P. Sengers and R. Prentice.
Computers are powerful tools for working, playing, thinking, and living. Laptops, PDAs, webcams, cell phones, and iPods are not just devices, they also provide narratives, metaphors, and ways of seeing the world. This course critically examines how computing technology and society shape each other and how this plays out in our everyday lives. Identifies how computers, networks, and information technology reproduce, reinforce, and rework existing cultural trends, norms and values. Looks at the values embodied in the cultures of computing and consider alternative ways to imagine, build, and work with information technologies.

[S&T S 381(3811) Philosophy of Science: Knowledge and Objectivity (also PHIL 381(3810)) (CA)]
Fall. 4 credits. R. Boyd.
For description, see PHIL 381.

[S&T S 400(4001) Components and Systems: Engineering in a Social Context (also M&AE 400/401(4000/4010)) (CA)]
Spring. 3 credits. Offered alternate years. Z. Warhaft.
For description, see M&AE 400.

[S&T S 409(4091) From the Phonograph to Techno (also SOC 409(4090)) (CA)]
Spring. 4 credits. T. Pinch.
In this seminar, we treat music and sound and the ways they are produced and consumed as socio-cultural phenomena. We specifically investigate the way that music and sounds are related to technology and how such technologies and sounds have been shaped by and have shaped the wider society and culture of which they are a part. We look at the history of sound technologies like the phonograph, the electronic music synthesizer, samplers, and the Sony walkman. Our perspective is drawn from social and cultural studies of science and technology. Students are encouraged to carry out a small original research project on their own favorite sound technology.

[S&T S 422(4221) New York Women (also FGSS 422(4220), HIST 445(4450)) (CA)]
Fall. 4 credits. M. Rossiter.
For description, see S&T S 422 Life in its Environment Theme.

[S&T S 431(4311) From Surgery to Simulation (SBA)]
Spring. 4 credits. R. Prentice.
A cliche among medical professionals says, "If you have a hammer, every problem..."
looks like a nail." In other words, treatment decisions often are dictated by available technologies. This course looks at medical technologies from dissection to x-rays to antidepressants and the ways they shape how medical professionals look at and practice upon the human body. Takes a broad view of technology, encompassing systems of practice that shape how work is conducted and the body is understood, as well as specific machines and treatments with specific uses. Considers how these technologies often are not only treatments for individual patients but also metaphors for larger cultural questions.

S&TS 453/(4531) Knowledge and Society (also SOC 453/(4530)] (CA) Fall. 4 credits. Limited to 15 students. C. Leuenberger.

Focuses on the historical evolution of the sociology of knowledge as a theoretical paradigm and an empirical research field. Examines the phenomenological origins of the sociology of knowledge and many of its central texts. Studies how it has been applied to such areas as personhood, interaction, religion, identity, and the emotions. Also considers epistemological questions that arise, and covers various theoretical and empirical approaches that have been influenced by the sociology of knowledge such as ethnomethodology, conversation analysis, and the sociology of science and technology.

S&TS 468/(4681) Understanding Innovation Fall. 4 credits. J. Reppy.

For description, see S&TS 468 Science, Technology and Public Policy.

S&TS 481/(4811) Philosophy of Science (also PHIL 481/[4810], S&TS 681/[6811]) (KCM) Spring. 4 credits. R. Boyd.

For description, see PHIL 681.

Science, Technology, and Public Policy

S&TS 281/(2811) Science in Western Civilization (also HIST 281/[2810]) # (HA) Fall. 5 credits. P. Dear.

For description, see HIST 281.

S&TS 282/(2821) Science in Western Civilization (also HIST 282/[2820]) # (HA) Spring. 4 credits. P. Dear.

For description, see HIST 282.

S&TS 324/(3241) Environment and Society (also D SOC 324/[3240]) (SBA) Fall and spring. 3 credits. Fall. C. Geisler; spring. G. Gillespie.

For description, see D SOC 324.

S&TS 331/(3311) Environmental Governance (also B&SOC 331/[3311], NTRES 331/[3310]) (CA) Spring. 3 credits. S. Wolf.

For description, see NTRES 331.

S&TS 352/(3521) Science Writing for the Mass Media (also COMM 352/[3520]) Fall. 3 credits. B. Lewenstein.

For description, see COMM 352.

[S&TS 357/(3571) Engineering in American Culture (also ENGRG 357/[3570], AM ST 356/[3570], HIST 357/[3570]) Fall. 4 credits. Offered alternate years; next offered 2007–2008. R. Kline.

For description, see ENGRG 357.]

S&TS 360/(3601) Ethical Issues in Engineering (also ENGRG 360/[3600]) Spring. 3 credits. P. Doing.

For description, see ENGRG 360.

S&TS 391/(3911) Science in the American Polity, 1960 to Now (also GOVT 309/[3091], AM ST 369/[3691]) (SBA) Spring. 4 credits. S. Hilgartner.

Reviews the changing political relations between science, technology, and the state in America from 1960 to the present. It focuses on the politics of choices involving science and technology in a variety of institutional settings, from Congress to courts and regulatory agencies. The tensions and contradictions between the concepts of science as an autonomous republic and as just another special interest provide a central theme for the course. Topics addressed include research funding, technological controversies, scientific advice, citizen participation in science policy, and the use of experts in courts.

S&TS 401/(4011) Genomics and Society (also NS 401/[4010]) Fall. 3–4 credits. Taught in Washington, D.C. D. Pelletier.

For description, see NS 401.

Examines problems that arise at the interface of law and science. These problems include the regulation of novel technology, the role of technical expertise in public decision-making, and the control over scientific research. The first part of the course covers basic perspectives in science and technology studies (S&TS) and how they relate to legal decisions and processes. The second part covers a series of examples and legal cases on the role of expert judgments in legal and legislative settings, intellectual property considerations in science and medicine, and legal and political oversight of scientific research. The final part examines social processes and practices in legal institutions, and relates these to specific cases and conceptual controversies. Lectures and assignments are designed to acquaint students with relevant ideas about the relationship between legal, political, and scientific institutions, and to encourage independent thought and research about specific problems covered in the course.

S&TS 411/(4111) Knowledge, Technology, and Property (SBA) Spring. 4 credits. Prerequisite: one course in science and technology studies. S. Hilgartner.

Should the human genome be treated as private property or a public resource? How should copyright be managed in any description of our era, whether the topic is economic growth, military power, or globalization. The course will explore different ways of understanding the innovation process, the institutions and practices that are meant to foster innovation, and the issues that governments face when they seek to regulate innovations. We will read across a range of literature in economics, history, and science and technology studies.

S&TS 471/(4711) The Dark Side of Biology: Biological Weapons, Bioterrorism, and Biocriminality (also B&SOC 471/[4711]) (SBA) Fall. 4 credits. K. Vogel.

For description, see B&SOC 471.

S&TS 483/(4831) The Military and New Technology (also GOVT 483/[4837]) (SBA) Spring. 4 credits. K. Vogel.

For description, see GOVT 483.

Life in Its Environment

S&TS 205/(2051) Ethical Issues in Health and Medicine (also B&SOC 205/[2051]) (KCM) Fall. 4 credits. S. Hilgartner.

For description, see B&SOC 205.
**S & T S 206 (2061) Ethics and the Environment** (also B & SOC 206 [2061], PHIL 246 [2460]) (KCM)
Spring. 4 credits. P. Doi.
For description, see B & SOC 206.

**S & T S 233 (2331) Agriculture, History, and Society** (also Quansto to Biotechnology) (KCM)
Fall. 3 credits. M. Rossiter.
Surveys the major themes in the development of agriculture and agribusiness in the United States in the 19th and 20th centuries. These include particular individuals (e.g., Liberty Hyde Bailey, Luther Burbank, G. W. Carver, Henry A. Wallace, and Norman Borlaug), the rise of government support and institutions (including U.S.D.A. and Cornell), noteworthy events (the dust bowl, World War II, and the environmental movement), and the achievements of the Green and "Gene" Revolutions.

**S & T S 281 (2811) Science in Western Civilization** (also HIST 281 [2810]) (HA)
Fall. 3 credits. P. Dear.
For description, see HIST 281.

**S & T S 282 (2821) Science in Western Civilization** (also HIST 282 [2820]) (HA)
Spring. 4 credits. P. Dear.
For description, see HIST 282.

**S & T S 285 (2851) Communication in the Life Sciences** (also COMM 285 [2850])
Spring. 3 credits. R. Lewenstein.
For description, see COMM 285.

**S & T S 286 (2861) Science and Human Nature** (also PHIL 286 [2861]) (KCM)
Spring. 4 credits. R. Boyd.
For description, see PHIL 286.

**S & T S 287 (2871) Evolution** (also BIOEE 207 [2070], HIST 287 [2870]) (PBS)
Fall. 3 credits. W. Provine.
For description, see BIOEE 207.

**S & T S 301 (3011) Life Sciences and Society** (also B & SOC 301 [3011]) (SBA)
Spring. 4 credits. M. Lynch.
For description, see B & SOC 301.

**S & T S 311 (3110) Sociology of Medicine** (SBA)
Spring. 4 credits. Not open to freshmen.
C. Leuenberger.
Provides an introduction to the ways in which medical practice, biomedical technology, and the medical profession are embedded in society and shaped by social phenomena. Accountability to patients and the public, and struggles over the control of medical practice in a world where medicine is connected to gender, class, race, and personal autonomy are important overarching themes. This course examines the structure of the medical profession, medical training and professional socialization; the social organization of the hospital; and doctor-patient interactions. Also explores how biomedical knowledge and technology are produced, assessed, and introduced into clinical practice. Topics may include the intensive-care unit, the training of surgeons, the regulation of pharmaceuticals, AIDS and breast cancer activism, genetic testing, and priority setting in biomedical science.

**S & T S 324 (3241) Environment and Society** (also D SOC/SOC 324 [3240]) (SBA)
Fall and spring. 3 credits. Fall, C. Geistler; spring, G. Gillespie.
For description, see D SOC 324.

**S & T S 331 (3311) Environmental Governance** (also B & SOC 331 [3311], NTRES 331 [3310]) (CA)
Spring. 3 credits. S. Wolf.
For description, see NTRES 331.

**S & T S 409 (4091) From the Phonograph to Techno** (also SOC 409 [4090])
Spring. 4 credits. T. Pinch.
In this seminar, we treat music and sound and the ways they are produced and consumed as socio-cultural phenomena. We specifically investigate the way that music and sounds are related to technology and how such technologies and sounds have been shaped by and have shaped the wider society and culture of which they are a part. We look at the history of sound technologies like the phonograph, the electronic music synthesizer, samplers, and the Sony walkman. Our perspective is drawn from social and cultural studies of science and technology. Students are encouraged to carry out a small original research project on their own favorite sound technology.

**S & T S 411 (4111) Knowledge, Technology, and Property** (SBA)
Spring. 4 credits. Prerequisite: one course in science and technology studies. S. Hilgartner.

**S & T S 412 (4101) Science, Technology, and Culture** (COM L 410 [4100]) (CA)
Fall. 4 credits. Next offered 2007-2008.
A. Banerjee.
For description, see COM L 410.

**S & T S 420 (4201) The Darwinian Scientific Revolution** (also B & SOC 420 [4201]) (HA)
Fall. 4 credits. Offered only fall 2006.
K. Lambert.
For description, see B & SOC 420.

**S & T S 422 (4221) New York Women** (also HIST 445 [4450], FGSS 422 [4220])
Fall. 4 credits. M. Rossiter.
Over the centuries New York State has been the site of activity for a great many women of consequence. This course is a one-semester survey of the past and present activities and contributions of rural and urban women in a variety of fields of interest to Cornell students—politics, medicine, science, the law, education, business (including hotels), entertainment, communications, government, labor, religion, athletics, the arts and other areas. Weekly readings and discussion and a paper, possibly using local or university archives. Limited to 15 students.

**S & T S 431 (4311) From Surgery to Simulation** (SBA)
Spring. 4 credits. R. Prentice.
For description, see "Minds and Machines."

**S & T S 444 (4441) Historical Issues of Gender and Science** (also FGSS 444 [4440]) (CA)
Spring. 4 credits. Not open to freshmen.
M. Rossiter.
A one-semester survey of women's role in science and engineering from antiquity to the 1980s, with special emphasis on the United States in the 20th century. Readings include biographies and autobiographies of prominent women scientists, educational writings and other primary sources, and recent historical and sociological studies. By the end of the semester, students attain a broad view of the problems that women faced in entering science and those that still remain.

**S & T S 447 (4471) Seminar in the History of Biology** (also B & SOC 447 [4471], HIST 415 [4150], BIOEE 467 [4670]) (PBS)
Summer and fall. 4 credits. Limited to 18 students. S & T S students optional. W. Provine and K. Kennedy.
For description, see BIOEE 467.

**S & T S 471 (4711) The Dark Side of Biology: Biological Weapons, Bioterrorism, and Biocriminality** (also B & SOC 471 [4711]) (SBA)
Fall. 4 credits. K. Vogel.
For description, see B & SOC 471.

**S & T S 478 (4871) Seminar in the History of the Environment** (HA)
M. Rossiter.

**S & T S 495 (4951) Social Studies of the Human Sciences** (CA)
C. Leuenberger.
Explores how the human and social sciences have provided the knowledge and categories we use to make sense of people and their behavior. Looking across a range of disciplines—including sociology, psychology, psychiatry, and economics—the course examines how human beings have become objects of scientific investigation. Discusses the rise of the human sciences and their role in politics, culture, and society.

**S & T S 496 (4961) Medicine and Healing in China** (also HIST 496 [4960], B & SOC 496 [4961], ASIAN 469 [4669])
Spring. 4 credit. T. Hirschel.
For description, see HIST 496.

**Independent Study**

**S & T S 399 (3991) Undergraduate Independent Study**
Fall, spring. 1-4 credits. No more than 8 hours total of independent study (not including honors) can count toward S & T S major. Prerequisite: permission of instructor.
More information and applications available in 306 Rockefeller Hall.

**S & T S 499 (4991/4992) Honors Project**
Fall and spring (yearlong)*. Prerequisite: senior S & T S students by permission of department; overall Cornell cumulative GPA of 3.00 and 3.30 cumulative GPA in courses taken for major. Apply in 306 Rockefeller Hall.

Students admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research, and the completed work should be of a wider scope and greater originality than is normal for an upper-level course. The student must find a project supervisor and a second faculty member willing to serve as faculty reader; at least one of these must be a member of the S & T S department.
Students must register for total credits desired for the whole project each semester (e.g., 8 credits for the fall semester and 8 credits for the spring semester). After the fall semester, students will receive a letter grade of "R" for the first semester with a letter grade for both semesters submitted at the end of the spring semester. If students do not complete the second semester of the honors project, they must change the first semester to independent study to clear the "R" and receive a grade. Otherwise, the "R" will remain on their record and prevent them from graduating.

Graduate Seminars

[S&TS 525(5251) Seminar in the History of Technology (also HIST 525(5250))]
Exploration of the history of technology in Europe and the United States from the 18th century to the present. Typical topics include the industrial revolution in Britain, the emergence of engineering as a profession, military support of technological change, labor and technology, the "incorporation" of science and technological utopias, social myths of engineers and inventors, social aspects of urbanization in the city and on the farm, post-war consumerism, and gender and technology. The interests of students and recent literature in the field are considered in selecting the topics for the seminar.

[S&TS 627(6271) Making People Through Social Theory]
Spring. 4 credits. C. Leuenberger.
This seminar explores how the human and social sciences have provided the knowledge and categories we use to make sense of human beings and their behavior. Looking across a range of disciplines—including sociology, psychiatry, psychology, psychoanalysis, anthropology, and economics—we will look at how human beings have become objects of scientific investigation. We will focus on how culture, politics, and the professional environment impact the human sciences and how the use of rhetoric constitutes academic discourse. We will also focus on the social scientific construction of selves, sex, gender, and race.

[S&TS 628(6281) Self and Society]
How has the self become a political, scientific, and cultural project caught up in the ideological and cultural battles of modern times? What roles do cultural institutions, politics and science play in making human beings visible, understandable, and treatable? Students in this course will read and discuss texts at the intersection of sociology, cultural studies, history of the human and behavioral sciences, and science and technology studies that treat the self as a social construction. The course focuses on how culture, politics, science, as well as bureaucratic and economic imperatives help shape modern and postmodern conceptions of the self.

[S&TS 630(6301) Social Theory for Science Studies]
Fall. 4 credits. R. Prentice. Sociologist C. Wright Mills challenged his readers to develop their "sociological imaginations" to understand the social and historical context of seemingly individual events, such as the receipt of a pink slip, a draft card, or a drug prescription. Within science and technology studies, scholars have documented how social issues can be classified at the social, cultural, technical, or medical, often appearing to leave the social realm altogether to become biological, technical, or pathological. The best social constructivist work in Science and Technology Studies reveals how scientific, technological, and medical worlds are thoroughly social, that is, theories of social structure and action underpin the best empirical work in the field. This course introduces graduate students to classic texts and concepts in social theory with a focus on applying such theories to empirical research in science, technology, and medicine. It will consider major thinkers and schools of social thought, such as Marx, Weber, Durkheim, Mannheim, Foucault, and the Frankfurt School. We will also consider how a nuanced interplay of theory and empirical data can bring critically important insights to both theoretical and empirical understandings of the world.

[S&TS 631(6311) Qualitative Research Methods for Studying Science (also SOCO 631(6310))]
Spring. 4 credits. M. Lynch.
Much has been learned about the nature of science by sociologists and anthropologists donning lab coats and studying scientists in action. This course looks at the methods used in this new wave of science studies. Examines what can be learned by interviewing scientists, from videos, and from detailed examinations of scientific texts. Students gain hands-on experience by conducting a mini-project in which they investigate some aspect of scientific culture.

[S&TS 632(6321) Inside Technology: The Social Construction of Technology (also SOC 632(6320))]
Fall. 4 credits. T. Pinchin.
Rather than analyze the social impact of technology upon society, this course investigates how society gets inside technology. In other words, is it possible that the very design of technologies embody assumptions about the nature of society? And, if so, are alternative technologies which embody different assumptions about society, possible? Do engineers have implicit theories about society? Is technology gendered? How can we understand the interaction of science and technology? Throughout the course the arguments are illustrated by detailed examinations of particular technologies, such as the ballistic missile, the bicycle, the electric car, and the refrigerator.

[S&TS 634(6341) Information Technology in Sociocultural Context]
Fall. 4 credits. S. Seth.
Analyzes information technology using historical, qualitative, and critical approaches. Discusses questions such as: In what ways is information technology—often portrayed as radically new—actually deeply historical? How do information technologies represent and intervene in debates and struggles among people, communities, and institutions? How is the design of information technology tools entangled in the realms of law, politics, and commerce? In what ways are the social consequences of information technologies produced and changed by the claims we make about the technologies as well as about the raw functionality of the tools themselves? This course investigates these issues through the lenses of long-standing debates and current controversies.

[S&TS 640(6401) Science, Technology, and Gender: Historical and Cultural Studies (also FGSS 640(6400), HIST 641(6410))]
Explores five, often interrelated, aspects of the literature on gender, science, and technology: (1) The historical participation of women (and men) in scientific work, (2) the embodiment of scientific, medical and technical knowledge, (3) the scientific construction of sexuality, (4) the control of knowledge through technological artifacts, and (5) feminist critiques of scientific knowledge. Examines the origins of modern western science in the scientific revolution, considering the claim that "science," by its very nature, is an androcentric enterprise. The rise of scientific and medical discourses and professions in the 19th century provides a focus for discussions of the systematic exclusion of women from the production of scientific knowledge at precisely the point that women's bodies become the object of intensive scientific study. Drawing on a range of material, the course considers the construction of sexual and intersubjective individuals in scientific discourse. In later weeks, it discusses so-called "postmodernist" critiques of science, and debates the possibilities for "feminist science."

[S&TS 644(6441) Topics in the History of Women in Science (also FGSS 644(6440))]
Spring. 4 credits. M. Rossiter.
The new life sciences (including genetics, genomics, and biotechnology) are highly controversial areas of emerging science and technology. They inspire both hope and anxiety, and are a source of ongoing conflicts. This course will examine the politics of the new biology, both to consider the issues in their own right and to examine the relationships among science, technology, and politics. In particular, the course will focus on three themes—the politics of property, the politics of identity, and the politics of risk—as they pertain to the emerging technosciences of life. It will include the social shaping biological research, eugenics and genetics, genomic medicine; risk; commercial biotechnology; university-industry relationships; social movements; North-South issues; the Human Genome Project; genetics and race; intellectual property; the debate over human cloning; and the capacity of contemporary societies to manage emerging technologies.

[S&TS 675(6751) Science, Race, and Colonialism]
Scholarly work in the last two decades has come increasingly to pay attention to the oft-neglected linkages between the sciences and the discourses and practices of colonialism. Texts of broad conception like Michael Adas’s Machines as the Measure of Men and Gary Prakash’s recent Another Reason have made an attempt to provide an overview of many of the issues involved, but the field awaits a genuinely synthetic treatment. This course aims to provide the framework for such a treatment by focusing on a number of key areas of current interest. Beginning with a survey of the history of ideas of race and the development of “race science,” the course moves on to consider a series of specific topics, including the importance of social statistics and technologies of identification (fingerprinting), medicine, hygiene, technologies of overt control, scientific nationalism and nationalist science, the periphery as laboratory, gender, and savagery and criminality. Readings comprise a mixture of primary and secondary sources, and students are encouraged to contribute topics and texts of particular interest.

S&T 681(6811) Philosophy of Science (also PHIL 481[4810], S&T 481[481]) Fall. 4 credits. R. Boyd. For description, see PHIL 681.

S&T 693(6931) Economics Meets Science Studies Fall. 4 credits. Next offered 2008-2009. J. Reppy. Covers a variety of possible interactions between the disciplines of economics and science and technology studies. Some economists are interested in science and technology as important components in economic growth, while scholars in science studies often appeal to economic motives and institutions to explain behavior in the production of scientific and technological knowledge. This course explores ways in which economics can provide new questions and theoretical approaches for science and technology studies. From another perspective, economics, as the most “scientific” of the social sciences, is itself a subject for study. Internal critiques by economists are compared to external analyses in the science studies literature. Readings include works on the epistemology and use of rhetoric in economics and on the “new economics of science,” and examples of the use of economic analysis in the science studies literature.

S&T 700(7001) Special Topic 1: Science Studies and the Politics of Sex Fall. 4 credits. Prerequisites: S&T 711 or permission of instructor. Next offered 2007-2008. M. Rossiter. Theoretical developments in science and technology studies have called attention to the contingent and socially embedded character of both knowledge claims and technological systems. Drawing on literature from several disciplines, this seminar explores the consequences of these findings for social and political studies of science. Issues and problems considered include trust and skepticism, political and legal agency, reflexive institutions, relativism and social agency, science and technologies, and the co-production of knowledge and social order.

S&T 700(7002) Special Topic 2: Technology Transfer Issues Fall. 4 credits. Next offered 2007-2008. J. Reppy. The goal of this course is to develop a coherent analytical framework for analyzing technology transfer, using insights from economics, sociology, history, and science and technology studies, and to employ that framework to evaluate current policy issues. Studies the nature of technology transfer in different contexts, ranging from intra-firm and intra-industry to technology transfer between civil and military sectors, and between industrialized and less-industrialized countries. The readings include a mix of theoretical writings and case studies.

S&T 700(7003) Special Topic 3: Issues in the Social and Cultural History of Technology Spring. 4 credits. R. Kline. This seminar focuses on different issues in the social and cultural history of technology each semester. Typical issues include Gender and Technology, Rethinking Technological Determinism. Was there an Information Revolution? Consumerism, and the Military and Technology in the United States. Students read and discuss exemplary books and articles on a topic for the first half of the course, then give presentations on their research papers.

S&T 711(7111) Introduction to Science and Technology Studies (also HIST 711[7110]) Fall. 4 credits. P. Dear. Provides students with a foundation in the field of science and technology studies. Using classic works as well as contemporary exemplars, seminar participants chart the terrain of this new field. Topics for discussion include, but are not limited to: historiography of science and technology and their relation to social studies of science and technology; laboratory studies; intellectual property; science and the state; the role of instruments; fieldwork; politics and technical knowledge; philosophy of science; sociological studies of science and technology; and popularization.

S&T 720(7201) Emerging Technologies Spring. 4 credits. Prerequisite: graduate students in social sciences, sciences, and humanities. Next offered 2007-2008. S. Hilgartner and B. Lewenstein. Examines the peculiar speculative world of emerging technologies—a social and technical “space” found at the edges of expanding technological systems, where new technologies are being most actively constructed and transformed. In this dynamic world, emerging technologies exist in a state of flux as a mixture of blueprint and hardware, plan and practice, the nearly online and the almost obsolete, surrounded by speculation and speculators, who make often-contrasted claims about their promises, perils, and possibilities. Among the characteristics of this space are: the frequent appearance of unverifiable claims about technologies that have yet to materialize; an entrepreneurial drive for commercial implementation; ongoing institutional innovation; frequent public controversies; and problems of political legitimacy. The course examines the epistemic, discursive, institutional, and political dimensions of emerging technologies in an effort to understand the social worlds that shape technological change.

S&T 721(7211) Archiving Contemporary Science Spring. 4 credits. Next offered 2008-2009. B. Lewenstein. Methodology course exploring the conceptual and practical issues involved with creating archives of science “as it happens.” Readings focus on issues in historiography of contemporary science and on issues in contemporary archiving. Practical examples are drawn from several Cornell-based archives (on cold fusion, on the role of science in the O.J. Simpson trial, on the “Y2K bug,” and on voting technologies in the 2000 presidential election).

Independent Study

S&T 699(6991) Graduate Independent Study Fall or spring. 2-4 credits. Permission of department required. Applications and information are available in 300 Rockefeller Hall.

SCIENCE OF EARTH SYSTEMS

See “Department of Earth and Atmospheric Sciences.”

SERBO-CROATIAN

See “Department of Russian.”

SINHALA (SINHALESE)

See “Department of Asian Studies.”

SOCIETY FOR THE HUMANITIES

Brett de Bary, Director

Fellows for 2006-2007

Stefan Igor Ayora-Diaz (Universidad Autonoma de Yucatan)

Jefferson Cowie (Cornell University)

Belinda Edmondson (Rutgers University)

Sarah Evans (University of California, Berkeley)

Matthew Hart (University of Illinois, Urbana-Champaign)

Andrew Hoberek (University of Missouri-Columbia)

Petrus Liu (Cornell University)

Natalie Nelos (Cornell University)

Micol Seigel (California State University, Los Angeles)

Suman Seth (Cornell University)

Philip Stern (American University)

Gabriela Vargas-Cetina (Universidad Autonoma de Yucatan)

The Society annually awards fellowships for research in the humanities. The fellows offer, in line with their research, informal seminars intended to be exploratory or interdisciplinary. These seminars are open to graduate students, suitably qualified undergraduates, and interested auditors. Students who wish credit for a seminar should formally register.
This course examines the social construction of race in the West. We begin with the existence or non-existence of concepts of biological race in the early-modern period, focusing on early voyages of discovery and so-called "first encounters" between the peoples of the Old and New Worlds. In the second part of the course we will look at enculturations of racial thought in the late 18th century and at the problems of classification that these raised, before examining the roots of "Scientific Racism." Part three looks at Darwin, Social Darwinism, and eugenics movements in different national contexts, concluding with a study of Nazi science and the subsequent utilization of scientific conceptions of race as a category of culture, ethnicity and identity, often assumed a relationship. Participants will examine, through the reading of works of Foucault, Deleuze, Guattari, Derrida, Bhabha, Spivak and others, how the understanding of the complexities of the postcolonial, postmodern, postnational, global order and its implications for the representation of racial histories.

S HUM 408 Global Martial Arts Film & Lit (also ASIAN 452, COM L 408(4080))
Fall. 4 credits. Limited to 15 students.

With recent blockbusters such as Kill Bill, Kung Fu Hustle, Hero, and The Matrix, a cultural practice from "martial arts" has transformed itself from a spiritual and bodily discipline in medieval China into a popular visual spectacle housed in transnational cinema and arcade games. This course studies the Asianization of global postmodern culture by comparing the historical routes, institutional bases, and ideologies of different modes of representing martial arts in film and literature. Our questions will include: the historical origins of martial arts and martial arts cinema; the development of the "wushu" as a racialized bodily performance; the social constructivist approach to martial arts as a site at which the social dimension of art production and reception is manifest. In pursuit of methods more sensitive to the common culture, we will revisit the "myth" of bohemia and the modernist subculture and investigate the social and sociable dimensions of avant-garde projects. We will study Manet, Toulouse-Lautrec, Picasso, Rodchenko, Johns, Fluxus, the Exploding Plastic Inevitable, Collaborative Projects, Sherman, Taravajj, and Bradley.

S HUM 412 America in the 1970s (also AM ST 402, ILRSC 608)
Fall. 4 credits. Limited to 15 students.

J. Cowie.
This course will investigate the social, cultural, and political history of what is often thought of as the first postmodern decade: the long 1970s. We will attempt to trace the major issues of the era in order to explain the rise of postmodern cultural forms, the coming of postindustrial society, the triumph of neo-conservatism, and the consolidation of a neo-liberal model of political economy. As the prefixes "post" and "neo" suggest, the seventies rested upon a series of disassembled and rebuilt ideas that form the foundation of our own time.

S HUM 413 Noise, Music, Power (also ANTHR 414, MUSIC 413)
Fall. 4 credits. Limited to 15 students.
G. Vargas-Cetina.
This seminar will bring together different fields of discussion around the musical phenomenon. Post-structuralist philosophy, post-colonial studies, anthropology, musicology and film will be juxtaposed in the discussion of the musical, from acoustic to electronic beats. We will examine the place of noise and music in society, and the power structures surrounding and inhabiting music and its enjoyment.

S HUM 415 Post-national Gastrodictionaries (also LAT A 415)
Fall. 4 credits. Limited to 15 students.
S. Ayora-Diaz.
Explorations into the relationship between gastronomy and identity, identity, and mass culture, and investigate the social and sociable dimensions of avant-garde projects. We will study Manet, Toulouse-Lautrec, Picasso, Rodchenko, Johns, Fluxus, the Exploding Plastic Inevitable, Collaborative Projects, Sherman, Taravajj, and Bradley.

S HUM 416 Modern Art and Popular Culture (also ART H 417(4171), VISST 417(4170))
Fall. 4 credits. Limited to 15 students.
S. Evans.
This course will examine a range of art-historical approaches to the relationship between modern art and popular culture from the 19th century to now. This will include works of Benjamin, Greenberg, and others, of mass culture, mass culture, and the role of art in society and the social and sociable dimensions of avant-garde projects. We will study Manet, Toulouse-Lautrec, Picasso, Rodchenko, Johns, Fluxus, the Exploding Plastic Inevitable, Collaborative Projects, Sherman, Taravajj, and Bradley.

S HUM 419 Transnational Method Then and Now (also AS&R 419)
Fall. 4 credits. Limited to 15 students.
M. Seigel.
Full title: Transnational Method Then and Now: Historiography, Theory, and Practice. This course will explore contemporary transnational scholarship and some of its possible precedents, both acknowledged and implicit. Its premise is that the popularity of transnational method encourages amnesic engagements with the genealogy of less visible schools or sorts of transborder thinking. We will attempt to discern the contours of transnationalism avant la lettre thinkers pursuing a global vision from a variety of different and political positions over the past three hundred years. The course will focus primarily on works by American authors, from Hamlin Garland and Willa Cather to Don DeLillo and Ruth Ozeki. Because modernization has been central to the United States' relationship to the rest of the globe in this period, however, we will also consider, for comparative and historical purposes, fiction from other nationalities, including examples from the Soviet realist tradition and from the so-called "developing world."

S HUM 420 Culture, Sovereignty, the State (also COM L 442)
Spring. 4 credits. Limited to 15 students.
M. Hart.
This course combines reading in political and cultural theory with works of literature and art, asking whether humanities have neglected the importance of the state as opposed to concepts like national culture. Theoretical readings will include works of Matthew Arnold, Hannah Arendt, Raymond Williams, Giorgio Agamben, and others. This course will feature collaborative projects, contemporary British fiction, and architecture in Israel/Palestine and New York.

S HUM 421 Modernization and Fiction (also ENGL 408.01)
Spring. 4 credits. Limited to 15 students.
A. Hoberek.
This course will attempt to rethink 20th-century fiction outside the standard categories of modernism and postmodernism, concentrating instead on fiction's relationship to the processes of economic, technological, and organizational development known collectively as "modernization." We will focus primarily on works by American authors, from Hamlin Garland and Willa Cather to Don DeLillo and Ruth Ozeki. Because modernization has been central to the United States' relationship to the rest of the globe in this period, however, we will also consider, for comparative and historical purposes, fiction from other nationalities, including examples from the Soviet realist tradition and from the so-called "developing world."

S HUM 423 Caribbean Popular Literature (also ENGL 408.02, AS&RC 427)
Spring. 4 credits. Limited to 15 students.
B. Edmondson.
This course will explore, and historicize, popular, non-canonical Anglophone Caribbean literature as a part of the regional class cultural production. By linking early (19th and early 20th century) popular texts to contemporary ones, the course goal is to interrogate critical tenets of Caribbean literature, such as the role of Caribbean society through its apparently non-serious, or "middlebrow," literature.
S HUM 424 Time and the Other
Spring. 4 credits. Limited to 15 students. N. Melas.
This course will address the relation between time and belonging in a wide-ranging selection of key texts, mainly in philosophy and literature with special attention to the intersection of experience and politics. Authors may include Heraclitus, St Augustine, Nietzsche, Marx, Freud, Levinas, Fabian, Conrad, Acchebe, Glissant, Ouolouguen, Bugul.

S HUM 425 Cold War Aesthetics in E. Asia (also ASIAN 468)
Spring. 4 credits. Limited to 15 students. P. Liu.
This course is concerned with the Cold War in East Asia—the "partitioning" of China, Japan, and Korea into mutually hostile, geographically fractured and temporally de-synchronized "zones" in the post-WWII era—and how this historical experience produced a postmodern aesthetics in East Asia. We will be interested in recent research projects on Taiwan, South Korea and Japan as "anomalous colonies" of the U.S., the "East Asian economic miracle" as an exception to capitalist development, and the limitations of the dialectic of foreign domination/nativist resistance for an understanding of postmodernity in East Asia.

S HUM 426 Science, Technology, Colonialism (also S&TS 476/4761)
Spring. 4 credits. Limited to 15 students. S. Seth.
Scholarly work in the last two decades has come increasingly to pay attention to the oft-neglected linkages between technology and science on the one hand and the discourses and practices of colonialism and imperialism on the other. Texts of broad conception like Michael Adas' Machines as the Measure of Modernity and recent authors like Roy Macintyre and John reputedly have made an attempt to provide an overview of many of the issues involved, but the field awaits a genuinely synthetic treatment. This advanced seminar will aim to provide the framework for such a treatment by looking at a number of key areas of current interest. The course is organized thematically and topics will include the importance to the colonial project of social statistics and technologies of identification (fingerprints, medicine and hygiene, scientific nationalism and nationalist science, "guns, phones and steam," the periphery as laboratory, and gender, savagery and criminality. We will also draw on some aspects of post-colonial literature, especially the writing of those involved in Subaltern Studies, to take up a question poorly explored in the field so far: the relationship between science and violence. Readings will be comprised of a mixture of primary and secondary sources, and students are encouraged to contribute topics and texts of particular interest.

S HUM 428 The State and Its Rivals, 1500-1800
Spring. 4 credits. Limited to 15 students. P. Stern.
Full title: Rethinking Leviathan: The State and Its Rivals in the Early Modern World. This course examines the definitions, foundations, and development of modern state formation in early modern Europe and the wider world. Drawing upon contemporary writings as well as interdisciplinary scholarship in history, sociology, political science, historical geography, and literary studies, this course historicizes and problematizes the centrality of the modern western European nation-state in our understanding of the formation of political communities. It investigates the contingencies and strategies that led to the rise of the state, as well as the myriad possible alternatives and rivals to it, including religious authorities, corporations, companies, mercenaries, composite states, pirates, thieves, and secret societies.

SOCIETY
Sociology is the study of human social organization, institutions, and groups. The Department of Sociology offers courses in a number of key areas, including comparative sociology, culture, economy and society, family and the life course, gender inequality, political behavior and public policy, organizations, race and ethnicity, social inequality; social psychology and group processes, social and political movements, and social work. A particular emphasis of the department is the linkage of sociological theory to issues of public concern such as ethnic conflict, drugs, poverty, and gender and race segregation. Interests of faculty members range from study of interaction in small groups to the study of organizations and social change in a number of different countries. The department offers the opportunity for students to develop fundamental theoretical insights and understanding as well as advanced research skills in quantitative and qualitative methods. Graduates of the department take up careers in university, government, and business settings, and enter professions such as law, management, and urban policy.

Sociology Courses for Nonmajors
Sociology provides students with particularly effective ways to understand the complexities of modern life. For many students, the undergraduate years are a last opportunity to gain the insights these fields have to offer. The Department of Sociology is continuing to design an array of beginning and advanced courses that convey a broad understanding of the methods and insights of sociological analysis—courses that is of particular interest to undergraduates who may not major in sociology. First- and second-year students should note that the introductory courses (101, 103, 105, and 115) focus on the sociological analysis of major issues of public life, and that a wide selection of general education courses is available at the 200 level. Advanced undergraduates who are majors in other fields should also see, in particular, descriptions of the 300- and 400-level courses, for which there are no prerequisites other than junior or senior standing.

Related Courses in Other Departments
Students interested in sociology should consult the course lists of the other social science departments in the College of Arts and Sciences (including Anthropology, Economics, Government, and Psychology) and of the following departments in other colleges: Organizational Behavior (School of Industrial and Labor Relations), Human Development (College of Human Ecology), and Development Sociology (College of Agriculture and Life Sciences).

The Sociology Major
The Department of Sociology is one of the social science departments at Cornell with the highest national ranking. Faculty members are internationally recognized for their scholarly work, and have received numerous awards, research fellowships, and research grants. The 25 professors currently in the department are dedicated to scholarly inquiry that is both methodologically rigorous and theoretically innovative. The breadth of their substantive interests and the variety of their methodological styles are well demonstrated in the different fields that are represented within the department. These include comparative societal analysis, culture, deviance and social control, education, economic sociology, family, gender, inequality, social networks, organizations, political sociology, public policy, race and ethnic relations, religion, science and technology, social movements, and social psychology.

Career Opportunities for Graduates
An undergraduate degree in sociology is one of the most popular degrees with employers. After engineering and computer science, sociology is the most able to place graduates into jobs immediately after completing their bachelor's degree. This is not altogether surprising, since sociology can lead to a rewarding career in any of the following fields:

- government: urban/regional planning, affirmative action, foreign service, human rights management, personnel management
- research: social research, consumer research, data analysis, market research, survey research, census analysis, systems analysis
- criminal justice: corrections, criminology assistance, police work, rehabilitation counseling, criminal investigation, parole management
- teaching: public health education, school admissions, college placement
- community affairs: occupational counseling, career counseling, public health administration, hospital administration, social assistance advocacy, fund-raising, community organizing, social work
- business: advertising, sales, project management, sales representation, market analysis, real estate management, journalism, public relations, insurance, human resource management, production management, labor relations, quality control management

A large number of sociology majors also go onto graduate school and obtain advanced (i.e., master's and Ph.D.) degrees in such varied fields as sociology, political science, philosophy, economics, and psychology. Many also complete professional degrees in education, law, medicine, social work, and business administration.
Requirements for the Major
In addition to the academic requirements established by the College of Arts and Sciences, students must also fulfill requirements toward a specified major. Ten courses are required in the sociology major. All courses toward the major must be taken for a letter grade, and students must maintain at least a 2.0 grade point average (GPA) while enrolled in the major. The 10 courses required for the major are divided into the following categories:

- SOC 101
- SOC 375
- two research methods courses (SOC 301 and 303)
- one advanced-level sociology course (400-level or higher)
- five additional (i.e., elective) courses in sociology

Declaring the Sociology Major
Students in the College of Arts and Sciences who wish to declare a major in sociology should do so as soon as possible. Students who are not currently in the College of Arts and Sciences need to be admitted to A&S before declaring the major. To declare the sociology major, students need to take the following steps:

- Obtain a campus copy of their transcript from Day Hall and bring it to the department office (316 Uris Hall).
- Obtain a sociology major packet from Susan Meyer, undergraduate advisor, during her office hours (316 Uris Hall). During the meeting, the student fills out a major declaration form.
- Leave this form and the transcript with the undergraduate advisor. The declaration will be reviewed by the director of undergraduate studies and sent on to the College of Arts and Sciences for official notification that the student has declared a major. Please allow two weeks for the declaration to be approved and entered into the campus computer.

A student file will be set up to maintain the student's records in the department. Once the student is officially recognized as a major in sociology, the Sociology Department will receive a copy of the transcript at the end of each semester, which will be kept in the student's file at 316 Uris Hall. Records are maintained until five years after graduation.

Academic Advising in Sociology
Cornell students are ultimately responsible for the policies, procedures, and requirements regarding their degree as stated in the current Courses of Study. After reading this document, students may find that they are still confused or unclear about some of the requirements, and may have questions and concerns that pertain to their individual situation. Several sources of academic assistance and advice are available.

College Advisor: Because sociology majors are students in the College of Arts and Sciences, college advisors are available by appointment in the Office of Undergraduate Admissions and Academic Advising (Goldwin Smith Hall). It is recommended that students consult with a college advisor sometime before their last semester to discuss the completion of college requirements, graduation, and residency requirements.

Undergraduate Program Coordinator: The undergraduate assistant (Susan Meyer) in the Department of Sociology is located in 316 Uris Hall. She is available to provide assistance with the following:

- the process of declaring the sociology major.
- information about transferring courses from other universities and/or other departments.
- other administrative matters or concerns (e.g., forms, adding and dropping courses).

Director of Undergraduate Studies: The director of undergraduate studies will:

- provide information about departmental curricula and the requirements for the major.
- meet with applicants to the major.
- review applications for sociology majors and accept students into the program.
- assist students in finding an advisor in the sociology department.
- screen sociology classes taken outside Cornell for acceptance as Cornell credit.
- serve as the backup for faculty advisors who are absent during advising periods.

Faculty Advising: Once a student is a declared sociology major, he or she is assigned a faculty advisor within the Sociology Department. The student is asked to name his or her preference for an advisor; however, if he or she is not sufficiently familiar with the program, the director of undergraduate studies can assist in selecting a faculty member.

Faculty advisors are there to:

- discuss education, career goals, and graduate school opportunities.
- meet to talk about courses and plan your program of study within the department.
- go over the student's academic program each semester.

Sociology Peer Advisors: Approximately 10 advanced sociology majors serve as peer advisors in the department. These advisors change from year to year, but a complete list of their names and e-mail addresses is available from the undergraduate assistant in the sociology office (316 Uris Hall). Peer advisors do not provide academic counseling; they are there to help students adjust to college life in the major, as well as to let them know about the department's many support services and activities.

Research Opportunities
Qualified sociology majors are invited to participate with faculty members in conducting research. Such projects are usually initiated in one of two ways: the student may offer to assist the faculty member in an ongoing project, or the student may request that the faculty member supervise the execution of a project conceived by the student. In either case, the student should enroll in SOC 491 Independent Study. Interested students may direct inquiries to any faculty member.

The Sociology Honors Program
Honors in sociology are awarded for excellence in the major, which includes overall GPA and completion of an honors thesis. In addition to the regular requirements of the major, candidates for honors must maintain a cumulative GPA of at least a 4.0 in all sociology classes, complete SOC 495 and 496 (in the senior year), and write a honors thesis. Students are awarded either honors (cum laude), high honors (magna cum laude), or highest honors (summa cum laude) in the program based on the honors advisor's evaluation of the level and quality of the work completed towards the honors thesis and the quality of the course work. The honors distinction will be noted on the student's official transcript and it will also be indicated on the student's diploma.

Admission to the Honors Program
To qualify for entrance into the honors program, students must have at least a 4.0 GPA overall and an A- in the major. In addition, they must secure the permission of a faculty member in the Department of Sociology who will guide their honors thesis.

Students who wish to be considered for honors should apply to the director of undergraduate studies no later than the second semester of their junior year. Honors program application forms are available in 316 Uris Hall. The application must include a copy of the student's undergraduate transcript, a brief description of the proposed research project (due May 15), and the endorsement of a faculty member in the Sociology Department who will supervise the honors work (due September 15).

The Honors Thesis
During the senior year, each candidate for honors in sociology enrolls in a yearlong tutorial (SOC 495 and 496) with the faculty member who has agreed to serve as the student's thesis advisor. During the first semester of their senior year, students determine the focus of their honors thesis, and submit a 10- to 15-page overview (or, alternatively, a preliminary draft) of the thesis to their advisor. During the second semester, they complete their honors thesis and submit final copies to the department.

The text of the honors thesis may not exceed 60 pages except by permission of the honors advisor. Two copies of the honors thesis are due to the undergraduate assistant (316 Uris Hall) during the third or fourth week of April. Honors thesis preparation guidelines are available from the undergraduate assistant (316 Uris Hall).

Any honors candidate whose research directly involves working with human subjects must receive approval for the project from the Cornell University Committee on Human Subjects.

Introductory Courses
SOC 101(1101) Introduction to Sociology (SBA)
Fall, spring. 3 credits. Staff
Introduces students to the distinctive features of the sociological perspective, as opposed to psychological, historical, or economic approaches. First discusses the sociological perspective in the context of small groups
and face-to-face interaction. As the course unfolds, the same perspective is applied to progressively larger social groupings, such as peer groups and families, formal organizations, social classes, ethnic and racial groups, and nation states. This approach also provides new insights into such topics as deviance, gender inequality, culture, and lifestyles. Whenever possible, class lectures and discussions illustrate these themes by exploring contemporary social problems and developments, including the rise of Generation X (and Generation Y?), the sources of current racial tensions, and the gender gap in the workplace.

**SOC 105(1105) Introduction to Economic Sociology (SBA)**

Fall. 3 credits. Staff.

Modern social thought arose out of attempts to explain the relationship between economic development and the social transformations that gave rise to the contemporary world. Classical theorists from Karl Marx and Max Weber to Karl Polanyi focused their writings on emergent capitalist economics and societies. Contemporary social theorists likewise have sought to understand the interaction between capitalism, the social forces reacting against and emerging from modern economic development. From exchange and rational choice theories to network analysis and institutional theory, a central theme in contemporary social thought has been the relationship between the economy and society, economic action and social structure, and rationality and fundamental social processes.

This course provides an introduction to social thought and research seeking to understand and explain the relationship between economy and society in the modern era.

**SOC 115(1150) Utopia in Theory and Practice (SBA)**

D. Strang.

People have always sought to imagine and realize a better society, with both inspiring and disheartening results. This course discusses the literary utopias of Moore, Morris, and Bellamy, and the dystopias of Huxley, Orwell, and Zamyatin. Also examines real social experiments, including 19th-century intentional communities, 20th-century socialists and religious cults, and modern ecological, political, and millennial movements. Throughout, the emphasis is on two sociological questions: What kinds of social relationships appear as ideal? How can we tell societies that might work from those that cannot?

**General Education Courses**

**SOC 202(2202) Population Dynamics (also D SOC 201[2010]) (CA)**

Spring. 3 credits. L. Williams.

For description, see D SOC 201.

**SOC 203(2203) Work and Family in Comparative Perspective (SBA)**

Family life is often portrayed in the popular media as a haven away from the harsh realities of public life, suggesting that work and family constitute separate and distinct spheres. By contrast, many sociologists point out the links between work and family, and how these links have different consequences for men and women. This course highlights the responses of individuals, employers, and governments, both in the United States and internationally, to the dilemmas posed by the interface between work and family.

**SOC 206(2206) International Development (also D SOC 205[2050]) (HA)**

Spring. 3 credits. Staff.

For description, see D SOC 205.

**SOC 207(2070) Problems in Contemporary Society (SBA)**

Spring. 4 credits. Staff.

Examines contemporary social problems, with a focus on their sources in the organization of society. Modern societies are based on three fundamental types of institutions—social norms, hierarchies, and markets. Each is subject to distinctive types of failures resulting in problems that include poverty, prejudice and discrimination, intolerance and hate, alcohol and drug abuse, physical and mental illness, crime and delinquency, and urban problems. In analyzing these problems the course emphasizes the institutions through which they are created and perpetuated and the form of institutional change required to address them.

**SOC 208(2028) Social Inequality (also D SOC 206[2060]) (SBA)**

Staff.

Reviews contemporary approaches to understanding social inequality and the processes by which it comes to be seen as legitimate, natural, or desirable. We address questions of the following kind: What are the major forms of stratification in human history? Are inequality and poverty inevitable? How many social classes are there in advanced industrial societies? Is there a "ruling class"? Are lifestyles, attitudes, and personalities shaped fundamentally by class membership? Can individuals born into poverty readily escape their class origins and move upward in the class structure? Are social contacts and "luck" important forces in matching individuals to jobs and class positions? What types of social processes serve to maintain and alter ethnic, racial, and gender discrimination in labor markets? Is there an "underclass"? These and other questions are addressed in light of classical and contemporary theory and research.

**SOC 209(2090) Networks (also ECON 204) (SBA)**

Spring. 4 credits. D. Eskey and J. Kleinberg.

For description, see ECON 204.

**SOC 210(2101) What Is Science? (also S&T 201[2010]) (CA)**

Spring. 3 credits. T. Pinch.

For description, see S&Ts 201.

**SOC 215(2150) Organizations: An Introduction (SBA)**

Fall. 4 credits. Staff.

This course examines the fundamental and pervasive role that organizations play in modern society. From universities, hospitals, banks, factories, prisons and churches to museums, art galleries and NGOs, contemporary society is inconceivable without organizations. Whether one struggles for change, seeks to protect the status quo, or simply wants to get things done in the modern world, it is crucially important to understand how organizations work. This course will explore such issues as the historical origins of complex organizations, the internal structure and dynamics of organizations, organizations interactions with their external environments, and how organizations change over time.

**SOC 221(2210) Race, Class, and Gender Research in Practice (SBA)**

What are the promises and limitations of social science as a tool for understanding the sources and consequences of social inequality? This course introduces the underlying logic of social scientific research in the context of contemporary debate on social inequality: e.g., educational testing and tracking, race-based affirmative action, and the roles of intelligence and parental resources in affecting who gets ahead. Its goals are to encourage students to be critical consumers of social scientific data, evidence, and discourse and to develop their own rigorous, informed explanations of social phenomena.

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program Program Seminar Seminars offer discipline-specific study and an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

**SOC 222(2220) Controversies about Inequality (also PAM/LROB/D SOC 222[2220]) (SBA)**

S. Morgan.

Introduces students to contemporary debates and controversies about the underlying structure of inequality, the processes by which it is generated and maintained, the mechanisms through which it comes to be viewed as legitimate, natural, or inevitable, and the forces making for change and stability in inequality regimes. These topics are addressed through readings, class discussion, visiting lectures from distinguished scholars of inequality, and debates staged between students who take opposing positions on pressing inequality-relevant issues (e.g., welfare reform, school vouchers, immigration policy, affirmative action).

**SOC 231(2310) Latino Communities (also D SOC 230) (SBA)**

Spring. 3 credits. M. Mize.

For description, see D SOC 230.

**SOC 246(2480) Politics and Culture (also GOVT 363[3633]) (HA)**

M. Berezin.

Focuses on currently salient themes of nationalism, multiculturalism, and democracy. It explores such questions as who is a citizen; what is a nation; what is a political institution; and how do bonds of solidarity form in modern civil society. Readings are drawn principally from Weegay and where applicable from political science and history. Journalist accounts, films, and web site research supplement readings.

**SOC 265(2650) Latinos in the United States (also LSP 201[2010], D SOC 265[2650]) (SBA)**

Spring. 3 credits; 4-credit option available. H. Velez.
Exploration and analysis of the Hispanic experience in the United States. Examines the sociohistorical background and economic, psychological, and political factors that converge to shape a Latino group identity in the United States. Perspectives are suggested and developed for understanding Hispanic migrations, the plight of Latinos in urban and rural areas, and the unique problems faced by the diverse Latino groups. Studies include Mexican Americans, Dominicans, Cubans, and Puerto Ricans.

SOC 270(2700) Gender: Meanings and Practice (also FS & SS 270(2700)) (SBA) Spring. 3 credits. S. Correll.

People have many ideas about gender—about women, men, femininity, and masculinity. These ideas organize our social lives in important ways and often in ways that we do not even notice. They are often so taken for granted that we simply assume they are part of the "natural" or normal way that life works. As part of its focus, sociology investigates and exposes aspects of social life that are usually taken for granted. This course critically examines the ways that gender structures the social world in which we live. After laying the theoretical groundwork, the course examines cultural conceptions about gender, paying special attention to how beliefs about masculinity and femininity create and enforce a system of gender difference and inequality. Next it attempts to reveal the "common sense" world of gender that surrounds us by exploring the workings of institutions, such as the family, the classroom, and the workplace. Next, it explores how gender stereotypes and the interaction of gender among women and men create and recreate gender. Then it briefly examines the link between gender, friendship, and sex/sexuality. Concludes by considering the possibilities of a "degendered" or less-gendered society.

SOC 280(2800) Social Movements (SBA) Spring. 3 credits. S. Soule.

This course presents a sociological examination of the emergence and development of social movements and collective action at both the societal and individual levels. Students will learn about the major theoretical perspectives on social movements, as well as several recent and classical empirical works in the area. Students will learn about a variety of different social movements (both contemporary and historic).

Methods and Statistics Courses

SOC 301(3010) Evaluating Statistical Evidence (MQR) Fall. 4 credits. Prerequisite: Arts and Sciences students only. Staff.

First course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

SOC 303(3030) Design and Measurement (SBA) Spring. 4 credits. D. Harris.

Research methods are the foundation upon which all research rests. When there are flaws in the methodology, the whole project usually crumbles. This course uses methods texts, and examples from real research projects, to investigate the research methods and logic employed by sociologists. Topics explored include surveys, experimentation, sampling, observation, causal inference, and ethics. By the end of the course, students are able to identify methodological weaknesses in others' research, and design projects that can withstand a critical eye.

SOC 304(3040) Social Networks and Social Processes (SBA) Fall. 4 credits. D. Strange.

How do groups self-segregate? What leads fashions to rise and fall? How do rumors spread? How do communities form and police themselves on the Internet? This course examines these kinds of issues through the study of fundamental social processes such as exchange, diffusion, and group formation. Focuses on models that can be explored through computer simulation and improved through observation.

SOC 307(3070) Society and Party Politics (also GOVT 306) (SBA) Spring. 4 credits. S. Van Morgan.

This course will focus on the role that society plays in the emergence and functioning of political parties. In addition to investigating different types of party systems, the societal roots of political parties, and the influence of institutions on electoral politics, the course will also examine contemporary debates, such as the relationship between culture and electoral behavior. Case studies will be drawn from a number of Western and non-Western democracies.

Intermediate Courses

SOC 311(3110) Group Solidarity (SBA) Fall. 4 credits. M. Macy.

What is the most important group that you belong to? What makes it important? What holds the group together, and how might it fall apart? How does the group recruit new members? Select leaders? Make and enforce rules? Do some members end up doing most of the work while others get a free ride? This course explores these questions from an interdisciplinary perspective, drawing on sociological, economics, and social psychology, as well as a variety of theoretical perspectives in solidarity to a series of case studies, such as urban gangs, spiritual communes, the civil rights movement, pro-life activists, athletic teams, work groups, and college fraternities.

This course will provide an overview of the field of environmental sociology. The course will begin by examining the history of various Western ideas—e.g., essentialism, the idea of progress, the Great Chain of Being, and Darwinian evolution—that have shaped our understanding of human-environment interactions. We will then consider the origins of the field of environmental sociology and conduct a brief review of the various theoretical perspectives in the field. The core course will be devoted to using these perspectives to illuminate various historical and current environmental problems such as overpopulation, the energy crisis, toxic wastes, the ecological impacts of the green revolutions, deforestation in the Amazon and vulnerability to climate change. In the final section of the course we will examine the origins, growth, and diversification of the U.S. environmental movement.

SOC 324(3240) Environment and Society (also S&TS 324[3241], D SOC 324[3240]) (SBA) Fall or spring. 3 credits. Staff.

Fall or spring. 3 credits. Staff.

For description, see D SOC 324.

Toleration and Fundamentalism (SBA) Spring. M. Berezin.

The purpose of this course is to help students think historically and sociologically about the resurgence of religion as a political issue. In order to cover a wide range of time periods and cultures, the seminar views religion through an institutional framework concentrating particularly on the separation of Church and State which has been the hallmark of modern Western political organization. The seminar asks students first to think about how the boundary between church and state, sacred and secular was negotiated in various nation-states; and second, how that divide encourages toleration and discourages fundamentalisms of various stripes. This institutional focus will lead us to consider the legal frames, i.e., the laws that govern the boundaries between religion and the polity.

This is a special seminar sponsored by the John S. Knight Institutes Sophomore Seminars Program. Seminars Program Seminars offer discipline-specific study within and an interdisciplinary context. While not restricted to sophomores, the seminars aim to initiate students into the disciplines outlook, discourse community, modes of knowledge, and ways of articulating the knowledge. Enrollment is limited to 15. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

SOC 330(3300) Sociology of Sport (also NES/JWST 389) (SBA) Spring. 4 credits. T. Sorek.

For description, see NES 389.

SOC 334(3340) Chinese Society in Transition (SBA) Fall. 2 credits. V. Nee and L. Rong.

Modern Chinese society is undergoing transformative change to a market society. To understand the trajectory of societal change, this course examines the causes and consequences of China's market transition. Why did China's political elite launch the economic reform and why does market transition theory predict the erosion of power of the communist political elite and the emergence of a new elite drawing on power and gains made in markets? The course focuses on studying the dynamics of China's transition to market society, in which entrepreneurs and professionals comprise the new elite and a growing urban middle class oriented to global cultural beliefs and economic forces increasingly shape popular culture and tastes. In turn, we examine the development of rational legal institutions and law, the nature of Chinese entrepreneurial spirit, the "floating population" of rural migrants seeking jobs in cities, a deepening environmental crisis, expanding social inequalities, rise of popular unrest and local rebellion, and the dilemma faced by the communist elite in charting a course between reform and stability. Both political and economic agents are active in motivating.
SOC 336(3360) Evolving Families: Challenges to Family Policy (also PAM 336) (SBA)
Fall. 3 credits. S. Sassler.
For description, see PAM 336.

SOC 337(3370) Racial and Ethnic Differentiation (also PAM 337) (SBA)
Spring. 3 credits. S. Sassler.
For description, see PAM 337.

SOC 341(3410) Modern European Society and Politics (also GOVT 341(3413)) (SBA)
Spring. 4 credits. S. Van Morgan.
For description, see GOVT 341.

SOC 357(3570) Schooling, Racial Inequality, and Public Policy in America (SBA)
Spring. 4 credits. Sophomore seminar. S. Morgan.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual's family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of urban schools, community resources on student achievement and as well as the development and later evaluation of school desegregation policies. Also considered are studies of current policy debates in the United States, such as housing segregation and school desegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to see how they were put together; (4) an analysis of full-length works of sociology, from classical and modern. The contributions of Max Weber, Joseph Schumpeter, and Alexis de Tocqueville, among others, are presented. Special emphasis is put on the concepts, ideas, and modes of explanation that characterize the classics. Students also look at these writers' empirical material, and what may be termed the social construction of the classics. Course requirements include active class participation and three tests in class.

SOC 395(3950) Advanced Economic Sociology (SBA)
Fall. 4 credits. Next offered 2007-2008. R. Swedberg.
Aims at reinforcing and adding to the insights presented in SOC 105 Introduction to Economic Sociology (taught by Professor Victor Nee in the fall). Begins with the theoretical foundation of economic sociology (classical and modern). The contributions of Max Weber, Joseph Schumpeter, and Alexis de Tocqueville, among others, are presented. Special emphasis is put on the concepts, ideas, and modes of explanation that characterize the classics. Students also look at these writers' empirical material, and what may be termed the social construction of the classics. Course requirements include active class participation and three tests in class.

Advanced Courses

The following courses are intended for advanced undergraduates with substantial preparation, as well as for graduate students in sociology and related disciplines. The normal prerequisite for all 400-level courses is one introductory course plus 501 (or an equivalent statistics course). Students who are not sure whether their background is sufficient for a particular course should consult the professor.

SOC 408(4080) Qualitative Methods (also SOC 508)
Spring. 4 credits. M. Berenz.
This course aims to acquaint students with the practice of non-quantitative research methods. It does not offer a laboratory list of techniques, rather it asks students to think about how particular methods are less suited to the answering of particular types of research questions. The course is divided into four parts: (1) a general discussion of theory, methods and evidence in social science; (2) a series of readings and exercises on particular methods; (3) an analysis of full-length works to see how they were put together; (4) discussion of student projects.

SOC 410(4100) Health and Survival Inequalities (also FGSS 410(4100)) (SBA)
Fall. 4 credits. A. Basu.
Examines the changing nature of the debate on what makes populations grow and what makes families have any, few, and many children. The course begins with theories of historical population growth and changing fertility and then moves on to consider the economic, social, cultural, political, and biological theories applied to fertility and changing fertility in contemporary populations. Demographic concepts and factors believed to account for the high fertility of many developing country populations and the extremely low fertility in many parts of the developed world are examined. Emphasis is given to "sociocultural" and "gender-based" explanations of reproductive behavior, which activism groups and organizations have used to push political and social agenda. The course pays particular attention to the role of the state in population growth and its place in women's lives.

SOC 421(4210) Theories of Reproduction (also FGSS 421(4210)) (SBA)
Spring. 4 credits. A. Basu.
Examines the changing nature of the debate on what makes populations grow and what makes families have any, few, and many children. The course begins with theories of historical population growth and changing fertility and then moves on to consider the economic, social, cultural, political, and biological theories applied to fertility and changing fertility in contemporary populations. Demographic concepts and factors believed to account for the high fertility of many developing country populations and the extremely low fertility in many parts of the developed world are examined. Emphasis is given to "sociocultural" and "gender-based" explanations of reproductive behavior, which activism groups and organizations have used to push political and social agenda. The course pays particular attention to the role of the state in population growth and its place in women's lives.

SOC 430(4300) Cultural Sociology (also SOC 630) (SBA)
Cultural sociology is a flourishing subfield within sociology that incorporates a wide range of substantive areas (art, inequality, family, politics) and uses a wide range of methods from the ethnographic to the textual. This course proposes to explore some of the leading works and ideas in that field and to analyze how culture operates in social life. It begins by analyzing the different meanings that sociologists have ascribed to culture. Students begin by reading classics like Durkheim's Elementary Forms of Religious Life move on to contemporary theorists such as Geertz, Bourdieu, and Swidler. They then read a series of empirically grounded case studies that make culture the basis of the analysis (i.e., Lamont, Money, Manners and Morals). They analyze certain cultural objects such as films, art, etc., to put into practice some of the ideas from the readings.

SOC 453(4530) Knowledge and Society (also S&T 453) (SBA)
Fall. 4 credits. C. Leuenberger.
For description, see S&T 453.
SOC 491(4910) Independent Study
Fall or spring. 1-4 credits. For undergraduates who wish to obtain research experience or do extensive reading on a special topic. Prerequisite: acceptable prospectus and agreement of a faculty member to serve as supervisor for project throughout semester. Graduate students should enroll in 891-892.

SOC 492(4920) Economic Sociology of Entrepreneurship (SBA)
Fall. 4 credits. Next offered 2007-2008. V. Nee.
This course introduces the classical and contemporary writings on the rise of entrepreneurial capitalism in the West and the global diffusion of the modern entrepreneurial rational orientation to profit-making and innovative drive to apply new technologies and ideas to production. Contemporary approaches shift the emphasis away from the analysis of individual attributes and agency to focus on examining the role of small business in economic development. The course addresses the context in which entrepreneurs, alongside capitalist forces, are often facilitated in their entrepreneurial careers, and the firm in the second part of the course, we will examine case studies of entrepreneurs, drawing selectively from novels, movies and autobiographies.

SOC 495(4950) Honors Research
Fall or spring. 4 credits. Prerequisite: sociology seniors; permission of instructor.

SOC 496(4960) Honors Thesis: Senior Year
Fall or spring. 4 credits. Prerequisite: SOC 495.

Graduate Core Courses

These courses are primarily for graduate students in sociology but may be taken by other graduate students with permission of the instructor.

SOC 501(5010) Basic Problems in Sociology I
Fall. 4 credits. V. Nee.
Analysis of theory shaping current sociological research. Examination of several central problems in sociological inquiry provides an occasion for understanding tensions and continuities between classical and contemporary approaches, for indicating the prospects for unifying microsociological and macrosociological orientations, and for developing a critical appreciation of efforts to integrate theory and research.

SOC 502(5020) Basic Problems in Sociology II
Continuation of SOC 501. Emphasis is on the logical analysis of theoretical perspectives, theories, and theoretical research programs shaping current sociological research. The course includes an introduction to basic concepts used in the logical analysis of theories and examines their application to specific theories and theoretical research programs. Theoretical perspectives include functionalism, social exchange, and interactionism.

SOC 506(5060) Research Methods II
Spring. 4 credits. E. Hirsh.
Course on advanced linear regression analysis in theory and practice. After a review of classical bivariate regression and elementary matrix algebra, the course progresses under the credible assumption that the most important fundaments of data analysis techniques can be taught in the context of simple multivariate linear models. Accordingly, the course provides a relatively formal treatment of the identification and estimation of single equation OLS and GLS regression models, instrumental variable models, traditional path models, and multiple indicator models. Interspersed with this material, the course addresses comparison of regression modeling for the practicing researcher including: missing data problems, measurement error, regression diagnostics, weighting, and inference for surveys. The course concludes with a brief introduction to nonlinear regression, counterfactual models of causality, Bayesian inference, and hierarchical models.

Graduate Seminars

These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. The seminars offered in each semester are determined in part by the interests of students, but it is unlikely that any seminar will be offered more frequently than every other year. The list below indicates seminars that are likely to be offered, but others may be added and some may be deleted. Students should check with the department before each semester.

SOC 510(5100) Seminar on Comparative Societal Analysis
Spring 3 credits. Prerequisite: advanced graduate students throughout social sciences; permission of instructor. M. Betezin.
Intended for advanced graduate students interested in comparative methods and research in the social sciences. It is offered in conjunction with the Comparative Societal Analysis program in the Einandi Center for International Studies. Students enrolled for credit write critiques of papers presented at the seminar by faculty members and other graduate students, and work on their own project. Some weeks are devoted to collective reading and analysis of background work. Students may enroll for more than one semester.

SOC 519(5190) Workshop on Social Inequality
Spring. 4 credits. Prerequisite: SOC 518; sociology Ph.D. students, or permission of instructor. Next offered 2007-2008. K. Weeden.
Provides a forum in which students and others can present, discuss, and receive instant feedback on their inequality-related research. Its primary goal is to provide graduate students with the opportunity to improve their own research; its secondary goal is to establish and maintain research projects, and to that end, seminar participants should be expected to critically engage the literature each week and to write a final paper that advances original research (as a detailed prospectus or, where practical, as a publishable article).

SOC 526(5260) Social Policy
Fall. 4 credits. S. Caldwell.
The dramatic growth of the policy research sector as an institutional and intellectual voice signals the changing relationship of social science to social policy in the United States. With an eye on that relationship, this course examines the development of social policy in selected areas, among them welfare, poverty, housing, crime, and health. The policy research sector itself--people, values, and institutions—is also surveyed.

SOC 528(5280) Conflict and the Nation-State
The nation-state developed out of conflict, through military competition within Europe and the rise of and response to colonial empires in the Americas, Asia, and Africa. Conflict is just as virulent today, as ethnic cleansing and movement toward American imperialism attest. This course examines these conflicts both in comparative historical terms and in terms of fundamental social processes, with an eye to what they tell us about contemporary issues. Questions include: when and why do groups seek to leave polities, through secession or decolonization? When and why do states become imperial powers? How are intra-state and inter-state conflict conditioned by the changing content of nationality and citizenship, global institutions, and inequalities of wealth and power?

SOC 540(5400) Organizational Research
Fall. 4 credits. D. Strang.
Seminar focusing on contemporary sociological research on organizations. It centers theoretically on the interplay of institutional, ecological, and choice-theoretic accounts of organizational structure and action. Subjects include organizational founding and mortality, differentiation and integration, organizational practices over time; the relationship between organizations and their legal, social, and cultural environment; and stratification and mobility within organizations.

SOC 580(5800) Identity and Interest in Collective Action
Spring 4 credits. Offered every other year. M. Macy.
This research seminar examines the problem of collective action from alternative theoretical perspectives: one centered on shared interests, the other on common identities. The former claims that groups are held together because the members are interdependent and thus benefit from mutual trust and cooperation in a common endeavor. Identity theorists contend that trust and cooperation may also depend on affective and normative ties among participants who share a salient demarcation (including a "shared fate"). We will explore this debate, and its possible resolution, through an examination of formal theoretical studies (including game theoretic, evolutionary, and agent-based models) as well as empirical research using experimentation and comparative case analysis. We will also examine research on informal social control (including reciprocity and reputation systems), social networks, and mobilizing strategies as mechanisms for reconciling the tension between individual self interest and collective obligations. The primary goal is to identify, formulate, and promote promising research projects, and to that end, seminar members will be expected to critically engage the literature each week and to write a final paper that advances original research (as a detailed prospectus or, where practical, as a publishable article).

SOC 591(5910) Special Seminars in Sociology
Fall and spring. 2-4 credits. Staff.
These graduate seminars are offered irregularly. Topics, credit, and instructors vary.
from semester to semester. Students should look at the Sociology Department bulletin board at the beginning of each semester for current offerings.

**SOC 605(6050) Political Sociology**
Fall. 3 credits. S. Soule.
This seminar presents the basic approaches to political sociology, with emphasis on the political process in the United States (including the study of both conventional and unconventional politics). Students will learn about explanations for individual participation in both conventional and unconventional politics. Major theoretical and empirical works in this area will be studied.

**SOC 606-607(6060-6070) Sociology Curriculum**
Fall and spring. 0 credits. Requirement for sociology graduate students. Staff. A series of talks representative of current research interests in sociology, given by distinguished visitors and faculty members.

**SOC 608(6080) Proseminar in Sociology**
Fall. 1 credit. Prerequisite: first-year sociology graduate students. Staff. Discussion of the current state of sociology and of the research interests of members of the graduate field; taught by all members of the field.

**SOC 609(6090) Special Topics in Methodology**
Spring. S. Morgan.
After considering alternative modes of explanation in the social sciences, this course offers an introduction to techniques and strategies for estimating causal effects from a counterfactual perspective. For problems where potential outcomes exist because they can be specified for well-defined causal states, alternative data analysis techniques will then be introduced and explained, including matching as stratification, propensity scores as weights in regression, and2 estimation of treatment effects, longitudinal data techniques from an interrupted time series perspective, and the front-door criterion for estimating causal effects via the exhaustive modeling of mechanisms. Because the course assumes some familiarity with advanced data analysis techniques, the course is not suitable for students who have not had some training in statistics and data analysis techniques at the graduate level. The course will meet weekly for the first seven weeks of the spring semester. Students who attend the lectures and participate in the discussion of the readings for the first seven weeks should enroll in the pass-fail 2-credit version of the course. Students who wish to carry on in the remaining weeks of the semester to write a term paper using the techniques should enroll in the graded 4-credit version of the course.

**SOC 632(6320) Inside Technology: The Social Construction of Technology (also S&TS 632(6321))**
Fall. 4 credits. T. Pinch.
For description, see S&TS 632.

**SOC 680(6800) States and Social Movements (also GOVT 660(6603))**
Spring. 4 credits. S. Tarrow.
For description, see GOVT 660.

**SOC 680(6800) Workshop on Transnational Contention (also GOVT 681(6817))**
Spring. 4 credits. S. Tarrow.
For description, see GOVT 681.

**SOC 682(6820) Experimental Sociology Workshop**
Fall and spring. 1 credit. S. Correll.
This course is designed as a workshop where students develop original research projects using experimental research methods. Students take turns presenting their projects, as work-in-progress. Students will receive feedback from the instructor and from their fellow classmates. The goal is to turn student research projects into published journal articles.

**SOC 685(6850) Research Practicum on Gender**
Fall. 4 credits. S. Correll.
This course is an advanced graduate seminar designed to help Ph.D. students learn to conduct research projects in the sociology of gender/sexuality. The goal will be to develop projects that are both empirically sound and reflect an understanding and appreciation of gender as a social phenomenon. In the second week of class, students will give a short presentation of a research project on gender that they began in a previous course. We will then read and discuss current debates on topics such as feminist methods and the application and penetration of gender theories in sociological research. Students will apply these readings as they critique and improve their own projects. Students will also be exposed to the peer review and gain practice reviewing each other's papers following the guidelines provided by the journal Gender & Society. We will conclude the course with short presentations of students' final projects.

**SOC 691(6910) Independent Study**
Fall or spring. 2–4 credits. Prerequisite: graduate status and permission of faculty member willing to supervise project. Staff. For graduates who wish to obtain research experience or to do extensive reading on a special topic. Permission to enroll for independent study is granted only to students who present an acceptable prospectus and secure the agreement of a faculty member to serve as supervisor for the project throughout the semester.

**SOC 778(7780) Solidarity in Groups (also ILROB 778(7780))**
Fall. 3 credits. E. Lawler.
For description, see ILROB 778.

**SOC 891–892(8910–8920) Graduate Research**
891, fall; 892, spring. Variable to 4 credits each semester. Prerequisite: graduate standing and permission of faculty member willing to supervise project.

**SOC 895–896(8950–8960) Thesis Research**
895, fall; 896, spring. Variable to 6 credits each semester. Prerequisite: permission of thesis supervisor.

**SOUTHEAST ASIA PROGRAM**
The South Asia Program coordinates research, teaching, and special campus events relating to Bangladesh, India, Pakistan, Nepal, and Sri Lanka. The program faculty include members from a variety of disciplines, including agricultural economics, agricultural engineering, anthropology, architecture, art, city and regional planning, comparative religion, development sociology, ecology and systematics, economics, English, geology, government, history, history of art, human ecology, industrial and labor relations, international agriculture, linguistics, and literature. Undergraduates may pursue a special interest in the region may major in Asian Studies with a South Asian concentration, or complete a South Asia concentration with any other major. Graduate students may pursue the M.A. degree in Asian Studies with a concentration in South Asia.

Languages offered are Bengali, Hindi, Nepali, Sinhala, Sanskrit, and Urdu. Foreign Language and Area Studies scholarships are available to graduate students who are U.S. citizens or permanent residents. Cornell is a member of the American Institute of Bangladesh, Indian, Pakistan, and Sri Lankan studies. For details on the major, see the Department of Asian Studies listing in this volume. For courses available in South Asian studies, or for further information on research opportunities, direct questions to the South Asia Program Office, 170 Uris Hall, 255-8493. www.einaudi.cornell.edu/SouthAsia.

**SOUTHEAST ASIA PROGRAM**

Southeast Asia studies at Cornell is within the framework of the Department of Asian Studies and affiliates with the Einaudi Center for International Studies. Seventeen core faculty members in the college of Arts and Sciences, Business and the Johnson Graduate School of Management, the School of Industrial and Labor Relations, and Agriculture and Life Sciences participate in an interdisciplinary program of teaching, research, and outreach. The history, culture, and societies of the region stretching from Burma through the Philippines. Courses are offered in such fields as anthropology, Asian studies, economics, finance, government, history, history of art, labor relations, linguistics, music, and development sociology. Instruction is also...
THEATRE, FILM, AND DANCE

Through its courses and production laboratories, the department provides students with a wide range of opportunities in theatre, film, and dance. It also offers bachelor of arts degrees in each of those areas. These majors educate students in accordance with the general liberal arts ethic of the college. The department invites and encourages academic and studio participation by students from all disciplines.

Theatre Arts Major

The theatre major offers studies in the history of theatre, dramatic theory and criticism, playwriting, acting, directing, design/technology, and stage management. Students interested in the theatre arts major should consult with Alison Van Dyke (director of undergraduate studies).

Theatre major requirements

1. THETR 240 and 241, and 242 (three-semester Introduction to World Theatre) 12
2. THETR 250 Introduction to Theatre Design and Technology 4
3. THETR 280 Introduction to Acting 3
4. Four laboratory courses distributed as follows:
   THETR 151 Production Lab I 1–3
   THETR 153, 253, or 353 Stage Management Lab I, II, or III 1–3
   THETR 155 Rehearsal and Performance or THETR 151 in a different area 1–3
   THETR 251 or 351 Production Lab II or III 1–4
5. Three courses in the area of theatre studies (see “Theatre Studies” section of theatre courses) chosen in the following manner:
   one course must be at 300 level
   one course must be at 400 level
   one additional course at the 300 or above level

one of the three courses must be pre-20th century.

4. Three courses (at least 9 credits) in other theatre courses chosen in consultation with the faculty advisor. Course taken to qualify for admission to the Advanced Undergraduate Theatre Program (described below) may also be used to fulfill this requirement.

5. Courses in which a student receives a grade below C cannot be used to fulfill the requirements for a Theatre major.

Honors

The theatre honors program is for majors who have demonstrated exceptional ability in the major and who seek an opportunity to explore branches of their subject not represented in the regular curriculum or to gain experience in original research. To be part of the honors program the student must maintain a GPA of 3.5 in classes for the theatre major and an average of 3.0 in all courses. Students must consult with their advisors in the spring of their junior year to enroll in the honors programs.

The Advanced Undergraduate Theatre Program

The department offers advanced study in directing, playwriting, design/technology, and stage management to students who qualify on the basis of outstanding achievement in course work. Admission to the AUTP is by invitation of the area faculty supervisor and the completion of a recommended "track" of courses or equivalent experience. (For recommended courses of study see listing of courses at end of departmental listings.) Approval process includes a portfolio review and/or interview. The program provides students with intensive study in theatre as well as the opportunity to collaborate with professional faculty and guest artists.

Independent Study, Internships and Honors

THETR 300(3000)Independent Study
Fall, spring, or summer. 1–4 credits.

Independent study in theatre allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student’s instructor for the course, must approve the student’s program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study, which is available in 225 Schwartz Center.

THETR 485(4850)Undergraduate Internship
Fall, spring, or summer. 1–3 credits.

Prerequisite: majors or concentrators in the department.

Students are responsible for arranging their own internships in consultation with the faculty in their area of choice before pre-registration for the semester in which the internship is planned to take place. To receive credit for this course, the internship must be unpaid. Students must follow the rules and procedures stated in the departmental internship form.

THETR 495(4950)Honors Research Tutorial
Fall, spring. 4 credits. Prerequisite: honors students in theatre.
First of a two-semester sequence (the second is THETR 495) for seniors engaged in an honors project.

THETR 496(4960) Honors Research Tutorial
Fall or spring. 4 credits. Prerequisite: honors students in theatre.
Second of a two-semester sequence (the first is THETR 495) for students engaged in an honors project.

First-Year Writing Seminars
Consult the John S. Knight Institute brochure for times, instructors, and descriptions.

Theatre Studies

THETR 223(2230) The Comic Theater (also CLASS 223[2641] # (LA)
Spring. 3 credits. J. Rustem.
For description, see CLASS 223.

THETR 277[2770] Shakespeare (also ENGL 227[2270]) # (LA)
Fall. 4 credits. B. Correll.
For description, see ENGL 227.

THETR 236[2360] Public Voice and Civic Gesture (also DANCE 236[2450], VISST 236[2360])
Fall. 1 credit. B. Suber and B. Milles.
This course combines acting and movement techniques encouraging process-oriented work. Focusing on performance in civic spaces, the class works to examine the politics of status and the social role of bodily (including vocal) expressions of urban natural and audience. Working within the specific context of urban public spaces, the class will question the function of monument and the character of urbanism in relation to individual bodies while understanding how these bodies combine to create a body politic. The class will consider traditional tools of political and social satire, including Commedia dell'Arte. Fundamental in comedies is the exploration of status, the gradations of power and influence and role-playing. Students will create their own texts and movement as well as draw from other textual and visual sources. The class will conclude with a public performance.

THETR 240(2400) Introduction to World Theatre I—Antiquity to 1500 # (LA)
Fall. 4 credits. S. Warner.
A survey of practices, literatures, and themes of theatrical performance in Africa, America, Asia, and Europe from antiquity to the mid-1500s. Examines case studies from ancient Egypt, Greece, Rome, the Near East, and India; and medieval and feudal Indonesia. China, Japan, and England; continuing up to the age of European colonialism. Looks at issues of masking and identity, storytelling and ritual, stage and society, tradition and modernity. Lectures are combined with periodic student projects.

THETR 241(2410) Introduction to World Theatre II—Early Modernity # (LA)*
Staff.
Survey of world theatrical performance from around 1500 to 1800. Examines the development of European and Asian vernacular and national theatrical traditions; recent ethnic and popular performance traditions of Europe, Asia, Africa, and meso-America; recurring issues of realism and theatricalism, innovation and nostalgia, and colonial expansion and marginalization. Lectures are combined with periodic student projects.

THETR 242(2420) Introduction to World Theatre III—1800 to the Present (LA) Spring. 4 credits.
Traces the emergence of theatrical modernity as a global phenomenon. In Europe and North America, traces the progression from romanticism through realism and the modernist avant-gardes, to post-modernism and beyond. Traces the emergence of recent performance traditions in Asia and Africa in response to local and global forces, and the emergence of an increasingly global and intercultural economy of world theatre. Lectures are combined with periodic student projects.

THETR 273(2730) Opera (also MUSIC 274[2241]) # (LA)
Spring. 3 credits. R. Harris-Warrick.
For description, see MUSIC 274.

THETR 278(2780) Desire (also ENGL/COM L/FGSS 278[2760]) (LA)
Spring. 4 credits. E. Hanson.
For description, see ENGL 276.

THETR 319[3190] Music, Dance, and Light (also DANCE 319[3590]) (LA)
Artistic values, parameters, and concerns of music (sound design), dance, and lighting design are explored and contrasted, and the combination of design elements is analyzed in contemporary dance. Includes writing in response to readings, audio and video recordings, and performances. Some classes devoted to creating sound, movement, and lighting.

THETR 326(3260) Queer Performance (also FGSS 325[3520]) (LA)
Spring. 3 credits. Limited to 15 students.
S. Warner.
What constitutes queer performance? Is queer who you are or what you do? Is sexuality all we mean by queer? Has queer performance enhanced or eclipsed gay and lesbian theater? This course investigates the polymorphously perverse relationship between queer theory and performance. Integral to our theoretical discussions are readings of practice and production. Where is queer performance staged and how is it received? How is it produced, for whom, by whom, and with what funds? What is the relationship between politics and performance? Students are expected to attend at least one performance outside of class and to collaborate on an in-class performance.

THETR 335(3350) Modern Western Drama, Modern Western Theatre: Theory and Practice (also COM L/ VISST 335[3735], ENGL 335[3550]) (LA)
Fall. 4 credits. N. Salvato.
This course investigates drama and the cultural contexts of its performance from the mid-19th century to the mid-20th century in Europe and the United States. We will consider such artistic movements as expressionism, symbolism, naturalism, futurism, constructivism, surrealism, and dadaism. The course will conclude with an emphasis on Brecht’s epic theater, Artaud’s theater of cruelty, and a few of their more contemporary descendants.

THETR 336 American Drama and Theatre (also AM ST 334)
Fall. 4 credits. Prerequisite: permission of instructor. Limited to 25 students.
S. Warner.
This course explores major American playwrights from 1900 to 1960, introducing students to American theater as a significant part of modern American cultural history. Our focus will be to consider the ways in which theater has contributed to the construction and deconstruction of a national identity. We will pay special attention to the social, political, and aesthetic contexts of the time period and discuss the shifting popularity of dramatic forms, including melodrama, realism, expressionism, absurdist, and the folk play, in the American theatre tradition. Authors include: O’Neill, Glaspell, Oates, Rice, Hellman, Hughes, Hurston, Hansberry, Miller, Williams, and Albee, among others.

THETR 337 Contemporary American Theatre (also ENGL 337[3730]) (LA)
Fall. 3 credits. Offered to 15 students. Next offered 2007–2008. Staff.
How has theater shaped our notion of what it means to be an American in the second half of the 20th century? What role has politics played in recent theatrical experimentation? Has it ever been used as a platform for constructing and deconstructing conceptions of identity, community, and nationality? In this course we will examine major trends in American drama from 1960 to the present. Readings for the class focus on theater that responds directly to or intervenes in moments of social crisis, including: the Vietnam War, the Civil Rights Movement, the Women’s Movement, the Gay and Lesbian Liberation Movement, and AIDS.

THETR 345(3450) The Tragic Theatre (also CLASS 345[3645], COM L 344[3440]) # (LA)
Fall. 4 credits. Limited to 40 students.
F. Ahl.
For description, see CLASS 345.

THETR 372 Medieval and Renaissance Drama (also ENGL 372[3772], 372/677[3720/6770]) # (LA)
M. Raskolnikov.

THETR 375 Studies in Drama and Theatre: “Enemies, A ‘Love’ Story?” (also ENGL 375[3750]) (LA)
Fall. 4 credits. P. Lorenz.
For description, see ENGL 375.

THETR 403(4030) Ritual, Play, Spectacle, Act: Performing Culture (also THE 603[5030]) (LA)
S. Warner.
Takes a broad-spectrum approach to performance. Includes anthropological texts on ritual and play, sociological texts on performances in everyday life, literary studies texts on “performatives” in speech and writing, folkloric studies on parades and reenactments, psychological and philosophical studies on the role of performance in the formation of identity, as well as standard texts of the theater. Considers the distinctions between play, ritual, spectacle, festival, theater, and the “visual” arts. Explores the differences between spectating and witnessing and examine studies on audience behavior. At the base of the inquiry is the broad issue of the role of representational practices.
within culture and among cultures. If, as Barbara Meyerhoff has written, we understand ourselves by showing ourselves to ourselves, what role does “showing” have in construction of the selves we seek to understand? Why is postmodern culture often called the “society of the spectacle” (Debord)? If, as Aristotle claimed, we are mimetic creatures at base, which comes first—representation or reality? Looking closely at the notion of “live” art, students weigh theorists who claim that performance is ephemeral and disappearing against those who claim that performance, such as oral history, is resilient and enduring. Students have the opportunity to do fieldwork, create performative works, and engage in scholarly study.

**[THETR 404(4040)] Mythology and Postmodern Performance (also THETR 604[6040]) (LA)**  
Spring. 4 credits. Limited to 15 students.  

Why has mythology flourished in performance projects despite the rather marginal position it has occupied in the academy in the past few decades? Does a survey of postmodern performances, especially by so-called “marginal” or “minority” groups, suggest a shift toward a postsecular society? Bringing a variety of cultures into dialogue, this course investigates the critical potentiality mythology holds for both performance theory and social activism. Specifically, it looks to mythology to provide a fresh perspective on cultural performances sanctioned and unsanctioned forms of transgression; ritualized behavior; initiation and incarceration; and artistic projects aimed at consciousness raising and social change. In what ways does mythology provide an interesting alternative to mimetic as a discursive and performative strategy? How efficacious is it in representing concepts or situations that cannot adequately be conceived of in language or under the law?

**[THETR 426(4260)] Adaptation: Text/ Theatricality (also VISST 426[4260]) (LA)**  
Spring. 4 credits. Prerequisite: permission of instructor. Next offered 2007–2008.

B. Milles
Mounting a script into a show is a process of adaptation from page to stage. But dramas have also been translated of other media. Sondheim's Sunday in the Park with George “adapted” a painting by Seurat. Strindberg's Ghost Sonata translated a symphony by Beethoven. Plays can even be adapted into other plays. Cesarine's A Tempest, Paula Vogel's Desdemona: A Play about a Handkerchief, Heiner Muller's Hamletmachine. In performance art (where there is often no script) examples abound as well: Can you imagine reenacting Edward Manet's Le-deuxieme as Gertrude Stein's The King of Paris?

**[THETR 431(4310)] Theory of the Theatre and Drama *(LA)**  

D. Bathrick
Surveys dramatic theory and theories of theatrical representation from Aristotle to the present. Although covering a span of over two thousand years, the point is to focus the analysis on a smaller number of key representative texts from the European, American, and postcolonial traditions. In so doing the goal is to develop a close reading of each text, while at the same time exploring both their reception within the context in which they emerged as well as their importance in the evolving process of the institutions of theatre and drama over greater periods of time. Participants are expected to read carefully the primary and background texts assigned for each session and come to class prepared to raise and answer questions about the material at hand.

**[THETR 436(4360)] The Female Dramatic Tradition (also FGSS 433[4330]) (LA)**  

Staff
Is there a "female dramaturgy?" What is the female tradition in the theatre? This course explores these questions through an investigation of texts by women dramatists, including Hotzvitha, Aphra Behn, and Caryl Churchhill, as well as theory by such critics as Sue Ellen Case and Jill Dolan.

**[THETR 440(4400)] Romantic Drama (also THETR 644[6440], ENGL 444[4440]444[4440]) (LA)**  
Fall. 4 credits. B. Parker.

For description, see ENGL 440.

**[THETR 445(4450)] Text Analysis for Production: How to Get from the Text onto the Stage (also VISST 445[4450], ENGL 444[4440]444[4440]) (LA)**  
Fall. 4 credits. Limited to 15 students.

Prerequisite: THETR 281 or 250 or 398, or permission of instructor. B. Levitt.

Examines the play as the central, essential source for production decisions made by the actor, the director, the designer, and the dramaturg. Students "perform" the conclusions about the performance of studied texts through project work as either an actor, director, designer, or dramaturg, as well as through two to three papers.

**[THETR 446(4460)] Shakespeare in (Con)Text (also ENGL 445[4450]445[4450]) (LA)**  
Spring. 4 credits. Limited to 15 students.

Prerequisite: permission of instructor. B. Levitt.

Examines how collaboration among stage directors, designers, and actors leads to differing interpretations of plays. The course focuses on how the texts themselves are blueprints for productions with particular emphasis on the choices available to the actor inherent in the text.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge, and ways of articulating that knowledge. Limited to 15 students. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.

**[THETR 447(4470)] Hamlet: The Seminar *(LA)**  
Spring. 4 credits. Limited to 15 students.

Prerequisites: THETR 240, 241, 242 or equivalent and permission of instructor. B. Levitt.

The most studied and written about work in Western Literature outside the Bible, Hamlet, according to Harold Bloom, is our secular savior and our ambassador to death. This course centers on a close reading of the play. Through research and assigned readings, the course tests theoretical viewpoints about the play against the text itself by reading the theory in relationship to the production history.

**[THETR 483(4830)] Seminar in Comparative 20th-Century Anglophone Drama (also ENGL 483[4860]) (LA)**  
Fall. 4 credits. Recommended: some knowledge of classical and avant-garde theories of drama and theatre. B. Jeyifo.

For description, see ENGL 483.

**[THETR 580(5800)] Problems in Asian Art: Dancing the Stone: Body, Memory, and Architecture (also ART H 580[5850]) (LA)**  

**[THETR 600(6000)] Proseminar in Theatre Studies**  
Spring. 4 credits. Prerequisite: graduate standing.

An introduction to the theory and methods involved in the study of the theatre. Attention focuses on pedagogy and the profession in Part I. Part II explores current scholarly trends.

**[THETR 627(6270)] Studies in Shakespeare: Shakespeare and Marlowe. (also ENGL 627[6270])**  
Fall. 4 credits. B. Correll.

For description, see ENGL 627.

**[THETR 638(6380)] Digital Bodies, Virtual Identities (also ENGL 638)**  
Fall. 4 credits. Prerequisite: permission of instructor. T. Murray.

For description, see ENGL 638.

**[THETR 640(6480)] East and West German Drama: Post-1945 (also THETR 438[4380])**  

D. Bathrick.

**[THETR 679(6790)] Bertolt Brecht in Context (also COM L 679[6790])**  

D. Bathrick.

Requirements: seminar paper that forms the basis for an oral presentation for class discussion. For description, see GERST 679.

**[THETR 680(6800)] Brecht, Müller, and Avant-Garde**  

D. Bathrick.

**[THETR 703(7030)] Theorizing Film**  

**[THETR 710(7100)] The Pedagogy of Theatre**  
Fall. 4 credits. Corequisite: relevant undergraduate class and permission of instructor. Staff.

Provides graduate students in the field of theatre an opportunity to work directly with a faculty member to explore pedagogical theory.
and practice for undergraduate theatre classes in all areas of the curriculum.

Acting

THETR 155(1550) Rehearsal and Performance
Fall or spring. 1–2 credits. 1 credit per production experience per semester up to 2 credits per semester. Students must register for course in semester in which credits are earned. Prerequisite: students who are assigned roles after tryouts at department’s scheduled auditions. Students should add this course only after they have been assigned roles. S-U grades only. The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

THETR 205(2050) Rehearsal Workshop
Fall or spring. 2 credits. Limited to 30 students. Prerequisites: participation in a particular department production and permission of instructor. Staff. Enables students participating in a particular production to gain expertise and/or knowledge to contribute to that production. The focus of the course depends on the needs of a particular production (e.g., history, choreography, textwork, dramaturgy).

THETR 280(2800) Introduction to Acting (LA)
Fall or spring. 3 credits. Limited to 16 students per sec. Preregistration and registration only through roster in department office, 225 Schwartz Center. No online registration. Staff. An introduction to the actor’s technique and performance skills, exploring the elements necessary to begin training as an actor, i.e., observation, concentration, and imagination. Focus is on physical and vocal exercises, improvisation, and text and character. There is required play reading, play attendance, and some scene study.

THETR 281(2810) Acting I (LA)
Fall or spring. 3 credits. Limited to 14 students per sec. Prerequisites: sophomore standing above THETR 280 and audition. Registration only through roster in department office, 225 Schwartz Center. Practical exploration of the actor’s craft through exercises in physical and psychological action, improvisation and scene study.

THETR 282(2820) Standard American Stage Speech (LA)
Fall. 3 credits. Limited to 10 students. Prerequisites: THETR 280 and permission of instructor. Next offered 2007–2008. A. Van Dyke. Introduction to Standard American Stage Speech. Study of various regional American accents and Standard American Stage Speech using the International Phonetic Alphabet (IPA) as a way to designate the vowel, diphthong, and consonant sounds of spoken English. The goal of this course is to learn speech for use in performing Shakespeare, Shaw, Chekhov, Moliere, etc.

THETR 284(2840) Speech and Dialects for Performance (LA)
Fall. 3 credits. Limited to 10 students. Primarily for department majors. Prerequisite: THETR 281 and permission of instructor. A. Van Dyke.

Development of speech and dialects in dramatic text.

THETR 380(3800) Acting II (LA)
Fall. 3 credits. Limited to 12 students. Prerequisite: THETR 281 and audition. S. Cole. Continuation of Acting I. Special consideration is given to a physical approach to characterization.

THETR 381(3810) Acting III: Advanced Scene Study (LA)
Spring. 3 credits. Limited to 10 students. Prerequisite: audition. Strong preference given to those who have taken THETR 446. B. Levitt. Focuses on advanced problems for the stage. Monologues and scenes are drawn from Shakespeare and classical sources.

THETR 384(3840) Commedia: A Contemporization of Physical Acting Styles and the Comic Approach (also VISST 386[3850]) (LA)
Fall. 3 credits. Limited to 10 students. Prerequisites: THETR 281 and permission of instructor. B. Milles. A wholly physical acting course based in the practices of Commedia dell’arte—stock characters, physical lazzi, improvisation, street theatre—using improvisation, some mask work, clown and viewpoint training. An exploration of how to use the body to illuminate text, and how to mine text to maximize comedy.

THETR 385(3850) Advanced Studies in Acting Techniques (LA)
Fall. 3 credits; may be repeated for credit. Limited to 8 students. Prerequisites: THETR 281, audition, and permission of instructor. Fall: Alternative Shakespeare. B. Levitt; spring: Acting with an accent. A. Van Dyke. Topic for fall: Shakespeare’s plays were a popular entertainment in the Elizabethan period. The course will explore combining Shakespeare’s language—from plays and sonnets, and explore combing that work with popular forms of entertainment today such as Beat Boxing and Hip Hop. The course will lead to the construction of a theatre piece to be rehearsed and performed in January. Course work will consist of text work, research on themes and structural organization of the piece; some dance instruction, some musical and singing instruction and the evolution of the text for Beat Box Bard. Guests will be brought in to teach aspects of this type of work.

Directing

THETR 177(1770) Student Laboratory Theatre Company
Spring. 1–2 credits. The Student Laboratory Theatre Company (SLTC) is a group of student-actors who earn credit by acting in three scenes directed by students taking THETR 498. Students enrolling in SLTC for credit earn 1 credit for two projects and 2 credits for three projects. SLTC also meets with directors once a week.

THETR 396(3960) Fundamentals of Directing I (also VISST 396[3790]) (LA)
Fall. 3 credits. Limited to 9 students. Prerequisite: permission of instructor. Special consideration given to students who have completed THETR 280 or are intending to continue in area of stage or screen directing. Students should see instructor one year in advance to sign up for course. D. Feldshuh.

Focused, practical exercises teach the student fundamental staging techniques that bring written text to theatrical life. A core objective is to increase the student’s awareness of why and how certain stage directions communicate effectively to an audience. Each student directs a number of exercises as well as a short scene.

THETR 498(4980) Fundamentals of Directing II (LA)
Spring. 4 credits. Limited enrollment. Prerequisite: THETR 280 and 398, and permission of instructor. Recommended: THETR 250 and 281. B. Milles. Builds on the staging techniques learned in Fundamentals of Directing I. In this course each student directs actors from the Student Laboratory Theatre Company in the completion of projects and public presentations focusing on specific directorial challenges.

THETR 499(4990) Practicum in Directing
Fall or spring. 1–4 credits. Prerequisites: THETR 240, 250, 280, 398, 498, and permission of instructor. D. Feldshuh. Allows the student who has completed the appropriate prerequisites the opportunity to direct a full presentation of theatre in conjunction with a faculty mentor. May also involve an internship with a prominent director on campus or the opportunity to assistant direct a faculty or guest director.

Playwriting

THETR 348(3480) Playwriting (LA)
Fall. 4 credits. Limited to 12 students. Prerequisite: permission of instructor. Next offered 2007–2008. Staff. Various approaches and techniques are examined as the student is introduced to the art and craft of dramatic writing. The student is required to read dramatic texts, observe theatre productions and rehearsals and write. The semester culminates in the completion of a 20–30 minute one-act play.

THETR 349(3490) Advanced Playwriting (LA)
Fall. 4 credits. Prerequisite: THETR 348 or permission of instructor. B. Milles. Continuation of THETR 348. An intensive writing class. Students are encouraged to explore a rich creative landscape culminating in the completion of a full length play. Focus is on the clarification of dramatic action with emphasis on conflict, theatrical language and refining the visual impulse.

THETR 497(4970) Seminar in Playwriting
1–4 credits. Prerequisite: THETR 348 and 349 and permission of instructor. Next offered 2008–2009. Staff. Extension of THETR 348 and 349. Students formulate a process for developing a full-length play, which they develop over the course of the semester. The class meetings are made up of discussions about the students’
Design, Technology, and Stage Management

**THETR 250(2500) Fundamentals of Theatre Design and Technology (LA)**
Fall and spring, 4 credits. Limited to 12 students. Not open to first-semester freshmen. Registration only through department roster in 225 Schwartz Center. Highly recommended: concurrent enrollment in VISST 211 or permission of Production Lab (THETR 151 or 251). Students required to purchase materials that instructors specify (approx. cost $50). K. Goetz, E. Cross, E. Intemann, and S. Bernstein. Lectures, discussion, and project work introduce the principles of designing scenery, costumes, lighting, and sound, and the technical process of realizing designs on stage.

**THETR 254(2540) Theatrical Makeup Studio**
Spring, 3 credits. Limited to 10 students. Prerequisite: permission of instructor. Registration only through department roster in 225 Schwartz Center. Students are required to purchase makeup kits that instructor provides (approx. cost $50). It is expected that any interested student will have taken courses within the department in any of the areas of: design, acting, dance, or film, or will have completed rehearsal and performance (THETR 155) credit. Basic technique of makeup design and application for the stage including corrective, old age, likeness, and animals; use of some three-dimensional makeup and false facial hair.

**THETR 319(3190) Music, Dance, and Light (also DANCE 319[3900]) (LA)**
Fall, 3 credits. Attendance at dance concerts and music concerts required. Next offered 2007–2008. E. Intemann and A. Fogelsanger. Artistic values, parameters, and concerns of music (sound design), dance, and lighting design are compared and contrasted, and the combination of design elements is analyzed in contemporary dance. Includes writing in response to readings, audio and video recordings, and performances. Some classes devoted to creating sound, movement, and lighting.

**THETR 341(3410) CAD Studio for Theatre Design**
Fall and/or Spring, 3 credits. Prerequisite: THETR 250 and 340 or permission of instructor. Experience in theatre production and graphic communication helpful but not essential. Staff. Students will utilize commercially available computer-assisted design software to explore the process of designing scenery, costume and lighting for the live theatre. AutoCAD, Vectorworks and Photoshop are some of the applications utilized.

**THETR 343(3430) Costume History: From Fig Leaf to Vanity # (LA)**

Offers an overview of the history of clothing from the first signs of clothing to the early 21st century. It investigates social, political, economic, technological, geographic, ecological, and artistic influences on costume.

**THETR 362(3620) Lighting Design Studio I (also DANCE 362[3660], VISST 362[3662]) (LA)**
Fall, 4 credits. Limited to 6 students. E. Intemann. The theory and practice of lighting design as a medium for artistic expression. This course explores the aesthetic and mechanical aspects of light and their application in a variety of disciplines. Emphasis is on understanding lighting's function in an environment and manipulating light effectively. Artistic style and viewpoint are also covered.

**THETR 364(3640) Scenic Design Studio (LA)**
Fall, 3 credits. Limited to 10 students. Prerequisite: THETR 250 and 340 or permission of instructor. Recommended: experience in theatre production and graphic skills. Students are required to purchase materials that instructor will specify (approx. cost $50). K. Goetz. An exploration of the process of designing scenery for the live theatre. Projects employ various media to explore dramatic use of architecture, the scenic space, and elements of interior design.

**THETR 365(3650) Automated Lighting and Control Systems**
Fall, 3 credits. Limited to 8 students. Prerequisite: permission of instructor. Highly recommended: at least 1 credit of THETR 151 or 251. E. Intemann and F. Sellers. Covers the understanding and application of lights control technologies, including electrical systems, color, optics, dimming protocols, and console programming. Students complete a series of projects culminating in the programming and use of moving fixtures and lighting visualization software.

**THETR 366(3660) Costume Design Studio (LA)**
Fall, 4 credits. Limited to 10 students. Prerequisite: THETR 250 and 340 or permission of instructor. S. Bernstein. Design of costumes for the theatre, concentrating on script and character analysis, period research, design elements, figure drawing and rendering skills, and an understanding of production style.

**THETR 368(3680) Sound Design and Digital Audio (also DANCE 368[3680], MUSIC 368[3431]) (LA)**
Fall, 4 credits. Prerequisite: permission of instructor. Recommended: some experience with audio/video recording or editing, previous enrollment in one of the following: FIML 577, FIML 591, MUSIC 120, MUSIC 320, or THETR 250. Basics of digital audio, psychoacoustics, and sound design as they apply to theatre, film, and music production. Weekly projects require time spent in the studio outside of class. Students create soundtracks for text and moving image, with final projects in 5.1 surround sound, using Pro Tools and Digital Performer.

**THETR 369(3690) Digital Performance (also DANCE 369[3560], MUSIC 356[3441]) (LA)**
Fall, 4 credits. Prerequisite: permission of instructors. Laptop computer and MAX/MSP software required. See www.worldcycling4.com for student software pricing. Lab performance at end of semester. Recommended: previous enrollment in one of the following: COM S 100, DANCE 210, DANCE/THETR 368, VISST 211, W. Cross and A. Fogelsanger. Introduction to the multimedia programming language MAX/MSP and its application to computer-interactive dance. Intended to bring together programmers and dancers. Each student will create movements, patches, and collaborate with others on a final project focusing on the input, manipulation, and output of sound, video, graphics, and lighting in live performance. Topics include digital audio/video processing, MIDI control, sensor use, electroacoustic music, history and current state of computer technology and dance, and aesthetics. Includes 3-hour Wednesday night lab.

**THETR 371(3710) Costume Design Studio II (LA)**
Fall, 3 credits. Limited to 10 students. Prerequisite: THETR 366, or THETR 250 with permission of instructor. Students are required to purchase materials that instructor will specify (approx. cost $50). Next offered 2007–2008. S. Bernstein. Explores unconventional costume designs for theatre and dance. Deals with the special considerations found in many plays and performance pieces, such as the theatricalization of nonhuman subjects (e.g., animals, plants, machines, magical creatures), the visualization of music, or the support or enhancement of movement. Also covers alternative (some non-Western) ways to create character through costume, make-up, masks, and wearable forms of puppetry.

**THETR 462(4620) Lighting Design Studio II (also DANCE 462[4660]) (LA)**
Spring, 4 credits. Limited to 6 students. Prerequisite: THETR 250 or 362 or permission of instructor. E. Intemann. Concentrates on lighting design for different genres of performance in various venues. Emphasis is placed on developing both the visual sophistication and the technical artistry of the lighting designer. Concentration, personal style, and professional presentation are stressed.

**THETR 464(4640) Scene Design Studio II (LA)**
Spring, 3 credits. Prerequisite: THETR 364 or permission of instructor. Students are required to purchase materials that instructor will specify (approx. cost $50). K. Goetz. Projects and activities are tailored to the creative and developmental needs of the individual student with emphasis on developing professional standards and practices that would prepare the student for a major design assignment in the department production season.

**Technology**

**THETR 252(2520) Technical Production Studio I**
Fall, 3 credits. Limited to 6 students. D. Hall and F. Sellers.
Stage Lighting and Sound Technology: the practical aspects of lighting and sound technology including equipment setup, engineering, electrics, organization, recording techniques, and production paperwork are explored through projects, lectures, and class discussions. In addition to two weekly class meetings the course requires a laboratory commitment of 50 hours for the semester.

THETR 256(2560) Technical Production Studio II
Spring. 3 credits. Limited to 6 students. Students are required to purchase materials that instructor will specify (approx. cost $150). Prerequisite: THETR 250 or permission of instructor. Additional hands-on time in prop and paint shops required, to be discussed. C. Seakatz and T. Ostrander.

Scene Painting: introduction to the basic techniques of painting scenery, including but not limited to the layout and painting of bricks, marble, stone, and wood grain for the theatre. Individual projects in scene painting and participation on paint crew for productions are included.

Stage Properties: introduction to the processes of propmaking, including furniture construction and upholstery techniques, use of shop tools and materials, period research, and painting and finishing.

THETR 340(3400) Theatrical Drafting and Technical Drawing Studio
Fall. 3 credits. Limited to 5 students. Prerequisite: permission of instructor. S. Brookhouse.

Implementation of the fundamentals of drafting and technical drawing. Introduction of the concept of an individual style in the approach to drafting for the theatre. Involves a series of projects to familiarize students with the convention and process of visualization and drafting, using both mechanical drafting techniques and AUTOCAD.

THETR 352(3520) Themed Entertainment: The Technical Perspective
Fall. 3 credits. Limited to 12 students. R. Archer.

Exploration into the integration of art and science in today's theme parks and interactive entertainment attractions. Papers, projects, and discussions deal with planning and development aspects of large-scale entertainment projects including architecture, engineering, construction, and attraction installation. Focus is on the specialized entertainment technologies that make these attractions work: audio and lighting design, ride and show control systems, and special effects.

THETR 354(3540) Stagecraft Studio
Fall. 3 credits. Prerequisite: THETR 250 or permission of instructor. Highly recommended: concurrent enrollment in at least 1 credit of THETR 151 or 251. R. Archer.

Exploration of the techniques and practice of theatre operation, scenic construction, stage mechanics, rigging, painting, and model building.

THETR 356(3560) Costume Construction Studio
Spring. 3 credits. Highly recommended: concurrent enrollment in at least 1 credit of THETR 151 or 251. Lab fee: $100 (paid in class). R. MacPike.

Project/lecture/discussion class in costume research, patterning, cutting, construction, and fitting.

THETR 360(3600) Costumes: Special Projects
Fall. 3 credits, may be repeated for credit. Prerequisite: permission of instructor. Lab fee: $150 (paid in class). R. MacPike.

Designed for students who have completed a basic construction class (in THETR or TXA, or another department). Each fall, this project-oriented course focuses on one of the following areas of costume crafts: millinery, fabric modification, or mask making. Students should check with the instructor to find out each fall which topic is being offered.

Stage Management

THETR 153(1530) Stage Management Production Laboratory I (also DANCE 153(1630))
Fall and spring. 1–2 credits; may be repeated for credit. Before registering, students must attend orientation meeting at 7:30 p.m. in Kiplinger Theatre at Schwartz Center on first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.

Practical experience in theatrical production as assistant stage manager for a dance theatre concert or as a stage manager for productions, Black Box lab productions, or SLTC under the supervision of the faculty production manager. THETR 370 complements this course.

THETR 253(2530) Stage Management Laboratory II (also DANCE 253(2630))
Fall and spring. 1–5 credits; may be repeated for credit. Before registering, students must attend orientation meeting at 7:30 p.m. in Kiplinger Theatre at Schwartz Center on first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.

Practical experience in theatrical production as assistant stage manager for a season production under the supervision of the faculty production manager. THETR 370 complements this course.

THETR 353(3530) Stage Management Laboratory III
Fall and spring. 1–4 credits; may be repeated for credit. Before registering, students must attend orientation meeting at 7:30 p.m. in Kiplinger Theatre at Schwartz Center on first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.

Practical experience in theatrical production as assistant stage manager for a season production under the supervision of the faculty production manager. THETR 370 complements this course.

THETR 370(3700) Stage Management Studio
Fall. 2 credits. Prerequisite: THETR 250 or 280 or permission of instructor. Students are required to purchase materials that instructor will specify (approx. cost $10). P. Lillard.

Introduction to the concepts and techniques of stage management as they relate to specific areas of production. Development of relevant communication skills and an understanding of the production process as experienced by a working stage manager or assistant stage manager. THETR 153, 253, and 353 complement this course.

THETR 453(4530) Stage Management Laboratory IV
Fall and spring. 1–5 credits; may be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard.

Practical experience in theatrical production as stage manager for a season production under the supervision of the faculty production manager.

Production Laboratories

THETR 151(1510) Production Laboratory I (also DANCE 151(1610))
Fall and spring. 1–3 credits; may be repeated for credit. No prerequisites or experience required. Orientation meeting at 7:30 p.m. first Tuesday of classes each semester in Kiplinger Theatre at Schwartz Center. P. Lillard, S. Brookhouse, and F. Sellers.

Provides practical experiences in theatrical production. Students can work on scenery, costumes, properties, lighting, or stage crew.

THETR 251(2510) Production Laboratory II (also DANCE 251(2610))
Fall and spring. 1–3 credits; may be repeated for credit. Prerequisite: permission of instructor. Orientation meeting at 7:30 p.m. on first Tuesday of classes each semester in Kiplinger Theatre at Schwartz Center. P. Lillard, D. Hall, F. Sellers, and R. MacPike.

Practical experience in theatrical production, as a light board operator, sound board operator, sound technician, head dresser or scenery/props special project.

THETR 351(3510) Production Laboratory III
Fall and spring. 1–3 credits; may be repeated for credit. Prerequisite: permission of instructor. P. Lillard, R. Archer, S. Brookhouse, K. Goetz, D. Hall, E. Intemann, and F. Sellers.

Practical experience in theatrical production as a master electrician, assistant technical director, assistant costume shop manager, or assistant to a faculty or guest director or designer.

THETR 451(4510) Production Laboratory IV
Fall and spring. 1–4 credits; may be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard, R. Archer, S. Brookhouse, K. Goetz, D. Hall, and E. Intemann.

Practical experience in theatrical production, in the position of designer, shop manager, technical director, or sound engineer.

Independent Study, Internships, and Honors

THETR 300(3000) Independent Study
Summer, fall, or spring. 1–4 credits. Independent study in the theatre allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course, must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study, which is available in 225 Schwartz Center.
To be eligible to enroll and receive credit, students must either be majors or be concentrators in the department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice. Students interested in the visual studies concentration should contact its director.

**Film Major Requirements**

The department’s film major requires a total of 50 credits in film and related courses. Students should note that a number of film courses—including two required “core” courses: FILM 375 and 376—are offered in alternating years. This means that students cannot fulfill the requirements for the major in less than two years and that they must plan accordingly in consultation with their major advisor. In particular, students must plan to be in residence at Cornell during the fall semesters of both their junior and senior years to take FILM 375 and 376. Within the “core” required courses, FILM 274, Introduction to Film Analysis, is to be taken during the sophomore year. Note: Prospective majors must earn a grade of B (not B-) or higher in FILM 274 to be accepted into the major. Students may not enter the major until they have completed FILM 274 in the fall semester of their sophomore year.

Majors wishing to use the production courses in a substantial manner must plan carefully and work within certain limits. These courses are FILM 324, 377, 383, 422, 477, 478, 493. Enrollment in each of these courses is limited by the nature of the work and by facilities. Enrollment in FILM 477, 478, and 493 depends on the quality of previous work in FILM 377 and/or 383; enrollment is not guaranteed. Majors without a strong interest in production can complete the production requirement with one course: FILM 577, after they have taken FILM 274 in their sophomore year. The total credits in production courses cannot exceed 20 hours; this limit is strictly enforced.

1. A core of four film courses:
   - FILM 274 Introduction to Film Analysis (offered every fall semester)
   - FILM 375 History and Theory of Commercial Narrative Film (offered alternate fall semesters; next offered fall 2006) (prerequisite for film majors: FILM 274)
   - FILM 376 History and Theory of Documentary and Experimental Film (offered alternate fall semesters; offered fall 2007) (prerequisite for film majors: FILM 274)
   - FILM 377 History and Theory of Documentary and Experimental Film (offered alternate fall semesters; offered fall 2007) (prerequisite for film majors: FILM 274)

2. One of the following theatre courses:
   - THETR 250 Fundamentals of Theatre Design Technology (offered every semester)
   - THETR 280 Introduction to Acting (offered every semester)

3. Four courses (15-16 credits) in film offered by Theatre, Film, and Dance as below, or (with permission of advisor) by other departments:
   - FILM 265 Studies in Film Analysis: Hitchcock’s Films (offered fall 2006)
   - [FILM 276 Survey of American Film (next offered fall 2007)]

4. 15 credits of related course work inside or outside the Department of Theatre, Film, and Dance (as approved by the major advisor). The courses chosen to fulfill this requirement should reinforce...
For description, see ENGL 263.

FILM 274(2740) Introduction to Film Analysis: Meaning and Value
(Also FILM 674[6740], VISST 274[2744]/2174[6740]) (LA)
Fall. 4 credits. Limited to 40 students. Graduate students must enroll in FILM 674.
D. Frederiksen.
Intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial, narrative, documentary, and personal film modes. Prospective film majors should enroll in their sophomore year.

[FILM 276[2760] Survey of American Film (also AM ST 230[2760], VISST 230[2300]) (LA)]
Fall. 4 credits. Required film screenings; disc once a week. Offered alternate years; next offered 2007–2008. S. Haenni.
For description, see AM ST 230.

FILM 293(2930) SSP: Middle Eastern Cinema (also NES 293[2939], COM L 293[2930], JWST 291[2939], VISST 292[2919]) (LA)
Fall. 4 credits. D. Carlin.
For description, see NES 293.

[FILM 326(3240) Animation Workshop: Experimental and Traditional Methods (LA)]
The art of animation involves many dimensions, including time and motion. This course introduces students to the fundamentals of traditional animation and the mechanics used to capture the illusion of movement. Projects focus on the work of artists who have pushed the potential of animation in new directions, students investigate innovative ways of animating sequential images and objects. Emphasizing technical processes—including drawing, sculpting, and painting—and recording the images we create to capture movement and expression, students explore a variety of experimental and fine-arts approaches used in modern-day animation.

FILM 325(3250) Animation History & Practice (LA)
Beginning with the pre-history of animation, optical toys and magic lantern projections, and continuing through a century of animation history to contemporary work, this course investigates the history of animation from around the world, through a variety of hands-on production projects, as well as lectures, discussions, research, and screenings. Combining technical and digital methods, students create interactive projects and individual animated films, incorporating lessons from the historical work studied.

[FILM 341(3410) French Film (also FR/FLIT 336[3360]) (LA)]

[FILM 344(3440) American Film Melodrama (also AM ST 338, ENGL 344, VISST 345) (LA)]
Understanding melodrama as a 'mode of excess' which powerfully affects film audiences, this course focuses on melodramatic style and themes (paranoia, trauma) in different historical moments (World War II, postwar suburban America, the contemporary moment).

[FILM 348(3480) Film Noir (also AM ST 348[3480], VISST 348[3480]) (LA)]
Spring. 4 credits. Recommended: some course work in film. S. Haenni.
At the close of World War II, the French coined the term ‘film noir’ to describe a new, "dark," and ‘gloomy’ set of Hollywood films that were populated by femmes fatales, criminal gangs, private eyes, and lovers on the run, and which centered on issues of violence, crime, paranoia, betrayal, pessimism, and self-doubt. Derived from hard-boiled detective fiction and influenced by German expressionist cinema, film noir has become one of the most acclaimed genres in Hollywood film. This course explores both the stylistic characteristics and thematic and cultural contexts of film noir. Examines the history and function of “noir” as a critical term; the influence of hard-boiled fiction; and the evolution of noir style and noir narratives. Investigates how film noir articulates anxieties about postwar masculinity and the sexual and social roles of women; how it popularizes psychology; how it portrays the city as an “urban jungle”; and how it represents a response to fears about communism and the atomic bomb. Screenings include major studio features such as Double Indemnity and Laura, B-pictures such as Detour and Gun Crazy, and “neo-noirs” such as Chinatown and Devil in a Blue Dress. Discussion of films is guided by readings in film criticism and history.

[FILM 369(3690) Fast-Talking Dames and Sad Ladies: 1940s and Now (also ENGL/FILM 369)]
Spring. 4 credits. L. Bogel.
For description, see ENGL 369.

[FILM 375(3750) History and Theory of the Commercial Narrative Film (also VISST 375[3175]) (LA)]
Fall. 4 credits. Fee for screening expenses: $10 (paid in class). Prerequisite: film majors FILM 274. Offered alternate years; next offered 2006–2007. S. Haenni.
Consideration of the broad patterns of narration in the history of the commercial narrative film. Emphasis will be on the early articulation of a cinematic means of narration, realism as an artistic style, the nature and functions of popular film, and the modes of modernist and post-modernist "art cinema" narration.

[FILM 376(3760) History and Theory of Documentary and Experimental Film (also VISST 376[3176]) (LA)]
Analyses canonical works in documentary film up to the end of World War II, including Vertov, Flaherty, Grierson, Hurwitz, Grierson, Wright, Capra, Riefenstahl, and the connection between documentary film and modernism(s) in the 1920s and 1930s. Also includes analysis of canonical works in the avant-garde: experimental/personal film tradition(s) in Europe and the United States from the 1920s to the 1980s, including French impressionism, surrealism, the New Realism, graphic cinema, and the several patterns of the American personal film during its heyday (1940s to the late 1970s).

...
FILM 377(3770) Introduction to 16mm and Digital Filmmaking (LA)
Fall and spring. 4 credits. Limited to 12 students. Intended for juniors and seniors (who may need to sign up a year or more in advance) with priority given to film majors. Prerequisite: FILM 374 (or higher-level film studies course) and permission of instructor. Equipment fee: $150 (paid in class). Average cost to each student for materials and processing is $500.

M. Rivchin.

Creative, hands-on production course in filmmaking emphasizing the development of technical original ideas and the acquisition of basic technical skills in both 16mm and minDV formats: cinematography, lighting, sound recording and editing, and film and nonlinear digital editing. Students complete several exercises and two short projects; the final project may be narrative, documentary, experimental, or animation and is shown in linear digital editing. Students complete recording and editing, and film and non- linear formats: cinematography, lighting, sound.

FILM 379(3790) Soviet Film of the 1920s and French Film of the 1960s (LA)

Intensive treatment of two distinct periods of radical innovation in film theory and history. Emphasis is on the animated relationship between theory and filmmaking during these two decades.

[FILM 379(3790) Modern Documentary Film (LA)]

An intensive consideration of canonical documentary films from 1945 to the present. Emphases are on the documentary film as an artistic form with a distinct history and set of theoretical questions, as a sociopolitical force, as an ethnographic medium within and without a filmmaker's culture, and as a televised medium of persuasion and expression.

FILM 382(3830) Screenwriting: Bringing Your Vision to the Page (LA)
Spring. 4 credits. Limited to 12 students. Prerequisite: completed application, writing sample, and permission of instructor. Students must go to 225 CT to apply. Staff.

This course explores the fundamentals of traditional Hollywood and independent screenplays.

[FILM 382(3830) Modern Documentary Film (LA)]
Spring. 4 credits. Limited to 12 students. Prerequisite: completion of course in film criticism or consent of instructor. Students must go to 225 CT to apply. Staff.

This course explores the fundamentals of traditional Hollywood and independent screenplays.

FILM 383(3860) Cinema and Social Change (was Third Cinema (LA))

Explores the role of cinema in social and political change that address processes of decolonization as well as issues of labor, health-care, gender and racial equity, globalization, war, and imperialism.

[FILM 384(3891) Media Arts Studio I (also ART/MUSIC/VISST 391)]
Fall. 3 credits. Prerequisite: permission of instructor and junior standing, minimum FILM 277 or 27, or dance studio courses. Equipment fee: $50 (paid in class). Participating faculty include M. Rivchin, film, J. Zissi, Video, dance.

Collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video. Group projects to investigate and produce interactive work in public spaces on campus.

FILM 393(3930) International Film of the 1970s (also AM ST/VISST 393[3930]) (LA)

Considers how the social, political and cultural upheavals of the late '60s (Watergate, Vietnam, terrorist attacks) affected film, aesthetics, narrative, and style; emphasis on 'new' Hollywood, European art cinema, black independent and blaxploitation films, etc.

[FILM 393(3930) Video: Art, Theory, Politics (also ENGL 395[3950])]

[FILM 396(3960) German Film (also GERST 396[3960]) (LA)]

Explores German film from the Weimar and Nazi periods to the present in relation to the cultural and sociopolitical content of which it was a part.

FILM 422(4220) Cinematography (LA)
Spring. 4 credits. Limited to 8 students. Pre- or corequisite: FILM 403. Prerequisite: permission of instructor. Letter grades only. Equipment fee: $150. Advanced camera and lighting techniques, designed for students who have taken at least FILM 377 and/or the photography courses or course in animation courses. M. Rivchin.

Students work on a series of tests, short exercises, and scene projects using sync and nonsync 16mm cameras, digital video cameras, camera movement apparatus, lighting instruments, a range of lighting instruments, filters, and gels and digital video cameras to expand their knowledge of the technical and aesthetic aspects of cinematography.

FILM 430(4300) Topics in American Studies: The Cinema and the American City (also AM ST 430; VISST 430[4630]) (CA)
Fall. 4 credits. Weekly screenings TBA. The Cinema and the American City. The emergence of the cinema in the late-19th century coincided with the emergence of a new kind of metropolis, characterized, among other things, by new traffic systems (elevated train, subway, automobile), new racial, ethnic, and sexual regimes, and new urban planning. The cinema was affected by the ways in which the city developed, while at the same time it also made the city legible. In this course, we will examine how American cities and towns have been represented in film in different ways, as, for instance, musical symphonies, mysteries to be deciphered, or post-apocalyptic wastelands. We will explore how gender, racial, ethnic, class and sexual identities are negotiated in the modern cinematic city. Screenings will range from silent and early sound films, such as The Crowd and 1930s musicals, to contemporary cinema, such as Do the Right Thing and Blade Runner; our viewings will be guided by readings in film and urban theory and history.

[FILM 450(4500) Rescreening the Holocaust (also COM L 453[4530]); GERST 449[4490], RELST 450[4500]) (LA)]

A survey of the major films dealing with the Holocaust. The course focuses on the possibilities and limits of representing the Holocaust cinematically, as well as questions more specifically concerning commercialization, fictionalization, trivialization, documentation, visualization, and narrativization in the making and distributing of films about this event.

FILM 455(4550) History of Modern Polish Film (LA)
Fall. 4 credits. Prerequisite: some film analysis course work. D. Fredericksen.

An analysis of Polish films from 1939 to the present, within the context of Poland's postwar history. Topics include the period of socialist realism, the so-called "Polish School" (1956–1982), the cinema of moral anxiety, solidarity cinema, and the Polish documentary tradition. Key directors considered include Ford, Wajda, Munk, Polanski, Skolimowski, Zanussi, Falk, Pawiowski, Bugajski, Krzystek, Kijowski, Zatorski, Kisiewski, and Lozinski.

S. Haenni.

[FILM 472(4730) Film and Spiritual Questions (LA)]
Spring. 4 credits. Limited to 20 students. Offered alternate years. D. Fredericksen.

The use of film as a medium for the expression of spiritual questions has a long and rich history, although little attention is given to this fact in contemporary film studies. This seminar examines films by filmmakers who are so inclined, including Baille, Gardner, Bergman, Dreyer, Bresson, Godard, Scorsese, Brakhage, Belson, Whitney, Bouquer, Newby, Kubrick, and Bae Yong-Kwan. Special attention is given to the work of Andrey Tarkovsky, the Russian film director and theorist. Readings include Tarkovsky's Sculpting in Time, Smith's Why Religion Matters, Eliead's The Sacred and the Profane, Elinger's The Christian Archetype, Schrader's Transcendental Style in Film, and Warren and Locke's Women and the Sacred in Film.

[FILM 474(4740) Jung, Film, and the Process of Self-Knowledge (LA)]

"Know thyself" is one of the oldest and most enduring imperatives of the human spirit, and the raison d'etre for liberal studies. This seminar traces in some detail the Jungian approach to this imperative and then tests its critical capacities with respect to films.

[FILM 475(4750) Seminar in Cinema II (also AM ST 475[4750]) (LA)]

[FILM 476(4760) Seminar in the Cinema (LA)]
Fall or spring. 4 credits. Offered occasionally: next offered 2007–2008.
FILM 477(4770) Intermediate Film and Video Projects: Documentary and Experimental Workshop (also VISST 47770) (LA)
Fall. 4 credits. Limited to 8 students. Prerequisites: FILM 377 as minimum production priority given to those who have taken FILM 376, 379, or 386 and permission of instructor based on project proposals. Equipment fee: $150 (paid in class). Film projects costs: $300-$1,500, video: $100-$400. Next offered 2007-2008. M. Rivchin.

Intensive course in 16mm filmmaking and digital video in which each student develops a significant documentary or experimental project both critically and creatively. Readings, discussions, and exercises are designed to increase the student's knowledge and practice of: cinematography, lighting, sync-sound, filming, and editing techniques; working with labs and sound houses; digital video camera; and digital (Final Cut Pro and AVID) digital editing.

FILM 478(4780) Intermediate Film and Video Projects: Narrative Workshop (LA)
Fall. 4 credits. Limited to 8 students. Prerequisites: FILM 377 as minimum production; priority given to those who have taken FILM 376, 379, or 386; OTHER 398 or 413, and permission of instructor based on project proposals. Equipment fee: $150 (paid in class). Film projects costs: $500-$1,500, video: $100-$200. M. Rivchin.

Intensive course in narrative filmmaking and digital video in which each student develops a significant, original narrative script project that he or she then directs, shoots in crews, and edits. Students may opt for narrative documentary and experimental work as well. Readings, discussions, and exercises are designed to increase the student's knowledge and practice of directing; cinematography, lighting, sync-sound, filing, and editing techniques; working with labs and sound houses; digital video cameras; and digital (Final Cut Pro and AVID) digital editing.

FILM 485(4850) Undergraduate Internship
Fall, spring, or summer. 1-3 credits. To be eligible to enroll and receive credit for an internship, students must either be majors or concentration in any department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice before preregistration for the semester in which the internship is planned to take place. To receive credit within the course, the internship must be unpaid. Students must follow the rules and procedures stated on the departmental internship form.

FILM 493(4930) Advanced Film and Video Projects (LA)
Spring. 4 credits. Limited to 6-8 students. Prerequisites: minimum FILM 377, priority given to those who have taken 477, 478, or 324. Recommended: FILM 383 and THETR 389. Equipment fee: $150. Project costs: $500-$2,000. M. Rivchin.

Intensive filmmaking course in which students focus on developing and producing a single, already-proposed (15-30 min.) 16mm film or digital video project over the semester. Students direct and edit their own scenes, write collaborative projects working in crews for sync-sound dialog, narrative films or documentaries and in small groups for technical exercises and assisting in non-sync projects. Readings, discussions, and exercises are designed to increase the students' knowledge and practice of script revision, directing; scene breakdowns; auditions, and casting; cinematography, lighting, sync-sound, filming, and editing techniques; working with labs and sound houses; digital video camera; and digital (Final Cut Pro, AVID, and ProTools) editing.

FILM 674(6740) Introduction to Film Analysis: Meaning and Value
Fall. 4 credits. Limited to 10 graduate students. D. Fredrickeksen.

Intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film modes. Graduate students who intend to teach film at the undergraduate level are especially welcome. In addition to full participation in the work of FILM 274, graduate students read and discuss in tutorials primary sources in film theory.

FILM 722(7220) Independent Study in Film for Graduate Students
Fall or spring. Staff.

Dance
Faculty: J. Chu, A. Fogelsanger (director of undergraduate studies in dance), E. Innemann, J. Kovar, J. Morgenroth (on leave fall 2006), J. Self, B. Suber.

The dance program offers courses in dance technique, improvisation, composition, performance, anatomical analysis of movement, dance technology, music for dance, and the history, theory, and criticism of dance. Technique courses include introductory dance technique, modern dance at three levels, and Western classical dance at three levels. (Other dance forms, such as Indian dance, and Japanese dance, are offered periodically.) A variety of courses in other dance idioms, taken through the Physical Education program, supplement these offerings. Technique courses develop strength, flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with clarity of rhythm, body design, and expression. The more advanced courses require the ability to perform complex phrases in various styles. Students may earn up to 16 academic credits per semester (2 credits each semester) in technique courses. Students may also satisfy the physical education requirement by taking dance technique courses or other movement courses in the dance program. Students taking technique for academic credit must also register through their own colleges. The schedule for all dance technique courses is available in the main office of the Sheila W. and Richard J. Schwartz Center for the Performing Arts.

The faculty offer rehearsal and performance workshops in which they choreograph and rehearse original dances, performed in public concert. Admission to rehearsal and performance courses is by permission. Students may receive one academic credit per semester (S-U grades only) when performing in student-faculty concerts by registering for DANCE 155.

Dance Major Requirements
A revised dance major has been approved for implementation Fall 2006. Students accepted into the major through Spring semester 2006 may choose to meet either the old requirements or the new. Students accepted beginning in Fall semester 2006 must satisfy the new requirements below. Copies of the previous requirements may be obtained from the director of undergraduate studies in dance through Spring 2008.

Prerequisites: 2 credits in category 1 below and one course in category II below. Prerequisites count towards the 40 credits fulfilling the major.

The major: 40 credits (towards which the prerequisites for the major count) are required of all students majoring in dance as follows:

1. 6 credits: six 1-credit movement courses chosen from Dance Technique (DANCE 122, 231, 232, 503, 304, 305, 308, 309), Exploration in Dance (DANCE 234, 235), Improvisation (DANCE 201), Indian Dance (307, 317), and other courses approved by the dance faculty. The 6 credits must include at least 2 from Dance Technique, at least 1 from Exploration and Improvisation courses. Any two of these courses taken to satisfy the university's Physical Education requirement may be counted towards the major, thus decreasing the number of academic credits possibly to as low as 58. Movement courses taken for 0 academic credits do not count towards the major.

2. 14 credits: Dance composition (DANCE 210, 310) and history/theory (DANCE 313, 418).

3. 2 credits: 1 credit of performance (DANCE 155) and 1 credit of production (DANCE 151, 153, 251, or 253).

4. 18 credits: selected from Dance and related fields, including: at most 2 additional 1-credit movement courses; at most 4 additional credits in DANCE 151, 153, 155, 251, 253, and 316; and at most two courses outside of Dance, which may include courses on sound, music, light, non-western movement forms; design, performance and visual studies, and must be approved by the dance faculty.

In all courses used for the dance major, a grade of C (not C-) must be achieved. Courses in which this minimum is not achieved must be repeated if the student is to receive credit in the major.

A partial list of courses from outside Dance which may be used to satisfy part IV of the major requirements includes MUSIC 103, 104, 105, 107, and 108; and THETR 250.

Honors
Students who have maintained a GPA of 3.5 in classes for the dance major and an overall grade of 3.0 in all courses may elect to work for honors in dance during their senior year. They must consult with their advisor in the spring of their junior year about the honors program in dance.

Computing in the Arts Undergraduate Concentration
A concentration in Computing in the Arts with an emphasis on dance is available to both dance majors and students majoring in other subjects. For more information, see "Computing in the Arts Undergraduate Concentration" under "Departments, Programs and Courses" in the "College of Arts and Sciences," or contact the Director of Undergraduate Studies in Dance, danceprogram@cornell.edu.
**DANCE 155(1250) Rehearsal and Performance** Fall and spring. 1 credit. Attendance at dance concerts is required. May be repeated. S-U grades only. Fall: J. Chu and J. Self. Spring: J. Self.

Students learn and perform dances choreographed by Dance Composition students. Course work includes: rehearsing an average of two hours a week with student choreographers, attending dance composition class (faculty led) once a week for 90 minutes, and possibly performing in departmental dance productions or mid or end of semester class showings. Students in this course will receive feedback on their performance from the faculty member teaching the Composition course and from the composition students within class discussion periods, to help them refine their skills as performers (including dynamics, focus, phrasing, rhythm, dramatic presence, etc.) in both classroom and public showing of student work. They will sometimes participate in the discussion of the student compositions, gaining insight into the compositional process. This type of participation will be an introduction to dance composition for students interested in pursuing the composition curriculum.

**DANCE 201(2480) Dance Improvisation** Spring. 1 credit. Limited to 12 students. Attendance at dance concerts required. S-U grades only. J. Morgenroz. When the body knows when, where, and how to move without prior direction, we call that improvisation. This course coaxes inspiration, seeking to make it reliable and to keep it surprising. It offers the possibility of "training" one's movement instincts to respond reliably and with spontaneity. Solo and group forms are covered. Live musical accompaniment.

**DANCE 233(2410) Explorations in Movement and Performance** [also PE 162(1181), VISST 233(2553)] Spring. 0 or 1 credit. Limited to 16 students. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S-U grades only. J. Self.

A physically demanding exploration of creative possibilities in various movement realms. Specific subjects covered are gendered movement, erotic power, spiritual power, ritual, and performance. Techniques include extensive use of breath and movement, improvisation, and group games. This course requires an eagerness to investigate the nature of performance and explore unfamiliar territory in movement.

**DANCE 234(3410) Masculine, Feminine, or Neutral: Explorations in Movement and Performance I** Spring. 0 or 1 credit. Limited to 16 students. Prerequisite: DANCE 201, 233, or permission of instructor. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S-U grades only. Next offered 2007–2008.

This course, with special emphasis on the differences and similarities between "masculine" or "feminine" expressions in movement and performance.

**DANCE 235(2430) Hip-Hop, Hollywood, and Home Movies: Exploring Movement and Media** [also PE 161(1181), VISST 235(2430)] Fall. 3 credits. Permission of instructor. Letter grades. Requirements include attendance at performances with written responses, selected readings, and home-movie production.

This course is a laboratory for generating and exploring contemporary dance forms. Monday sessions are devoted to viewing media and discussing. We will be looking at early B-Boy films, recent dance-battle documentaries, classic dance clips from Hollywood films, and other related pieces (Black Dance, Show Dance, Art Dance). Wednesday is a laboratory for trying out new movement ideas and creating simple dance/music videos (home-movies). This course will be of special value for choreographers using popular dance forms and those interested in the history of popular culture. Everyone must be willing and able to improvise dance moves, teach classmates and exchange movement ideas.

**DANCE 236(2450) Public Voice and Civic Gesture** [also THETR 236(2360), VISST 236(2360)] Fall. 1 credit. B. Suber and B. Miles.

This course combines acting and movement techniques encouraging process-oriented work. Focusing on performance in civic spaces, the class works to examine the politics of status and the social role of bodily (including vocal) expression of both performer and audience. Working within the specific context of urban public spaces, the class will question the function of monument and the character of urbanism in relation to individual bodies while understanding how these bodies combine to create a body politic. The class will consider traditional tools of political and social satire, including Commedia dell'Arte. Fundamental in commedia is the exploration of status, the gradations of power and influence and role-playing. Students will create their own texts and movement as well as draw from other textual and visual
DANCE 303(2240) Dance Technique Workshop (also PE 161[1181], VISST 303[3503])
Spring. 0 to 1 credit, may be repeated.
Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S-U grades only. Requirements include attendance at performances with written responses. J. Self.
Primarily Parallel Universe. The course will explore working primarily in parallel position as a basic technique for strengthening the legs, posture and physical presence by blending movements from Modern Dance, Jazz, Hip Hop, Yoga and other related forms. Students must be willing to experiment with new concepts of constructing movement techniques.

DANCE 304(3210) Dance Technique III/Classical (also PE 161[1181])
Fall. 0 to 1 credit; may be repeated.
Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S-U grades only. B. Suber.
Intermediate Western classical technique. Work is done on strengthening the body through a movement technique emphasizing precision and musicality based on harmonic muscular control.

DANCE 306(3220) Dance Technique III/Modern (also PE 161[1181])
Fall and spring. 0 to 1 credit, may be repeated.
Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S-U grades only. J. Chu; spring. J. Morgenroth.
Intermediate modern technique focusing on rhythm, placement, and phrasing for students who are prepared to refine the skills of dancing. Students are challenged by complex phrases and musicality.

DANCE 307(1320) Indian Dance I (also PE 163)
Fall. 0 to 1 credits. Satisfies PE requirement if taken as PE. Satisfies @ if taken for 3 credits. D. Box.
Designed to give students a working knowledge of Indian classical dance in both movement and theory. The movement section focuses on Odissi classical dance, the indigenous style of Orissa state, starting with basic exercises, to open and strengthen the body and prepare it for the structured form of Odissi. Basic exercises, steps, and a full choreographed piece are taught and performed at the end of the semester. The core material of this class can benefit all forms of dance. For 3-credit students, the theory section focuses on history and development of the main styles of South Asian classical dance, their role in society and distinguishing characteristics. This is done through lectures, videos, and reading assignments.

DANCE 308(4220) Dance Technique IV/Modern (also PE 161[1181], VISST 308[3503])
Fall and spring. 0 to 1 credit; may be repeated.
Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S-U grades only. J. Chu.
Advanced and pre-professional Modern technique. A continuation of and supplement to DANCE 306.

DANCE 309(4210) Dance Technique IV/Classical (also PE 161[1181])
Fall. 0 to 1 credit; may be repeated.
Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S-U grades only. B. Suber.
Advanced and pre-professional Western classical. A continuation of and supplement to DANCE 304.

DANCE 316(3240) Writing Dance Criticism
Fall and spring. 1 credit; may be repeated.
Corequisite: DANCE 303, 304, 306, 308, or 309. Attendance at two or three concerts required. J. Chu.
J. Morgenroth, and J. Self.
Dance criticism for incorporation with technique. Topics rotate depending on instructor, class focus, and relevance to guest dance companies. Attendance at two or three concerts required (same as for dance critique), additional readings and/or viewing of recorded performances as assigned by instructor, and three five- to seven-page analytic papers.

DANCE 355(3250) Repertory
Spring. 0 or 1 credit. Prerequisite: permission of instructor. Attendance at dance performances required. J. Chu.
Reconstruction of dance by an important modern dance choreographer. Through a close examination of the composition process, and with readings, the course studies the historical and aesthetic role of this work and its continued influence today.

DANCE 407(4399) Early Dance (also MUSIC 407, J. Morgenroth)
R. Harris-Warrick.
For description, see MUSIC 407.

Dance Composition
DANCE 210(2500) Beginning Dance Composition (also VISST 211[2711]) (LA)
Fall and spring. 3 credits. Attendance at dance concerts required. Fall, J. Chu and J. Self spring.
J. Self.
Special topic for section 1. Writing, Dancing, Drawing: Choreography and Performance Workshop. How do the visual, verbal and movement realms intersect? How do the disciplines of writing, drawing and choreography inform and shape our sense of reality and place. This course explores the use of "drawn" or "found" visual images, "written" choreography and other conceptions of time, space and narrative to create group and individual projects. Requirements include attendance at dance concerts, with written responses, notebook work and sketchbook work. Includes informal showing of work.

Section 2. Weekly assignments in basic elements of choreography. Students compose and present short studies that are discussed and reworked. Problems are defined and explored through class improvisations. Informal showing at end of semester. Includes informal showing of work.

DANCE 310(3500) Intermediate Dance Composition I (LA)
Fall and spring. 3 credits. Prerequisite: DANCE 210. J. Chu and J. Self.
J. Self.
Intermediate choreographic projects are critiqued in progress by faculty and peers. Consideration of design problems in

DANCE 311(3510) Intermediate Dance Composition II (LA)
Fall and spring. 3 credits. Prerequisite: DANCE 310. Co- or prerequisite: DANCE 323 or 324. Attendance at dance concerts required. J. Chu and B. Suber spring. J. Morgenroth and J. Self.
Continuation of DANCE 310. For full description, see DANCE 210.

DANCE 323(3520) Music Resources II
Fall. 2 credits. Prerequisite: DANCE 212. Attendance at dance concerts and music concerts required. DANCE 212 and DANCE 323 together count as a course for purposes of graduation and for satisfying humanities or literature and arts distribution requirement.

DANCE 324(3530) Music and Choreography (also MUSIC 408[4512]) (LA)
Spring. 3 credits. Attendance at dance concerts and music concerts required. A. Fogelsanger.
Intended to expose students to music they probably have not heard and are unlikely to seek out on their own, particularly contemporary "classical" music and music used in modern concert dance, to mark out the possible relationships between music and dance when combined in concert; and to pull apart the compositional construction of musical pieces to consider what musical structuring ideas might be profitably applied by choreographers to making dances. The course also considers examples from film and the plastic arts, reading topics include criticism and aesthetics of dance, music, and the arts in general. Includes discussions of music and writing about concerts, and audio and video recordings. May include rehearsing and performing music or dance. Concentrates especially on minimalism, improvisation, and polystylism in music, dance, the two considered together, and other arts singly and in combination.

The DANCE 212–213 sequence is being replaced by DANCE 324. DANCE 323 will not begin meeting until September 25 and will thereafter meet simultaneously with DANCE 324. Contact instructor for details.

DANCE 324(3530) Music and Choreography (also MUSIC 408[4512]) (LA)
Spring. 3 credits. Attendance at dance concerts and music concerts required. A. Fogelsanger.
Intended to expose students to music they probably have not heard and are unlikely to seek out on their own, particularly contemporary "classical" music and music used in modern concert dance, to mark out the possible relationships between music and dance when combined in concert; and to pull apart the compositional construction of musical pieces to consider what musical structuring ideas might be profitably applied by choreographers to making dances. The course also considers examples from film and the plastic arts, provides students with some experience making sound and movement, and includes discussion of and writing about concert, and audio and video recordings. Reading topics include criticism and aesthetics of dance, music, and the arts in general, in particular concentrating on counterpoint, minimalism, improvisation, and polystylism. DANCE 324 replaces the sequence DANCE 212–213.

DANCE 410(4500) Advanced Dance Composition I (LA)
Fall and spring. 3 credits. Prerequisite: DANCE 311. Attendance at dance concerts required. J. Chu and J. Self.
J. Self.
Students work on advanced choreographic problems, to be presented in performance.
is Born and White Christmas, this seminar will explore modernist spatialities, as defined through body movement, architecture. Rising tensions between popular entertainment and modernist impulses, and between stage, screen, and television, will be examined. Camp as queer sensibility in non-musical films such as All About Eve, and semi-musicals such as Beyond the Valley of the Dolls, will be related to the movie musical, modern dance, modern architecture and modern art practices. Also, the class will look to the Hayes Code as arbiter of a surrealistic aesthetic from films such as An American in Paris to television specials such as Raquel, featuring a futurist, Barbarella-esque, Raquel Welch.

DANCE 424(4089) Formalist Aesthetics of Modernism and Postmodernism in Music, Dance, and Painting
Spring. 4 credits. Limited to 15 students. A. Fogelsanger.
This seminar examines the formalist side of the aesthetics of modernism from the idea of absolute music and the rise of abstraction in painting, through atonality, modern dance, minimalism, and postmodernism. Includes readings of Susan Daces, Monroe Beardsley, Walter Benjamin, Hans Bertens, Peter Berger, Tito Calvino, Roger Copeland, Susanne Langer, David Michael Levin, Susan Manning, Leonard Meyer, Yvonne Rainer, Meyer Schapiro, Susan Sontag, and others.

DANCE 490(4000) Senior Paper in Dance
Fall and spring. 3 credits. Prerequisite: DANCE 493.
Second of a two-semester sequence (the first is DANCE 492) for senior dance majors. Under faculty direction, the students write a senior paper in dance history, criticism, or theory.

Interdisciplinary Courses

DANCE 258(3550) Techno Soma Kinetics: Repositioning the Performing Body in Space through the Lenses of Digital Media (LA)
Spring. 4 credits. B. Suber.
Works to expand the specific aesthetics of live performance (music, theatre, and dance) and traditional technological media presentation (sound, film, and video) through the use of emerging digital technologies. Included in the process is the analysis of built environments that both inspire and are designed to be inhabited by these disciplines. This studio course explores the resulting neo-performance forms being created within the range of digital media processing; such as gallery installations, multimedia dance-theatre, personal interactive media (games and digital art) and web projects. Computer-imaging and sound-production programs are examined and used in the class work (human form-animation software [Life Forms], vocal recording and digital editing [Protocols and Hyperprism], digital-imaging tools [Photoshop, Final Cut Pro, Flash, Dreamweaver, and Director]). The new context in digital performance raises questions concerning the use of traditional lighting, set, costume, and sound-design techniques that are examined as they are repositioned by digital-translation tools with the goal of creating experimental and/or conceptual multimedia performance and/or installation work. Theoretical texts on dance and theatrical performance, film studies, the dynamic social body, architecture, and digital technology are also used to support conceptual, creative work.

DANCE 319(3590) Music, Dance, and Light (also THETR 319[3190]) (LA)
Artistic values, parameters, and concerns of music (sound design), architecture, and lighting design are compared and contrasted, and the combination of design elements is analyzed in contemporary dance.

DANCE 358(4550) Techno Soma Kinetics II: Repositioning the Performing Body in Space through the Lenses of Digital Media (LA)
Spring. 4 credits. B. Suber.
Continuation of DANCE 258. DANCE 258 expands on principles using more complex and interactive software using MAX/MSP and Jitter, Director, DVD Studio Pro, and Dreamweaver.

DANCE 369(3560) Digital Performance (also THETR 369[3690], MUSIC 355[3541]) (LA)
Fall. 4 credits. Prerequisites: permission of instructors. Laptop computer and MAX/MSP software required, Jitter software encouraged, see www.cycling74.com for student software pricing. Lab performance at end of semester. Recommended: previous enrollment in one of the following: CO M S 100, DANCE 210, DANCE 368, MUSIC 120, MUSIC 355, THETR 368, VISST 211. W. Cross and A. Fogelsanger.
Introduction to the multimedia programming language MAX/MSP and its application to computer-interactive dance. Intended to bring together programmers and dancers. Each student will create software patches and pieces movement patches, and collaborate with others on a final project focusing on the input, manipulation, and output of movement sound, video, graphics, and lighting in live performance. Topics include digital audio/video processing, MIDI control, sensor use, electroacoustic music, history state of computer technology and dance up to the present, gestural-expression, choreography, composition, design. Aesthetics. Includes 3-hour Wednesday night lab.

DANCE 391(3570) Media Arts Studio I (also ART/MUSIC/FILM 391, ARCH 459/659) (LA)
Fall or spring. 3 credits. Prerequisite: permission of instructor and junior standing, minimum FILM 377 or 277, or DANCE 258. Equipment fee: $50 (paid in class). Next offered 2007–2008. Participating faculty include M. Rivchin, film; B. Suber, dance.
A collaborative inter-disciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video.

Production

DANCE 151(1510) Dance Production Laboratory I (also THETR 151[1510])
Fall and spring. 1–3 credits: may be repeated for credit. No prerequisites or experience required. Orientation meeting at 7:30 p.m. first Tuesday of each class each semester in Kiplinger Theatre at Schwartz Center. P. Lillard.
Provides practical experiences in running stage crew or dresser crew for dance.
DANCE 153(1630) Dance Stage Management Production Laboratory I (also THETR 153[1530])
Fall and spring. 1–2 credits; may be repeated for credit. Before registering, students must attend orientation meeting at 7:30 p.m. in Kiplinger Theatre at Schwartz Center on first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.
Practical experience in dance production as assistant stage manager for a dance theatre production under the supervision of the faculty production manager. THETR 370 complements this course.

DANCE 251(2510) Dance Production Laboratory II (also THETR 251[2510])
Fall and spring. 1–3 credits; may be repeated for credit. Prerequisite: permission of instructor. Orientation meeting at 7:30 p.m. on first Tuesday of classes each semester in Kiplinger Theatre at Schwartz Center. P. Lillard, D. Hall, F. Sellers, and R. MacPike.
Practical experience in dance production, as a light board operator, sound board operator, video operator, or head dresser.

DANCE 253(2530) Dance Stage Management Production Laboratory II (also THETR 253[2530])
Fall and spring. 1–4 credits; may be repeated for credit. Before registering, students must attend orientation meeting at 7:30 p.m. in Kiplinger Theatre at Schwartz Center on first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.
Practical experience in theatrical production as assistant stage manager for the dance mainstage concert under the supervision of the faculty production manager. THETR 370 complements this course.

DANCE 362(3660) Lighting Design Studio I (also THETR/VISST 362(3620)) (LA)
For description, see THETR 362.

DANCE 368(3680) Sound Design and Digital Audio (also THETR 368[3680], MUSIC 355[3431]) (LA)
For description, see THETR 368.

DANCE 462(4660) Lighting Design Studio II (also THETR 462[4620])
For description, see THETR 462.

Independent Study, Internships, and Honors

DANCE 300(3000) Independent Study
Summer, fall, or spring. 1–4 credits. Independent study in the dance allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course, must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study, which is available in 225 Schwartz.

DANCE 485(4880) Undergraduate Internship
Fall, spring, or summer. 1–3 credits. To be eligible to enroll and receive credit for an internship, students must be majors in the department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice before preregistration for the semester in which the internship is planned to take place. To receive credit within this course, the internship must be unpaid. Students must follow the rules and procedures stated in the departmental internship form.

DANCE 495(4050) Honors Research Tutorial
Fall or spring. 4 credits. Prerequisite: honors students in dance. First of a two-semester sequence (the second is DANCE 496) for seniors engaged in an honors project. For guidelines, see the director of undergraduate studies in dance.

DANCE 496(4060) Honors Research Tutorial
Fall or spring. 4 credits. Prerequisite: honors students in dance. Second of a two-semester sequence (the first is DANCE 495) for students engaged in an honors project.

Tracks toward admission into the advanced undergraduate theatre program

Design, Technology, and Stage Management
Recommended for individuals interested in a Design, Technology, or Stage Management track.

THETR 250 Fundamentals of Theatre Design and Technology
THETR 151 and 251 Production Lab I and II (at least 1 credit of each)
Recommended for Scenic Design emphasis:
THETR 340 Theatrical Drafting and Technical Drawing Studio
THETR 351 Production Lab III (as design assistant)
THETR 354 Stagecraft Studio
THETR 364 Scene Design Studio
Upon admission to the program:
THETR 451 Production Lab IV (at least 1 credit)
Recommended for costume design or costume shop management emphasis:
THETR 351 Production Lab III (as design assistant)
THETR 356 Costume Construction Studio
THETR 366 Costume Design Studio I
THETR 371 Costume Design Studio II
Upon admission to the program:
THETR 451 Production Lab IV (at least 1 credit)
Recommended for Lighting Design or costume shop management emphasis:
THETR 252 Technical Production Studio I
THETR 351 Production Lab III (as student electrician)
THETR 351 Production Lab III (as design assistant)
THETR 362 Lighting Design Studio I
Upon admission to the program:
THETR 451 Production Lab IV (at least 1 credit)
Recommended for Sound Design emphasis:
THETR 251 Production Lab II (as student sound technician)
THETR 252 Technical Production Studio I
THETR 351 Production Lab III (as design assistant)
THETR 368 Sound Design Studio
Upon admission to the program:
THETR 451 Production Lab IV (at least 1 credit)
Recommended for Technical Direction emphasis:

THETR 252 Technical Production Studio I
THETR 256 Technical Production Studio II
THETR 340 Theatrical Drafting and Technical Drawing Studio
THETR 351 Production Lab III (as assistant technical director)
THETR 354 Stagecraft Studio
Upon admission to the program:
THETR 451 Production Lab IV (at least 1 credit)
Recommended for Stage Management emphasis:
THETR 253 or 353 Stage Management Lab II or III—two assignments
THETR 280 Introduction to Acting
THETR 370 Stage Management Studio
THETR 398 Fundamentals of Directing I
Upon admission to the program:
THETR 453 Stage Management Lab IV

Directing
Recommended for individuals interested in a directing track:

THETR 151 and THETR 251 Production Lab I and II (at least 2 combined credits)
THETR 240/241 Introduction to Western Theatre (one semester only)
THETR 250 Fundamentals of Design and Technology
THETR 280 Introduction to Acting
THETR 398 Directing I
THETR 498 Directing II

Playwriting
Recommended for individuals interested in a playwriting track:

THETR 240/241 Introduction to Western Theatre (one semester only)
THETR 250 Fundamentals of Design and Technology
THETR 280 Introduction to Acting
THETR 348 Playwriting
THETR 349 Advanced Playwriting
Students in the advanced undergraduate theatre program may also elect to take FILM 485 (Undergraduate Internship) in addition to or in place of one production assignment.

VISUAL STUDIES UNDERGRADUATE CONCENTRATION

Visual studies is a concentration that provides students with an interdisciplinary approach to visual art, media (including digital works), performance, and perception. Faculty from departments throughout the college offer courses toward the concentration, drawing on such various disciplines as the history of art, film, literary studies, psychology, theatre, and others. Requirements for the concentration include the core course VISST 200 Introduction to Visual Studies, which introduces students to critical thinking about visual studies as well as close textual analysis in social and historical contexts. Responsibility for teaching the core course rotates among faculty affiliated with the concentration, and the course, as much as possible, entails interdisciplinary collaboration in the form of team-teaching or visiting lectures. In addition to the core course, students must take one course within the Theory/Practice group plus three additional courses at the 200 level or above. No more than two courses from the concentration may be double-counted toward a student's major. All courses must be taken for a letter grade.

Students interested in pursuing the concentration should first discuss it with their current advisors, and then either download the form from the visual studies web site (www.arts.cornell.edu/visualstudies/requirements.htm) or contact the visual studies undergraduate coordinator, Chris Capalongo. After completing the form, students should attach a copy of their transcript and submit it to Chris Capalongo, 409 White Hall. Students who have not been in contact with a visual studies advisor will have one selected for them from among the concentration's affiliated faculty.

Interdisciplinary Graduate Concentration

In the spring of 2004, Cornell began plans for an interdisciplinary graduate concentration in visual studies that will take several years to institutionalize. The concentration in visual studies is not meant to substitute for disciplinary training, which will not be waived by the addition of interdisciplinary courses. The "Course List in Visual Studies for 2006-2007" alerts incoming students to courses that may be relevant to their interests, and aids them in discovering the network of professors working in visual studies, spanning multiple departments and schools at Cornell.

Visual Studies Concentration Course List

VISST 101(1101) Visual Literacy and Interior Design (also DEA 101)
Fall. 3 credits. J. Elliott. For description, see DEA 101.

VISST 200(2000) Introduction to Visual Studies
Spring. 4 credits. Requirement for undergraduate concentrators. T. Murray. Provides a broad introduction of modes of vision and the historical impact of visual images, visual structures, and visual space on culture, communication, and politics. The question of "how we see" is discussed in terms of (1) past and present uses of optical machines to the psychology of vision and the philosophy of aesthetics; (2) spaces of vision (from landscapes to maps to cities); (3) objects of vision (from sacred sites to illuminated books to digital screens); and (4) performances of vision (race, sexualities, ethnicities, cultures). Of importance to the course is the practical and conceptual relation of 20th-century visual technologies (photography, cinema, video, and computing) to their historical corollaries in the arts. The course draws on the visual traditions of both Western and non-Western societies and study texts that have defined the premises and analytic vocabularies of the visual. Through viewings, screenings, collaborative writing, and art projects, students develop the critical skills necessary to appreciate how the approaches that define visual studies complicate traditional models of defining and analyzing art objects. Guest lecturers occasionally address the class. Requirements: two objective midterm exams; occasional listserve postings; two five-page papers.

VISST 203(2020) Introduction to Feminist Theory (also FGSS 202(2020))
Spring. 3 credits. D. Reese. For description, see FGSS 202.

VISST 211(2711) Beginning Dance Composition (also DANCE 210(2500))
Fall. 3 credits. Concurrent enrollment in DANCE 212 and a dance technique class at appropriate level. Attendance at dance concerts required. J. Self.

VISST 219(2190) Thinking Surrealisms (also ART H 219, COM L 220)
Spring. 3 credits. B. Maxwell. For description, see COM L 220.

VISST 230(2300) Survey of American Film (also FILM 230(2300), AM ST 230(2760))
Spring. 3 credits. S. Haenni. For description, see AM ST 230.

VISST 233(2533) Explorations in Movement (also DANCE 233(2410))
Fall. 0 to 1 credit. Limited to 16 students. Attendance at dance concerts required. J. Self. For description, see DANCE 233.

VISST 235(2430) Hip-Hop Hollywood (also DANCE 235(2430), PE 161(1181))
Fall. 3 credits. J. Self. For description, see DANCE 235.

VISST 236(2430) Public Voice and Civic Gesture (also DANCE 236, THETR 236)
Fall. 1 credit. P. Suber and B. Milles. For description, see THETR 236.

VISST 244(2744) Gamelan in Indonesian History and Cultures (also MUSIC 245(1341), ASIAN 245(2245))
Fall and spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience required. M. Hatch. For description, see MUSIC 245.

VISST 245(2645) Renaissance and Baroque (also ART H 258(2400))
Fall. 4 credits. Each student must enroll in a sec. C. Lazzaro For description, see ART H 245.

VISST 274(674)/2174/6174) Introduction to Film Analysis: Meaning and Value (also FILM 274(674)/2740/6740)
Fall. 4 credits. Limited to 40 students. Graduate students should enroll in FILM 674. D. Fredericksen. For description, see FILM 274/674.

VISST 293(2193) SSP: Middle Eastern Cinema (also NES 293(2753), COM L/FILM 293(2930), JWST 291(2793))
Fall. 4 credits. D. Starr. For description, see NES 293.

VISST 305(3305) Visual Perception (also PSYCH 305)
Fall. 4 credits. Limited to 20 students. Prerequisite: PSYCH 205 or permission of instructor. J. Cutting. For description, see PSYCH 305.

VISST 308(3300) Dance Technique IV/Modern (also DANCE 308(4220), PE 161(1181))
Fall. 1 credit. By placement only: no pre­enrollment. Attendance at dance concerts required. J. Chu. For description, see DANCE 308.

VISST 335(3735) Modern Western Drama, Modern Western Theorists: Theory and Practice (also THETR 335, COM L 335(3735), ENGL 335(3530))
Fall. 4 credits. N. Salvato. For description, see THETR 335.

VISST 342(3342) Human Perception: Application to Computer Graphics, Art, and Visual Display (also PSYCH/COGST 342(3240), PSYCH 642(6420))
Fall. 3 or 4 credits. 4-credit option involves term paper. Prerequisite: PSYCH 101 or permission of instructor. PSYCH 205 strongly recommended. D. Field. For description, see PSYCH 342.

VISST 348(2480) Film Noir (also AM ST 348, FILM 346)
Spring. 4 credits. S. Haenni. For description, see AM ST 348.

VISST 356(3560) Computing Cultures (also S&T/COMM/INFO 356(3561))
Spring. 4 credits. P. Sengers. For description, see S&T/COMM/INFO 356.

VISST 362(3620) Lighting Design Studio I (also THETR 362(3620), DANCE 362(3660))
Fall. 4 credits. E. Intemann. For description, see THETR 362.

VISST 375(3175) History and Theory of Commercial Narrative Film (also FILM 375(3750))
Fall. 4 credits. Fee for screening expenses: $10 (paid in class). A. Villarejo. For description, see FILM 375.

VISST 376(3176) History and Theory of Documentary and Experimental Film (also FILM 376(3760))
4 credits. Fee for screening expenses: $10 (paid in class). A. Villarejo. For description, see FILM 376.

VISST 385(3850) Commedia: A Contemporization of Physical Acting Styles and the Comic Approach (also THETR 384(3840))
Fall. 4 credits. B. Milles. For description, see THETR 384.
VISST 387(3870) Literature and Film of South Asia (also COM L 386[3860], ASIAN 387[3870])
Spring. 4 credits. A. Banerjee.
For description, see COM L 386.

VISST 393(3930) International Film of the 1970s (also AM ST 393[3930], FILM 393[3930])
Spring. 4 credits. S. Haenri.
For description, see FILM 393.

VISST 394(3655) The House and the World: Architecture of Asia (also ART H 395[3855])
Spring. 4 credits. K. McGowan.
For description, see ART H 395.

VISST 398(3798) Fundamentals of Directing I (also THETR 398[3980])
Fall. 3 credits. Limited to 10 students.
Prerequisite: permission of instructor.
Special consideration given to students who have completed THETR 280 or intend to continue in area of stage or screen directing. Students should see instructor one year in advance to sign up for course.
D. Feldshuh.
For description, see THETR 398.

VISST 400(4200) Proseminar (also ART H 400/600[4100/6100])
Fall. 4 credits. Limited enrollment.
Prerequisite: History of Art majors only.
I. Dadi.
For description, see ART H 400.

VISST 407(4607) The Museum and the Object (also ART H 407[4107])
Fall. 4 credits. Prerequisites: History of Art majors only. Not open to freshmen or sophomores without permission of instructor. All classes meet in Johnson Art Museum Study Gallery. A. Pan.
For description, see ART H 407.

[VISST 412(4120) Science, Technology and Culture (also COM L 410[4100], S&T S 412[4101])]
Fall. 4 credits. Next offered 2007-2008.
A. Banerjee.
For description, see COM L 410.

VISST 417(4170) Modern Art and Popular Culture (also ART H 417, S HUM 416)
Fall. 4 credits. S. Evans.
For description, see S HUM 416.

VISST 426(4260) Adaptation: Text/ Theatrically (also THETR 426[4260])
Spring. 4 credits. B. Miles.
For description, see THETR 426.

VISST 430(4630) Topics in American Studies: The Cinema and the American City
Fall. 4 credits. S. Haenri.
For description, see AM ST 430.10.

VISST 477(4770) Intermediate Film and Video Projects: Documentary and Experimental Workshop (also FILM 477[4770])
Fall. 4 credits. M. Rivchin.
For description, see FILM 477.

VISST 480(4800) Advanced Seminar in American Literature; Visual Culture in Women's Literature (also ENGL/ FGS 480[4790], ART H 479[4793])
Fall. 4 credits. S. Samuels.
For description, see ENGL 479.

VISST 619(6619) Translation in Theory (also ASIAN 619[6619])
Fall. 4 credits. B. delBary.
For description, see ASIAN 619.

VISST 634(6340) Deleuze and Lyotard: Aesthetic Excess and Artistic Practice (also ENGL 629[6290], COM L 634[6340], FRLIT 672)
Spring. 4 credits. T. Murray.
For description, see COM L 634.

VISST 666(6466) Media Theory: Film and Photography (also FRLIT 676, GOVT 666[6665])
Fall. 4 credits. D. Rubenstein.
For description, see GOVT 666.

[VISST 670(6470) Modern Social Theory (also GERST 670[6700], GOVT 670[6705])]
Spring. 4 credits. S. Buck-Mors.
For description, see FILM 274.

Pinch, Trevor J., Ph.D., U. of Bath (England). Prof., Science and Technology Studies
Pinet, Simone, Ph.D., Harvard U. Asst. Prof., Earth and Atmospheric Sciences
Pintner, Walter M., Ph.D., Harvard U. Emeritus, History
Pizarro, David A., Ph.D., Yale U. Asst. Prof., Psychology
Plane, Rosalind A., Ph.D., of Chicago. Prof., Emeritus, Chemistry
Platts, J. Robert, D. O., Ph.D., U. of Erlangen (Germany). Prof. Emeritus, Physics/LASSP*
Poleman, Richard, Ph.D., Columbia U. Goldwin Smith Professor of American History
Pollak, Nancy, Ph.D., Yale U. Assoc. Prof., Russian
Pond, Steven, Ph.D., U. of California, Berkeley. Assoc. Prof., Music
Porte, Helene Sophrin, Ph.D., Harvard U. Sr. Lee., Psychology
Porte, Joel, Ph.D., Harvard U. Ernest J. White Professor of American Studies and Human Letters Emeritus
Possen, Richard, Ph.D., Yale U. Sr. Lee., Romance Studies
Possen, Rhoda, Ph.D., Yale U. Sr. Lee., Romance Studies
Polenz, Steven M., Ph.D., Harvard U. Goldwin Smith Professor of English Emeritus
Provine, William B., Ph.D., U. of Chicago. Prof., History/Biological Sciences
Pucin, Pietro, Ph.D., U. of Pisa (Italy). Goldwin Smith Professor of Classics
Puchner, Martin, Ph.D., Harvard U. Assoc. Prof., English
Quiroz, Ernesto, M.F.A., CUNY. Asst. Prof., English
Rakbin, Jeremy A., Ph.D., Harvard U. Assoc. Prof., Government
Radziszewicz, Mary A., Ph.D., Columbia U. Jacob Gould Schurman Professor of English Emeritus
Ralph, Daniel C., Ph.D., Cornell U. Prof., Physics/LASSP*
Ralph, Michael, Ph.D., U. of Chicago. Asst. Prof., Anthropology
Ramage, Andrew, Ph.D., Harvard U. Prof., History of Art
Ramakrishna, Ravi, Ph.D., Princeton U. Assoc. Prof., Mathematics
Raskolnikov, Masha, Ph.D., U. of California, Berkeley. Asst. Prof., English
Rawlings III, Hunter R., Ph.D., Princeton U. Prof., Classics/History
Razin, Assaf, Ph.D., U. of Chicago. Friedman Professor of International Economics, Economics Emeritus
Rebillard, Eric, Ph.D., U. of Paris (France). Assoc. Prof., Classics/History
Redmond, Mary Kathryn, M.A.T., School for International Training, Brattleboro, Vt. Sr. Lee., Romance Studies
Reese, Diana, Ph.D., Columbia U. Asst. Prof., German Studies/Feminist, Gender, & Sexuality Studies
Regan, Dennis T., Ph.D., Stanford U. Assoc. Prof., Psychology
Regan, Elizabeth Adkins, Ph.D., U. of Pennsylvania. Prof., Psychology/Biological Sciences
Repp, John D., Ph.D., Yale U. John L. Wetherill Professor Emeritus of Physics, Physics/LASSP*
Repp, Judith, Ph.D., Cornell U. Prof., Science and Technology Studies
Resina, Joan Ramon, Ph.D., U. of California, Berkeley. Prof., Romance Studies
Rhodes, Frank H. T., Ph.D., U. of Birmingham (England). Prof. Emeritus/President Emeritus, Earth and Atmospheric Sciences
Richards, Annette, Ph.D., Stanford U. Assoc. Prof., Music
Richardson, Betty McCarthy, Ph.D., Duke U. Sr. Lee., Physics
Richardson, Robert C., Ph.D., Duke U. F. R. Newman Professor of Physics/LASSP*.
Richard, Jolene, Ph.d., SUNY Buffalo Asst. Prof., History of Art
Rigi, Jakob, Ph.D., U. of London (England). Asst. Prof., Anthropology
Riha, Susan J., Ph.D., Washington State U. Prof., Earth and Atmospheric Sciences
Riles, Anneleen, Ph.D., Cambridge U. (England). Prof., Anthropology
Rivchin, Marilyn, M.F.A., Cornell U. Sr. Lee., Theatre, Film and Dance
Roberts, Kenneth, Ph.D., Stanford U. Prof., Government
Robinson, Cynthia, Ph.D., U. of Pennsylvania. Asst. Prof., History of Art
Rodriguez-Garcia, José Marga, Ph.D., U. of Colorado, Boulder. Prof., Romance Studies
Roldan, Mary J., Ph.D., Harvard U. Assoc. Prof., History
Rooth, Mats, Ph.D., U. of Massachusetts, Amherst. Prof., Linguistics
Rosen, Benjamin, Ph.D., Cornell U. Emeritus, Sociology
Rosen, Carol G., Ph.D., Harvard U. Prof., Linguistics
Rosen, David, Ph.D., U. of California, Berkeley. Prof. Emeritus, Music
Rosenberg, Alex, Ph.D., U. of Chicago. Prof. Emeritus, Mathematics
Rosenberg, Roger D., Stanford U. Prof., Emeritus of English/Comparative Literature
Rossiter, Margaret, Ph.D., Yale U. Marie Underhill Noll Professor of the History of Science, Science and Technology Studies
Rubenstein, Diane, Ph.D., Yale U. Visiting Assoc. Prof., Government
Ruzin, David L., Ph.D., U. of Michigan. Boyce D. McGhannel Prof. of Physics, Physics/LEPP
Rugina, Radu, Ph.D., U. of California, Santa Barbara. Asst. Prof., Computer Science
Rush, Myron, Ph.D., U. of Chicago. Prof., Government
Rusk, Bruce, Ph.D., U. of California, Los Angeles. Asst. Prof., Asian Studies
Russell, Nerissa, Ph.D., U. of California, Berkeley. Assoc. Prof., Anthropology
Russo, Steven, Ph.D., Cornell U. Sr. Lee., Chemistry and Chemical Biology
Rutten, Jeffrey S., Ph.D., Harvard U. Classics
Ryd, Anders, Ph.D., U. of California, Santa Barbara. Asst. Prof., Physics/LEPP
Saccomano, Neil, Ph.D., Johns Hopkins U. Assoc. Prof., English/Comparative Literature
Sachs, Aaron, Ph.D., Yale U. Asst. Prof., History
Sakai, Naoki, Ph.D., U. of Chicago. Prof., Asian Studies/Comparative Literature
Saloff-Coste, Laurent, Ph.D., U. of Paris VI (France). Prof., Mathematics
Salpeter, Edwin E., Ph.D., Birmingham U. (England). James Gilbert White Distinguished Professor in the Physical Sciences Emeritus, Physics/LEPP*
Santiago-Irazarry, Vilma, Ph.D., New York U. Assoc. Prof., Anthropology and Latino Studies
Sawyer, Paul L., Ph.D., Columbia U. Prof., English
Scharf, Nava, M.A., Levinsky Seminary, Tel Aviv (Israel). Sr. Lee., Near Eastern Studies
Schatz, Alfred H., Ph.D., New York U. Prof., Mathematics
Schegloff, Harald A., Ph.D., Duke U. George W. and Grace L. Todd Professor Emeritus of Chemistry and Chemical Biology
Schneider, Fred B., Ph.D., SUNY Stony Brook. Prof., Computer Science
Schloss, Johann, Ph.D., U. of Chicago. Sr. Lee., Anthropology
Scher, Keith, Ph.D., U. of California, Berkeley. Assoc. Prof., Physics/LASSP
Schwarz, Anette, Ph.D., Johns Hopkins U. Assoc. Prof., German Studies
Schwarz, David, Ph.D., Brown U. Prof., English
Segal, Harry, Ph.D., U. of Michigan. Sr. Lee., Psychology
Selby, Katherine, Ph.D., U. of California, Berkeley. Sr. Lee., Physics
Selden, Kyoko Iriye, Ph.D., Yale U. Sr. Lee., Asian Studies
Self, James T., B.A., Cornell U. Sr. Lee., Psychology
Selman, Bart, Ph.D., U. of Toronto (Canada). Prof., Computer Science
Seth, Suman, Ph.D., Princeton U. Asst. Prof., Science and Technology Studies/Computer Science
Sethi, Neelam, Ph.D., U. of California, San Diego. Lee., Philosophy
Silverman, Albert, Ph.D., U. of California, Berkeley. Maxwell M. Upson Professor of Government
Simpson, Audra, Ph.D., McGill U. (Canada). Asst. Prof., Anthropology
Singh, Sujata, B.A., Kashi Vidyapeeth U. (India). Lec, Asian Studies
Sirer, Emin Gun, Ph.D., U. of Washington. Asst. Prof., Computer Science
Smajlaj, Steven W., Ph.D., Rijksuniversiteit te Utrecht (The Netherlands). Assoc. Prof., Mathematics
Small, Meredith F., Ph.D., U. of California, Davis. Prof., Anthropology
Smiljic, John, Ph.D., U. of Chicago. Prof., Mathematics
Smith, Anna Marie, Ph.D., U. of Essex (England). Assoc. Prof., Government
Smith, Robert J., Ph.D., Cornell U. Goldwin Smith Professor of Anthropology Emeritus
Sogah, Donovan Y., Ph.D., U. of California, Los Angeles. Prof., Chemistry and Chemical Biology
Sogno, Cristina, Ph.D., Yale U. Townsend Asst. Prof., Classics
Sokol, Thomas A., M.A., George Peabody Coll. Prof. Emeritus, Music
Solá, Donald F., Ph.D., Cornell U. Emeritus, Modern Languages and Linguistics
Sonkin, Fred, Ph.D., Cornell U. Emeritus, History of Art/Asian American Studies
Soule, Sara, Ph.D., Cornell U. Sociology
Sparfel, Christine, Mathematiques-Physique I and DEUG. Sr. Lec., Romance Studies
Speh, Birgit, Ph.D., Massachusetts Inst. of Technology. Prof., Mathematics
Spinjler, Hortense, Ph.D., Brandeis U. Frederick J. Whoton Prof. of English
Spivey, Michael, Ph.D., U. of Rochester. Assoc. Prof., Psychology
Squier, Stephen, Ph.D., Cornell U. Prof., Astronomy/CIRS
Stacey, Gordon J., Ph.D., Cornell U. Astronomy/CIRS
Stallman, Michael E., Ph.D., Harvard U. Emeritus, Economics
Stein, Peter C., Ph.D., Massachusetts Inst. of Technology. Prof., Physics/LEPP
Sterberg, Michael F., Ph.D., U. of Chicago. Prof., History
Stern, Robert, Ph.D., Vanderbilt U. Prof., Sociology/Industrial and Labor Relations
Steinhardt, Susan, Ph.D., Yale U. Adjunct Asst. Prof., Romance Studies
Stillman, Michael E., Ph.D., Harvard U. Emeritus, Mathematics
Stith, Marice W., M.A., Ohio State U. Prof., History
Strange, Philip, Ph.D., Stanford U. Prof., Sociology
Stratokis Tio, Amalia M.S., Syracuse U. Sr. Lec., Romance Studies
Stauss, Barry S., Ph.D., Yale U. Prof., History/Classics
Strickert, Robert S., Ph.D., Princeton U. Prof., Mathematics
Strook, C. Cushing, Jr., Ph.D., Harvard U. Emeritus I. White Professor of American Studies and Humane Letters, Emeritus, English
Stuckey, Steven D.M.A., Cornell U. Given Foundation Professor of Music
Sturgeon, Nicholas L., Ph.D., Princeton U. Prof., Philosophy
Styron, Joseph P., Ph.D., Columbia U. Prof., Rural Sociology/Sociology
Suber, Paul Byron, B.A., Cornell U. Sr. Lec., Theatre, Film and Dance
Sui, Jae Jung, Ph.D., U. of Pennsylvania. Asst. Prof., Government
Suher, Margarita A., Ph.D., Indiana U. Prof., Emerita, Linguistics
Swartz, Edward, Ph.D., U. of Maryland, College Park. Asst. Prof., Mathematics
Swedberg, Richard, Ph.D., Boston Coll. Prof., Sociology
Swift, Moss F., Ph.D., Massachusetts Inst. of Technology. Prof. Emeritus, Mathematics
Swenson, Maria G., Ph.D., Cornell U. Sr. Lec., Romance Studies
Szwab, Zoltán, Ph.D., Massachusetts Inst. of Technology. Prof., Physics/LEPP
Tagliacozzo, Eric, Ph.D., Yale U. Assoc. Prof., History
Taylor, Richard M., Ph.D., California Inst. of Technology. Prof., Physics/LEPP
Taylor, Keith W., Ph.D., U. of Michigan. Prof., Asian Studies
Teitelbaum, Tim, Ph.D., Carnegie-Mellon U. Assoc. Prof., Computer Science
Teng, Quyun, M.A., Cornell U. Sr. Lec., Asian Studies
Terrell, Maria Shea, Ph.D., U. of Virginia. Sr. Lec., Mathematics
Terrell, Robert, Ph.D., U. of Virginia. Sr. Lec., Mathematics
Terzian, Yervant, Ph.D., Indiana U. David C. Duncan Professor in the Physical Sciences, Astronomy/NAIC
Teukolsky, Saul A., Ph.D., California Inst. of Technology. Hans A. Bethe Professor of Physics and Astronomy, Physics/LEPP Astron.
Tewfik, Brisa, M.A., U. de las Américas-Puebla. Sr. Lec., Romance Studies
Thom, Julia, Ph.D., U. of Hamburg (Germany). Asst. Prof., Physics/LEPP
Thorbecke, Erik, Ph.D., U. of California, Berkeley. H. Edward Babcock Professor of Economics and Food Economics Emeritus, Nutritional Sciences/Economics
Thorne, Robert E., Ph.D., U. of Illinois. Prof., Physics/LEPP
Throst, William P., Ph.D., U. of California, Berkeley. Prof., Mathematics
Tierney, Brian, Ph.D., Pembroke Coll. of Cambridge U. (England).
Tobin, Eddy and M. Bowman Professor in Humantistic Studies Emeritus, History
Tigges, Maury, Ph.D., Cornell U. Hans Bethe Prof. of Physics, Emeritus, Physics/LEPP
Tolbert, Pamela, Ph.D., U. of California, Los Angeles Assoc. Prof., Sociology/Industrial and Labor Relations
Toorawa, Shwetak, Ph.D., U. of Pennsylvania. Assoc. Prof., Near Eastern Studies
Tranvik, Lena Gerd Karin, M.A. equiv., U. of Stockholm (Sweden). Sr. Lec., German Studies
Traverse, Thuy D., M.A., U. of Michigan. Sr. Lec., Asian Studies
Travers, T. Robert, Ph.D., Gonville and Caius Coll. Asst. Prof., History
Tsinberov, Viktoria M., Lensovet Leningrad Inst. of Chemical Technology (Russia). Sr. Lec., Russian
Tu, Thuy, Ph.D., New York U. Asst. Prof., History of Art/Asian American Studies
Way, Christopher, Ph.D., Stanford U. Asst. Prof., Government.

Weatherston, Brian, Ph.D., Manash U. (Australia). Asst. Prof., Philosophy.

Webster, James, Ph.D., Princeton U. Goldwin Smith Professor of Music.

Weeden, Kim, Ph.D., Stanford U. Asst. Prof., Sociology.

Wei, Rachel, Ph.D., Princeton U. Assoc. Prof., History.

Weiss, Michael, Ph.D., Cornell U. Assoc. Prof., Linguistics.

West, James E., Ph.D., Louisiana State U. Prof., Mathematics.

Wetherbee, Winthrop, Ph.D., U. of California, Berkeley. Avalon Professor of English and Medieval Studies Emeritus, English/Medieval Studies.

White, William, M. Ph.D., U. of Rhode Island. Prof., Earth and Atmospheric Sciences.

Whitman, John B., Ph.D., Harvard U. Prof., Linguistics.

Widom, Benjamin, Ph.D., Cornell U. Goldwin Smith Professor of Chemistry and Chemical Biology.

Wilcox, Charles F., Jr., Ph.D., U. of California, Los Angeles. Prof. Emeritus, Chemistry and Chemical Biology.

Wilks, Daniel S., Ph.D., Oregon State U. Prof., Earth and Atmospheric Sciences.

Williams, J. Pearce, Ph.D., Cornell U. John Stambaugh Professor of the History of Science Emeritus, Science and Technology Studies.

Williams, Robin M., Jr., Ph.D., Harvard U. Henry Scarborough Professor of Social Sciences Emeritus, Sociology.

Wittch, Peter, Ph.D./, U. of Pittsburgh. Assoc. Prof., Physics/LEPP.

Wolczanski, Peter T., Ph.D., California Inst. of Technology. Prof., Physics/LNS.

Wyatt, David K., Ph.D., Cornell U. John Gussman Professor of Music.

Wysocki, Mark, Ph.D., SUNY Stony Brook. Assoc. Prof., Physics/LASSP*

Zabih, Raman, Ph.D., Stanford U. Assoc. Prof., Computer Science.

Ronald Seeher, vice provost
John A. Siliciano, vice provost
David Wippman, vice provost

Cornell University has an enduring commitment to support equality of education and employment opportunity by affirming the value of diversity and by promoting an environment free from discrimination. Association with Cornell, either as a student, faculty, or staff member, involves participation in a free community where all people are recognized and rewarded on the basis of individual performance rather than personal convictions, appearance, preferences (including sexual or affectional orientation), or happenstance of birth.

Cornell University’s history of diversity and inclusion encourages all students, faculty, and staff to support a diverse and inclusive university in which to work, study, teach, research, and serve. No person shall be denied admission to any educational program or activity or denied employment on the basis of any legally prohibited discrimination involving but not limited to, factors such as race, color, creed, religion, national or ethnic origin, gender, sexual orientation, age, disability, or veteran status. Cornell University is an affirmative action, equal opportunity employer.

Concerns and complaints related to equal opportunity in education and employment based on aspects of diversity protected under federal, state, and local law, including sexual harassment complaints filed by any member of the Cornell community against an academic or nonacademic staff member, as well as complaints arising under Title IX, should be directed to the Office of Workforce Diversity: Equity and Life Quality, 101 Day Hall, Ithaca; NY 14853-2801 (telephone: 607-255-9706; fax: 607-255-9706; TDD: 607-255-9706; www.orb.cornell.edu/worklifeDiversity.html).

Cornell University is committed to assisting those persons with disabilities who have special needs related to their educational pursuit or employment. Information on services provided to prospective and current Cornell students with disabilities can be obtained by contacting Student Disability Services, Center for Learning and Teaching, 120 Computing and Communications Center, Ithaca; NY 14853-6001 (telephone: 607-255-8545; fax: 607-255-8545; www.clt.cornell.edu). Prospective and current employees in need of a workplace accommodation pursuant to the Americans with Disabilities Act or New York State law should contact Workers Compensation and Disability Services, Surge 3 Facility, Ithaca; NY 14853-7900 (telephone: 607-255-5706; fax: 607-255-9649; TDD: 607-255-7066).

Members of the Cornell University community are strongly encouraged to report immediately any criminal activity and suspicious persons to the Cornell University Police Department. Incidents that may or may not be crimes may also be reported to “campus security authorities” which include, in addition to the Cornell University Police, those with responsibility for controlling access to buildings or facilities and officials having significant responsibility for students or campus activities.

Licensed counselors and campus clergy (pastoral counselors) are exempt from reporting requirements. Cornell University encourages counselors and clergy, if and when they deem it appropriate, to inform those who they counsel of procedures for reporting crimes on a voluntary, confidential basis for inclusion in the Cornell University Police Statistical Crime Record.

For Cornell University directory information or general information, call 607-255-2090 or 607-254-INFO. The 2006–2007 Courses of Study is available on the web at cuinfo.cornell.edu/Academic/Courses/.

To obtain a copy of this catalog, please follow these guidelines:

If you are a currently enrolled student, please contact your college registrar.
